**SHIPPING.** Vessels entering French ports in 1931 in the foreign trade totaled 30,211, of 57,676,852 tons, and vessels clearing 22,845, of 48,267,405 tons. Marseilles was the leading port, in the number of vessels and tonnage handled, although Cherbourg was a close second. Cherbourg ranked first among the ports of Europe in the number of trans-Atlantic passengers embarked and disembarked; in 1931 there entered and cleared at the port 746 trans-Atlantic liners, representing 10,725,000 net tons, with 115,000 passengers, and 513,000 sacks of mail. Harbor improvements were under way at Cherbourg in 1932. The new 73,000-ton liner *Normandie* was added to the French mercantile marine on Oct. 29, 1932 (see **SHIPBUILDING**). The new motor liner *Georges Philppar* burned and sank at sea in May on her maiden voyage to the Far East (see **SAFETY AT SEA**). The *Normandie* also was severely damaged by fire while on a trial run.

**GOVERNMENT.** The French Constitution vests executive power in the President of the Republic and the Ministry, and legislative power in the Chamber of Deputies and the Senate. The legislative branch has steadily encroached upon the prerogatives of the executive, however, and the President wields little influence in executive matters, which are decided by members of the Ministry directly responsible to Parliament. The President is elected for seven years by an absolute majority of votes in the Senate and Cham-

ber of Deputies, and selects his cabinet ordinarily from among the members of both bodies. The Senate is made up of 314 members not less than 40 years of age and elected by an electoral college for nine years, one-third retiring every three years; the Chamber of Deputies is made up of 612 members elected by direct popular manhood suffrage for four years. The composition of the Chamber elected Apr. 22-29, 1928, was as follows: Communists, 16; Democrats, 22; Independent Radicals, 64; Left Republican Democrats, 34; Socialists, 104; Radicals and Radical Socialists, 110; Republican Socialists and French Socialists, 46; Republicans of the Left, 94; Democratic Republican Union, 110; Conservatives, 12. President at the beginning of 1932, Paul Doumer, elected May 13, 1931. For changes in 1932, see *History*.

## HISTORY

**TARDIEU SUCCEEDS LAVAL.** Crucial changes in French domestic and foreign policy occurred during 1932. The train of events accompanying these changes commenced on January 7, when the Laval cabinet resigned. The position of the ministry had been shaken by the death of André Maginot, Minister of War, and the resignation of Aristide Briand as Foreign Minister, ostensibly due to ill health. For seven years Briand had guided French foreign policy in successive cabinets. His name had become synonymous with peaceful collaboration in the reconstruction of Europe under the aegis of the League of Nations. To Briand's many supporters, his retirement was considered a "dismissal" which forecast the abandonment of his peaceful policy.

In view of the critical foreign situation and to still the outcry of the Left elements, Premier Laval offered the Foreign Office post to Edouard Herriot, leader of the Radical Socialist party. The Radical Socialists, however, refused to collaborate with the parties of the Right, from which the Laval cabinet drew its main support. Moreover they were unwilling to weaken their strategic position in advance of the approaching quadrennial elections to the Assembly. Unable to secure a non-partisan cabinet, Premier Laval handed in the resignation of the entire ministry. He was asked by President Doumer to reconstruct it along the same lines as before. Accordingly, the third Laval ministry presented to Parliament on January 19 differed but little from its predecessor. Premier Laval himself assumed direction of the Foreign Office. André Tardieu was transferred from the Agriculture to the War portfolio. The Interior and Agriculture posts were filled, respectively, by Pierre Cathala and Achille Fould, former Under-Secretaries.

The new Laval government enjoyed but a short lease of life. On February 16 it was defeated in the Senate, which criticized M. Laval's foreign policy as conservative and attacked the electoral reform sponsored by his supporters. The highly controversial electoral reform (Mandel) bill had been passed in the Chamber of Deputies, February 12, 288 to 1, after the Radical Socialists and Socialists had withdrawn. In place of the *scrutin d'arrondissement* system, it provided that a candidate receiving 40 per cent of the vote on the first ballot would be declared elected. The result would have been adverse to the parties of the Left. When the Democratic Left and Radical Socialist Senators unexpectedly defeated the bill and overturned the Laval cabinet, by a vote of

157 to 134, the Radical Socialists with support from moderate parties then succeeded (March 17) in shelving the bill in the Chamber of Deputies.

Paul Painlevé, a Republican Socialist, now unsuccessfully attempted to form a Left ministry. M. Tardieu was then called and on February 23 formed his third cabinet from the Centre and Right. The new Tardieu cabinet consisted of only 13 Ministers and six Under-Secretaries, most of them holdovers from the Laval government. M. Tardieu himself took over the Foreign Office. M. Laval again became Minister of Labor. The Ministries of War, Navy, and Aviation were merged in the Ministry of National Defense, headed by François Piétri. Paul Reynaud, as Minister of Justice and "Controller of the Administration," and Albert Mahieu, as Minister of Interior, were other leading members. Securing a vote of confidence by 309 to 262 on February 23, M. Tardieu returned to Geneva, where the deliberations of the Disarmament Conference had been interrupted by the French cabinet crisis.

**THE ELECTORAL CAMPAIGN.** With the adjournment of Parliament on April 1, the campaign for the election of a new Chamber of Deputies on May 1 and 8 opened in earnest. Critical foreign and domestic problems confronted the French voters. The continued rise of German nationalism, the threatened economic and financial collapse of Eastern Europe, growing unemployment and industrial depression, and the mounting budget deficit all aroused fear that France's dominant position in Europe, and consequently her security, was menaced. There was a demand for a more constructive programme with respect to disarmament, reparations and war debts, and European economic rehabilitation.

M. Tardieu attempted to dissipate signs of increasing discontent by moderating the conservative policies he had espoused while Premier in 1930. His platform now included Franco-British collaboration, rapprochement with Germany, the "adjustment" of reparation charges, and the economic reconstruction of Eastern Europe by means of a Danubian tariff union (see UNITED STATES OF EUROPE). Moreover his plan for an international police force, presented February 5 before the Geneva Disarmament Conference, was in line with the policy championed by the Left parties.

The Left elements distrusted Tardieu's "conciliatory" foreign policy and bitterly opposed his domestic policy, because he drew his support from the Right and Centre groups. The Right opposed the League, favored a "strong" foreign policy, supported the Catholic clergy against the anti-clerical measures of the Left, and opposed certain social reforms. The Centre joined the Right in fighting socialism, but was more moderate in its foreign policies and less pro-clerical in sympathy. In contrast, the Left favored advanced social legislation, the extension of secular education, active measures toward disarmament, Franco-German rapprochement, and active co-operation with the League of Nations. It attacked the Tardieu ministry for the dissipation of the Treasury reserve, the heavy burden of military expenditures, the loans advanced to bankrupt nations and to insolvent private banks, and the increasing Franco-German tension.

The elections resulted in a decisive victory for the Left. The Radical Socialists made the

greatest gain, emerging with 160 seats, against 109 in the former Chamber. The Socialists increased their mandates from 112 to 131, but were displaced by the Radical Socialists as the largest single party in the Chamber. The principal losers were the Republican Democratic Union (including M. Marin's group of Nationalists), M. Tardieu's Left Republicans, and the Independent Radicals of the Centre. The standing of the main groups in the Chamber following the 1932 elections, with the comparative standings previous to dissolution, are shown in the accompanying table.

COMPOSITION OF THE FRENCH CABINET

	1932	1928
<i>Right (74 in 1932):</i>		
Conservatives .....	13	18
Republican-Democratic Union .....	43	102
Republican and Social Group .....	18	31
<i>Centre (146):</i>		
Popular Democratic party .....	17	18
Centre Republicans (Alsatiens) .....	7	3
Centre Republicans .....	36	..
Left Republicans .....	38	64
Radical Left .....	48	53
<i>Left (376):</i>		
Radical-Socialists .....	160	124

Republican and French Socialists ..	28	31
Left Independents .....	15	..
Socialists .....	131	100
Dissident Communists .....	9	..
Communists .....	10	12
<i>Other Independents .....</i>	<i>19</i>	<i>38</i>

**ASSASSINATION OF DOUMER.** On May 6, two days before the second ballot of the Assembly elections, President Paul Doumer was shot and mortally wounded by Paul Gorgoulou, a Russian fanatic. The Senate and the Chamber of Deputies had not yet been dissolved. They were summoned to meet in joint session on May 10 at Versailles, where Albert Lebrun, president of the Senate, was elected President of the Republic on the first ballot. The vote was: Lebrun (Republican Union), 633; Paul Faure (Socialist), 114; Paul Painlevé (Republican Socialist), 12; Marcel Cachin (Communist), 8. M. Painlevé had previously announced that he was not a candidate. Gorgoulou was tried before the Seine Court of Assizes. A jury on July 28 found him guilty of premeditated murder and he was executed on the guillotine. See DOUMER, PAUL.

**HERRIOT FORMS NEW MINISTRY.** Repudiated by the electorate, Premier Tardieu, on May 10, handed in the resignation of the cabinet to the newly elected President. He and his colleagues remained at their posts, however, until the new Chamber met early in June. His successor, by general assent, was M. Herriot, a former Premier and leader of the Radical Socialists. Rejecting a definite alliance with the Socialists under Léon Blum, Herriot on June 4 announced a ministry in which members of his own party held 13 of the 18 posts. The other five members were closely affiliated with the Left. The composition of the cabinet follows: Premier and Minister of Foreign Affairs, Edouard Herriot; Minister of Justice and Vice President of the Council, René Renoult; Interior, Camille Chautemps; War, Joseph Paul-Boncour; Marine, Georges Leygues; Air, Paul Painlevé; Finance, Louis Germain-Martin; Budget, Maurice Palmade; Education, Anatole de Monzie; Colonies, Albert Sarraut; Public Works, Edouard Daladier; Commerce, Julien Durand; Labor, Albert Dalimier; Agricul-

ture, Abel Gardey; Mercantile Marine, Léon Meyer; Posts, Telegraphs and Telephones, Henri Queuille; Pensions, Aimé Berthod; Public Health, Justin Godart.

The cabinet, including five former Premiers and 17 with previous Ministerial experience, won an overwhelming vote of confidence—390 to 150—on its first test before the Chamber June 7.

At the outset of his administration, Premier Herriot confronted five main problems and innumerable minor ones. The chief issues were: (1) Disarmament, particularly the German demand for the abolition of the armament clauses of the Versailles treaty; (2) German reparation, a problem linked with that of the economic rehabilitation of Europe; (3) the strained state of Franco-Italian relations; (4) the French debt to the United States and commercial relations with that country; and (5) the problem of balancing the French budget. The Lausanne Conference on reparation and the Disarmament Conference at Geneva were both in session during the second half of June and M. Herriot was forced to divide his time among Paris and the two Swiss cities.

In outlining his policy before the Chamber June 7, M. Herriot dwelt particularly on reparation and disarmament. While France was ready to promote "greater world stability or loyal reconciliation in peace," she could not "permit those rights to be contested which are the outcome not only of treaties but of contractual agreements protected by the honor of the signatories." Regarding disarmament, he promised to favor measures "within the framework of the (League) covenant and in the spirit of the Pact of Paris which will permit, without compromising national security, the lightening of military charges. . . ."

These theses he eloquently and, in part, successfully maintained at Geneva and Lausanne. The reparation settlement (see REPARATIONS AND WAR DEBTS) greatly increased Herriot's prestige in France and he was acclaimed by virtually all parties when he returned to Paris from Lausanne on July 10. At Geneva he presented the French disarmament case in the most favorable light, but the outcome satisfied neither the advocates of peace nor the apostles of force in France (see DISARMAMENT).

THE BUDGET CRISIS. Meanwhile in parliament had commenced the battle over the budget. When M. Herriot assumed office he found that the Treasury reserve of more than \$80,000,000 accumulated between 1927 and 1929 had been reduced to \$2,800,000. Moreover there was an accumulated budget deficit of about \$422,520,000 and a prospective deficit of \$260,000,000 for the nine months ending Dec. 31, 1932 (see *Finances*). Accordingly, in the revised estimates for April–December, 1932, submitted to Parliament July 1, provision was made for new taxes aggregating \$56,000,000 and economies of \$104,000,000. The economies consisted chiefly of \$60,000,000 to be cut from appropriations for national defense and a 5 per cent reduction in all governmental salaries and pensions. The new taxes were bitterly protested by the taxpayers, while the Left parties in parliament proved reluctant to support the reduction of pensions and salaries. The budget bill, badly mutilated, was finally passed on July 11, 306 to 172, with the Socialists voting in the opposition. On July 16, the Chamber voted, 381 to 30, to issue 2,000,000,000 francs of

Treasury bonds to meet immediate financial needs.

As part of its financial programme, the Ministry in September carried through the largest conversion loan in French history. All of the 5, 6, and 7 per cent government bonds issued in 1915, 1916, 1920, 1927, and 1928 were converted into a single 4½ per cent loan, which was tax exempt and amortizable in 75 years. The total amount involved was about \$3,400,000,000. After the necessary legislation had been passed at a special two-day session of parliament—September 16 and 17—the conversion operation was virtually completed by October 4. It was expected to save about \$40,000,000 annually in interest payments, but the steady decline in governmental receipts indicated that further economies or new sources of income were necessary to avert a deficit variously estimated at \$320,000,000 to \$400,000,000 for 1933. As a major aid in balancing the budget, the government studied ways of reducing the cost of living, which was extremely high in France, compared with most countries. Meanwhile the gold reserve of the Bank of France continued to increase, rising to 83,233,000,000 francs on November 17, the largest reserve in the Bank's history.

FARM RELIEF. In October the sudden decline in the price of wheat to a point considerably below the estimated cost of production offered a new and pressing problem to the Herriot government. The Ministry took measures closely resembling those of the Farm Board in the United States, holding more than 6,000,000 quintals (about 22,000,000 bushels) off the market, but the price continued to decline. How to increase wheat prices without forcing a rise in living costs presented a dilemma. The ministry's reluctance to take further drastic measures to support wheat caused a great outcry in the wheat-growing regions of the country, accompanied by the resignations of about 200 mayors of small communities and the threat of a taxpayers' strike.

THE SENATORIAL ELECTIONS. The triennial elections to fill one-third of the seats in the Senate were held October 16. The Left groups affiliated with the Herriot Ministry increased their representation in the 111 seats filled by only 12 to 15 seats, less than the number anticipated. The Democratic Left, corresponding to the Radical Socialists in the Chamber of Deputies, captured four new seats, which assured them of a virtual majority. The composition of the new Senate, with the previous standing of the parties in parentheses, was as follows: Democratic Left, 155 (150); Republican Union, 71 (71); Democratic and Radical Union, 37 (34); Socialists, 17 (16); Republican Left, 15 (20); Conservatives, 6 (9); Independents, 13 (12).

HERRIOT'S FOREIGN POLICY. The international position of France in 1931 had aroused much anxiety (see 1931 YEAR BOOK). Although France had decisively defeated Germany's attempt to challenge her hegemony in Europe, she had done so at the cost of increased tension with both Germany and Italy and of hostile sentiment in Great Britain and the United States. The Soviet Union was angered at the French embargo on her exports. When Premier Tardieu regained power in February, 1932, he sought to end France's diplomatic isolation among the Great Powers by tacitly supporting Japan in the Sino-Japanese dispute over Manchuria. His policy produced a storm of protest in France as well as in Europe.

The Left leaders charged that he was sabotaging the League of Nations and paving the way for the forceful repudiation of the Treaty of Versailles. Tardieu's foreign policy was an important cause of his defeat in May.

The advent of Herriot to power brought a striking reversal in French policy. At Lausanne he strove to conciliate the Germans by virtually wiping out reparation claims while maintaining the legality of the Versailles Treaty. He also concluded at Lausanne a new entente with Great Britain (see GREAT BRITAIN under *History*), in which the British agreed in substance not to side with Germany against France and not to accept debt concessions from the United States which were withheld from France. Also, M. Herriot brought about a great improvement in Franco-Soviet relations, although the ratification of the non-aggression pact signed by French and Soviet representatives in 1931 was delayed until November 29 by Rumania's refusal to conclude a similar pact until the Soviet Union recognized the cession of Bessarabia to Rumania (see RUMANIA under *History*). Poland, another French ally, ratified a non-aggression pact with the Soviet Union without waiting for Rumania to act (see POLAND under *History*). The French policy of rapprochement with Russia was designed to end the possibility of a Russo-German combination against France, which had appeared imminent on several occasions after the signing of the Rapallo treaty in 1922. The new Franco-Soviet intimacy was indicated by the signing on August 9 of a contract by which one of the largest French oil importing agencies agreed to purchase all its crude oil and refined petroleum products for the years 1932 to 1937, inclusive, from the Soviet government.

Improvement in Franco-American relations was noted in the early autumn of 1932 as a result of French support of the Kellogg-Briand pact against Japan in Manchuria. Like the hasty efforts to push through the non-aggression pacts between her allies and the Soviet Union, the French position on the Kellogg-Briand pact was the direct result of the threatening developments in Germany (q.v.). Previously Herriot, as well as Tardieu, had been cordial toward the Japanese. French interests in Indo-China and South China were similar to those of Japan in Manchuria. By the treaty of June 10, 1907, France and Japan agreed to reciprocally uphold their respective rights and interests in specific regions in China. Moreover, Japan in the first seven months of 1932 increased her purchases from France, while French exports to other countries were rapidly declining. According to the diplomatic correspondent of *The Sunday Times*, London, Gen. Henri Claudel, French member of the Lytton commission, exerted his influence to mitigate the severity with which Japan was censured in the original draft of the Lytton Report.

Viewing the ominous tone of the von Papen government in Germany, the Herriot government apparently decided that its best interests lay in cooperation with the United States. It was believed that if France stood with the United States in supporting the Kellogg-Briand pact in Manchuria, America would be morally bound to stand with France in supporting the pact against Germany or Italy. Likewise, support of President Hoover's disarmament proposals seemed the only practical way to secure the backing of the United States in opposing the rearming of

Germany. Informal conversations between Premier Herriot and Senator David Reed and Norman Davis, special representatives of the American State Department, in which the question of war debt payments was believed to have been raised, served further to convince the Premier (see REPARATIONS AND WAR DEBTS). On September 22 a spokesman for the French Foreign Office announced that France had no intention of recognizing Manchoukuo (see JAPAN; LEAGUE OF NATIONS). It was reported October 8 that France had rejected a Japanese offer of a formal alliance. However, with the renewal of the war-debt controversy toward the end of November, Franco-American relations became noticeably less amicable.

Franco-American relations early in the year were adversely affected by the numerous import quotas decreed by the French government in an attempt to redress the increasingly adverse trade balance. These restrictions seriously curtailed imports from the United States into France and aroused charges of discrimination among American business interests. The situation was relieved, however, when on May 1 Ambassador Edge and Premier Tardieu exchanged notes in which France agreed to give the United States most-favored-nation treatment in all matters relating to quotas and restrictions on imports, and to increase allotments on a number of articles exported from the United States. On August 22 negotiations were begun in Paris for a commercial treaty to replace the existing *modus vivendi*. A treaty signed by Premier Tardieu and Ambassador Edge at Paris until April 27, after two years' negotiation, regulated taxation between France and the United States. A major feature of the treaty was the elimination of the French "double taxation" levied on the income of American corporations having subsidiaries in France. The negotiations for a Franco-American commercial treaty were broken off following France's default on the December 15 debt payment to the United States.

Franco-Spanish relations were also improved as a result of the advent of a Left government in France and the establishment of a republican régime in Spain. On October 31, Premier Herriot visited Madrid for the purpose of furthering the rapprochement of the two governments. Rumors that a Franco-Spanish military understanding was arrived at, although officially denied in Paris and Madrid, caused hostile demonstrations among Spanish students.

Meanwhile Franco-German relations were approaching a state of tension probably worse than at any other time since the World War. Herriot's concessions with regard to reparation were followed on August 29 by the demand of the von Papen-Schleicher government that Germany be authorized to reorganize and increase her army. In a memorandum of September 12, which was supported by the British and American governments, the Herriot Ministry declined to permit Germany to rearm in violation of provisions of the Versailles Treaty unless rearmament was first approved by the League of Nations and the other interested powers. However, before the Disarmament Conference Bureau at Geneva November 3, M. Herriot submitted a new disarmament plan designed to solve the problem raised by the German demand for equality, which resulted in Germany's return to the Conference (see DISARMAMENT).

Despite Franco-German friction, the joint economic commission established as a result of the visit of Premier Laval and Foreign Minister Briand to Berlin in September, 1931, continued to function. On Nov. 16, 1932, Raymond Patenôtre, French Under Secretary of State for National Economy, announced a project, formulated by the commission, for French-German-British financial and industrial consortiums to stimulate an industrial revival in Europe through the financing of public works programmes in various countries. The most optimistic view of the project in British banking circles was that it might develop gradually.

In other foreign fields, also, Herriot's policy was not so successful. Relations with Italy remained highly unsatisfactory and it was generally believed in France that internal conditions in Italy were forcing Mussolini into a diplomacy dangerous to the peace of Europe (see ITALY under *History*). On Nov. 14, 1932, the detailed Franco-Italian negotiations for an agreement on naval limitation, broken off in April, 1931, were resumed at Geneva. Subsequently Premier Herriot made several conciliatory gestures toward Premier Mussolini. Hungary, which France had succeeded in detaching from Italy's orbit in 1931 by means of a sorely-needed loan, returned to its former alignment when the pro-French Karolyi Cabinet was succeeded by Julius Gömbös and a pro-Fascist ministry (see HUNGARY). Turkey, also, appeared to be coming into closer touch with Italy (see TURKEY).

These developments presented France with two alternatives. She might strengthen her system of alliances against a resurgent Germany, in which case she could expect little sympathy or support from the United States and Great Britain. Or she could abandon the balance-of-power policy and join the United States in enforcing the Kellogg-Briand pact and promoting disarmament along the lines suggested by President Hoover. Herriot, in his speech before the League of Nations Assembly September 29, indicated that he was seriously considering the latter alternative. But it was extremely doubtful whether he could persuade France to accept it as a permanent policy.

Moreover, both the United States and Great Britain continued to withhold definite guarantees of military aid in case France was attacked—guarantees which the French had demanded ever since 1919 as a condition to further reduction of French armaments or the freeing of Germany from the Versailles armament restrictions. On October 13 and 14, Premier Herriot visited London with a view to securing such guarantees from the MacDonald government and thus making concessions which would induce Germany to reenter the Disarmament Conference. The effort failed.

**THE FALL OF HERRIOT.** The conciliatory and forward-looking policy by which Herriot was gradually reshaping the political alignment in Europe was halted by his defeat in the Chamber of Deputies on December 14. Herriot fell as a result of his insistence upon meeting the war-debt payment of \$19,261,432 due to the United States government on December 15. Early in November, the British and French governments had asked the American government for an extension of the Hoover moratorium and a reconsideration of the whole war-debt problem. Following several interchanges of notes, Washington on December

7 and 8 notified Paris and London that while the American government did not consider the suspension of the December 15 payment necessary, it was nevertheless "prepared through whatever agency may seem appropriate" to survey "the entire situation" after the payments had been made.

Premier Herriot and Prime Minister MacDonald, at a conference in Paris on December 8, decided to meet the December 15 payments, on the understanding that the sums paid would be deducted from the sum agreed on in a final settlement. On December 11, Secretary of State Stimson informed the British government that the United States could not approve any agreement inconsistent with the terms of the existing debt agreements, but that no objection was offered to a "statement of the views" of the British government as to the subsequent reexamination of the debt problem. The British government substantially accepted this interpretation on December 13. However, the French Chamber rejected, 402 to 187, Herriot's impassioned appeals for authority to make the December 15 payment subject to the understanding that France thereafter would pay nothing until a new general settlement was reached. The Premier was forced to resign. On the same day (December 13) the Chamber, by a vote of 380 to 57, declared that it would have authorized the December 15 payment if the American government had accepted a debt conference. The resolution stated that "the response addressed on December 11 to the British government by the Secretary of State of the United States no longer permits the Chamber to persevere usefully in this way of thinking. . . ." The resolution invited the French government to defer payment, and in accord with the other debtors to convene an international conference "to put an end to all international transfers not having a counterpart."

**THE PAUL-BONCOUR MINISTRY.** President Lebrun immediately called upon Herriot to form a new cabinet, but the Radical-Socialist leader refused to hold the Premiership or to participate in any cabinet. After Camille Chautemps had tried and failed, Senator Joseph Paul-Boncour, a former Socialist, on December 18 formed another ministry representing the Left groups and including many of M. Herriot's cabinet members. The cabinet was notable for the fact that none of the members had voted against payment of the debt installment to the United States and that it included Henry Chéron as Finance Minister. The full cabinet lineup was: Premier and Minister of Foreign Affairs, Joseph Paul-Boncour; Justice, Abel Gaidey; Interior, Camille Chautemps; War, Edouard Daladier; Marine, Georges Leygues; Air, Paul Painlevé; Finance, Henry Chéron; Education, Anatole de Monzie; Agriculture, Henri Gueuille; Colonies, Albert Sarraut; Labor, Albert Dalhmer; Merchant Marine, Leon Meyer; Posts and Telegraphs, Laurent Eynac; Commerce, Julien Durand; Pensions, Adrien Mielliet; Public Works, Georges Bonnet; Health, Charles Danielou. On December 22, the Chamber of Deputies gave the new cabinet a vote of confidence, 365 votes to 215.

On the following day, Finance Minister Chéron informed the Chamber that there remained in the Treasury only 212,000,000 francs (about \$8,268,000). He secured permission to issue bonds for 5,000,000,000 francs (about \$198,000,000) to meet current expenses pending the voting of the

1933 budget. Debate on the budget had scarcely begun by the end of the year. Before parliament rose for the New Year recess, however, both chambers passed a bill empowering the Treasury to guarantee a loan of 350,000,000 francs (\$13,700,000) to Austria, in accordance with a plan of financial assistance formulated by the League of Nations in an effort to prevent further collapse in Austria and Central Europe. The text of a Franco-German commercial agreement, which dealt a severe blow at the most-favored-nation principle, was made public on December 29. It superseded the 1927 Franco-German treaty.

**OTHER EVENTS.** France sustained the loss of important public figures during 1932, notably Aristide Briand, Jules Jusserand, former Ambassador to the United States, and Albert Thomas, head of the International Labor Office. See the biographies of each. The Breton autonomy movement gained wide notoriety, if few adherents, by the bombing of the great bas-relief at the Rennes City Hall. The bas-relief, symbol of the union of France and Brittany in 1532, was wrecked by the explosion, which took place in August during celebrations of the fourth centenary of Franco-Breton unity. The new French submarine *Prométhée* foundered near Cherbourg on July 7 while undergoing trials; 62 members of the crew were lost. It was reported in November, but not confirmed, that France had drawn up an agreement with Monaco to assume control of Monaco's customs and finances in return for a cash payment and an annuity. See **MONACO**, **POLAND**, **MOROCCO**, and **SPAIN** under *History*.

**FRANKLIN.** See **NORTHWEST TERRITORIES**.

**FREDERICK AUGUSTUS.** Former King of Saxony, died in Breslau, Germany, Feb. 18, 1932. Born in Dresden May 25, 1805, he attended Strassburg and Leipzig Universities and then entered the army, attaining in 1902 the rank of commanding general of the Twelfth German Army.

During 1891 he married Princess Louise of Tuscany, whom he divorced in 1903 following her elopement with André Giron, his son's tutor. He succeeded his father George on the throne Oct. 15, 1904, taking the title Frederick Augustus III. After his abdication on Nov. 13, 1918, he founded a mercantile corporation, called the House of Wettin-Albertine Line, Inc.

**FREEMAN, JOHN RIPLEY.** An American civil and mechanical engineer, died in Providence, R. I., Oct. 6, 1932. He was born in West Bridgeton, Me., July 27, 1855. Following his graduation from the Massachusetts Institute of Technology in 1876, he was an assistant engineer for 10 years with the Lawrence (Mass.) Water Power Co. He then established his own practice as a consulting engineer on water power, mill construction, and fire protection, and during 1886-96 was chief engineer on hydraulic problems for the Associated Factory Mutual Insurance Companies. In 1896 he was elected president and treasurer of the Manufacturers, Rhode

Island, and Mechanics Factory Mutual Insurance Companies, and after 1903 held similar offices with the State, Enterprise, and American companies.

As a consulting engineer on water supply, he was appointed in 1895 one of the original members of the Massachusetts Metropolitan Water Board, and in 1903 became chief engineer of investigations for construction of the Charles River Dam and improvement of Boston harbor, and consulting engineer for the Boston Metropolitan Park Commission on sanitary and drainage problems. He was also a member of the special commission that studied the problem of additional water supply for New York City, and after 1905 was consulting engineer to the New York Board of Water Supply. After 1910 he held a similar position with the San Francisco Board of Water Supply, being consulting engineer on the Hetch Hetchy project. In 1924 he was consulting engineer to the Chicago Engineering Board of Review in connection with the establishment of the Chicago Sanitary District. Among other cities for which he made extensive water supply studies were Nashua, Los Angeles, and Baltimore.

During 1906-07 Freeman was in charge of the water power investigations for the New York State Water Supply Commission. His advice was sought also in connection with the Panama Canal locks and dams, water power developments on the Feather River in California and the St. Lawrence River, and regulation of the level of the Great Lakes. The Canadian government consulted him in regard to water power conservation in 1910, and the Chinese government on development of its Grand Canal project in 1917-19. During the World War he acted as chairman of the National Advisory Committee for Aeronautics. He was also a fellow of the American Academy of Arts and Sciences. In 1904 he served as president of the American Society of Mechanical Engineers and in 1922-23 as president of the American Society of Civil Engineers, whose Normal Medal he twice received for the best contribution to its *Transactions*. He financed the translation of *Die Wasserbauabhandlungen Europas* and its publication in English under the title of *Hydraulic Laboratory Practice* (1929).

**FREEMASONRY** has been authoritatively defined as "a system of morality, veiled in allegory and teaching by symbols." For its early history consult the article entitled **MASONS** in Volume XV of **THE NEW INTERNATIONAL ENCYCLOPEDIA**, pages 193 to 199. In 1717 four lodges in London united to form the first Grand Lodge whose constituents now (1932) number a total of 4652 subordinate lodges, of which London has 1130; 2799 are distributed among 40 "provinces" in England (mostly counties), 3 in Wales, 2 in the Channel Isles, and 1 in the Isle of Man; 654 lodges are in 33 oversea "districts," including 9 in Africa, 5 in New Zealand, 4 in India, and 1 each in Barbados, British Guiana, Burma, Ceylon, Northern China, Eastern Archipelago, Egypt and the Sudan, Gibraltar, Hong Kong and South China, Jamaica, Japan, Malta, Newfoundland, Queensland, and South America. Most of the self governing dominions now have their own independent grand lodges but three in Canada retain their allegiance to the "Mother Grand Lodge." Sir Harry Goschen, Grand Treasurer of this premier grand body, reported at a

recent communication, a balance of £1,436,973 in its two principal funds. The sum of £72,324 had been raised for the Benevolent Institution for Aged Masons and their widows, founded in 1832, and nearly £125,000 for the Royal Masonic Institution for girls, founded in 1788 and having now about 1400 pupils. On April 27, within one month of his 82d birthday, the Duke of Connaught, brother of the late King Edward, and a Master Mason since 1875, was again installed as Grand Master, after serving 31 years. On the same occasion Lord Amptill was installed as Pro Grand Master and Lord Cornwallis as Deputy Grand Master. On May 13, at Farnborough, Hampshire, Leese-Warre Lodge (military) was opened under a charter from the Grand Lodge of Ireland (which thus for the first time officially entered England), with its Grand Master, the Earl of Donoughmore, and other Grand officers in attendance. On July 9 the *Freemasons' Chronicle*, founded in 1857, published its 3000th issue. On Aug. 3 the imposing new Temple at 52 Gt. Queen St., London, headquarters of the "Mother Grand Lodge" was occupied for the first time by the Supreme Grand Chapter R. A. M., although it is yet far from completed. In the same month a handsome new Temple, erected at a cost of £28,000, was dedicated at Sunderland, and in September another was opened at the east end of Greenock.

IN THE UNITED STATES Masonry dates back to colonial times when it was transplanted from Britain. All of the early American lodges were under the ægis of the "Mother Grand Lodge"; but after the Revolution, separate grand lodges were formed here and to-day, every State and territory of the American Union, except Alaska and Hawaii, has its own Grand Lodge. The outstanding national Masonic event of the year was the dedication on May 12, in the presence of President and Mrs. Hoover and Masonic dignitaries and thousands of Masons from various parts of the country, of the "George Washington Memorial Temple" at Alexandria, Va. The dedicatory oration was delivered by Past Grand Master Melvin M. Johnson of Massachusetts, and a parade of Masonic bodies of every rite and class took place in spite of a drizzling rain. The new Temple (built on the model of the Pharos at Alexandria, Egypt) stands on "Shooter's Hill," once considered as a site for the nation's Capitol, and commands a wide view of the landscape. The funds for its construction came from Masonic bodies widely diffused as well as from individual Masons. Among the numerous fraternal greetings from all over the world, came an elaborate one from the "Mother Grand Lodge," reciting that Washington's "portrait has for many years held an honoured place at the head of the staircase leading to our Temple." Following the dedication the National Ass'n of Masonic Librarians and Educators met in the new building.

Despite the depression the Grand Master of a southern State reports the attendance of some 30,000 Masons during his fraternal visits of the summer months and a spirit of steadfastness prevailing. More than 1000 attended a recent exemplification of the third degree by Evergreen Lodge No. 51 at Tacoma, former State Senator Walter J. Thompson, 60 years a Mason, acting as Junior Warden. The Appellate Division of the New York Supreme Court dismissed the suit of the Cerneau (irregular) bodies against the Grand Commander of the Northern Supreme Council.

The Philippine Grand Lodge, combining lodges of both Spanish and American origin, celebrated its 20th anniversary and chartered Amity Lodge No. 106 at Shanghai, composed largely of Chinese Masons, and the Filipino Grand Master, with a party, paid an official visit to the latter in September.

IN OTHER COUNTRIES, the order was introduced either directly from England or through some continental country, usually France, where it underwent a change, both of substance and polity, so that a distinctive type of Gallican Masonry has emerged, differing not a little from the original Anglican. Certain Latin-American countries, including Argentina, Paraguay, and Uruguay, report changes during the year from the former to the latter. The Grand Lodge of Bolivia, opened June 24, 1931, under a charter from that of Chile, started in the Anglican form. A bill was introduced into the Bolivian Congress to suppress all secret societies, and especially the Masons, but failed of passage. A new lodge (Baldur) was formed in Brussels to work in the Flemish language. Amizade Lodge, under the jurisdiction of the Grand Lodge of São Paulo, Brazil, celebrated its centenary on May 13, an enlarged temple is planned there and various Brazilian Grand Lodges have entered into fraternal relations with the Grand Lodge of Kentucky. In Czechoslovakia the Grand Lodge *Lessing zu Den Drei Ringen*, organized in 1920, is limited to German speaking members while the Grand Lodge of Czechoslovakia is for Czech speakers; but the relations between the two seem harmonious. There are three Grand Lodges and one Supreme Council in Colombia. The Supreme Council of Ecuador reports valuable accessions to its membership. On May 22 Lodge L'Anglaise of Bordeaux celebrated its bi-centennial. Grand Commander René Raymond of the French Supreme Council presided and spoke of the fine spirit of progress displayed. A prize has been awarded for the new history of the Supreme Council. In the Hungarian Parliament Deputy Eugene Gál demanded the removal of the ban against Masonry which has existed in that country since 1920. In Italy, under the Fascist régime, a similar situation still exists. The Grand Lodge of Ireland held its annual communication in Freemasons' Hall, Dublin. The Deputy Grand Master reported a year of progress, warrants issued for two new lodges, one new hall completed, another, at Antrim, under construction and increased subscriptions. A Masonic pillar in St. Anne's Cathedral, Belfast, was dedicated. The Netherlands Supreme Council extended its activities to South Africa, instituting a new "areopagus" (Goede Hoop) at Cape Town and another (Unie) at Bloemfontein. Grand Commander Dop was succeeded by Lt. Grand Commander Tongeren. In New Zealand the Grand Lodge treasury showed a cash balance of £141,092, a Masonic Home for boys had been opened at Papakura, and Lord Bledisloe, Governor General, was installed as Grand Master, taking as the theme of his inaugural address, "Masonry in the Pacific" and declaring "unless we are misnamed our function is to build." Members of Scarboro Lodge No. 653 of Agincourt, Ont., made a literal application of this idea by reverting temporarily to the "operative" stage and building their own temple, including the work of excavation. A new Grand Lodge was formed in Palestine by seven lodges chartered by the Grand Lodge of Egypt; the Grand Lodges of England

and Scotland, both of which have subordinate lodges in Palestine, as yet withhold recognition. Grand Commander Magahaes, newly elected in Portugal, is a former minister of war and a professor in the army school. Four or five members of the Spanish cabinet are reported as Masons but the order announces its firm opposition to communism. *La Revista Masónica* appeared at Caracas as the official organ of the Venezuelan Grand Lodge. An international Masonic Congress, with delegates from twenty-six countries, met at Constantinople and Masonic representatives appeared at the Philosophical Congress in honor of Spinoza at The Hague in August.

The new *History of the Ancient and Accepted Scottish Rite* by Charles S. Lobingier, 33°, appeared under the auspices of the Mother Supreme Council in December.

**NECROLOGY.** Among the eminent Masons who died during the year were Demetrios Papoulias 33° (1879–July 13, 1932), Grand Master of the Grand Orient of Greece; Dr. John H. Salter, Dept. Prov. Gr. Master of the Province of Essex, Eng.; Perry W. Weidner, 33° (Oct. 8, 1871–Aug. 16, 1932), active member of the Mother Supreme Council and Grand Master of American Knights Templar; Domizio Torrigiani, 33° (1877–1932), Past Grand Master of Italian Masons and Grand Commander of their Supreme Council; Leon M. Abbott, 33° (Aug. 28, 1867–Oct. 10, 1932), Grand Commander of the Northern (Am.) Supreme Council; Col. Claude Cane, 33°, Lieut. Commander of the Supreme Council of Ireland and Deputy Grand Master of its Grand Lodge; and Melville R. Grant, 33° (Nov. 25, 1850–Dec. 21, 1932), active member of the "Mother Supreme Council." The bicentennial of Washington and the centenaries of Goethe and Scott, were especially observed by Masons, not only in their own but in other countries and served to remind the world that these three notables were all Masons.

**FRENCH, DANIEL CHESTER, EXHIBITION OF WORKS.** See SCULPTURE

**FRENCH ACADEMY.** See ACADEMY, FRENCH.

**FRENCH ARCHITECTURE.** See ARCHITECTURE

**FRENCH ART.** See ART EXHIBITIONS; ART MUSEUMS.

**FRENCH CAMEROON.** See under CAMEROON.

**FRENCH CONGO.** See FRENCH EQUATORIAL AFRICA.

**FRENCH EQUATORIAL AFRICA.** A French possession in Africa on the Atlantic coast between the territories of the Belgian Congo and British Cameroons. Area, 912,049 square miles; population, 1931 census, 3,196,687, of whom 4687 were Europeans. The possession comprises the four colonies of Gabun, Middle Congo, Ubangi-Shari, and Chad. Brazzaville, with 4000 inhabitants, is the capital. In 1930 there were 65 native schools with 4608 pupils, and 81 private missionary schools with 5325 pupils.

The products are ivory, rubber, coffee, cacao, palm oil, and cotton. Copper, zinc, and lead are found. In 1930 imports were valued at 591,790,464 francs and exports at 197,510,133 francs. The general budget for the four colonies balanced at 86,875,000 francs in 1932 (1 franc equals \$0.0392 at par).

The governor-general has general supervision, but each colony is locally governed by a lieutenant-governor, aided by an administrative

council. Governor-General in 1932, Rafael Antonetti, appointed in July, 1924.

**FRENCH GUIANA, gè-à'nà.** A French colony and penal settlement on the northeast coast of South America. Area, about 34,740 square miles; population at the census of 1926, 47,341. Cayenne, a seaport, with 13,936 inhabitants in 1926, is the capital. The population figures do not include the number in the penal settlement of Maroni, in which there were 4000 prisoners in 1929, the floating population of miners, French officials, or native tribes.

The extensive forests are rich in timber. Only about 7900 acres are devoted to agriculture. Placer mining for gold is the chief industry. Other minerals produced are silver, iron, and phosphates. The total imports in 1931 were valued at 42,699,000 francs and exports at 30,154,000 francs (1 franc equals \$0.0392 at par). The principal exports were gold, rosewood essence, various woods, phosphates, cacao, balata, and hides. The budget for 1930 balanced at 16,370,965 francs; the public debt was 635,000 francs.

The colony is administered by a governor who is aided by a privy council and by a council-general elected by French citizens in Guiana, and is represented in the French Parliament by one deputy. Governor in 1932, M. Bouge.

**FRENCH GUINEA, gín'f.** An Atlantic coast colony of French West Africa, bounded on the south by Sierra Leone and Liberia; north by Portuguese Guinea and Senegal; and east by the Ivory Coast and French Sudan. The colony is administered by a lieutenant-governor under the governor-general of French West Africa. Lieutenant-Governor in 1932, M. Vadier. See FRENCH WEST AFRICA.

**FRENCH INDIA.** The name given to the group of five French dependencies in India, of which the chief is Pondichéry. Area, about 196 square miles; estimated population in 1931, 286,410, divided among the five dependencies as follows: Pondichéry, 183,555; Karikal, 57,914; Chandernagor, 27,262; Mahé, 12,430; Yanaon, 5249. French residents numbered about 1035. The chief towns with 1931 populations follow: Pondichéry, the capital, 43,449; and Karikal, 17,558.

Rice, ground-nuts, and manioc are the chief crops. Imports, in 1930, totaled about 184,042,407 francs; exports, 219,985,488 francs (franc equals \$0.0392 at par). In 1931 the budget was estimated to balance at 2,890,320 rupees (rupee averaged \$0.3369 in 1931).

The governor is assisted by an elective general council. French India is represented in the French Parliament by one Senator and one Deputy. Governor in 1932, Adrien Juvanon, appointed in 1930.

**FRENCH INDO-CHINA.** A French possession in southeastern Asia, comprising the colony of Cochín-China; the protectorates of Annam, Cambodia, Tongking (Tonkin), and Laos; and Kwangchow (Kwangchowwan), which was leased from China in 1898. French Indo-China is bounded on the east by the South China Sea, on the west by Siam and Burma and on the north by China. The capital is Hanoi, but during certain seasons of the year, when climatic conditions are oppressive, the government offices, including the courts, remove to Saigon. The area and population are shown in the accompanying table.

Of the total population in 1931, only 42,000 were Europeans. The populations of the chief cities in 1931 were: Saigon, 122,000; Cholon

## FRENCH INDO-CHINA: AREA AND POPULATION

Division	Capital	Area (sq. miles)	Population (1931 census)
Cochin China	Saigon	24,700	4,484,000
Cambodia	Pnom-Penh	67,800	2,806,000
Annam	Hué	58,000	5,122,000
Tongking	Hanoi	44,700	8,096,000
Laos	Vientiane	89,400	944,000
Kwangchow	Fort Bayard	300	250,000*
Total		284,900	21,702,000

\* Estimated.

(Cochin-China), 134,000; Hanoi, 124,000; Pnom-Penh, 90,000; Hué, 31,885; Binh-Dinh (Annam), 147,199; Haiphong, 122,000; Vientiane, 28,000.

PRODUCTION. Agriculture, mining, and fishing are the principal industries. The territory tributary to Saigon is one of the great rice-growing regions of the world; the rice crop of the entire country in 1930 was about 1,500,000 metric tons, of which 1,121,000 tons were exported. The exportable rice surplus in 1931 was estimated at 1,700,000 metric tons. The price of rice per 100 kilos (220 pounds), however, had fallen from \$4.67 on Jan. 1, 1930, to \$2.94 on Jan. 1, 1931. As the rice crop normally accounts for about 65 per cent of the total value of exports, the price decline resulted in severe economic depression. Rubber, sugar, cinnamon, and tea are other farm products, while the minerals exploited are coal, phosphates, zinc, antimony, tin, wolfram, graphite, and lead. Rubber exports in 1930 totaled 7738 metric tons (8700 in 1929). The total value of mineral production in 1928 was 18,460,000 piasters (\$9,245,000). In 1930, the output of coal and lignite was 1,955,000 metric tons; of zinc, 15,900 metric tons; tin, 1017 metric tons, phosphate rock, 30,300 metric tons.

COMMERCE. The states of French Indo-China, including Annam, Tonking, Cochinchina, and Cambodia, were united in a Customs union in 1887. In 1931, total exports amounted to 1,148,000,000 francs and total imports to 1,292,000,000 francs (1 franc = \$0.0392). In 1930, exports to France were valued at 526,059,000 francs (692,002,000 francs in 1929) and imports from France totaled 896,313,000 francs (1,013,278,000 francs in 1929). During the first half of 1931, exports to all countries dropped 50 per cent and imports declined 30 per cent in value, as compared with the same period of 1930. Rice, crude rubber, coal, fish and shrimps, and corn are the leading exports and cotton fabrics, metal manufactures, machinery and apparatus, silk fabrics, and kerosene are the leading imports.

FINANCE. There is a general budget for Indo-China and a separate budget for each of the component states. The ordinary general budget for 1931 balanced at 108,000,000 piasters (the piaster was stabilized at \$0.392 on May 31, 1930), the extraordinary budget totaling an additional 6,236,000 piasters. Opium, alcohol, and salt are state monopolies. The 1930 budget included a contribution of 11,891,000 piasters to France, representing a share in the cost of military and naval expenses. The public debt on Jan. 1, 1930 amounted to 353,000,000 French francs (10 francs = 1 piaster) and 6,600,000 piasters. The bank of Indo-China is the leading financial institution.

COMMUNICATIONS. There were 1488 miles of railway line in 1929, all government-owned but leased in part to private operators. The total

highway mileage in 1931 was reported at 19,931 miles, of which 8890 miles were paved. In 1929, a total of 1492 vessels in the overseas trade aggregating 4,527,867 tons entered the ports of French Indo-China and 1491 of 4,530,401 tons departed. The first airmail service from France to Indo-China was inaugurated Jan. 27, 1931. The telegraph and telephone system is owned by the Government. In 1932, the Government authorized a loan of \$9,800,000 for the following railway projects: A line from Pnom-Penh to Mongkolborey in Cambodia; lines from Tourane to Nhatrang, from Tanap to Thaket, and from Krongpha to Dalat in Annam.

GOVERNMENT. The central government is headed by a governor-general, assisted by a secretary general, a government council, and a grand council for economic affairs. A French resident-superior administers the affairs of each of the states, except Cochinchina, which is administered by a governor. Governor-General in 1932, Pierre Pasquier, appointed Aug. 22, 1928.

FRENCH IVORY COAST. See IVORY COAST.

FRENCH LANGUAGE. See PHILOLOGY, MODERN.

FRENCH LITERATURE. France has taken its full share in the celebration of the Goethe centenary, under the leadership of MM. Painlevé, Valéry and Monzie. An elaborate ceremony took place in the great amphitheatre of the Sorbonne in the early spring; Valéry pronounced the oration and the Comtesse de Noailles read a poem. The Bibliothèque Nationale had a special exhibit. The best known critics, A. Suarès, Thibaudet, J. Marie-Carré, and others, wrote articles or books; the translation of the two *Fausts* by Gérard de Nerval was issued in a new edition; and the Théâtre de la Porte Saint-Martin presented, in translation, Goethe's *Clavago*. There was bestowed on Premier Herriot, in recognition of the Goethe oration he had delivered, a commemorative medal made by the German Government in celebration of the centenary.

The most sensational event in the field of letters, however, was the publication in April of the *Grammaire de l'Académie française*. Nothing shows better the prestige of that famous corporation than the eagerness with which the book was purchased; 300,000 copies were sold in almost no time, and the firm that published it made a fortune. Unfortunately the book lent itself to sharp criticism, which brought out the fact that there had been previously a civil war in the very precinct of the Academy over this edition prepared under the direction of Abel Hermant, chairman of the grammar committee; and now it has been announced that a much corrected edition will be issued. The attacks upon the book were numerous, the most serious being that of the dean emeritus of the Faculté des Lettres of the University of Paris, Ferdinand Brunot, and the most witty that of Baudy de Saunier. A summary of this battle royal by Prof. William L. Schwartz, of Leland Stanford University, will be found in *Modern Language Journal* (November issue). See also PHILOLOGY.

The literary progress of the year was marked by a feverish activity. But great as was the output of fiction, the larger part consisted of valuable contributions to national literature. The *roman populiste* movement, in which many had moderate faith when it asserted itself two or three years ago, showed continued strength. Its supporters are publishing a periodical *Nouvel-âge*,

edited by Poulaille, and to which men like Barbusse, Dabit, and G. Altman are steady contributors. A revival of war literature was noticeable also. However, the three most famous *prix de roman* were awarded to works in other fields.

The *Grand Prix du roman* of the French Academy was bestowed on *Claire* by Jacques Chardonne (pseudonym for Boutelleau), a work in which the author continues his searching psychological analysis, especially of women, which had previously attracted attention in such books as *L'Épithalame* and *Eva*. The *Prix Goncourt* went to Guy Mazeline, first a marine officer but since 1927 a man of letters. His novel *Les Loups* is a long-drawn picture (600 pages) of rather unpleasant, wolfish relations among families and friends in Le Havre; and the *Prix Femina*, to *Le Pari*, a first novel by Ramon Fernandez. The *Prix Renaudot* (given by journalists while awaiting the decision of the other juries) was bestowed on *Voyage au bout de la nuit* by Louis Ferdinand Céline (pseudonym for Dr. Destouches). This is also a first book; the author, after serving in the War, traveled extensively.

The *Grand Prix de littérature*, for the ensemble of an author's work, was awarded by the French Academy to Franc-Nohain (pseudonym for Maurice-Étienne Legrand). He is known as a witty journalist but has also produced works in various other fields, such as the theatre, biography, several collections of *Fables*, etc. The *Prix Lasserre*, awarded to works of a more philosophical character, the bestowing of which is in the hands of the Minister of Public Instruction, went to the brothers Marius and Ary Leblond, authors of (among other books) *Ulysse*, *Cafre*, and last year of *Les Martyrs de la République*.

**POETRY.** The important *Prix Moréas* was presented December 6 to Georges-Louis Garnier for his various collections of poetry, while the *Prix de Poésie Claire-Virenque*, for a work of spiritual tendency, was presented to Renée Zeller for her *Sainte-Catherine de Sienne* and other works. The *Prix de Poésie de la Société des Gens de Lettres* went to Jacques Cœurvières for *Hésitations*, and the *Prix Petit Didier* to Vincent Muselli for *Les Travaux et les jeux*. Several other such prizes were awarded.

A modern edition of the *Poèmes complets* of Marceline Desbordes Valmore was produced by B. Guégien. *Le Mercure de France* detected and published *Vers de collège*, by Rimbaud. Plon published the *Poésies complètes* of the late Charles Le Goffic (q.v.). The veteran poet Fernand Gregh offered *La Gloire du cœur*, in contrast with the *Poésie de l'intelligence* sponsored by Paul Valéry. Henri de Régnier, Pierre Jean Jouve, and Jean Cocteau published selections of their own poetic works, and Maurice Allem an anthology of *Poésie religieuse*. Widespread public regret was expressed when Albert Londres, the *chef de l'école effréniste*, died in a shipwreck. His last collection of verses was *La Marche à l'étoile*; it concerns six men who start on a search for a life of enthusiasm, but only the poet among them continues the quest to the end. Lucie Delarue-Mardrus added a new volume to her poetic work, *Mort et printemps*.

Probably the most original contribution to the poetry of 1932 was the publication of *Nemrod* by Raymond Schwob. Fragments had appeared here and there which had received much praise. This is a great symbolic poem in heroic verse, representing the reconciliation of the gods and man.

Charles Sébastien Leconte, in *Nuit à Getsemani*, sang, in the style of Leconte de Lisle, the poem of human suffering—in which, however, Pan receives almost as much attention as Christ. An amusing little volume, *Plein air*, by Jean Hercourt (Geneva), wished to free modern poets of the virus of Valéryan poetry and once more give free rein to fancy. About the same idea was found in Lise Lamarre's *Chants de la solitaire*, light feminine fancies that were crowned by the Academy. A profound pessimism, however, was expressed in *Voyage dans l'esprit* by a woman who signs herself Gilbert Mauge. A quite original note was found in *Fableaux* by J. M. Sollier, imitations of the medieval *fabliau* with modern topics.

A. Godoy, in *Marcel, poème dramatique*, offered a symbolic description of the ages of man (dawn, morning, noon, evening, night) in the tradition of Baudelaire and Mallarmé. There were also Max Jacob's *Rivages*, which assumes the style of Baudelaire, concealing the sombre under the grotesque and ugly, and the poems of former Dadaists (known to-day as Surrealists), who have by no means forgotten their attempt at mystification years past: Tristan Tzara's *Où boivent les loups*; Paul Eluard's *La Vie immédiate*; and André Breton's *Le Revolver à cheveux blancs*. The poetical periodical *Commerce*, in its issue No. XXVIII, attracted attention with striking contributions by Paul Claudel, Jacques Prévert, and Robert Desnos. An original book on the essence of modern poetry was Carl Suarès's *La Comédie psychologique*.

**THEATRE.** The unusual number of foreign plays offered has betrayed dissatisfaction with native productions. The Pitoëffs especially have borrowed from abroad. There have been a *Hamlet*, in the translation by Morand and Schwob (the one made for Sarah Bernhardt); Goethe's *Clavigo* (relating an episode of Beaumarchais's life); Schnitzler's *La Ronde* (an old play of 1903); Brooks and Lister's *Wall Street, 145*; the German Hans Chlumski's *Miracle de Verdun* (considered somewhat naive); and Stéphane Zweig's *24 Heures de la vie d'une femme* (in a gambling place), staged by Nozière.

Of the French plays a few were undisputed successes. Among the more popular, at the beginning of the year, was Pagnol's *Phaëton*—the story of an old scholar who finds at the age of 60 that his whole life, devoted to the editing of a newly discovered text by Plato, is wasted as the manuscript has been found to be spurious, and he regrets not having devoted his life to "jazz" (the original title of the play written several years ago). The year closed with Bourdet's *La Fleur des pois*, a new satire on the snobs of this modern world.

By far the majority of plays that made just a fair showing were of the type of disenchanting realism. Such was André Arsan's *Le grand Enfant*, in which a woman and her husband discover that life must be taken as it is, a succession of degrading compromises. Jacques Deval's *Mademoiselle* (given in New York soon after its presentation in Paris) was the story of a governess who, urged by her love for children, agrees to act as a substitute mother for her young mistress's child. Estève Passéur's *Tricheurs* treated of a Jew who cannot be loved and who yields spontaneously to a rival; the woman, touched by such magnanimity declares her willingness to love him, but he still refuses the sacrifice. Sacha Guitry, in

*Française*, presented a sombre drama, treating a similar problem. Pierre Wolff's *Belle de nuit* treated of the world of the "night owls." Jean Arnouilh, in *L'Hermine*, presented a romanesque Chatterton, who believes in his right to happiness; however, instead of killing himself when he cannot attain his end he plunges into a life of cynical revenge, like Julien Sorel. C. Puget, author of last year's successful *Ligne de cœur*, pictured in *Valentin, le désossé* a type of mystically disposed, disjoined night dancer of Montmartre. Marcel Piéchaud, in *Le favori* depicts family life as affected by internal strifes.

Plays with a symbolic meaning included Jules Romains's *Le Roi masqué*, which was produced at the Théâtre Pigalle and treats of a king who, tired of the ties of court formalities, escapes to Paris to enjoy association with an unsophisticated shop girl. There were also Jean Sarmet's *Le Plancher des vaches*, a comedy in which a young man who gives up a life of fancy free for a comfortable living and bourgeois ideals wants to return to his former life—away from the "plancher des vaches"; Marcel Achard's *Domino*, a clever farce in his characteristic style; and Charles Vildrac's *Le Jardinier de Samos*, a reminder of *Lysistrata*, in which a gardener, accused of doing nothing for his country in time of war, asserts his innocence and claims that he is entertaining the wives of the warriors while they are away. An amusing theory was presented in Francis de Croisset's *Il était une fois*, the purport of which was that an ugly woman is inherently wicked but when a beauty specialist has lifted her face, and so has remodeled her expression, she becomes the most suave of creatures. Edmond Sée's *Charité* treated the question, which is the stronger in love, Man or Woman? The answer is Man, but Woman knows how to take advantage even of Man's victory.

Freudianism and allied topics still prevailed. André Gide's *Œdipe-Roi* was presented in Brussels by the Pitoeffs. The subject of Lenormand's *Asie* was that of Medea in modern dress—a mother who kills her children out of hatred for her husband. In *Sortilèges*, by the same playwright, there was more of a leaning, however, toward occultism than toward Freudianism. The idea of reincarnation was treated by the famous author of *Maya* in *Bifur*; Reine, the heroine, reappears to her lover freed from the earthly woman in an exalted form. A. Villeroi offered *Sur l'autre rive*, the title of which—On the Other Shore—indicates the theme. E. Dujardin described his belief in *Le Retour éternel*—the cycles of Plato, ever recurring events in the world.

The Comédie Française presented a play written in 1919 by Paul Demasy, *La Tragédie d'Alexandre*, in which the author shows the young Alexander almost repudiated by his father Philip; when his turn to reign comes, however, he proves himself an even more brilliant warrior than his father, but his aim in achieving the conquest of the world is to establish a world empire of peace and universal brotherhood. François Porché, in *La Race errante*, a lofty play in verse, studied the problem of the Jewish race and presented two types—the Jew who cares only for money and is unscrupulous, and the cultured, intellectual Jew who uses his fine intelligence to uplift his race.

Paul Raynal, author of the much discussed *L'Arc de Triomphe de l'Étoile*, again stirred a great controversy by his play, *Au soleil de l'in-*

*stinot*. Denis Amiel, in *L'Age de fer*, dealt with the modern idea of a man running away from civilization to live what he considered a real life. Géraudy, another specialist in subtle love-psychology, earned a success at the Comédie Française with *Christine*, a story of two persons who love each other dearly and yet are not faithful to each other. Paul Morand's *Le Voyageur et l'amour*, a little two act play concerning parted lovers, was also well received at the Comédie Française. Henri Duvernois's *Jeanne* discussed the childless home. A spectacular historical play, *Le Château des papes*, by Richaüd, a young playwright, was given under the able direction of Dullin. Alfred Savoir, author of *Lui*, presented in New York in 1931, put on the stage another eccentric character in *La Margrave*, a woman ruler who stops at nothing, not even the most cruel deeds, to be absolute mistress in her domain.

A number of war or post-war plays were produced during the first months of the year. Among these were: G. Bernanos's *La Loi d'amour*; Alfred Savoir's *La Pâtissière*; Jean Guitton's *M. Durand, Français moyen*; Henri Decoin's *Hector*; and André-Paul Antoine's *La Prochaine*, a play with symbolic characters. The last reminds one of Obey's *Bataille de la Marne*, one of the successes at the close of 1930, in that it calls for the suppression of the political influences that lead to war.

Three regrettable failures were noted: René Benjamin's *Paris*; Maurice Rostand's *La jeune Fille espagnole*; and the adaptation to the stage of Boylesve's *Leçon d'amour dans un parc*. After a year of relative success Tristan Bernard was forced to close his theatre. To combat the *crise du théâtre*, as it has been called, Copeau declared that the best elements should combine and start a mass attack. Something along this line has been achieved by what is known as the *Cartel des quatre*—Jouvet, Dullin, Baty, and the Pitoeffs, four leading managers. Another move has been the joining of forces of the *Compagnie des quinze*, of Michel Saint-Denis, with Dullin of the *Atelier*; they have already presented one play, *Lanceurs de graine* by Jean Giono.

On the occasion of the 50th anniversary of *Les Corbeaux* several plays by Henri Becque were revived and many articles written about him. Maurice Barrès's *Un Jardin sur l'Oronte* was dramatized for opera, with music by Bachelet. Gaston Baty and René Chavance contributed an important book, *La Vie de l'art théâtral*, tracing theatrical art from its origin to modern times.

THE NOVEL. The awards of the most important *prix de roman* have already been noted. Among the best sellers of the year was Marcel Prévost's *Marie des Angoisses*, the scene of which is laid in the south of France in a conservative setting of Carlist noblemen; the heroine is the haughty Augustia, a mixture of mysticism and satanism. Paul Benoit, the newly elected Academician, published *L'Île verte*, in which a collector of birds on a lonely island of the Gironde is dragged to material and mental ruin by his passion. André Maurois's *Le Cercle de famille* showed a daughter as a very severe judge of some of her mother's actions, but later in life, having herself fallen a prey to similar temptations, she becomes reconciled to the memory of her mother. Edmond Jaloux's *La Balance faussée* displayed the discrete melancholy characteristic of the author. The following four novels won most approbation

from the press: Edouard Estaunié's *Madame Clapain*, the heroine of which appears to be a moral monster but who is revealed as a wonderfully pathetic model of self sacrifice; François Mauriac's *Naud de vipère*, in which a man who tortures his family over money matters turns out to be not the contemptible person the reader imagined; Frères Tharaud's *Les bien-aimées*, which is a rejuvenation of Flaubert's theme in *Education sentimentale*; and Duhamel's *Tel qu'en lui-même*—the end of Salavin.

Another exponent of gloomy writing, so frequent in French novels, is the American Julian Green, who for the past few years has seemed to try to outdo the French on their own ground. His novel *Epaves* (Waifs) indeed deserves that title, for it has not one sympathetic character and two especially bad ones, the weak hero and his wicked sister-in-law. Gaston Chérau's *L'Enfant du pays* related the dishonorable climbing of a young provincial in the capital. J. Kessel added another perfect story to his previous successes—*Partie carrée*, almost a *roman d'aventure* in the Orient. Roland Dorgelès's attempt in *Le Château de brouillards* to make the reader see once more the Paris of pre-war days was enthusiastically received and approved.

While Roger Martin du Gard announced his intention to discontinue his series of novels *Les Thibault*, Jacques de Lacretelle and Jules Romains announced stories that are to run into an indefinite number of volumes. In vol. i, *Sabine*, of Lacretelle's *Les Hauts-Points*, the story turns, as in last year's successful *Les Saturniens* by Schlumberger, on the ownership of a piece of land called Les Hauts-Points. The four volumes of Romains's series, to be known as *Les Hommes de bonne volonté*—I *Le 6 Octobre*, II *Le Crimé de Quinette*, III *Amours enfantines*, IV *Eros de Paris*—were written according to the formula of "Unanism," the literary school that Romains launched several years ago. René Behaine issued *Dans la foule horrible*, the eighth volume of his *Histoire d'une Société*. Henry Bordeaux continued his rôle of apostolate for the ethical life in *Sybille ou le dernier amour*, a story in which a woman imposes upon her husband a "mariage blanc," and *La Recevante*, a continuation of *Murder party* (see 1931 NEW INTERNATIONAL YEAR BOOK), in which the unfortunate heroine continues her life in Algeria and is once more brought face to face with the tragedy by a motion picture.

Jean Des Vignes Rouges, in *L'Enfant des vignes*, told the pathetic story of a child suffering from the actions of an alcoholic father; and A. t'Serstevens, in *L'Amour autour de la maison*, recounted how a girl was frustrated of her share of happiness by the jealousy of an elder sister. André Chamson won fresh success with *Héritages*, a novel written around an interesting idea: A young man has it in his power to bring prosperity to his native town and he is willing to do so, but because he is descended from the social class the plain people distrust him and his plans fail. Pierre Mac Orlan, in *Filles d'amour et ports d'Europe* and *Quartier réservé*, and Francis Carco, in *Traduit de l'argot*, resorted for locale to the underworld. The standard of the peasant novel was sustained by Ernest Péronchon's *Les Fils Madagascan*, a picturesque study of a rustic Jack of all trades; Charles Silvestre's *Pleine terre*; Marcel Aymé's *Le Puits aux images*; Gaston Chérau's *Celui du bois de Jaqueline*, the story of a poacher; Jean Giono's *Jean le bleu*, autobio-

graphical; and C. F. Ramuz's *Farinette ou fausse monnaie*.

This year again several successful novels were found among the so-called *roman populiste*. The *Prix populiste* went to Jean Pallu for *Port d'Escale*. E. Dabit, the laureate of 1931, offered *Villa-Oasis ou les faux bourgeois*; Marc Bernard, *Au secours*; R. Trinzus, *Le septième jour*; Leon Guilloux, *Hyménées*; and Céline Lothe, *La petite Bismuth*, all of which dealt with the struggling lower classes. Pierre Bost deserves particular reference for *Porte-malheur*, and André Thérive for *Anna*, which develops an uncommon episode in a woman's life. A. Breton, the Surrealist, published *Les Vases communicants*. Claude Aveline had a fine detective story in *La double mort de Frédéric Belot*, while André Maurois's *Le Côté de Chelsea* was a clever imitation of Proust's style.

Women produced their full share of novels. Lucienne Favre earned the *Grand Prix littéraire de l'Algérie* with *La Nœce orientale* (a work which dates back, however, to 1930). Isabelle Sandy's *Un Homme à la mer* retailed the danger of leaving one's native soil. Lucie Delarue-Mardrus's *L'autre Enfant* opposed to the child of the flesh the child by adoption who, by sympathy, seems the real one. Germaine Castro's *Passage* related the "passing" of a child in the life of a woman whom, after the child's death, life "passes" too. Colette's *Ces plaisirs*, defined "Ces plaisirs qu'on nomme à la légère physiques . . ." was one of the most startling books of the year but it treated its risque subject very cleverly.

To the list of authors interested in Jewish topics (Jean and Jérôme Tharaud, Eliassa Rhais, E. Fleg, R. Schwob, and Twerski, some years ago co-author with André Billy of *Épopée de Menachi Foigel*) the name of Guedy must be added. In collaboration with Twerski he published *Israël à New-York*, in which Perlstein, a poor immigrant, climbs up the social ladder. Maurice Rostand continued his pacifistic stories, adding to *L'Homme que j'ai tué* another striking story in *L'Homme que j'ai fait naître*—the man born from the marriage of a Frenchman with a German woman has to go to a new war, but the dead of the World War rise and separate the two armies.

IMPORTANT MEMOIRS, BIOGRAPHIES, AND HISTORICAL WORKS. Outstanding among memoirs of contemporaries published during the year were Barrès's admirable *Mes cahiers* (fourth and fifth volumes, the last); the Comtesse de Noailles's *Le Livre de ma vie*; Fr. Mauriac's *Commencements d'une vie*; Armen Ohanian's *Les Rires d'une charmeuse de serpents*, being the life of an Armenian dancer who won fame in western Europe.

A number of books on the World War, souvenirs and others, may be listed: A. Jamet's *La Guerre vue par un paysan*, which was much admired; R. Clozier's *Zouaves*; Alexandre Renaud's *Chair à canon, la simple vie de la guerre*; Jacques Meyer's *La Guerre, mon vieux*, which endeavors to take all heroism out of war; A. Grillet's *Fantassins*; P. Loevenbruck's *Bouches inutiles*; and Jean de Vallières's *Tendre Allemagne, Kavalier Sharnhorst*. In addition there were published two volumes of anthology, *La Guerre racontée par les combattants* (collected by A. Ducasse).

Among books on the borderland of history and literature were Henri-Robert's new series of *Grand procès de l'histoire* (dealing chiefly with the Bonaparte family); Lenotre's *Les derniers*

*Terroristes*; Duvivier's *La Masque de fer* (very well documented); Albéric Cahuet's *Sainte-Hélène, petite île* (less accurate, on the last days of Napoleon); and Lamandé's *La Vallée des miracles* (describing the valley of the Marne where Joan of Arc was born, the Fuite de Varennes stopped, and two battles of the World War fought). Julien Benda's *Esquisse d'une histoire des Français dans leur volonté d'être une nation* was primarily a philosophical work.

Octave Aubry continued his ascendancy as a biographer, offering *Le Roi de Rome* and *Napoléon III*. Other important biographies written by men of letters were: Franc-Nohain's *Saint-Louis* (crowned by the Academy); V. Giraud's *Saint-Vincent de Paul*; Comte de Saint-Aulaire's *Richelieu*; A. Maurois's *Voltaire*; and L. Barthou's *Danton*. Jean Jacques Brousson's *Les Fioretti de Jeanne d'Arc* consisted of miscellaneous stories from the legend of the heroine, collected while the author was secretary to Anatole France in 1908 as the latter was writing his *La Vie de Jeanne d'Arc*.

HISTORY OF LITERATURE AND CRITICISM. First in importance in the domain of the history of literature is the third volume of the part of Ferdinand Brunot's monumental *Histoire de la langue française* referring to the eighteenth century (prepared by one of his disciples, Alexis François). Other outstanding general works are: Charles Bally's *Linguistique générale et linguistique française* (the literary testament of the Geneva linguist); Oscar Bloch's long awaited *Dictionnaire étymologique de la langue française* (2 vols.); and Émile Chautard's *Vie étrange de l'argot*.

Other works may be arranged chronologically. Those pertaining to the sixteenth century included Plattard's *François Rabelais*, Villey's *Essais de Montaigne*, and Vianey's *Odes de Ronsard* (the two latter in collection "Grands Événements"); those pertaining to the seventeenth century, Alméras's *Roman comique* (same collection), Abbé Brémond's vol ix of *Histoire du sentiment religieux en France*, Brunschvicg's *Pascal*, Lancaster's two volumes on *Corneille* and G. Michaut's *Molière raconté par ceux qui l'ont vu*; and those pertaining to the eighteenth century, the very important Pierre Trahard's *Les Maîtres de la sensibilité au XVIII<sup>e</sup> siècle*, to be completed ultimately in four volumes, G. Lanson's *Montesquieu*, and Fusil's *La Contagion sacrée de J. J. Rousseau de 1778-1820*, the third volume in this author's naive attempt to besmirch a great name.

The nineteenth century was represented by R. Johanne's *Joseph de Maistre*; J. Marsan's *Stendhal*; Valléry-Radot's *Lamennais, le prêtre malgré lui*; Chinard's erudite edition of Chateaubriand's *Les Natchez*; Pierre Moreau's important *Le Classicisme des romantiques*; R. Bray's *Chronologie du romantisme*; Eugène Delacroix's *Journal, 1822-1862*; H. Peyre's *Louis Ménard, 1822-1901*, and *Bibliographie critique de l'Hellénisme, 1843-1870*. There were also André Chevrillon's remarkable *Taine* (2 vols., the author is related to the Taine family); J. Pommier's *La Mystique de Baudelaire*; G. Monly's *Vie prodigieuse de Sardou*; Marcel Sauvage's *Jules et Edmond de Goncourt*; L. Levaux's *Léon Bloy*; V. Giraud's *Brunetière*; Edmond Sée's *Porto-Riche*; L. Pierre-Guint, A. Gide, *vie et oeuvres*; R. Schwob's *Le vrai Drame d'André Gide*; and C. Delhorbe's *L'Affaire Dreyfus et les écrivains français*.

Among works treating of literature proper, in the specific sense of the phrase, were Pierre Mille's *Le Roman français*, not a work of erudition but full of valuable suggestions, and F. Gaiffe's *Le Rire et la scène française*, a course of lectures at the Sorbonne.

VARIOUS ITEMS. Maeterlinck continued his considerations of natural history in *Araignée de Verre*, which forms a companion volume to *Les Abeilles* and *Les Termites*. *L'Histoire du Saint-Simonisme*, by Sébastien Charléty, rector of the University of Paris, was hailed as one of the year's important achievements. The third and last volume of J. Pesquidoux's *Le Livre de la raison* was issued posthumously. The fashionable tailor, Paul Poiret, continued in *Revenez-y*, his memoirs *En habillant l'époque*.

The taste of Frenchmen for exoticism continued unabated. Jean d'Esme's *Les Maîtres de la Brousse*, Marc Chadourne's *Chine* (awarded the *Prix Gringoire*), Princesse Bibesco's *Croisade pour l'anémone* (about a trip through Palestine), J. J. Tharaud's *Paris-Saigon dans l'azur* (enthusiastic relation of an air-trip into the Far East), and R. Blanchet's *Hors des chemins battus*, were all successful books. A pitiable ignorance of America, however, was displayed in R. Aron and A. Dandier's *Le Cancer américain*.

Three books on Paris, full of fancy, were Pierre Champion's *Mon vieux quartier*, Léon-Paul Fargue's *D'après Paris* (witty sketches), and Marcel Sauvage's *La Fin de Paris*. Duhamel's *Querelles de famille* directed against his own country the same sort of criticism as he had directed against the United States in *Scènes de la vie future*. Pierre Hamp continued his remarkable description of French life in *La France travaille: Mœurs et métiers de fer*.

Some of the *Præz littéraires* not previously mentioned may be added here: *Renaissance*, Léon-Paul Fargue; *Intercité*, Simonne Ratel (for *La Maison des Bories*); *Littérature coloniale*, M. Delavignette (for *Paysans noirs*); *des Vikings*, H. de Monfried (for *Aventures de mer*); *Vignes de France*, Paul Fort and Antoine Perbosc; *Roman d'aventure*, J. Toussaint Sama (for *L'horrible Mort de Miss Gildrich*); *des Enfants écrivains*, Nicole Roubakine, 11 years old (for *Le Coucou, le rossignol, et l'âne*).

Elections brought to the Academy Abel Bonnard, Paul Benoit, and the historian Lenôtre. Francis Mauriac was elected president of the Société des Gens de Lettres.

NECROLOGY. The following deaths occurred: Gyp (Comtesse de Martel de Janville, author of *Le Mariage de Chiffon*) at 81; the Belgian poet, Max Elskamp; the actor, Maurice de Féraudy (creator of the part of Isidore Lechat); and the following members of the French Academy, Charles Le Goffic, René Bazin, and Eugène Brieux.

**FRENCH SOMALI (sô-mâ'lê) COAST**, or FRENCH SOMALILAND. A French colony in East Africa on the Gulf of Aden between Eritrea and British Somaliland. Estimated area, 5790 square miles; population in 1931, 69,362, including about 1362 Europeans. The port of Djibouti, the capital, had 9414 inhabitants in 1928. The coast fisheries, salt mines, and inland trade are the chief sources of livelihood. Trade in 1930, most of it in transit to or from Ethiopia (q.v.) consisted of imports, 301,891,000, francs; exports, 278,152,000 francs (1 franc = \$0.0392 at par). In 1930 the budget was balanced at 18,036,700

frances; and 830 steamers aggregating 3,470,800 tons entered the ports. There is a railway from Djibouti to Addis Ababa, the Ethiopian capital, a distance of 485 miles. There are about 56 miles of railway in the French Somali Coast. The colony is under a governor assisted by an administrative council. Governor in 1932, M. Chapon-Baissac (appointed in 1924).

**FRENCH SUDAN.** A French colony forming part of French West Africa. The government is administered by a lieutenant-governor under the governor-general of French West Africa. Lieutenant-Governor in 1932, M. Fousset (appointed in 1931). See FRENCH WEST AFRICA.

**FRENCH WEST AFRICA.** An African colonial possession of France made up of the Atlantic and interior colonies shown, with areas and population, in the accompanying table.

Colony	Area (sq. mi.)	Population (1931 census)	Capital
Dahomey . . . . .	41,802	1,112,000	Porto Novo
Dakar, Circle of	61	54,000	Dakar
French Guinea . .	89,436	2,237,000	Conakry
French Sudan . .	860,331	2,856,000	Bamako
Ivory Coast . . . .	121,590	1,856,000	Bingerville
Mauritania . . . .	847,400	324,000	Saint Louis
Niger, Colony of	463,200	1,543,000	Niamey
Senegal . . . . .	74,112	1,584,000	Saint Louis
Upper Volta * . .	142,320	3,000,000	Ouagadougou
<b>FRENCH WEST AFRICA . . . . .</b>	<b>1,640,252</b>	<b>14,574,000</b>	<b>Dakar</b>

\* The colony of Upper Volta was to be partitioned and combined with the adjacent colonies of the Niger, French Sudan, and Ivory Coast, according to a decree signed by the President of France on Sept. 5, 1932, effective Jan. 1, 1933.

The populations of the chief towns (1931 census) were: Dakar, 42,000; St. Louis, 30,000; Porto Novo, 27,000; Bamako, 20,000. The chief tribes are the Bambaras, and Mandingoes in the Sudan; the Oulofas in Senegal; the Peuhls Faulbés in the Sudan, Upper Volta, Niger, and Guinea; the Mossi in the Upper Volta; and the Kroumen on the Ivory Coast.

**PRODUCTION, ETC.** Cacao, cotton, and groundnuts are the principal agricultural products, others being palm kernels, palm oil, gums, and crude rubber. Hardwoods and hides are also produced, together with such native crops as millet, maize, rice. Stock raising is extensively carried on. Imports in 1930 were valued at 1,457,470,723 francs and exports at 1,169,181,417 francs (1 franc equals \$0.0392 at par). France supplied 700,860,291 francs of the imports and took 639,140,949 francs of the exports.

The budget for 1930 balanced at a total of 1,000,809,284 francs, of which 319,019,000 francs constituted the general budget for French West Africa, 515,306,284 francs the aggregate of local budgets, and 166,484,000 francs the supplementary budgets. Railway lines in operation (Jan. 1, 1931) aggregated 2090 miles, with 631 miles under construction. There were 20,580 miles of telegraph line. A total of 22,898 vessels aggregating 20,777,081 tons entered and cleared the ports in 1930.

**GOVERNMENT.** A governor-general, assisted by a council, administers the entire territory. Each colony is under a lieutenant-governor, Dakar and Dependencies being under a governor of colonies, all subordinate to the governor-general. A military force of 16,000 men, including 3000 Europeans, is maintained in peace time. Governor-General in 1932, M. J. Brévié, appointed 1930.

**FRIEDSAM COLLECTION.** See ART MUSEUMS.

**FRIENDLY ISLANDS.** See TONGA.

**FRIENDS, RELIGIOUS SOCIETY OF.** A mystical religious sect which originated in England in the middle of the seventeenth century. The founder of the society was George Fox who visited America in 1672. The first Yearly Meeting in the United States was held in Newport, R. I., in 1661 and has been continued under the name of New England Yearly Meeting. Others established within the next 40 years were the Baltimore, Philadelphia, New York, and North Carolina Yearly Meetings; they are composed of quarterly and monthly meetings having one or more congregations. In the nineteenth century other meetings were formed as migration moved westward.

**FIVE YEARS' MEETING.** In 1902 the largest body of the Religious Society of Friends, known as the Orthodox Group organized the Five Years' Meeting. This organization meets as a delegate body every five years and in 1932 consisted of 12 Yearly Meetings, with a membership of approximately 80,000. Its headquarters are in Richmond, Ind. The work of the various departments, such as missions, peace, prohibition and public morals, religious education, is under the direction of executive committees and secretaries of boards. The Five Years' Meeting also maintains seven colleges for higher education: Earlham in Richmond, Ind.; Penn in Oskaloosa, Iowa; Guilford in Guilford, N. C.; Wilmington in Wilmington, Ohio; Whittier in Whittier, Calif.; Nebraska Central in Central City, Nebr.; and Friends University in Wichita, Kans. Haverford College in Haverford, Pa., is maintained by the Philadelphia Yearly Meeting and Pacific College in Newberg, Ore., by the Oregon Yearly Meeting. The latter bodies, however, and the Ohio Yearly Meeting are not a part of the Five Years' Meeting. In 1932 the membership of the Oregon Yearly Meeting was 3089; of the Ohio Yearly Meeting 5000; and of the Philadelphia Yearly Meeting (Orthodox), approximately 4700. *The American Friend*, a weekly religious journal, is published at headquarters, as is also literature for the Bible Schools of the Five Years' Meeting.

**LIBERAL BRANCH.** This branch was formed in 1827 as the result of a separation which centered around the doctrinal issues of the day and with which the name of Elias Hicks is associated. The Liberal Branch includes seven Yearly Meetings federated in the Friends' General Conference, which meets in even numbered years and conducts work in religious education, social service, and advancement of Friends' principles. The society emphasizes the freedom of the individual to follow the voice of God in his own soul rather than any external or church authority. The membership in 1932 was 16,384, and there were 135 meetings. Publications include the weekly periodical, *Friends' Intelligencer*, and a monthly magazine for children, *Scattered Seeds*. The society conducts several secondary schools, and Swarthmore College in Swarthmore, Pa., was founded by it. It coöperates with other branches of Friends in supporting the American Friends' Service Committee for international understanding and service in this country and abroad, and in Pendle Hill at Wallingford, Pa., a Quaker

educational institution for graduate study in religion and social science.

**FUEL.** See **COAL; PETROLEUM; NATURAL GAS; BOILERS; INTERNAL COMBUSTION ENGINES.**

**FUERTES, JAMES HILLHOUSE.** An American hydraulic and sanitary engineer, died in Brooklyn, N. Y., Jan. 27, 1932. He was born in Ponce, Puerto Rico, Aug. 10, 1863, son of Prof. E. A. Fuertes, and was graduated from Cornell University in 1883. His early career was devoted to railroad engineering in the West and Southwest. He later designed and constructed various works for the drainage, sewage, water purification, and water supply of cities in Brazil, Canada, and the United States. Among the cities whose sanitary condition he helped improve were Santos, Brazil, and Harrisburg, Pa. He was a member of the commissions which reported on the water supply of New York City, Philadelphia, and Winnipeg, Man., and constructed gravity water-supply works for Lynchburg, Va., and Cumberland, Md. He was the author of *Water and Public Health* (1897), and *Water Filtration Works* (1901).

**GADSKI, gad'ské, (TAUSCHER), JOHANNA.** A German dramatic soprano, died in Berlin, Feb. 22, 1932. She was born in Anclam, Prussia, June 15, 1872, and was educated in Stettin, where she studied voice under Mme. Schroeder-Sgaloupka. At the age of 17 she made her debut as Undine in Lortzing's opera of that name at Kroll's Theatre in Berlin and was engaged as prima donna for five seasons. In 1892 she married Hans Tauscher, an officer in the Prussian army. After making a concert tour of Germany and the Netherlands and singing at the Royal Opera House in Berlin, she came to the United States in 1895, having been engaged by Walter Damrosch to sing the principal Wagnerian rôles with his opera company. Her success led to her engagement in 1898 as a member of the Metropolitan Opera Company, New York City. She also sang at Covent Garden, London, and at the Wagnerian festival at Bayreuth. In 1917 she was obliged to resign from the Metropolitan Opera Company, where she had been a prime favorite, on account of the utterance of pro-German sentiments. Aside from a few concert appearances in New York she did not sing in American cities again until 1929 when she was engaged as prima donna of the German Grand Opera Company. At the time of her death she was planning to return to the United States in the fall of 1932 at the head of her own opera company. Her repertoire included leading soprano parts in all the standard operas, such as *Aida*, *Don Giovanni*, *Cavalleria Rusticana*, and *Carmen*, but she was especially effective in Wagnerian operas where her commanding presence, beautiful and powerful voice, and dramatic intensity made her one of the greatest interpreters.

**GAMBIA.** A British Crown colony and protectorate in West Africa bounded on all land sides by the French colony of Senegal in French West Africa. The colony proper is St. Mary's island at the mouth of the Gambia River, with an area of 4 square miles and a population in 1931 of 14,370. Bathurst is the capital. The protectorate occupies about six miles on each side of the river for a distance inland of about 200 miles and has an area of 4130 square miles and a population in 1931 of 185,150.

In 1930 imports (including specie) totaled £542,760; exports (including specie) £908,643. Revenue amounted to £216,736 and expenditure to £253,228. The public debt on Jan. 1, 1931 was £13,721. Vessels to the number of 572, with a tonnage of 1,239,151 tons, entered and cleared in 1930. The colony is administered by a governor assisted by an executive, and a nominated legislative council. Governor in 1932, H. R. Palmer.

**GANDHI, MOHANDAS KARAMCHAND.** See **INDIA under History.**

**GAONA, JUAN BAUTISTA.** A Paraguayan statesman, died May 18, 1932, in Asunción, where he was born in 1845. Educated privately, he entered finance, becoming in 1893 president of the Mercantile Bank of Paraguay, a post which he held for more than 25 years. He served also on the board of directors of the National Bank, of the Bank of the River Platte, and of important corporations, including the Industrial Paraguayo. In 1905 he was elected President of Paraguay, and in 1911 Vice-President. He was also a member of the Senate from 1909 to 1911 and again from 1912 to 1919, serving during the latter term as head of the Liberal party.

**GARBAGE AND REFUSE DISPOSAL.** Unprecedented activity in the construction of incinerators for the disposal of garbage and other city refuse marked the year. After months of postponement due to its financial condition, *New York City* at last made headway on the programme of incineration construction ordered by the U. S. Supreme Court as a result of the lawsuit brought by the State of New Jersey to prevent the pollution of the beaches of its seaside resorts from refuse dumped at sea by New York City. (See 1931 YEAR BOOK.) The first stage of this programme called for four large incinerators to be ready for use in 1933, but local complications prevented getting more than two under way. Contracts for these were let on November 18, each plant to consist of five furnaces with a capacity of 150 tons each, at a contract price of \$1,431,000 for both. Two incinerators for the rubbish from a population of 620,000 in *Washington, D. C.*, with a combined capacity of 595 tons a day, were completed during the year. Contrary to usual practice, complete detailed plans for these incinerators were drawn by engineers employed by the city (District of Columbia) instead of having each bidder submit his own plans with his bid. This was in accordance with a ruling by a government attorney that bids on plans drawn by each bidder would be illegal because there could be no true competition unless all bids were upon the same plan. (See 1931 YEAR BOOK for further history of the project, and *Engineering News-Record*, Nov. 10, 1932, for a description of the furnaces.) *Baltimore* let a contract for the construction and also for ten years' operation of a 600-ton-per-day incinerator for garbage and rubbish, the plant to become the

property of the city at the expiration of the contract (see *Engineering News-Record*, Aug. 25, 1932). This unusual procedure was due in part to local conditions, including the wish of the city to avoid capital outlay. For many years the garbage of Baltimore has been disposed of by contract, by the reduction process, except for a short period when it was fed to hogs. Baltimore rubbish has been incinerated for several years. At the close of the year *Detroit* advertised for bids (to be received Jan. 18, 1933) for four incinerators to burn garbage and rubbish, the garbage, like that of Baltimore, having been disposed of by means of a privately-owned reduction plant. There will be two 600-ton incinerators, and one 400- and one 200-ton incinerator. The city will lease the sites to the contractor. After operating the plants for seven years they will, as at Baltimore, become the property of the city. Across the continent, *San Francisco* is still wrestling with the problem of garbage and refuse disposal, as it has been for many years. The city has been under a suspended injunction to shut down an old incinerator leased to an association of scavengers which collects garbage on a utility franchise plan, householders paying for the service. For a summary of the history of garbage disposal at San Francisco, see *Engineering News-Record*, Nov. 14, 1929, and for the alternative projects to be submitted to popular vote, see the same journal for Oct. 20, 1932.

**GARDENS.** See HORTICULTURE.

**GARRISON, LINDLEY MILLER.** An American lawyer and cabinet officer, died in Sea Bright, N. J., Oct. 18, 1932. He was born in Camden, N. J., Nov. 28, 1864, attended the Protestant Episcopal Academy (Philadelphia), and Phillips Exeter Academy, and Harvard University, and was graduated with the LL.B. degree from the University of Pennsylvania in 1885. Following his admission to the Pennsylvania bar in 1886, he practiced in Philadelphia, being associated with Redding, Jones & Carson. Two years later he was admitted to the New Jersey bar and practiced in Camden, N. J., until 1898 when he became a member of the law firm of Garrison, McManus & Enright in Jersey City. He was appointed vice-chancellor of New Jersey in 1904 and again in 1911. In 1913 he was made Secretary of War in President Wilson's cabinet. Convinced of the inadequacy of the nation's defenses, he inaugurated a plan to provide a reserve of commissioned officers by training college and university students, and later business men, at summer camps, such as Plattsburg, N. Y., Fort Sheridan, Ill., and San Francisco, Calif. Also, at the request of the president and with the assistance of the general staff, he prepared a comprehensive plan for increasing the military forces of the United States. This plan provided for a regular army of 140,000 men, a national guard force of 130,000, and a "continental" army of 400,000. Enlistment in the latter was to be for six years, the first three years to be devoted to drilling; during the second three years the recruits would be subject to call at any time. The plan, however, met with the opposition of the House military affairs committee, which favored a partly federalized National Guard. President Wilson failed also to give the plan the assurance of support which Mr. Garrison had been led to expect, and he accordingly resigned in February, 1916. He resumed his law practice in New York City with the firm of Hornblower, Miller, Potter & Earle,

later Hornblower, Miller & Garrison, his most distinguished service being the reorganization of the Brooklyn Rapid Transit Co., for which he was appointed receiver in 1918. He retired in 1930.

**GAS, MANUFACTURED.** In all lines but one, during the year 1932, the consumption of manufactured gas declined, though in comparison with other fuels the decline was relatively slight. The total consumption for the year, according to preliminary estimates of the Statistical Department of the American Gas Association, was 372,283,900,000 cu. ft., as against 391,197,300,000 cu. ft. in 1931, or a decrease of 4.8 per cent. Bituminous coal, however, declined 20 per cent in production for the same period; anthracite production dropped 17 per cent; crude petroleum was 8 per cent below 1931; coke declined 35 per cent; and the production of electric power was 10 per cent less than in 1931.

As was to be expected, the greatest decrease in the consumption of manufactured gas was among the industrial and commercial users. Although the number of such customers showed little reduction—487,900 in 1931, and 483,500 in 1932—the gas requirements dropped by 12.6 per cent, from 92,248,300,000 cu. ft. in 1931 to 80,625,000,000 cu. ft. in 1932. Revenue from these sources also declined in the same ratio, from \$82,297,500 in 1931 to \$71,928,000 in 1932. The decline in the number of domestic users, who normally take about three-fourths of the gas that is manufactured, was only 3.5 per cent for the year; dropping from 9,848,800 in 1931 to 9,504,100 in 1932; their requirements, however, showed a net reduction of but 2.8 per cent, or 269,220,300,000 cu. ft. in 1932, as against 276,975,600,000 cu. ft. in 1931. Revenue from these users dropped to \$324,695,200 in 1932 (\$335,428,900 in 1931).

Although relatively small, an increase of 11 per cent in the number of users of manufactured gas for house heating was noted, totaling 65,200 at the end of the year. The gas requirements of such consumers amounted to 20,445,600,000 cu. ft. for the year, or 2.7 per cent more than in the preceding year. However, the concessions in price for this extension of service resulted in a drop of 5.2 per cent in revenue, or \$15,226,300 in 1932, from \$16,061,500 in 1931. Total revenues from all sources amounted to \$413,248,200 as against \$435,390,100 in 1931, or a total reduction of 5.1 per cent.

**GAS, NATURAL.** The proportionate use of natural gas in 1932 dropped to a larger degree than did the use of manufactured gas; the latter showed a net decrease of but 4.8 per cent over 1931, while natural gas dropped 16 per cent, or from a total of 1,677,835,000,000 cu. ft. in 1931 to 1,410,000,000,000 cu. ft. in 1932, according to preliminary estimates of the Statistical Department of the American Gas Association. Although the reduction of 15.1 per cent in industrial sales, dropping to 455,000,000,000 cu. ft., accounted for a large part of the total decrease, the greatest consumption of natural gas has been in the manufacture of carbon black and in field use. In these non-utility sales the consumption declined 21.7 per cent, or from 767,761,000,000 cu. ft. in 1931 to 601,000,000,000 cu. ft., in 1932. Domestic sales showed a smaller decline, dropping to 271,000,000,000 cu. ft. in 1932 from 288,959,000,000 cu. ft. in 1931; and the least change occurred in the field of commercial sales which

showed an actual increase of almost 1 per cent in customers at the end of the year, although a decline in sales of about 2.8 per cent, or from 85,419,000,000 cu. ft. in 1931 to 83,000,000,000 cu. ft. in 1932.

Revenues from all consumers dropped by about 10.9 per cent from the preceding year. In 1931 total revenues amounted to \$383,730,000; in 1932 \$342,000,000. About one-fourth of the reduction was due to the large curtailment in the non-utility sales for carbon black and field use, and about one-half to the reduced demands of industry. Reductions in domestic sales accounted for most of the remaining fourth.

The closing month of the year showed a slight, almost 2 per cent, increase in sales for the 206 natural gas companies reporting to the American Gas Association over the sales for the corresponding month in 1931. The highest percentage of increase was in commercial sales, with a total of 5,836,182,000 cu. ft. as against 5,107,564,000 cu. ft. for December, 1931; but the highest volume of sales was domestic, including house heating, which increased from 31,397,013,000 cu. ft. for December, 1931, to 32,568,061,000 cu. ft., for December, 1932. There was also a slight increase in industrial sales. The improvement was general throughout the territories reporting. In New York, the improvement was solely in industrial sales; in Pennsylvania and West Virginia, domestic and commercial; in Ohio and Louisiana, domestic, commercial, and main line industrial; in Kansas, domestic, commercial, and industrial; in Oklahoma, main line industrial; in Texas, domestic; and in California, though the total of sales for December decreased from December of the previous year, commercial and industrial sales showed increases of 6 and 3 per cent respectively.

Exports of natural gas to Canada and Mexico, according to the U. S. Bureau of Mines, increased in 1931, totaling 2,231,000,000 cu. ft. of which 74,000,000 cu. ft. went to Canada. Imports into the United States (Montana) from western Canada increased from 21,000,000 cu. ft. in 1930 to 44,000,000 cu. ft. in 1931. The natural gas produced in 1931 had a total value at the wells of \$117,505,000 and at points of consumption of \$392,816,000.

Of the total consumption, production plus imports minus exports, of natural gas in 1931, 571,305,000,000 cu. ft., or 34 per cent, was used for field purposes; 380,897,000,000 cu. ft., or 23 per cent, was used for domestic and commercial purposes; 195,386,000,000 cu. ft., or 12 per cent, was burned in the manufacture of carbon black; 138,343,000,000 cu. ft., or 8 per cent, was utilized as fuel at electric public-utility power plants; 75,584,000,000 cu. ft., or 4 per cent, was utilized as fuel at petroleum refineries, leaving 322,700,000,000 cu. ft., or 19 per cent, used for other industrial purposes. In comparison with 1930, these data represent gains in the proportions distributed for domestic and commercial consumption, electric public-utility power plants and general industrial uses, at the expense of the proportions distributed for field and refinery purposes and for the manufacture of carbon black.

Contrary to popular belief, the use of natural gas for field purposes constitutes the largest item in consumption. Field work fell to a low ebb in 1931—for example, only 12,432 wells were completed against 21,240 in 1930—with the result that the quantity of natural gas used for

such purposes declined 21 per cent in 1931. Overproduction, and low prices resultant therefrom, forced the producers of carbon black to restrict their operations in 1931. The demand for natural gas from this source accordingly declined from 266,625,000,000 cu. ft. to 195,396,000,000 cu. ft., or 27 per cent. The consumption of natural gas as fuel at petroleum refineries has declined steadily in recent years as many refiners have found it cheaper to utilize the fuels made at their plants—fuel oil, refinery gas, and coke—rather than to buy natural gas from outside companies. In 1931 the consumption of natural gas as refinery fuel totaled 75,548,000,000 cu. ft., a decline of 24 per cent from the 1930 total.

According to the U. S. Geological Survey, the consumption of natural gas at electric public-utility power plants in 1931 amounted to 138,343,000,000 cu. ft., an increase of 15 per cent over 1930. This class of consumption has become an important factor in the industry as its proportion of the total consumption has risen from 3.6 per cent in 1921 to 8.2 per cent in 1931. The consumption of natural gas for general industrial purposes, exclusive of consumption at carbon-black plants, refineries, and electric public-utility power plants, totaled 322,700,000,000 cu. ft., in 1931, a decline of 9 per cent from 1930. This decrease undoubtedly resulted from a general slowing down of industrial activity.

Texas continued to outrank the other States both in the production and consumption of natural gas. Ohio ranked first in the quantity used for domestic and commercial consumption; Oklahoma, in field use; Texas, in the utilization at carbon-black plants and at refineries; California in use at electric public-utility power plants. California displaced Oklahoma as the second-ranking natural gas producing State in 1931; this change was predicted several years ago. The number of producing gas wells, as of Dec. 31, 1931, totaled 55,756, an increase of 736 over 1930. According to the *Oil & Gas Journal*, the number of gas wells completed in 1931 exclusive of California totaled 1985, from which it follows that 1249 wells were abandoned or disconnected in 1931. This was considerably below abandonments in 1930, reflecting a firm market in those States like Pennsylvania which have a large number of small wells.

**GASOLINE.** See PETROLEUM.

**GAYLEY, CHARLES MILLS.** An American author, died in Berkeley, Calif., July 26, 1932. He was born in Shanghai, China, Feb. 22, 1858, and was educated in Blackheath, England, at the Royal Academic Institution in Belfast, and at the University of Michigan, being graduated from the latter in 1878. He also attended the Universities of Giessen and Halle. At the University of Michigan he taught Latin from 1880 to 1886 and English from 1887 to 1889. He then became professor of English at the University of California, where he remained until 1923. He was also dean of faculties during 1918-20 and co-administrator of the presidency in 1919. During 1924-25 he was director of the American University Union in London. His publications, the more important of which deal with the history and criticism of the English drama, include: *Classic Myths in English Literature* (1893); *English in Secondary Schools* (1894); *Representative English Comedies* (vol. i, 1903;

vol. ii, 1913; vol. iii, 1914), a valuable collection of texts and notes by various scholars; *The Star of Bethlehem* (1904); *Songs of California* (ed., 1905); *Plays of Our Forefathers* (1907); *Idols of Education* (1910); *Beaumont the Dramatist* (1913); and *Shakespeare and the Founders of American Liberty* (1917). With F. N. Scott he wrote *A Guide to the Literature of Aesthetics* (1890), *Methods and Materials of Literary Criticism* (1899); with F. N. Scott and A. A. Stanley, *Songs of the Yellow and Blue* (1889); with M. C. Flaherty, *The Poetry of the People* (1903); with C. C. Young, *The Principles and Progress of English Poetry* (1904); and with B. P. Kufitz, *Lyric, Epic, and Allied Forms of Poetry* (1919).

**GEBEL DISTRICT.** See CYRENAICA.

**GEDDES, SIR PATRICK.** A British biologist and educator, died in Montpellier, France, Apr. 16, 1932. Born in Perth, Scotland, in 1854, he was educated at University College, London, the University of Edinburgh, and the Sorbonne. He was successively demonstrator of physiology at University College, London, of zoology at the University of Aberdeen, and of botany at the University of Edinburgh. After acting as lecturer on natural history at the Edinburgh school of medicine, he became in 1883 professor of botany at University College, Dundee (St. Andrews University). In 1919 he became professor of sociology and civics at the University of Bombay, and at the time of his death was director of the Scots College at Montpellier University. One of the important projects which he sponsored was that of the university halls at Edinburgh and Chelsea which served as a beginning of collegiate life. He was a pioneer in city planning and showed great interest in municipal art and education and other forms of civic betterment. He also became director of the printing establishment Geddes and Colleagues, which was interested chiefly in the publication of works of Celtic literature, and designed the Hebrew University building in Jerusalem. His publications include: *The Evolution of Sea* (Outlines of General Biology, with Sir J. Arthur Thomson, 2 vols., 1889); *Chapters in Modern Botany* (1893); *A Study in City Development* (1904); *Cities in Evolution* (1913); *The Life and Work of Sir Jagadis C. Bose* (1920); *The Coming Polity* (with V. V. Branford, 1917); *Ideas at War* (with Gilbert Slater, 1917); and *Our Social Inheritance* (with V. V. Branford, 1919). He was knighted in 1932.

**GENERATORS.** See DYNAMO ELECTRIC MACHINERY.

**GENETICS.** See BOTANY; ZOÖLOGY.

**GEOGRAPHICAL SOCIETY, AMERICAN.**

The oldest geographical society in the United States, founded in 1852, to collect and disseminate geographical information by discussion, lectures, and publications; to establish in the chief city of the United States a place where there may be obtained accurate information concerning every part of the globe; and to encourage such exploring expeditions as seem likely to result in valuable discoveries in geography and related sciences. Within recent years the society has taken an active part in the encouragement of exploration, the scientific work of Sir Hubert Wilkins in the Arctic and Antarctic and of Rear Admiral Richard E. Byrd in the Antarctic having been carried out under its auspices.

The society's periodical is the *Geographical Review*, a quarterly, in which appear original articles and notes dealing with exploration and

geographical research and reviews of the more significant geographical books. The maps, books, and pamphlets issued by the society fall into six series: research series, comprising specialized monographs; special publications, specialized monographs published in a larger format and also certain works having a more general appeal; library series, devoted primarily to the collections of the society; outing series, including tramps' guides entitled *The Palisades Interstate Park* and *New York Walk Book*; a map of Hispanic America published in conformity with the International Millionth Map of the World and accompanied by geographical monographs (this map will consist of 100 sheets, of which 42 have been completed); and oriental explorations and studies, comprising six volumes on the explorations of Prof. Alois Musil in northern Arabia.

The society maintains a geographical library and sponsors six regular lectures annually by distinguished explorers or geographers. Contributions to the development of geographical science and exploration are recognized in the society's election to honorary and corresponding memberships and in the bestowal of medals. The honorary members elected during the past year were Miss Louise A. Boyd of San Francisco, Field-Marshal Lord Allenby of Megiddo and Felixstowe, and Prof. Harry Clifton Heaton of New York University. The Cullum Geographical Medal, founded by Maj.-Gen. George W. Cullum to be awarded to those "who distinguish themselves by geographical discoveries, or in the advancement of geographical science," was awarded to Prof. Mark Jefferson of Ypsilanti, Mich., one of America's outstanding geographers, and to Bertram Thomas, the British orientalist, for his explorations in southern Arabia.

During 1932 the society's school of surveying was reorganized and will be continued as a part of a larger department of technical training. The society participated in the work of the Yale North India Expedition. Under the leadership of Dr. Hellmut de Terra this expedition has undertaken geographical, geological, biological, and ethnographical explorations of many hundreds of square miles of unexplored country north of the Himalayas in the eastern Karakoram and on the bordering plateau region of Tibet.

Three important projects of cooperative research were brought to completion. The first was a series of studies, made under the joint auspices of the Social Science Research Council and the society, of the problems of settlement in the regions of the world where there are still pioneer frontiers (Canada, Australia, South America, southern Africa, northern Asia). The results of the investigations of 26 specialists were published in a volume entitled *Pioneer Settlement*. In collaboration with the Carnegie Institution of Washington the society published a monumental *Atlas of the Historical Geography of the United States*, to the preparation of which nearly 20 years of research have been devoted. Geographical, social, economic, and governmental studies of New England, carried out by 27 specialists, were also concluded in 1932 and were to be published under the title, *New England's Prospect*, 1933.

The president of the society in 1932 was John H. Finley, LL.D.; and the director, Isaiah Bowman, Ph.D. Headquarters are at Broadway and 156th Street, New York City.

**GEOGRAPHIC SOCIETY, NATIONAL.** An organization for "the increase and diffusion of geographic knowledge," founded in 1888. During 1932 the field work included the concluding chapters of the Citroen-Haardt Trans-Asiatic Expedition, begun in 1931, in which Dr. Maynard Owen Williams participated as the representative of the National Geographic Society. The expedition successfully reached Peiping on Feb. 12, 1932. Led by Georges-Marie Haardt (q.v.), the party won its way, in 314½ days, from the Mediterranean to the Yellow Sea along a 7370-mile trail. All but 700 miles—from Nomal, near Gilgit, to Aqsu—were covered by track-type motor cars. Coming from Beirut, the "Pamir Group" joined with the "China Group" at Aqsu Oct. 8, 1931. Each of the groups numbered about 30 men, of which 11 made the entire trip. Studies were made in geology, botany, zoology, and archaeology, and complete photographic and sound-motion-picture records were brought back.

The expedition was the first party to follow the Marco Polo trail since the Middle Ages. The proposed return by way of Indo-China, Siam, India, Persia, and Syria was abandoned, however, because of the death of M. Haardt in Hong Kong Mar. 16, 1932. The lateness of the season necessitated also the crossing of Baluchistan and Iraq in midsummer, but important studies were made in Indo-China, and a series of portraits was made by Alexandre Iacovlev, showing men and women of many races and types of civilization. Scientific reports are being prepared by Père Teilhard de Chardin, M. Hackin, M. Raymond, and others, while the popular account by Dr. Williams has been published in the *National Geographic Magazine*, as well as radio dispatches in hundreds of newspapers. Chosen from more than 20 miles of records, a sound-cinema film soon is to appear throughout the world.

The eclipse expedition sent into the field by the society, with the U. S. Army Air Corps participating, observed the 1932 total eclipse of the sun from the ground and from the air and secured the first photographs of the moon's shadow from a high altitude. These pictures, published in the society's magazine for November, have remarkable interest and scientific value. In the ground party were Albert H. Bumstead, chief of the cartographic department of the society and inventor of the sun compass which helped pilot Admiral Richard E. Byrd to the poles; Charles Martin, chief of the society's photographic laboratories; and J. R. Hildebrand, chief of school service. The ground work, concerned particularly with the making of color photographs of the direct eclipse phenomena, for which Mr. Martin had developed special screens and emulsions that have advanced the art of rapid color photography, was accomplished at Mount Black Cap, North Conway, N. H. A battery of cameras, some with telescopic lenses, was in constant action through totality.

Flying three miles higher than any other plane observing the eclipse, and more than five miles above the earth, Capt. Albert W. Stevens and Lieut. Charles D. McAllister, in charge of aerial photographic work of the expedition, watched for a great distance the spectacle of the dark shadow of the moon moving over the tops of clouds, that were two miles above the earth and three miles beneath the aviators, and found that the cloud masses formed an effective screen for the shadow. Captain Stevens made exposures of the ap-

proaching shadow at five-second intervals with a short-focus, wide-angle lens. He reported that the entire corona sprang into sight very much as if someone had snapped an electric switch, when totality was reached. He carried an apparatus consisting of a very sensitive electroscope for measuring the intensity of cosmic rays, with a device for recording its readings photographically. The recording was started twenty minutes before totality.

A special gold medal was awarded by the society to Amelia Earhart, the first woman to achieve a solo trans-Atlantic flight. The work of the society, in the realization of its chartered object of diffusing geographic knowledge, was continued along the lines of previous years. Maps of the world, Antarctica, and of the travels of George Washington were published during the year, and one of the United States was in preparation. The chief activity of the society continued to be the publication of the *National Geographic Magazine*, which is distributed to the 1,100,000 members of the society.

**GEOGRAPHY.** See EXPLORATION; POLAR RESEARCH; ANTHROPOLOGY.

**GEOLOGICAL CONGRESS, INTERNATIONAL.** See GEOLOGY.

**GEOLOGICAL SOCIETY OF AMERICA.** See GEOLOGY.

**GEOLOGY.** Much of the major activity in geology during the past year, at least in the United States of America, has centered about preparing for the 16th International Geological Congress which will be held in the United States during the summer of 1933. The meetings will be in Washington, D. C., and the field excursions will visit most of the known geological features of the country of sufficient importance to interest foreign visitors. The information necessary to make these excursions profitable has been collected and printed in the form of guide books. One important feature of this preparation is that it has focused attention upon the metamorphic terrane of eastern New York State and western New England. This battlefield of early American geologists has been neglected for many years except by a few investigators.

The continued depression materially affected the amount of geological explorations or prospecting financed by mining, petroleum, and engineering companies and, to a lesser extent, the research prosecuted by government bureaus, both State and Federal.

So far, however, the literature of the science has benefited rather than suffered from this fact. The following article reviews the activity of the societies, presents abstracts of some of the new publications and mentions others.

**SOCIETIES.** The Geological Society of America, The Paleontological Society of America, The Society of Economic Geologists, and The Mineralogical Society of America held their annual meetings at Tulsa, Okla., Dec. 29 to 31, 1931, under the auspices of the American Association of Petroleum Geologists. A feature of the meetings was the symposium arranged by the latter organization dealing with the contributions of petroleum geology to the science in general. Some of the titles and abstracts follow:

*Contributions of Petroleum Geologists to General Geology in California*, by L. Courtney Decius, San Francisco, Calif.

Petroleum geology became of importance in California about 1906, and since that date has been primarily

responsible for the mapping of the Tertiary basins of sedimentation. Contributions of general geology during the same period have been largely confined to the older non oil-bearing sediments and igneous and intrusive rocks. Mapping the Tertiary basins for petroleum explorations has involved the development of numerous new methods and refinements, such as core-drilling, airplane photography, and the use of micropaleontology. Such work has enabled a more accurate interpretation to be made of the epochs of deposition, the tectonics of the folding which has produced mountain ranges as well as oil fields, and the origin and migration of oil and oil field waters.

*Contributions of Petroleum Geology to the Science of Geology in the Southern Mid-Continent District*, by F. H. Lahee, Dallas, Texas.

Oil in the States of Texas, New Mexico, Louisiana, and Arkansas is produced from formations ranging in age from Ordovician to late Tertiary. In the intensive search for petroleum, during the last 15 years, a great deal has been learned in this area regarding surface and sub-surface geology. Had it not been for petroleum research, the underground structure and stratigraphy of large parts of this area would be wholly unknown. Not only has petroleum geology thus increased our store of knowledge in pure geology, but also it has led to development and improvement of several important branches of technical research, such as geophysics, micropaleontology, airplane mapping, and the study of earth temperatures.

*Contributions from Geophysics to Geology*, by J. C. Karcher and C. A. Heiland, Golden, Col.

Four geophysical methods have been extensively employed in petroleum geology in the United States. The magnetometer has surveyed a vast area. It has developed our knowledge of the character of the crystalline basement. The torsion balance has been successful in locating salt domes and determining their outlines. Electrical prospecting has not been very successful to date but promises to indicate subsurface unconformities and attitudes of beds. The seismograph has discovered many salt domes. It has discovered at least three producing fields in Oklahoma. It has outlined the area accurately, depth and thickness of buried formations.

As is the custom, the retiring presidents of the various societies addressed joint meetings on topics which they considered of fundamental importance in their respective specialties. Professor Alfred C. Lane of Tufts College, president of the Geological Society of America, chose to indicate how the special knowledge of the past gained from geological studies can be applied to man at present, particularly here in America, confronted as he is by many important environmental changes and the necessity of making serious decisions in order to meet them. The title of his address was "Eutopotropism," a word coined for the occasion which means "The tendency or sense to know where you are well off and to go there." He traced some of the important changes in the environment. Through these changes nature commanded, "Modify or migrate!" Some animals, preadapted, could obey the first alternative, others sensibly eutopotropic obeyed the second, those without variability or intelligence perished. He further emphasized the part played by choice and by intelligence in the course of the development of life, and indicated how necessary is the choice of the proper course for man to-day. For "environment, heredity—these are not all the factors in evolution. We must add our individuality as helmsmen." We must be "eutopotropic," know what course is best and take it.

Professor E. R. Cumings of Indiana University, president of the Paleontological Society, discussed certain phases of the coral reef problem under the title "Reefs or Bioherms." He indicated the inapplicability of the term to most of those structures since they are largely composed of other things than coral. This fact is explained

by solution of the coral skeleton, diagenesis, boring and predatory organisms that triturate the reef material and help to form the coral sand and mud; and algae that precipitate goodly amounts of the original material. The term reef used alone is not satisfactory since it does not indicate organic origin and is much more applicable to a narrow ridge of any kind of material lying at or near the surface of the water. Professor Cumings suggested the term "bioherm" (organic reef) for "reeflike, mound like, lenslike, or otherwise circumscribed structures of strictly organic origin, embedded in rocks of different lithology"; and biostrome (organic layer) for "purely bedded structures, such as shell beds, crinoid beds, coral beds, et cetera, consisting of and built mainly by sedentary organisms, . . ." The bulk of his address concerned the internal structures of the forms described above. It was a detailed discussion that can hardly be summarized here. His address, together with that of Professor Lane, can be found in the *Bulletin* of the Geological Society of America, March, 1932.

Professor A. H. Phillips of Princeton University, president of the Mineralogical Society of America, addressed his audience on "Isomorphous Substitution of Elements in Minerals." He pointed out that it has long been known that certain elements could substitute for others in chemical compounds without greatly affecting the forms of the crystal structure. When Wollaston invented the reflecting goniometer in 1812 he proved small but measurable differences in the angles of such isomorphous groups as the orthorhombic sulphates and carbonates of barium, strontium, and lead. Since then, accumulating data have shown that the angles in isomorphous groups are a function of the chemical composition and the law of isomorphism is now restricted to those chemical compounds with a like number of atoms and configuration. He then discussed the results of modern research that bear upon this problem and concluded as follows: "Undoubtedly volume is a prime factor in isomorphism, but I have attempted to show that there are other factors of equal importance even where the atoms are practically of the same size, such as (1) the co-ordinate position of the atom in the crystalline lattice; (2) atomic directional forces probably due to pressure; (3) the variable compressibility of the atoms; (4) differential expansion of the atoms with a rise of temperature; and lastly (5) the weakening of the crystalline force with a rise of temperature." This address may be read in the *American Mineralogist*, March, 1932. A few of the other papers that were presented before the societies are recorded below.

Bailey Willis of Stanford University discussed "Isthmian Links." He said that biologic evidence is proving that terrestrial animals have migrated over certain areas in the past that are now broad seaways. One way to approach the explanation of these former connections is through a study of modern ones, such as the link between North and South America. All published reports ascribe the framework of the Caribbean region to pressures originating within or underneath the region itself. Following this clew the sub-Atlantic deeps are shown to have been active areas of disturbance in the Permian and probably during later epochs and their margins were thrust up to form inter-continental links.

W. J. Miller, speaking on the "Intrusive Power

of Anorthosite," showed that the anorthosite of Los Angeles County, California, contains inclusions of country rock and has been intruded as dikes and lit-par-lit injections in the latter. There are important observations that bear upon the theory of origin of anorthosite and monomineralic rocks in general.

In his address on "Rock Fans of Arid Regions" Douglas Johnson of Columbia University made the critical test of the theory of the origin of rock pediments by lateral planation rest on the existence or non-existence, at the contact zone of pediment and mountain scarp, of forms resembling alluvial fans but carved on solid rock. He stated that a number of such "rock fans" do exist in Texas, New Mexico, Arizona, and Nevada, and that the evidence favors the development of such features by lateral planation of heavily laden streams.

*Paleozoic Rocks in Mongolia*, by C. P. Berkey and F. K. Morris.

The authors report finding fine grained mica-schist and phyllites with traces of Permian fossils preserved in a thin limestone wedge in the phyllite, north of Tabool, Inner Mongolia. These rocks are cut by batholithic granite. Crinoid stems were found in a sandy limestone interbedded with clastic sediments and volcanics in the Jichi Ola range. These are intersected by dikes of diorite. Granite cuts similar rocks in the next range to the east, the Los Ola. These facts indicate the wide occurrence of Paleozoic rocks and the large scale of post-Permian batholithic intrusions.

*Distribution and Source of Chinese Loess*, by George P. Cressy.

The author points out that the greatest development of loess deposits of northwest China is south and southeast of the Ordos Desert, where it is 250 feet thick. Where the loess adjoins the Gobi Desert it rarely exceeds 50 feet. This marked concentration next to a desert floored by fluvio-lacustrine sediment suggests that the loess forming dust originated there rather than in the rock floored Gobi.

*Sediment Distribution on the Continental Shelves*, by F. P. Shepard.

A detailed study of marine charts that indicate the character of the sea floor and the examination of some of these samples stored in the National Museum revealed the fact that the coarser types of sediments are as common on the outer parts of the continental shelves as on the inner margin. Often the coarse and fine zones are much intermixed. The recent rise in sea level due to the melting of the ice, ocean currents, and tides are suggested explanations of this phenomena.

*Premonitory Formations*, by C. W. Washburne.

Marked change in type of sedimentation precedes every great deformation. During many geologic periods there is slow deposition of relatively fine, largely marine sediments, mostly in the geosyncline. Then rather suddenly comes the unconformable rapid deposition of thick series of coarser, clastic, largely non-marine sediments, during only one or two geologic periods immediately preceding the main disturbance. These may be called *premonitory* strata, because of their time relation to the main orogeny. Examples are the Pennsylvanian-Permian group of the eastern United States of America and western Europe, preceding the Appalachian-Hercynian revolution; the similar Upper Cretaceous-Paleocene strata, premonitory to the main orog-

eny of the Rocky Mountains; the great Franciscan series of California, premonitory to the late Jurassic revolution of the Pacific Coast, as were also other masses of coarse clastics, as on the Alaskan Peninsula; the great thickness of Pliocene sand and gravel in southern California, premonitory to the main deformation of the Coast Ranges; a thick body of continental, partly coal-bearing Lower Cretaceous strata in northern Alaska, premonitory to the main folding and thrusting of the Brooks Range; the *flysch* of the Alps; et cetera.

Recognition of the premonitory character of strata may help decide disputed points in orogeny. Thus in southern Oklahoma-Arkansas, the premonitory character of the Pennsylvanian sediments indicates that the main deformation of the Ouchita-Arbuckle chains was post-, not early Pennsylvanian. In eastern Canada the strongly premonitory character of the Devonian strata, including the 7000-foot Gaspé sandstone, supports Logan's contention that the greatest revolution of that region was the Acadian.

*Geologic Factors that Determine the Positions of Oil Fields in East Texas*, by F. B. Plummer.

The relative importance of the distribution of the source material, regional variations in porosity, regional variations in underground temperature, regional movement of underground waters, variations in chemical composition of underground waters, and positions of areas of differential pressures are evaluated. It is concluded that:

1. Movement of oil and water in the sand sheet must have played a major part in the concentration of oil into pools.
2. Accumulation of hydrocarbons took place in three stages: (a) minute colloidal particles of petroleum suspended in water moved downward through the pore spaces with underground water toward the lower part of the basin and moved farthest in the more porous parts of the sand sheet, (b) in deeper portions of the basin "cracking" of hydro-carbon molecules occurred and resulted in the formation of gas bubbles and of lighter oil; (c) the gas propelled the oil droplets to higher levels of less pressure and brought about accumulation into pools.
3. Movement of the hydrocarbons is controlled (a) by the distribution and extent of regional porosity, (b) by the regional and local structure of the sand sheet, and (c) by the differential regional and local pressures in the pore space.

The American Institute of Mining and Metallurgical Engineers held its annual New York meeting in February, 1932. The Mining Geology section met and discussed the deposits of some of the important ferro-alloy metals.

E. S. Moore of Toronto, Ontario, spoke on *Nickel Resources, Production and Utilization*. He pointed out the great age of certain nickel alloys although the metal was not discovered until 1751. The prominence of nickel as a metal did not develop until the first shipment from New Caledonia in 1875. By 1890 ore was being raised from various mines in the Sudbury district in Ontario, and from then on these two centres have dominated the scene with Sudbury by far the most important. Other countries, India, Norway, United States, Australia, and Madagascar are producing small quantities of nickel from domestic ores, and many others have at some time produced it chiefly as a by-product of other mining activities. He described the nickel-copper sulphide ores of Sudbury and the hydrous silicate ores of New Caledonia together with the most important deposits in other parts of the world, and pointed out the many uses of the metal such as in nickel steel, corrosion-

resistant steel, copper nickel alloys, coinage, nickel bronzes, et cetera.

Ernest R. Lilly of New York City described the *Geology and Economics of Tin Mining in Cornwall, England*. He discussed the geologic setting and the zoning of the ores of this ancient and important tin and copper mining district, discussed its history, and indicated how the application of modern management, research, engineering, organization, and financing would likely greatly prolong the active life of the district.

John W. Vanderwilt of Golden, Colorado, discussed the *Geology of the Molybdenite Deposits at Climax, Colorado, and of Other Deposits Producing Molybdenite*. He pointed out that until recently Molybdenum, long known as a valuable ferro-alloy, could only be used in a small way due to lack of raw material. The world's yearly production even during the war period was only about 800,000 pounds. This rose to 4,000,000 pounds in 1929 and 1930 primarily as the result of the development of the Climax deposit. The present low and fairly constant price has resulted in a great increase in its use. The Climax deposit occurs in a moderately silicified zone in Pre-Cambrian granite surrounding an internal silicified core. The moderately silicified rock is cut in all directions by intersecting quartz veinlets carrying molybdenite. The reserves are enormous and capable of supplying the present world demand for 190 years to come without considering low grade ores which may well be utilizable in the future.

The paper ends with a brief description of the deposit at Questa, New Mexico, where the molybdenite occurs in quartz fissure veins; and that at Knaben, Norway, in which the molybdenite is found in a silicified shear zone described as a quartz lode.

Mr. Hugh H. Spence, Ottawa, Canada, described the radium and silver ore discovered in 1930 at Great Bear Lake in the Northwest Territories of Canada. Two veins have been proved over a total combined length of more than 2000 feet and are believed to converge into a strong break upon which pitchblende has been found at several points over a distance of two miles. In parts of the veins pitchblende is mixed with rich native silver. The region is extremely favorable for mineralization and much is expected of it when it is better developed.

A paper by W. H. Emmons of Minneapolis, Minn., was read by title. This paper, *Prospecting for Gold in the Shield Areas of Canada, Siberia, Southern Rhodesia, and Western Australia*, is a summary and genetic discussion of the major gold producing regions in the earth's pre-Cambrian shields. It is a statistical study that brings to light certain facts of the distribution of gold around and in the borders and upper parts (cupolas) of the granite batholiths in all those shields, which facts are valuable guides to future search for ore. (The papers listed in this section are published in the *Transactions of the American Institute of Mining and Metallurgical Engineers*, vol. 102, 1932, or in the technical publications of that Society.)

*Recent Gold Discoveries in the Ontario-Quebec Boundary District*. (Taken from notes prepared by the Ontario Department of Mines and the Quebec Bureau of Mines for the proposed summer excursion of the Society of Economic Geologists—1932, which was later given up.)

Three districts are undergoing development

west and southwest of the important established camps of Kirkland Lake and Porcupine. These are the Matachewan, Swayze, and Bannockburn areas. East of the provincial boundary, in Quebec considerable mining and active prospecting and development work is taking place along a zone 120 miles long, closely following the northern contact of a synclinal belt of Temiscamian sediments with Keewatin volcanic rocks. The Horne mine at Noranda has been producing gold and copper in quantities since December, 1927, and many other mines in this, the Rouyn, area and farther to the east are producing, or are ready to produce. The activity in this general region has greatly increased Canada's gold production in the last year.

*Other Papers published during the year:*

*Geology of the Taconic Quadrangle*, Louis M. Prindle and E. B. Knopf, *Am. Jour. Sci.*, October, 1932, pp. 257-302.

An important addition to our growing knowledge of the complicated geology of eastern New York State and western Massachusetts. This paper includes parts of southwestern Vermont, northwestern Massachusetts, and adjacent eastern New York—a region that contains a known lower Paleozoic sequence, a variety of metamorphic rocks definitely assigned to the pre-Cambrian, and a series of tightly folded and overthrust metamorphics of uncertain age. The senior author believes that this sequence represents a metamorphosed equivalent of the overthrust Taconic sequence farther north but the relations are complicated in this and in neighboring regions by the fact that the belts of low grade metamorphism both east and west of the Green Mountain upland, including most of the overthrust mass in question, are not normal epizone schists but are originally mesozone types that have been degraded by intense differential movement after the main overthrusting. Also the effect of subjacent igneous invasions are prominent and difficult to evaluate properly as distinct from dynamic metamorphism. The authors connect the geology of the Green Mountains with that of the Taconics (in the particular district) as the area clearly shows—and they believe (as does the reviewer) that this marks a distinct advance in the interpretation of the regional geology.

*The Petrology and Structure of the Salisbury-Canaan District of Connecticut*, William M. Agar, *Am. Jour. Sci.*, January, 1932, pp. 31-48.

Presents the latest interpretation of the structure and petrology of the district, and shows that the chlorite, chloritoid schists of the southern end of the Taconic Range are diaphthorites degraded from former garnet, biotite, staurolite schist, rather than primary epizone schists making the transition from a region of intense metamorphism to one of non-metamorphosed sediments.

*On the Geology of Fennoscandia, with Special Reference to the Pre-Cambrian. Explanatory Notes to Accompany a General Geological Map of Fennoscandia*, J. J. Sederholm, *Bull. de la Commission Geologique de Finlande*, No. 98, July, 1932.

Contains a table showing the subdivisions and correlations of the pre-Cambrian. A brief exposition of the results of detailed work in a difficult region that explains the main sequence of events and indicates many of the details. The author does not minimize the difficulties in in-

terpretation and correlation or even the lack of finality of the map, but his name and ability give great importance to the work.

*A New Geological Map of the Commonwealth of Australia, with Explanatory Notes*, Sir T. W. Edgeworth David, 1932.

A large colored map in four sheets, scale 1:2,990,000. Includes Tasmania and the Mandated Territory of New Guinea. The most up-to-date map of an important geological terrane.

*Geology and Ore Deposits of the Stockton and Fairfield Quadrangles, Utah*, J. Gilluly, U. S. G. S. Prof. Paper 173, 1932.

This has the general scope of all the geological surveys' professional papers. It describes and illustrates the district in detail and discusses the scientific and economic problems of the ore deposits. It contains a particularly well reasoned discussion of the rock alterations accompanying the introduction of the ore minerals, the processes of igneous metamorphism, and the mode of transfer of materials. Figures emphasize the truly colossal amount of material deposited from, and carried off by, the fluids emanating from the congealing magma.

*A History of the Principles and Methods of Mechanical Analysis*, W. C. Krumbein, Jour. of Sed. Petrology vol. 2, August, 1932, pp. 89-124.

A discussion and analysis of the methods, old and new. Contains a complete bibliography. Required reading for all who work by these methods.

*The Adirondack Amorphosite and Its Problems*, H. L. Alling, Journal of Geology, 1932, pp. 193-237.

A valuable summary and comparison of views on Adirondack geology. It compares the views of the different geologists who have worked in the area, both in the text and by means of a table.

*Nitrate Deposits of the United States*, Mansfield and Boardman, U. S. G. S. Bull. 838, 1932.

Emphasizes the superficial nature of these deposits. There are none of great importance now known in the United States. This coupled with the fact that the type of region in which unknown deposits may be found is known "affords little hope that any deposits of sufficient magnitude to have commercial value will be found." Any one prospecting for nitrates should recognize this fact and the evidence upon which the statement is based. The Bulletin describes the test for nitrates in a rock and then considers deposits by States.

*Mineralogy of Drill Cores from the Potash Field of New Mexico and Texas*, W. T. Schaller and E. P. Henderson, U. S. G. S. Bull. 833, 1932.

The potash field most likely to have commercial value is confined to the south part of the Permian salt basin of the southwestern United States. This comprises an area of about 40,000 square miles in New Mexico and Texas. This report covers the minerals from the cores sent to Washington to be studied. Twenty-three minerals are described of which halite is by far the most abundant, followed by anhydrite, clays, polyhalite, and sylvite. A succession of minerals is noted and many rearrangements have occurred since the original deposition. A table of values of the index of refraction of all the minerals studied is an important contribution.

*Influence of the Replaced Rock on Replacement of Minerals Associated with Ore Deposits*, B. S. Butler, Econ. Geol., vol. 27, pp. 1-24, 1932.

This paper deals with the possibility of carrying Bowen's reaction series into ore minerals and "the probability that ore solutions react on wall rocks essentially as magmas react with earlier formed minerals and with foreign rock inclusions." Examples that indicate the validity of the thesis are described.

*Magmatic Chromite Deposits in Southern Africa*, Edward Sampson, Econ. Geol., vol. 27, pp. 113-144, 1932.

Discusses the occurrences of chromite in the Bushfield igneous complex of the Transvaal and the "great dike" of southern Rhodesia. It is concluded that the chromite of such deposits crystallized with the latest rather than with the earliest silicates. The time relations of the various silicates, and different possible modes of magmatic concentration are considered.

*Structures of the Wisconsin and Tri-State Lead and Zinc Deposits*, C. K. Leith, Econ. Geol., vol. 27, pp. 405-418, 1932.

Combats the recently advanced theories of the magmatic origin of these important metalliferous deposits and indicates that the structures in the field are more complicated than has been recognized by any of the advocates of special types of ore genesis.

*Microscopic Criteria of Hypogene and Supergene Origin of Ore Minerals*, G. M. Schwartz, Econ. Geol., vol. 27, pp. 533-553, 1932.

An important compilation of the views of various authors and a comparison of criteria regarded as definitive by different ones. This should go a long way toward clearing up the fog of conflicting views that envelops the subject. The article is indispensable to a beginning student of ore deposits.

*A Bibliography of the Tectonics of England and Wales*, R. H. Rastall, Geological Magazine, London, vol. lxix, pp. 233-236, 1932.

Important reference to a literature that has apparently not been sufficiently stressed.

*The Permo-Carboniferous Orogeny in the South-Central United States*, W. A. J. M. Van Waterschoot van der Gracht, Verhandeligen der Koninklijke Akademie, Van Wetenschappen Te Amsterdam Afdeling Naturkunde (Tweede Sectie) Deel xxvii, No. 3, Amsterdam, 1931.

This is a volume of 170 pages with many maps and diagrams that presents as complete a picture of the buried late Paleozoic structures of the region as can be done through the correlation of the work of many geologists and the author's own extensive studies in the field. The extensive drilling campaign for oil has furnished much of the material.

*Brachiopods of the Pennsylvanian System in Nebraska*, Carl O. Dunbar and G. E. Condra, Nebraska Geol. Survey, Bull. 5, second series, 1932.

A morphologic and taxonomic treatment of the Pennsylvanian brachiopods of Nebraska and adjacent areas. This subject has long needed revision since the precise limitation of species, rendered difficult by the intergradation of forms, was further hampered by imperfect studies and descriptions. The present study is detailed, systematic, and complete.

*The Stratigraphy of the Central Basin of Tenn.*, R. S. Bassler, Bull. 30, Tenn. Dept. of Education, Division of Geology, Nashville, 1932.

A detailed study of the paleontology, stratigraphy, and mineral deposits of a wide area.

*Arizona Gold Placers and Placering*, G. M.

Butler, University of Arizona Bull., No. 132, 1932.

This pamphlet describes the regions where successful operations have been carried on and gives the prospective placer miner who is not an "old timer" all the information possible to enable him to organize and carry out his expedition. It includes information concerning the laws in relation to location and retention of placer claims in Arizona; information on poisonous animals and a suggested list of equipment and food for the region considered.

*Outline of Methods for Estimating Ground Water Supplies*, D. E. Meinzer, U. S. G. S. Water Supply Paper 638-C, Washington, 1932.

Summarizes the methods for estimating the yield of aquifers and discusses critically the qualitative factors which must be considered in making such estimates. This is a very valuable contribution to a difficult and important subject.

*Geology of the Boston Area, Massachusetts*, L. LaForge, U. S. G. S. Bull. 839, 1932.

This bulletin includes a map of the bed rock geology of the Boston area and one of the surface formations together with a small scale geological map of eastern Massachusetts, Rhode Island, and the southeastern corner of New Hampshire. It presents the most recent discussion of the ages and correlation of the complicated metamorphic rocks of southeastern New England.

*The Bushveld Igneous Complex of the Central Transvaal*, A. L. Hall (Union of South Africa. Geological Survey Memoir 28, Pretoria, 1932).

An elaborate and beautifully illustrated account of the rocks of this important district, their origin, history, and structure. The conclusions are too detailed to be abstracted here.

#### NEW BOOKS

*Earthquake Damage and Earthquake Insurance*, J. R. Freeman (McGraw Hill, New York, 1932). An encyclopedic volume of great value to geologic and structural engineers and insurance companies alike.

*Outline of the Geology and Petrography of Surinam (Dutch Guiana)*, R. Izerman (Martinus Nijhoff, The Hague, Holland, 1931). All the latest available knowledge of a region much of which has been little explored.

*Handbook of Chemical Microscopy*, E. M. Charnot and C. W. Mason (Wiley and Sons, New York, 1932). Invaluable to every geologist who studies the polished surfaces of ore minerals.

*Prospecting for Gold*, I. L. Idriess (Angus and Robertson Ltd., Sydney, 1932). A clear, practical guide for a cub prospector as well as for the "old timer" who wishes to learn more about his trade.

*Petrography and Petrology*, F. F. Grout (McGraw-Hill Book Company, New York, 1932). An important contribution to descriptive petrography as well as to the more difficult interpretive petrology.

*Dana's Textbook of Mineralogy*, W. E. Ford (John Wiley and Sons, New York, 1932). A new edition of an indispensable book with an added section on crystal structure and the methods of its determination by X-rays, and on the origin, mode of occurrence and association of minerals. The description of minerals is revised and about 220 new species are added.

*An Introduction to Geology*, W. B. Scott (Macmillan, New York, 1932). This well known text is now in two volumes. The first part is one of the most inclusive and philosophic of all texts, and part two gives the most complete view of the geology of continents other than North America.

*Petroleum in the United States and Possessions: A Presentation and Interpretation of the Salient Data of Geology, Technology, and Economics in each State and Possession Treated According to the Conventional Major Field Divisions*, Ralph Arnold and W. J. Kenimtz (Harper Brothers, New York and London, 1930).

*The Grand Coulee*, T. Harlan Bretz (American Geographical Society, Special Publication No. 15, 1932). Well illustrated account of the author's view of the origin of this striking topographic feature and of the erosional features of falls in general.

*The Coming of Man*, G. G. MacCurdy (The University

Society, New York, 1932). A readable condensation of the facts so far known concerning pre-man and pre-historic man.

*Ursprung der Menschheit: Über den engeren Anschluss des Menschengeschlechts an die Menschenaffen*, Hans Weinert (Ferdinand Luke Verlag, Stuttgart, 1932). A detailed study of the physical relationship of man and the apes which concludes that the human stem remained one with the gorilla and chimpanzee after the orang-utan and gibbon stems had branched off. Places the chimpanzee as the closest relative to man.

*Treatise on Sedimentation*, William H. Twenhofel and collaborators (The Williams and Wilkins Co., Baltimore, 1932). The second edition. A very valuable book brought up-to-date.

*Physics of the Earth-V-Oceanography*, Bull. of the National Research Council, No. 85 (Washington, 1932). The most recent of an important series dealing with the earth. This volume contains many chapters by a number of different authors that deal with the following subjects: The Domains of Oceanography; Bottom of the Ocean; Properties of Sea Water, Movements of Sea Water, Oceanographic Instruments, Relations of Oceanography to other sciences.

*The Geology of Southwestern Uganda, with Special Reference to the Stanniferous Deposits*, H. A. Sthemann (Martinus Nyhoff, The Hague, 1932). A beautifully illustrated report that includes studies of morphology, regional geology, tectonics, metamorphism and the tin deposits.

*Grundprobleme der Geologie, eine Einführung in Geologisches Denken*, by Serge Von Buboff (Berlin, 1931). An inquiry into the fundamental problems of geology and an analysis of geological thought.

*Earth History*, Luther C. Snyder, The Century Earth Science Series (The Century Co., New York, 1932). A general geology written for the inquiring layman as well as for the beginning student. Emphasizes the historical, developmental side of geology, the evolution of living creatures and the influence of earth processes on man.

*Textbook of Geology, Pt. I, Physical Geology*, by Longwell, Knopf, Flint (John Wiley and Sons, New York, 1932). Supersedes the 1929 revision of Pilsen's "Physical Geology." The outcome of many years' experience in teaching beginning classes. This work is definite, concise, and clearly distinguishes fact from theory.

*Alpine Zone of Mt. Washington Range*, by Ernst Antevs (Auburn, Maine, 1932). A well illustrated account of the glacial phenomena, climate, and plant life of the White Mountains in New Hampshire with brief mention of some of the other higher summits of the eastern United States.

*Beryllium, Its Production and Application*, translated from the German by Richard Rimback and A. J. Michel (The Chemical Catalogue Co., Inc., New York City, 1932). A technical discussion of the properties and uses of beryllium and its alloys.

*Geology*, by W. H. Emmons, G. A. Theil, C. R. Stauffer, R. S. Allison (McGraw Hill Book Co., New York, 1932). An introductory text designed for one-semester courses. A well balanced book, suitably illustrated by photographs and instructive diagrams, with a brief final chapter on earth history. Perhaps its weakest point is the lack of emphasis on the various cycles of erosion.

*Man and Minerals*, by T. A. Rickard, 2 vols (McGraw Hill Book Co., New York, 1932). Traces the development in the use of metals from the earliest days to the present, and man's dependence on the materials won from the earth. Emphasizes the romantic aspect of mining and prospecting.

*A Descriptive Petrography of the Igneous Rocks, vol. II, The Quartz-Bearing Rocks*, by A. Johannsen (The University of Chicago Press, Chicago, Ill., 1932). The second part of this comprehensive study of the igneous rocks to be published. The title indicates the range of rocks considered. The text is largely descriptive, with many analyses, and brief outlines of the development of the theories of origin of the rock types.

*Stream Sculpture on the Atlantic Coast*, by D. W. Johnson (Columbia University Press, New York, 1931). An elaboration of the paper "A theory of Appalachian Geomorphic Evolution" mentioned in the 1931 YEAR BOOK.

*Die Feldspäte und ihre praktische Bestimmung*, by K. Chudoba (Stuttgart, 1932). A manual of the optical methods of practical value in the determination of the feldspars.

*The Genesis of the Diamond*, by A. F. Williams (Ernest Benn Ltd., London, 1932). A beautifully illustrated study of the present day practice of diamond mining, occurrence, geology, and the origin of Kimberlite and associated rocks; description, occurrence, and origin of the diamond. In two volumes.

*Erdöl: Allgemeine Erdölgeologie und Überblick über die Geologie der Erdölfelder Europas*, by O. Stutzer (Gebrüder Borntraeger, Berlin, 1931). A general, brief account of the properties of petroleum and related substances, their origin, and geologic occurrence. This is

followed by a description of the oil producing regions of Europe.

*The Unstable Earth*, by J. A. Steers (E. P. Dutton and Company, New York, 1932). A readable summary of the current theories of major earth movements and a discussion of such features as shields, geosynclines, mountain systems, island arcs, etc. The author discusses recent changes of sea level in great detail since they are fundamental to an understanding of earth movements.

**GEORGETOWN UNIVERSITY.** A Roman Catholic institution of higher education for men in Washington, D. C., founded in 1789, and conducted by the Society of Jesus. In the autumn of 1932, 2273 students were enrolled. The faculty numbered 394. The Riggs Memorial Library contained 164,547 volumes; the Hirst Library 10,456 volumes, and the individual libraries maintained by the professional schools, many additional volumes. In 1932 the corner-stone was laid for the White-Gravenor Building, which will contain the executive offices of the college and a number of class and lecture rooms, and a top floor devoted to modern chemical laboratories. President, the Rev. Coleman Nevils, S.J., Ph.D., D.D.

**GEORGE WASHINGTON BICENTENNIAL.** See ART EXHIBITIONS; ART MUSEUMS; CELEBRATIONS; SCULPTURE; WASHINGTON BICENTENNIAL.

**GEORGE WASHINGTON UNIVERSITY,** THE. A nonsectarian institution of higher learning for men and women in Washington, D. C., founded in 1821. The enrollment for the first semester of 1932-33 was 5131. The faculty numbered 378. The endowment amounted to \$1,670,245, from which the income for 1931-32 was \$72,806. The total income from all sources was \$1,270,409. The university library, comprising the general library, the various departmental and seminar libraries, the medical library, and the law library, contained more than 100,000 volumes.

*The George Washington Law Review*, the university's new legal quarterly, made its appearance in November, 1932. The publication is the first legal periodical in the United States devoted exclusively to governmental and federal public law, and is making use of the opportunities afforded by location in the national capital, and the university's extensive law library, to render a unique service to the legal profession. During the summer months the medical school building was completely remodeled and new equipment installed. There was also erected a four-story building, housing a central laboratory for the university hospital and clinical departments and research laboratories equipped with the finest and most modern facilities for teaching and research. President, Cloyd Heck Marvin, Ph.D., LL.D.

**GEORGE WESTINGHOUSE BRIDGE.** See BRIDGES.

**GEORGIA.** POPULATION. According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 2,908,506, as against 2,895,832 in 1920. Atlanta, the capital, had (1930) 270,306 inhabitants.

**AGRICULTURE.** The accompanying table gives the acreage, production, and value of the principal crops for 1932 and 1931.

**MINERAL PRODUCTION.** The clay products of the State attained for 1930 (the latest year for which a tabulation by the Federal Bureau of Mines was available), \$2,439,250, as against \$3,717,673 for 1929. Of these totals all but a very small component of pottery was supplied by brick and tile. The production of raw clay, attaining \$2,061,-

Crop	Year	Acreage	Prod. Bu.	Value
Cotton . . .	1932	2,985,000	845,000 <sup>a</sup>	\$27,040,000

<sup>a</sup> Bales    <sup>b</sup> Pounds.    <sup>c</sup> Tons.

209 for 1930 and \$2,098,891 for 1929, was in excess of the consumption of raw clay in the State's own clay products. Stone was quarried to the quantity of 772,650 short tons, exclusive of marble, in 1930, and to that of 977,910, marble included, in 1929; the respective totals, by value, were \$2,374,994 (1930) and \$6,417,329 (1929). There were, further, considerable totals of production of cement and of fuller's earth, for which figures were not specified in the Federal summary of the State's mineral production for 1930. In minor degree, barite, bauxite, coal, iron ore, lime, manganese and manganiferous ores, and talc contributed to the yearly mineral total. The value of the State's mineral product, raw clay excluded, was \$12,830,845 for 1930; for 1929, \$15,294,103.

**FINANCE.** State expenditures in the year ended Dec. 31, 1931, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments, \$21,214,292 (of which \$7,460,812 was for local education); for interest on debt, \$1,169,344 (chiefly a discount, non-recurring, on \$2,700,000 of Western and Atlanta Railroad warrants sold); for permanent improvements, \$18,568,867; total, \$40,952,503 (of which \$20,746,296 was for highways, \$3,061,378 being for maintenance and \$17,684,918 for construction). Revenues were \$40,369,191. Of these, property and special taxes furnished 20.5 per cent; departmental earnings and compensation to the State for officers' services, 4.2; sale of licenses, 49.4 (in which was included a gasoline sale tax that produced \$11,126,440). Funded debt outstanding on Dec. 31, 1931, totaled \$9,551,433. Net of sinking-fund assets, the debt was \$9,447,933. On an assessed valuation of \$1,267,788,959 the State levied in the year ad valorem taxes of \$6,338,945.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1932, was 6671.46.

**EDUCATION.** For the academic year 1931-32 the number of persons of school age in the State was reckoned as 867,995. There were enrolled in the public schools 751,397 pupils. Of these, 642,482 were in common schools or elementary grades; 100,274 were in daytime high schools; and 8641 were in evening high schools. The year's current expenditures for public-school education totaled \$18,235,248. The yearly salaries of teachers averaged \$655.15.

**CHARITIES AND CORRECTIONS.** A Board of Control of Eleemosynary Institutions, created by the reorganization act of 1931, assumed its functions

on Jan. 1, 1932. These included the direction of eight State institutions for the care of invalids, defectives, dependents, and young delinquents. In the new board were vested the functions of the several boards that had formerly directed these institutions. The new Board of Control was composed of 12 members; these were: the Governor, ex officio; one, representing the State at large; and 10 others, representing sections of the State, corresponding with its districts for the election of Federal Representatives. The board had as its executive aid a full-time secretary (Lucy R. D. Ficklen).

The State prison was not under the board's control. The institutions that it directed, with their respective average populations for 1932, were: Milledgeville State Hospital, Milledgeville, 5671 mental patients; Tuberculosis Sanatorium, Alto, 269 patients; Training School for Mental Defectives, Gracewood, 250; Academy for the Blind, Macon, 115; School for the Deaf, Cave Spring, 265; Training School for Girls, Atlanta, 156; Training School for Boys, Milledgeville, 173; Confederate Soldiers' Home, Atlanta, 29.

**POLITICAL AND OTHER EVENTS.** A law passed in the regular legislative session of 1931 prevented the State government from incurring debts that it could not pay when due. This affected the position of the State in 1932 in dealing with the prevailing economic depression. Some further administrative economies were effected, the State-owned automobiles of some of the State's employees being sold. Money was needed for the relief of destitution, particularly in Atlanta, and Atlanta, instead of the State, applied to the Reconstruction Finance Corporation for a loan on this account. The State, however, applied for a loan to enable it to pay its pensions to Confederate veterans.

Mayor James L. Key of Atlanta incurred, by his opposition to prohibition, the antagonism of organized prohibition forces in the city. These initiated a move for his recall. There was thus brought about on March 15 a popular vote on the recall proposal, in which the Dry and Wet elements were sharply opposed. Mayor Key was sustained by a majority of some 6400 in a total vote of about 39,000. United States Senator William J. Harris died on April 18. Governor Russell appointed Maj. John S. Cohen, editor of the *Atlanta Journal*, Senator to fill the vacancy until the election of a Senator in November, to fill the balance of the unexpired term. In the Democratic primary of September 13 Governor Russell himself gained the nomination for Senator, defeating Representative Charles R. Crisp, who had played a prominent part in shaping Federal tax measures, as Chairman of the House committee on ways and means, and who had voted against immediate payment of the soldiers' bonus.

**ELECTIONS.** The State voted the Democratic National ticket on November 8, casting only a scattering Republican vote. For President, the popular vote, as officially reported was: Roosevelt (Dem.), 234,118; Hoover (Rep.), 19,863. Eugene Talmadge, Commissioner of Agriculture, was elected Governor by the Democrats without opposition. Two Democratic Senators were elected: for the ensuing full term, Walter F. George, the incumbent; for the term expiring Mar. 4, 1937, Governor R. B. Russell, Jr.

**OFFICERS.** The chief officers of the State, serving in 1932, were: Governor, Richard B. Russell, Jr.; Secretary of State, John B. Wilson; Attorney-General, George M. Napier; Treasurer,

M. L. Ledford; Auditor, Tom Wisdom; Comptroller-General, W. B. Harrison; Superintendent of Education, M. L. Duggan; Commissioner of Agriculture, Eugene Talmage; Commissioner of Commerce and Labor, H. M. Stanley.

**Supreme Court:** Chief Justice, Richard B. Russell; Assistant Justices, Marcus W. Beck, Samuel C. Atkinson, S. Price Gilbert, H. Warner Hill, R. C. Bell.

**GEORGIA (GEORGIAN SOCIALIST SOVIET REPUBLIC).** A soviet republic (area, 26,381 square miles; population, about 2,661,000), which in 1922 united with Azerbaijan and Armenia to form the Transcaucasian Socialist Federated Soviet Republic (q.v.).

**GEORGIA, UNIVERSITY OF.** A State institution of higher education for men and women in Athens, Ga., chartered in 1785 and opened in 1801. The enrollment in the 1932 summer session was 1718 and for the autumn term, 1678. The faculty numbered 145. The productive funds of the university amounted to \$425,000, and the income for the year from the State and other sources was \$400,000. The library contained 70,000 volumes. There were completed during 1932 the Joseph E. Brown Dormitory, at a cost of \$150,000, the Harold Hirsch Law Building, at a cost of \$90,000, and the William Terrell Dawson Building, at a cost of \$130,000. The law building was the gift of alumni and friends. Mrs. Alexander C. King contributed \$20,000 for the library of the law school, which was to be known as the Alexander C. King Memorial Library. The Georgia State College of Agriculture and the Mechanic Arts and the Georgia State Teachers College have been integrated with the university, all three institutions constituting the University of Georgia. President, Steadman V. Sanford, Litt.D.

**GEORGIA SCHOOL OF TECHNOLOGY.** An institution for the scientific and technical education of men in Atlanta, Ga., founded in 1888. The enrollment for the autumn of 1932 was 2022, while that in the summer session was 417. The faculty numbered 170. The endowment amounted to \$420,000 and the income from appropriations and fees, to \$700,000. There were 30,000 volumes in the library. President, Marion Luther Brittain, LL.D.

**GERMAN ARCHITECTURE.** See ARCHITECTURE.

**GERMANIC LANGUAGES.** See PHILOLOGY, MODERN.

**GERMAN LITERATURE, GENERAL.** The political, social, and economic unsettlement of 1932 did not affect German letters to the extent one might have supposed. Many novels, plays, and miscellaneous books dealt, to be sure, with the grave problems of the time; but the tenor of the published literature seems more conservative and tranquil than the nation as a whole is. A considerable emphasis was placed upon patriotic motifs and emotions. The Goethe centenary and the Hauptmann birthday were important literary events, and the canonization of St. Albertus Magnus was a source of deep satisfaction to religious Germany. Economic conditions were reflected in a relatively smaller output of books, and in the emergence of a veritable multitude of brochure publications. The quantity and quality of the scholarly writing done during the year are impressive.

**THE NOVEL.** There was no dearth of novels by younger as well as established authors, though some famous names were not represented. Among

those books most widely talked of are: *Noch Nicht*, by Heinrich Hauser, which purports to be the diary of Christian Heinrich Skeel and blends the introspective method with *Sachlichkeit*; *Vor den Fenstern*, a proletarian story by Georg Rendl, a younger author who writes with remarkable precision and feeling; and *Vanadis*, a lengthy but dramatic psychological novel by the veteran Isolde Kurz. Ernst Wiechert's *Die Magd des Jürgen Doskocil*, Anna Seghers' *Die Gefährten*, and Ruth Schaumann's *Amei* (the story of a child) are books by craftsmen intended for those whose literary standards are high. Manners and morals, more or less contemporary, are the themes of Clara Viebig's *Menschen unter Zwang*, Richard von Kühlmann's *Der Kettenträger*, Walther von Hollander's *Schattenfänger*, Klaus Mann's *Treffpunkt im Unendlichen*, and Henry Benrath's *Ball auf Schloss Kobolnow*. The historical novel, never without its protagonists in Germany, was exemplified in Hermann Stegemann's *Die Herren von Hoehr*, written against the background of the French Revolution; Juliana von Stockhausen's *Meister Albert und die Ritter*; Lion Feuchtwanger's *Der jüdische Krieg*, which has to do with the life and times of Josephus; and Jakob Wassermann's *Bala Matari* (really a romantic biography) in which Stanley sits for a portrait. Political or racial emotions were stirred by Kasimir Edschmid's *Deutsches Schicksal*, a story of those for whom there was no room in the Fatherland and who therefore set out to carve a home out of the South American wilderness, and Ernst Glaeser's *Das Gut in Elsass*, which brings up a familiar cultural problem. Sociological novels, of which there were many, included Ernst von Salomon's *Die Stadt* and Hans Fallada's *Kleiner Mann—was nun?* A few other titles should be noted: W. E. Süßkind's *Mary und Ihr Knecht*, Ernst Zahn's *Der Fahrmann*, Adrien Risch, Franz Herwig's *Tim und Klara*, Georg Kaiser's *Es ist genug*, and Franz J. Weinrich's *Die Löwengrube*. All in all, a respectable year for German fiction.

**SHORTER FICTION.** The *Novelle* continues to remain in vogue, and there has been no dearth of new work in this medium. Perhaps the most interesting single achievement of the year was Ludwig Tugel's *Die Treue*, an unusual tale with a World War background. Notable also is Hermann Hesse's *Die Morgenlandfahrt*. Samples of the year's collections may be seen in Herman Löns' *Tiere unter sich*, and Jakob Schaffner's *Liebe und Schicksal*. *Vergrabenes Gut* is the last volume of stories by Paul Keller, who died during the year.

**POETRY AND DRAMA.** Poetry and drama are obviously in a transition stage. Organizations like the *Rheinischer Bund* strive manfully against a tide of prose. Will Vesper's *Ernte der deutschen Lyrik* is a revamped anthology of not a little interest. *Um Uns Die Stadt*, edited by Robert Seitz and Heinz Zucker, offers a selection of recent verse. Gertrud von Le Fort's *Hymnen an Deutschland* is an impassioned but not chauvinistic lyric sequence. Erich Kästner's *Gesang zwischen den Stühlen* affords interesting examples of this very modern poet's work. Friedrich Deml's *Sprache der Dinge* and Gottfried Hasenkamp's *Der Königstuhl von Aachen* contain religious verse by established Catholic poets. Of interest also are Hans Heinrich Ehrler's *Die Lichter schwinden im Licht* and Julius Zerzer's *Vor den*

*Bergen*. There was a collected edition of Bert Brecht's revolutionary lyrics.

No other recent drama seems to have attracted more attention than Fritz von Unruh's *Zero*, a violent and bitter denunciation of the world in which we are living. The title means what it says. Max Mell's *Die Sieben gegen Theben* is perhaps the best poetic play of the year. Other new offerings include: *Die Karriere*, by Ludwig Fulda; *Disraeli*, by Luise Mayer and Arthur Rundt; *Menschen ohne Gott*, by Hans Mühlestein; and *Clarence und die Nutzniesser*, by Wolfgang Petzet. Many shorter plays were issued by the co-operative drama associations, but such work is usually designed for the theatre rather than the library.

**RELIGION.** Numerous important religious publications appeared. The following deal with current problems and situations: Friedrich Karrenberg's *Christentum, Kapitalismus und Sozialismus*; Wilhelm Bergman's *Religion und Seelenleiden*; Peter Lippert's *Vom Gesetz und von der Liebe*; Karl Pfleger's *Im Schatten des Kirchturms*; and Adolf Ziegler's *Die russische Gottlosensbewegung*. Historical considerations dominate in: Peter Menneken's *Nikolaus von Cues*; Tor Andrae's *Mohamed, Sein Leben und Glaube*; Martin Grabmann's *Der heilige Albert der Grosse*; and Herbert Schöffler's *Die Anfänge des Puritanismus*. Karl Barth's *Die kirchliche Dogmatik* (vol. i) was possibly the most important publication in the doctrinal field. Of hortatory writing there was an abundance. Of religious interest also is Germany's new Catholic encyclopedia, *Der grosse Herder*, of which four volumes, ultra-modern in content, format, and illustration, appeared during the year.

**PHILOSOPHY.** Philosophical activity continued, though at a relatively slower pace. A monumental undertaking is the Heidelberg edition of the *Opera omnia* of Nicholas of Cusa, the initial volumes of which have now appeared. From this to the little book by Karl Jaspers, *Die geistige Situation der Zeit*, seems a long way, but Jaspers has crowded very much into a compact space. Contemporary interests and ideas prevail in Hermann Keyserling's *Südamerikanische Meditationen*, a travel-meditation on a continent of great interest to Germans, and Albert Schweitzer's *Aus meinem Leben und Denken*, autobiographical reflections by a man of indubitable greatness. The endeavor to effect a philosophic synthesis has inspired Erich Przywara's *Analogia Entis*, part one of a treatise by a keenly perceptive critic of modern trends. Special problems are envisaged in such books as Philipp Frank's *Das Kausalgesetz und seine Grenzen*, the subject of which happens to be in the forefront of current discussion; Otto Jannsen's *Das erlebende Ich und sein Dasein*; Ludwig Klages' *Der Geist als Widersacher der Seele*; and *Schönheit und Magie*, by Siegfried Behn, a study in the survival of primitive aesthetic. Many books are concerned with historical or critical problems. A few of these are: Ernst Cassirer's *Die Platonische Renaissance in England*, a study of British idealism, and Theodor Steinbüchel's *Das Grundproblem der Hegelschen Philosophie*. With Hegel quite a number of monographs and addresses have dealt. A good example of the contemporary philosophical essay is Alois Dempf's meaty *Kulturphilosophie*. Ernst Robert Curtius' *Elemente der Bildung* has a hortatory and educational purpose.

**LITERATURE.** Literary study has been pretty

well dominated during the past year by the Goethe centenary, which called forth well-nigh countless brochures and printed addresses by prominent scholars. To list even the best of these here is impossible. The following selection from newly issued Goethe literature will give some idea of the variety offered. *An Goethe: Briefe bedeutender Zeitgenossen* is a deluxe publication by the German government as a memorial offering. Louis Pinck's *Volkslieder von Goethe in Elsass gesammelt*, an anthology of folk-poems which once enchanted the master, may prove to be the most distinctive Goethe book of 1932. The following have the breadth and depth of special studies: Johannes Hofmeister's *Goethe und der deutsche Idealismus*; Herbert Cysarz's *Goethe und das geschichtliche Weltbild*, written from the point of view of a *Geisteswissenschaftler*; and Ferdinand Hammerschmidt's *Goethe und der Katholizismus. Goethe: Dreissig Handzeichnungen*, edited by Prof. Hans Wahl, and *Wie sah Goethe aus?*, by Fritz Stahl, are picture books. Other publications include: Julius Petersen's *Aus der Goethe Zeit*, collected essays by a recognized authority; Friedrich Zollinger's *Goethe in Zurich*; Albert Schweitzer's *Goethe*, a small book containing two addresses; and Fritz Friedländer's *Heine und Goethe*. One important aspect of the observance has been the publication of really excellent low-priced editions of the poet's works, notably by the Bibliographisches Institut.

The Gerhart Hauptmann 70th birthday has been marked by the virtual completion of Walter Requardt's *Gerhart Hauptmann Bibliographie*, by a new edition (three vols.) of the *Dramatische Werke*, by Joseph Shapiro's *Gesprache mit Gerhart Hauptmann*, and by Hans von Hülsen's *Gerhart Hauptmann*, which seems to be a virtually official biography. Other works of critical or historical interest appeared in number. Emil Ermatinger edited a symposium, *Philosophie der Literaturwissenschaft*, devoted to the study of knotty theoretical problems. Lothmar Helbing's *Der dritte Humanismus* is one of many recent programmatic publications. Carl Sieber's *René Rilke* is a study of the poet's youth. *Licht aus dem Osten*, by Theodorich Kampmann, is widely considered one of the best German books about Dostoevsky. No critique of contemporary letters issued this year attracted the attention still given to Otto Forst de Battaglia's *Kampf mit dem Drachen*, published late last year. The publication of the second volume of Friedrich Gundolf's *Romantiker* virtually brought to a close the work of this critic, recently deceased. I. Weidekampff's *Traum und Wirklichkeit in der Romantik und bei Heine* and E. Voegelé's *Mittelbarkeit und Unmittelbarkeit in der Lyrik* may be named as representative of many special studies. Notice is not taken here of those extensive collections—e.g. the Kindermann-Brecht-Kralik *Deutsche Literatur* or the *Deutsche Texte des Mittelalters*—which are gradually being pushed toward a conclusion. That such undertakings can make any progress at all under existing conditions is a splendid tribute to the tenacity of German scholarship.

ART. Though the hard times scarcely favored the production and purchase of necessarily expensive art books, some attractive examples were offered. Friedrich H. Hoffmann's *Das Porzellan der europäischen Manufakturen im 18. Jahrhundert* is another Propylaen-Verlag *Pracht-*

*werk*. Other publications include: *Das neue Kollwitz-Werk*, reproductions of recent drawings by Käthe Kollwitz; Oscar Wulff's *Die neurosische Kunst im Rahmen der Kulturentwicklung Russlands*; and Hans Karlinger's *Theodor Fischer*. Of cognate interest is Conrad Groeber's *Kirche und Künstler*, which discusses the problems of ecclesiastical art. One of the most important publications in the field of music is *Moderne Musik seit der Romantik* by Hans Mersmann.

THE SOCIAL SCIENCES. It was inevitable that there should be intense concern with social and economic problems, and the wealth of new books dealing with them is characteristic. Political radicalism is the theme of Wilhelm von Schramm's *Radikale Politik*, interesting chiefly for its interpretation of Fascist psychology. Much the same point of view governs Kurt Trampler's philosophic *Krise des Nationalstaats*, Carl Schmitt's trenchant and legalistic *Legalität oder Legitimität*, and Edgar von Schmidt-Pauli's informative but prejudiced *Manner um Hitler*. Karl Braunias has written a well-informed study of the voting systems of modern democracies, *Das parlamentarische Wahlrecht*; Gertrud Büumer's summary of politically active feminism in Germany is entitled *Die Frau im deutschen Staat*; and for general information one may consult Sigmund Neumann's *Die deutschen Parteien*. The general cultural situation is envisaged in Ernst Robert Curtius' *Deutscher Geist in Gefahr*. Economic trends are the topic of Franz Oppenheimer's *Weder Kapitalismus noch Kommunismus*, M. J. Bonn's *Kapitalismus oder Feudalismus?* and Goetz Briefs' *Die Wandlungen der Wirtschaft im kapitalistischen Zeitalter*. Special problems are considered in Josef Dobretsberger's *Freie oder gebundene Wirtschaft?*, Ernst Wagemann's *Geld und Kredit-Reform*, Emil Lederer's *Das Kartellproblem*, and Rudolf Stucken's *Die Konjunkturen im Wirtschaftsleben. Der deutsche Katholizismus im Zeitalter des Kapitalismus*, by Wilhelm Schwer and Franz Müller, is a contribution to the study of the relations between religion and the social order. Among the latest books on depression-ridden America Richard Lewinsohn's *Die Welt aus den Fugen* is notable. Little of great importance about Russia has appeared this year. The number of more or less interesting brochures is legion.

HISTORY. History has its patient servitors. Among the large-scale productions which have been carried a step forward are the *Monumenta Germaniae historica*, and the *Geschichte der führenden Völker* which a group of Catholic scholars are writing. Curt Gebauer's *Deutsche Kulturgeschichte der Neuzeit* is another venture into an attractive field. The publication of Gustav Stresemann's *Vermächtnis*, edited by Henry Bernhard, has occasioned a great deal of controversy. Stefan Zweig is the author of *Marie Antoinette*, much written about royal heroine. Eugen Kühnemann's biography of *George Washington* is sympathetic, and differs no whit in this respect from Walter Bloem's *Hindenburg der deutsche*. Franz Seldte's *Der Stahlhelm* adds something to our knowledge of the recent troubled past. *Ein Menschenleben: Heinrich Braun*, by Julie Braun-Vogelstein, records the career of an Austrian Socialist leader. Heinrich Gunter's *Deutsche Kultur in ihrer Entwicklung* is solid and authoritative.

TRAVEL. Travel is represented by Paul Schebasta's *Bambuti*, an authoritative but popularly

written account of life among the almost unvisited Pygmies of Central Africa. Richard Loederer is an artist whose sketch-book, *Wudu-Feier auf Haiti*, is illustrated with original woodcuts. Paul Rohrbach's *Errauchendes Asien* embodies the reflections aroused by a recent journey through India, China, and Japan, while Egon Erwin Kisch offers, in *China geheim*, a close-up of war-infested China. *Frankreich in Indochina* is a critique of French colonization methods by an anonymous writer.

**TRANSLATION.** Translations were rather noticeably fewer this year, and well-nigh limited to fiction and books on economic problems. Among the American writers translated into German are Thornton Wilder, who enjoyed a success *d'estime*, Stuart Chase, Upton Sinclair, and H. R. Knickerbocker.

**GERMANY.** A federal republic of central Europe. It is bounded on the north by the Baltic Sea, Denmark, and the North Sea; on the west by the Netherlands, Belgium, Luxemburg, and France; on the east by Lithuania and Poland, whose Danzig corridor isolates East Prussia from the rest of Germany; and on the south by Switzerland, Austria, and Czechoslovakia. The German Empire consisted of 25 Federal states and the Imperial Reichsland; the Federal Republic consists of 18 republics. Capital, Berlin.

**AREA AND POPULATION.** The accompanying table from the *Statesman's Year Book* for 1932 gives the population according to the census of June 16, 1925, and the area as of Dec. 31, 1930. The estimated population in June, 1930 was 65,092,000, excluding the Saar.

Cities of over 500,000 population at the census of 1925 were. Berlin, 4,024,286; Hamburg, 1,079,126; Cologne, 700,222; Munich, 685,036; Leipzig, 684,728; Essen 629,564; Dresden, 625,016; Breslau, 599,770; Frankfort-on-Main, 540,115; Dortmund, 525,837. Berlin's population on Mar. 1, 1932, was estimated by the Prussian Statistical Bureau at 4,288,314, as against 4,348,000 on the same date of 1930. Foreigners in the country in 1925 numbered 957,096, or 15.3 per cent of the population. Emigrants in 1930 numbered 37,399, of whom 25,427 went to the United

States. Births in 1931, excluding the Saar, numbered 1,031,508 (1,226,829 in 1930); deaths, 725,983 (710,905); marriages, 515,411 (562,491).

**EDUCATION AND RELIGION.** Elementary education is compulsory between the ages of 6 and 14. The enrollment in the various institutions during the 1926-27 scholastic years was as follows: Elementary public schools, 6,659,769; elementary private schools, 36,991; intermediate schools, 259,070; vocational and trade schools, 2,507,028; "gymnasien" and "realschulen" (corresponding to American high schools), 811,081; universities (1930), 97,403, excluding 6972 on leave or excused from attending classes. There are 23 universities and numerous technical and normal schools.

The 1925 census showed 40,014,677 Protestants (64.1 per cent of the population), 20,193,334 Catholics (32.4 per cent), and 564,379 Jews (0.9 per cent).

**PRODUCTION.** One of the most agriculturally productive countries of Europe, Germany in June, 1931, had 51,212,687 acres of arable land, 20,408,475 acres of grass, meadow and pasture, 206,362 acres of vineyards, and 1,591,795 acres of orchards, truck gardens, etc. The total area under cultivation was 73,419,825 acres. Of the cultivated area, about 61 per cent was sown to grain and legumes and 21 per cent to potatoes, sugar beets, and cattle turnips. The average size of individual farms was about 29 acres, although large estates predominated in the northeast. The area and production of the chief crops in 1930 and 1931 are shown in the accompanying table from the 1932 *Commerce Yearbook*. Livestock in December, 1931, included 19,090,500 cattle, 3,447,700 horses, 23,783,400 swine, and 3,495,000 sheep. The timber acreage in 1932 was 31,259,000, including over 22,000,000 acres of softwoods; one-third of the total acreage was under public control.

#### GERMAN CROPS AREA AND PRODUCTION

**MINING AND METALLURGY.** The principal German mining areas are in the districts of Westphalia, Rhenish Prussia, and Silesia (coal and iron), Central Germany (brown coal), the Harz (iron and copper ore), and the Westerwald (iron ore). In 1925, there were 2942 mines in Germany, employing 808,593 persons. Mineral production declined during the three years 1929, 1930 and 1931, as shown in the accompanying table of mineral, metallurgical, and industrial production. In 1932, the pig iron output was 3,933,026 metric tons and the output of steel was 5,746,000 metric tons (preliminary).

#### GERMANY. AREA AND POPULATION

**MANUFACTURING.** Germany's industrial output during 1931 was 25 per cent less than in 1930 and 57 per cent less than in 1929. The gross value of industrial production was officially estimated at approximately \$12,000,000,000 for 1931, \$16,000,000,000 for 1930, and \$21,000,000,000 for 1929. The quantity of industrial goods produced during 1931 was 37 per cent below the 1928 level, the chief decline taking place in manufactured consumption goods, especially textiles, shoes, and paper.

The industrial census of June 16, 1925, showed 1,852,737 industrial establishments, employing 12,704,135 work-people. The leading industries are the production of iron and steel in the Ruhr, Westphalia, and the lower Rhine district, electrical products, chemicals, textiles, linen, woollens, beet sugar, potash, glass, porcelain, earthenware, clocks and wooden ware, beer, and tobacco products. The raw sugar output in 1930-31 totaled 2,515,617 metric tons; beer (1930), 48,486,000 hectolitres (of 22 gallons); tobacco products (1930-31), 6,794,477,000 cigars, 29,748,462,000 cigarettes, 37,261,506 kilos of smoking tobacco, and 2,077,132 kilos of snuff. The number of unemployed workers decreased from 5,966,000 on Jan. 15, 1932, to 5,100,000 on Sept. 30, 1932. It was 5,773,000 on Dec. 31, 1932. Union wages in general declined about 20 per cent during the two years 1931 and 1932. During 1932, the index of agricultural prices declined 11 per cent, of manufactures 10 per cent, of raw materials 5 per cent. The national income in 1931 was estimated at 57 billion marks (about \$13,571,000,000), or 19 billion marks less than in 1929.

**COMMERCE.** Germany in 1931 had an export surplus amounting to 3,878,000,000 marks, including gold and silver and reparation deliveries in kind; excluding these items, the final surplus was 2,478,000,000 marks (mark equaled \$0.2382 at par). Imports were valued at 6,727,000,000 marks (10,393,000,000 marks in 1930) and exports at 9,598,600,000 marks (12,035,600,000 marks in 1930); imports in 1931 declined about 35 per cent in value and about 30 per cent in volume, while the export decline was 20 per cent in value and 10 per cent in volume. The chief export items, in order of value in 1931, were: Iron and steel, 1,419,419,000 marks; chemical products, 432,044,000; coal, 409,913,000; paper, 324,656,000; cotton goods, dyes and varnishes, woolen goods, silk and rayon, copper, glass and glassware, and leather. The leading import items were: Raw cotton, 336,644,000 marks; wool, 321,824,000 marks; mineral oil, 256,841,000 marks; coffee, 222,784,000 marks; butter, copper, iron ore, timber, coal and wheat.

The United States continued as the chief source of supply, although imports from that country decreased 40 per cent in value as compared with 1930. Imports from the United States were valued at 791,400,000 marks (1,306,800,000 in 1930); Great Britain, 453,400,000 marks (639,000,000); the Netherlands, 383,800,000 marks (560,800,000); France, 341,200,000 (518,700,000); Soviet Union, 302,800,000 (436,300,000). Exports went principally to Great Britain, 1,133,400,000 marks in 1931 (1,218,900,000 in 1930); the Netherlands, 954,600,000 (1,205,800,000); France, 834,000,000 (1,148,600,000); United States, 476,300,000 (885,200,000); Switzerland, 541,600,000 (627,600,000); Czechoslovakia, 423,800,000 (528,200,000).

Excluding gold and silver, the 1932 exports totaled 5,700,000,000 Reichsmarks and imports 4,600,000,000 Reichsmarks, leaving an export surplus of 1,100,000,000 Reichsmarks. German exports to the United States in 1932 were valued at \$73,521,439 and imports from the United States were \$133,416,957.

**FINANCES.** The combined budgets of the Reich, the states, the communes, and the Hanseatic cities have shown continual deficits, amounting to 1,443,000,000 Reichsmarks for the fiscal year ended Mar. 31, 1931, 919,000,000 marks for 1929-30, and 1,210,000,000 marks for 1928-29. Actual returns of the Reich's budget operations in 1929-30 were: Revenue, 10,100,000,000 Reichsmarks; expenditure, 10,546,000,000 marks. For 1930-31, revenue was 10,259,000,000 marks; expenditure, 11,248,000,000 marks. The 1931-32 budget estimates of the Reich balanced at 9,300,000,000 marks; those for 1932-33 at 8,200,000,000 marks. Actual returns for 1931-32 showed a deficit of 449,000,000 marks in the ordinary budget, of 152,000,000 marks in the extraordinary budget, and 1,031,000,000 marks carried over from the deficit of 1930-31, making a total actual deficit of 1,632,000,000 marks (about \$400,000,000). Between 1930 and 1932 expenditures of all governmental units were reduced by some 6,000,000,000 marks. A deficit of about 800,000,000 marks (about \$190,000,000) was forecast for the 1932-33 fiscal year, despite economies totaling 783,000,000 marks.

In July, 1932, the total debt of the Reich was placed at 11,423,000,000 marks; of the states, 2,881,000,000 marks; of the municipalities, 9,407,000,000 marks; total public debt, 24,100,000,000 marks, of which about 18,000,000,000 were contracted since the stabilization of the currency in 1923. On the basis of a census taken as of Feb. 29, 1932, the private foreign indebtedness on that date was 20,623,000,000 marks, including 10,153,000,000 marks in short-term debts (maturing up to February, 1933) and 10,470,000,000 marks in long-term debts (due after February, 1933). Adding German bonds owned by foreigners (about 400,000,000 marks), foreign-owned German shares and interest in German enterprises (2,500,000,000 to 3,500,000,000 marks), and foreign-owned real property in Germany (2,000,000,000 marks), the German Statistical Bureau estimated that the total German foreign indebtedness was from 25,600,000,000 to 26,600,000,000 marks. German investments abroad amounted to some 8,500,000,000 marks. Of the long-term debt contracted abroad, 5,265,000,000 marks, or 55.2 per cent, was held in the United States.

**INTERNAL COMMUNICATIONS.** At the beginning of 1931, railway lines extended 36,231 miles, of which 33,434, miles were state owned and oper-

ated. The state railways in 1930 carried 399,544,176 tons of merchandise and 1,829,000,000 passengers. In the same year, there were 7689 miles of inland waterways, with a fleet of 19,166 vessels, aggregating 6,725,748 tons. In the summer of 1931, 94 air-mail lines were in operation, with routes aggregating 20,460 miles. Air lines carried 93,677 passengers and 481 tons of letters and parcels in 1930. Highways totaled 217,479 miles, of which 74,564 miles were macadam.

**SHIPPING.** The German mercantile marine increased from 1990 vessels (of 100 tons and over), aggregating 3,363,046 gross tons on June 30, 1927, to 2171 vessels, of 4,254,601 gross tons on June 30, 1931. The net tonnage of vessels entering German ports with cargo in 1931 was 31,152,000 (34,176,000 in 1930) and the net tonnage of vessels clearing with cargo was 27,876,000 (28,908,000). See **SHIPPING, MERCHANT.**

**GOVERNMENT.** Under the Constitution of the Republic adopted July 31, 1919, and promulgated Aug. 11, 1919, executive power is vested in the President elected by the people for seven years, and in a ministry appointed by him and responsible to the Reichstag, or lower house of Parliament. Legislative power is vested in the Reichstag, consisting of 577 members following election of Sept. 14, 1930, who are elected by universal, equal, direct, secret franchise of male and female voters, on the principle of proportional representation: and in a federal council, the Reichsrat, consisting of 66 members. The consent of the Reichsrat is required to all bills before their introduction into the Reichstag, but the latter body may pass a bill over the heads of the former by a two-thirds vote.

The cabinet formed Oct. 9, 1931, was constituted as follows: Chancellor and Foreign Minister, Dr. Heinrich Brüning (Centre); Minister of Finance and Vice Chancellor, Hermann Robert Dietrich (German Democratic party); Justice, Dr. K. Joël; Defense and Home Affairs, Lieut.-Gen. Wilhelm Groener; Economic Affairs, Dr. Hermann Warmbold; Transport, Gottfried Reinhold Treviranus (People's Conservative party); Labor, Dr. Adam Stegerwald (Centre); Food and Agriculture, Dr. Martin Schiele (Nationalist); Posts, Dr. G. Schaetzel (Bavarian People's party). For changes during 1932, see *History*.

### HISTORY

Three years of economic and political disintegration in Germany culminated in 1932 in the virtually complete breakdown of parliamentary government and the return to power of the Junker class of large landowners who established and dominated the Empire. Supported by President von Hindenburg and the heads of the Reichswehr, a Junker cabinet led by Col. Franz von Papen displaced Chancellor Brüning and headed off Adolf Hitler's spectacular drive toward a Fascist dictatorship. Amid the political chaos manifested by five major elections within eight months, the new cabinet presented a determined, aggressive front. It embarked upon a bold course, designed to check the economic depression at home and to shake off without delay the chains of the Versailles Treaty. Within Germany, its policies increased the dangerous schism between the working classes, represented by the Social Democrats and Communists, on the one hand, and the industrialists, large estate owners, and army officers on the other. In the international field, its

course endangered prospects of substantial progress toward the limitation of armaments and increased the general uneasiness and tension in Europe.

**THE PRESIDENTIAL ELECTION.** The opening of the year found Chancellor Brüning engaged in negotiating an agreement among German political leaders for the extension of President von Hindenburg's term of office, which was due to expire May 5, 1932. Intended to spare the country the cost and excitement of a presidential election at a time of political and financial crisis, the proposal met with favor among many party chiefs. It was flatly rejected on January 17, however, by the National Socialist leader, Adolf Hitler, without whose support the necessary two-thirds vote could not be mustered in the Reichstag.

The presidential campaign temporarily ended the so-called "Harzburg Front," the anti-republican union of the Nazis (National Socialists), Nationalists, and the *Stahlhelm* (Steel Helmet league) formed at Bad Harzburg the previous October. The Nazis and Nationalists nominated Hitler and Theodore Duestenberg, a leading *Stahlhelm* official, respectively. On petition of some 3,000,000 voters, von Hindenburg consented to run for reelection, being supported directly by the Catholic Centre, the Bavarian People's, State, and the Social Democratic parties and indirectly by most of the moderate bourgeois groups. The other candidates were Ernst Thaelmann, leader of the German Communist party, and Gustav Winter, an obscure advocate of the revalorization of the old German mark. The voters were thus presented with three alternatives—the maintenance of the Weimar Republic under von Hindenburg, the establishment of Hitler's Third Reich, or the creation of a communist state under Thaelmann. The Nationalists, monarchist in sentiment, hoped to secure enough votes to obtain the balance of power at the "run-off election."

In the first election of March 13, von Hindenburg lacked only one-half of 1 per cent of the necessary absolute majority over all other candidates, capturing 18,654,244 votes out of the 37,657,201 cast. Hitler followed with 11,341,119 votes. Thaelmann secured 4,982,870, Duestenberg 2,558,815, Winter 111,492, and others 8661. In the run-off election of April 10, von Hindenburg won 19,359,642 votes, or 53 per cent of the 36,491,694 votes cast. Hitler's vote increased to 13,417,460, or 36.7 per cent; Thaelmann's declined to 3,706,388, or 10.1 per cent. Duestenberg and Winter dropped out of the second contest.

**RISE OF THE NAZIS.** Von Hindenburg's victory was diagnosed as an endorsement of the Weimar Republic. The voting, however, showed extensive gains for the anti-Republican parties and subsequent events indicated that the success of the 84-year-old President was due more to his personal popularity than to his support of the Republic. On Mar. 13, 1932, the opponents of the Republic polled 50.4 per cent of the total vote, as compared with 38.75 per cent in September, 1930. Hitler's National Socialists doubled their vote of the September, 1930, elections, and in the run-off poll of April 10, they added 2,000,000 more votes. In the state elections held April 24 in Prussia, Württemberg, Hamburg, and Anhalt, the Nazis emerged as the largest single party; in Bavaria they stood second. In these five states, comprising about five-sixths of the total popula-

tion, they averaged 35 per cent of the votes—40 per cent in Anhalt, 38 per cent in Prussia, and 30 per cent in Bavaria.

Further Nazi gains were shown in the elections to the State Diet of Hesse on June 19. Hitler's followers polled 322,268 votes, against 319,039 on the second ballot of the Presidential election and 291,183 in the preceding Diet elections of November, 1931. On May 29, the election to the Diet of Oldenburg gave the National Socialists 131,525 votes, as against 97,778 votes in the 1931 election; the Nationalist vote was 15,629, against 12,500. The Mecklenburg-Schwerin state election on June 5 showed a similar trend. Of the 58 seats, the Nazis captured 29, the Social Democrats 18, the Nationalists 5, Communists 4, and others 2.

In all of these states, the smaller conservative groups were almost entirely absorbed by the Hitlerites. The Social Democrats lost heavily, while the Communists made slight gains. In no state, however, did the Nazis secure a majority, in each case the legislative bodies were deadlocked, with the Communists or some other small group holding the balance of power. In Prussia the Nazis counted 162 seats out of 422 in the Diet, compared with 6 out of 453 in the previous Diet. They held exactly the same number of mandates as the coalition of Social Democrats, Centrists, and Democrats (state party) which had governed Prussia since 1925 (see PRUSSIA). The Centrists, with 67 seats, and the Communists, with 57, held the balance of power.

**THE FALL OF BRÜNING.** As the fate of the Brüning government was closely bound to that of the republican coalition in the Prussian Diet, the attention of all Germany was focused upon the new Diet when it convened on May 24. It opened with a violent struggle between Nazi and Communist members, in which several were badly hurt. The National Socialists succeeded in electing Wilhelm Kerl as President, in accordance with the precedent that the office should go to the strongest party. A deadlock ensued over the choice of a Premier to succeed the Social Democrat, Dr. Otto Braun, no candidate being able to secure the required absolute majority.

Before the deadlock could be ended by a realignment of parties, the resignation of Dr. Brüning's coalition Reich cabinet on May 30 precipitated a more drastic solution. Brüning's downfall was caused by the withdrawal of the loyal support which both President Hindenburg and the Reichswehr officers, acting through Minister of Defense Groener, had accorded him for more than two years. Aided by von Hindenburg, Groener, and the Socialist Premier of Prussia, Brüning had maintained a semi-dictatorial government which managed to observe the constitutional forms of the Weimar Constitution and still maintain relative domestic tranquillity. Moreover Brüning's policies had the support of the Reichstag, which two weeks before his resignation gave him a vote of confidence by a margin of 30 votes.

However, there had been growing dissatisfaction, particularly among the army officers, at the moderation of the Chancellor's foreign policy and his support of various socialistic measures. The April elections reflected this turn of sentiment. Discontent among the Junker element in the Reichswehr was further stirred by the ban placed by General Groener on the Nazi Storm Troops early in April, a measure which was extended to all political military organizations on May 4.

Lieut.-Gen. Kurt von Schleicher, "political" manager of the Reichswehr under Groener, now informed his chief that he (Groener) no longer had the support of his officers, and suggested that he resign. On May 12, General Groener was forced to comply.

The gain in the Hitler vote, the failure of Brüning to secure satisfactory concessions from Germany's opponents in the World War, intrigue in the army, and finally von Hindenburg's personal objection to a government measure designed to redivide the larger estates in East Prussia—all these factors induced the President to withdraw his support. With these two indispensable props removed, the Brüning Ministry collapsed.

**THE PAPEN-SCHLEICHER CABINET.** To the surprise of the nation, President von Hindenburg on May 31 entrusted the formation of a new cabinet to Col. Franz von Papen, former German military attaché in Washington. (Von Papen was recalled by the German government in 1915 at President Wilson's request for alleged violation of American neutrality and misuse of diplomatic privileges.) His ministry looked to the army rather than to the Reichstag for support. Containing no representative of labor, it stood for the interests of the army, conservative agrarian elements, and heavy industry. Von Papen resigned his membership in the Centre party upon becoming Chancellor. His Foreign Minister, Baron Constantin von Neurath, was notoriously monarchist in sentiment. Lieutenant-General von Schleicher, Minister of Defense, was the most influential figure in the cabinet. The other members were: Minister of Finance, Baron Schwerin von Krosigk; Interior, Baron Wilhelm von Gayl; Economics, Prof. Hermann Warmbold; Food and Agriculture, Baron Magnus von Braun; Transportation and Posts, Baron Paul von Eltz-Ruebenach; Labor, Hugo Schäffer; Justice, Dr. Franz Guertner.

It was clear that the ministry could not survive a test vote in the Reichstag. Accordingly, Chancellor von Papen secured a decree from President von Hindenburg dissolving the Reichstag and calling for a new general election on July 31. The 60-day interval—the maximum allowed by the Reich Constitution—served to enhance the prestige of the new cabinet. At the Lausanne Conference, in the treaty of July 8, Germany secured the virtual cancellation of reparations (see REPARATIONS AND WAR DEBTS). The cabinet's internal programme was primarily one of defeating socialism in all of its forms, whether advocated by Social Democrats and Centrists, the National Socialists, or Communists of the Moscow variety. Accordingly its efforts were directed toward the overthrow of the Centrist-Social Democratic coalition ruling Prussia, which comprises two-thirds of Germany.

The disorders throughout Germany in connection with the Reichstag campaign provided a convenient excuse for intervention. These disorders had been accentuated by the Reich decree of June 16 removing the ban imposed by the Brüning government on the Nazi Storm Troops. Nevertheless, on the ground that the Socialist-Centrist government was unable to maintain order in Prussia, the Papen-Schleicher government, with von Hindenburg's authorization, on July 29 appointed a Federal commissioner for Prussia, and placed Berlin and the Province of Brandenburg under martial law. Herr Braun, Prussian Minister-President, and Prus-

slan Minister of Interior Severing were forced to cease their administrative activities under threat of arrest and the Socialist police officials of Berlin were forcibly ejected by the Reichwehr and held in prison until they signed their resignations. The Prussian officials sought an injunction to restrain the Reich government. The German Supreme Court refused to grant the injunction (July 25). Its decision (of October 25) as to the constitutionality of President Hindenburg's decree deposing the Prussian Cabinet upheld the President but left the Prussian Ministry formally in office with a semblance of power.

Chancellor von Papen now proceeded to consolidate his control of Prussia by partially merging its administration with that of the Reich. On October 31 he appointed Magnus von Braun, Federal Minister of Agriculture, to administer the Prussian Ministry of Agriculture; Prof. H. Johannes Popitz, former Federal Under-secretary of Finance, to administer the Prussian Finance Ministry; and Prof. Wilhelm Kaehler of Greifswald University, to administer the Prussian Ministry of Education. At the same time Professor Popitz and Hans Bracht, the acting Federal Commissioner for Prussia, were appointed ministers without portfolio in the Reich Cabinet. This process was completed on November 18, when President von Hindenburg issued another emergency decree under Article 48 of the Federal Constitution defining the jurisdictions of the titular Prussian Ministry and the Reich's commissioner. The latter was invested with all administrative duties and prerogatives. The Prussian (Braun) Cabinet retained only the right of representation in the Reichsrat (Federal Council), the Prussian Diet and the State Council. The Reich's commissioner was even authorized to dictate the replies of the Prussian Ministers to interpellations in the Diet. The successful seizure of Prussia by the Reich was one of the chief reasons for the widespread opposition to the Papen-Schleicher government and the refusal of the other states to cooperate with it.

**THE FIRST REICHSTAG ELECTION.** The bitterness of German dissensions was illustrated by the campaign, during which more than 100 persons were killed and many hundreds seriously wounded. Despite important gains by the National Socialists, who won 37.9 per cent of the seats in the new Reichstag as against 18.6 per cent in the old, the election of July 31 resulted in a stalemate. With 230 seats the Nazis were by far the largest single party delegation which had ever sat in the Reichstag. Nevertheless, they failed to acquire a majority of seats, even with the support of the other Right parties. The combined Right groups held 46.6 per cent of the seats; the Centre and Moderate Left 38.7 per cent; and the Communists, who held the balance of power, 14.7 per cent. The standing of the parties in the new Reichstag, with the standing in the former Reichstag in parentheses, was: Right groups: National Socialists, 230 (107); Nationalists, 37 (41); People's party, 7 (30); Christian Socialists, 4 (14); Agrarian parties, 3 (21); Economic party, 3 (21); other conservative parties, 0 (20)—Centre and Moderate Left: Bavarian People's party, 20 (19); Catholic Centre, 76 (68); State party, 4 (14); Bavarian Farmers' party, 2 (0); Social Democrats, 133 (143)—Extreme Left: Communists, 9 (77)—total, 607 (577).

In the new Reichstag, as in the previous one,

the Papen-Schleicher cabinet had little chance of securing a majority. Under President von Hindenburg's direction extended negotiations now took place in an endeavor to form a coalition ministry, including the Nazis, which would have the needed majority. These efforts broke down (August 13) when Hitler demanded the Chancellorship for himself and a dominating position for his party in the new Cabinet. Hitler was reported to have told the President that he wanted "precisely the same power Mussolini exercised after the March on Rome." With Hindenburg's refusal to grant such powers, the Nazis joined the political opposition to the Papen-Schleicher Cabinet, which was forced to choose between again dissolving the Reichstag or continuing in office by extra-constitutional means.

**SECOND DISSOLUTION OF REICHSTAG.** The newly-elected Reichstag met and selected its officers on August 30 without any of the expected disorders. Capt. Hermann Goering, a Hitler lieutenant, was chosen President. Then it adjourned to September 12. In the interval (September 5) the ministry promulgated a decree reversing the deflationary policy which the Brüning government had followed for the preceding two years. By inaugurating an indirect inflation of credit, the cabinet planned to stimulate industry sufficiently to reimburse it for an outlay of some 3,000,000,000 marks. The main features of the decree were:

- (1) Emergency unemployment relief works, for which 850,000,000 marks were immediately available.
- (2) Payment by the Reich to employers of a premium of 400 marks for each new employee taken on, the total payments not to exceed 700,000,000 marks. This scheme was expected to reemploy 1,700,000 workers at no additional cost to the Reich, as the unemployment relief fund would be relieved of a similar burden.
- (3) Remission by the Reich of some 312,000,000 marks of industrial taxation in each of the five years beginning in October, 1934. This scheme was intended to enable the potential taxpayer to mobilize immediately the money he might be expected to pay later. It provided for the issuance of 1,600,000,000 marks of taxation credit certificates, bearing 4 per cent interest. The citizen paying between October, 1932, and October, 1933, taxes weighing especially heavily on industry was to receive taxation credit certificates equivalent to about 40 per cent of his tax payment. He could use the certificates either as collateral for a loan or to pay his taxes between 1934 and 1938.
- (4) The reduction of wages by employers taking on more workers up to a maximum reduction of 12½ per cent if the staffs were increased by 25 per cent.

The decree enlarged the already extended sphere of state capitalism in Germany, in a manner redounding mainly to the benefit of the industrialists. It was in line with a previous decree of June 14 reorganizing the system of unemployment relief and reducing the funds distributed to the unemployed by about 20 per cent. The decree of September 5 was novel in form only. The practice of granting governmental guaranties or special credits on exceptionally favorable terms to distressed enterprises was carried far under the Brüning government and its predecessors. It was estimated that these advances by the Federal and state governments aggregated about \$1,200,000,000, up to Apr. 1, 1932.

Chancellor von Papen had planned to introduce his economic programme in the Reichstag when it reconvened September 12, holding in reserve a decree for the dissolution of that body, given him by the President, for use in case it should try to oust his ministry. Before the Chancellor could outline his programme, however, a Communist resolution was presented declaring lack of confidence in the Papen Government and call-

ing for the revocation of his economic decrees. During the recess held to consider this surprise motion, the Nazis decided to support it and to overthrow the Cabinet without giving the Chancellor a chance to speak. Accordingly the Communist no-confidence motion was immediately put to a vote when the Reichstag reconvened and was carried by 513 to 32. While the vote was being taken, Chancellor von Papen placed the decree dissolving the Reichstag on the desk of its President, but Herr Goering brushed it aside and allowed the vote to be completed.

Declaring the no-confidence vote illegal, since the Reichstag had passed out of existence, the ministry announced that elections for a new Reichstag would be held November 6. The constitutionality of the Chancellor's action was challenged by Herr Goering. The Centrists and Social Democrats announced that they would not join in an effort to force this issue against the government and Herr Goering was obliged to cancel the Reichstag session called for next day, ostensibly until such time as the Supreme Court could pass upon the constitutional question involved.

The Papen-Schleicher government thus continued to govern, in complete disregard of the Reichstag. The constitutional issue was again revived on October 11, when the Reichstag's standing committee on foreign affairs threatened the cabinet with impeachment. The Centrist and Bavarian People's party members on the committee joined with the National Socialists and Social Democrats in a scathing denunciation of the cabinet's refusal to give the committee an account of its negotiations with respect to the reparations and disarmament problems.

**THE SECOND REICHSTAG ELECTION.** The campaign for the new Reichstag elections, which none of the parties desired, led to a recrudescence of political violence. An unexpected development was the violent clashes which occurred between the Nazis and the Nationalists, who were formerly allies. The Nazi "wrecking crews" systematically disrupted Nationalist meetings throughout the country, a move attributed to the drift of voters from the Hitlerites to the Nationalists. Hitler's reiteration on October 23 that he would take nothing less than the Chancellorship after November 6 and Chancellor von Papen's declaration that the restoration of the monarchy was not an issue, were other highlights of the campaign.

While the voting produced important changes in the composition of the Reichstag, that body remained as hopelessly deadlocked as ever. The most significant shifts were the loss of 35 seats by the Hitlerites, whose vote declined 11.5 per cent as compared with the July 31 election, and a gain of 11 seats by the Communists, whose vote increased by 18 per cent. The composition of the Reichstag now was: National Socialists, 195; Social Democrats, 121; Communists, 100; Centre party, 70; Nationalist party, 51; Bavarian People's party, 18; People's party, 11; Christian Social party, 5; State party, 2; scattered, 9; total, 582. The setback of the Hitler party was attributed chiefly to the fact that the Papen-Schleicher government had stolen most of its thunder by its firm foreign and domestic policy. Hitler's refusal to accept the proffered post of Vice Chancellor on August 13, his criticism of von Hindenburg, and his unblushing defense of some of his Storm Troopers convicted of political

murder in Silesia, all weighed against him. The election indicated that about 70 per cent of the German people were dissatisfied with the existing economic and social system, that about 90 per cent were hostile to the Papen-Schleicher Cabinet, and that almost two-thirds were opposed to the Weimar (republican) Constitution. But the parties hostile to the Republic were so divided there was little prospect of radical action.

The ministry was now faced with the alternatives of establishing an open dictatorship or greatly enlarging its support among the political parties. Chancellor von Papen attempted to win the new Reichstag's toleration of his cabinet, but the blunt refusal of the Centrist and Bavarian People's parties on November 16 to coöperate led to the resignation of the entire ministry on the following day. President von Hindenburg once again presented Hitler with a conditional opportunity to form a new ministry (November 21) but the latter again refused to accept the rigorous conditions laid down. On November 24 the aged President terminated the negotiations, announcing that he could not consider Hitler for the Chancellorship on any except a parliamentary basis.

**THE SCHLEICHER CABINET.** It was not until December 2 that the cabinet crisis was ended by the appointment of General von Schleicher as Chancellor in a slightly reorganized presidential ministry, responsible to the President alone. In forming his cabinet, the new Chancellor indicated his purpose to eliminate the anti-labor tendencies, the import contingent policy, and the policy of centralization and constitutional reform which were considered primarily responsible for von Papen's resignation. He created a ministry for reemployment, headed by Dr. Guenther Gereke, whose unemployment relief plan had been widely discussed. Besides the Chancellorship, General von Schleicher held the posts of Minister of Defense and Federal Commissioner for Prussia, thus controlling both the Reichswehr and the Prussian police. The other cabinet members were: Foreign Affairs, Baron Constantin von Neurath; Interior, Dr. Franz Bracht; Finance, Count Lutz Schwerin von Krosigk; Justice, Dr. Franz Guertner; Transportation and Posts, Baron Eltz von Ruebenach; Labor, Dr. Friedrich Syrup; Minister Without Portfolio, H. Johannes Popitz.

When the newly elected Reichstag—the seventh under the Republic—convened on December 6, Socialist and Communist motions to compel Chancellor von Schleicher to submit his programme for the immediate approval of that body were voted down by the other parties. The Reichstag recessed indefinitely on December 9, giving the Chancellor an opportunity to put his programme into effect before facing a vote of confidence. The short session was marked by a bitter attack upon President von Hindenburg for his refusal to entrust Hitler with the Chancellorship by Gen. Karl Litzmann, 82-year-old National Socialist. Also by the passage of a National Socialist bill amending the Constitution so that the Chief Justice of the Supreme Court would succeed to the Presidency in the event of the death of the incumbent.

The Chancellor announced his programme over a nation-wide radio hook-up on December 15. It consisted, he said, "of one single point: the creation of work." He advocated the creation of employment, extensive promotion of land settlement, and the stimulation of private industry along

the lines of Colonel von Papen's economic programme. He reiterated the German demand for arms equality, opposed monetary inflation, and pledged the abolition of emergency decrees, such as those restricting the press. His government had already revoked the von Papen decree permitting employers to pay less than union rates. On December 23, Dr. Gereke announced that the 40-hour week and union wages would prevail on all public works and improvements to be launched in January in connection with the government's 500,000,000-mark emergency programme.

The advent of von Schleicher coincided with the final dissolution of the Weimar coalition—of Socialists, Centrists, and Democrats—which had controlled the Reich and most of the states since the establishment of the Republic. Its control of the Reich terminated with the collapse of the Brüning government. The last remnant of the coalition, in the State of Baden, succumbed on December 2, when the Socialists withdrew from the State government, after co-operating for some 14 years. On December 20, the Reichsrat approved a Reichstag bill granting amnesty to between 15,000 and 20,000 prisoners under sentence for political crimes or crimes committed as a result of want. December also witnessed a serious rift in the Nazi ranks, Gregor Strasser, national organizer of the party, resigning along with other members of Hitler's executive staff. Their resignation was said to represent a protest against Hitler's "rule or ruin" policy and a demand for a programme of constructive parliamentary activity.

**THE BLACK TOM CLAIM.** In a decision rendered by Associate Justice Owen J. Roberts of the U. S. Supreme Court on December 3, the Black Tom and Kingsland cases, involving claims amounting to \$40,000,000 against Germany for alleged sabotage in the World War, were settled in Germany's favor. Justice Roberts was acting as umpire of the German-American Mixed Claims Commission. The U. S. Government had claimed damages for the explosion of the Lehigh Valley terminal in New York Harbor on July 30, 1916, and the fire at the Kingsland, N. J., munition plant six months later, both of which destroyed millions of dollars' worth of munitions awaiting shipment to the Allies. It was charged that the damage was caused by agents of the German Government.

**FOREIGN AFFAIRS.** The rôle of the Papen-Schleicher Cabinet in the international field was no less spectacular than its course at home. The Lausanne Treaty, the groundwork for which had been laid by the Brüning government, scaled down the reparation burden, fixed at approximately 34,000,000,000 gold marks payable over 56 years by the Young Plan, to about 3,000,000,000 gold marks (about \$714,000,000), to be paid at the end of three years and then under certain safeguards. Freed of reparation payments, the government also sought to secure a reduction of interest and deferred principal payments on the German private foreign debt. In September, it announced that it would be unable to pay \$7,800,000 due to the United States government September 30 toward payment of mixed claims and costs of the American army of occupation. In accordance with provisions of the debt agreement, payment was postponed two years to Sept. 30, 1934. On October 16 Chancellor von Papen prepared Germany's foreign private creditors for

further sacrifices, when he warned them that Germany's obligations could be paid only by the sale of goods and that trade barriers would have to be lifted to make this possible.

At the Geneva Disarmament Conference, which adjourned on July 23, 1932, until Jan. 29, 1933, the Papen-Schleicher Ministry inaugurated a bold drive for the removal of the restrictions upon German armaments imposed by the Versailles Treaty. Count Nadolny, German delegate to the conference, brusquely announced the opposition of his government to the final resolution drafted for adoption by the Conference (see **DISARMAMENT**), on the ground that it did not grant Germany juridical equality with France. Later the government withdrew from the Disarmament Conference until such time as its claim to equality was recognized in principle. In a memorandum submitted to the French government on August 29, the Papen-Schleicher Government requested that France consent to the revision of the disarmament clause of the Versailles Treaty. The French replied that Germany was bound by Article 164 of the Treaty not to change her military status without the previous authorization of the League of Nations and that, therefore, the League was the sole judge of the issue. In a number of belligerent speeches, which had wide repercussions in Europe (see **FRANCE, POLAND, and GERMANY under History**), General von Schleicher made it plain that Germany intended to restore its armaments to the level of other powers, whether or not legal permission was forthcoming.

In line with this decision, President von Hindenburg on September 14 authorized the creation of "a national institution for the physical training of youth" and the appropriation of an initial sum of about \$360,000 to provide for three weeks' training for the youths enrolled. Orders were also given (September 14) for the construction of Germany's third "pocket battleship." On September 4, the leading lights of von Papen's government lent their official countenance to the annual parade of the *Stahlhelm* in the Tempelhoferfeld, Berlin. Led by princes and generals of the old régime, 150,000 uniformed *Stahlhelmers* from all parts of Germany swore "to be true to the last breath to the black, white, and red banner" (the Imperial colors). Foreign alarm at these events was increased by the removal (September 21) of the ten-year ban on the notorious monarchical propaganda organization *Bund der Aufrechten*.

On December 11, Germany's claim to equality of armaments was explicitly acknowledged in a declaration signed at Geneva by France, Great Britain, and Italy. In return for this concession, Germany signified her intention of reëntering the Geneva Disarmament Conference. At the same time Germany joined with Britain, France, and Italy in a declaration to the effect that they would never try to settle disputes by resort to force. The German delegate also joined with delegates representing Britain, France, Italy, and the United States in declaring their intention to coöperate in the working out of a convention substantially reducing armaments. **GIBRALTAR.** A British Crown colony consisting of a small peninsula on the south coast of Spain. The Rock of Gibraltar (1439 feet high) commands the entrance to the Mediterranean Sea. Area, 1 and  $\frac{7}{8}$  square miles; population, 1931 census, 21,372, of whom 3218 were military and 541 naval men. The fixed civil population on Jan. 1, 1931, was estimated at 16,558 including 1032 aliens. In 1930, 4026 vessels of 7,257,828 tons entered and 4032 vessels of 7,270,251 tons cleared the port, which is a British naval base. The commerce of the port is chiefly transit trade, and the supply of coal to ships. The revenue for 1930 was £146,847, and the expenditure £169,182. Cables connect with the Continent, with Tangier, with eastern Mediterranean ports, and with England. Gibraltar is under a governor who is also commander-in-chief. He is assisted by an executive council, established in 1922, Governor in 1932, General Sir A. J. Godley, appointed October, 1928.

**GIDE, zhéd, CHARLES.** A French economist, died in Paris, Mar. 13, 1932. He was born in Uzès (Gard) June 29, 1847, and attended the College of Uzès and the law faculty of the University of Paris. After practicing for a few years he was made in 1874 a professor of political economy at the University of Bordeaux. In 1880 he was called to the same chair at the University of Montpellier and in 1898 to that at the Collège de France in Paris. He was a leader in the movement toward "Christian Socialism," organized by French Protestants, and in the cooperative movement, being a member of the Higher Council of Labor and the Higher Council of Coöperation. His later years were devoted to furthering amicable relations between France and Soviet Russia. He was a chevalier of the Legion of Honor. In 1887 he founded *Revue d'économie politique*. His works include: *Du droit d'association en matière religieuse* (1874); *Principes d'économie politique* (1883); *Étude sur l'act Torrens* (1886); *La Coopération* (1900); *Les sociétés coopératives de consommation* (1904); *La séparation des églises de l'état* (1905); *Economie sociale* (1905); *Cours d'économie politique* (1909); *Histoire des doctrines économiques* (with Charles Rist, 1909); *Les institutions de progrès social* (1920); and *Premières notions d'économie politique* (1921).

**GIRL SCOUTS.** A nonsectarian movement for girls from 10 to 18, started in Savannah, Ga., in 1912 by Mrs. Juliette Low and adapted from the Scouting programme begun in England in 1907 by Lord Baden-Powell. It is a leisure-time programme which supplements the work of the church, the home and the school, and encourages

girls to learn and practice the cultural and domestic arts that were part of the old-fashioned home's training. To that it adds the love of outdoors and the cult of the physical courage which was the distinguishing mark of the pioneer.

The working membership unit of the Girl Scouts is the troop, consisting of from 8 to 32 members. This, in turn, is divided into patrols, consisting of from four to eight girls in each patrol. The adult leader of the troop is known as the captain. There are three ranks in Girl Scouting: Tenderfoot; second class; and first class. The requirements for these and for some 50 proficiency badges are described in the *Girl Scout Handbook*. In each community women interested in the movement are organized as local councils, community committees, or troop committees to help support and develop the local Girl Scout activities.

The active, paid-up memberships in the Girl Scouts as of Oct. 31, 1932, totaled 287,957, inclusive of Brownies (girls between 7 and 10) and leaders. In 1932, 71 training courses for leaders were given in 18 approved camps. About 100 were given in colleges and universities.

The official organ for girls is *The American Girl Magazine*, and for leaders, *The Girl Scout Leader*, each a monthly publication. The officers elected at the national convention held in Virginia Beach, Va., Oct. 5-8, 1932 were: Honorary president, Mrs. Herbert Hoover; chairman of the board of directors, Mrs. Nicholas F. Brady; president, Mrs. Frederick Edey; secretary, Mrs. Julius H. Barnes; treasurer, Mrs. Edgar Rickard. Miss Josephine Schain is national director. National headquarters are at 570 Lexington Avenue, New York City.

**GIROUARD, SIR EDOUARD PERCY CRANWILL.** A British soldier, railway engineer, and administrator, died in London Sept. 26, 1932. Born in Montreal, Jan. 26, 1867, he was educated at the Royal Military College, Kingston, Ont., and for some time was on the engineering staff of the Canadian Pacific Railway. In 1888 he was gazetted second lieutenant of the Royal Engineers and in 1890 lieutenant, and for five years was traffic manager of the Royal Arsenal at Woolwich. He served under Lord Kitchener with the Dongola and Nile expeditions of 1896-97, being commissioned major, in recognition of his services as director of the Sudan railroads, and receiving the Distinguished Service Order, the British medal, and the Khedive's medal with two clasps. During 1898-99 he was president of the Egyptian State Railways, and during 1899-1902 director of the South African railways. He was then made commissioner of railways for the Transvaal and the Orange River Colony. In 1904 he was promoted to lieutenant colonel and was assigned to the headquarters of the Eastern Command. In 1906 he became assistant quartermaster-general of the Western Command (Chester, England). His career as administrator began with his appointment in 1907 as high commissioner of the Protectorate of Northern Nigeria. The following year he was made governor of that protectorate and in 1909, on his promotion as colonel, governor, and commander-in-chief of the British East Africa Protectorate. During the World War he was director-general of munitions supply in London. He was created a Knight Commander of St. Michael and St. George in 1900. He published a *History of the Railways during the War in South Africa* (1905).

**GOLD.** The production of gold continued to be the exceptional industry in the United States to exceed the output of the previous year. With the decreased costs of labor and supplies, mines that had been long shut down were again able to open up; though hesitantly, because of the uncertainty of a continuation of the permitting conditions.

The situation throughout the world of thousands of men, unable to find other employment, led to an intensified prospecting which, in turn, helped to increase the total production. In addition to these factors was the release of gold hoards in India, Great Britain, and Russia. From these several sources and from the normal sources the total production of gold throughout the world in 1932 was the greatest on record. Figures compiled by the American Bureau of Metal Statistics give the world's production at 23,911,000 fine ounces, valued at \$494,240,370, an increase of 7 per cent over the previous year's output of 22,168,000 fine ounces valued at \$458,212,560.

In world output of new gold, South Africa, the largest producer, increased its production from 10,878,000 fine ounces in 1931 to 11,566,000 in 1932, with a value of \$239,069,220, or almost half of the year's total. Canadian mines showed an increase from 2,694,000 fine ounces in 1931 to 3,055,000 in 1932, valued at \$63,146,850. In Russia, the 1932 production was raised to 1,900,000 fine ounces from 1,600,000 in 1931. The greatest percentage of increase was seen in Canada, which is now the second in rank, with an increase of 13.5 per cent over 1931.

The Director of the Bureau of the Mint, with the cooperation of the Bureau of Mines, has issued the following statement of the preliminary estimate of refinery production of gold and silver in the United States during the calendar year 1932:

PRODUCTION OF GOLD IN THE UNITED STATES  
IN 1932  
[Equivalent value per fine ounce, \$20.67]

States	Gold	
	Ounces	Value
Alaska .....	434,514	\$ 8,982,200
Alabama .....	29	600
Arizona .....	66,980	1,384,600
California .....	566,031	11,700,900
Colorado .....	306,668	6,339,400
Georgia .....	242	5,000
Idaho .....	41,327	854,300
Montana .....	43,407	897,300
Nevada .....	130,037	2,688,100
New Mexico .....	23,917	494,400
North Carolina .....	508	10,500
Oregon .....	20,753	429,000
Pennsylvania .....	82	1,700
South Carolina .....	58	1,200
South Dakota .....	485,051	10,026,900
Tennessee .....	189	3,900
Texas .....	10	200
Utah .....	153,557	3,174,300
Virginia .....	10	200
Washington .....	4,242	87,700
Wyoming .....	1,592	32,900
Philippine Islands .....	228,282	4,719,000
Puerto Rico .....	101	2,100
Total .....	2,507,587	51,836,400

Comparison with 1931 final production indicates an increase in 1932 of \$2,309,200 in gold.

Comparison with the year of largest production, 1915, when gold amounted to \$101,035,700, gives a reduction of \$49,199,300.

**GOLD, MOVEMENT OF.** See FINANCIAL REVIEW.

**GOLD COAST.** A British African colony, extending 334 miles along the Gulf of Guinea between the French Ivory Coast and Togoland; comprising, in addition to the colony proper, Ashanti and the Northern Territories. The area of these three divisions is about 78,802 square miles; population, 1931 census, 3,121,214. Accra, with 59,895 inhabitants, is the capital and chief town. The part of Togoland mandated to Great Britain (13,041 square miles) is under the administration of the Governor of the Gold Coast.

Staple products and chief exports are cacao, palm oil, kola nuts, palm kernels, lumber, rubber, manganese, gold and diamonds. Including bullion and specie, imports for 1930 totaled \$8,953,770 and exports \$11,287,388. In 1930, cacao shipments were valued at \$6,970,385; gold at \$1,055,634; manganese, \$823,396; diamonds, \$658,994. For the year ended Mar. 31, 1931, revenue amounted to \$4,653,005 and expenditure to \$4,898,198. The public debt Mar. 31, 1931, stood at \$11,791,000. Shipping aggregating 5,267,048 tons entered and cleared in the foreign trade in 1930. The harbor of Takoradi, opened in 1928, offers the only complete shelter for ships of over 30-foot draft between Sierra Leone and Nigeria. There were 500 miles of railway in operation on Mar. 31, 1931.

**ASHANTI, a-shān'tē.** Annexed by Great Britain in 1901, Ashanti has an area of 24,379 square miles and a population (census of 1931) 582,866 including 400 Europeans. Kumasi, the leading town, has about 25,000 inhabitants. There were 5125 pupils in government and mission schools in 1930. Agriculture and gold mining are the chief industries, and valuable forests in the western districts yield mahogany, cedar, fruits, oil, rubber, and gum copal.

**NORTHERN TERRITORIES.** Constituted a British protectorate in 1901, the Northern Territories are under the governor of the Gold Coast but are locally administered by a chief commissioner, with headquarters at Tamale. Area, about 30,486 square miles, excluding the adjoining mandated territory of Togoland (q.v.); population, estimated in 1931, 717,283 including 107 Europeans. Navrango, the chief city, had about 18,138 inhabitants, and Tamale about 12,941. Agriculture is the main occupation, though some gold has been found. About 2311 miles of roads are passable to motors in dry weather.

The Gold Coast is administered by a governor assisted by an executive, and a legislative council. Ashanti and the Northern Territories are each locally administered by a chief commissioner. Governor of the Gold Coast, Sir T. S. W. Thomas (appointed in 1932); Chief Commissioner of Ashanti, H. S. Newlands; Chief Commissioner of Northern Territories, Maj. F. W. F. Jackson.

**GOLD STANDARD.** ABANDONMENT OF. See RHODESIA; GREAT BRITAIN; SOUTH AFRICA, UNION OF; PERU; FINANCIAL REVIEW.

**GOLF.** Gene Sarazen, erstwhile caddie, who took the golf world by storm in 1922 when he nosed out John Ball and Bobby Jones for the national open title at Skokie, had another grand golfing year in 1932. In early June he went to Sandwich, England, and continued the march

of the Americans in the British Open. He set an all-time record for open play at Sandwich, finishing with a 70 and a 69 on his last two rounds for a seventy-two hole score of 233, two strokes better than the mark made by Jones in 1930 at St. Andrews. Five strokes back was Macdonald Smith, another American. Three and a half weeks later, playing over his home course at Fresh Meadow, L. I., Sarazen staged a whirlwind finish to take the national open title, completing the difficult double. After thirty-six holes at Fresh Meadow, Sarazen was not well considered for the title, T. Philip Perkins, Britisher, being ahead. Sarazen negotiated the last twenty-eight holes in an even 100, and did the last eighteen in a record smashing 66, finishing the seventy-two holes in 286, two strokes ahead of Bobby Cruickshank and Perkins.

With visions of a triple crown, Sarazen faltered and failed to qualify for the P. G. A. championship, which was won by big Olin Dutra, Californian, in the tournament at St. Paul late in the summer. Dutra, previously had beaten Walter Kozak in the final for the Metropolitan open at Lido.

The national amateur championship was taken out of this country for the second time in history when C. Ross Somerville, Canadian from London, Ont., played marvelous golf at Five Farms, Baltimore. (Harold Hilton, of England, won in 1911.) Johnny Fischer, who in June had won the national intercollegiate title, won the medal in the amateur with 142. Francis Ouimet, veteran defending champion, had a hard time squeezing into the championship flight but managed to do so and his march toward the final was closely followed by all golf enthusiasts. Ouimet was perfect in his early rounds, creating a record when he went out on the first nine holes against George Voigt in 30. Johnny Goodman, youth from Omaha, who eliminated Bobby Jones from the amateur in 1929 at Pebble Beach, beat Ouimet in the semi-final when Somerville was downing another former champion—Jess Guilford. Somerville's powerful iron play prevailed in the final and he won, 2 and 1.

Previous to the championship, the British amateurs succumbed to the United States players in the Walker Cup play at Brookline, 6 to 1. Leonard Crawley, who defeated Voigt, was the only Britisher to win a match.

One of the real surprises of the season was the defeat of Mrs. Glenna Collett Vare, five-time champion, in the final of the women's national championship tournament at the Salem (Mass.) Country Club late in the fall. Miss Virginia Van Wie, of Chicago, trounced Mrs. Vare, 10 and 8, to break through finally to a national title. Miss Van Wie tied for the medal with Miss Maureen Orcutt. Miss Charlotte Glutting, young New Jersey champion, was the sensation of the week, eliminating Miss Enid Wilson, winner of the English women's championship in May, and who was considered the strongest threat in the championship at Salem. Miss Glutting bowed to Miss Van Wie.

The United States women fared poorly abroad in their annual attempt to lift the British championship, Mrs. Leona Pressler Cheney being the lone invader to survive at all, reaching the semi-final bracket. In the team matches the United States women vanquished the British, 5½ to 2½.

John de Forest won the British amateur title for England, and Henry Cotton took the British

professional one. Harry Cooper, Chicago professional, captured the Canadian open, and Gordon Taylor of Montreal snared the Canadian amateur title. Lex Robson of Toronto, Ont., won the Canadian professional honors and Miss Margery Kirkham of Montreal took the trophy for the Canadian women's championship. Al Lacey of Great Britain won the French Open, a title that had been held by Aubrey Boomer, of St. Cloud for so many years.

R. L. Miller of Jacksonville, Fla., won the national public links title, displacing Charles Ferrara of San Francisco. Walter Hagen captured the Western open title and Gus Moreland the Western amateur. Findlay S. Douglas took the national senior honors with his fine play at the Apawamis Club in September and then the United States seniors defeated Canada in the annual series for the Duke of Devonshire Trophy. Mrs. Leila C. DuBois of Noroton, Conn., won the women's national senior honors. To Yale went the national as well as Eastern intercollegiate laurels.

NECROLOGY. Robert M. Cutting, nominee for president of United States Golf Association; E. M. Byers, former national golf champion.

**GORDON BENNETT CUP COMPETITION.** See AERONAUTICS.

**GORE, CHARLES.** A British theologian, died in London, Jan. 17, 1932. Born in 1853, he was educated at Harrow and at Balliol College, Oxford, and was a fellow of Trinity College from 1875 to 1895. After ordination in the Church of England he became vice principal of Cuddesdon Theological College in 1880 and on the foundation of Pusey House at Oxford in 1884 was appointed head of its staff of clerical librarians. As editor and one of the principal contributors to the volume of essays called *Lux Mundi*, published in 1890, he aroused considerable distrust by the advanced nature of his views on the incarnate nature of Christ, especially the technical point known as *kenosis*, by which is meant that in entering on the human condition Christ limited Himself to the capacity of humanity. This idea was further developed in the Bampton lectures on the incarnation which he delivered at Oxford in 1891. In 1893 Dr. Gore became vicar of Radley, near Oxford, and also founded a quasi-religious clerical community called the Society of the Resurrection. He was cannon of Westminster from 1894 to 1902, and having gained considerable influence by his powers as a preacher served as chaplain-in-ordinary to Queen Victoria during 1898-1900 and to King Edward in 1901. In 1902 he was consecrated Bishop of Worcester, and in 1905 was translated to Birmingham, and in 1911 to Oxford. He resigned the latter see in 1919 and settled in London where he identified himself with the Christian Socialists. His important works are: *The Church and the Ministry* (1889); *Roman Catholic Claims* (1889); *The Mission of the Church* (1895); *The Creed of the Christian* (1895); *Dissertations on Subjects Connected with the Incarnation* (1895); *The Body of Christ* (1901); *The Permanent Creed* (1905); *The New Theology and the Old Religion* (1908); *Orders and Unity* (1910); *The Question of Divorce* (1911); *The Religion of the Church* (1916); *Christian Moral Principles* (1921) *Belief in God* (1921); *The Deity of Christ* (1922); *Belief in Christ* (1922); *The Holy Spirit and the Church* (1924); *Can We Then Believe?* (1926); *Christ and Society*

(1928); and *The Philosophy of the Good Life* (1930).

**GORGOULOV, PAUL.** Assassin of President Paul Doumer of France. See DOUMER, PAUL; FRANCE under *History*.

**GOSPLAN.** See UNION OF SOVIET SOCIALIST REPUBLICS.

**GOUCHER COLLEGE.** A nonsectarian college for women in Baltimore, Md., founded in 1885. The enrollment for the first semester of the year 1932-33 was 725. The faculty had 95 members. The endowment funds of the college amounted to \$2,441,145. The library contained 58,000 volumes. President, David Allan Robertson.

**GRAHAM, WILLIAM.** A British economist and labor leader, died in London, Jan. 8, 1932. He was born in Peebles, Scotland, July 29, 1887, and after attending private schools became a clerk in the War Office in 1903. After engaging in journalism for a few years he entered the University of Edinburgh in 1911, from which he received the M.A. degree in 1915 and the LL.B. degree in 1917. He was also lecturer during 1915-18 for the Workers' Educational Association in Economics at Edinburgh. In 1918 he was elected to Parliament as Labor representative for the central division of Edinburgh, and was a member of the Royal Commission on the Income Tax (1919), of the Speaker's Conference on Devolution (1919-20), and of the Royal Commission on the Universities of Oxford and Cambridge (1920-21). He was also a member of the Medical Research Council from 1920 to 1928. In 1924 he was appointed Financial Secretary to the Treasury in the first Labor government and was also made a Privy Councillor. In the Labor Cabinet formed in June, 1929, he was named President of the Board of Trade but resigned on the formation of the Coalition government in August, 1931. He was the author of *The Wages of Labor* (1921) and contributed articles on social, industrial, and political questions to newspapers and periodicals.

**GRAHAME, KENNETH.** A British author, died in Pangbourne, Eng., July 6, 1932. He was born in Edinburgh in 1859 and attended St. Edward's School in Oxford. At the age of 19 he entered the service of the Bank of England, and from 1898 to 1908 acted as secretary of that institution. His writing ability was first recognized by the *Scots Observer* in the '90's. In 1895 appeared *The Golden Age*, composed in part of papers from an earlier volume, *Pagan Papers* (1893), which established his reputation as one of the select company of children's story writers in whom humor, tenderness, poetry, and romance coexisted harmoniously. His other successful books are *Dream Days* (1898) and the animal fantasy, *The Wind in the Willows* (1908).

**GRAHAM LAND.** See FALKLAND ISLANDS.

**GRAIN.** See AGRICULTURE; OATS; RYE; WHEAT, ETC.

**GRAND ARMY OF THE REPUBLIC, THE.** A patriotic order formed in 1866 in Decatur, Ill., among a number of former soldiers who had served in the Civil War. Its purpose is to "enjoy a companionship made sacred by common sufferings and sacrifices." Its corner stones, "Fraternity, Charity, and Loyalty," demand the care and protection of sick and helpless comrades and their widows and orphans; the upholding of all comrades in their worthy endeavors; and loyalty to the flag and laws of the Republic. Affiliated with

the Grand Army of the Republic are its auxiliary, the Woman's Relief Corps, and the allied bodies, the Ladies of the G. A. R., Daughters of Union Veterans of the Civil War, Sons of Union Veterans of the Civil War, and the auxiliary to Sons of Union Veterans.

The maximum strength of the organization was in 1890 when it had a membership of 409,487. On Jan. 1, 1932, there were 1790 active local posts with a membership of 13,066. The sixty-sixth national encampment was held in Springfield, Ill., Sept 18-23, 1932, while St. Paul, Minn., was selected for the 1933 encampment. The officers for 1932-33 were: commander-in-chief, William P. Wright, Chicago, Ill.; senior vice commander-in-chief, Russell C. Martin, Los Angeles, Calif.; junior vice commander-in-chief, Charles E. Jones, Tuscaloosa, Ala.; surgeon-general, D. Edward H. Cowan, Crawfordville, Ind.; quartermaster-general, Samuel P. Town, Philadelphia, Pa.; adjutant-general, Calvin A. Brainard, Chicago, Ill. National headquarters are at Memorial Hall, Chicago, Ill.

**GRAND NATIONAL.** See HORSE RACING.

**GRANT, ULYSSES SHERMAN.** An American geologist, died in Evanston, Ill., Sept. 21, 1932. He was born in Moline, Ill., Feb. 14, 1867, and was graduated from the University of Minnesota in 1888 and with the Ph.D. degree from the Johns Hopkins University in 1893. He was assistant State geologist of Minnesota during 1893-99 and taught geology at the University of Minnesota during 1897-98. In 1899 he became professor of geology and curator of the museum at Northwestern University. He acted during 1907-08 and again during 1916-19 as dean of the college of liberal arts at Northwestern. He served as geologist on the Geological and Natural History Survey of Wisconsin during 1899-1907, investigating the geology of the iron-bearing and copper-bearing rocks of the Lake Superior region and the lead and zinc deposits of Wisconsin. He was also geologist for the U. S. Geological Survey (1904-25), the Illinois Geological Survey (1906-20), and the Oregon Bureau of Mines and Geology (1913-15). From 1897 to 1906 he was associate editor of the *American Geologist*. He published: *Preliminary Report on the Copper-Bearing Rocks of Douglas County, Wisconsin* (1900); *Report on the Lead and Zinc Deposits of Wisconsin* (1906); *Copper and Other Mineral Resources of Prince William Sound, Alaska* (1906); *Glaciers of Prince William Sound and Kenai Peninsula, Alaska* (1910-12); and *Mineral Resources of Kenai Peninsula, Alaska* (1910-12).

**GRAVINA, MANFREDI, COUNT.** An Italian statesman, died in Danzig, Sept. 19, 1932. Born in Palermo in 1883, he entered the Italian navy in 1900, serving in the Turco-Italian War of 1911 and the World War and particularly distinguishing himself in the latter by his torpedo boat exploits. He became naval and aeronautical attaché to the Scandinavian States in 1919 and negotiated in Copenhagen the following year the treaty with Litvinov, the Soviet agent, for the resumption of relations between Italy and the U.S.S.R. He was also a member of the Italian

peace delegation at Paris, and following his retirement from the naval service in 1922 represented his country at several Assemblies of the League of Nations. In September, 1928, he was appointed by the League Council High Commissioner for Danzig for the years 1929-32. His chief duty was the settlement of disputes arising between Danzig and Poland, for whom the Free City serves as the chief outlet for commerce, and he did much to prevent the further growth of animosity. He was a member of the editorial committee of the *Nuova Antologia* and published a large number of political pamphlets and historical monographs, including *La Cma dopo il* (1900, 1907); *Attualita Politiche* (1926); *Problemi Navali* (1929); and *Problemi Italiani* (1930).

**GREAT BRITAIN.** The official title of the political union embracing England, Scotland, and Wales. Great Britain forms the main part of the United Kingdom of Great Britain and Northern Ireland, which includes the Isle of Man and the Channel Islands. Capital, London; ruling sovereign in 1932, George V. In this article the Isle of Man, the Channel Islands, and in some cases Northern Ireland, are included under Great Britain for statistical purposes. See **BRITISH EMPIRE; IRELAND, NORTHERN.**

**AREA AND POPULATION.** The area and population of Great Britain and its sub-divisions, according to the censuses taken in 1921 and 1931, are shown in the accompanying table.

AREA AND POPULATION OF GREAT BRITAIN

Divisions	Area in sq. miles	Population	
		1921	1931
England (including Monmouthshire) . . .	50,874	35,681,019	37,789,738
Wales . . . . .	7,466	2,205,680	2,158,193
Scotland . . . . .	30,405	4,882,497	4,842,554
Isle of Man . . . . .	221	60,284	49,338
Channel Islands . . . .	75	90,230	93,061
Total . . . . .	89,041	43,176,521*	44,932,884

\* Including 256,811 persons in the Army, Navy, and Merchant Marine abroad.

The population of England and Wales was 80 per cent urban and 20 per cent rural at the census of 1931, compared with 79.3 per cent urban and 20.7 per cent rural in 1921. Scotland in 1921 had a population 77.3 per cent urban and 22.7 per cent rural. In general, there has been a steady decline in both the birth rate and in emigration. Births in 1931 in England and Wales totaled 632,081 (648,811 in 1930); deaths, 491,630 (455,427); marriages, 311,402 (315,109). For Scotland the 1931 births numbered 92,220 (94,538 in 1930); deaths, 64,229 (64,283); marriages, 32,667 (33,323). In 1931 the birth rate was 15.8 and the death rate 12.3 per thousand of population for England and Wales; for Scotland, the rates were 19.0 and 13.3, respectively. Persons leaving the United Kingdom in 1931 for non-European countries numbered 213,851 (63,493 aliens and 149,564 British subjects), against 327,992 (107,026 aliens and 220,966 British subjects) in 1930. The 1931 arrivals from non-European countries numbered 255,768 (70,955 aliens and 184,813 British subjects), against 290,369 (92,943 aliens and 197,426 British subjects) in 1930. In 1931, for the first time on record, immigrants of British nationality into Great Britain (71,382) exceeded emigrants of British nationality (34,310).

The 1931 census showed a decline of population in the administrative County of London,

coupled with a large net increase in the population of Greater London. The inhabitants of the City and the 28 metropolitan boroughs in 1931 numbered 4,397,003, a decrease of 87,520 since the 1921 census. In the Greater London area—comprising the City and the Metropolitan Police Districts, and including roughly the area within a 15-mile radius of Charing Cross—the 1931 census showed 8,203,942 persons, or an increase of 723,741 since 1921. The population of the other leading cities in 1931, with 1921 figures in parentheses, was: Glasgow, 1,088,417 (1,034,174); Birmingham, 1,002,413 (922,107); Liverpool, 855,539 (805,046); Manchester, 766,333 (735,774); Sheffield, 511,742 (511,696); Edinburgh, 438,998 (420,264).

**EDUCATION.** Primary education is free and compulsory between the ages of 5 and 14. In England and Wales in 1931, there were 20,869 ordinary public elementary schools, with accommodation for 7,102,667 pupils and an average attendance of 4,930,076. The 2924 primary schools in Scotland had accommodation for 867,506 pupils and an average attendance of 594,006. For secondary and technical education, there were in England and Wales in 1930-31, 1957 "efficient" schools, with 492,578 pupils; in Scotland, 251 schools, with an average enrollment of 155,389. For higher education, there were in England in 1931-32, 11 universities, with 3027 members of the teaching staff and 36,781 students; in Scotland, four universities, with 998 teachers and 11,692 students; in Wales, one university, with 343 teachers and 3176 students.

**AGRICULTURE.** Agriculture is relatively unimportant in Great Britain, engaging only 7 per cent of the working population, as against 41 per cent in France and 31 per cent in Germany. Of the total land area in 1930, 22.5 per cent was under cultivation, 56.8 per cent was permanent grass and pasture, and 20.7 per cent was wood, forest and other land. In 1931, the total arable acreage declined by 105,645 acres to 29,015,520 acres. The cereal acreage dropped to 5,304,380 from 5,659,947 acres in 1930 and farm workers declined by 25,000. The area and production of the chief crops in 1930 and 1931 are shown in the accompanying table from the 1932 U. S. *Commerce Yearbook*. Livestock in England, Scotland, and Wales in June, 1931, included 24,146,630 sheep, 7,058,650 cattle, 1,091,162 horses, and 2,472,444 swine. See **AGRICULTURE** under *World Agriculture*.

UNITED KINGDOM: AREA AND PRODUCTION OF CROPS

[Including Northern Ireland]

Crop	Area <sup>a</sup>		Production <sup>b</sup>	
	1930	1931	1930	1931
Wheat . . . . .	1,405	1,250	42,253	37,775
Barley . . . . .	1,129	1,118	38,914	39,543
Oats . . . . .	2,947	2,772	158,556	146,158
Potatoes . . . . .	684	709	166,486	142,015
Turnips and swedes	1,084	1,022	14,525	12,972

Beet sugar <sup>d</sup> . . . .	..	..	452	269
Hops <sup>e</sup> . . . . .	20	20	28,336	18,928
Flax <sup>f</sup> . . . . .	29	7	12,013	3,091
Hay . . . . .	2,244	..	3,363	2,975

<sup>a</sup> Thousands of acres. <sup>b</sup> Thousands of units—bushels except as indicated. <sup>c</sup> Unit, long ton. <sup>d</sup> Exclusive of Northern Ireland. <sup>e</sup> Seasons ended following year. <sup>f</sup> England and Wales. <sup>g</sup> Unit, pound <sup>h</sup> Northern Ireland only; very little raised in Great Britain.

**INDUSTRY.** According to a general and a special index of industrial profits in Great Britain over

the 12-year period 1920-31, prepared by Sir Josiah Stamp, such profits reached their highest point in 1929 and their lowest point in 1921. Based on 1924 as 100, the general index for 1931 stood at 92 and that for 1930 at 109.9, as compared with 68.7 in 1921. The Board of Trade index of industrial production, based on 1924 production, declined to 93.8 for 1931 from 103.3 for 1930 and 111.8 for 1929. Industrial output during 1931 showed a steady and progressive decline until, in the third quarter, it was about 13½ per cent below the average level for 1930. However, suspension of the gold standard was accompanied by an increased output and the industrial activity for the full year declined only 9.3 per cent from that of 1930.

Output of the principal mining and metallurgical industries during 1931, with 1930 figures in parentheses, was: Coal, 220,150,000 long tons (243,882,000); pig iron, 3,758,000 long tons (6,192,000); steel ingots and castings, 5,179,000 tons (7,326,000). Coal exports in 1931 fell to just under 43,000,000 long tons, or 22 per cent less than in 1930. Despite benefits accruing from the abandonment of the gold standard and the imposition of a protective tariff, the British textile industry suffered a further recession from 1930 levels. Exports of yarns in 1931 declined 2½ per cent in volume and nearly 25 per cent in value; of cotton cloth, 29 per cent in volume and about 39 per cent in value. Purchases of raw cotton declined 10 per cent, while raw cotton imports from the United States, totaling 441,000,000 pounds, dropped about 25 per cent. The number of cotton spindles on Jan. 31, 1932, was 52,776.

Rayon production increased from 48,770,000 pounds in 1930 to 54,570,000 pounds in 1931. The output of motor cars was 223,000 (237,000 in 1930); of electricity, 11,401,000,000 units (10,914,000,000 in 1930); of shipping tonnage (launched), 467,000 (1,489,000 in 1930). At the end of 1931, 401,000 gross tons of shipping were under construction, as against 909,000 tons a year earlier. The number of registered unemployed on Sept. 26, 1932, was 2,858,011, or 33,239 more than on the same date a year earlier. The rate of wages in 1931 was estimated by the Ministry of Labor to be 2.4 per cent lower than the average for 1924. For the trend of industrial activity during 1932, see *History*. The production of steel in 1932 was 5,257,400 tons; of pig iron, 3,508,900 tons. New ships launched in Great Britain and Northern Ireland numbered 104, of 191,866 gross tons. Bankruptcies during 1932 numbered 8654, or 655 more than in 1931.

Annual reports of Britain's "Big Five" banks (Midland, Lloyds, Barclays, Westminster, and National Provincial) indicated that they weathered the financial crisis of 1931 satisfactorily. They reported aggregate net profits for the year of £9,163,779, or 8.5 per cent less than in 1930. Deposits and current accounts declined by £133,614,955, or 8 per cent.

**FISHERIES.** The quantity of fish of British taking landed in Great Britain during 1931 totaled 989,078 tons, valued at £15,904,316 (excluding shell-fish), compared with 1,093,948 tons, valued at £18,339,715 in 1930. Fishing boats registered on Dec. 31, 1930, numbered 14,284, of 283,944 net tons.

**COMMERCE.** The abandonment of the gold standard on Sept. 20, 1931, was expected to stimulate exports and effectively decrease imports. How-

ever the temporary stimulus which this step afforded some export industries was more than offset by the departure of many other countries from the gold standard, the adoption of import and exchange restrictions in various overseas markets, and the world depression generally. Moreover, there was abnormal importation in November and December in anticipation of emergency duties. After April, 1932, exports showed a decided tendency to decline.

The total foreign trade for 1931 contracted further, as compared with previous years, and there was an additional increase in the excess of imports over exports. As compared with 1930, imports decreased 17.4 per cent, from £1,043,975,261 to £862,174,709; domestic exports declined 31.8 per cent, from £570,755,416 to £389,163,817; and reexports declined 26.2 per cent, from £86,835,409 to £64,035,347. The quantity of merchandise imported showed a small increase of 2.3 per cent, while domestic exports declined in quantity by nearly one-fourth. British foreign trade for the years 1928 to 1932 is summarized in the accompanying table.

BRITISH FOREIGN TRADE, 1928 TO 1932 \*  
[In thousands of pounds sterling]

Calendar year	Imports <sup>b</sup>	Exports <sup>b</sup>	Reexports (imported British merchan- products <sup>c</sup> & else) <sup>c</sup>	Total exports <sup>a</sup>	Excess of im- ports
1928 ..	1,195,598	723,579	120,283	843,862	351,736
1929 ..	1,220,765	729,349	109,702	839,051	381,714
1930 ..	1,043,975	570,755	86,835	657,590	386,385
1931 <sup>d</sup> ..	862,174	389,163	64,035	453,199	408,975
1932 <sup>d</sup> ..	703,133	365,138	50,914	416,052	287,081

\* Not including bullion and specie movements.

<sup>b</sup> C. i. f. value.

<sup>c</sup> F. o. b. value.

<sup>d</sup> Preliminary figures.

Leading import items in 1931 included: Butter, £46,357,997; wheat, £30,345,157; tea, £29,633,149; raw fruit and nuts, £34,704,344; raw wool, waste and rags, £34,817,977; wood and timber, £29,144,442; beef, £29,814,042; raw cotton and cotton waste, £27,153,009; mutton and lamb, £18,915,588. The principal export items included: Cotton piece goods, £71,322,557 (£61,305,421 in 1930); coal, £34,653,774 (£45,661,280 in 1930); machinery, £32,839,207 (£40,974,006); iron and steel and manufactures, £30,410,185 (£51,261,119); vehicles, including locomotives, ships, and aircraft, £28,417,828 (£50,992,306); woolen and worsted yarns and manufactures, £25,150,313 (£36,962,726). The percentage of British imports obtained from within the Empire in 1931 was 28.7 per cent, against 29.1 per cent in 1930 and 29.4 in 1929. The leading sources of supply for Great Britain in 1931 were the United States, which furnished imports valued at £104,171,000, or 12.1 per cent of the total (£153,497,000, or 14.7 per cent, in 1930); Germany, £64,150,000, or 7.4 per cent; Argentina, £52,764,000 (6.1 per cent); Denmark, £46,697,000 (5.4 per cent); Australia, £45,674,000 (5.3); France, £40,883,000 (4.7); New Zealand, £37,832,000 (4.4); and British India, £36,743,000 (4.3). Exports went principally to British India, which took £32,302,000, or 8.3 per cent of the total (£52,944,000, or 9.2 per cent in 1930); Irish Free State, £30,314,000 (7.8 per cent); France, £22,537,000 (5.8 per cent); Union of South Africa, £21,849,000 (5.6); Canada, £20,560,000 (5.3); Germany, £18,413,000 (4.7); and the United States, £17,101,000 (4.4). The percentage of British domestic exports that

went to the Empire countries was 43.8 per cent in 1931, 43.5 per cent in 1930, and 44.5 in 1929.

Excluding gold movements, the British Board of Trade estimated that the balance of British international payments in 1931 showed a deficit of £110,000,000, compared with a credit balance of £28,000,000 for 1930 and of £103,000,000 for 1929. Gold movements showed an export excess of £35,000,000 in 1931, an import excess of £5,000,000 in 1930, and an export excess of £15,000,000 in 1929.

**FINANCE.** National accounts of the United Kingdom for the financial year ended Mar. 31, 1932, showed an apparent surplus of £304,000, due to the strenuous efforts of the National government to achieve a balanced budget (see 1931 YEAR BOOK). Actual receipts totaled £851,482,281, or £14,799,719 less than anticipated in the revised budget. Actual expenditures likewise declined to £851,117,944, or £13,643,056 less than the revised budget estimates. In the preceding fiscal year, revenue totaled £857,760,934 and expenditure £881,036,905, leaving a deficit of £23,275,971.

Revenue from income tax and surtax in 1931-32 exceeded the budget estimates by £19,000,000 and customs duties were £4,382,000 higher, while estate duties were £18,000,000 less than estimated, stamp duties £3,000,000 less, excise duties £1,330,000 less, and miscellaneous receipts £12,887,000 less. The decline in expenditure was due chiefly to a reduction of £12,629,000 in the estimates for unemployment relief. Expenditure on interest and management of the national debt was close to the estimate of £289,400,000 and was £3,677,000 less than in 1930-31. Not included in the budget expenditure figures is the amount of £39,610,000 borrowed from the treasury by the unemployment insurance fund.

The budget for the financial year ended Mar. 31, 1933, provided for an estimated surplus of £796,000, with a revenue of £848,898,000 and an expenditure of £848,102,000, including the self-balancing items of £82,098,000 and the sinking fund of £32,500,000. Compared with actual results of the preceding year, these totals showed an expected decrease in revenue of £2,584,000 and a decrease in expenditure of £3,016,000. See *History*.

The national debt increased by £20,634,000 during the year ended Mar. 31, 1932, to a total of £7,433,943,000; the total on Mar. 31, 1931, was £7,413,309,000. The debt on Mar. 31, 1932, was divided as follows: Funded internal debt, £1,467,075,541, an increase of £42,051,225; terminable annuities, £11,719,000, a decrease of £280,630; floating internal debt, £611,955,000, an increase of £17,630,000; other unfunded internal debt, £437,589,614, a decrease of £55,841,523; external debt, £1,090,836,656, an increase of £24,174,293. The net cash applied to debt redemption during the year was £25,391,467. On Sept. 30, 1932, the total debt was £7,708,000,000.

**SHIPPING.** According to the 1932 edition of *Lloyd's Register Book*, the British proportion of the world's steam and motor-ship tonnage was 28.6 per cent, as compared with 41.6 per cent in 1914. The decrease was relative, there being an actual increase in British tonnage to a total of 12,966 steam and motor vessels, of 11,986,394 net tons, in 1930. Sailing vessels (1930) numbered 5098, of 467,493 net tons. The idle merchant shipping tonnage in the ports of Great Britain and Ireland in August, 1932, was reported at

about 5,250,000 tons. The net tonnage of vessels clearing from British ports in the foreign trade in 1931 was 58,339,587, compared with 65,852,593 in 1930 and 68,679,630 in 1929. Of these, 38,104,025 tons were British in 1931, 42,619,497 in 1930, and 45,337,485 in 1929. The busiest ports in 1930, in the order named, were London, Liverpool, Hull, Manchester, Southampton, Glasgow, and Harwich.

**RAILWAYS.** The financial condition of British railways became increasingly serious during 1931 and 1932. Gross receipts of the "Big Four" railway systems (Great Western; London, Midland & Scottish; London & North Eastern, and Southern) totaled £156,284,000 in 1931, compared with £170,608,000 in 1930 and £180,927,000 in 1929. Due to economies, the decline in net revenue during 1931 was held to be about £6,000,000. Most of the lines passed or reduced dividends on ordinary stocks. In 1930, there were 24,403 miles of railway line open for traffic, which carried 1,217,200,000 passengers (excluding season ticket holders) and 304,300,000 tons of freight. Gross receipts of the "Big Four" railways in 1932 were £142,800,000 (preliminary), or 8.75 per cent less than in 1931.

**OTHER COMMUNICATIONS.** Public highways at the beginning of 1931 extended 177,256 miles (151,807 miles in England and Wales and 25,449 miles in Scotland). Of the total, 42,141 miles, or 23.9 per cent, represented main arterial highways, while the remaining 134,915 miles consisted of country lanes, tracks, and residential streets. Receipts into the road fund during the 1931 fiscal year were £23,000,000 (£22,100,000 in 1930). In August, 1931, 2,189,650 motor vehicles of all descriptions were registered, an average of one for every 21 persons. Civil air lines in 1930 reported 1,437,000 miles flown, with 25,094 passengers and 848 tons of cargo. Air lines connect London with the various European capitals, Palestine, India, Australia, Egypt, and South Africa. Telephone and telegraph systems are operated by the British Post Office. In 1932, the extension of direct telephone service to Canada and to the cities of Pretoria and Johannesburg, South Africa, gave British telephone subscribers connection with about 95 per cent of the world's telephones. The number of telephone subscribers increased by 66,300 during 1932 to a total of 2,133,000.

**ARMY AND NAVY.** See **MILITARY PROGRESS; NAVAL PROGRESS.**

**GOVERNMENT.** The United Kingdom is a limited monarchy, with an unwritten constitution, under which final legislative, judicial, and administrative authority is vested in a Parliament of two houses, acting through a cabinet drawn from its members. The House of Commons consists of 615 members, elected by male and female suffrage on the basis of one member for every 70,000 of the population. The House of Lords, with a voting strength of 740 members, consists of peers who hold seats (1) by hereditary right; (2) by creation of the sovereign; (3) by virtue of office; (4) by election for life, as with Irish peers; or (5) by election for the duration of Parliament, as with Scottish peers.

The composition of the House of Lords in 1932 was: Conservatives and Liberals, 706; Labor, 15; National Labor, 6; Bishops, 24; Royal Peers, 4; Archbishops, 2. The composition of the House of Commons elected Oct. 28, 1931, was: Government parties—Conservatives, 472; National Liberals,

35; Liberals, 33; National Labor, 13; Independent Nationals, 2; total, 555; Opposition parties—Labor, 52; Independent Liberals, 4; Independents, 4; total, 60. Members of the National Cabinet formed Nov. 6, 1931, included: Prime Minister and First Lord of the Treasury, J. Ramsay MacDonald (National Labor); Lord President of the Council, Stanley Baldwin (Conservative); Chancellor of the Exchequer, Neville Chamberlain (Conservative); Home Affairs, Sir Herbert Samuel (Liberal); Lord Chancellor, Lord Sankey (National Labor); War, Viscount Hailsham (Conservative); Foreign Affairs, Sir John Simon (National Liberal); Secretary of State for India, Sir Samuel Hoare (Conservative); Dominion Affairs, J. H. Thomas (National Labor); Colonies, Sir Philip Cunliffe-Lister (Conservative); Air, Marquis of Londonderry (Conservative); Scotland, Sir Archibald Sinclair (Liberal); Health, Sir Edward Hilton Young (Conservative); President of the Board of Trade, Walter Runciman (Liberal); Lord Privy Seal, Viscount Snowden (National Labor); First Lord of the Admiralty, Sir Bolton M. Eyres-Monsell (Conservative); Education, Sir Donald Maclean (Liberal); Agriculture and Fisheries, Sir John Gilmour (Conservative); Labor, Sir Henry Betterton (Conservative); Works, W. Ormsby-Gore (Conservative). For changes in 1932, see *History*.

#### HISTORY

**DOMESTIC DEVELOPMENTS.** The National government had been formed during the emergency of August, 1931, for the sole purpose of combating the financial crisis (see 1931 YEAR BOOK). Throughout 1932, its strategy was marked by bold departures from Britain's traditional trade and fiscal policies. The emergency protective tariff of Nov. 19, 1931, was made a permanent feature of the government's programme early in 1932 and was incorporated in the Ottawa tariff agreements, ratified by the House of Commons on November 3. The pound sterling, whose maintenance at par was long regarded as the symbol of British stability, underwent a long process of controlled depreciation.

The government won notable victories in balancing the 1931-32 budget, repaying the emergency credits raised in New York and Paris in 1931, and carrying through huge war-loan conversion operations. But, after noticeable improvement early in 1932, the general economic situation became worse. Exports declined further and unemployment at the beginning of September reached the record figure of 2,860,000, although decreasing by 110,000 during October. Waging an apparently inconclusive fight against the depression, the government pinned its hopes upon the benefits to British industry expected to result from the Ottawa agreements.

The Ottawa agreements caused the resignation of the more pronounced Free Traders on the Cabinet September 28. Aside from this defection, the temporary coalition of parties formed in 1931 continued in office to the end of 1932. The Conservatives, however, with their overwhelming majority in Parliament, assumed increasing control of the government's policies. Their programme of wage reductions and the economies effected in unemployment insurance payments led to extensive strikes and to rioting in the great cities. Meanwhile, municipal and by-elections revealed a steady drift of voters back to the Labor

party. The first session of the new Parliament was prorogued November 17, a new session being opened November 22.

**The Budget Battle.** Within five months after the abandonment of the gold standard on Sept. 20, 1931, the government had paid off \$565,000,000 out of the \$650,000,000 emergency credits secured from the Bank of France and the Federal Reserve Bank of New York, with the loss of only about \$50,000,000 in the British gold reserve. The last of these "crisis credits" were repaid on Sept. 10, 1932. Moreover, the fiscal year ended Mar. 31, 1932, with an actual budget surplus of £364,000, compared with a deficit of £23,275,971 in the preceding year. The budget for 1932-33, presented to the House of Commons April 19, provided for slight decreases in both revenue and expenditure (see under *Finance*). It did nothing to alter the income tax, the civil service salary reductions of the previous autumn, or the beer duty. A new tax of fourpence (about 8 cents) a pound on foreign tea and twopence (4 cents) a pound on tea grown within the empire was imposed. The general 10-per cent tariff was calculated to yield £27,000,000. The sensational features of the budget were the lack of provision for payment of \$95,550,000 due the U. S. government on the British war debt December 15 and the government's request for authority to borrow £150,000,000 with which to control sterling exchange. The budget likewise omitted the reparation and war debt payments due Great Britain during the year. Chancellor of the Exchequer Chamberlain explained that these omissions were due to the fact that the government did not know what was going to happen with regard to these problems. On November 10 the government formally requested continuation of the Hoover moratorium on war-debt payments pending a reconsideration of the question. When this request was refused at Washington, payment was made as scheduled. Reparation payments were cancelled by the Lausanne Agreement signed July 8, 1932, conditional upon a satisfactory adjustment of war-debt payments owing the United States (see *REPARATIONS AND WAR DEBTS*).

As a major step toward reduction of the heavy interest burden on the national debt, the treasury on June 30 announced that £2,085,000,000 of 5 per cent internal war-loan stock would be converted into a new 3½ per cent loan. The conversion offer closed on September 30, when the treasury stated that approximately £1,920,000,000 had been converted into the new loan, and that applications for redemption in cash on December 1 amounted to only £165,000,000, or about 8 per cent of the total. Subsequent conversion operations brought the total for the year to about £2,500,000,000, effecting a saving to the Treasury of about £40,000,000 annually.

At the end of 1932, however, the Government presented supplementary estimates of additional expenditures, amounting to £21,421,000 in 1932-33, which threatened to throw the budget out of balance unless further economies were achieved. The additional charge was due chiefly to the continued high level of unemployment.

**The Exchange Problem.** As a result of the encouraging trade and budgetary developments during March, the pound sterling displayed buoyancy and wide fluctuations which forced the government to tackle the thorny problem of monetary control. British industry favored de-

preciation of the pound to a low level, in the belief that this would stimulate the export trade, while London bankers favored stabilization at or near the par value of \$4.86. The latter policy would increase the capital values of, and interest payments upon, British foreign investments and international services, such as insurance and merchant shipping.

In this conflict of interests, the industrialists were temporarily victorious. The £150,000,000 Equalization Fund established in May to prevent fluctuations in the exchange value of the pound sterling was used at first to check the rising tendency of sterling exchange induced by the weakness of the dollar. With the return of confidence in the dollar in June, sterling began to depreciate once more. The managers of the currency used the fund to prevent extreme breaks, while allowing the pound to fall gradually to about \$3.46, where the decline was arrested. For several months thereafter, the pound remained fairly stable at between \$3.45 and \$3.47. Early in October, however, sterling was allowed to break below \$3.45 and on October 18, finding it impractical to maintain the pound at this level, the treasury officials removed the exchange controls and allowed a slump to \$3.40½, the lowest quotation since January 11. This was viewed as a step preliminary to trying out a new level of exchange, an experiment necessary to find the most advantageous level at which to stabilize the pound and return to the gold standard. Under the pressure of the \$95,550,000 war-debt payment due the United States on December 15, the pound continued its downward plunge to an average of \$3.1877 for the week of November 28–December 3. Thereafter it recovered, averaging \$3.2787 for the month of December.

By successive reductions, the minimum rate of discount of the Bank of England was cut from 6 per cent at the beginning of the year to 2½ per cent on May 12. Despite the lowered bank rate, the sharp depreciation of the currency, and the imposition of tariff duties, the Board of Trade's index of wholesale prices declined from 100 in January to 98 in June and July. In August, the index rose to 100. Some 200 industrial representatives in the House of Commons, led by Sir Robert Horne and L. S. Amery, continued to demand further inflation to check the price decline. The government refused to adopt this policy. Instead, it invited the United States and other leading countries to join in an international economic and monetary conference at which means of checking the fall in commodity prices were to be discussed. The Bank of England also cooperated with the Federal Reserve Bank of New York to make credit easier.

**Tariff Policy.** In its effort to stabilize the financial situation, the government placed increasing reliance upon a protective tariff. The imposition of high protective duties was expected to reduce imports and consequently redress the highly adverse trade balance, which was one of the main factors involved in the flight from the pound in 1931. The report of the Cabinet Committee on the Balance of Trade, framing a permanent tariff to replace the emergency decrees of the previous November, encountered strong opposition from the Free Traders in the Cabinet. The issue came to a head in January, when a split was prevented only by the abandonment of the traditional principle of the collective responsibility of the Cabinet.

Lord Snowden, Sir Herbert Samuel, Sir Donald Maclean, and Sir Archibald Sinclair had threatened to resign rather than accept the tariff favored by the majority of the Cabinet. However, they consented to remain when their colleagues agreed to allow them to speak and vote in opposition to the policies adopted by the majority. An official statement explaining that this agreement was necessary to maintain "national unity in the presence of grave problems" was issued on January 22. The Import Duties Act, introduced in Parliament February 4 and made effective March 1, imposed a minimum tariff of 10 per cent on all imports except raw cotton, wool, meat, fish, and wheat. It provided for the creation of a tariff commission, empowered to raise any duty as much as 100 per cent against countries discriminating against British goods. The Dominions and colonies were exempted from the new tariff until after the Ottawa Conference.

Successive modifications of the Import Duties Act were made during the remainder of the year. The chief of these were the schedule of new duties imposed April 25 and approved by the House of Commons—405 votes to 70—on April 28 and the Ottawa agreements ratified on November 3. The April schedule imposed an additional duty of 23½ per cent above the all-round duty of 10 per cent for a minimum period of three months on semi-finished steel. For most manufactured goods, there was an additional duty of 10 per cent, making 20 per cent in all; for a limited number of others, a total duty of 15 per cent; and for certain luxury or semi-luxury articles, total duties of 25 or 30 per cent. Foodstuffs were largely exempted, pending the outcome of the Ottawa Conference. The new duties fell on approximately 60 per cent of the total imports. As a result of these duties and the stimulation of exports due to depreciation of the pound, the adverse visible balance of trade during 1932 (£287,213,000) was the smallest in a number of years.

The Ottawa Agreements (Customs Duties) Bill, became effective November 15. Under it, the United Kingdom undertook to continue the duty-free admission, from the Dominions, of those products which were made subject to duties on importation from non-British countries under the Import Duties Act. Great Britain also agreed to impose special duties on other designated goods from foreign countries and, except with the consent of the Dominions concerned, not to reduce the existing duty of 10 per cent ad valorem on selected groups of commodities. In return the Dominions generally granted new or increased margins of preference to selected groups of British goods. The agreements were to continue in force for five years, and thereafter to be subject to termination with six months' notice. In essence, the Ottawa agreements amounted to the restriction of British imports of foodstuffs from foreign countries in favor of the Dominions in return for Dominion preferences to British manufactures. For details of the agreements, see CANADA under *History*.

By the end of the year, the various Ottawa pacts had been ratified also by Canada, Australia, New Zealand, India, Union of South Africa, and Southern Rhodesia. In addition Jamaica, Trinidad, the Bahamas, the Federated Malay States and several other colonies had adopted or enlarged tariff preferences in favor of the Dominions. However, the legislative bodies of New-

foundland and the Irish Free State had not yet ratified the pacts signed by their representatives at Ottawa.

On September 28, Lord Snowden, Sir Herbert Samuel, Sir Archibald Sinclair and eight junior Ministers not of Cabinet rank resigned from the National government in protest against the Ottawa agreements. They declared that the trade pacts would mean permanent tariffs and "food taxes" and were not only a peril to the harmony of the empire, but a barrier to the removal of restrictions on world trade. Their resignations caused Prime Minister MacDonald to reorganize the Cabinet. The nominal duties of Lord Privy Seal were taken over by Stanley Baldwin, in addition to the Presidency of the Council. Sir John Gilmour (Conservative) succeeded Sir Herbert Samuel at the Home Office and was succeeded as Secretary for Agriculture by Major Walter Elliot (Conservative). Sir Godfrey Collins (National Liberal) replaced Sir Archibald Sinclair as Secretary for Scotland. The "reshuffling" increased Conservative representation on the Cabinet, which now consisted of 14 Conservatives, 3 National Laborites, and 3 National Liberals. Backed by about 465 Conservatives, 35 Liberals associated with Sir John Simon, and 13 Labor adherents of Prime Minister MacDonald, the Cabinet still held a majority of about 400 votes over its Liberal and Labor opponents.

*Anti-Government Swing.* With this first break in the Cabinet, the tide of public sentiment adverse to the government gradually assumed more serious proportions. Within the elements supporting the government there was dissension, with the ultra-Conservatives under the newspaper barons, Lords Beaverbrook and Rothermere, demanding the resignation of MacDonald and his non-Conservative colleagues. In both Houses of Parliament there was criticism from all parties of Sir John Simon's conduct of the Foreign Office, particularly his Manchurian and disarmament policies. Some 150 Conservative back benchers in the House of Commons waged a fight for revision of the Ottawa trade agreements in the interests of domestic livestock producers. The government's failure to reduce unemployment and the establishment of the so-called means test, withholding unemployment insurance benefits from workers having resources to fall back on, added to general discontent. This unrest found expression in serious rioting in some of the larger industrial cities, a "hunger march" upon London in October, and an increase in labor disputes.

The political repercussion of these developments was evidenced in the municipal elections of November 2, in which the Laborites won 139 seats in 12 large industrial cities, where they had elected only 25 candidates a year earlier. In the whole country, Labor converted a net loss of 200 municipal council seats in 1931 into a net gain of 15 in 1932. The Communists, who organized the "hunger march" and who entered candidates in many boroughs, failed to win a single seat.

*Party Trends.* The Labor gains were significant in view of the radical swing to the Left which marked the annual Labor party conference held at Leicester early in October. Declaring its objective to be the establishment of a socialistic state, the party adopted planks calling for the nationalization of banks (including the Bank of England), railways, and farm land, and the establishment of national commodity boards with

full power to purchase or regulate imports. The party jettisoned the policy of "gradualness," which had marked the leadership of MacDonald, Snowden, and Henderson. On motion of Sir Charles Trevelyan, and against the warning issued by the party leader, Arthur Henderson, the conference instructed the next Labor government that on assuming office it must immediately promulgate definite socialist legislation and stand or fall in the House of Commons on the party's full programme. Secondly, the conference decided that if the King asked a Labor leader to form a new government, the party must then be consulted and its decision taken on the question of accepting office. The five-day conference ended October 7 with a resolution favoring the abolition of the House of Lords.

With his prestige weakened by the party's disregard of his advice, Arthur Henderson resigned as leader on October 18. His poor health, his duties as chairman of the Geneva Disarmament Conference, and his failure to secure a seat in the House of Commons, contributed to his withdrawal. He was succeeded by George Lansbury, 73 years old, a stopgap named to carry on until the right man appeared.

The annual conference of the Conservative party, held simultaneously at Blackpool, met the Labor challenge by a resolution providing for legislation to strengthen the House of Lords, to be passed by the existing Parliament. By extending the Lords' veto power to include financial measures of the House of Commons, the Conservatives hoped to block socialist legislation in the event of a Labor majority in the Commons. The conference voted unanimously to continue its support of the MacDonald government, approved the Ottawa trade agreements and the government's steps to establish imperial preferences in commerce, and opposed the establishment of democratic government for India.

Meanwhile efforts of Sir Herbert Samuel and others to reunite the divided Liberal party on the issue of free trade proved a failure. The party remained split in three groups headed by Lloyd George, Sir Herbert, and Sir John Simon, respectively. The Lloyd George Liberals denounced the National government on every issue. Sir Herbert and his followers approved all of the actions of the National government except the establishment of the tariff. And Sir John Simon's group approved even of the National government's tariff policy as necessitated by the times. Following the announcement of Sir Herbert Samuel on October 14 that the Liberals would support home rule for Scotland, the Scottish Liberal Federation voted overwhelmingly to ask Liberal members of Parliament to urge the government to give self-government to Scotland.

*DOMINION AFFAIRS.* At Ottawa the MacDonald government strove to substitute economic bonds for the disintegrating political links between the United Kingdom and the Dominions. The bargaining and recrimination which marked the Ottawa meeting were not conducive to more intimate ties within the Empire, but it was hoped that the economic advantages expected to accrue from the agreements signed there would more than compensate for temporarily ruffled feelings. These agreements were opposed by the Labor party and a large section of the Liberal party in Britain, by the Liberals in Canada, the Laborites and industrialists in Australia, and the extreme republicans in South Africa. On the other hand

they were approved by the governments in power in all the Dominions, including the Nationalist administration in South Africa. The Irish Free State was excluded from the preferences granted by Great Britain to the Dominions, as a result of the repudiation of the oath of allegiance and the withholding of the land annuities by the new Free State government of Eamon de Valera (see *IRISH FREE STATE* under *History*). Agitation and disorders continued in India in connection with the movement for greater autonomy, but on a relatively small scale, compared with events of the preceding two years (see *INDIA* under *History*). In South Africa, there were renewed evidences of republican agitation (see *SOUTH AFRICA, UNION OF*). Upon application of the British government, the mandated territory of Iraq (q.v.) was admitted to the League of Nations. On recommendation of a British Royal Commission, constitutional government was re-established in Malta (see *MALTA*).

**FOREIGN RELATIONS.** It was largely due to Prime Minister MacDonald's initiative and unflagging zeal that the reparations issue was successfully disposed of at the Lausanne Conference (see *REPARATIONS AND WAR DEBTS*). He also arranged for the holding of the 1933 World Economic Conference in London to consider plans for an international attack upon the world depression. In the other crucial issues confronting Britain during the year—disarmament and the League of Nations' conflict with Japan over Manchuria—the cautious and passive attitude of the Foreign Secretary, Sir John Simon, evoked dissatisfaction among all parties except the wing of the Conservatives favoring Japan. Sir John opposed the Hoover armament reduction proposals at Geneva (see *DISARMAMENT*) and tacitly declined to support either the American State Department or the League in their efforts to bring Japan to book for her alleged violation of the Kellogg-Briand Pact, the Nine-Power Treaty, and the League Covenant (see *JAPAN; LEAGUE OF NATIONS*).

The adoption of a permanent protective tariff system had a profound effect upon Britain's commercial relations with other nations. One notable result was the termination of the Anglo-Soviet trade agreement concluded by the Labor government in 1930. On October 18, the government announced that it had given the required six months' notice of the termination of the treaty. Dominions Minister Thomas explained that the step was necessary because the continued importation of "sweated" goods from the Soviet Union would violate the Ottawa agreements. Termination of the treaty deprived British consumers of large quantities of low-priced lumber, fish, and grain, which thereafter were to be supplied chiefly by Canada. The British note, however, requested the Soviet government to open negotiations for a new trade agreement. Previously (September 11) the Board of Trade had authorized the extension of Soviet trade credits in Britain from 12 to 18 months in order to stimulate Russian orders for British goods. Following ratification of the Ottawa agreements, the government invited Norway, Sweden, Denmark, and Argentina to open negotiations for bilateral trade agreements. Uruguay, Finland, and several other countries prepared to negotiate reciprocal commercial pacts with Great Britain.

The atmosphere of irritation which had marked Anglo-French relations during 1931 was succeed-

ed in 1932 by effective coöperation between the two Powers, particularly after the advent of the Herriot government. Sir John Simon supported the French (Tardieu) plan for the establishment of a Danubian federation (see *UNITED STATES OF EUROPE*), which was rejected by Germany and Italy at the Four-Power Conference held in London April 6-8. The conference, at which Great Britain, France, Germany, and Italy were represented, was preceded by a visit of Premier Tardieu to London (April 2 and 3) at which the whole range of Franco-British relations was discussed. At the Lausanne Conference, Prime Minister MacDonald induced Premier Herriot to virtually cancel French reparation claims on Germany. In return he entered into a consultative agreement resembling in certain respects the pre-war entente cordiale. By this agreement, the British government in substance was reported to have promised France not to covertly side with Germany against French policy, not to accept any American inter-allied debt concessions which were not offered to France, and not to join the United States in supporting a form of disarmament to which France was opposed.

British sympathy for Germany, rooted in the desire for restoration of German prosperity and trade, was alienated by the extremely nationalist tone of the Papen-Schleicher Cabinet in the face of French concessions. The German note of August 29, threatening to rearm unless the armament restrictions of the Versailles Treaty were immediately removed, was answered in a British note of September 18. While admitting Germany's moral right to terminate her inferior treaty status, the London government flatly denied the legality of the German claim to equal status. It urged Germany to reënter the Disarmament Conference and seek to attain her objective by "friendly negotiation and agreed adjustment" (see *DISARMAMENT*).

In an effort to secure Germany's return to the Geneva Disarmament Conference and to prevent the arms *impasse* threatened by her withdrawal, Britain, on October 4, suggested a second four-power conference at London. Italy accepted the proposal, but France and Germany declined. This failure was followed by the visit of Premier Herriot to London (October 12, 13), where he asked new British guarantees for French security in return for concessions which would be acceptable to Germany. The guarantees were not forthcoming and Premier Herriot subsequently announced a new French disarmament plan (see *FRANCE* under *History*). Germany's return to the Conference was secured through a joint declaration signed by representatives of Britain, France, Germany, Italy, and the United States at Geneva December 11, which gave Germany equality of status. See *GERMANY* under *History*.

**THE ANGLO-PERSIAN OIL DISPUTE.** British relations with Persia became strained when on November 27 the Persian government notified the Anglo-Persian Oil Company that the oil concession granted that company in 1901 for 60 years had been cancelled. The British government, which owned more than half the common stock of the company, depended upon the monopoly for the oil supply of the British navy. Asserting that the concession contract made no provision for cancellation, the British government announced that unless cancellation was rescinded by December 15, it would refer the question to the World Court under the Optional

Clause. Persia, denying the jurisdiction of the World Court, threatened to bring the case to the attention of the League Council. Great Britain acted first, however, invoking Article XV of the League Covenant on December 14 and requesting early consideration of the dispute. The Council tentatively set Jan. 23, 1933, for opening the arguments. See PERSIA under *History*.

**OTHER EVENTS.** A scheme for the coöperative production and marketing of the Empire's primary produce was launched November 3, with the establishment of the Empire Farmers' Co-op, Ltd. in London. The union of the three largest branches of the Methodist Church—the Primitive Methodists, the United Methodists, and the Wesleysans—was officially celebrated in London on September 20. The submarine *M-2* sank in the Channel January 27, with the loss of the 61 members of the crew. Deaths during the year included William Graham and Dr. Marion Philipps, both Labor leaders; Sir Sidney Low and Lytton Strachey, authors and historians; and Bishop Charles Gore of Birmingham, leader of the High Church party.

V. Hodson, "Before Ottawa," *Foreign Affairs*, July, 1932; Francis W. Hirst, "The National Government's First Year" and J. Bartlett Brebner, "Imperial Conference Results," *Current History*, October, 1932.

**GREECE.** A republic in southeastern Europe, comprising the lower Balkan peninsula and many islands in the Aegean Sea. Among the administrative divisions are Macedonia, Central Greece, and Euboea, Peloponnese, Thessaly, Epirus, Western Thrace, and Crete (Krête). Capital, Athens.

**AREA AND POPULATION.** The total area is 50,257 square miles (41,641 square miles of mainland and 8616 square miles of islands). The population in December, 1930, was estimated at 6,394,000, compared with 6,204,684 at the census of 1928 and 5,016,889 in 1920. Between 1920 and 1930, a total of 1,221,849 Greeks were repatriated from Turkey. The chief cities, with the 1930 and 1920 populations, are: Athens, 452,919 (292,991 in 1920); Piraeus (Peiraieus), 251,328 (133,492); and Saloniki, 235,524 (170,321). Their rapid growth was due chiefly to the influx of refugees from Turkey. In 1929, living births numbered 181,820; deaths, 115,511; marriages, 44,450.

**EDUCATION AND RELIGION.** Illiterates over 10 years of age in 1928 numbered 1,962,330. During the 1928-29 school year, 704,510 pupils were attending all schools, of whom 609,595 were in primary, 87,015 in secondary, and 7900 in higher educational institutions. At the census of 1928, there were 5,961,529 adherents of the Greek Orthodox Church, 35,182 Catholics, 9003 Protestants, 126,017 Moslems, and 72,791 Jews.

**PRODUCTION.** Predominantly agricultural, Greece specializes in the production of tobacco and currants for export. The cultivated area in 1929 totaled 3,815,233 acres, or one-fifth of the total area; the forest area, was 5,944,059 acres, of which 4,121,119 acres were owned by the state. Production of the chief crops, in metric tons, for 1931 was (provisional): Wheat, 347,669; barley, 201,814; currants, 152,270; oats, 92,898; tobacco, 31,640. Corn, cotton, wine, olives, citrus fruits, and rice are other crops. Livestock in 1930 included 241,722 horses, 880,907 cattle,

and 6,799,067 sheep. Minerals produced include chromite, lignite, lead, calcined magnesite, and iron. The value of industrial production in 1930 totaled about 6,646,363,000 drachmas (drachma exchanged at \$0.0130 in 1930). Olive oil, wine, carpets, textiles, chemicals, and food items are the chief industrial products.

Preliminary crop estimates for 1932 were: Wheat, 19,474,000 bushels; all cereals, 45,000,000 bushels; tobacco, 28,000 metric tons; currants, 131,000 tons; olive oil, 104,000 tons; dried figs, 20,000 tons. Industrial production in 1932 was valued at 8,313,000,000 drachmas.

**COMMERCE.** The value of Greek imports in 1931 was equivalent to \$113,851,000 (\$136,828,000 in 1930) and that of exports to \$54,211,000 (\$77,814,000 in 1930). Textile materials, wheat, livestock, coal, lumber, and machinery were the leading imports, in the order named, and tobacco, currants, raisins, wine, olives, and olive oil were the chief exports. The 1931 imports came chiefly from Great Britain, which furnished 13 per cent of the total, against 9.5 per cent from the United States; Soviet Union, 6.9 per cent; France, 6.5 per cent; and Italy, 6.1 per cent. Exports went to the United States, which took 17.2 per cent; Italy, 16.7 per cent; Great Britain, 14.9; and Germany, 14. In 1932, imports totaled 7,870,863,000 drachmas; exports, 4,759,218,000 drachmas.

**FINANCE.** The Greek budgets for the fiscal years ending March 31 since 1929-30 are shown in the accompanying table compiled by the Institute of International Finance. Drachmas are converted at the par value of \$0.0130.

SUMMARY OF GREEK BUDGETS  
[In millions of dollars]

	Revenues	Expenditures	Surplus
1929-30 (actual) . . .	257.1	251.2	5.9
1930-31 (actual) . . .	166.1	158.1	8.0
1931-32 (actual) . . .	159.3	157.6	1.7
1932-33 (proposed) . .	111.0	111.0	..

The public debt on Mar. 31, 1932, totaled 42,967,000,000 drachmas (about \$557,588,000 at par). Gold loans amounted to \$382,269,000, of which \$164,759,000 represented prewar loans, \$65,894,000 debts to foreign governments, and \$151,616,000 postwar loans. Loans in drachmas totaled \$76,468,000; the floating debt was \$62,780,000; the railway debt, \$35,895,000; and the treaty debt, \$176,000. On Apr. 25, 1932, Greece abandoned the gold standard and on Mar. 31, 1932, suspended service on the internal and external debt (see *History*).

**COMMUNICATIONS.** In 1929, 2683 miles of railway line were open for traffic, of which 1322 were operated by the state. Highways extended about 8611 miles, with some 570 miles under construction. Six international air lines used Greece as a transit station between western Europe and the Near and Far East. The merchant marine on June 30, 1931, included 539 steam and motor vessels (of over 100 gross tons), aggregating 1,397,782 tons. The net tonnage of vessels with cargo and in ballast entering Greek ports during 1931 was 5,928,000; the tonnage cleared was 5,772,000.

**GOVERNMENT.** The Constitution, revised as of June 3, 1927, vested legislative power in a bicameral legislature. The Chamber of from 200 to 250 members was elected for four years by universal manhood suffrage; the Senate comprised 120 members, of whom 92 were elected by the

people, 10 by the Senate and Chamber jointly, and 18 by trade, industrial, and scientific organizations. The President was elected for five years by an absolute majority of the two chambers in joint session. There was a Cabinet, responsible collectively and individually to the Lower Chamber. The Constitution declared that the republican form of government could not be the subject of a constitutional amendment. President in 1932, Alexander Zaimis, elected Dec. 14, 1929. The Ministry, as reorganized Dec. 22, 1930, was headed by Eleutherios Venizelos. For changes in 1932, see *History*.

**HISTORY.** Greek history during 1932 was marked by a serious financial crisis and by heavy Royalist gains in the general election of September 25, followed by the resignation on October 31 of the noted statesman and Premier, Eleutherios Venizelos. The foreign exchange reserve, and with it the stability of the drachma, was in growing danger by the beginning of the year, due to the decline in exports, cessation of foreign loans, and adverse repercussions of the depreciation of the pound sterling. Consequently payment of interest and amortization on the external debt, the service of which required approximately 1,230,000,000 drachmas annually, presented great difficulties. Early in the year, Premier Venizelos visited London, Paris, and Rome in a vain effort to secure a \$50,000,000 loan and authority to suspend for five years payments into the sinking fund on its foreign debt. The Premier, in turn, rejected recommendations of the League of Nations' Financial Committee for reducing expenditures, balancing the budget, and suspending for one year the transfer abroad of sinking funds on Greek loans.

The appointment of Kriakos Varvaressos as Minister of Finance on April 22, to succeed George Maris, foreshadowed the abandonment three days later of the gold standard. At the same time the Premier announced that Greece would cease sinking-fund payments on both the internal and external debt, reduce the interest payments on the internal debt by 25 per cent, and pay interest on the external debt into a blocked account in the National Bank for a five year period, unless a foreign loan was forthcoming. A bill incorporating these measures retroactive to April 1, was enacted by Parliament May 10.

There was a short Cabinet crisis when Premier Venizelos and his colleagues resigned (May 21), owing to the refusal of parliament to adopt its measures, a serious railway strike, and adverse press comment. A tentative coalition cabinet, embracing all the opposition parties except the Royalists, was formed May 25 under Alexander Papanastassiou, but was forced to resign June 3 by the refusal of Venizelos to pledge the full support of his party. Venizelos was again called upon by President Zaimis and two days later announced his reconstructed cabinet. In the meanwhile, to avoid the possibility of a *coup d'état*, Gen. Theodoros Pangalos, former dictator, was banished with 11 supporters on June 1 for a five-months period.

On June 30, the Venizelos government notified the U. S. Treasury that Greece would not make the payment of \$130,000 due July 1 on account of the principal of her \$30,292,000 debt to the United States. In accordance with the moratorium agreement of the debt-funding treaty, Greece exercised her option to postpone these principal, but not interest, payments for two and a half

years. About the same time (June 10) arrangements were concluded for French financial control of the Greek state railways. Despite these efforts to conserve and strengthen the foreign-exchange reserve, the gold exchange reserve of the Bank of Greece decreased from \$39,080,000 at the end of 1930 to \$9,095,000 on June 30, 1932. Meanwhile the drachma was steadily depreciating—from a par value of \$0.0130 to \$0.0060 in October, 1932. As the external debt was payable in foreign currencies, depreciation of the drachma added steadily to the debt burden of the country.

The campaign previous to the election of a new Lower Chamber and one-third of the Senate on September 25 was one of the most bitter recorded since the World War. It revolved principally about the personality of the veteran Premier, whom the opposition sought to hold responsible for the financial crisis and acute economic distress. The opposition was led by the Royalists under Panayoti Tsaldaris, who, despite their anti-republican sympathies, were supported by several small anti-Venizelos but republican groups, led by M. Papanastassiou, George Cafandaris, and others. Premier Venizelos repeatedly announced that he would refuse to resign in favor of the Royalists, in case they won the election, on the ground that they planned to restore the monarchy. In this stand he was supported by the Military League of republican army officers, who seriously considered a *coup d'état* and the establishment of a dictatorship for five years.

The election resulted in a stalemate, with no party holding a majority. The Venizelists lost 81 seats, while the Royalists gained 76, the Agrarians 9, and the Communists 9. Of the 250 seats in the new Chamber, the Venizelist Liberals held 102, the Royalist People's party 96, the Progressives (Cafandaris) 15, Agrarians 11, Communists 9, Farm-Labor bloc (Papanastassiou) 6, and the Radical Nationalists 5. The lineup in the Chamber forced President Zaimis to choose between a new election and a coalition cabinet. He chose the latter alternative. On October 31, Premier Venizelos resigned and the Royalist leader, Tsaldaris, was asked to form a cabinet. He had promised to oppose open discussion of the monarchy temporarily, to recognize the status quo, and to facilitate a solution of the financial situation. His cabinet, a coalition of all the anti-Venizelist parties, was announced November 4 as follows: Premier and Minister of Finance, Panayoti Tsaldaris; Foreign Affairs, John Raillis; Justice, M. Papathanasis; Interior, Gen. John Metaxas; War, Gen. George Kondylis; Navy, Adm. Hadjikyriakos; Agriculture, M. Theotokis; Communications, M. Stratos. On November 6 Premier Tsaldaris appointed M. Agenopulos to the Finance portfolio. The latter immediately announced that henceforth Greece could pay the interest on her debts to the United States and Great Britain only in paper drachmas; he proposed arbitration of the question of Greece's foreign obligations.

On November 12 Premier Tsaldaris announced that his parliamentary programme called for the abolition of several ministries, shortening of the military training period, and establishment of new government monopolies to rehabilitate Greek finances. Venizelos then announced that he would tolerate the new government but declined to give it a vote of confidence. Accordingly a vote of

lerance was passed November 13, after which the Chamber recessed for two months, with the mizelos Liberals reserving the right to reconvene it at any time.

On November 10, Greece defaulted on a \$440,000 interest payment due on the \$12,000,000 American loan of 1928. The Greek government, setting that the 1928 loan was a war loan, demanded arbitration as to the validity of the loan conditions. Under pressure of the United States government, which was supported by the British government, the Cabinet on December 30 pronounced that Greece would pay \$67,000, or 30 per cent of the sum due November 10. The government offered to pay a similar percentage of the service charges due on British and other European loans.

On December 27, five judges of the Athens Court of Appeals ruled that Samuel Insull, American public utilities magnate, was not subject to extradition, under the Greek-American extradition treaty. Insull's extradition was requested by the United States government, after he had been indicted by a Cook County (Ill.) grand jury. See LAW, under *Extradition*.

A severe earthquake in the Chalcidice peninsula on the night of September 26 killed 141 persons, injured 403, and ruined more than 3000 houses (see EARTHQUAKES). Former Queen Sophie of Greece, wife of former King Constantine who died in exile at Palermo in 1923, died at Frankfort-on-Main on January 13 (see her biography).

**GREEK ARCHÆOLOGY.** See ARCHÆOLOGY.

**GREEK STUDIES.** See PHILOLOGY, CLASSICAL.

**GREENLAND.** Ranking second in size to Australia among the islands of the world, Greenland is situated in the North Atlantic to the north and east of Canada. The estimated area, covered for the most part with a thick layer of ice, is 839,782 square miles; the population on Jan. 1, 1931, of the settled area (46,740 square miles) included 16,495 native Eskimos and 324 Europeans, mostly Danes. The settled area along the southern coasts is divided into the provinces of North, South, and East Greenland, with 7238, 489, and 883 inhabitants, respectively. Julianesaab, with 3532 inhabitants, is the principal settlement. Godthaab and Godhavn are the administrative cities for South and North Greenland. Trade, which is chiefly in furs, sealskins, and oil, is a monopoly of the Danish government. Exports in 1929-30 were valued at 2,906,000 Danish crowns (worth \$0.267 at par) and exports at 10,742,000 crowns. In the 1930-31 budget estimated revenues and expenditures balanced at 4,457,000 crowns. Administrative authority rests with a director residing in Copenhagen. Director in 1932, J. Daugaard-Jensen.

**HISTORY.** While the dispute among the governments of Norway, Denmark, and Iceland over possession of territory on the east coast of Greenland was still pending before the Permanent Court of International Justice at The Hague, Norway on July 12, 1932, enlarged the controversy by formally occupying and annexing another stretch of coast (see WORLD COURT). The area claimed by Norway in 1931 extended between 71 degrees 30 minutes and 75 degrees 40 minutes North Latitude. That claimed in 1932 lay between 61 degrees 30 minutes and 63 degrees 10 minutes North Latitude. The Danish author-

ities immediately submitted this second dispute to the World Court. M. Stauning, the Danish Prime Minister, declared that the occupation was in direct violation of the Danish-Norwegian agreement of 1924, and an intrusion into an administrative area of the colony of Greenland. Meanwhile a large Danish expedition under Dr. Lauge Koch was carrying on extensive scientific studies and airplane mapping activities in East Greenland. Dr. Koch sailed from Copenhagen June 15, 1932, with five ships, airplanes, and over 90 men. He returned on September 18. See POLAR RESEARCH.

**GREEN SHIRTS.** See PEACE.

**GREGORY, AUGUSTA, LADY.** An Irish dramatist, died in Gort, County Galway, May 22, 1932. She was born in Roxborough, County Galway, Mar. 5, 1859, youngest daughter of Dudley Persse. In 1881 she married Sir William Gregory, who had been member of Parliament for Galway and Dublin and governor of Ceylon. She played an important part during the '90s in the Irish literary revival. Of special merit were her renderings of the Irish sagas, in *Cuchulain of Muirtemne* (1902) and *Gods and Fighting Men* (1904), in an Anglo-Irish idiom, a modified form of English fashioned by the Celtic peasant, which expressed better the thoughts and feelings that had formerly found utterance in the expiring Gaelic tongue. She also used this dialect with great effect in her plays. Among her translations into the idiom are several plays of Molière, which were published as *The Kiltartan Molière* (1910), and also Sudermann's *Trja* (1908) and Goldoni's *Mirandolina* (1910). William Butler Yeats, Edward Martyn, John Millington Synge, George Moore, and other moving spirits of the revival owed much to her help and encouragement. Her last protégé was the playwright, Sean O'Casey.

Lady Gregory devoted herself especially to the Irish National Theatre in Dublin, which with Edward Martyn and George Moore she founded in 1899 and which was later endowed as the Abbey Theatre under the auspices of the National Theatre Society. At this theatre there were produced many of her own plays, the most distinctive and popular of which were her one-act comedies of modern Irish life. Among these are: *The Workhouse Ward*; *The Full Moon*; *Coats*; *The Image*; *Dervorgilla*; *Hyacinth Halcy*; *The Jackdaw*; *The Goal Gate*; *The Rising of the Moon*; *Spreading the News*; *Kincora*; *Twenty-five*; *The White Cockade*; *The Canavans*; *The Unicorn from the Stars* (with W. B. Yeats); *The Travelling Man*; *The Deliverer*; *Macdaragh's Wife*; *The Bogle Man*; *Damer's Gold*; *Shanwalla*; *Hanrahan's Oath*; *The Dragon*; *The Golden Apple*; *The Story Brought by Brigit*; *Dave*; and *Sancho's Master*. She accompanied the Irish Players (the Abbey Theatre's company) to the United States on their tours of 1911-12 and 1913. In the latter year she also published *Our Irish Theatre*. She remained a director of the Abbey Theatre until her death.

Lady Gregory's important books, in addition to those mentioned, are: *Poets and Dreamers* (1903); *Saints and Wonders* (1908); *Seven Short Plays* (1909); *The Kiltartan History Book* (1909); *The Kiltartan Wonder Book* (1910); *Irish Folk History Plays* (1912); *New Comedies* (1912); *The Kiltartan Poetry Book* (1919); *Hugh Lane's Life and Achievement* (1921); *Three Wonder Plays* (1922); *Three Last Plays* (1928); and *Coole* (1931). For the "Cel-

tic Renaissance" she collected and arranged *Visions and Beliefs in the West of Ireland* (1920). She also edited her husband's autobiography in 1894 and in 1898 *Mr. Gregory's Letter Box*, the correspondence in 1812-30 of her husband's grandfather, William Gregory, Under-Secretary of State for Ireland.

**GREGORY, CHARLES NOBLE.** An American lawyer, died in Washington, D. C., July 10, 1932. He was born in Otsego Co., N. Y., Aug. 27, 1851, and was graduated with the LL.B. degree from the University of Wisconsin in 1874. He practiced law in Madison, Wis., until 1894 and was also attorney there for the Chicago, Milwaukee & St. Paul Railway. After serving as associate dean of the law college at the University of Wisconsin, he was appointed in 1901 dean of the law college at the State University of Iowa and in 1911 dean of the law department at George Washington University. He remained at the latter institution until 1914. In 1909 he was president of the Association of American Law Schools. He was also a former editor of the *Tariff Reform Advocate* and of the *American Journal of International Law*. His works include *The Life of Justice Miller of the Supreme Court of the United States* (1907) and *Abstracts of Cases in Lloyd's Reports of Prize Cases* (4 vols., 1919).

**GREGORY, JOHN WALTER.** A British geologist and explorer, died by drowning June 6, 1932, when his canoe capsized in the Urubamba River, Peru. Born Jan. 27, 1864, he attended the Stepney Grammar School, Bow, and from 1879 to 1887 was engaged in the wool trade with his father. On becoming an assistant in the geological department of the British Museum, he made geological explorations of the western United States (1891) and British East Africa (1892-93) and was naturalist with Sir Martin Conway's expedition across Spitzbergen (1896). In 1900 he was called to the University of Melbourne, where he was professor of geology and mineralogy until 1904. He was also director of the geological survey of the Mines Department of Victoria during 1902-04. He then accepted the geological chair at the University of Glasgow, which he held until 1929. Among the important expeditions which he headed were to Lake Eyre (1901-02), Cyrenaica (1908), Southern Angola (1912), and Chinese Tibet (1922). At the time of his death he was head of a British scientific mission studying Andean geological formations. Made a fellow of the Royal Society in 1901, he received the Victoria Medal of the Royal Geographical Society (1919), the gold medal of the Scottish Geographical Society (1922), and the gold medal of the Royal Society, Edinburgh (1924). He was also a member of the Calcutta University Commission (1917-19) and president of the British Geological Society (1928-30). His works include, in addition to over 200 scientific papers on geology, *The Foundation of British East Africa* (1901); *The Dead Heart of Australia* (1906); *The Rift Valleys and Geology of East Africa* (1921); *The Menace of Color* (1925); *Human Migration and the Future* (1928); and *Elements of Geology* (1928).

**GRENADA, gre-nā'da.** An insular possession of Great Britain in the Windward group of the British West Indies. Area, 133 square miles; population at the census of 1921, 66,302; estimated Jan. 1, 1931, at 76,967. Grenada includes half the Grenadine Islands, the other half being administered from St. Vincent. The capital

is St. George's with a population of about 5000. The chief products are cacao, sugar, spices, lime juice, and cotton. In 1930 revenue was £141,946; expenditure, £91,453; public debt, £183,510; imports were valued at £193,252 and exports at £172,648. The colony is under the Governor of the Windward Islands, whose headquarters are at St. George's but has its own legislative council. Colonial Secretary for Grenada in 1932, H. R. R. Blood, see WINDWARD ISLANDS.

**GRINNELL COLLEGE.** A coeducational, non-sectarian institution of higher learning in Grinnell, Iowa, founded in 1846. The enrollment for the autumn of 1932 was 683, while that for the summer session was 95. There were 70 faculty members. The productive funds amounted to \$2,063,405, and the income for the year, exclusive of dormitories, was \$335,000. The library contained 90,000 volumes. President, John Scholte Nollen, Ph.D., LL.D.

**GADELOUPE, ga'da-lōp'. A** French insular possession in the Lesser Antilles in the West Indies, consisting of two islands separated by a narrow channel, the one on the west being Guadeloupe proper or Basse-Terre, and the one on the east Grande-Terre. Total area, including five small dependent islands, 688 square miles; population (1931 census) 267,407. Basse-Terre is the capital, with a population, in 1926, of 8379; chief town and port, Pointe-à-Pitre, with 30,465 inhabitants in 1931.

The budget in 1930 balanced at 40,593,956 francs; public debt was 1,385,850 francs; exports were valued at 192,719,000 francs and imports at 229,059,000. Gadeloupe is under a governor and an elected council. Governor in 1932, M. Choteau, appointed in 1931.

**GUAM, gwām.** An insular possession of the United States, situated at the southern end of the Mariana, or Marianne, Islands in mid-Pacific about 1500 miles from Manila and 5053 miles from San Francisco. The largest and most populous island of the Mariana group, it has an area of 210 square miles. The total population on June 30, 1932, was 19,673 (18,297 natives, 784 non-natives, and 592 members of the naval establishment). Capital, Agaña, with about 8500 inhabitants.

The public-school registration in 1931-32 averaged 3676 pupils. Education is compulsory between the ages of 7 and 12. Spanish and English are spoken in addition to the native Chamorro. Cacao, coffee, copra, corn, rice, sugar, sweet potatoes, and timber are the chief products of the island, but only copra and coconut oil are exported. The trade of the island is principally with the United States and Manila. For the year ended June 30, 1932, imports totaled \$514,431 and exports \$53,821.

In connection with the Federal government's economy programme, it was ordered, June 11, 1931, that Guam be demilitarized and all fortifications removed. The work of dismantling guns was completed Oct. 31, 1931, and most of them were shipped back to the United States. Also the officer and enlisted personnel of the Marine Corps attached to the station was considerably reduced. For the fiscal year ended June 30, 1932, general revenue totaled \$155,181 and expenditure \$145,444. Guam is a United States naval station, of which the governor, who is appointed by the President, is commander. There is a native Congress, with advisory powers. Commandant and Governor in 1932, Capt. E. S. Root, U. S. N.

**GUATEMALA**, gwá'tá-má'lá. A Central American republic, situated between the Caribbean Sea and the Pacific Ocean, whose land frontiers are continuous with those of Mexico, British Honduras, Salvador, and Honduras. Capital, Guatemala City.

**AREA AND POPULATION.** With an area of 42,364 square miles, Guatemala in 1931 had an estimated population of 2,219,000, compared with the 1921 census population of 2,004,900. The urban population in 1921 numbered 534,176, or 27 per cent of the total. About 60 per cent of the population are pure Indian, the remainder being largely mestizos. For the period 1927 to 1931, births averaged 100,076 annually and deaths 47,440; birth and death rates per 1000 inhabitants for the same period were 45.6 and 21.6, respectively. The populations of the chief cities in 1921 were: Guatemala City, 120,707; Quezaltenango, 30,125; Cobán, 20,774; and Escuintla, 21,840.

**EDUCATION.** Approximately 80 per cent of the population are illiterate. There were 141,167 pupils in public and private elementary schools in 1931, as compared with 577,568 children of school age (5 to 17 years) in 1921. Public elementary schools numbered 2410, with an enrollment of 110,890. Enrollment in normal, secondary, and special schools totaled 4769 and that of the National University 714.

**PRODUCTION.** Agriculture is the principal occupation and coffee, the chief crop cultivated, normally constitutes 80 per cent of the value of all exports. The drastic decline in coffee prices dealt a severe blow to the national economy. General business operations in 1931 declined about 25 per cent from 1930 and 50 per cent from 1929. The 1931-32 coffee crop was estimated at 76,075,000 pounds, compared with 90,290,000 pounds in 1930-31, and 107,798,000 pounds in 1929-30. Production of other leading crops was: Bananas, 4,500,000 stems in 1931 (shipments), as against 4,874,000 stems in 1930, and a normal production of about 6,000,000 stems; sugar, 31,000,000 pounds in 1931, against about 40,000,000 pounds in 1930. Corn, wheat, rice, and potatoes are produced for local consumption. Livestock in 1931 included 373,000 cattle, 146,000 sheep, 55,000 horses, 77,000 swine, and 55,000 asses and mules. The forests, covering 1,316,000 acres, yield hardwood and chicle. Gold, lead, mica, chromium, and silver are produced in normal times. Industrial establishments are confined chiefly to coffee-cleaning plants and sugar mills.

**COMMERCE.** Total imports in 1931 were valued at \$12,971,000, as against \$16,474,000 in 1930, a decline of 21 per cent, while exports of Guatemalan products declined to \$15,167,000 in 1931, from \$23,578,000 in 1930. The United States in 1931 supplied 54.9 per cent of the total imports; Germany, 12.75 per cent; and the United Kingdom, 8.91 per cent. Exports went chiefly to the United States, which took 35.39 per cent; Germany, 33.1 per cent; and the Netherlands, 15.43 per cent. For the year ended June 30, 1932, Guatemala's imports from the United States were valued at \$3,643,000 (\$6,168,000 in 1930-31), and exports to the United States totaled \$3,776,000 (\$5,741,000 in 1930-31). The chief imports in order of value (1931) were cotton fabrics, iron and steel, wheat flour, cotton yarn and thread, gasoline, and machinery and tools. Coffee exports (1931) were valued at \$10,982,000

(\$18,936,000 in 1930); bananas, \$2,899,000 (\$2,437,000 in 1930).

**FINANCE.** For the fiscal year ended June 30, 1931, ordinary revenues totaled 10,652,907 quetzales (the quetzal equals \$1 at par), as compared with 13,426,739 quetzales in 1929-30. Ordinary expenditures for 1930-31 totaled 13,171,764 quetzales, compared with 13,270,799 quetzales in 1929-30. The budget estimates for 1931-32 balanced at 7,980,000 quetzales; preliminary returns indicated a deficit for the year. The national debt as of Dec. 31, 1931, stood at 13,457,965 quetzales and £1,540,863, or a total of 18,696,899 quetzales when the sterling debt was converted at par of exchange. By a law effective in April, 1932, the Central Bank was authorized to charge as high as 103 quetzales for \$100 United States currency, thus recognizing a 3 per cent depreciation of the quetzal. Guatemala in 1931 defaulted on several interest payments.

**COMMUNICATIONS.** Railway lines in operation in 1931 totaled 788 miles, of which 509 miles, operated by the International Railways of Central America, carried 1,956,000 passengers and 439,300 short tons of freight, earning gross receipts of \$3,960,000 (\$4,859,000 in 1930). In 1930, 1195 vessels of 2,443,000 net registered tons entered the ports, as against 1150 vessels of 2,080,000 tons in 1929.

**GOVERNMENT.** Executive power under the Constitution of Jan. 1, 1928, is vested in a president elected for six years and legislative power in the National Assembly, which consists of 69 members elected for four years by universal suffrage. A council of state of seven members, three elected by the National Assembly and four appointed by the President, has large advisory powers besides supervising public concessions and contracts. President in 1932, Gen. Jorge Ubico, who assumed office Feb. 14, 1931.

**HISTORY.** Increasing discontent with the régime of President Ubico was reported during the year, but there were no political disorders such as those occurring in neighboring states. Hostility between the governments of Guatemala and El Salvador was evidenced repeatedly. In June, President Maximiliano Hernandez Martínez of Salvador, in a telegram to the Salvadorean legation in Washington, charged that President Ubico was supporting a conspiracy headed by former President Arturo Araujo of Salvador to overthrow the Martínez régime. The Guatemalan government denied the charge. President Ubico strongly opposed the campaign undertaken by Foreign Minister Pacheco of Costa Rica to secure a joint denunciation of the Central American non-recognition treaties (see *COSTA RICA* under *History*). The Guatemalan Foreign Minister on November 29 declared that the treaties had proven more beneficial than harmful and should be revised rather than suppressed. The Guatemalan government thus was in accord with the United States in refusing to extend recognition to the revolutionary government of President Martínez in Salvador.

**GUGGENHEIM FELLOWSHIPS.** See *PAINTING*.

**GUIANA.** See *DUTCH, BRITISH, FRENCH GUIANA*.

**GYDNIA.** See *POLAND* under *Communications*.

**GYMNASTICS.** For the second year in succession, Frank Haubold, a member of the Swiss Turn Verein of Union City, won the national A.A.U. gymnastics all-around title in 1932. Once

again the battle for honors was between Alfred Jochim and his teammate Haubold, Haubold triumphing over the former champion by the slim margin of five-hundredths of a point. Jochim won at calisthenics and on the long horse, and Haubold on the parallel bars. Jochim previously had won the Metropolitan all-around championship. Haubold won on the pommel horse for the United States at the Olympics.

The United States Naval Academy team swept the intercollegiate championships, led by Charles A. Curtze, who won the individual all-around championship.

**GYPSUM.** The amount of crude gypsum mined in the United States during 1932 was about 1,364,900 short tons, or an estimated decrease of 40 per cent as compared with the figures reported for 1931, according to the U. S. Bureau of Mines. The amount of domestic and imported rock sold as uncalcined gypsum in 1932 was 505,461 tons, while the amount of calcined gypsum produced from domestic and imported rock was 1,031,280 tons. The corresponding figures for 1931 were 775,242 tons and 1,856,245 tons.

New building construction of all kinds was at unprecedentedly low levels during 1932 and the total demand for gypsum products declined. There were practically no developments of major importance in the domestic gypsum industry during the year. The Century of Progress Exposition, which will open in Chicago on June 1, 1933, experimented in building construction of a cheap non-inflammable type. In cooperation with officials of the Exposition, the gypsum industry worked out a type of board which appeared sufficiently weatherproof for exterior use, and which considerably lowered the cost of construction.

While there were slight reductions in the prices of certain products, the price structure of the gypsum industry as a whole held up remarkably well under adverse conditions. Crude gypsum prices varied only slightly from the previous year when producers reported sales at an average price of \$2.02 per short ton. The Canadian gypsum industry, which suffered less from the general business slump in 1931 than did that in the United States, decreased its output from 863,752 tons, valued at \$2,111,517 in 1931 to 485,205 tons, valued at \$1,178,000 in 1932. These figures represent decreases of 44 per cent in quantity and value, as compared with 1931.

**HADRAMAUT, THE.** See ARABIA.

**HAGUE TRIBUNAL.** See ARBITRATION, INTERNATIONAL.

**HAITI**, hä'tī. A West Indian republic, comprising the western third of the island of Haiti, the other part forming the Dominican Republic, or Santo Domingo (see DOMINICAN REPUBLIC). Capital, Port-au-Prince.

**AREA AND POPULATION.** With an area of about 10,204 square miles, Haiti had an estimated population of 2,550,000 in 1929, or 250 per square mile; in 1909 the estimated population was 2,029,700. Port-au-Prince had about 80,000 inhabitants in 1929. The estimated population of the other chief towns (1927) was: Cape Haitien, 12,500; Aux Cayes, 12,500; Gonaives, 10,000; St. Marc, 8000; Jacmel, 7500. The inhabitants are Negroes and mulattoes. The language of the educated classes is French and that of the masses a dialect known as Creole French.

**EDUCATION.** The population is largely illiterate. There were 1129 schools of all classes in 1930-31, with 92,355 pupils.

**PRODUCTION.** Haiti is a predominantly agricultural country, producing coffee, cotton, sugar, cacao, sisal, and pineapples for export. Logwood, hides and skins, lignum-vitæ, honey, tobacco, and turtle-shell are other products. The coffee crop is the outstanding factor in the national economy, exports in the fiscal year ended Sept. 30, 1931, totaling 57,972,000 pounds valued at \$6,687,000, as against 75,664,000 pounds valued at \$10,406,000 in 1929-30. The total value of exports in 1930-31 was \$8,963,419. The output of raw sugar in 1930-31 was 18,800 long tons (18,907 in 1929-30). Mining is unimportant commercially, and manufacturing is confined to the production of sugar, alcohol, rum, molasses, and other products for local consumption.

**COMMERCE.** The total value of all imports during the fiscal year ended Sept. 30, 1931, was \$9,570,318, compared with \$12,842,000 in 1929-30 and with \$17,238,000 in 1928-29. Exports during 1930-31 were valued at \$8,963,000 compared with \$14,145,000 in 1929-30 and with \$16,724,000 in 1928-29. As compared with 1929-30, the 1930-31 exports and imports declined 36.6 and 25.4 per cent, respectively, in value. Coffee and cotton in 1930-31 accounted for 78.7 per cent of the total export value. France took 50.8 per cent of the total exports, while the United States supplied 68.6 per cent of all imports.

**FINANCE.** For the fiscal year ended Sept. 30, 1931, revenues totaled 31,746,582 gourdes (\$6,349,316 and expenditures 36,190,070 gourdes (\$7,238,014). This compared with revenues of 38,648,000 gourdes (\$7,729,000) and expenditures of 40,643,000 gourdes (\$8,128,600) in the fiscal year 1929-30. A law of Sept. 29, 1932, imposed a surtax of 5 per cent of the import duty and other clearance charges on all imports. The President was authorized to stop the collection of the surtax by decree as soon as revenue was sufficient to balance the budget. The public debt of Haiti totaled 82,705,649 gourdes (\$16,541,129) at the end of the 1929-30 fiscal year, as compared with 78,357,576 gourdes (\$15,671,515) on Sept. 30, 1931. The gourde was equivalent to \$0.20 United States currency.

**COMMUNICATIONS.** There are two privately owned railway systems, with a total of 158 miles of line. One system, the National Railways, which suspended operations in May, 1931, resumed traffic in January, 1932. Highways, extending 1072 miles in 1931, provided the chief means of communication. In the fiscal year 1930-31, vessels entering Haitian ports numbered 682 of 1,332,000 net tons, as against 712 of 1,377,000 tons in 1929-30.

**GOVERNMENT.** The Constitution adopted June 12, 1918, provided for a national assembly, consisting of a senate and house of representatives. The National Assembly was elected for the first time on Oct. 14, 1930, legislative functions having been carried on in the interim by a council of state of 21 members appointed by the President. As amended in 1928, the Constitution vested executive power in a president elected for six years and ineligible for reelection. The President in 1932 was Sténio Vincent, elected Nov. 18, 1931, by the 36 Deputies and 15 Senators, sitting as a National Assembly. Under a treaty between the United States and Haiti concluded Sept. 16, 1916, and to expire in 1936, the constabulary, finances, public health, public works, and agriculture of the Republic were supervised by American advisers appointed by the President of Haiti on

recommendation of the President of the United States. The post of American High Commissioner was abolished in 1930, and most of the duties of that office were taken over by the newly appointed American Minister. The administration of public health, public works, and agricultural training was turned over to Haitian officials in 1931, the United States retaining control of finances and the constabulary.

**HISTORY.** On September 3, representatives of the American and Haitian governments signed a treaty and two protocols under which the intervention of the United States was to be ended "as soon as practicable and in an orderly manner." The first step toward American withdrawal had already been taken in the agreement of Aug. 3, 1931 (see 1931 YEAR BOOK), which terminated American control of all departments of the Haitian administration, except the constabulary, or Garde, and finances. The 1932 treaty envisaged the complete Haitianization of the Garde and the withdrawal of the American marines on Dec. 31, 1934, instead of awaiting the expiration in May, 1936, of the American-Haitian treaty of September, 1915, upon which the American occupation is based. However, an exchange of notes stipulated that withdrawal of the marines might be postponed "if serious disturbances or other difficulties in Haiti now unforeseen should arise. . . ." The treaty further authorized the United States to establish a military mission, with considerable supervisory powers over the Garde.

With regard to finances, the treaty provided that customs revenue should continue to be collected by an American fiscal representative until the extinction of the \$23,660,000 loan raised in the United States in 1922. At the current rate of amortization, the loan would probably be retired about 1942, or six years after the expiration of the 1915 treaty. In the meantime, the American fiscal representative was to exercise extensive control over the Haitian budget and the collection of internal revenue.

Although ratification of the treaty was urged by President Vincent, the Haitian National Assembly on September 21 unanimously rejected it. In doing so the Assembly approved a report of its committee stating that the new treaty "reinforced," rather than liquidated, the treaty of 1915. In an exchange of notes between the two governments, made public on October 10, the State Department at Washington again announced that the United States intended to withdraw its marines but warned that continued refusal of the Haitian Assembly to accept the new treaty might delay such withdrawal until 1936. However, complete Haitianization of the Garde in the Department of the South was contemplated by Dec. 31, 1932.

Appearing before the U. S. Senate Finance Committee on Feb. 10, 1932, Georges Leger, brother of the Haitian Foreign Minister, charged the United States with dominating Haiti ever since the military occupation of 1915. He said the American financial advisers had been virtual dictators in Haiti, that extension of the 1915 treaty from its original expiration date in 1926 to 1936 and the 1922 loan had been forced upon the Haitian people against their will, and that the American High Commissioner had prevented the reelection of President d'Artignave in 1922 because he was opposed to the loan. On the same day the U. S. Department of State issued a statement reviewing the financial situation in Haiti

since 1915. It stated that Haiti's total debt at the time of the American occupation, amounting to \$31,700,000, had been liquidated for a total of \$23,660,000, and that this bonded indebtedness was reduced to \$14,329,161 on Dec. 31, 1931, while a surplus of \$3,292,568 had been accumulated in the Haitian Treasury by Sept. 30, 1931. On February 16, Secretary of State Stimson replied to Mr. Leger's charges in a letter to Chairman Smoot of the Senate Finance Committee. He said that apparently the American High Commissioner had nothing to do with preventing the reelection of President d'Artignave in 1922. He denied Mr. Leger's statement that "a continual state of martial law had existed in Haiti" since 1915.

Norman Armour, Counselor of the American Embassy in Paris, on August 13 succeeded Dr. Dana G. Munro as Minister to Haiti. The American naval forces, including marines, in Haiti totaled 950 on Sept. 1, 1932.

The administration of President Stenio Vincent was vigorously attacked by the opposition press during the year. On August 20, the President proclaimed martial law for Port-au-Prince and certain other parts of the island. Five newspapers were suppressed and two editors were arrested on the ground that their anti-government agitation threatened to lead to bloodshed and to imperil the stability of the government. A law passed by the Assembly on Sept. 24, 1932, provided for the distribution of government-owned land in plots of about 12 acres per person.

**HALE, EDWARD EVERETT.** An American author and educator, died in Schenectady, N. Y., Aug. 19, 1932. He was born in Boston, Mass., Feb. 18, 1863, son of the Rev. Edward Everett Hale. Graduated from Harvard University in 1883, he taught English at Cornell University from 1886 to 1890. In 1892 he received the Ph.D. degree from the University of Halle. He was then called to Iowa State College as professor of English, and in 1895 accepted the same chair at Union College. Previous to his death he had retired as head of the English department at the latter institution. He wrote *Constructive Rhetoric* (1896); *James Russell Lowell* (1899); *Dramatists of Today* (1905); and *Sevard* (1910), and contributed to the *Dial* from 1893 to 1917 and to the *NEW INTERNATIONAL ENCYCLOPEDIA*.

**HALL, FRANCIS JOSEPH.** An American theologian, died in Baldwinsville, N. Y., Mar. 12, 1932. He was born in Ashtabula, O., Dec. 24, 1857, and was graduated from Racine College in 1882. He attended the General and the Western theological seminaries, and following his ordination to the priesthood of the Protestant Episcopal Church in 1886 became professor of dogmatic theology at the Western Seminary. From 1913 to 1928 he held the same chair at the General Seminary. He was also registrar of the diocese of Chicago from 1894 to 1913 and was church counsel in the heresy trial of Dr. Algernon S. Crapsey in 1906. His writings include: *Theological Outlines* (3 vols., 1892-95); *Historical Position of the Episcopal Church* (1896); *The Kenotic Theory* (1898); *Introduction to Dogmatic Theology* (1907); *Authority, Ecclesiastical and Biblical* (1908); *The Being and Attributes of God* (1909); *Evolution and the Fall* (1909); *The Trinity* (1910); *Creation and Man* (1912); *The Incarnation* (1915); *The Bible and Modern Criticism* (1915); *The Passion and Exaltation of Christ* (1918); *The Church and the Sacramental System* (1920); *The Sacraments* (1921);

*Eschatology* (1922); *Moral Theology* (with F. H. Hallock, 1923); *Christianity and Modernism* (1924); and *Christian Reunion in Ecumenical Light* (1930).

**HAMBURG**, STATE AND FREE CITY OF. A constituent republic of the German Reich, the state and Free City of Hamburg has an area of 160 square miles; the population (on Oct. 10, 1929) was 1,226,111, of whom 1,143,079 resided in the City of Hamburg and 83,032 in Landgebiet. The ordinary budget for 1931 balanced at 430,567,280 reichsmarks and the extraordinary budget at 9,859,300 reichsmarks (1 reichsmark = \$0.2382 at par). On Sept. 30, 1931 the public debt was 413,800,000 reichsmarks. Hamburg is the chief seaport of Germany; in 1930, 20,350 vessels of 27,990,248 tons entered and 22,744 vessels of 22,204,578 tons cleared. The Constitution of Jan. 7, 1921 (modified Mar. 21, 1924; May 19, 1926; Feb. 28, 1927) vests supreme power in the House of Burgesses of 160 members, which delegates executive authority to a Senate of 12 members. The elections of Sept. 27, 1931, returned 46 Social Democrats, 43 National Socialists, 35 Communists, 14 State party, 9 Nationalists, 7 People's party, 2 Centrists, and 4 others to the House of Burgesses. See GERMANY, under *History* for 1932 elections.

**HAMILTON COLLEGE**. A nonsectarian institution for the higher education of men in Clinton, N. Y., founded in 1812. A total of 463 students was registered for the 1932 autumn session. There were 44 members of the faculty for the year 1932-33. The productive funds of the college were approximately \$4,175,000 and the income for the year 1931-32 was \$377,840. The library contained 147,136 volumes, and 32,000 pamphlets. President, Frederick C. Ferry, Ph.D., Sc.D., LL.D.

**HAMPTON INSTITUTE**. An institution founded in 1868 in Hampton, Va., for the education of Negroes. The enrollment for the autumn term of 1932 was 988, while that for the summer school was 701. The faculty numbered 159. The endowment for the fiscal year ending June 30, 1932, was \$10,017,393 from which the income was \$456,500. Gifts to the endowment and investment funds amounted to \$77,681. There were 81,390 volumes in the library. President, Arthur Howe.

**HANDBALL**. Angelo Trulio, of the New York Athletic Club, was the outstanding performer in 1932 handball, winning six titles in the course of the year. With Al Banuet, who had held the national four-wall crown for three years turned professional on the Pacific Coast, Trulio, former national junior titleholder, was supreme. He won the national singles and doubles titles on the same day in March at the New York Athletic Club. Performing with his usual care and smashing perfectly, Trulio vanquished Sam Atcheson, of Memphis, in three games, 14-21, 21-9, 21-13. Later he paired with his clubmate, Maynard Laswell, to win the doubles by beating the defending champions, Joseph Bathe and Herman Dworman, of Detroit, 21-19, 21-11.

Before that achievement Trulio had won the Metropolitan and the New York State singles championships, beating Solly Goldman of the Trinity Club in the Metropolitan final, and downing Ed Hahn, of the Pastime A. C. in the State. He also won doubles titles in both tournaments, pairing with William Barry to take the

Metropolitan and with Laswell for the State honors.

One-wall handball activities were lessened when no national championship tournaments, senior or junior, were held, because no section or club applied for them. Irving Jacobs of the Union Temple, won the New York State title, and Jack Seaman, Trinity Club veteran player, took the Metropolitan championship. The Metropolitan one-wall doubles was captured by Ben Yedlin and Arthur Aiello, of the Trinity Club, and the New York State doubles went to the same pair.

The National A. A. U. four-wall hard-ball singles title was won by Edward Rogers of the Brooklyn Central Y. M. C. A., who teamed with James Lantry to win the doubles.

**HARRIMAN**, MARY WILLIAMSON AVERELL. An American philanthropist, died Nov. 7, 1932, in New York City, where she was born July 23, 1851, daughter of William J. Averell. She was married in 1879 to Edward Henry Harriman, who became one of the leading American railroad magnates and financiers, controlling the Union Pacific, Southern Pacific, Southern Pacific and Mexico, St. Joseph and Grand Island, Illinois Central, and Central of Georgia Railroads; the Pacific Mail and Portland & Asiatic Steamship Companies; and the Wells Fargo Express Co. On the death of her husband in 1909 she was the sole heir and executor of an estate appraised at more than \$100,000,000. Outstanding among her gifts was a 10,000-acre tract of land in the Highlands of the Hudson, known as Harriman Park, which she gave to the State of New York to afford recreational opportunities to the people. The land was accompanied by a gift of \$1,000,000 for its upkeep. Later, through additional gifts of land and money from J. P. Morgan and John D. Rockefeller, it was developed into the Palisades Interstate Park. Mrs. Harriman gave also \$80,000 for the endowment of the E. H. Harriman chair of forestry at Yale University and \$50,000 to the Bureau of Municipal Research in New York City, and established the Training School for Public Service in New York City and the Eugenics Record Office at Cold Spring Harbor, Long Island, N. Y. The latter in 1917 was given over to the Carnegie Institution of Washington for supervision by its department of genetics. Among her medical endowments were the Southern Pacific Hospital in San Francisco, which was accompanied by \$150,000 for the maintenance of a medical and surgical laboratory for the benefit of Southern Pacific Railway employees; the Edward H. Harriman research fund of the Adirondack Cottage Sanitarium at Saranac Lake; a research laboratory at Roosevelt Hospital, New York City; a bureau for the study of public health problems under the New York Academy of Medicine; and a fund for research into the problem of obstetrics at the Yale University medical school. She established in 1913 the fund for medals commemorating work for railroad safety under the American Museum of Safety and organized lectures for children on safety first. Her favorite cultural project was the American Orchestral Society, a training orchestra for young

musicians, of which she was the founder and principal financial backer for more than 10 years.

**HART, HASTINGS HORNELL.** An American social worker, died in White Plains, N. Y., May 9, 1932. He was born in Brookfield, O., Dec. 14, 1851, and was graduated from Oberlin College in 1875. On his graduation from the Andover Theological Seminary in 1880, he was ordained to the Congregational ministry and served for three years as pastor in Worthington, Minn. After 1883, when he became secretary of the Minnesota State Board of Corrections and Charities, he was identified with social work. In 1898 he accepted the position of superintendent of the Illinois Children's Home and Aid Society. He became associated with the Russell Sage Foundation in 1908 as director of the department of child-helping, and after 1924 was consultant in delinquency and penology. He investigated the prison and penitentiary systems of Wisconsin, Pennsylvania, Missouri, and other States, and in 1926 reported on United States Prisoners in County Jails and in 1929 gave testimony before a special committee of the House of Representatives on Federal penal and reformatory institutions. He was president in 1893 and general secretary from 1894 to 1901 of the National Conference of Charities and Corrections. During 1921-22 he was president of the American Prison Association, and in 1930 received the gold medal awarded by the Roosevelt Memorial Association for "the promotion of social justice." Among his numerous works are: *Preventive Treatment of Neglected Children* (1910); *A Social Welfare Programme for the State of Florida* (1918); *Social Progress of Mississippi* (1919); *Social Problems of Alabama* (1921); *How to Give Wisely \$25,000 to \$1,000,000* (1921); *The Third Degree: Methods of Obtaining Confessions and Information from Persons Accused of Crime* (1921); *The Restoration of the Criminal* (1922); *Penology, an Educational Problem* (1922); *County Jails in the Light of the "Declaration of the Principles of 1870"* (1925); and *Training Schools for Prison Officers* (1930).

**HARVARD UNIVERSITY.** A nonsectarian institution of higher education for men in Cambridge, Mass., founded in 1636. The number of students enrolled for the year 1932-33 was 8228, distributed as follows: college, 3390, including 611 seniors, 738 juniors, 852 sophomores, 1117 freshmen, and 72 out-of-course. Graduate schools: arts and sciences, 985; business administration, 960; education, 285. Professional schools: engineering (undergraduate and graduate), 218; theology, 48; law, 1509; medicine, 510; dentistry, 133; public health, 28; architecture, 75; landscape architecture, 35; city planning, 7; special students, 36. For the summer session of 1932, the registration was 1943. The officers of instruction for 1932-33 numbered 1635, of whom 273 were professors, 82 associate professors, and 167 assistant professors.

Visiting professors and lecturers during the year included: Henri Guy, president of the University of Grenoble, who came as lecturer on French for the second half-year; Pierre Caron, head of the division of modern history of the national Archives, Paris, who came as exchange professor from France for the second half-year; Wilhelm Köhler, director of the Weimar State art collection, who came as Kuno Francke professor of German art and culture for the entire year; Thomas Stearns Eliot, editor of the Lon-

don *Criterion*, who came as Charles Eliot Norton professor of poetry for the academic year; Serge Elisseeff, professor of the history of Japanese literature in the Russian Institute, University of Paris, who came as lecturer on Chinese and Japanese for the academic year; João Frederico Normano, associate director of the Harvard Bureau of Economic Research in Latin America, who came as lecturer on economics for the entire year; Miles Lawrence Hanley, associate professor of English at the University of Wisconsin, who came as lecturer on English for the academic year; Robert Cedric Binkley, professor of history at Western Reserve University, who came as lecturer on history for the entire year; and David Mitrany, assistant European editor of the *Economic and Social History of the War* (Carnegie Endowment for International Peace), who came again as lecturer on government for the academic year.

The book value of endowment funds of the university in June, 1932, exclusive of land and buildings used for educational purposes, was \$123,415,389. The total expenses for the year were \$14,111,225. Building activity included the completion of the Harvard Memorial Church and the astrophotographic building of the Harvard College Observatory in Cambridge, Mass. Construction was also carried forward on the group of buildings comprising the new Oak Ridge Astronomical Observing Station at Harvard, Mass. In the autumn of 1932, a new wing of the Fogg Art Museum was completed to house the Naumburg art collection. A new residential unit was completed on the site of Russell Hall as part of Adams House, thus concluding the major construction connected with the Harvard House Plan. The library contained 3,336,282 volumes and pamphlets. President, Abbott Lawrence Lowell, LL.B., LL.D.

**HARZBURG FRONT.** See GERMANY under *History*.

**HASTINGS, CHARLES SHELDON.** An American physicist, died in Greenwich, Conn., Jan. 30, 1932. He was born in Clinton, N. Y., Nov. 27, 1848, and was graduated from Yale University with the Ph.B. degree in 1870 and the Ph.D. degree three years later. He then studied at the Universities of Heidelberg and Berlin and at the Sorbonne in Paris, and on his return to America in 1877 was appointed associate professor of physics at Johns Hopkins University, Baltimore. In 1884 he was called to the chair of physics at the Sheffield Scientific School at Yale, where he remained until his retirement as professor emeritus in 1915. He was considered one of the foremost American experts in optics, devising a method which enabled him to determine not only the spherical aberration and astigmatism of a lens but the variation of its focal plane and its magnification with variation of the wave-length of light. In the field of astronomy he made correcting lenses for transforming visual into photographic refractors and brought the spectroscope to a high degree of perfection. The largest telescope which he designed is the 30-inch photographic objective at the Allegheny Observatory. There have also been constructed from his calculations the telescopes at the Yale Observatory in South Africa, the Chabot Observatory in Oakland, Calif., and the observatories of Yale, Pennsylvania, and Heidelberg Universities. He was the author of a *Text-Book on General Physics* (with F. E. Beach, 1899); *Light: A Consideration of*

*the More Familiar Phenomena of Optics* (1901); and *New Methods in Geometrical Optics* (1927).

**HAUPTMANN**, GERHART. See GERMAN LITERATURE.

**HAVERFORD COLLEGE.** An institution of higher education under the control of the Society of Friends in Haverford, Pa., founded in 1833. Registration for the autumn term of 1932 totaled 312 students. There were 44 members on the faculty. The productive funds of the institution amounted to \$4,014,445 (book value). The library contained 117,444 volumes. President, William Wistar Comfort, Ph.D., Litt.D., LL.D.

**HAWAII**, hā-wiʻā. A territory of the United States, consisting of a group of islands in the north central Pacific Ocean 2809 miles southwest of San Francisco. Capital, Honolulu.

**AREA AND POPULATION.** With a gross area of 6407 square miles, Hawaii had a population of 368,336, or 57.5 per square mile, at the census of 1930, compared with 255,912 in 1920. The estimated population on June 30, 1932, was 380,507. The population of the nine inhabited islands in 1930, with the area in square miles in parentheses, was as follows: Oahu, 202,887 (598); Hawaii, 73,325 (4018); Maui, 48,750 (728); Kauai, 35,806 (547); Molokai, 5032 (261); Lanai, 2356 (139); Niihau, 136 (97); Midway, 30 (2.7); and Kahoolawe, 2 (69). The racial composition of the population as of June 30, 1932, was estimated by the board of health as follows: Japanese, 146,189; Filipino, 65,515; Caucasian, other than Portuguese, Puerto Rican, and Spanish, 43,517; Portuguese, 28,595; Chinese, 27,235; Hawaiian, 22,230; Caucasian-Hawaiian, 17,056; Asiatic-Hawaiian, 14,459; Korean, 6653; Puerto Rican, 7000; and Spanish, 1253. Of the total 1930 population, 81.4 per cent were native born, as compared with 65.9 per cent in 1920. In 1931 there were 10,831 births and 3805 deaths. The average birth and death rates for the five-year period 1927 to 1931 were 32.4 and 11.5, respectively. Honolulu in 1930 had 137,582 inhabitants (83,327 in 1920); Hilo, 19,468 (10,431).

**EDUCATION.** On June 30, 1932, there were 78,663 pupils enrolled in 181 public schools, and 12,617 pupils in 74 private schools. The enrollment of regular undergraduates in the University of Hawaii during 1931-32 was 1369; in addition there were 117 graduate students and 720 part-time students, making a total of 2206, not including summer session students. English is the language of instruction. Appropriations for the department of public instruction in the revised budget for the biennium commencing Jan. 1, 1932, totaled \$11,617,910.

**PRODUCTION.** Sugar and pineapples are the chief agricultural products of Hawaii, but coffee, bananas, rice, sisal, tobacco, cotton, and meat are important products also. Large plantation companies control much of the land devoted to sugar and pineapples. In 1930, there were 5942 farms on the islands. Raw sugar production in 1930-31 was 993,787 short tons from 134,680 acres (924,464 short tons from 136,127 acres in 1929-30); the 1931 pineapple output set a new record of 12,726,000 cases (of 24 cans each), an increase of 46,000 cases over 1930. Coffee production is increasing, shipments to continental United States in 1931 totaling 6,637,000 pounds (5,887,000 in 1930). Manufacturing is confined chiefly to the preparation of pineapples and sugar for market, but other lines of manufacture are expanding. In 1930, there were 21,028 persons en-

gaged in mining and manufacturing industries. The depression was reflected in the internal revenue payments for the fiscal year ended June 30, 1932, totaling \$3,785,879, or nearly \$1,000,000 less than in the previous year.

**COMMERCE.** During the calendar year 1931, Hawaii sold goods valued at \$101,548,555 to the United States and purchased commodities valued at \$79,092,387 from the mainland. The comparative figures for 1932 were \$82,688,000 and \$58,504,000, respectively. Exports to countries other than the United States were \$1,189,280 in 1931 (\$1,992,046 in 1930), and imports from other countries were \$7,864,381 (\$9,486,645). Sugar exports in 1931 totaled \$55,233,469; fruits (mostly pineapples), \$39,256,875; coffee, \$1,401,608; molasses, \$1,330,378.

**FINANCE.** For the fiscal year ended June 30, 1932, revenues collected by the territory aggregated \$12,208,679 and expenditures were \$12,422,947. The bonded debt on June 30, 1932, stood at \$32,405,000, an increase of \$405,000 during the year. For the same year the income of the various counties comprising the territory aggregated \$11,511,852, as against \$11,713,979 in 1930-31. The assessment of real and personal property for 1932 totaled \$328,685,005, against \$390,556,301 in 1931.

**COMMUNICATIONS.** In the 1931-32 fiscal year, 1225 vessels with a gross tonnage of 10,318,131 arrived at the territorial ports, a decrease of 58 vessels, and 37,751 gross tons from the previous year. All the principal islands are supplied with steam railways (361 miles in all). Inter-island steamship and airplane services were maintained. Telephonic communication with the mainland was inaugurated in 1931.

**GOVERNMENT.** The Governor and Secretary of the Territory are appointed for four years by the President of the United States. There is a legislature of two houses, the Senate of 15 members, elected for four years, and the House of Representatives of 30 members, elected for two years. A delegate, elected biennially, represents the Territory in the Congress of the United States. Governor in 1932, Lawrence M. Judd, appointed in 1929; Secretary, Raymond C. Brown, delegate to Congress, Victor S. K. Houston.

**HISTORY.** As the result of a vicious outrage on a white woman that occurred in Honolulu a consequent murder and subsequent trial in 1932 attracted widespread attention in the United States. On January 8 occurred the murder of Joseph Kahahawai, a Hawaiian, who with four other suspects of Hawaiian or Oriental descent, had been on parole pending retrial upon a charge of rape and assault on Mrs. Thomas H. Massie, the wife of an American naval lieutenant on duty in Hawaii. Four persons were arrested and charged with the murder—Lieutenant Massie; Mrs. Granville Fortescue, mother of Mrs. Massie and socially prominent in New York and other American circles; and Edward J. Lord and Albert O. Jones, both enlisted men in the navy. After a sensational trial, all four were found guilty of manslaughter on April 29 and sentenced to 10 years' imprisonment by Judge A. M. Cristy. On May 4 Governor Judd commuted the sentence of the four, after they had served one hour.

Meanwhile the affair had aroused a storm of criticism on the mainland. On January 9 a report on the Massie case by Rear Admiral Yates Stirling Jr., U.S.N., commandant of the 14th Naval District at Pearl Harbor, had been made public.

He declared that the inefficiency of the Hawaiian police and race antagonism were a menace to navy men and their families residing there (see 1931 YEAR BOOK). There was a growing demand in the United States for the abolition of civil government and its replacement by a military or naval régime. The U. S. Government sent Assistant Att. Gen. Seth W. Richardson to investigate crime conditions in Hawaii. His report, submitted to the U. S. Senate April 4, declared that the investigators found "no organized crime, no important criminal class, and no criminal rackets." They did find "extreme laxity in the administration of law enforcement agencies" and inefficiency in the administration of justice which "had given rise to a feeling of personal unsafety among a substantial portion of the citizens." Mr. Richardson opposed any change in the form of the territorial government, but recommended that the President be empowered to appoint a territorial attorney general in charge of law enforcement.

Governor Judd acted to correct conditions in the islands which were arousing mainland criticism by calling two special sessions of the Territorial Legislature—January 8 to March 28 and March 29 to June 3. Legislation was passed providing for the appointment of a public prosecutor for the city and county of Honolulu, removable by the attorney general; reorganization of the Honolulu police department, of the courts and jury system, and of criminal procedure; and establishment of a board of prison directors to have entire control and supervision of prisons and prison camps. The statutes governing rape, abduction, and seduction were made more drastic. Other measures were passed completely revising the system of taxation and tax laws and instituting a programme of governmental economy.

Despite these measures, a number of bills were introduced into the United States Congress to restrict the large measure of autonomy enjoyed by the Territory. These bills aroused the almost unanimous opposition of the islanders and of government officials in Hawaii and the United States. In his annual report for 1932, the Secretary of the Interior announced that the Administration would "continue to insist upon the American policy of local self-government and to hold the local government responsible for the results." He added that "The islands' principal problem now is the counteracting of the influence of a chain of mainland newspapers which have done their best to promote racial controversy within the islands and prejudice from without." For this latter purpose Governor Judd on Nov. 20, 1932, appointed a legislative commission to assist Hawaii's delegate in Congress in opposing the anti-autonomy bills.

In the territorial election of Nov. 8, 1932, the Democrats made the most decisive gains in 10 years. Lincoln Loy McCandless defeated Victor Houston, Republican incumbent, for the office of delegate to the Congress. He campaigned on a platform demanding exclusion of Filipino labor from Hawaiian plantations and attacking Mr. Houston's act in recommending that Governor Judd pardon the four defendants in the Massie trial. Several of the Honolulu officials criticized in connection with the Massie case were defeated, including Sheriff Patrick Gleason. The new Legislature consisted of 31 Republicans and 14 Democrats. See UNITED STATES.

Consult Lillian Symes, "What About Hawaii?", *Harper's Magazine*, October, 1932.

**HAY.** The hay crop of the United States in 1932 according to estimates published by the Department of Agriculture amounted to 81,788,000 tons harvested from 67,117,000 acres, the average yield per acre being 1.22 tons. In 1931 the total yield was 73,436,000 tons, the area harvested 66,138,000 acres and the average yield per acre, 1.11 tons. The 1932 production was made up of 69,609,000 tons of tame hay and 12,179,000 tons of wild hay. The crop of tame hay consisted mainly of alfalfa hay (see ALFALFA) and clover and timothy hay each amounting to about 26,000,000 tons. Due to dry weather, the clover and timothy hay crop was more than 1,500,000 tons less than in 1931 and 1930. The tame hay crop of 1932 was below the average crop for the five years 1924-1928 which was 74,000,000 tons. To offset the small yield of tame hay and the shortage of farm stocks of old hay which were nearly 3,000,000 tons below the average on May 1, a larger acreage of wild hay, including marsh, salt, and prairie hay, was cut. The acreage of wild hay was 14,298,000 acres, an increase of about 17 per cent over the acreage of the preceding year.

The leading tame hay producing States and their yields in 1932 were as follows: New York 4,914,000 tons, Iowa 4,468,000 tons, California 4,354,000 tons, Minnesota 3,699,000 tons, and Wisconsin 3,672,000 tons. These States produced nearly 30 per cent of the tame hay crop of the country. The production of wild hay in the leading States was reported as follows: Nebraska 2,189,000 tons, Minnesota 1,865,000 tons, South Dakota 1,633,000 tons, and North Dakota 1,583,000 tons. These States produced nearly 60 per cent of the total wild hay crop. The acreage cut in these States was 2,919,000; 1,865,000; 2,512,000, and 1,862,000 acres respectively, or about 64 per cent of the acreage harvested.

During the fiscal year ended June 30, 1932, the hay imports of the United States amounted to 20,000 short tons and the exports to 3000 long tons. Hay inspection schools were held during the calendar year in Michigan, Ohio, and Oregon to train officials in grading and marketing and to acquaint producers and shippers with the adopted hay grades for the United States. Studies by the United States Department of Agriculture and the agricultural experiment stations were continued to develop machinery and methods for the artificial drying of hay that will produce a high-quality product profitably.

**HAYDEN**, REAR ADMIRAL EDWARD EVERETT, U.S.N., RET. An American naval officer, died in Washington, D. C., Nov. 17, 1932. He was born in Boston, Mass., Apr. 14, 1858, and was graduated from the U. S. Naval Academy in 1879. He was appointed assistant geologist with the U. S. Geological Survey in 1885, and the following year became marine meteorologist with the U. S. Hydrographic Office and editor of the *Pilot Chart*. In 1898 he was put in charge of the naval observatory at Mare Island, Calif., and in 1899 of the branch hydrographic office in Manila. He was director of the department of chronometers and time service of the U. S. Naval Observatory, Washington, from 1902 to 1910. From 1910 to 1915 he was commandant of the U. S. Naval Station, Key West, Fla., and from 1916 until his retirement in 1921, with the rank of rear admiral, president of the general court martial at the Norfolk (Va.) Navy Yard. He was the author of *West Indian*

*Hurricanes and the March Blizzard* (1888) and of various pamphlets and articles on standard time, the law of storms, and tropical hurricanes.

**HERNÁNDEZ, ɛr-nān'dāth, JOSÉ CONRADO.** A Puerto Rican jurist, died in San Juan, June 20, 1932. He was born in Aibonito, Feb. 19, 1849, and was graduated from the Jesuits' College at San Juan in 1865 and from the law department of the University of Salamanca, Spain, in 1873. After engaging in general practice he was appointed in 1877 assisting prosecuting attorney in Humacao and in 1880 was made judge of the first instance of Aguadilla and in 1883 of Mayaguez. In 1888 he was sent to Cuba as judge of the first instance for the district of Santiago and the following year was appointed judge of the criminal court of Pinar del Rio. In 1891 he was transferred to the Philippine Islands, where he was judge of the supreme court at Cebú until 1893 and at Manila until 1898. While in the Philippines he received a special commission from the Manila supreme court to prosecute the insular treasurer and officials of the treasury department for the embezzlement of \$1,500,000. In 1898 he returned to Puerto Rico as judge of the circuit court at San Juan, and upon the establishment of civil government in Puerto Rico after the Spanish-American War was named by President McKinley associate justice of the supreme court. He served as chief justice of that body from 1909 to 1921.

**HERR, EDWIN MUSSEY.** An American mechanical and electrical engineer, died in New York City, Dec. 24, 1932. He was born in Lancaster, Pa., May 3, 1860, and was graduated from the Sheffield Scientific School of Yale University in 1884. Between 1886 and 1890 he was engineer of tests, superintendent of telegraph, and division superintendent on the Chicago, Burlington & Quincy Railway. He next became division master mechanic on the Chicago, Milwaukee & St. Paul Railway. During 1892-93 he was general superintendent of the Grant Locomotive Works in Chicago and in 1894 of the Gibbs Electric Co. in Milwaukee. After acting as assistant superintendent of motive power for the Chicago & Northwestern Railway, he was made in 1896 superintendent of the same department for the Northern Pacific Railway. In 1898 he began his long association with the Westinghouse Co., acting until 1905 as general manager of the Westinghouse Air Brake Co. in Wilmerding, Pa., and until 1911 as first vice-president and director of the Westinghouse Electric & Manufacturing Co. in East Pittsburgh. Elected president of the latter company, he directed its expansion during the next 20 years into one of the largest electrical manufacturing companies in the world, doing an annual business of more than \$150,000,000. At the time of his death he was vice-chairman of the board of directors. He was also an officer or director of the Radio Corporation of America, the Westinghouse Lamp Co., the Bryant Electric Co., the Westinghouse Air Brake Co., the Westinghouse High Voltage Insurance Co., and the Union Switch & Signal Co. In 1920 he was decorated

with the Order of the Rising Sun of Japan in recognition of the company's effective aid in the electrical development of that country. As a member of the Yale Corporation he contributed to the development of the Sheffield Scientific School. He was also a member of the Franklin Institute, the National Industrial Conference Board, the American Manufacturers Export Association, and the board of the Carnegie Institute of Technology.

**HERRESHOFF, J(OHN) B(ROWN) FRANCIS.** An American chemist, died in Atlanta, Ga., Jan. 30, 1932. He was born in Bristol, R. I., Feb. 7, 1850, and attended Brown University, where he was professor of analytical chemistry from 1869 to 1872. He then devoted himself to industrial chemistry and research, becoming superintendent of the Laurel Hill (N. Y.) Chemical Works in 1876. He later became vice-president and trustee of the Nichols Copper Co. His most important invention was the improvement of the process for manufacturing sulphuric acid. In 1908 he received the first award of the Perkin medal, which had been provided for in the will of Sir William Henry Perkin in recognition of the contributions of American chemists. He retired in 1917.

**HILL, DAVID JAYNE.** An American diplomat and historian, died in Washington, D. C., Mar. 2, 1932. He was born in Plainfield, N. J., June 10, 1850, and was graduated from the University of Lewisburg in 1874. He taught rhetoric at Lewisburg for several years, and in 1879 was elected president. During his administration the institution was renamed in honor of William Bucknell, its liberal benefactor. In 1888 he was elected president of the University of Rochester, where he remained until 1896. He then spent nearly three years studying public law at the Universities of Berlin and Paris, which fitted him for his later diplomatic career. On his return to the United States in 1898 he was appointed Assistant Secretary of State, and during his residence in Washington was also professor of European diplomacy at the School of Comparative Jurisprudence and Diplomacy. In 1903 he was named United States Minister to Switzerland and in 1905 Minister to the Netherlands. He served from 1908 to 1911 as Ambassador to Germany.

An ardent advocate of peace, Dr. Hill was a delegate to the Second Peace Conference at The Hague in 1907, and was later made a member of the Permanent Administrative Council of The Hague Tribunal. He favored, however, the establishment of world peace not through a League of Nations but through an organization strictly juridical in nature. He was president for some years of the National Association for Constitutional Government and was also a member of the American Academy of Arts and Letters. His monumental work was *A History of Diplomacy in the International Development of Europe*, of which three volumes had been com-

pleted: *The Struggle for Universal Empire* (1905); *The Establishment of Territorial Sovereignty* (1906); and *The Diplomacy of the Age of Absolutism* (1914). His other writings are: *Elements of Rhetoric* (1877); *Life of Washington Irving* (1877); *Science of Rhetoric* (1878); *William Cullen Bryant* (1878); *Elements of Psychology* (1886); *Social Influence of Christianity* (1888); *Principles and Fallacies of Socialism* (1888); *Genetic Philosophy* (1893); *The Conception and Realization of Neutrality* (1902); *The Life and Work of Hugo Grotius* (1902); *The Contemporary Development of Diplomacy* (1904); *World Organization as Affected by the Nature of the Modern State* (1911); *The People's Government* (1915); *Americanism—What It Is* (1916); *The Rebuilding of Europe* (1917); *Impressions of the Kaiser* (1918); *Present Problems in Foreign Policy* (1919); *American World Policies* (1920); and *The Problem of a World Court* (1927).

**HIPPER, VICE ADMIRAL FRANZ VON.** A German naval officer, died in Hamburg, May 25, 1932. He was born in Weilheim, Bavaria, Sept. 13, 1863. Entering the Navy in 1881, he was advanced through the grades to rear admiral in 1912. At the outbreak of the World War he was in command of the reconnaissance forces of the High Seas Fleet, which bombarded Scarborough (1914) and whose efficiency was admirably displayed at the Battle of Jutland on May 31, 1916. With the destruction of the *Queen Mary* and the *Indefatigable* by von Hipper's squadron during the first hour of the battle, Beatty retired on the Grand Fleet with what was practically a beaten force, a condition without precedent in British naval history. The battle itself was indecisive, but the high standard of gunnery and manoeuvring of the German scouting fleet was credited with having saved the main fleet in the face of British superiority in ships and guns. The Germans never again attacked the British fleet, although their battle cruisers, under von Hipper's command, repeatedly raided the British coast. In August, 1918, von Hipper was appointed vice admiral and commander-in-chief of the High Seas Fleet. He retired in December of that year.

**HISPANIC SOCIETY OF AMERICA, THE.** An international organization founded in New York City in 1904 to establish a public library and museum designed to be a link between the English-, Spanish-, and Portuguese-speaking peoples, and to advance the study of the Spanish and Portuguese languages, literature, and history, and the study of the countries wherein Spanish and Portuguese are or have been spoken languages. Since 1904, when a collection of paintings, manuscripts, maps, and coins, and a library of about 40,000 volumes were placed in charge of the society, valuable additions have been made to this collection, and a number of temporary exhibitions have been held of the works of noted Hispanic artists. Membership of the society is limited to 100, is honorary, and includes specialists and scholars of all nationalities distinguished in the Hispanic field. The society has published more than 200 catalogues, reprints of old manuscripts, and monographs. The president is Archer M. Huntington and the secretary, George Bird Grinnell. The museum and headquarters of the society are at 156th Street, West of Broadway, New York City. See **ART EXHIBITIONS.**

**HISTORICAL ASSOCIATION, AMERICAN.** A society for the promotion of historical studies and writings, formed in 1884 by a group of American scholars and chartered by Congress in 1889. Under provision made by the United States government, it publishes annual reports and is charged with the office of communicating its proceedings and its information on the state of historical study and writing to the secretary of the Smithsonian Institution, for transmission to Congress. In 1932 the association had a membership of 3336, who represented not only every State of the Union but also Canada and many European and South American countries.

The forty-seventh annual meeting of the association was held in Toronto, Ont., Canada, Dec. 27-29, 1932. Meeting concurrently were the Mississippi Valley Historical Association, Conference of Historical Societies, Agricultural History Society, American Catholic Historical Association, National Council for Social Studies, American Society of Church History, and Canadian Historical Association. Among the general topics presented and discussed at the sessions were: The United States: The National Interest ("The Original American Conception of National Interest" and "National Interest and Recent American Thought"); Diplomatic History ("Canada and the Peace Settlement of 1782" and "British Government Propaganda and the Oregon Treaty"); Economic History: Crises and Panaceas ("Some Populist Panaceas," "Investment Banking in the United States, 1861-73," and "Some Aspects of American States Debts in the 'Forties'"); The British Commonwealth; The United States: The Frontier ("A Generation of the Frontier Hypothesis"); and The Far East ("Certain Psychological Factors in the Present Far Eastern Situation.")

The prizes awarded by the association in 1932 included the George Louis Beer Prize for "the best work upon any phase of European international history since 1895," to O. H. Wedel of the University of Arizona for *Austro-German Diplomatic Relations, 1908-14*; and the Jusserand Medal for "a published work of distinction on any phase involving the history of the intellectual relations between the United States and any foreign country," to Howard Mumford Jones for his book entitled *America and French Culture, 1750-1848* (Univ. of North Carolina Press).

The official organ of the association is the *American Historical Review*, a quarterly. The *Annual Report* contains proceedings, important papers read at the annual meeting, texts of significant documents, reports on American archives, reports on history teaching, and papers on agricultural history. The officers for 1932 were: president, Herbert E. Bolton, University of California; first vice-president, Charles A. Beard, New Milford, Conn.; second vice-president, William E. Dodd, University of Chicago; secretary, Dexter Perkins, University of Rochester; treasurer, Constantine E. McGuire, Washington, D. C.; assistant secretary-treasurer, Patty W. Washington, Washington, D. C.; editor, Lowell Joseph Ragatz, George Washington University. Headquarters are at 40 B Street, S.W., Washington, D. C.

**HOBART COLLEGE.** An institution for the higher education of men in Geneva, N. Y., founded chiefly under the auspices of the Protestant Episcopal Church in 1822 and permanently chartered by the Regents of the University of the State of New York in 1825. William Smith College, a coördinate institution for the separate instruction of women, administered by the Hobart College corporation, and with instruction given by the Hobart College faculty, was established in 1908. The student enrollment in Hobart College for the autumn of 1932 was 316, while the enrollment in William Smith College was 132. The combined faculty of the two colleges numbered 44. The endowment amounted to \$1,918,000, and the income for the year was approximately \$236,000. President Murray Bartlett, D.D., S.T.D., LL.D.

**HOCKEY.** The Toronto Maple Leafs were crowned Stanley Cup champions and world's professional champions at the end of the spirited 1931-32 hockey season. The Leafs finished second in the Canadian division of the National Hockey League, and they were supreme in the post-season games. According to the rules, the leaders of the two divisions, the New York Rangers and the Montreal Canadians, defending champions, met in the play-off for first place teams, the Rangers winning three of four games, and thereby being accorded the National Hockey League championship for the season. Meanwhile Toronto subdued the Chicago Black Hawks and the Montreal Maroons defeated the Detroit Falcons in the second and third place play-offs. Next, Toronto defeated the Maroons in the semi-final, and the youngsters on the first line, Harvey Jackson and Charley Conacher, working perfectly, defeated the Rangers for the famed Stanley Cup, in three straight games, 6-4, 6-2, 6-4.

The Providence Reds were best in the Canadian-American League, a six club minor-league combination that caught public fancy in every city except in New York where the Bronx Tigers played to small crowds. The Reds finished the season seven points ahead of the Boston Cubs and then succeeded in wading through the play-offs without much trouble, beating Boston in the finals, three straight games. Quebec won the Eastern Canada Hockey Association championship and La Brassiere Champlain Cup, finishing first in the league standing and then trouncing Chicoutimi in the play-off. The Buffalo Bisons won the International League championship. The championship of the American Hockey League, a mid-Western organization, was won by the Chicago Shamrocks, after a play-off with Duluth.

The Winnipeg "Winnipegs" won the Olympic title for Canada for the fourth consecutive time, giving the Dominion the championship in this event since it was inaugurated in 1920. The National A.A.U. championship was captured by the Atlantic City Sea Gulls, a team made up for the most part of imported star players from Canada. The Toronto Nationals won the Allan Cup, emblematic of the world's senior amateur championship, and the Sudbury Wolves gained the Memorial Cup, for the junior amateur championship of the world.

**HOLBROOK, MAJ. GEN. WILLARD AMES,** U. S. A., RET. An American soldier, died in Washington, D. C., July 18, 1932. He was born in Arkansas, Wis., July 23, 1860, and was graduated from the U. S. Military Academy in 1885. From second lieutenant in the 1st cavalry he was advanced through the grades until in 1920 he became chief of cavalry, with the rank of major general. He served in Cuba during the Spanish-American War, in the Philippines where during 1901-02 he was civil governor of the province of Antique Panay, at the Pennsylvania Military Academy during 1905-09, and at the Army Staff College and School of Line at Fort Leavenworth during 1913-16. During the World War, as a major general in the National Army, he commanded the Southern Department, having supervision of the Mexican border from May to September, 1918. Later at Camp Sheridan, Ala., he was in command of the 9th division, and on its demobilization was commander of the Camp Grant demobilization centre from February to May, 1919. His services during the War won him the Distinguished Service Medal. He was retired from the regular army July 23, 1924.

**HOLLAND.** See NETHERLANDS, THE

**HOLLAND, WILLIAM J (ACOB).** An American educator, clergyman, and naturalist, died in Pittsburgh, Pa., Dec. 13, 1932. He was born in Bethany, Jamaica, W. I., Aug. 16, 1848, and was graduated from the Moravian College and Theological Seminary in Bethlehem, Pa., in 1867, from Amherst College in 1869, and from the Princeton Theological Seminary in 1874. Ordained to the Moravian ministry, he held pastorates in Philadelphia (1872-74) and Pittsburgh (1874-91). He then became chancellor of the Western University of Pennsylvania (now the University of Pittsburgh) where he remained until 1901. During his administration there were added to the original college and engineering school departments of medicine, law, dentistry, and pharmacy and the enrollment was increased eight-fold. He was also the author of the act creating the college and university council of the State of Pennsylvania. In 1898 he became director of the Carnegie Institute in Pittsburgh, and after 1922 was director-emeritus. He served also as trustee of the Carnegie Library and was vice-president of the Carnegie Hero Fund Commission during 1904-22 and president thereafter. In 1922 he was made a member of the Carnegie Corporation.

Dr. Holland won renown as a zoölogist and paleontologist. In the field of lepidoptera alone he discovered more than 800 new species. He was also an authority on the Tertiary fauna and dinosauria of the Jurassic age found in Wyoming, Colorado, and other Rocky Mountain States. In 1887 he was appointed by the National Academy of Sciences and the U. S. Navy Department as naturalist of the eclipse expedition to Japan, and two years later acted in the same capacity on an eclipse expedition to West Africa. He was one of the founders and first president of the Academy of Science and Art of Pittsburgh, and during 1907-09 served as president of the American Association of Museums. He was a fellow of the Zoölogical and Entomological Society of London, the Royal Society of Edinburgh, the American Association for the Advancement of Science, and the American Geological Society, and held decorations from the governments of France, Italy, Germany, Austria-Hungary, Russia, Spain,

and Belgium. Honorary degrees were conferred on him by Washington and Jefferson, Amherst, Dickinson, and Bethany Colleges and by the universities of St. Andrews, New York, and Pittsburgh. Outstanding among his publications are: *The Butterfly Book* (1898); *The Moth Book* (1903); *To the River Platte and Back* (1913); and *The Butterfly Guide* (1915).

**HOLY CROSS, COLLEGE OF THE.** A Roman Catholic College for men, under the Society of Jesus, in Worcester, Mass., founded in 1843. The enrollment for the autumn of 1932 totaled 1094, with distribution as follows: Arts course, 783; science course, 132; philosophy course, 173; and graduate school of chemistry, 6. The faculty numbered 79. The library contained 75,000 volumes. President, the Rev. John M. Fox, S.J.

**HONDURAS**, hōn-dōō'rās. A Central American republic, bounded on the north and east by the Caribbean Sea, on the west by Guatemala, Salvador, and the Gulf of Fonseca, and on the south by Nicaragua. Capital, Tegucigalpa.

**AREA AND POPULATION.** The estimated area is 46,250 square miles; population, according to the census of 1930, was 859,761, as compared with 700,811 in 1926. The inhabitants are mostly Indians with a strain of Spanish blood. The chief towns, with their populations in 1930, are Tegucigalpa, 40,049; San Pedro Sula, 24,292; La Ceiba, 13,073; Choluteca, 12,371; Juticalpa, 10,809. The chief ports are Amapala on the Pacific and Puerto Cortez and Omoa on the Atlantic. Births and deaths during the fiscal year 1930-31 numbered 33,540 and 14,991, respectively; the rates per 1000 inhabitants were about 39 and 17.4, respectively.

**EDUCATION.** Education is free, secular, and nominally compulsory for children from 7 to 15 years of age. In 1930-31, there were 128,033 children of school age, of whom 54,491 attended school. The National University at Tegucigalpa had 179 students in 1930-31. There were in addition 13 secondary schools, with 609 pupils; 1107 students in normal schools, and 415 in commercial schools.

**PRODUCTION.** Honduras is the world's largest producer of bananas. Sugar, coffee, and coconuts are the other leading agricultural products. Banana exports during 1931 totaled 30,924,000 stems, as compared with 26,982,000 stems in 1930. For the fiscal year 1930-31, bananas comprised 86 per cent of the value of all exports. Sugar exports during the same year (1930-31) fell to 11,750,000 pounds from 35,510,475 pounds in 1929-30. Low sugar prices were causing the transference of much land from sugar to banana cultivation. Coffee exports declined also, to 2,482,000 pounds for 1930-31, from 3,046,000 pounds in 1929-30. A further decline in coffee production was indicated for 1931-32. The banana industry, upon which about 30 per cent of the population is dependent, is largely controlled by the United Fruit and other foreign fruit companies. Silver, gold, lead, copper, iron, zinc,

antimony, and coal are found, but only the first four were exported in commercial quantities. There are a few manufacturing industries of minor importance.

**COMMERCE.** For the fiscal year ended July 31, 1931, exports were valued at \$20,028,000 (\$26,171,000 in 1929-30) and imports at \$10,291,000 (\$15,946,000 in 1929-30). The value of the chief exports in 1930-31 was: Bananas, \$17,306,000 (\$22,981,000 in 1929-30); gold and silver, \$1,492,000 (\$1,245,000); coffee, \$267,000 (\$402,000); sugar, \$186,000 (\$555,000). Foodstuffs and beverages, cotton fabrics, and petroleum products were the leading imports. Imports from the United States in 1930-31 were 7,368,000, or 71.6 per cent of the total, against \$11,886,000, or 74.5 per cent of the total, in 1929-30. The United States took 72.4 per cent of the total exports in 1930-31, as against 74 per cent in the previous year (\$14,500,000 and \$19,352,000, respectively). United States statistics for the fiscal year ended June 30, 1932, showed imports from Honduras of \$10,473,000 (\$11,722,000 in 1930-31), and exports to Honduras of \$5,539,000 (\$7,095,000).

**FINANCE.** Ordinary revenues for the fiscal year 1930-31 amounted to 11,818,672 pesos and expenditures to 13,875,144 pesos, leaving a deficit of 2,056,472 pesos (the peso equals \$0.50 at par). Of the total deficit, 417,112 pesos were retired by loans from Honduran banks and commercial houses, leaving an unpaid balance of 1,639,360 at the end of the year. This compared with receipts of 14,314,000 pesos, expenditures of 15,022,000 pesos, and a deficit of 707,440 pesos in 1929-30. The budget estimates for 1931-32 were reduced to 15,400,119 lempiras. (The gold lempira replaced the silver peso as the unit of currency during 1931 and 1932; it had the same par value of \$0.50 United States currency.) On June 30, 1931, the foreign debt stood at 8,523,876 pesos and the internal debt at 17,004,311 pesos. During the revolution of 1932 (see *History*), the government authorized the issuance of a war loan of \$500,000, with the customs revenue pledged as security, and decreed provisional suspension of payments on the internal debt. Furthermore funds held in special accounts for public health, education, and other civil purposes were appropriated to meet war expenses.

**COMMUNICATIONS.** Railway lines totaled 1060 miles in 1931. With the exception of the government owned National Railways (57 miles long) they were all owned by foreign fruit companies. Highways in 1930 extended 196 miles. Air-lines connected the leading cities with the other countries of the two Americas. The transportation facilities are for the most part concentrated in the northern coastal region.

**GOVERNMENT.** According to the Constitution as amended in 1924, executive power is vested in the President nominated and elected by popular vote, and holding office for four years; legislative power is in the Congress of Deputies consisting of 48 members chosen for four years directly by popular vote. A prominent commission of five members transacts the routine business for Congress while that body is not in session. President in 1932, Dr. Vicente Mejía Colindres (Liberal), who assumed office Feb. 1, 1929, for a four-year term.

**HISTORY.** A presidential election and two revolutions kept Honduras in turmoil during most of 1932. In the election, held October 30, Gen. Tiburcio Carias Andino, candidate of the Conserva-

tive party, defeated Angel Zúñiga Huete, the Liberal candidate. The campaign was marked by unusual bitterness, particularly after President Mejía Colindres in the spring of 1932 withdrew all restrictions upon the press and on free speech. Many partisan political newspapers sprang into existence and dealt freely in personalities of the rival candidates. On June 8 a rebellion in Northern Honduras was announced in Tegucigalpa. The main body of the rebels was routed by 500 government troops under Gen. Justo Umana, after a battle costing 51 lives, and by June 14 the insurgents under Díaz Zelayas had been dispersed in the Piedras Negras hills. The government announced that the revolutionists carried the colors of Gen. Carias Andino, but the latter issued a statement condemning the revolt and disavowing any connection with it.

Dissatisfaction with the result of the election led to a much more serious uprising by the defeated Liberals in mid-November. The revolt broke out November 13, when insurgents captured the cities of San Pedro in the north and Nacaome, key to the southern district of Honduras. Numerous towns and villages in various parts of the republic were occupied by rebel bands, but government troops aided by Nationalists recaptured most of these points, in some cases after heavy fighting. Three hundred casualties were reported in a 12-hour battle for the possession of San Pedro on November 15. Despite initial government victories, the insurrection gained strength by the successive desertions of units of government troops. The garrison at Comayagua joined the revolt on November 24 and on December 11 the important garrison at Amapala under Gen. Andres Garcia espoused the cause of Gen. José María Reina, who returned from exile in Guatemala and proclaimed himself provisional president. Other prominent army officers joined Gen. María Reina's ranks. The latter, moving his forces from Amapala Island in the Gulf of Fonseca to the mainland, joined forces at Aceituno with another rebel contingent under Gen. José María Fonseca. He then marched upon Tegucigalpa, but in the Curaren region about 50 miles southwest of the capital, he was confronted with government forces under his brother, Gen. Camilo Reina. At the close of the year a decisive battle was believed to be impending. Government forces had succeeded in cutting the insurgent army's communications with Amapala.

The Honduran Congress was called in emergency session on December 15. It approved decrees declaring martial law throughout the republic and commandeering for military purposes all funds in special treasuries. During a second special session, Congress approved the issuance of a \$500,000 war loan and decreed the provisional suspension of internal debt payments, diverting the funds for war purposes. Meanwhile the revolutionary disturbances and the general fear of looting had brought business almost to a standstill.

In the spring, there had been a considerable improvement in business as a result of the settlement of differences between the government and foreign fruit companies operating on the north coast. By the decree of Mar. 2, 1932, the government reduced to \$3 gold the \$10 per hectare (2.47 acres) tax to which the companies objected. The government also sanctioned the extension of certain of the company railway lines, which it had previously opposed.

**HONG KONG.** A possession of Great Britain at the mouth of the Canton River, about 90 miles to the south of Canton, China; comprising the island of Hong Kong, with an area of 32 square miles, and the opposite Peninsula of Kowloon, separated from it by a strait about a half-mile wide. Total area, 391 square miles. In addition, considerable land in Kowloon Bay has been reclaimed from the sea. At the 1931 census the population was 840,473 including 19,369 non-Chinese. Registered births and deaths in 1930 numbered 11,134 and 19,260, respectively. Chinese emigrants in 1930 totaled 188,900 and Chinese immigrants 223,136. The city of Victoria (including Peak) had a Chinese civil population of 358,351.

Hong Kong's prosperity has been built primarily on its extensive transit trade, the free port of Victoria being the distributing centre for that part of China and French Indo-China situated south of Foochow and north of Saigon. Local industries include the refining of sugar and tin, rice polishing, furniture making, ship-building, and engineering. Provisional trade returns for the fiscal year ended Mar. 31, 1932, showed total imports of about 721,553,000 Hong Kong dollars and exports of 528,951,000 dollars compared with imports of 639,398,000 dollars and exports of 496,953,000 dollars in 1930-31.

In the budget for 1931, receipts and expenditures were estimated to balance at 29,800,000 Hong Kong silver dollars, as compared with a budget total of about 23,800,000 dollars in 1930 (Hong Kong silver dollar averaged \$0.2433 U. S. currency for 1931). Expenditure for defense totaled 3,957,611 Hong Kong dollars in 1930. The colony is headquarters for the China squadron of the British navy. A total of 49,609 vessels (including 21,235 junks and 6326 steamers under 60 tons) aggregating 40,511,050 tons entered and cleared in the foreign trade in 1930. The colony is administered by a governor, assisted by an executive council of 9 members and a legislative council of 17 members Governor and Commander-in-Chief in 1932, Sir William Peel, appointed in 1930.

**HOPKINS, E(DWARD) WASHBURN.** An American philologist. died in Madison, Conn., July 16, 1932. He was born in Northampton, Mass., Sept. 8, 1857, and was graduated from Columbia College in 1878 and with the Ph.D. degree from the University of Leipzig in 1881. After teaching Greek, Sanskrit, and comparative philology at Bryn Mawr College, he was called to Yale University in 1895 as professor of Sanskrit language and literature and of comparative philology. He remained there until his retirement as professor emeritus in 1926. He was twice president of the American Oriental Society, and during the period that he was secretary of that society from 1896 to 1908 also edited its journal. His works include: *Caste in Ancient India* (1881); *Manu's Lawbook* (1884); *Religions of India* (1895); *The Great Epic of India* (1901); *India, Old and New* (1901); *Epic Mythology* (1915); *History of Religions* (1918); *Origin and Evolution of*

*Religion* (1923); *Ethics of India* (1924); and *Legends of India* (1928).

**HOPS.** The hop production in 1932 in the important European hop growing countries and in the United States was reduced by about 17 per cent from the yield in 1931 and was the lowest since 1923. The total crop of Germany, Belgium, England and Wales, Czechoslovakia, and the United States as reported by the International Institute of Agriculture was 73,440,000 pounds as compared with 90,787,000 pounds in the preceding year, a reduction of over 38 per cent below the average annual yield for the five years 1926-1930. The total acreage in these countries declined from 99,000 acres in 1931 to 84,000 acres in 1932, a reduction of 12.5 per cent and 25.5 per cent below the annual average of the five year period. The production of the European countries was reported as follows: England and Wales 21,056,000 pounds, Czechoslovakia 16,451,000 pounds, Germany 10,929,000 pounds and Belgium 884,000 pounds. Private estimates placed the yields of Poland at 2,600,000 pounds, Yugoslavia at 2,300,000 pounds and France at 1,500,000 pounds. The combined production of Canada and Australia in recent years has averaged about 3,500,000 pounds.

In the United States as reported by the Department of Agriculture the hop crop of 1932 amounted to 24,120,000 pounds produced on 22,000 acres at an average yield per acre of 1096 pounds. In 1931 the yield was 26,410,000 pounds, the area 21,000 acres, and the average acre yield 1234 pounds. The 1932 production by States was as follows: Oregon 13,020,000 pounds, California 6,600,000 pounds and Washington 4,500,000 pounds. The acreage was 15,500, 4000 and 2500 acres and the average yield per acre 840, 1650 and 1800 pounds respectively.

In the fiscal year ended June 30, 1932, the United States exported 3,817,000 pounds of hops and imported 1,253,000 pounds. The imports were larger than in the preceding year but the exports showed a marked decline.

**HORMONE, ISOLATION OF SEX.** See CHEMISTRY.

**HORSE RACING.** Thoroughbred horse racing was hard hit by the depression in 1932. The big tracks were never crowded with spectators and betting fell off in every place. Pimlico, Belmont, Saratoga, and others all felt the pressure and toward the close of the year plans for retrenchment in 1933 were being announced by most of the racing associations. The values of the stakes will be lowered, and in some cases meetings will be shortened.

To pick the outstanding horse of the 1932 season fairly is impossible. There never was such a season of breakdowns and accidents to the thoroughbreds that promised great things. But out of the chaos comes the figure of the four-year-old, C. V. Whitney's gallant Equipoise, champion handicap division horse and probably the outstanding turf figure of the year. Equipoise, the same horse that uncovered a blind quartercrack on the morning of the 1931 Kentucky Derby, came back after a year of leisure and recuperation to win 10 races, come second twice, and third once, in fourteen starts and to win \$107,375 in the season, placing him eighth on the list of all-time money winners with a grand total of \$267,210.

Equipoise had the greatest following and justified the trust placed in him. One of the most

amazing of his feats was the running of a mile at Chicago in the early summer in 1.34 $\frac{1}{2}$ , a new world's record for a dirt track. Equipoise carried 128 pounds when performing this deed. Two other older horses were scheduled to meet him during the season but the race never took place. Phar Lap, the huge Australian horse that had won everything in Australia from a mile to two and a half miles, was shipped to the United States in early winter and won the rich Agua Caliente Handicap handily and went into second place in the list of all-time money winners with \$332,250. He was found dead from colic and indigestion in his stall at Menlo Park, Calif., Mar. 5, 1932. The other rival of Equipoise was Twenty Grand, winner of the 1931 Kentucky Derby, but this giant never rounded into his finest racing condition.

Bar Equipoise, there was no thoroughbred of any age that could be classed as an outstanding champion. William Woodward's Faireno must be awarded the three-year-old championship of a rather unsatisfactory season in this division. The year's crop was a brittle one. E. R. Bradley's Burgoo King, which made such a handsome start by winning the Kentucky Derby and Preakness on successive Saturdays in May, howed a tendon soon after. Mrs. L. G. Kaufman's two fine prospects, Tick On and On Post, both went amiss in early spring. Burning Blaze spread a hoof before the Kentucky Derby was run; Universe, winner of the Wood Memorial, first of the three-year-old stakes, was out of training a week later and unable to start in the Kentucky Derby. Although M. L. Schwartz's Gusto was the money winning three-year-old champion, Faireno's record was better. Gusto won four races and Faireno seven. Gusto's total of \$143,940 was swelled by victories in the \$70,000 Arlington Classic and the \$50,000 American Derby. Gusto also won the Jockey Club Gold Cup in which Faireno did not start because of a slight leg injury. Faireno was second money winner of the season with \$136,000 in seven triumphs and two seconds in 10 starts. In the Arlington Classic, won by Gusto, Faireno and Top Flight, great two-year-old filly of 1931, racing at top speed both broke and finished far behind the Schwartz colt. Faireno had previously won the Belmont, the Shevlin, and the Dwyer in succession and later went on to victories over Gusto in the Saratoga Handicap and the Hawthorne Handicap. Faireno topped his successful year by winning the Lawrence Realization at Belmont in September, in which he more than squared accounts with Gusto and also proved himself pounds better than War Hero, which had won both the Travers and the Gold Cup at Saratoga, in which fixtures Faireno was not a starter.

W. R. Coe's Ladysman was awarded the two-year-old crown, by grace of victories in the Arlington Futurity, the United States Hotel Stakes, and the Hopeful. He had some hard luck in the rich Futurity at Belmont in the fall, and this plum fell to Lee Rosenberg's Kerry Patch, an ill-considered outsider. Kerry Patch showed no real class outside of this one stake. A filly, Swivel, won the Pimlico Futurity and deserved high rating. C. V. Whitney's Caterwaul started the season with some brilliant spring victories but disappointed in later racing. As a lot, the two-year-olds seemed so evenly balanced that the merest shift in weights would result in a beating for the winner in the previous encounter.

**STEEPLECHASING** and hunt racing enjoyed a good season and the failure of such old standbys as Chenango, Green Cheese, Arc Light and Bangle was more than discounted by the brilliant racing of Thomas Hitchcock's Escapade, which won the Harbor Hill in record time. This race is always emblematic of the championship in the timber-topping division. The Sanford Stud Farm's Golden Meadows was extremely impressive in winning a minor race at Saratoga and the Gwathmey Memorial Steeplechase Handicap, and deserved equal rating with Escapade. Tourist II won the Brook and the Grand National Handicap.

In England the Aga Khan's long shot, April the Fifth, with Fred Lane up, won the historic English Derby at Epsom Downs in June, beating his stablemate, Dastur, three parts of a length. April the Fifth was held at 100 to 6 before the classic. Forbra, another long shot, won the gruelling Grand National Steeplechase at Liverpool, a race that holds a particular charm for American race followers. Owned by William Parsonage, a bookmaker, and ridden magnificently by J. Hamey, Forbra raced home at odds of 50 to 1. Egremont, 33 to 1, was second, and Shaun Golin, 40 to 1, winner in 1930, was third. Only nine of the starting field of 36 finished.

**HARNESS RACING.** The Marchioness, Mrs. Keeler's three-year-old, was the sensational harness horse of 1932, and many reinsmen of the Grand Circuit rated her the greatest trotter that ever raced. The Marchioness, faultlessly driven by Will Caton, won the Champion Stallion, the Horseman, the Kentucky Futurity, and the rich Hambletonian, and every one of her engagements except the Matron Stake. In winning the Champion Stallion in 2.03¾, 2.02, 2.02½, 2.04, she established a world's record for four heats by a trotter regardless of age. She later trotted in 2.00, and her final effort, before being exported to Italy late in the autumn, resulted in a record mile of 1.59¼ for three-year-old trotting fillies.

Ankabar, 2.01½, by Bingen Silk, 2.07¼, was the best stake winner of the aged division, winning six of the leading aged events of the year, including the \$10,000 Marshall House prize at Salem, N. H. The long legged chestnut gelding proved one of the great trotters of all time by twice winning in 2.01½, and beating all the other horses in his division. There were no outstanding two-year-olds, the crop being much less speedy than that of 1931. Spencer McElwyn, 2.04½, was the fastest two-year-old of the season.

**HORSE SHOWS.** Mention must be made in review of the year of 1932 in sports of the remarkable achievement of Seaton Pippin, Mr. and Mrs. Paul Moore's great hackney mare, which was the sensation of the horse show season. Coming into the National show at Madison Square Garden she had won almost 200 blue ribbons and championships over six unbeaten seasons. In the national, the superb twelve-year-old bay mare strode through the early classes and then won the coveted title of "champion of champions," an award given in 1932 for the first time. Immediately after this grand triumph Mr. and Mrs. Moore announced that Seaton Pippin would be permanently retired and used for breeding purposes.

**HORSE SHOWS.** See HORSE RACING.

**HORTICULTURE.** Rarely have horticulturists suffered a more trying year than in 1932. Because of restricted demands, overproduction was general with consequent low prices and mar-

ket gluts. As a result considerable fruit was never harvested at all. The destruction of the Georgia peach crop by a delayed March freeze did not disturb the market to the expected extent because of the general dullness. In the Pacific Northwest, especially in the Yakima and Wenatchee Valleys, an attempt was made to bolster the market by prohibiting the boxing of apples below a certain grade. However, the State courts ruled that such a regulation was legally invalid as it proscribed the constitutional rights of individuals.

Naturally the demand for trees and shrubs for planting fell off sharply, causing distress among nurserymen and plant growers. Not in many years was planting stock of all kinds so reasonably priced, with a result that department and chain stores sold plants and trees at absurdly low prices. Optimists saw a ray of sunshine in the general situation, believing that orchards on so-called marginal lands would be forced out of existence to the general betterment of the industry. The low prices of evergreens and other valuable species greatly stimulated their planting in many localities, a fact which should tend to more beautiful homes in the near future. But withal, 1932 will be long remembered as a severe year.

**THE WORLD SITUATION.** According to a report on world apple production and trade issued in September by the Bureau of Agricultural Economics, there are approximately 6,940,000 acres of cultivated apples producing an average annual yield of 550,000,000 bushels. The leading apple producing countries arranged in order of importance are the United States, France, Russia, Germany, Poland, Switzerland, Rumania, Canada, England, and Australia, the United States supplying approximately 35 per cent of the total. In the 8-year period 1923-1930, Canada averaged 9,798,000 bushels of apples, of which some 4,000,000 bushels were exported. Australia, with an estimated production of 7,120,000 bushels of apples in 1932, exported 4,416,000 bushels, largely to Europe. The United Kingdom is the greatest importer of fruit in the world, receiving in apples alone approximately 16,467,000 bushels per year in the six years beginning 1925-1926.

World pear production averaged 150,000,000 bushels per year with France leading with 25 per cent and the United States second with 15 per cent. The bulk of the French crop consists, however, of cider fruit. The United Kingdom is the major importing country of the world, averaging around 7,100,000 bushels per year. Pear production in the United States has moved sharply westward in recent years, to the extent that about 52 per cent of the pear trees are now located in the three Pacific coast States as compared with 15.8 per cent in 1910.

The increasing importance of South America in the fruit world was shown in shipments of some 6,959,000 pounds of Argentine grapes to the United States in the 1931-1932 season. France dealt a severe blow to American prune producers by doubling the import duty on dried prunes, effective April 21, 1932. Increased tariffs and increased planting during prosperous times forecast rather drastic changes in fruit production in various parts of the world in the near future.

**DOMESTIC PRODUCTION.** Crop yield records released by the U. S. Department of Agriculture on Dec. 15, 1932 show that the production of fruit was substantially below average and that the commercial production of vegetables grown for

canning was the lowest in several years, due primarily to a reduction in the acreage planted. Comparisons of crops produced in 1932 with those of 1931 show about 31 per cent less apples, 40 per cent less peaches, 15 per cent less prunes and 13 per cent less grapefruit. Following an exceedingly mild winter, a severe cold period in March practically eliminated the peach crop in Georgia and in certain of the central States. A long continued summer drought reduced the apple crop in the eastern States, particularly Virginia and West Virginia.

Actual figures as presented in the above mentioned release indicate a production of 139,156,000 bushels of apples in 1932 as compared with 202,415,000 bushels in 1931; 46,267,000 bushels of peaches in 1932 and 76,586,000 bushels in 1931; 21,981,000 bushels of pears in 1932 and 23,346,000 bushels in 1931; 2,162,000 tons of grapes in 1932 and 1,622,000 tons in 1931; 126,000 tons of cherries in 1932 and 111,000 tons in 1931; oranges, 48,788,000 boxes in 1932 and 49,734,000 boxes in 1931; grapefruit, 13,221,000 boxes in 1932 and 15,147,000 boxes in 1931; lemons, 7,000,000 boxes in 1932 and 7,800,000 boxes in 1931; cranberries, 525,000 barrels in 1932 and 651,000 barrels in 1931; pecans, 53,160,000 pounds in 1932 and 77,800,000 pounds in 1931; strawberries, 13,574,000 crates in 1932 and 11,322,000 crates in 1931.

Vegetables show even greater reductions as might be expected because of their annual planting. There were 9,049,000 crates of asparagus produced in the United States in 1932 as compared with 9,189,000 crates in 1931; lima beans, 17,600 tons in 1932 and 23,300 tons in 1931; snap beans, 175,300 tons in 1932 and 187,300 tons in 1931; cabbage, 964,400 tons in 1932 and 1,018,800 tons in 1931; cantaloupes, 17,096,000 crates in 1932, 17,998,000 crates in 1931; lettuce, 17,715,000 crates in 1932 and 19,466,000 crates in 1931; onions, 226,000 tons in 1932 and 241,300 tons in 1931; spinach, 133,400 tons in 1932 and 171,200 tons in 1931; tomatoes, 1,656,100 tons in 1932 and 1,446,200 tons in 1931; watermelons, 60,520,000 units in 1932 and 75,509,000 units in 1931.

Although the yields show a substantial reduction in most instances from the preceding year, they indicate, nevertheless, an enormous production of fresh fruits and vegetables in the United States.

**FOREIGN TRADE.** Data recorded in the monthly summaries of foreign commerce, published by the U. S. Department of Commerce, show notable declines in value of both imported and exported horticultural products during the first 10 months of 1932 as compared with the corresponding period of 1931. The total value of fruits, vegetables and preparations and nuts imported in the 1932 period was \$51,514,393 as compared with \$70,183,052 in 1931. For exports of the same items, the total value in 1932 was \$71,120,403 as compared with \$102,280,336 in 1931. Part of the reductions was due to lesser quantities handled but more largely to greatly decreased unit values. Bananas, because of their desirability and high nutritive value, remained much the largest item among imported fruits. Among import items to show conspicuous changes in a downward direction were lemons, pineapples, shelled almonds and shelled walnuts. Exported products of sharply decreased value included grapefruits, oranges, and boxed apples.

The generally unfavorable situation was fur-

ther aggravated by increased tariffs promulgated in many European countries, including Great Britain. In some of the smaller countries, duties on boxed apples and other fruits were completely prohibitive. The Ottawa Conference, held in the summer of 1932, with delegates from the various units of the British Empire assembled to develop policies for the stimulation of trade within the empire, was an indirect blow to American fruit growers, especially the box apple growers of the Pacific Northwest and the barreled apple exporters of Virginia and adjacent States.

**COÖPERATION.** As indicated in the annual report for the year ended June 30, 1932, the Federal Farm Board assisted during the fiscal year in the formation of 10 cooperative marketing associations for the handling of horticultural products. According to the board, there is now a total of 1417 fruit, vegetable, and nut associations in the United States, with a membership of about 180,000 producers. The percentage of important horticultural commodities handled co-operatively varies greatly, reaching a maximum of approximately 90 per cent in the cases of English walnuts and lemons. A total of 68 associations handled products in excess of one million dollars' value in the 1930-1931 marketing season. One of the largest organizations shipped 63,750 car-lots of horticultural products in that year.

An outstanding feature of the 1932 season was the signing of a contract in early December between the California Fruit Exchange and the Earl Fruit Company, in which the former will take over the marketing of deciduous fruits and grapes formerly handled by the latter organization. Otherwise the two units maintain their separate identities. The new marketing merger will handle between 75 and 85 thousand car-lots of fruit and fruit products and will become a tremendous factor in the fresh fruit trade.

**PLANT QUARANTINES.** From the horticultural viewpoint, plant quarantines have exerted in the past decade a profound influence on certain industries. For example, the exclusion of the narcissus and certain other bulbous plants has led to a rapid expansion of the bulb producing industry in the United States. Domestic quarantines regarding the corn borer and the Japanese beetle have interfered considerably with the interstate movement of sweet corn and fruits but, unfortunately, without material success from the viewpoint of hindering the spread of these insects. Phony peach, a virus disease of the peach tree, caused serious damage in the great peach area of Georgia and the Southeast. A simple and effective diagnostic test for the presence of the disease was developed by the U. S. Bureau of Plant Industry with promise that this formidable pest may be controlled. Notable progress was made in stopping the spread of the Mexican fruit worm in the citrus district of Texas by the simple expedient of storing the fruit for 15 days at a temperature which reached 30° F. at the centre of the fruits.

**RESEARCH ACTIVITIES.** In times of stress, such as prevailed in 1932, when only the highest grade products commanded a ready sale, knowledge of the most efficient methods of production and marketing was increasingly important. Progress in the field of horticultural research was somewhat hampered by decreased support but, nevertheless, was substantial. For example, the Oregon Agricultural Experiment Station, Oregon Sta. Bul. 300, 1932, found that with the onset of maturity,

rapid changes take place in the resistance of pear tissues to electric currents. One of the great difficulties of western fruit growers in the past has been a difficulty in determining when the fruit should be picked. Harvested too green, fruit never attains quality, and harvested too late, it fails to reach eastern markets without serious losses. The device for measuring resistance to an electric current was found very accurate in detecting maturity changes. The Missouri Agricultural Experiment Station, Missouri Sta. Research Bul. 171, 1932, in studying the movement of nutrients in the apple tree in late Autumn, observed that as much as 40 per cent of the nitrogen in percentage of dry weight was reabsorbed by the tree prior to leaf dropping. Interpreted practically, this finding showed the importance of protecting the foliage from insects and diseases so that the nutrients may not be lost to the tree. Of major importance to fruit growers in the irrigated regions was the finding of the California Agricultural Experiment Station, Amer. Soc. Hort. Sci. Proc., 1931, namely, that fluctuations of soil moisture from field capacity to permanent wilting percentage cause no response in grapes unless the minimum point is held for a considerable period. This information opens the way for large savings in irrigation costs as it opposed the accepted belief that the soil should be kept in a moist condition throughout the fruiting period. Plant breeders at various agricultural institutions continued active work in the production of improved fruits and vegetables. Red raspberry growing seriously menaced by plant diseases was greatly assisted by the production of the Latham and Chief varieties by the Minnesota Agricultural Experiment Station and the Newburgh variety by the New York Agricultural Experiment Station at Geneva.

**THE PEACE GARDEN.** Like a rainbow in a clouded sky stood out the dedication of the International Peace Garden on July 14, 1932, in the presence of some 30,000 Canadians and Americans, including many notable persons. Containing 3000 acres of broken terrain, located on either side of the 49th degree of latitude between Dunsen, North Dakota, and Boissevain, Manitoba, this international monument, like the Christ of the Andes, stands as a symbol of long continued peace between two sister nations. The Netherlands donated 250,000 bulbs, Japan an almost complete garden, and England a vast stock of roses to beautify the area. In time, this garden should prove one of the beauty spots of the Northwest and a mecca for the friendly citizens of both countries.

**MISCELLANEOUS.** An item in the Official Record of the U. S. Department of Agriculture stated that up to Oct. 31, 1932, a total of 39 plant patents had been granted by the U. S. Patent Office under the amendment to the Patent Law approved by President Hoover in May, 1930. Included in the group of patented plants were roses, carnations, peaches and plums, and a cultivated mushroom. A receiver of a patent is given exclusive right to use, vend, and asexually reproduce the new variety for a period of 17 years.

A laboratory building was dedicated on Sept. 23, 1932, at the Fruit Breeding Farm of the University of Minnesota, from which institution have come many notable fruits, including the Latham and Chief red raspberries. This new building will greatly facilitate important studies and the production of better fruits.

John Scheepers, well known commercial horticulturist of New York City, was knighted with the Order of Orange Nassau by Queen Wilhelmina of the Netherlands on her birthday as a tribute to the effective work that he had accomplished in ornamental gardening.

Dr. Howard H. Zimmerley, of the U. S. Department of Agriculture, was appointed director of the Virginia Truck Experiment Station at Norfolk vice T. C. Johnson who died on Mar. 31, 1932, following a protracted illness.

Dr. E. P. Sandsten, horticulturist of the Colorado Agricultural Experiment Station, was appointed director of the station following the resignation of Dr. C. P. Gillette on account of age. Dr. Sandsten's appointment brought the total number of horticulturists now serving as directors of agricultural experiment stations to eight.

The American Pomological Society, the oldest national organization of fruit growers in the United States, held its 65th meeting at Columbus, Ohio, in early February in conjunction with the annual meeting of the Ohio Horticultural Society. Dr. Liberty Hyde Bailey, dean of American horticultural writers, was the guest speaker, taking as his subject "Human Values in Rural Life."

Pertinent to the proposed repeal of the National Prohibition Act and its expected benefit to wine grape growers of California was the statement of the managing director of the California Vineyardists Association to the effect that wine grape production had increased from a pre-Volstead quantity sufficient to make 52 million gallons of wine to a 100 million gallon capacity in 1932.

The passing on Aug. 17, 1932, of A. W. Latham, famous pioneer horticulturist of Minnesota and for whom the Latham red raspberry was named, marked the end of a hardy band of settlers who, finding no worthwhile fruits in the Northwest, proceeded to develop hardy varieties able to resist that severe climate.

**BIBLIOGRAPHY.** Judging by the accessions to the United States Department of Agriculture Library, the output of horticultural books declined somewhat in 1932, a situation that was to be expected in view of economic conditions. That the home garden continued to be a favorite topic for writers is indicated in the following list, which also suggests that the moderate priced, easily read book was most popular: E. C. Auchter and H. B. Knapp, *Orchards and Small Fruit Culture*, Edition 2, New York, 1932; K. D. Boggs, *Prints and Plants of Old Gardens*, Richmond, 1932; W. P. Eaton, *Everybody's Garden*, New York, 1932; E. I. Farrington, *The Backyard Garden*, Boston, 1932; A. J. Macself, *Flowering Trees and Shrubs*, London, 1932; P. Murray, *Planning and Planting the Home Garden*, New York, 1932; G. W. Oliver and A. C. Hottes, *Plant Culture*, Edition 6, New York, 1932; H. S. Orloff, *Annals in the Garden*, New York, 1932; H. S. Orloff and H. B. Raymore, *Garden Maintenance*, New York, 1932; J. D. Oppenheim, *Citrusfruchte, Berlin-Charlottenburg*, Bangert, 1932; W. S. Rowe, *Living with Our Flowers Through the Four Seasons of the Year*, Cincinnati, 1932; L. B. Wilder, *The Fragrant Path*, New York, 1932.

**HOTELS.** See ARCHITECTURE.

**HOUSING ACTIVITY.** See ARCHITECTURE.

**HOWARD UNIVERSITY.** A nonsectarian institution for the higher education of men and women in Washington, D. C., incorporated by Act of Congress Mar. 2, 1867, "for the education

of youth in liberal arts and sciences," open to students without regard to race but principally for the education of Negroes. The registration for the Summer School and Autumn Quarter of 1932 totaled 1393. The faculty numbered 259. The total endowment amounted to \$855,852. The total appropriation of the United States government for 1932-33 was \$1,277,380. The University also received during 1931-32, \$45,883 from Private Sources in addition to \$11,476 for endowment. The Library contained 75,237 volumes. President, Mordecai Wyatt Johnson, S.T.M., D.D.

**HOWLAND, CHARLES PRENTICE.** An American lawyer, died in New Haven, Conn., Nov. 12, 1932. He was born in New York City Sept. 15, 1869, and was graduated from Yale University in 1891. On completing the law course at Harvard University in 1894 he was admitted to the New York bar, and began practice in New York City with the firm of Seward, Guthrie, Morawetz & Steele. From 1896 to 1921 he was a partner in the firm which was successively Anderson & Howland; Howland & Murray; Howland, Murray & Prentice; and Murray, Prentice & Howland. He was associated during the next four years with Rushmore, Bisbee & Stern. In 1925 he succeeded Henry Morgenthau as chairman of the Greek Refugee Settlement Commission, sponsored by the League of Nations for the repatriation of 1,000,000 or more Greek refugees from Asia Minor and eastern Thrace. He became director of research for the Council on Foreign Relations in 1927, and at the time of his death was research associate in government at Yale University. He was a member of the General Education Board and of the Rockefeller Foundation, a trustee of the Johns Hopkins University, and a director of the Foreign Policy Association.

**HUMANISM.** A religious movement emphasizing faith in man instead of belief in the supernatural. It has arisen largely (in the United States) from and in the left wing of Unitarianism, although it is now spreading in other liberal religious groups, including Universalists and Congregationalists. There are as yet but three definitely Humanist local societies, in Hollywood, Calif., Kansas City, Mo., and New York City, but some 40 or more Unitarian churches are led by ministers who have openly announced their belief in Humanism. The Unitarian policy of no creedal restrictions permits these men to remain in full Unitarian fellowship. The Hollywood Humanist Society and The First Humanist Society of New York were both organized in 1929, and the All Souls Unitarian Church of Kansas City recently became The Liberal Centre, the minister of which, the Rev. L. M. Birkhead, has long preached Humanism. The director of The Hollywood Humanist Society is the Rev. Theodore C. Abell, and the founder and leader of The First Humanist Society of New York, Inc., is the Rev. Charles Francis Potter, who has defined Humanism as "faith in the supreme value and self-improvability of human personality."

The tendency in Humanist societies and in churches led by Humanist ministers is toward the minimizing or abolition of prayer, worship, and Bible reading and the maintaining of an agnostic attitude on the questions of immortality and the existence of God. The movement is reported to be spreading rapidly in the colleges and universities. In 1932 at least 150 theses on Humanism were presented by candidates for the degree of Ph.D.

Information concerning the spread of Humanism in other countries is difficult to secure, but groups avowing beliefs identical with Humanism or essentially the same have been reported in Canada, Australia, England, Germany, Turkey, and in Bangalore, India. Publications include *The Humanist*, monthly, Hollywood, Calif.; *The New Humanist*, bi-monthly, Chicago, Ill.; and *The Huma*, weekly, under the auspices of The First Humanist Society of New York. The book and pamphlet literature is already extensive: more than 500 titles have been listed, including *Humanism*, *Humanist Sermons*, and *Humanist Religion* by Dr. Curtis W. Reese of Chicago, and *Humanism, A New Religion, A Humanist Encyclical*, and *The Humanist Attitude Toward Life* by Charles Francis Potter. Dr. John H. Dietrich, minister of The First Unitarian Church of Minneapolis, Minn., was a pioneer in preaching Humanism, and his many published addresses on Humanism have had a wide circulation, both in pamphlet and book form. Statistics of membership in Humanist societies and churches favoring Humanism are not yet available, as the movement is still so young, but a careful conservative estimate would indicate at least 10,000 avowed Humanists in the United States.

**HUNGARY.** A kingdom of central Europe, formerly constituting, with Austria, the Dual Monarchy of Austria-Hungary. Capital, Budapest. Regent in 1932, Nicholas Horthy de Nagybánya (elected Mar. 1, 1920).

**AREA AND POPULATION.** At the census of Dec. 31, 1930, Hungary had an area of 35,875 square miles and a population of 8,683,740, with 42.5 per cent of the total residing in cities of more than 10,000. The 1920 census population was 7,980,143. Of the 1930 total, about 90 per cent were Hungarians (Magyars), 6.8 per cent Germans, 1.7 per cent Slovaks, and the remainder Croats, Rumanians, Ruthenians, and Serbians. The population of the chief cities in 1930, with 1920 census figures in parentheses, was: Budapest, 1,004,681 (928,996); Szeged, 135,141 (119,109); Debrecen (Debreczen), 117,410 (103,186); Kecskemét, 79,505 (73,109); Pesterzsébet, 67,871; Ujpest, 67,374 (56,439); Kispest, 64,547 (51,064). In 1931, living births numbered 201,879; deaths, 143,690; marriages, 75,523.

**EDUCATION AND RELIGION.** About 15.2 per cent of the population over six years of age were illiterate in 1920. Elementary education is free and compulsory for children from 6 to 12 years of age. In 1929-30, there were 6794 elementary schools, with 908,295 pupils; 157 middle schools, with 61,087 pupils; 228 special and occupational schools, with 14,741 students; and four universities, with 10,691 students. The universities are at Budapest, Szeged, Pécs, and Debrecen. Roman Catholics comprised about 64.5 per cent of the population in 1929; Helvetian Evangelicals, 20.7 per cent; Augsburg Evangelicals, 6.1 per cent; Jews, 5.5 per cent; Greek Catholics, 2.4 per cent.

**PRODUCTION.** A fertile agricultural country, Hungary in 1931 had about 13,757,000 acres of arable land (60 per cent of the total area), 793,000 acres of vineyards and gardens, 4,144,000 acres of permanent meadow and pasture, and 2,707,000 acres of woods and forests. Livestock in 1931 included 1,813,894 cattle, 864,571 horses, 1,440,409 sheep, and 2,814,635 swine. The value of field crops declined steadily from about \$433,200,000 in 1928 to about \$171,000,000 in 1931.

Production of the chief crops in 1931 and 1930,

in bushels except as indicated, was: Wheat, 72,550,000 (84,388,000 in 1930); rye, 21,672,000 (28,406,000); barley, 21,867,000 (27,605,000); oats, 13,368,000 (17,999,000); corn, 59,749,000 (55,394,000); potatoes, 53,185,000 (67,660,000); sugar beets, 966,000 metric tons (1,461,000); beet sugar (in 1931-32), 125,000 metric tons (234,000); wine, 101,336,000 gallons (106,239,000); and tobacco, 80,403,000 pounds (75,372,000). All manufactured products in 1930 were valued at 2,496,000,000 pengös (\$436,550,000). The industrial output, in metric tons, in 1931 and 1930 was: Coal, 776,000 (812,000 in 1930); lignite, 6,110,000 (6,174,000); iron ore, 84,000 (157,000); pig iron, 160,000 (257,000); steel ingots and castings, 316,000 (369,000); cement, 280,000 (310,000). Unemployed trade unionists on Dec. 31, 1931, numbered 33,146; on June 30, 1932, about 34,000. The average number of workers in industry during 1930 was estimated at 216,000.

COMMERCE. The decline of Hungarian foreign trade during the years 1929 to 1932 is shown in thousands of pengös (pengö equals \$0.1749 U. S. currency at par):

	Imports (1,000 pengös)	Exports (1,000 pengös)
1929 .....	1,068,697	1,038,540
1930 .....	832,947	910,481
1931 .....	543,770	570,555
1932 ..	336,700	332,800

The 1931 imports, equivalent to \$96,122,000, were 35 per cent lower in value than in 1930, while exports, valued at \$99,189,500, declined 37 per cent. Import restrictions established in July, 1931, accounted for the maintenance of an export surplus. The chief imports, in order of value, in 1931 were hewn and sawn wood, coal, coke and briquets, chemicals and allied products, machinery, paper, raw cotton, and tobacco. Leading exports, in order of value, were cattle, poultry, wheat, wheat flour, machinery, and swine. Germany in 1931 supplied 24.1 per cent of the total imports; Rumania, 13 per cent; Austria, 12.6; and Czechoslovakia, 9.1. Austria purchased 30.1 per cent of the total exports; Germany, 12.1; Italy, 10.1; and Czechoslovakia, 4.3. The United States supplied imports valued at \$4,022,000 (\$6,927,000 in 1930) and purchased exports to the value of \$661,000 (\$679,000 in 1930).

FINANCE. Revised budget estimates for the fiscal year ended June 30, 1932, placed revenue at 918,000,000 pengös and expenditure at 922,900,000 pengös, compared with actual receipts of 829,600,000 pengös and actual expenditures of 974,000,000 pengös (preliminary) in the preceding fiscal year. According to preliminary returns, the 1931-32 budget closed with an actual deficit of 141,000,000 pengös.

The public debt stood at 1,992,600,000 pengös on Dec. 31, 1931, of which 1,561,100,000 pengös represented the foreign debt and 431,500,000 pengös the domestic debt. On Oct. 1, 1932, the foreign debt was equivalent to \$250,000,000. On Dec. 22, 1931, the government declared a partial one-year moratorium on the transfer of payments on foreign debts. The unit of currency is the pengö, worth \$0.1749 at par, which declined slightly during 1932 to \$0.1743 for the week ended October 29.

COMMUNICATIONS. Railways in 1931 extended 5387 miles, of which 4411 miles were owned and

operated by the state. Between 1929 and 1932, about 667 miles of modern highways were constructed, bringing the total mileage for the country to about 38,551 miles, of which about 12,712 miles were hard-surfaced. The five air lines reported 3593 flights aggregating 551,133 miles during 1930, in which 7962 passengers and 476 metric tons of freight were carried.

GOVERNMENT. Technically, Hungary is a constitutional monarchy with the throne vacant. The Horthy régime, which won control of the government on Aug. 7, 1919, decided that the question of who was to be chosen monarch would be postponed until the nation was liberated from external pressure. The Legislature has two Houses, the Lower House of 245 elected members, and the Upper House consisting of 244 representatives of appointed and elected groups. The composition of the Lower Chamber following the election of June 28, 1931, was: Party of National Unity (Bethlen party), 155; Christian Social Union, 32; Socialists, 14; Independent Agricultural party, 11; other parties, 12; Independents, 21. The Ministry formed Aug. 23, 1931, following the resignation of Premier Bethlen, was headed by Count Julius Karolyi. For changes in 1932, see HISTORY.

## HISTORY

ECONOMIC AND FINANCIAL CRISIS. Economic and financial conditions in Hungary, which became acute during 1931, grew steadily worse during the following year. The withdrawal of foreign credits, inability to float further foreign loans, and an unfavorable trade balance resulted in an increasing shortage of foreign exchange. By August, the government was forced to extend the transfer moratorium of Dec. 2, 1931 to the service of the international loan of 1924 authorized by the League of Nations. About \$40,000,000 of American short-term credits were "frozen" in Hungary, when the Hungarian banks on January 17 notified their American creditors that they would be unable to pay interest or commissions on these credits. On March 1, Premier Karolyi declared in Parliament that unless Hungary's foreign creditors were prepared to accept a considerable reduction in interest rates they might lose everything.

The pengö was maintained on a relatively stable basis only by severe restrictions on dealings in foreign currency and foreign bills of exchange. These restrictions, however, provoked retaliation in neighboring states and curtailed both imports and exports. There was a continual decline in price, as well as in volume, of the chief agricultural exports, accompanied by a further shortage of foreign exchange for the payment of interest on the foreign debt. While farm prices fell, industrial prices rose and peasant discontent was fanned by the steady pressure of the economic pincers. The report of the League of Nations Commissioner to Hungary for the third quarter of the year mentioned these factors as responsible for the deepening economic crisis and stated that in view of the growing budget deficit for 1932-33 drastic budget changes were necessary to avoid inflation.

THE POLITICAL REPERCUSSIONS. A combination of economic discontent and political intrigue finally caused the overthrow of the Karolyi government on September 21. Peasants protesting the auctioning of cattle seized for tax arrears were fired on at Pacsa on February 18. Several minor

parties now joined the Socialists in their attacks upon the government. On April 22, by a reduced parliamentary majority of 93 to 45, the government secured an extension for one year of the emergency powers granted it several months earlier to deal with economic issues. In June, Premier Karolyi was faced by a revolt of agrarian representatives among his supporters and won back their support only by agreeing that the banks would be restrained from pressing for the payment of agricultural debts until after the harvest. The Premier offered his resignation on June 30, but it was refused by Admiral Horthy, the Regent.

Attacked by the Socialists and other opposition parties on the Left and by the conservative Bethlen adherents on the Right, Count Karolyi's position became increasingly precarious. His Minister of Agriculture was decisively defeated at the poll in a by-election August 29. Similar setbacks in other by-elections and the intrigues of the Bethlen extremists finally forced him to resign on September 21.

**THE GÖMBÖS CABINET.** Count Karolyi was succeeded as Premier by Gen. Julius Gömbös, Minister of War in both the Karolyi and Bethlen Cabinets. A pronounced Magyar Nationalist, he rose to fame by organizing the counter-revolutionary army which overthrew Bela Kun in 1920 and by frustrating the effort of King Charles to regain the Hungarian throne in 1921. Later he founded the Anti-Semitic Fascist party of Awakening Magyars. An Italophile and an ardent admirer of Premier Mussolini, General Gömbös' advent to power terminated the French orientation which the Karolyi Cabinet had been forced to take by the exigencies of the financial situation. His Cabinet, announced September 30, was formed of comparatively young men and was the first in some 60 years not to include members of the nobility. The composition of his Cabinet was: Premier and Minister of War, Julius Gömbös; Foreign Affairs, Andreas Puky; Interior, Franz Keresztes Fischer; Finance, Bela Imredy; Education, Valentin Homan; Justice, Andreas Lazar; Trade, Tihamer Fabini; Agriculture, Nicholas Kally.

Gömbös immediately demonstrated his kinship with the leaders of the Papen-Schleicher Cabinet in Germany by addressing a huge irredentist demonstration in Budapest (October 2). Twenty thousand Hungarian veterans present solemnly swore "to reconquer the frontiers of pre-war Hungary—of the holy crown of Saint Stephen." The new Premier had accepted his post on condition that he would be allowed to dissolve parliament, if necessary. However he made a vigorous bid for parliamentary support by abolishing (October 10) the martial law placed in effect thirteen months earlier. Addressing the Lower Chamber October 11, he announced that the government would introduce nation-wide secret voting in the near future and establish public freedom and a free press. His striking speech included declarations favoring religious toleration, restraint of capitalistic greed, Pan-Europeanism, revision of the peace treaties, and equal military rights for Hungary. He promised reduction of the domestic interest rate, the regulation of the foreign debt problem by friendly agreement with creditors, and the provision of work, but not of unemployment payments, by the state. Regarding his foreign policy, he said it envisaged continued friendly relations with Italy and Poland, good

relations with Germany and Austria, and peace and understanding with Hungary's other neighbors provided they accorded her a voice in the settlement of Central European problems.

One of the first moves of the new Premier was a trip to Rome, where three days of discussion with Premier Mussolini (November 10-12) resulted in the signing of three conventions settling Italo-Hungarian accounts arising from the World War. The conventions placed in effect agreements on debts and credits reached in 1924 and 1927, settled all pending questions relative to the Italian occupation of Fiume, and established a mixed Italo-Hungarian commission to foster mutual trade relations.

Shortly after the visit of Premier Gömbös to Rome, he was visited at Budapest by the Austrian Chancellor, Dr. Engelbert Dollfuss. The new Premier's diplomatic activity, together with rumors of a conference of representatives of the Italian, Hungarian, Austrian, Bulgarian, and Albanian general staffs in Hungary, aroused considerable uneasiness in the Little Entente countries and in France. This uneasiness gave way to outright alarm when it became known that on Dec. 30 and 31, 1932, a large shipment of rifles and machine guns was transferred from Italy to Hirtenberg, Austria, from which point part of the consignment was transshipped to Hungary. The shipment was in violation of clauses of the peace treaties forbidding the transport of munitions over Austrian territory. It was regarded as additional evidence that Mussolini was cementing an alliance with Austria, Hungary, and possibly Germany to secure a revision of the peace treaties.

**ICELAND.** An island state united with Denmark by the Act of Union of Nov. 30, 1918. Situated to the northwest of Great Britain (to which it is next in size of European islands), and with its northern coast touching the Arctic Circle, Iceland has an area of 39,709 square miles, and a population of 108,644 in 1930. The capital, Reykjavik, had a population of 28,182 in 1930. In 1928-29, there were 238 elementary schools, with 8709 pupils; also continuation schools and a university at Reykjavik.

Fisheries are the chief support of the population, as only about one-fourth of 1 per cent of the land area is suitable for cultivation. Sheep and other livestock are raised. Hay, potatoes, and turnips are the chief farm products. The cod fisheries in 1930 reported a record catch of 70,000 metric tons (66,000 tons in 1929), but prices were lower. In the foreign trade for 1930, exports were valued at 57,000,000 crowns (1 crown equals about \$0.22); imports were valued at 66,000,000 crowns. Fish products accounted for 52,300,000 crowns of the total 1930 exports. State revenues for 1932 were 11,266,300 crowns and expenditures were 10,525,700 crowns. The National debt on Jan. 1, 1931, amounted to 40,200,000 crowns (about \$8,840,000).

Executive power is vested in the King of Denmark who acts through a responsible ministry; and legislative power in the King and Althing or

Parliament, which consists of 42 members, of whom 6 are elected for 8 years by proportional representation for the whole country, and 36 for 4 years by universal suffrage. The Althing is divided into two Houses, of which the upper has 14 members and the lower, 28. The right to vote is possessed by both men and women over the age of 25. King in 1932, Christian X; President of the Council and Minister of Trade and Communication, Tryggvi Thorhallsson. See *GREENLAND under History*.

**ICELANDIC PARLIAMENT, ANNIVERSARY OF.** See *CELEBRATIONS*.

**IDAHO. POPULATION.** According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 445,032, as against 431,866 in 1920. Boise, the capital, had (1930), 21,544 inhabitants.

**AGRICULTURE.** The following table shows the acreage, production, and value of the principal crops for 1932 and 1931:

Crop	Year	Acreage	Prod. Bu.	Value
Hay .....	1932	1,203,000	2,825,000*	\$11,736,000
	1931	1,107,000	2,158,000*	17,602,000
Wheat .....	1932	1,192,000	30,656,000	9,197,000
	1931	981,000	17,577,000	5,976,000
Potatoes ...	1932	99,000	19,800,000	4,554,000
	1931	110,000	24,200,000	6,776,000

	1931	106,000	2,862,000	716,000

\* Tons.    \* 100-lb. bags    \* Not available.

**MINERAL PRODUCTION.** The metals lead, zinc, silver, gold, and copper continued, as a group, to furnish in 1931, 90 per cent or more of the total yearly mineral product of the State as measured by value. All, however, were mined on a reduced scale, and the market values of all these metals save gold at the same time suffered radical declines. The value of the total production of the five combined, \$21,494,867 for 1930, fell some 31 per cent below the corresponding figure for 1929; it was in turn cut almost in half, to a total of but \$11,418,013 for 1931; and, further, to an estimated \$7,443,270 for 1932. The greater part of the loss registered for 1931 was in production of lead, which fell to 198,729,228 pounds (1931), from 268,115,963 (1930); and in value to \$7,352,981 (1931), from \$13,405,798 (1930). Estimates of the totals for 1932 were: quantity, 142,000,000 lbs., value, \$3,976,000. The diminution in production by quantity reflected reduced mining activity; the proportionately greater loss in production by value reflected the additional feature of a fall in the price of the product. In the case of silver the proportionate losses were similar, the total mined being 7,220,923 ounces for 1931, as against 9,710,150 for 1930; by value, \$2,094,068 (1931) and \$3,738,408 (1930). Estimates of silver totals for 1932 were: 6,700,000 oz.; value, \$1,889,400. The zinc output fell to some 41,000,000 pounds (1931) from 75,298,172 (1930), and declined yet more sharply in value. The production of gold declined to 18,058 ounces (1931), from 21,198 (1930); the decline, necessarily in the same proportion by value, was to \$373,300 (1931), from 438,200 (1930). Except for the leading metals only one product, stone,

attained production valued in excess of \$500,000 for 1930; there were produced 536,810 short tons of stone, in value \$513,752. The total value of the State's mineral product, after allowance for duplications, was \$22,903,659 for 1930: for 1929, \$32,142,685.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1932, was 2951.64. During the year previous, 13.57 miles had been abandoned.

**FINANCE.** State expenditures in the year ended Sept. 30, 1931, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments, \$5,628,981 (of which \$605,687 was for local education); for interest on debt, \$379,693; for permanent improvements, \$6,122,938; total, \$12,131,612 (of which \$6,853,640 was for highways, \$1,107,310 being for maintenance and \$5,746,330 for construction). Revenues were \$12,350,863. Of these, property and special taxes furnished 24.3 per cent; departmental earnings and compensation to the State for officers' services, 5.0; sale of licenses, 27.5 (in which was included a gasoline sale tax that produced \$2,742,135). Funded debt outstanding on Sept. 30, 1931, totaled \$4,334,300, of which \$1,821,300 was for highways. Net of sinking-fund assets, the debt was \$3,770,351. On an assessed valuation of \$428,018,004 the State levied in the year ad valorem taxes of \$2,813,003.

**CHARITIES AND CORRECTIONS.** Through its Department of Public Welfare, the State conducted approximately the functions of a State board of health. This department also held jurisdiction over the State's mental hospitals, its Soldiers' Home, work to combat tuberculosis, and the administration of the old-age pension. The State's institutions for the mentally afflicted were: Northern Idaho Sanatorium, Orofino; State School and Colony, Nampa. The State Penitentiary, at Boise, was directed by a board consisting of the Governor, Attorney-General, and Secretary of State.

**ELECTIONS.** The popular vote on November 8 gave a substantial majority for the Democratic National ticket. Governor C. Ben Ross, Democrat, was reelected. James P. Pope, Mayor of Boise, Democrat, was elected United States Senator for the ensuing full term, defeating John Thomas, Republican, the incumbent. For President the popular vote was: Roosevelt (Dem.), 109,208; Hoover, (Rep.), 71,122.

**OFFICERS.** The chief officers of the State, serving in 1932, were: Governor, C. Ben Ross; Lieutenant-Governor, G. P. Mix; Secretary of State, Fred E. Lukens; Auditor, E. P. Gallet; Treasurer, George J. Barrett; Attorney-General, Fred J. Babcock; Superintendent of Public Instruction, Myrtle R. Davis; Inspector of Mines, Stewart Campbell.

**Supreme Court:** Justices, T. Bailey Lee, Bertram S. Varian, R. D. Leeper, Raymond L. Givens, Alfred Budge.

**IDAHO, UNIVERSITY OF.** A coeducational State institution of higher learning in Moscow, Idaho, founded in 1889, with a southern branch in Pocatello, established by Act of the State Legislature which converted the Idaho Technical Institute into a division of the State University; the change became effective in the autumn of 1927. The total enrollment at Moscow in the autumn of 1932 was 1994. Total enrollment at Pocatello was 821. The enrollment for the 1931 summer session was 536. The faculty numbered

approximately 180. The physical plant at the university was valued at approximately \$2,150,000, and that at the southern branch at approximately \$765,000, making a total of about \$2,915,000. The productive funds of the university amounted to \$2,080,375, and the income for 1930-31 was approximately \$1,535,112. The library contained 93,000 volumes. The outstanding event of the year was the ceremony October 12, commemorating the fortieth anniversary of the opening of the university. President, Mervin Gordon Neale, Ph.D.

**ILLINOIS. POPULATION.** According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 7,630,654, as against 6,485,280 in 1920. Chicago, the chief city, had (1930) 3,376,438 inhabitants; Peoria, 104,969; Springfield, the capital, 71,864.

**AGRICULTURE.** The following table shows the acreage, production, and value of the principal crops for 1932 and 1931:

Crop	Year	Acreage	Prod. Bu.	Value
Corn ....	1932	9,001,000	387,043,000	\$58,056,000
	1931	9,185,000	339,845,000	84,961,000
Hay .....	1932	2,329,000	3,102,000 <sup>a</sup>	16,114,000
	1931	2,346,000	2,932,000 <sup>a</sup>	22,564,000
Oats .....	1932	4,307,000	161,512,000	19,381,000
	1931	4,182,000	144,279,000	24,527,000
Wheat ...	1932	1,549,000	23,433,000	8,139,000
	1931	1,935,000	45,076,000	18,030,000
Potatoes .	1932	54,000	4,860,000	2,865,000
	1931	50,000	4,250,000	3,060,000
Barley ...	1932	371,000	10,574,000	2,538,000
	1931	297,000	8,613,000	3,273,000

<sup>a</sup> Tons

**MINERAL INDUSTRIES.** The coal-and-iron group of industries, dependent on the State's own coal and its importations of iron ore, were severely curtailed in 1931. There were mined 44,105,000 short tons of coal (1931), as against 53,731,230 (1930); by value the total for 1931 fell yet more sharply below the \$93,484,000 of 1930. The production of coke, entirely in by-product processes fell to 2,478,984 short tons (1931), from 3,576,577 (1930); in value, to \$14,042,457 (1931), from \$21,379,784 (1930). The output of pig iron fell somewhat more severely than the average for the Union as a whole, to 1,727,834 long tons for 1931, from 3,050,743 for 1930; by value, to \$29,178,510 for 1931, from \$54,290,144 for 1930. The producers of Portland cement shipped 6,425,909 barrels in 1931, or about 80 per cent of the quantity, 7,951,680 barrels, shipped in 1930; lower prices caused the value of yearly shipments to recede to \$5,342,446 (1931), or barely over half the \$10,519,102 of 1930. The production of petroleum was cut in somewhat like proportions to 5,039,000 barrels (1931), from 5,736,000 (1930); by value, to \$4,500,000 (1931), from \$9,100,000. Clay products had for 1930, the latest year of available tabulations, a value of \$17,520,430, as against \$27,391,068 for 1929. There was a considerable production of sulphuric acid, which amounted for 1930 to 243,772 short tons (60 deg. Baumé), in value \$2,347,524. Other minerals of which the production in 1930 substantially exceeded \$1,000,000 were sand and gravel (\$8,382,025) and stone, chiefly of the commoner grades (\$5,939,297). The total value of the mineral product of the State, duplications eliminated, was \$148,311,418 for 1930; for 1929, \$182,791,131.

**FINANCE.** State expenditures in the year ended June 30, 1931, as reported by the U. S. Department of Commerce, were: for maintaining and

operating governmental departments, \$57,897,793 (of which \$12,003,648 was for local education); for interest on debt, \$8,358,487; for permanent improvements, \$56,268,617; total, \$122,547,331 (of which \$48,521,857 was for highways, \$3,587,943 being for maintenance and \$44,933,914 for construction). Revenues were \$122,608,219. Of these, property and special taxes furnished 43.7 per cent; departmental earnings and compensation to the State for officers' services, 2.9; sale of licenses, 46.5 (in which was included a gasoline sale tax that produced \$28,846,193). Funded debt outstanding on June 30, 1931, totaled \$196,836,320, of which \$153,070,000 was for highways. Net of sinking-fund assets, the debt was \$195,517,168. On an assessed valuation of \$8,249,429, 161 the State levied in the year ad-valorem taxes of \$32,172,773.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1932, was 12,472.46. Line to the total of 31.6 miles had been abandoned during the previous year, and 4.46 miles of line had been brought into operation.

**EDUCATION.** In the face of much reduction of budgets for public schools, effected during the year, among the 11,000 school districts, the intention was generally maintained to preserve the essentials of common-school education. Statistics for the public schools as a whole were obtainable only for the academic year 1930-1931. For that year the number of persons of school age in the State was rendered as 2,042,207. There were enrolled in the public schools 1,406,915 pupils. Of these, 1,086,692 were in common schools or elementary grades; in high schools, 320,223. The year's current expenditures for public-school education totaled \$134,502,656; capital outlay, \$28,942,338; debt service, \$8,433,556. Salaries of teachers averaged, by the year, \$1695.

**CHARITIES AND CORRECTIONS.** The central administrative authority for the care and custody of persons rested in 1932 in the Department of Public Welfare, as created by the Civil Administrative Code of 1917. It had as its head a director (Rodney H. Brandon). Under him were a superintendent of charities, administering charitable institutions; a superintendent of prisons, with like authority over penal institutions; and among other subordinates a supervisor of paroles, an alienist, and a criminologist. A division of child welfare dealt with dependent children. The department maintained a psychopathic institute, schools of psychopathic nursing, an institute for juvenile research, supervision over a system of mothers' pensions, and means for the education of crippled children, and inspected many private and local public institutions.

The State institutions under the direction of the department, with their populations of November 1, were: mental hospitals at Elgin, Chicago, Kankakee, Manteno, Peoria, Jacksonville, East Moline, Alton, Anna, and Chester, 24,202 inmates; penitentiaries at Joliet and Menard, a boys' reformatory at Pontiac, women's prison at Joliet, State Farm (for misdemeanants) at Vandalia, and women's reformatory at Dwight, with an aggregate of 10,965; institutions for the feeble-minded, at Dixon and Lincoln, 6371; Illinois School for the Deaf, at Jacksonville, 572; Illinois School for the Blind, at Jacksonville, 254; Industrial Home for the Blind, at Chicago, 93; Illinois Soldiers' and Sailors' Home, Quincy, 829; Soldiers' Widows' Home, Wilmington, 113;

Eye and Ear Infirmary, Chicago, 168; Soldiers' and Sailors' Children's School, Normal, 706; Research and Educational Hospitals, Chicago, 367; School for Boys (delinquent), St. Charles, 550; State Training School for Girls (delinquent), Geneva, 396. There were under parole on June 30, 1932, 5483 persons released from penal and correctional institutions.

**LEGISLATION.** The Legislature was repeatedly called into special session during the year by Governor Emmerson. An appropriation of \$20,000,000 for extra funds to relieve destitution was made at the end of January and an Unemployment Relief Commission was created to that end. In February was enacted an income-tax measure to become effective on July 1. (It was invalidated by the courts; see below.) Other acts passed in February permitted the West Park Board and certain school districts to incur bonded indebtedness without the sanction of a popular vote. A measure altering the system of assessment for Cook County was enacted in January, with the design to correct the faults that had brought about a failure of the revenues of Chicago. Provision was made for State regulation of dealers in securities. In July the Legislature ratified the proposed amendment of the Federal Constitution to alter the dates of Presidential inaugurations and sessions of Congress. The General Assembly convened in November, in its fourth special session, to adopt measures required in order to provide about \$45,000,000, sought by the State's Emergency Relief Commission, wherewith to meet the ensuing 7 months' expense of public assistance to the destitute, chiefly in Cook County and estimated to number a great part of some 1,300,000 unemployed.

**POLITICAL AND OTHER EVENTS.** A law providing a State income tax, which had been signed by Governor Emmerson on February 22, was declared by Judge Brown of the Sangamon County Circuit Court, in a decision rendered in April, to be unconstitutional, in that it violated Section 1 of Article 9 of the State constitution, in proposing a tax by graduation instead of straight valuation. The decision had the effect of impairing the State's prospect of much-needed revenue. The State Supreme Court, on appeal, held (October 22) that the tax was invalid. The State Supreme Court in decisions of April 8 and April 20 upheld the legality of the contested real-estate tax levied by Cook County for the years 1928 and 1929, holding that failure to assess personal property to the alleged total of \$16,000,000,000 did not invalidate the realty assessments. The effect of this ruling was to discourage the existing widespread abstention from tax payments among dissatisfied realty owners in Chicago.

The decision came only after Chicago had suffered severely from lack of ready money. A pay cut of 20 per cent had been decreed for thousands of city employees on January 4; bonds of the County Sanitary Board and of the Forest Preserve, due February 1, had been defaulted; 38,000 city employees had received only half a month's pay in March; the county commissioners had been unable to adopt a budget within the statutory time in February; a citizens' committee on public expenditures had reported on April 4 that the major taxing units of Cook County faced a deficit of \$200,000,000 in revenues. This committee was instrumental later in a reduction of some \$25,000,000 in the tax levy for the year 1931. Collections remained insufficient long after

the April court decisions, so that sales of 100,000 parcels of property in the county were sought and were ordered by the county court on July 23. Unpaid bills and payrolls, which had totaled \$59,833,628 on January 1, were estimated to have risen by \$10,000,000 by the end of July, the overdue payrolls alone then aggregating some \$36,000,000, while tax-anticipation warrants outstanding on January 1 totaled \$230,714,000. It was only in October, after the Federal Supreme Court had declined to assume jurisdiction in the taxpayers' contest, that Chicago was in a position to redeem part of the tax-anticipation warrants.

There occurred in Chicago on March 12 a riot that was the outcome of a Communist demonstration against the Japanese Consulate, as a protest against "Japanese imperialism." On February 5, after a trial lasting two months, two former trustees of the Sanitary District, Timothy L. Crowe and Frank J. Link, were found guilty of having padded the payroll of that agency to the extent of millions of dollars and were each sentenced to five years' imprisonment. A fire destroyed the Quincy Grain Elevator and most of the plant of the Omaha Packing Company on August 4, causing some \$6,000,000 of damage. Plans for the Chicago World's Fair of 1933 were aided by a Federal appropriation of \$1,000,000 in July.

Economic distress in Chicago and elsewhere in the State was severe during the year. Owing to the financial incapacity of Chicago the State incurred a heavy burden in having to provide relief for destitution. It borrowed \$3,000,000 from the Reconstruction Finance Corporation for relief on July 27, being the first State to which a loan was accorded. It applied further for \$23,279,475, of which, however, the Corporation granted on August 18 only \$6,000,000, demanding that the State and its subdivisions make provisions by appropriations from their own revenue before receiving further aid. In all, up to December 27, the Corporation made available to the State and its subdivisions, loans to the total of \$25,238,228. The coal operators of Illinois proposed to their miners' representatives on March 22 that the wages in the mines be reduced to the scale of the northern West Virginia field, from the \$6 a day and over that had prevailed. A \$5 basic wage scale for the Illinois mines was finally negotiated, but many of the miners refused to accept it, and there followed, late in August, a strike agitation attended with violence in the neighborhood of Benton. Severe banking difficulties in Chicago were averted by aid from the Reconstruction Finance Corporation early in the year and by reorganization and consolidation of large banks affected. The Middle West Utilities Company, a holding concern for properties having aggregate assets of some \$2,500,000,000, controlled by the Insull brothers, went into the hands of a receiver in April, and in October the Cook County Grand Jury found indictments against the two Insull brothers, who had left the country and were made the objects of extradition proceedings.

**ELECTIONS.** The popular vote cast on November 8 gave a majority of some 450,000 for the Democratic National ticket, thus upsetting a record of heavy Republican majorities in all Presidential elections since and including 1916. For President, the vote was officially reported as:

Roosevelt (Dem.), 1,882,304; Hoover (Rep.), 1,432,756.

Judge Henry Horner, Democrat, was elected Governor, defeating Len Small, Republican and former Governor. Representative William H. Dieterich, Democrat, was elected United States Senator, defeating Senator Otis Glenn, Republican. Twenty Democrats and seven Republicans were elected to the Federal House of Representatives; two of the 20 Democrats were elected at large. Democrats won control of the chief tax-spending bodies in Cook County. The so-called gateway amendment to the State constitution, an amendment to the bank-loan act, and a proposed issue of \$20,000,000 in bonds for relief of the destitute were reported approved by referendum vote.

**OFFICERS.** The chief officers of the State, serving in 1932, were: Governor, Louis L. Emmerson; Lieutenant-Governor, Fred E. Sterling; Secretary of State, William J. Stratton; Treasurer, Edward J. Barrett; Auditor of Public Accounts, Oscar Nelson; Attorney-General, Oscar E. Carlson; Superintendent of Public Instruction, Francis G. Blair.

**Supreme Court:** Chief Justice, Clyde E. Stone; Associate Justices, Norman L. Jones, Oscar E. Heard, Frederic R. de Young, Warren W. Duncan, Warren H. Orr.

**ILLINOIS, UNIVERSITY OF.** A coeducational State institution of higher learning in Urbana-Champaign, Ill., founded in 1867. The enrollment in the autumn of 1932 was 10,579, of whom 7981 were men and 2598 were women. The summer-session enrollment was 2910, of whom 1776 were men and 1134 were women. The number of persons on the teaching staff above the rank of assistant was 717, in the grade of assistant or lower there were 353, and the administrative officers and assistants (including Library assistants) totaled 138. The income for the year 1931-32 was \$6,714,016, of which \$4,440,448 was from the State. The productive funds from Federal endowment totaled \$649,013 and from private gifts, \$369,524. The library contained 916,452 volumes and 236,400 pamphlets. President, Harry Woodburn Chase, Ph.D., LL.D.

**IMMIGRATION.** STATISTICS OF IMMIGRATION. During the fiscal year ending June 30, 1932, 35,576 immigrants entered the United States, a decrease of 61,563, or 63.4 per cent, as compared with the previous year. The decline in immigration from Europe was 41,330, or 66.8 per cent; from Canada it was 13,760, or 63.4 per cent; from Mexico it was 1162, or 34.9 per cent; and from all other countries it was 5311, or 52 per cent. Aliens of all classes admitted in the fiscal year 1932 totaled 174,871 of whom 35,576 were immigrants and 139,295 were non-immigrants. The outgoing aliens numbered 287,657, of whom 103,295 were emigrants and 184,362 were non-emigrants. This was an excess of 112,786 departures over admissions for the fiscal year ending June 30, 1932. When this record is compared with previous years the differences are startling. Thus, for the fiscal year ending June 30, 1931, the excess of departures over admissions was 10,237; while for the fiscal year ending June 30, 1930, the excess of admissions over departures was 173,789 and for the fiscal year ending June 30, 1929, the excess of admissions over departures was 226,839. Of the 35,576 immigrants for permanent residence admitted into the country during the year 1931-32, 12,983, or 36.5 per cent, were charged to the quota; 9490, or 26.7 per cent, were admitted under the immigration act of 1924 as husbands, wives, and unmarried children of American citizens; and 9328, or 26.2 per cent were admitted as natives of non-quota countries. The remainder, comprising 10.6 per cent of the total immigrants, entered the country as ministers, professors and other miscellaneous classes under the act. During the fiscal year 1931-32 a total of 19,426 undesirable aliens were deported, largely to Mexico, Europe, Canada, and China. This was a record for the country, deportations for 1930-31 numbering 18,142, for 1929-30 numbering 16,631, for 1928-29 numbering 12,908, and for 1927-28 numbering 11,625. During the year 1931-32, 2637 indigent aliens were, at their own request, removed to their native countries, over two-thirds of these having last resided in Michigan, New York, Illinois, and Pennsylvania.

TABLE I—INWARD AND OUTWARD PASSENGER MOVEMENT, JULY 1, 1931, TO JUNE 30, 1932

Period	INWARD					Aliens de- barred from entering <sup>a</sup>	OUTWARD					Aliens de- ported after land- ing <sup>b</sup>

\* These aliens are not included among arrivals, as they were not permitted to enter the United States.

\* These aliens are included among aliens departed, they having entered the United States, legally or illegally, and later being deported.

Table I presents the inward and outward passenger movement of the 12 months of the fiscal year 1931-32.

**IMMIGRATION LEGISLATION.** In the closing months of the long session of the Seventy-Second Congress a number of measures were passed which were designed to improve the Immigration Service activities. The most important of these was the act approved May 25, 1932, to permit aliens who had been deported or ordered deported from the United States to reënter. The law in effect permitted an alien to apply, after one year from his deportation or departure, to the Secretary of Labor for permission to reapply for admission to the United States. The statute was aimed to afford relief in cases where, for example, deportation had separated a husband and wife, or parents and children, and where the admission of such aliens was not calculated to be a cause of danger to the country or its institutions. Another law passed was one permitting the Immigration Service to exact bonds in the case of immigrant students where there was doubt of the bona fides of the alien's status as a student under the law. Before, when such doubt existed, the alien was excluded by law; but the bond provision permitted a more equitable disposition of such cases.

**ALIEN DEPORTATIONS.** The policy of the Department of Labor of deporting so-called undesirable aliens on the grounds either that they were public charges or were engaging in activities subversive to the political and economic institutions of the United States was being, in recent years, enforced so vigorously that the matter had become an outstanding public question. During the last ten years, according to Dr. Jane Perry Clark, writing in the April *Current History Magazine*, the number of such deportations had reached 105,782. In 1931 alone, 18,142 undesirable aliens were actually deported while 11,709 left voluntarily in compliance with deportation orders.

The law permits the deportation of individuals falling into two distinct categories: those who may be deported within five years after their entrance into the country—that is to say, persons with physical or mental disabilities which were undetected at the time of admission, contract laborers, illiterates, and persons liable to become public charges; and those who may be deported at any time regardless of date of their entry—for example, aliens who have unlawfully entered the country, aliens guilty of crimes involving moral turpitude, those engaged in narcotic traffic, anarchists and extreme radicals. It is important to observe that the deportation law is not at all simple. The courts, for example, have defined entry to mean last entry regardless of the length of time the alien may have made his permanent residence in the United States. The legal determination of moral turpitude apparently has become highly involved. The courts, for example, have declared that violation of the Volstead Act involves moral turpitude whereas violation of a State liquor law does not. If after admission to the country a person is sentenced to prison for a term of a year or more, the offense having been one involving moral turpitude, and if the crime had been committed within five years of entry, the alien is liable to deportation. But an alien, no matter when he entered the country, is liable to deportation at any time if convicted of moral turpitude and sentenced to

prison more than once for the term of a year or more.

The history of radical deportations makes an interesting chapter in the whole chronicle. In the years 1929 and 1930 alien radicals were deported in large numbers; but only fifteen aliens were sent out of the country between 1926 and 1929 because of radical affiliations. With the onset of the depression the drive against radicals once more commenced so that in 1931, eighteen radicals were deported. Dr. Clark points out that the deportation problems involving illegal entrance are "most numerous and most baffling." Because of the long and exposed frontier of the United States access to the country has been comparatively easy and while the immigration service has exerted great efforts in an attempt to close the frontiers to aliens seeking to obtain illegal entry into the United States "it has proved well-nigh impossible to prevent aliens from entering, and the need for more effective barriers is greater than ever." Dr. Clark points out that the procedure attending the apprehension and examination of supposed aliens is characterized by considerable hardship on the persons involved. "A person trying to cross the border may be caught by the border patrol; a man's next-door neighbor may take a dislike to him and denounce him as a possible deportee; a hospital in which a woman is a patient may inform the authorities that she is deportable. In all cases the local immigration officials are supposed to accept the complaint, whether anonymous or otherwise, and investigate. Sometimes the immigration inspectors, in company with local police, have raided peaceful dances or reading rooms in the search for aliens. . . . Because of the various methods by which aliens may be reported to the authorities, much depends on chance as to whom the arm of the law strikes."

Dr. Clark puts her finger on the central weakness of the system when she says that: "In all cases the procedure is purely administrative, highly centralized within the Department of Labor in Washington." While, according to law and the decision of the Department of Labor the alien may be declared liable to deportation as an undesirable, the United States cannot deport him unless some other country is willing to receive him. Because the United States has not recognized Soviet Russia and therefore diplomatic representation and facilities for the issuance of passports do not exist, deportation to Soviet Russia is impossible. It is interesting to note, too, that expatriated citizens of other countries, such as Germany, may not be deported to that country for they have lost their citizenship. Experience under the law has indicated that often tragic hardships are visited on its victims. Not infrequently persons are deported to countries which they have never seen; men or women with American born spouses and children are sent out of the country never to return; because of national laws not infrequently a wife is compelled to go to the country of her husband's citizenship where she, in all likelihood, is friendless and unknown and there liable to become a public charge. Doctor Clark concludes by pointing out that the law must be simplified, clarified and codified in order that the many injustices it commits be eliminated, or at least softened. "Among the many possible changes in procedure," she says, "the need for more adequate review is one of the most urgent, and for this

the establishment of an independent board of review, similar in organization to the board of tax appeals, has been suggested as a method whereby fundamental rights may be more fully protected. Only when we realize that the alien in the United States is the product not only of the country from which he derives his legal citizenship but also of the country in which he makes his home can there be a real attempt to deal with the problems of 'undesirables.'"

**DEPORTATIONS.** For the fiscal year 1931-32 there were deported 19,426 aliens, the highest on record, which compared with 18,142 in 1930-31, and 16,631 in 1929-30. Of the total 19,426 deported, 17,274 were sent out of the country at the expense of the Immigration Service; 1479 were deported at the expense of the steamship lines responsible for bringing such persons into the country; 103 were permitted to reshipe foreign one way as members of crews or vessels; and 570 were permitted to depart voluntarily at their own expense. The principal cause for deportation was for entry after July 1, 1924, without the requisite immigration visa. This included all aliens who had effected surreptitious entry over land boundaries, those who had entered as stowaways, and deserting seamen. The second group of deportees was made up of those aliens who had remained here longer than the temporary period for which they had been admitted; and the third group of deportees constituted criminal and immoral aliens. The Immigration Service pointed out the particularly distressing group of cases handled were those made up of Chinese who entered the Southern land borders due to their enforced departure from certain Mexican states. The Immigration Service, in describing the plight of this group, said: "These aliens were destitute, had no other place to go, and fully knew they would be fed and deported to their native country without cost to them. The usual detention places for aliens under warrant proceedings became so congested under this influx that it was necessary to detain many of the Chinese in camps or barracks, all at great expense to this service. Prosecution of these aliens under the act of Mar. 2, 1929, for illegal entry were quite often abortive and did not relieve the situation by discouraging further entries of the Chinese from Mexico. In all, 2256 of such Chinese were deported from Pacific seaports in several parties by the end of the year, at a cost to our appropriation of \$288,650.81." Of the 19,426 deportations, 6530 were to Europe, 2379 to China, 2338 to Canada, 7116 to Mexico, 567 to other North America, the West Indies, Central, and South America, 84 to Africa, Australia, and Pacific Islands, 412 to other Asia. In addition to deportations, there were repatriated to their native countries at the expense of the States and the Immigration Service, a total of 2637 aliens. Also, 10,775 aliens, who had been apprehended and found subject to deportation because of having entered the country clandestinely or having remained longer than the temporary period for which they had been admitted, were permitted to depart voluntarily. The majority of this class of aliens granted voluntary departure returned across the land borders, either to Mexico or Canada. Thus, in all, the Immigration Service was responsible for the departure of 32,838 aliens, who were in the country unlawfully or who had fallen into distress.

**THE ADMINISTRATION'S POLICY.** In an address

delivered at Columbus in the course of the Presidential campaign on October 22, President Hoover declared that the policy of his administration, with respect to immigration, had been based four-square on the fact that in order to maintain the high standard of living of America's working population, it was imperative that a definite check take place upon the "flow of immigrants, fleeing from the lower standards of living abroad, flooding our country and offering to work for less wage than the American working man, at the gate of every factory in the United States." The President, while insisting that the restriction of immigration should be wise and humane—in not separating families or preventing the entrance of the relatives of residents already here—said the policy was to be based upon "a flow of selective streams of peoples to refresh our population with the ideas and contributions of foreign countries to our civilization." However, in times of great crisis where unemployment was prevalent, the President maintained that it was an act of injustice to the American people to permit the entry of aliens who, themselves, were fleeing from starvation abroad. The President, therefore, in 1930, by an executive order, stopped the entry of all immigrants to the United States except of the relatives of residents who are still here. Within that time, had the bars not been definitely raised, fully one-half million aliens would have been admitted who, according to the President, would have added by that amount to the army of the unemployed and placed an additional burden upon public and private relief programmes. President Hoover declared that he meant to maintain this policy during the continuance of the depression; after then the restrictive immigration programme based upon the selection of aliens would be resumed.

**STUDENTS.** According to the immigration act of 1924, bona fide students over 15 years were entitled to admission to the United States for a temporary period in order to attend some institution of learning approved by the Secretary of Labor. Such students were designated by the law as non-quota immigrants and were required to depart from the United States at the completion of their studies or upon their surrender of their student status. During the fiscal year 1931-32, 1266 such students were admitted into the country as compared with 1538 in the preceding year, and 1902 in the year ended June 30, 1930. Since the passage of the act of 1924, a total of 13,635 immigrant students gained entry, of whom 7492 left the United States, 1269 having done so during the year 1931-32.

**ORDER AGAINST FOREIGN STUDENTS.** An order issued by Secretary of Labor William N. Doak, in October, forbade foreign students admitted to the United States on a non-quota basis to engage in a vocation or part-time employment, to help them finance their education here. The issuance of the ruling immediately provoked a storm of protest among college administrators in the East, particularly where large bodies of foreign students were to be found. It was pointed out, for example, that more than 700 students at Columbia alone were affected by this order. Particularly pointed were the remarks of Dr. Stephen S. Duggan, Director of the Institute of International Education, who declared: "The fundamental issue at stake is whether the cultural relations of the United States with foreign

countries should be to such an extent under the control and administration of a department of the Government which, almost of necessity, looks upon the matter primarily as one of employment." Other administrators to protest were President Livingston Farrand, of Cornell, President Nicholas Murray Butler, of Columbia, and President Frederick B. Robinson, of the College of the City of New York.

**FILIPINO IMMIGRATION.** That Filipino men and women during the five years, 1926-30, were leaving the islands for the Continental United States and Hawaii in considerable numbers, is evidenced from figures presented in the annual report of the Governor General of the Philippine Islands for 1930. The accompanying table shows the departures and returns of native Filipinos to and from the Continental United States and Hawaii for the period in question. It will be noted that net immigration was quite high despite the unfavorable reception with which Filipino laborers were being received in the United States, particularly on the Pacific coast. While departures had fallen off in 1930 very considerably as compared with 1929, there was still a net increase of immigration.

MIGRATION OF FILIPINOS, 1926 TO 1930

Item	1926	1927	1928	1929	1930
Number going to continental United States.					
Males . . . . .	6,574	5,487	8,370	4,376	
Females . . . . .	113	191	198	107	
Number returning from continental United States:					
Males . . . . .	864	1,122	1,366	2,066	
Females . . . . .	80	99	104	253	
Number going to Hawaii:					
Men . . . . .	2,977	9,784	9,026	8,189	7,185
Women . . . . .	160	120	153	134	253
Minors . . . . .	219	170	143	46	377
Total . . . . .	3,356	10,074	9,322	8,369	7,815
Number returning from Hawaii:					
Men . . . . .	2,562	2,410	3,968	3,402	2,897
Women . . . . .	348	510	379	241	192

Total . . . . .	3,390	3,565	4,839	3,991	3,413

**CANADIAN IMMIGRATION.** The United States was not alone in restrictions placed on the way of entry of new immigrants into the country. The records of Canada showed that during the calendar year 1931 there was a decrease of 74 per cent in the total number of immigrants admitted to the country as compared with 1930. The total admissions in 1931 were 27,530; in 1930 the admissions were 104,806. Of the 27,530 immigrants admitted in 1931, 7678 were British, 15,195 were from the United States, 1313 were classified as belonging to Northern European races, and 3344 to other races. In 1931, 213 Jews were admitted as compared with 3703 in 1930; 467 Italians as compared with 1104; 493 Magyars as compared with 3279; 560 Poles as compared with 4968; 503 Ruthenians as compared with 8045. That entry of aliens was definitely selected may be seen from the fact that the number of British immigrants in 1931 was 76 per cent lower than that for 1930; the decrease in the number of immigrants from the United States was 41 per cent; while the decrease of Northern European immigrants was

93 per cent and the decrease of immigrants from other races was 88 per cent.

**BRITISH EMPIRE MIGRATION.** The Economic Advisory Council in 1930 approved the appointment of a committee for the purpose of considering the question of overseas migration from the United Kingdom to other parts of the Empire. This committee, in reporting in 1932, differentiated between short and long term migration policies. The committee stressed the fact that in view of Great Britain's declining birth rate, emigration was no longer required as a safety valve against the pressure of increasing population for subsistence. The committee also pointed out that as emigration was a selective process it tended to draw off from the home country exactly those elements of the population that made the most desirable citizens. Thus, it said:

Emigrants are, therefore, not a random sample of the population. There are more males than females; there is already in this country a large excess of females. They are largely drawn from persons in the prime of life. They are above the average in physique and health, and more than all, they may certainly be assumed to be above the average in just those qualities of enterprise, leadership, and resilience which are needed at home. Thus emigration draws unduly upon those elements in the population of which this country has most need.

In view of the fact, however, that the present time was witnessing a marked surplus of labor, the committee tended to regard migration as a desirable short term policy. Nevertheless, the inauguration of a programme was bound to be attended by considerable difficulties. The crisis had fallen with particular severity on the Dominions where agriculture was bearing a heavy part of the economic depression; in view of the fact that agriculture heretofore had been the great immigrant absorbing industry, the Dominions were, therefore, at the present time, presenting small opportunities for newcomers. According to the committee, the Dominions probably would desire immigrants when matters returned to normal but at that time it might not be to the economic advantage of the home country to supply their needs. The committee went on to stress other factors in the situation. Thus, in many of the Dominions the population was inadequate "not only for the purpose of the efficient development of the vast territories and resources under their control, but also as a basis for political, social and industrial superstructure which has been created." The territories of the Dominions invited coöperation and the committee deemed it better for the population to be built up from British rather than from alien stocks. Hence, a steady flow of British migrants to the Dominions was counseled, although it seemed probable that such a flow was likely to be smaller in the future than it had been in past years. See LAW in 1932.

**IMPORTS.** See articles on various countries; and especially articles AGRICULTURE; CORN; IRON AND STEEL, ETC.

**IM THURN, SIR EVERARD.** A British explorer and colonial administrator, died in Prestonpans, East Lothian, Scotland, Oct. 10, 1932. Born in 1852, he attended Oxford University, and in 1877 was appointed curator of the British Guiana Museum and in 1882 a magistrate in the Pomeroon district of British Guiana. During 1897-99 he was also a member of the Venezuelan boundary commission. He did much exploring in British Guiana during this period, ascending successfully in 1884 Mt. Roraima, which had baffled all pre-

vious attempts. Entering the Colonial Office in 1899, he was made lieutenant governor and colonial secretary of Ceylon in 1901 and governor of Fiji and high commissioner of the Western Pacific in 1904. On his retirement in 1910 he devoted himself to anthropological research and was president of the Royal Anthropological Institute during 1919-20. He was created a Companion of St. Michael and St. George in 1892, a Companion of the Bath in 1900, a Knight Commander of St. Michael and St. George in 1905, and a Knight Commander of the Order of the British Empire in 1918. His publications include: *Among the Indians of Guiana* (1883); *A Tramp with Redskins* (1886); *Botany of the Koraima Expedition* (1886); and *Sketch of the Ceylon Pearl Fishery* (1903).

**INCHCAPE, JAMES LYLE MACKAY, 1ST EARL OF.** A British shipping magnate, died at Monte Carlo, Monaco, May 23, 1932. He was born in Arbroath, Forfarshire, Scotland, Sept. 11, 1852, and received his education there and in Elgin. In 1874 he went to India where he gained recognition as a shipping authority, being made Calcutta manager of the British India Steam Navigation Co. Later he became associated with the shipping firm of Mackinnon, Mackenzie & Co., of which he was senior partner at the time of his death. In 1914 the British India Steam Navigation and the Peninsular & Oriental Companies, controlling nearly 2,500,000 tons of the most valuable tonnage afloat, were merged under his direction. He was also vice-president of the Suez Canal Co., chairman of the P. & O. Banking Corp Ltd., director of the National Provincial Bank, the Atlas Assurance Co., Ltd., and other corporations, and until 1925 government director of the Anglo-Persian Oil & Affiliated Companies. He was thrice president of the Chamber of Shipping of the United Kingdom, in 1903, 1918, and 1919, and in 1926 was president of the British Shipping Federation.

While in India Lord Inchcape was a member of the legislative council of the Viceroy (1891-93) and of the Council of India (1897-1911). He exerted a potent influence upon government officials in their decision of 1893 to close the Indian mints to the free coinage of silver and to establish the gold standard at 16 to 1. In 1903 he was one of the representatives of the British government who conferred with representatives of the United States and Mexican governments on the question of introducing the gold standard into Mexico and China. He also negotiated, as the King's special commissioner, the commercial treaty which was signed with China after the Boxer Rebellion. In 1907 he was appointed by Lord Morley, then Secretary of State for India, chairman of the committee in regard to the finance and working of Indian railways. Four years later he was called upon to act as arbiter in a dispute which has arisen between the Indian railway companies and the railway board.

During the World War Lord Inchcape served on the war risks, imperial defense, and food production committees, and in 1915 was made chairman of the port and transit committee appointed by the government to expedite the discharge of vessels in British ports. In 1919 he was broker for the government in the sale of 196 of its standard ships, realizing thereby £35,000,000 (\$175,000,000) for the Exchequer. He also sold without personal remuneration the 418 enemy ships which had been allotted to Great

Britain by the Versailles Treaty (1920-21), the Mesopotamian war craft (1920), and vessels taken during the War as prizes (1921-23 and 1927). From 1918 to 1923 he was chairman of the committee appointed by the Treasury to control bank amalgamation. He also served in 1921-22 as a member of the National Economy (Geddes) Committee and in 1922-23 as chairman of the Indian retrenchment committee. When his youngest daughter, the Hon. Elsie Mackay, lost her life in an attempt with the British aviator, Capt. Walter Hinchliffe, to fly across the Atlantic, he gave her \$2,500,000 estate to the Empire as a memorial fund, to be used after 50 years' accumulation of interest to help retire the British national debt. He was created a baron in 1911, a viscount in 1924, and an earl in 1929.

**INCINERATORS.** See GARBAGE AND REFUSE DISPOSAL.

**INCOME TAX.** See PUBLIC FINANCE, TAXATION.

**INDEPENDENT METHODIST CHURCH.** See METHODISTS.

**INDEX NUMBERS.** See AGRICULTURE under *Agricultural Situation*; FINANCIAL REVIEW; FOOD AND NUTRITION; STATISTICS.

**INDIA.** A dependency of the British Empire comprising all that part of the Indian peninsula which is directly governed by British officials or indirectly governed through the rulers of native States subject to the British Parliament. The dependency is divided into British India, or the territory subject to British law, and the Indian States, ruled by native princes. Capital, New Delhi.

**AREA AND POPULATION.** The total area, including the Indian States and Agencies which are in political relations with the government, according to the census of 1931, was 1,819,000 square miles (1,805,332 square miles at the 1921 census), of which the British Provinces constituted 1,107,908 square miles and the Indian States 711,032 square miles. The population at the census of 1931 totaled 352,986,876, according to provisional returns. Compared with the 1921 population of 318,942,480, this represented an increase of 10.6 per cent. The British Provinces in 1931 had a population of 271,749,312 (247,003,293 in 1921) and the Native States and Agencies, 81,237,564 (71,939,187 in 1921). Of the total 1931 population, 181,921,914 were males and 171,064,962 were females. The area and population of the British Provinces and the Native States and Agencies in 1931 are shown in the accompanying table.

Approximately 41 per cent of the total 1931 population resided in Bengal, Madras, and the United Provinces. In 1921, over 90 per cent of the population was classed as rural, only 9½ per cent living in towns of 5000 or more.

The population of the leading cities, according to preliminary returns of the census of Feb. 26, 1931, with comparative 1921 figures in parentheses, was: Calcutta, with suburbs, 1,383,898 (1,327,547); Calcutta proper, 1,161,410 (907,851); Bombay, 1,157,851 (1,175,914); Madras, 647,225 (526,911); Delhi, 439,736 (304,420); Lahore, 429,403 (281,781); Rangoon, 400,419 (341,962); Hyderabad, 377,006 (404,187); and Bangalore, 306,365 (237,496).

**RELIGION, ETC.** The religious division of the population in 1931 was: Hindus, 238,330,912 (216,734,586 in 1921); Moslems, 77,743,928 (68,735,233); Buddhists, not available (11,571,268

NOTE.—Figures for the Provinces include those of the States attached to them except in the case of Madras, where they exclude Cochin and Travancore

in 1921); Christians, 5,961,794 (4,754,064); Sikhs, 4,306,442 (3,238,803). The 1931 figures are preliminary. The Jains, Parsis, and Jews are minor religious sects. There were 2300 different castes, the largest, in the order named, being the Sheikh, Brahman, Chamar, Rajput, Ahir, Burmese, Jat, and Maratha. The so-called "untouchables" comprised 30 per cent of the Hindu population. The principal languages in use are Hindu, Bengali, and Telugu. About 2,500,000 persons speak English.

EDUCATION. At the 1921 census, 87.4 per cent of the males and 98.1 per cent of the females over six years of age were illiterate. In British India in 1928-30, there were 260,946 educational institutions, with a total of 12,515,126 pupils, of whom 9,224,084 were in primary schools, 2,246,208 in secondary schools, 70,487 in arts and science colleges, and 9027 (all males) in the 16 universities.

PRODUCTION. The census of 1921 showed 72 per cent of the total population engaged in pastoral and agricultural pursuits. Of the 746,094,771 acres in British India in 1929-30, 228,160,535 acres were sown, 49,713,921 acres were left fallow, 155,491,449 acres represented culturable waste other than fallow, and 87,276,573 acres unculturable waste. The area irrigated was 51,010,126 acres. Forests covered 87,276,573 acres. The livestock census of British India in 1929-30 showed 122,985,000 oxen, 31,645,000 buffaloes, 25,540,000 sheep, 35,943,000 goats, 1,701,000 horses and ponies, and 526,000 camels. India is one of the world's largest producers of sugar-cane, ranks second to the United States in the production of cotton, and has a monopoly of the world's jute supply. In 1931-32, the jute crop was reduced by 50 per cent, due to low prices

and the lack of demand. The area and production of the chief crops in the 1930-31 and 1931-32 seasons are given in the accompanying table from the U. S. *Commerce Yearbook*, 1932.

<sup>a</sup> Not including Indian States (area only). <sup>b</sup> Unit, long ton. <sup>c</sup> Unit, pound. <sup>d</sup> Per cent of total area: 1929-30, 89—subsequent years, 93 <sup>e</sup> 1922-23 to 1926-27 average. <sup>f</sup> Thousands of units—bushels except as indicated.

Mineral production in 1930 was valued at \$96,115,000, as against \$108,665,000 in 1929. The production of the chief minerals in 1930, with 1929 figures in parentheses, was: gold, 329,232 troy ounces (363,869); silver, 7,072,000 troy ounces (7,298,000); lead, 79,730 long tons (80,233); manganese ore, 830,000 long tons (994,000); iron ore, 1,850,000 long tons (2,429,000); tungsten ore, 2452 long tons (1348); tin ore, 4271 long tons (3785); chromite, 50,684 (49,565); coal, 23,803,000 long tons (23,419,000); petroleum, 373,329,000 gallons (367,469,000); salt, 1,711,000 long tons (1,709,000); mica (exports), 2636 long tons (2662). Industrially, India is one of the seven leading countries in the world. Cotton textiles, jute, iron and steel, and sugar are leading manufactured products. Cotton consumption in 1930-31 was 1,025,060,000 pounds and the production of cotton piece goods totaled 2,561,133,000 yards. In 1931, there were 307 cotton mills with 9,021,879 spindles, 173,347 looms, and 614,039 employees; 17 wool mills, with 72,691 spindles and 1389 looms; 98 jute mills, with 53,900 looms; and 46 sugar mills, with a combined rated output of 99,100 tons per annum.

The low standard of living is indicated by the fact that only 318,516 persons filed income-tax returns during 1930-31. Among these, 2154 reported incomes of \$13,300 or over, while 61 per cent reported incomes of \$1333 or less and 33 per cent incomes of \$800 or less.

COMMERCE. India is one of the seven leading trading countries of the world. Total trade figures for the years 1929 through 1931, converted into U. S. dollars at the average rupee exchange rate of \$0.4482 for 1929, \$0.3906 for 1930, and \$0.36 for 1931, were as follows:

	<i>General imports</i>	<i>Exports of British Indian products</i>	<i>Total exports, including re- exports</i>
1929 ...	\$907,400,000	\$1,173,600,000	\$1,200,200,000
1930 ...	674,500,000	919,100,000	938,400,000
1931 ...	464,385,000	556,432,000	578,130,000

The 1931 total imports, which include government stores and treasure, decreased 42 per cent as compared with 1929 and 31 per cent as com-

pared with 1930. The total 1931 exports were valued at 37 per cent less than in 1929 and at 19 per cent less than in 1930. A considerable part of the decline was due to the fall in prices.

Leading import items, in order of their 1931 values, were: Cotton yarn and manufactures, \$67,148,000 (\$129,965,000 in 1930); machinery, \$44,884,000 (\$59,910,000); vegetable, mineral, and animal oils, \$33,912,000 (\$41,878,000); raw and waste cotton, \$27,026,000 (\$16,201,000); iron and steel manufactures, \$25,785,000 (\$45,609,000); sugar, \$25,659,000 (\$42,731,000). Raw cotton, jute, and wool; jute manufactures; grain, rice, and flour; oilseeds, and tea were leading exports. Exports went chiefly to Great Britain, other British possessions, Japan, the United States, Germany, and France, in the order named; imports were supplied chiefly by Great Britain, the United States, British possessions, Japan, and Germany, in the order named. Imports in 1931 from the United Kingdom were \$166,767,000; from the United States, \$49,243,000. Exports to the United Kingdom were \$162,646,000; to the United States, \$50,480,000.

**FINANCE.** The closed budget account of the Central government for the fiscal year ended Mar. 31, 1931, showed revenue of £93,446,000 and expenditure of £102,135,000, leaving a deficit of £8,689,000. In the budget estimates for 1931-32, receipts were calculated at £101,150,000 and expenditures at £101,142,000. However, the Finance Minister, Sir George Schuster, in his annual budget speech in March, 1932, estimated a deficit for the year of £10,125,000. A surplus of £1,612,000 was estimated for the 1932-33 fiscal year.

The total debt on Mar. 31, 1931, aggregated 11,604,100,000 rupees (converting the sterling debt to rupees at 1s 6d.), equivalent at par to about \$4,235,476,500. Of this total, 7,883,000,000 rupees represented productive expenditure on railways, etc., 1,939,100,000 rupees unproductive expenditure, 1,491,400,000 rupees debts incurred on behalf of Provincial governments, and 290,600,000 rupees were on account of cash, bullion and securities held in the Treasury. The government repaid the 5½ per cent loan of £15,000,000 due Jan. 15, 1932, without having to draw on its reserves or issue further loans. A £10,000,000 5 per cent loan was raised in London in April to repay £6,000,000 due June 15. The rupee was stabilized at \$0.36499 in March, 1927, but upon abandonment of the gold standard by Great Britain on Sept. 21, 1931, the rupee fluctuated in value in terms of foreign currency to the same extent as did the British pound.

**COMMUNICATIONS.** Railway lines in operation Mar. 31, 1931, aggregated 42,281 miles of line, an increase of 579 miles during the preceding year. Of the total, 31,489 miles were Imperial State lines and 6267 miles were Indian State lines. Passengers carried on all lines during the year totaled 575,826,500 and the tonnage of goods and livestock was 110,643,000. Highways in British India and the Punjab extended 225,280 miles. Air lines linked India with London and intermediate points, with Austria, with Netherland India, and with French Indo-China. Vessels entering with cargo in the interportal trade in 1930-31 aggregated 20,410,315 tons.

**GOVERNMENT.** Direction and control of the civil and military government were vested in the Governor-General in Council, or government of India. The Governor-General, or Viceroy, was appointed by the British government, usually

for five years. The Legislature consisted of the Viceroy and two chambers—the Council of State of 60 members (33 elected and 27 nominated) and the Legislative Assembly of 145 members (41 nominated and 104 elected). With the assent of the British government, the Viceroy might override the decisions of the Legislature; he had authority to dissolve the Legislature at any time, or to extend its term. Viceroy in 1932, the Earl of Willingdon (assumed office, April, 1931). Members of the Executive Council, appointed by the Crown, were: Home Affairs, Harry Graham Haig; Finance, Sir George Schuster; Education, Health, and Lands, Khan Bahadur Mian; Railways and Commerce, Sir George Rainy; Industries and Labor, Sir Frank Noyce; Law, Sir Brojendra Lal Mitter.

### HISTORY

Despite the continuance of civil disobedience on a large scale and a revival of savage Hindu-Moslem rioting, the delicate task of framing an acceptable constitution for a federated and largely autonomous India was pushed forward steadily during 1932. Both the British Raj and Mohandas Karamchand Gandhi contributed to the progress achieved, the government by its firm but purposeful leadership and the Mahatma ("holy one") by his sensational hunger strike.

**CIVIL DISOBEDIENCE RENEWED.** The Poona truce of Mar. 4, 1931, which terminated the civil disobedience campaign of 1930-31, had gradually broken down toward the end of 1931 (see 1931 YEAR BOOK). An outbreak of terrorism in Bengal, a revival of the "Red Shirt" agitation in the Northwest Frontier Province, and difficulties in other Provinces led the government to impose drastic anti-terrorist regulations. When Gandhi returned to Bombay Dec. 29, 1931, from the London Round-Table Conference, he requested an interview with the Viceroy to discuss the restrictive decrees. The interview was refused. The wizened Hindu leader thereupon sanctioned the resumption of civil disobedience by the non-payment of taxes, boycott of foreign cloth, picketing of liquor shops, and the unlicensed manufacture and collection of salt.

In accordance with Lord Willingdon's warning, the government met the issue more decisively than during Gandhi's previous non-violent campaign. All its resources were thrown into the suppression of the movement. Gandhi himself was arrested January 3 and remained for the balance of the year in his former quarters in the Yerovda jail at Poona. The scope of restrictive ordinances was extended to all India. The All-India National Congress and its activities were declared illegal, the Congress leaders were arrested one after another, and the pickets and demonstrations of the Congress party were broken up by the police. Arrests ranged from a peak of 17,800 in February to 3776 in May. On May 31, the jails held 31,194 prisoners arrested in connection with the civil disobedience campaign. The Congress party, in turn, resisted both actively and passively. There were more assassinations of British officials, bombings, shootings, and the derailment of trains. With its leaders in custody, however, the Congress campaign lost much of its momentum; by the middle of the year it was virtually at a standstill.

**COMMUNAL STRIFE.** Dissensions between Hindus and Moslems and between the high-caste Hindu Brahmans and the Hindu "untouchables" were

only less effective than the government's firmness in defeating the civil disobedience movement. These ever-present dissensions were stimulated by the inability of the religious communities to agree at the Round-Table Conference of 1931 on the question of minority representation in the projected Federal Legislature. Moslem-Hindu clashes commenced early in the year in the native state of Kashmir and continued sporadically in various provinces throughout the year. They reached a tragic climax in the Bombay religious riots of May 14-30, in which 174 were killed, 1950 injured, Hindu and Moslem temples desecrated, and homes and shops of both groups looted and burned. Meanwhile the All-India Moslem Conference at Lahore had voted to boycott the Round-Table Conference, on the ground that the suggested constitutional settlement was too favorable to the Hindus. Moslems in general refused to support the civil disobedience campaign.

As for the "untouchables," or lowest-caste Hindus, they had turned against Gandhi for his alleged neglect of their interest at the Round-Table Conference. Upon his return to India, they voiced their displeasure by attacking the Congress crowd gathered at the dock to welcome him. Many of them declined to cooperate with their Hindu compatriots in the anti-British boycott.

**PROGRESS TOWARD SELF-GOVERNMENT.** Confronted with the inability of the Indian communities to reach an agreement as to their respective representation in the projected Federal government, the British and Indian governments forced the pace of the march toward the promised goal of responsible government. Upon the breakdown of the Round-Table Conference the previous year, Prime Minister MacDonald had announced the appointment of three Anglo-Indian committees. These were to study, respectively, the question of the franchise, the relation of Federal and Provincial finance, and the financial problem involved in the administration of the Indian states. All three committees arrived in India in January, 1932, and several months later submitted comprehensive reports.

The report of the Marquis of Lothian's Franchise Committee, issued June 2, recommended the extension of the suffrage in Provincial elections to 36,000,000 voters, in place of the 7,108,000 then eligible to vote. It urged that between 2 and 5 per cent of the seats in the new Provincial legislatures should be filled by women and proposed to extend the franchise to 6,600,000 women, in place of the 315,000 then eligible to vote. The two main qualifications for voting suggested were a mild property test and an educational test based on an upper primary standard. Special exemptions were recommended for "untouchables" and factory laborers in order to grant the franchise to large numbers of these classes. On May 6 the Federal Finance Committee submitted a report on the Federal and Provincial budgets as estimated for 1935-36, showing the incidence of taxation and distribution of expenditure. The third report, that on the financial relationship of the Indian States and the future All-India Federation, was issued July 27. Its chief recommendation was that states then paying more than 5 per cent of their total revenues to the Central government should be granted a reduction under the new federal system and that inter-state tributes should be abolished.

With this information compiled, the govern-

ment was ready to attack the more controversial issues in connection with the new constitution. On these issues, the various antagonistic groups in India had moved farther apart since the Round-Table Conference. The struggle was fought out in the Consultative Committee, established by the Round-Table Conference to continue efforts to reach an agreement among the Indian communities. Representatives of the native rulers reflected the growing reluctance of their chiefs to cooperate when they declined to accept a bill of rights as part of the new Government of India Act. A growing faction of the princes favored seceding from the proposed federation, thus blocking the whole plan. However on April 1 the Chamber of Princes reaffirmed their decision to enter an Indian federation, provided the constitution reserved their internal sovereignty and guaranteed their full treaty relations with the Crown.

On the issue of communal representation in the Federal and Provincial legislatures, the Moslems, Hindus, "untouchables," and other groups proved unable to agree. In closing the 1931 Round-Table Conference Prime Minister MacDonald had warned the Indian delegates that if they could not reach a settlement on this issue, the government would itself draw up a provisional solution. When mid-summer of 1932 brought no agreement, the British government, through the Secretary of State for India, Sir Samuel Hoare, announced a new and speedier procedure for constitutional reform. The conference and committee methods were to be scrapped for the most part. The British government would shortly announce its plan for communal representation. After that, the Consultative Committee would settle other unfinished matters. The government would then prepare a bill embracing the constitutions of both the Provinces and the federation of native States and Provinces. This was to be considered by a joint select committee of both houses of Parliament, before which Indians and others might be called as witnesses. When approved by the select committee and the government, the bill would be submitted to Parliament.

The abandonment of the conference method met with strong opposition. The Indian moderates withdrew their cooperation and their resignations from the Consultative Committee virtually wrecked that body. Accordingly the government on September 5 announced a change in Sir Samuel Hoare's policy. The function of the Consultative Committee was to be taken over by a small Round-Table Conference, including representatives of native states and of British India, to be held in London in November.

The government also carried into effect the promise made at the Round-Table Conference to establish the North-West Frontier Province as a Governor's Province under the Government of India Act. On Apr. 18, 1932, Sir Ralph Griffith was installed by the Viceroy as the first Governor of the Province and the newly elected Legislature was sworn in April 19.

**THE COMMUNAL AWARD.** The British government on August 6 announced its plan for electoral representation of the Indian communities in the nine Provincial legislatures. The Federal legislature was reserved for later treatment. A feature of the scheme was the distribution of seats among 12 separate electorates, as follows: General (mostly Hindu), 705; "untouchables" (also Hindu), 61; Moslems, 489; Commerce and

Industry, 54; Labor, 38; Landholders, 35; Sikhs, 35; Europeans (Britishers), 25; Indian Christians, 21; Backward areas, 20; Anglo-Indians, 12; and Universities, 8. Over most of the country, the depressed classes were to continue to vote with the rest of the Hindus, but for 20 years they were to vote separately, i.e. for only their own candidates, in districts where they were in a majority. Under the plan, the "untouchables" would rank third among the legislative blocs in four Provinces. Although Indian women appearing before the Lothian Franchise Committee were almost unanimously in favor of general electorates the plan provided for 37 special women's seats. In addition, the distribution of seats was heavily weighted in favor of the Moslems, the Britishers, and the landholding and commercial classes. It was charged that the award was intended to establish a bloc of the Moslems, Britishers, and Indian conservatives as a counterpoise to the Hindu nationalists.

In issuing his proposals, Prime Minister MacDonald announced that if the Indian communities reached an agreement among themselves at any time before the measure became a law, the government would be "only too glad" to withdraw its plan in favor of theirs. His plan was immediately attacked by the Hindus and particularly by the Congress party, which had always urged joint electorates as indispensable to national unity. The "untouchables," Moslems, and others were divided, some favoring joint and others separate electorates.

Mahatma Gandhi intervened dramatically in this controversy September 12 with his announcement that he would "fast unto death" beginning September 20 unless the British government rescinded its provisions for separate electorates for the depressed classes. His position was that joint electorates should be established in the Hindu community in order to eliminate the distinction between caste and out-caste and bring the "untouchables" up to the level of the caste Hindus. His real purpose was to force an agreement between the high-caste Brahmans and the "untouchables," for the British government signified its readiness to accept joint electorates once the Hindus agreed among themselves. With Indian moderates serving as intermediaries, negotiations between the Brahmans and the "untouchables" led by B. M. Ambedkar were opened immediately. They continued in an atmosphere of increasing tension after Gandhi commenced his fast.

On September 24, leaders of both Hindu factions signed a historic agreement, in which the "untouchables" surrendered their right to separate electorates in return for 148 seats in the Provincial legislatures, or more than twice as many as under the British award. Also they were promised a definite percentage of seats in the Central Legislature, a fair share of public offices and positions, and financial assistance toward the education of the depressed classes and the amelioration of their general condition. Gandhi continued his fast until the British government on September 26 accepted "with great satisfaction" the principal terms of the agreement. He took food after 149 hours of fasting, having dealt the caste system its first major blow in more than 2000 years.

Factional dissensions within the Hindu community were by no means ended, however. The agreement was repudiated by some of the ex-

treme orthodox Hindus and their failure to admit "untouchables" to the famous Guruvayur Temple caused Gandhi to threaten a renewal of his hunger strike. Moreover, a special committee, established to formulate a plan for Hindu unity in advance of a plenary session of the unity conference at Allahabad, broke up in disagreement after endless debate. The situation had some hopeful aspects. There was much enthusiasm for reform of the caste system among the rank and file of the Hindus, reflected by the official abolition of untouchability in public places in the small state of Bhor on October 19.

**THIRD ROUND-TABLE CONFERENCE.** With Mahatma Gandhi still in jail and both the British Labor party and the All-India National Congress unrepresented, the third Round-Table Conference opened in London November 17 and terminated its work on December 24. There were only half as many delegates as at the two previous sessions. While the Conference made no noteworthy change in the fundamentals of India's Constitution as proposed three years earlier, it advanced the groundwork of that document to a stage where it was ready to draft for submission to the British Parliament in 1933. An All-India federation of the native States and the Provinces of British India was envisaged, with a cabinet on the British model and a bicameral legislature. Each Province and native State was to have its own government.

The noteworthy decisions reached by the conference were as follows: (1) The report of the Marquess of Lothian's franchise committee was adopted, thus providing for a great extension of the voting population. (2) It was decided that Indian finance was to be administered by elected Indian officials, subject to "safeguards" such as the reservation of certain controls by the Governor-General and the establishment of an Indian reserve bank prior to the establishment of the Federation. The conference also reached substantial agreement on most of the other items on the agenda. These included the method of election to and the size of the two federal legislative chambers, the relation between the Federal and provincial governments, the special powers and responsibilities of the Governor-General and the provincial governors, the constituent powers of the Indian legislatures in relation to the British Parliament, the apportioning of fundamental rights, and the matter of national defense.

There remained the task of winning over the All-India National Congress to the proposed Constitution, to be framed during 1933 in a Government White Paper. Before being submitted for India's approval, the draft Constitution would first require the approval of the British Parliament and it was expected that this would be forthcoming in the autumn of 1933. On December 22, Sir Samuel Hoare announced that the situation in India had so improved that the emergency ordinances might be removed early in 1933.

**OTTAWA TREATY RATIFIED.** On December 15, the Legislative Assembly at New Delhi passed a bill ratifying the commercial treaties with the United Kingdom and the Dominions which had been independently negotiated by the Indian delegation to the Ottawa Conference.

**BIBLIOGRAPHY.** Consult Sir John A. R. Marriott, *The English in India* (Oxford University Press, 1932); Sir John Cumming, ed., *Modern India* (London, 1931); Lord Meston, *Nation-*

*hood for India* (Yale University Press, 1931); Sir Frederick Whyte, "The East: A Survey of the Post-War Years," *Foreign Affairs*, October, 1932.

**INDIANA. POPULATION.** According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 3,238,503, as against 2,930,390 in 1920. Indianapolis, the capital, had (1930) 304,161 inhabitants.

**AGRICULTURE.** The following table shows the acreage, production, and value of the principal crops for 1932 and 1931:

Crop	Year	Acreage	Prod. Bu.	Value
Corn .....	1932	4,639,000	173,962,000	\$27,834,000
	1931	4,734,000	184,626,000	46,156,000
Hay .....	1932	1,782,000	2,220,000 <sup>a</sup>	11,090,000
	1931	1,783,000	2,048,000 <sup>a</sup>	13,913,000
Wheat ....	1932	1,450,000	23,214,000	9,053,000
	1931	1,725,000	44,544,000	17,818,000
Oats ...	1932	1,965,000	58,950,000	7,664,000
	1931	1,946,000	60,715,000	10,322,000
Potatoes ..	1932	61,000	5,490,000	2,525,000
	1931	58,000	4,930,000	2,909,000
Tobacco ..	1932	13,700	10,522,000 <sup>b</sup>	1,084,000
	1931	21,100	19,306,000 <sup>b</sup>	1,255,000

<sup>a</sup> Tons. <sup>b</sup> Pounds.

**MINERAL PRODUCTION.** The industries of the coal-and-iron group were much depressed in 1931. The quantity of coal mined declined to 13,310,000 short tons (1931), from 16,489,962 (1930); by value the total for 1931 fell still more sharply from the \$26,178,000 of 1930. The total of coke, entirely from by-product plants, was 2,757,135 short tons for 1931, as against 4,984,620 for 1930; in value, it rose, however, to \$16,431,416 for 1931, according to the figures of the Bureau of Mines from \$12,166,488 for 1930. Blast furnaces shipped 1,721,925 long tons of pig iron in 1931, as against 3,195,517 for 1930; in value, \$28,458,099 (1931), as against \$52,809,137 (1930). There was also a considerable production of sulphuric acid. The quantity of petroleum produced declined to 840,000 barrels (1931), from 994,000 (1930); the value of the product, to \$750,000 (1931), from \$1,610,000 (1930). The production of stone, largely of high grade, for which a later total was not available, attained 4,541,220 short tons for 1930, and of 5,129,220 for 1929; and the value of \$19,285,709 for 1930 and \$22,191,883 for 1929. There was also a large and fairly maintained production of sand and gravel. The clay products attained the value of \$12,032,852 for 1930 and \$18,503,240 for 1929. The total value of the mineral product of the State, duplications eliminated, was \$79,226,808 for 1930; for 1929, \$96,961,947.

**FINANCE.** State expenditures in the year ended Sept. 30, 1931, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments, \$29,606,408 (of which \$5,091,985 was for local education); for interest on debt, \$140,814; for permanent improvements, \$20,407,679; total, \$50,154,961 (of which \$22,116,313 was for highways, \$6,982,764 being for maintenance and \$15,133,549 for construction). Revenues were \$58,410,002. Of these, property and special taxes furnished 28.5 per cent; departmental earnings and compensation to the State for officers' services, 8.3; sale of licenses, 45.3 (in which was included a gasoline sale tax that produced \$17,825,960). Funded debt outstanding on Sept. 30, 1931, totaled \$3,277,500. Net of sinking-fund assets, the debt was \$3,101,454. On an assessed valua-

tion of \$5,073,241,146 the State levied in the year ad-valorem taxes of \$14,712,400.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1932, was 7107.64. During the year previous, somewhat over 15 miles of line had been brought into operation and somewhat less than 15 miles abandoned.

**EDUCATION.** According to the *Journal* of the National Education Association, the most desirable school legislation was preserved, in spite of a programme of school economy incident to adverse times. For the academic year 1931-1932 the number of persons of school age in the State was reported as 976,976. There were enrolled in the public schools 687,629 pupils. Of these, 527,044 were in common schools or elementary grades; in high schools, 160,585. The year's expenditure for public-school education was \$65,597,115, as against \$72,387,197 reported for the year before. Salaries of teachers, by the year, averaged \$1220.50.

**CHARITIES AND CORRECTIONS.** The Board of State Charities, a non-partisan body, performed the central functions of the State authority with regard to institutions of care and custody. It had power to examine into the condition and management of all such institutions of the State. It also supervised the placement of dependent and neglected children, regulated the admittance of such children from other States, inspected institutions for child care, licensed children's homes and maternity hospitals, had jurisdiction over proceedings for the adoption of dependent children, examined county jails and made rules for them.

The State maintained 20 charitable and correctional institutions. These were: for mental trouble, the Central State Hospital (Indianapolis), Logansport State Hospital (Logansport), Richmond State Hospital (Richmond), Evansville State Hospital (Evansville), Madison State Hospital (North Madison), Fort Wayne School (for the young feeble-minded, at Fort Wayne), and Muscatatuck Colony (feeble-minded, Butlerville); the Village for Epileptics, Newcastle; Soldiers' Home, Lafayette; Soldiers' and Sailors' Children's Home, Knightstown. State Sanatorium (tuberculosis), Rockville; Indiana University Hospitals, Indianapolis; State School for the Deaf, Indianapolis; State School for the Blind, Indianapolis; State Prison, Michigan City; Reformatory, Pendleton; State Farm for Misdemeanants, Greencastle; Women's Prison, Indianapolis; Indiana Girls' School, Indianapolis; Indiana Boys' School, Plainfield. The total number of inmates of the 20 institutions on Sept. 30, 1932, was 19,682.

**LEGISLATION.** A special session of the Legislature assembled early in July and adjourned on August 15. It ratified the "lame duck" amendment to the Federal Constitution, to alter the dates of inaugurations and of sessions of Congress. The rate of the general tax on property was limited for the ensuing year to \$1.50 on the \$100 of assessment. Efforts to create a State tax on personal incomes failed. Cuts to the estimated total of \$4,500,000 in the State's yearly expenditure were made, largely in salaries.

With regard to the tax-limiting act, the \$1.50 maximum applied to the entire tax bill annually assessed against property, ad valorem. The maximum share of the State was restricted to 15 cents of the \$1.50. That of the subdivisions was limited

to \$1.35. Some provision for adjustment was made by the institution of special county boards to be composed of three members from the county council of a county and three other members to be named by the judge of its Circuit Court, the subdivisions of counties, however, having no specific representation. The tax limitation was expected to reduce the tax revenue of the State to some \$6,000,000 a year, from a previous \$14,000,000.

**POLITICAL AND OTHER EVENTS.** The State faced financial difficulty in the latter part of the year on account of the working of the act of the special legislative session limiting the State's direct tax on property, which threatened to leave revenues much below the total of the sum required to meet existing appropriations. Troubles occurred in the coal fields in July and August. There was no general resumption of the wage agreement between the operators and the United Mine Workers of America, which expired on March 31. Mines attempting to operate without a union agreement were in some cases subjected to violence. Troops of the National Guard of the State were sent into Vigo County to protect mines. A gathering of some 800 "hunger marchers" made a demonstration at the State Capitol at Indianapolis on July 19, presenting demands of the Unemployed Workers' Council, by report an organization promoted by Communists; no clash with the authorities occurred. In the State primaries on May 3 a shift of popular sentiment toward the repeal of prohibition was evidenced, a number of advocates of repeal obtaining Democratic or Republican nominations for the House of Representatives in the Indianapolis area.

**ELECTIONS.** Reversing the State's normal Republican majority, the popular vote cast for National candidates on November 8 was prevalently Democratic. There were cast for Roosevelt (Dem.) 862,054 votes; for Hoover (Rep.), 677,184. The Democrats also elected Federal Representatives to the majority of the State's seats and elected to the United States Senate for the ensuing full term Fred Van Nuys, Democrat, of Indianapolis, who ran as a strong opponent of prohibition and defeated Senator James Eli Watson, Republican Senate floor leader. A proposed constitutional amendment to create an income tax was defeated by popular vote.

**OFFICERS.** The chief officers of the State, serving in 1932, were: Governor, Harry G. Leslie; Lieutenant-Governor, Ernest D. Bush; Secretary of State, Frank Mayr; Auditor, Floyd E. Williamson; Treasurer, William Storen; Superintendent of Public Instruction, George C. Cole. *Supreme Court:* Judges, Julius C. Travis, David A. Myers, Clarence R. Martin, Curtis W. Roll, Walter E. Treanor.

**INDIANA UNIVERSITY.** A coeducational State institution of higher learning in Bloomington, Ind., founded in 1820. For the first semester of the academic year 1932-33 the registration aggregated 4033 students (2554 men and 1479 women). The faculty had 322 members. The endowment funds amounted to \$1,784,939, and the total income for the year, from State and private sources, was \$3,470,340. The library contained 247,334 volumes. President, William Lowe Bryan, Ph.D.

**INDIANS.** The total estimated and enumerated number of Indians, according to the annual report of the U. S. Commissioner of Indian Affairs, Charles J. Rhoads, for the fiscal year end-

ing June 30, 1932, was 317,234. This number consisted of 228,381 Indians actually enumerated and 88,853 Indians taken from earlier or special censuses and estimates based on records. The Bureau of the Census reported 72,643 Indians of the Five Civilized Tribes in 1930, and this number was substituted for the previous estimated population of the Five Civilized Tribes. The aggregate estimated and enumerated number of Indians reported by Federal agencies on Apr. 1, 1932, represented an increase over the corresponding figure for the year 1931 of 2691 or 0.9 per cent. Of the 228,381 Indians enumerated, 116,265 were males, 112,106 females, and for 10 the sex was not reported.

When the Indians enumerated are considered it is significant that 194,391, or 85.1 per cent of them, resided at the Federal jurisdiction where enrolled, while only 4749, or 2.1 per cent, resided at another jurisdiction, and 29,241, or 12.8 per cent, resided elsewhere—that is, outside of any Federal jurisdiction. Of the 32,447 Indians residing elsewhere on Apr. 1, 1930, 41 were living in the New England States, 208 in the Middle Atlantic, 3633 in the East North Central, 9234 in the West North Central, 437 in the South Atlantic, 93 in the East South Central, 2166 in the West South Central, 5120 in the Mountain States, and 6024 in the Pacific States, and for 5491 Indians the residence was either not reported or unknown. Oklahoma has far more Indians than any other State. If the Federal census population of the Five Civilized Tribes is included, the Indian population is 94,552, or 29.8 per cent of the aggregate Indian population. Arizona ranks next with 48,162, or 15.2 per cent. According to the enumerated population only two other States have an Indian population numbering more than 20,000, New Mexico and South Dakota.

In his annual report, Dr. Ray Lyman Wilbur, Secretary of the Interior, stressed the responsibility of the U. S. Government to lead the Indian race into competent citizenship. He said:

It looks like a long process, but in the past four years there has been a sufficient change in direction in government policies to bring the goal within sight. We are not out to capture any more Indians, and our aim is to qualify those Indians now under our care, and their children, to take their place in the competitive system which surrounds them. That means the ultimate breaking up of the reservation system and its artificial islands in our civilization. Because of a racial tendency toward dominance of the tribe by the old people, it is difficult to make education "stick"; youngsters, having no kindred associations in white communities and having a characteristic homeward urge, have naturally drifted back to the home community and to its lack of independence. The progress of the Indian and of our assistance to him will always be hampered by a vociferous and emotional fringe of white people who encourage his grievance. The Indian suffers alike from enemies who exploit his property and friends who exploit his grievances. We see no valid reason why those who have more than one-half of white blood should not be promptly released from the wardship imposed by the Government and given control over their persons and property.

**EMERGENCY RELIEF.** Beginning in the summer of 1931, drought and grasshoppers devastated the States of Nebraska, North and South Dakota, and eastern Montana. Other States were also affected, and by early October the Indian Office was confronted with appeals for relief from most sections of the 26 States in which the Federal Government had jurisdiction over Indians. The Indian Service had little available money for relief work until after Congress met in December, but beginning in November the Red Cross contributed over a period of several months

\$192,260 for use in those sections of extreme drought.

With the coming of winter the general relief need became so great that the Army was called upon for surplus stocks. Fifty-five carloads of clothing, including overcoats, jackets, gloves, wool trousers, underwear, shirts, socks, shoes, and blanket material were obtained from that source; 6,190,000 lbs. of flour for human consumption, and 5,500,000 lbs. of crushed wheat for stock feeding, turned over by the Federal Farm Board to the Red Cross for relief purposes, was distributed to the distressed Indians.

A succession of unprecedented storms began in New Mexico and Arizona during the month of November. Storm upon storm had by January covered a large area of the Navajo jurisdictions with a blanket of snow. Roads were impassable and marooned groups in the mountain fastnesses faced death and starvation. Within a few hours after the plight of these unfortunate people had been made known by the Commissioner of Indian Affairs to the Assistant Secretary of War, six airplanes were on their way from California into the Navajo country. In four days over 30,000 lbs. of food were dropped to the distressed Indians.

**EDUCATION.** The most significant thing in education, according to the report of the Commissioner, was the continuation of the policy to change the boarding-school attendance to local day or public school attendance wherever possible. At the end of the year six more boarding schools were closed and two were placed on the list to be closed at the end of the year.

The report also stressed the reduction of numbers and particularly the elimination of small children from the large boarding schools. The programme was begun several years ago which involved the dropping of one elementary grade each year in the larger schools. At the close of the fiscal year, Haskell Institute at Lawrence, Kans., and Flandreau Indian School, Flandreau, S. D., had no pupils below the ninth grade. The Albuquerque Indian School had no pupils below the seventh grade; Sherman Institute, Calif., Salem Indian School, Ore., and Phoenix Indian School, Ariz., had no pupils below the sixth grade. With the above-mentioned changes there were at the beginning of the school year about 2000 fewer Indian children in the boarding schools than there were a year previous.

A substantial increase was shown in the number of contracts with school districts for tuition for Indian children in public schools and in the actual numbers enrolled, the number of contracts made for the year 1932-33 totaling 1160 as compared with 998 for the fiscal year 1931-32, and 841 for the year before. The number of Indian children attending public school was over 48,000 as compared with 43,000 in 1931.

In higher education the following opportunities were offered: (1) Educational loans from Federal or tribal reimbursable funds repayable in eight years, (2) room and board at Indian schools located close to universities and colleges in return for a certain amount of labor, (3) payment of tuition fees to State universities and colleges, and (4) scholarships at various institutions.

More gardens and field crops were planted during the spring than for any time in the past ten years. From 25 reservations the extension agents reported for the calendar year 1931, 12,690 gar-

dens planted, with an acreage of 10,846, and 138,381 acres planted in field crops. In the home extension work which was carried on in 10 reservations, 2975 gardens of 2164 acres were planted, 2665 garments renovated, 9000 articles of clothing were made, and other projects, such as poultry raising, cheese making, pest eradications, tribal arts and crafts, food conservation and storage, better bedding, home care, etc., were promoted.

**INOUE, JUNNOSUKE.** A Japanese banker and statesman, died in Tokyo, Feb. 9, 1932. He was born in Oita-ken in March, 1869. On his graduation from the Tokyo Imperial University in 1895 he entered the service of the Bank of Japan, and after having occupied important posts was promoted to director of the business bureau in 1905. During 1908-11 he was the Bank's agent in London. On his return he was made vice-president of the Yokohama Specie Bank and in 1913 president of that institution. He was twice governor of the Bank of Japan, in 1924 and again in 1927-28, and thrice Minister of Finance, in the Yamamoto cabinet of 1924, in the Hamaguchi cabinet of 1929-30, and in the Wakatsuki cabinet of 1931. While holding the Finance portfolio he succeeded in stabilizing Japan's currency and in restoring the gold standard. His drastic budget reductions, however, had aroused the opposition of the military and naval clique, and he was shot by a hired assassin, a member of the reactionary Seisanto party, as he was about to enter a political meeting in a suburb of Tokyo.

**INSURANCE.** Continued depression created additional problems for the insurance business. Those of the most immediate concern arose in the investment department. Fire and casualty companies lost so much surplus by depreciation of securities in the first half of the year that a number of them reduced capital in order to create surplus. Approximately \$120,000,000 was transferred from capital to surplus by these transactions, and in addition companies which on January 1 had more than \$12,000,000 capital retired, reinsured or were merged with others. Had not insurance commissioners permitted amortization of high-grade bonds and valuation of lower grade bonds and of stocks at the average of the market values of June 30, 1931, and June 30, 1932, many companies would have been technically insolvent on July 1. Life insurance companies were little troubled by market fluctuations but were confronted with defaults in payments on mortgages, foreclosures, handling of real estate taken over, declining interest rates, and the necessity of keeping much cash on hand to meet current demands.

In the operating departments defects which had been permitted in prosperous times were given close attention as they could not be tolerated under adverse conditions. Weak spots in well considered plans became apparent and had to be remedied. Evils resulting from a wrong mental attitude on the part of some company managements were in evidence. During the period of rising markets they had apparently forgotten that theirs are primarily underwriting institutions, with investment of funds as a necessary and very important incident, and had come to regard them as financial institutions whose insurance operations were carried on chiefly to bring in money for investment. A few scandalous failures of life insurance companies resulted from their control by men who did not recognize the fiduciary character of insurance companies but saw clearly the opportunities for exploiting their assets.

From an underwriting standpoint the year was disappointing. Fire and casualty companies suffered a marked decrease in premium income, and expense ratios necessarily went up. Fire insurance companies had about a normal loss experience, but casualty and surety companies continued to have very heavy losses on some of their major classes. Although the mortality among the industrial population was low, life insurance companies experienced an increased mortality cost, due largely to deaths of heavily insured men, by heart disease, by suicide and by complaints which they might have thrown off if they had not been worn down by worry and overwork.

Legislation was not as unfavorable as it might have been. Congress increased federal taxes and a few States increased premium taxes. The year closed with a prospect of heavier taxes being imposed in 1933 when many legislatures will be seeking new sources of revenue.

**LIFE INSURANCE.** With very few exceptions life insurance companies stood up splendidly under the heavy strain. The exceptions were a few, mostly smaller ones, which had been poorly managed or had fallen under control of interests

which substituted poor assets for good ones. Several of these went into the hands of receivers. In spite of their generally lenient policy toward mortgagors, the established, well managed companies were obliged to take over much real estate and this resulted in a considerable loss in investment earnings. Although the demand for policy loans decreased after the middle of the year the life insurance companies found it necessary to carry very large bank balances, thus putting these assets on a low interest earning basis. Some companies reported increased repayment of policy loans, but this often was accomplished by surrender of the policies. The unfortunate mortality experience among heavily insured risks over 40 years of age has created the probability of increased rates for new risks admitted at the higher ages. That experience also made companies more cautious about accepting applicants for very large amounts of insurance or those heavily insured in other companies. Additional companies increased their restrictions on provisions for waiver of premiums or payment of benefits for permanent total disability or advanced rates for such provisions as new policies are issued. The companies, however, have on their books millions of dollars of insurance under policies containing these provisions. The experience is such that a few prominent companies have reduced dividends to holders of such policies. The provision for double indemnity in the event that death is caused by accidental means resulted in many claims for double indemnity where it was doubtful whether death resulted from accident or from carefully arranged suicide.

Announcing the scale of dividends they would pay policyholders during 1933, a few companies continued the 1932 scale, at least temporarily, but the large majority announced reductions, often of 15 or 20 per cent, from the 1932 scale and explained that the reduction was necessary because of the reduced mortality savings and the smaller excess of interest earnings over that necessary to meet reserve requirements.

Statistics compiled by the Association of Life Insurance Presidents, based upon actual figures reported by member companies in November, with estimates for the remainder of the year, indicated new life insurance of \$14,700,000,000 or 13.2 per cent less than in 1931 and 23.7 per cent below the peak year 1929. The insurance in force at the end of the year was \$103,700,000,000, a decrease of \$4,300,000,000 during the year, the first decrease in a long period. During the year life insurance companies paid policyholders and beneficiaries in cash or credits \$3,100,000,000, or \$500,000,000 more than in 1931. They paid or credited to beneficiaries \$925,000,000 for death claims and to living policyholders \$2,175,000,000 in matured endowments, annuities, surrender values, dividends and disability benefits, of which \$1,400,000,000 was for surrender values; and in addition \$2,048,000,000 was paid to them in policy loans. At the end of the year the admitted assets of United States legal reserve life insurance companies amounted to \$20,750,000,000, an increase of \$590,000,000. Of \$19,000,000,000 of assets owned by 52 leading companies 36.3 per cent was invested in mortgages, as compared with 42 per cent at the end of 1931; 36.8 per cent in bonds and stocks, as compared with 37.2 per cent at the end of 1931, and 16.4

per cent in policy loans and premium notes, as compared with 13.3 per cent in 1931.

**FIRE INSURANCE.** Premium income of fire insurance companies continued to fall during the year, with the prospect that the total premiums of stock companies would be approximately \$700,000,000 for the year, as compared with over \$1,000,000,000 in 1929. The decrease was due largely to adjustment of insurance to lower values, to renewing for only one year policies which in the past had been written for three or five years and to dropping of insurance because of inability to pay premiums. This fall in the volume of premiums cut the incomes of brokers and agents, who are compensated by commissions, and threw many of them more deeply in debt to their companies. Increased efforts were made by companies to collect the balances due them and many agencies were placed in the hands of trustees to be administered and some were forced into bankruptcy.

The reduction in the companies' incomes was due largely to the smaller average premium per policy. The number of operations was not greatly reduced and, in spite of all economies, operating costs consumed a larger portion of the premium income. Fire losses of the country were slightly below those in 1931, and companies did not complain about their loss ratios, except that a large number of dwelling house fires showed signs of incendiarism. However, with a normal loss ratio and a high expense ratio there was little prospect of an underwriting profit.

The drop in security values early in the year was very serious for fire insurance companies, especially those which had invested largely in common stocks. In the past the bonds owned by fire insurance companies have been entered in financial statements at market value, but the New York Insurance Department directed companies to enter those meeting certain requirements on an amortized basis in their June 30 statements. This amortization, together with the acceptance of the average of market values of June 30, 1931, and June 30, 1932, for stocks and lower grade bonds enabled many companies to show a surplus which otherwise would have shown impaired capital.

More than twenty fire insurance companies, including many of the largest, increased surplus by reducing capital and several companies were merged. All told nearly \$90,000,000 was transferred from capital account to surplus account by fire insurance companies during the year. Many companies reduced their dividends to stockholders in order to conserve surplus. The number of fire insurance companies was reduced by fifteen or twenty by merger, voluntary retirement or reinsurance.

Individually and collectively companies endeavored to effect economies. Many unprofitable agencies were discontinued. Reductions were made in the cost of operating the numerous rating, inspecting, adjusting and supervisory organizations where this could be done without loss of efficiency. The Insurance Executives' Association, formed in 1931, completed its organization by the election of Mr. Paul L. Haid as president. He had previously been president of several very important companies and enjoys the confidence of fire underwriters generally. He immediately began putting into effect a programme of efficiency and economy, but sufficient time has not yet elapsed to show many of the results. A

long standing controversy between fire and burglary insurance companies on one side and inland marine insurance companies on the other, growing out of the encroachment of the inland marine companies on the field of the others, was partially settled by a ruling of the New York Insurance Department defining the proper field of each class.

Owing to the low price of grain, farmers bought much less hail insurance on growing crops than usual, but the loss ratio on the reduced volume was favorable. The year was not a bad one for companies writing windstorm insurance as destruction of property by wind was not excessive.

The experience of fire insurance companies in writing fire and theft insurance on automobiles was far from satisfactory. As compared with 1931, production of new cars and trucks fell off 40 per cent. By reason of the low average price of cars (around \$400) on account of age and the fact that most of the new cars purchased were low priced, many owners went without fire and theft insurance. Cancellations of policies for non-payment of premiums were the heaviest in 10 years. These and other factors resulted in reducing the premium income about 20 per cent. The low price of used cars made theft unattractive and the theft losses of the insurance companies did not increase, but total losses by fire did increase. The loss ratio went up and underwriters concluded that they had been unwise in reducing rates in previous years.

**CASUALTY INSURANCE AND SURETYSHIP.** The experience of casualty and surety companies generally speaking was bad. Premium income continued to drop and losses in several important branches were higher. Depreciation in security values in the earlier part of the year caused a number of companies to reduce capital by amounts aggregating more than \$35,000,000 in order to create more surplus. Several companies were merged, resulting in further capital reductions of about \$7,000,000. A few failures and reinsurances occurred.

Notwithstanding increases in rates for workmen's compensation insurance in 1931, the class proved so unprofitable that efforts to secure further increases were made in 1932 but met with only partial success. The stock companies sought to increase rates and then allow a discount on premiums of \$1000 or more, reducing the commissions to agents and brokers on these larger premiums. This was strongly opposed, and several States refused to sanction the discount on large premiums on the ground of discrimination. The mutual companies sought smaller increases in rates. With the companies divided, a number of States either refused to permit rate increases or granted smaller ones than were asked for. Premium income was reduced by reason of reduced payrolls, but awards of compensation were not reduced proportionally as they are based on full-time wages. Medical and hospital costs continue to increase. Underwriters are at a loss to know how to deal with this unprofitable class of business.

In the absence of official figures the automobile business of casualty companies is believed to have yielded an underwriting profit of 2 or 3 per cent in 1932 as compared with an underwriting loss of 4 per cent in 1931. The premium income of stock companies fell off about 13 per cent, but mutual companies are believed to have

fares better in this respect. Public liability rates were increased approximately 8.7 per cent, but rates for excess limits were materially reduced and property damage rates were reduced slightly. Elimination of merit rating of private passenger cars also increased average rates. Increase in rates, stricter underwriting, a slight decrease in automobile fatalities per 1000 registered cars and a slight improvement in the claim situation contributed to produce an underwriting profit. Companies were obliged to cancel thousands of policies for non-payment of premium and to charge off considerable in bad agency accounts. Notwithstanding the smaller premium volume, drastic economies enabled companies to reduce their expense ratios slightly.

Steam boiler insurance premiums were less in volume than in any year since 1922 and more than 30 per cent below those of the record year 1929. Machinery insurance premiums totaled less than half those of 1931 when much of the business was renewed for three years. A fair amount of new business was written in 1932 but companies had to pay back much in premiums because policies were suspended on account of boilers and machinery being out of operation. So serious did this become that companies were obliged to adopt a rule to pay return premiums only if suspensions were for three consecutive months or more. The cost of inspection is the largest element of expense in these classes of insurance and companies are obliged, for their own protection, to keep up inspections during suspension of operation so as to be assured that when operations are resumed the boilers or machinery will be in a safe condition. The reduced premium income without corresponding reduction in expenses therefore affected the expense ratio adversely, but with low losses some companies probably made an underwriting profit on these classes.

Burglary insurance decreased in volume as values went down and many who had carried insurance dropped it. Thievery and robbery losses were so alarming that rates were increased, but the premium income on this class decreased as bankers reduced their insurance. While some companies may have made a little profit on burglary insurance, the majority suffered a loss. One discouraging feature is that it required years of effort to induce people to buy burglary insurance and now many of them have ceased to do it because of low values and poverty and the work of educating them will have to be repeated.

Premium income on surety bonds fell off seriously. Companies were obliged to write depository bonds with extreme caution because of the numerous bank failures and they also were cautious about writing the bonds of public officials because under many of these they assume a depository hazard. There was comparatively little work for contractors and premium income from their bonds was smaller. The income from bonds required in court actions and those of receivers was probably larger than in 1931. While there was a reduction in premiums on fidelity bonds guaranteeing the honesty of employees, due to unemployment, the decrease in this branch was not so great as in the surety branch. Losses under depository bonds continued to be heavy. Eventually there will be considerable salvage as banks are liquidated or reorganized, but for two years it has been very disappointing. There are heavy losses under bank-

ers' and brokers' blanket bonds, but the premium income on these classes is so large that the loss ratio is reasonable. The necessity to be very rigid in their underwriting to avoid being overwhelmed by losses has caused the surety companies to lose favor with the public to some extent and they may be some time in regaining it.

**INTERNAL COMBUSTION ENGINES.** The completion of a number of long pipe lines for the transmission of natural gas, together with their pumping stations, and the postponement of construction on other lines previously projected, was responsible for very little activity in the gas-engine field during the past year.

As for Diesel engines, a few were installed in industrial plants and office buildings, but central stations made practically no additions to their units of this type. The largest stationary installation was in the municipal electric light plant serving the city of Vernon, Calif., where two 7000-horsepower Diesels were put in operation. Three more are on order.

In the marine field, according to the U. S. Department of Commerce, the number of Diesel-driven vessels has increased in the past ten years from 95 to nearly 3500. A considerable number of large passenger ships are propelled by Diesels, recent among which are the "Georgic," driven by two 10,000-horsepower ten-cylinder, double-acting engines of this type, and the "Neptunia" with 18,000 horsepower. The German Government is building two more naval vessels, similar to the much-discussed pocket battleship, "Deutschland," which is reported to be propelled by eight double-acting Diesels of 7100 horsepower each.

A number of light-weight Diesels were put in service on rail cars to handle short-haul traffic and others are being employed on trucks for long-haul traffic on the West Coast. Development of a very light Diesel for aviation is being carried on and successful flights have been attained. In the automotive field it is possible to convert gasoline engines into Diesels by substituting a new cylinder head and the proper fuel-injection devices. Such engines, however, have not as yet proved practicable for passenger cars.

Much research work is being carried on with a view to determining the most suitable fuel characteristics for high-speed Diesels, as it has now been established that such engines require a different grade of fuel from that of the slow-speed engines.

Supercharging to obtain overload capacity is now being extensively employed in Europe.

**INTERNATIONALISM. CHRISTIAN UNITY.** Although the depression did not prevent the holding of the Olympic Games in the summer of 1932 at a reported profit of over \$1,000,000, it caused church leaders to advocate the cancellation of all international Christian gatherings. Fortunately the most important ones were not cancelled, although all were reduced in size and representative character.

During the first week of August, there met at the Hotel Beau Séjour in Geneva the Universal Christian Council for Life and Work—the "Stockholm movement" for Christian unity through practical application of Christ's teachings without waiting for theological agreement. The meeting convened under the chairmanship of Dr. Bell, Lord Bishop of Chichester, in the same room where, in 1920, the first group met to plan the Stockholm Conference. There were fifty-seven present, representing a score of nations. Not a few had been in the original group, though many of the outstanding leaders of a dozen years ago have passed on, notably Archbishop Söderblom and the Bishop of Winchester. Frau Söderblom was the leader of a group of women leaders present, and she spoke in four languages of the genius of the movement, of its future, and its past.

The accomplishments of the Council were notable. A special steering committee, under the leadership of Bishop Bell, brought in a programme based on four basic needs: (1) economy, (2) deeper spiritual influence, (3) continuity and guidance in policy, and (4) closer coöperation with other ecumenical bodies.

Dr. Henry A. Atkinson and Dr. Adolf Keller, Secretaries of the Council from the beginning, both resigned on account of the pressure of other duties, and Dr. Henry L. Henriod, formerly Secretary of the World Christian Student Federation, was made General Secretary. He has become likewise General Secretary of the World Alliance for International Friendship through the Churches; and this joint relationship brings the Stockholm movement and the Alliance into intimate touch. A Swiss by birth, Dr. Henriod has command of the continental languages as well as English and is admirably fitted for the difficult tasks committed to him.

The possibility of holding the next world conference in 1935—ten years after the first one at Stockholm—was carefully reviewed and final decision reached that the 1934 meeting of the Council should be an enlarged meeting and that the world conference should be held not later than 1937.

Strong action on the matter of disarmament was taken and plans for coöperation with other Christian bodies in encouraging more vigorous action on the part of the churches in the nations. The Council was encouraged to learn in detail of the effect of its Basle Conference on Unemployment, whose action was presented to the Prime Ministers at Lausanne and was credited with having helped in that important conference.

**INTERNATIONAL POLICE.** A proposal has been made by Barron Collier, Special Deputy Police Commissioner of New York City in charge of foreign police relations, for the organization of an International World Police, its members made up of responsible police executives of every major municipality in all the countries of the world. Already the plan has been approved in

general by the three leading police organizations of the world—the International Police Conference, the International Criminal Police Commission and the International Association of Chiefs of Police, which through resolutions adopted by the first two at their September conference in Paris, and by the last at its October conference in St. Petersburg, Fla., have laid the groundwork for the necessary organization. The next step will be that of working up the details of operation of the International World Police, and the selection of a headquarters which will be, in effect, a clearing-house of international criminal information.

The objective of the International World Police will be the handling of international police problems exclusively. These problems in particular apply to immediate identification of criminals; their detention and prompt return to proper jurisdiction for trial, the eradication of the white-slave traffic, drug traffic, etc., further perfection of modern-day methods of police communication, and, above all, the efficient and friendly coöperation of the police officials of the various nations, among themselves and among their governments.

In presenting his proposal for an International World Police to the three police organizations named, Commissioner Collier nominated Dr. Johann Schober (q.v.), former Chancellor of Austria, as President. Others prominent in the movement are: Commissioner Edward P. Mulrooney of the New York Police Department; Hon. M. Louis Ducloux, Contrôleur General de Recherches Judiciaires, Ministry of Interior, Paris, France; the Hon. Florent Louwage, Commissioner and Chief of the Police Judiciary Delegations, of Belgium; Dr. Antonio Pizzuto, Sûreté Publique, Rome, Italy; Dr. Hans Menzel, Director of Police and General Administration, Ministry of the Interior, Berlin, Germany; Hon. Cesar E. Etcheverry, Police Delegate to the Argentine Embassy, Paris, France; Dr. Van Houten, Major de la Maréchaussée Royale, the Netherlands. Organization of the International World Police was to be completed in Chicago in July, 1933.

This new organization is not intended to supplant any of the established police organizations existing to-day. It will operate solely as a clearing-house of all police organizations and will be entirely international in its scope. It will speed up international police relations to the extent that it will effectively block the door through which international criminals, with the aid of modern transportation, at present operate.

**WALTER HINES PAGE SCHOOL OF INTERNATIONAL RELATIONS.** Professor Gilbert Chinard, member of the School, has continued, with the help of Miss Mary Francis, as research assistant, his study of the changes and fluctuations in American popular sentiment toward France, as revealed in contemporary periodical literature. Dr. Frederick Sherwood Dunn, Associate Member, has brought near to completion his study of the legal control of international relations, based primarily upon a consideration of the theory and practice of diplomatic protection abroad, with particular reference to Mexico; and it is hoped that it will be ready for publication this autumn. His work in this field has led him into the closely related problems of intervention, which he proposes to make the subject of his study next year. For that purpose, arrangements have been made

with Miss Mary E. Allen, under temporary appointment as a research assistant, to carry on under his supervision certain preliminary researches in England.

One aspect of the great loss suffered by the School through the death of Prof. John H. Latane (q.v.), last January, is that his study of American isolation was left at such a stage as affords no basis for a continuation of his work. Dr. Maurice T. Price, designated as a Fellow, is making a psycho-sociological case study of the so-called "Shanghai Incident" of May 30, 1925, and of the economic, political, and emotional elements of the cultural conflict involved therein.

Of a somewhat different type, concerned rather with the process of fact-finding than with that of the analysis of motivation, is the investigation which has been undertaken by Dr. Lazare Teper, research assistant, into the history of the Soviet Government's attitude and policy, in the course of various negotiations, with regard to the debts of the Czarist and Provisional Governments of Russia and other financial claims against the Russian Socialist Federated Soviet Republic.

Along the same line of fact-finding, rather elaborate plans were worked out, during the summer and autumn of 1931, for the organization, under the auspices of the School, of a group of about a dozen American scholars who have specialized upon various aspects of the present Russian situation, for the purpose of making a coördinated set of factual studies of the economic, social, and political problems presented by the Soviet experiment. The arrangements for that purpose had reached a point at which the scholars chosen for the purpose were prepared to proceed with the work: but to our great disappointment the project had to be abandoned, as it proved impossible to obtain the necessary funds.

Since the establishment of the School, one of the objectives constantly kept in view has been the organization of research on the present international economic situation. It has been felt, however, that such a project should be undertaken only by, or under the guidance and supervision of, someone qualified by detachment and breadth of view, and if possible by experience, to impress upon the work an authoritative character. The failure thus far to enlist the cooperation of an economist of the requisite qualifications is particularly regretted. Efforts to that end are being continued.

**UNIVERSAL CHRISTIAN COUNCIL.** The American section of this council for life and work, which constitutes the Commission on Relations with Churches Abroad of the Federal Council of the Churches of Christ in America, held a meeting in New York on May 27. The purpose of this was for the consideration of the proposed world conference, after the order of Stockholm 1925, to be held in 1935. International relations, the social application of Christianity, and the problem of church unity were discussed.

**WORLD ALLIANCE THROUGH THE CHURCHES.** The seventeenth annual meeting and International Goodwill Congress of the World Alliance for International Friendship Through the Churches was held in New York City, November 10-11-12. The theme of the meeting was "World Understanding and Economic Justice." The Congress emphasized the importance of securing world understanding as the most essential factor in the

reestablishment of normal economic, industrial, and social conditions.

**WORLD CONFERENCE FOR INTERNATIONAL PEACE THROUGH RELIGION.** The Executive Committee met in Geneva, August 16-18, with an attendance of fifty members and a number of invited friends interested in the movement. The Committee, as it discussed ways and means of furthering peace, was not unmindful of the exceeding gravity of the world situation. In fact, with representatives from so many nations and religions, it would have been impossible not to have felt the weight of depression that has settled upon the shoulders of the world. It is conservatively estimated that in the great industrial countries there are at least 25 million people out of employment, and the economic life, practically, of the whole civilized world has almost completely broken down. Since the war, we have passed through a series of crises and a large number of intricate and difficult problems have demanded individual attention at various times, and if they have not been solved satisfactorily, at least open war has been averted. All these old problems are to the front now, and some new ones present themselves which demand immediate attention. Can the peace machinery as now constituted bear the strain of the added burdens? Some progress has been made, but everyone asks: have we gone as far as we thought we had in getting rid of war and the threat of war?

Never according to the Secretary were the religions of the world and religious leaders challenged in the same way and to the same degree as at this time. When the Church Peace Union first proposed a World Conference of religious leaders representing the various faiths of mankind, not one of those responsible for the suggestion realized how far-reaching and significant would be the issue of that proposal.

After considerable discussion it was agreed that in view of recent developments, the purpose of the organization would be to work for the development of a world-wide cooperative interest on the part of various religions in behalf of world peace, rather than to consider itself *simply the machinery for the holding of a single world conference*. In view of the general turmoil and uncertainty throughout all nations, and the imminent danger of war, the problem is not whether a world conference can be held. It goes much further. The threat of war is a threat to every type of civilization and the responsibility for preventing war is a joint responsibility of all the religions; therefore it was agreed that the organization of groups within the various countries should be strengthened, and that other areas of the spiritual life of mankind should be brought into the general movement. For instance, little or no contact has been established with the great Moslem world. Dr. S. M. Abdullah, representing the Moslem Faith, spoke on this point and felt that the effort not only would be of value but that an adequate organization could be established.

In view of this decision, the following set of proposals were adopted, and now become, in a sense, the Charter of the Movement:

- I. The ideals of religion are to be recognized as motive and inspiration in international affairs.
- II. Chief among these are:
  - (a) The recognition of human brotherhood.
  - (b) Cooperation in behalf of human betterment.

- (c) The recognition of love as expressing itself in the mutual giving of justice
- (d) The emphasis of hope rather than fear.
- III. Each regional and cooperating group should adopt practical methods and programme best fitted to express these principles in its own circle of influence.
- IV. Membership in the World Conference, as well as in all groups, shall be based on individual devotion to the purposes of the World Conference.
- V. In all activities and programmes, the emphasis shall be upon spiritual and educational methods.

After a lively discussion this Resolution was adopted:

The Executive Committee of the World Conference for International Peace through Religion, assembled at Geneva, August 16-18, while deeply disappointed in the achievements of the first session of the Disarmament Conference, nevertheless rejoices in the fact that the Disarmament Conference met and remained in session until there had been secured an agreement to continue its efforts for the mutual limitation and the reduction of the weapons of war. This Committee trusts that these efforts will now be made with a reinforced determination to effect this object.

Realizing the special responsibility of the religious communities of the world for strengthening the spiritual forces that make for peace, we urge the governments and all responsible agencies to agree upon and to further plans to increase mutual understanding and good will by means of education and the appropriate use of present-day methods of disseminating information.

The Executive Committee reaffirms its conviction that the hope of all social progress, economic stability, and the development of religious life throughout the world depends, in large measure, upon the elimination of war in this generation. The burden of arms under which the world is staggering today and the lack of effective juridical guarantees against war, constitute the greatest menace to peace and good will. We, therefore, call upon all religious-minded people everywhere to support the efforts made for the limitation and reduction of arms as a first step toward total disarmament in the near future.

The Conference took account of its loss in the death of Monsignore Seipel (q.v.) and unanimously passed the following resolution:

WHEREAS the death, on August 3, 1932, of Monsignore Ignaz Seipel, former Chancellor of Austria, has deprived the Continent of Europe of an outstanding political statesman and the entire world of a tireless worker for international peace and good will, and

WHEREAS, in addition to his numerous duties at home and abroad, Monsignore Seipel found time to act as one of the presidents of the World Conference for International Peace through Religion, and thereby gave practical proof of his desire to promote world peace.

THEREFORE BE IT RESOLVED that the World Conference for International Peace through Religion records its sentiments of profound loss in the death of Monsignore Seipel, and

BE IT FURTHER RESOLVED that a copy of these resolutions be incorporated as a part of the minutes of the executive meeting of the World Conference for International Peace through Religion held at Geneva, August 16-18, 1932

Upon the nomination of the Roman Catholic members of the Committee, His Excellency Giuseppe Motta, President of the Swiss Confederation, was elected as one of the Presidents, to take the place of Monsignore Seipel.

**INTERNATIONAL JUSTICE.** PERMANENT COURT OF. See LAW IN 1932; LEAGUE OF NATIONS; WORLD COURT.

**INTERNATIONAL LABOR OFFICE.** See LEAGUE OF NATIONS.

**INTERNATIONAL LANGUAGES.** See PHILOLOGY, MODERN.

**INTERNATIONAL LAW.** The Foreign Policy Association during 1932 issued a pamphlet presenting the pros and cons of international sanctions. Dr. Raymond Leslie Buell, research director of the association, presented the arguments in favor of sanctions, Prof. John Dewey those for the opposition. Dr. Buell believes that force in some form is necessary in

international relations and that it should be under international control. Dr. Dewey, on the other hand, believes that the use of sanctions is so impracticable "that any attempt in that direction is sure to make international relations worse instead of better."

One important development during the year in the matter of the codification of international law was the work of the Harvard Research Bureau under Prof. Manley O. Hudson which continued the study of restatements of several new topics, including jurisdiction and punishment for crime, extradition, and neutrality. This has been published in its entirety as a Supplement to *The American Journal of International Law* for July, 1932.

The Inter-Parliamentary Union published an elaborate outline under the title of "Synthetic Plan for the Development of World Law." At the 28th Inter-Parliamentary Conference the Committee on Juridical Questions was asked to make a methodical study of the different chapters of this outline with a view to submitting to successive conferences of the Union proposals likely to forward the development of the unification of world law.

The Report of the Special Committee of the International Institute of Comparative Law is of as much interest. A meeting of the Congress of the Institute was held at The Hague in August, 1932. See LAW IN 1932.

**INTERNATIONAL WORLD POLICE.** See INTERNATIONALISM.

**INTERPARLIAMENTARY UNION.** The Twenty-eighth Conference of the Interparliamentary Union convened Wednesday, July 20, in Geneva in the League of Nations Building built for and occupied by the Arms Conference. It met in the same building Thursday, July 21, and during the forenoon of Friday, July 22. On the 23d the Conference moved from the League building to what is known as the Salle Centrale, Place de la Madeleine, on the other side of the river, where it ended its sessions Tuesday, the 26th. This moving of the Conference was due to one of the most turbulent experiences in the history of the Union. The circumstances of this unpleasant occurrence which happened on Friday morning, the 22d, grew out of an address by the Italian delegate, Prof. Carl Costamagna, a member of the Italian House of Deputies. During his remarks, the Professor, a member of the faculty of the University of Rome, read a carefully prepared paper in which he condemned Socialism, defended Fascism, and ended with a plea for international justice.

As he was leaving the platform, M. Pierre Renaudel, Socialist member of the French Chamber of Deputies, without recognition from the chair, arose and objected to the Italian's frequent use of the word "justice" and to his "lecture to us on the parliamentary rules of Italy, a country without a free parliament," and added: "There is no justice where liberty does not exist." The Fascist delegates sprang to their feet and cried for an immediate apology. "Apologize?" exclaimed M. Renaudel. "Never to the representative of the government which ordered the murder of Matteotti!" In the confusion that followed, the Italian delegates to the Disarmament Conference, who had been sitting in the next hall, rushed into the arena. General Italo Balbo, Fascist Air Minister, signaled to the Italian delegates to the Union to leave the room and

led them down the hallway past the Disarmament Conference auditorium to the pressroom. After a whispered consultation he commanded: "We must have an immediate apology or we shall refrain from the Conference." Eric Hellin, of Sweden, who was acting as Chairman of the meeting, had in the meantime adjourned the Conference and called a meeting of the Council, which is the governing board of the Union. The French Deputy maintained that, as he had spoken of Matteotti's murder after the meeting had been adjourned, the Fascists had no basis for withdrawing from the Conference, and he had no desire to apologize. Premier Benito Mussolini, it was understood, approved General Balbo's position and suggested that M. Renaudel's ejection from the Conference be demanded. General Balbo then visited Sir Eric Drummond, Secretary of the League of Nations and demanded that the League facilities should be denied to the Conference until an apology had been made. The Secretary General acquiesced in this demand and barred the use of the League building to the Conference thereafter.

M. Renaudel agreed to prepare and did prepare in writing a statement to the effect that since he spoke in the Conference without being recognized by the chair it was proper that he should be called to order. He was willing to go further and say that nothing should appear in the record relative to the occurrence, and that so far as he was concerned the matter might be considered as if nothing had happened. This being unsatisfactory to the Italians, the Italian Group withdrew not only from the Conference, but from the Interparliamentary Union. Referring to this incident, officials of the Union considered the departure of the Italian delegation to be most regrettable. They expressed the hope that the day will not be far distant when the representatives of the Italian nation will return to the Union, the doors of which will always remain wide open to greet them.

The attendance at the Conference far exceeded the number expected, the number of delegates rising to 150. Twenty-seven parliaments were represented as follows: Belgium, Bulgaria, Canada, Colombia, Czechoslovakia, Denmark, Egypt, Estonia, Finland, France, Germany, Great Britain, Hungary, Ireland, Italy, Japan, Latvia, Netherlands, Norway, Poland, Rumania, Spain, Sweden, Switzerland, Turkey, United States, and Yugoslavia. All the European groups were represented with the exception of Greece, which was prevented from attending on account of legislative elections. There was a large delegation from Japan. In the absence of M. Fernand Bouisson, President of the French Chamber of Deputies and of the Interparliamentary Union Council, Count Carton de Wiart, of Belgium, was elected President of the Conference. The opening meeting was addressed by Sir Eric Drummond who welcomed the Conference to the League of Nations Secretariat and to the Disarmament Building, in which the Conference was convened. He stressed the goodwill and mutual confidence which reigns between the League and the Interparliamentary Union. M. Max Huber welcomed the assembly in the name of the Swiss Government. Arthur Henderson, President of the Disarmament Conference, expressed his pleasure at finding himself once again among his Parliamentary friends.

The first item on the Agenda of the Conference

was a general debate on the report of the Secretary General which dealt largely with the economic and financial situation. Among those who discussed the report were Baron Sztrenyi, of Hungary, M. Bramsnaes, of Denmark, and Signor Re David, of Italy. The second question on the Agenda was the codification of world law. The general outline of a plan containing the rules of future world law includes organs of the world community, individuals, and groups. It was to this subject that Signor Costamagna addressed himself in the paper that ended in the unfortunate interruption, resulting in the withdrawal of the Italian Groups. The plan was recommended to the attention of the groups for further study and recommendations.

The last two days of the Conference were devoted to the problems of security and the reduction of armaments. During the discussions upon these topics, Frau Teusch, of Germany, raised before the Assembly the problem of the revision of the peace treaties and that of the equality of states with regard to armaments.

M. Fernand Bouisson, President of the French Chamber of Deputies, was reelected as its President. Bouisson also remains President of the Executive Committee. Dr. Christian L. Lange, who has been Secretary General of the Union for 22 years, is to retire at the end of the present fiscal year. His successor is to be Dr. Leopold Boissier who, for a number of years, has served as Deputy Secretary General. Andrew J. Montague, President of the United States of America Group of the Interparliamentary Union, was elected a member of the Executive Committee for a period of five years, in the place of Senator La Fontaine of Belgium, retiring member not eligible for reelection. The Executive Committee is composed of five members, one of whom retires every year. The 29th Conference of the Union is slated to meet next year in Madrid.

This Union of Parliamentarians, which has headquarters in Geneva and sections in 34 countries, has long exercised a powerful influence in favor of international cooperation. The indebtedness to the Union of those who are working for the cause of peace has been greatly increased by its recent and separate investigations into, first, the problem of Disarmament, and secondly, "the character of a new war," if such an eventuality should arise. In regard to disarmament the Union has published a booklet written by M. William Martin, political editor of the *Journal de Genève*, which begins with his commentary on the work of the Union and of the League of Nations, including the Draft Convention drawn up by the Preparatory Disarmament Commission, and has an annex containing the resolution adopted by the Union since the war, the text of the Draft Convention itself, and some extracts from the report and proposals of the Committee of Budgetary Experts.

The Report of the Inquiry "What would be the Character of a New War?" published by P. S. King & Son, is an exhaustive study, by experts from many countries, of the different aspects, military, economic, and juridical, of a future war, and is to be submitted to the Security Committee of the Union. M. Munch, Foreign Minister of Denmark, in his preface, says that the inquiry was based on the conviction that it was worth considering whether the belief that armaments are a first guarantee of security can possibly be justified under present

conditions. The Report goes far to show that the security which it is hoped to obtain by military methods has become at least "precarious in face of the infinite possibilities of mutual destruction created by the developments of new methods of warfare." Major Lefebure, M. Francis Delaisi, M. Nicolas Politis, Sir Norman Angell, Major K. A. Bratt, and General Requin are among the contributors to a volume which has a special bearing on the problems which will arise in the Disarmament Conference of next year. See *INTERNATIONAL LAW*.

**INTERSTATE COMMERCE COMMISSION.** See *RAILWAYS*; *UNITED STATES*.

**INTERSTATE LITIGATION.** See *LAW* IN 1932.

**INUKAI, KI (TSUYOSHI).** A Japanese statesman, died in Tokyo, May 16, 1932. He was born in Okayama-ken in April, 1855. Upon his graduation from Keio University he became associated with the *Hochi-Shimbun*, serving as war correspondent of that paper during the Satsuma Rebellion of 1877 and as editor until 1890. He founded also in 1880 the *Tokyo Economic Magazine*, which advocated the principle of protectionism as against that of free trade. In 1890 he was elected a member, for Okayama-ken, of the first House of Representatives in the Imperial Diet, which seat he held until his death. He served as Minister of Education in the Okuma-Itagaki cabinet of 1898 and as Minister of Communications in the Kato cabinet of 1924-25. In 1929 he was made president of the Seiyukai party, and in December, 1931, became premier. His assassination was the culmination of the attempt by patriotic fanatics to terrorize the government into a policy of military absolutism. See *JAPAN* under *History* for political background.

**INVESTMENTS.** See *FINANCIAL REVIEW*.

**IOWA. POPULATION.** According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 2,470,939, as against 2,404,021 in 1920. Des Moines, the capital, had (1930), 142,559 inhabitants.

**AGRICULTURE.** The following table shows the acreage, production, and value of the principal crops for 1932 and 1931:

Crop	Year	Acreage	Prod. Bu.	Value
Corn ....	1932	11,732,000	539,672,000	\$ 70,157,000
	1931	11,732,000	385,983,000	108,075,000
Oats ....	1932	6,212,000	223,632,000	24,600,000
	1931	6,120,000	189,720,000	36,047,000
Hay ....	1932	2,951,000	4,668,000*	26,814,000
	1931	3,037,000	3,988,000*	28,288,000
Potatoes .	1932	73,000	8,030,000	2,971,000
	1931	70,000	3,850,000	2,888,000
Barley ..	1932	600,000	15,000,000	3,000,000
	1931	521,000	13,546,000	4,835,000
Wheat ...	1932	298,000	4,898,000	1,714,000
	1931	357,000	7,321,000	2,928,000

\* Tons.

**MINERAL PRODUCTION.** The production of coal, normally the State's most important mineral product, declined, as to quantity, in about the same proportion as for the Union as a whole, to 3,305,000 short tons for 1931, from 3,892,571 for 1930. It declined substantially also as to value, from the \$10,385,000 of 1930. The producers of Portland cement operated on a much reduced scale, shipping only 5,790,087 barrels

in 1931, as against 7,035,252 in 1930; shrinkage in the prices obtained brought the total of cement by value down to \$5,453,320 for 1931, from \$10,017,584 for 1930. Clay products, structural chiefly and excluding a minor production of pottery, attained for 1930 the value of \$4,671,487, as against \$5,770,125 for 1929. The quantity of gypsum was 481,047 short tons for 1930 (718,503 for 1929); the value, \$3,741,319 for 1930 (\$4,688-856 for 1929). Stone to the total (1930) of 1,813,860 short tons, valued at \$1,850,832, and sand and gravel to the value (1930) of \$2,599,107, were the other substantial elements of the yearly mineral total. The total value of the State's mineral product, duplications eliminated, was \$33,357,958 for 1930; for 1929, \$35,954,895.

**FINANCE.** State expenditures in the year ended June 30, 1931, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments \$24,642,636 (of which \$861,035 was for local education); for interest on debt, \$714,759; for permanent improvements, \$19,704,066; total, \$45,062,061 (of which \$22,391,787 was for highways, \$4,034,645 being for maintenance and \$18,357,142 for construction). Revenues were \$46,338,897. Of these, property and special taxes furnished 27.3 per cent; departmental earnings and compensation to the State for officers' services, 11.6; sale of licenses, 47.0 (in which was included a gasoline sale tax that produced \$6,329,803). Funded debt outstanding on June 30, 1931, totaled \$16,182,000. Net of sinking-fund assets, the debt was \$14,817,323. On an assessed valuation of \$1,559,177,948 the State levied in the year ad-valorem taxes of \$11,482,938.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1932, was 9684.58. During the year previous, some 13 miles had been abandoned.

**EDUCATION.** In the face of difficulty quite widely experienced in the collection of the revenues for the public schools, it was reported in the *Journal* of the National Education Association at the end of the year that all the public elementary and secondary schools had been maintained. For the academic year 1931-1932 the number of persons of school age in the State was stated as 718,627. There were enrolled in the public schools 557,220 pupils. Of these, 430,352 were in common schools, elementary grades or special classes; in high schools, 124,989; and in public junior colleges, 1879. The year's expenditures for public-school education totaled approximately \$50,000,000, as compared with about \$57,000,000, which had been stated as the total for the year before.

**CHARITIES AND CORRECTIONS.** The statutory Board of Control of State Institutions was in 1932 the body holding the centralized authority to control and govern the institutions of the State for the care and custody of persons. It was composed of three members, serving six-year terms expiring in rotation. It appointed the governing officers of the institutions and fixed the number and compensation of their subordinates. It also functioned as the institutional purchasing agent and conducted institutional industries. These produced the State's automobile-license plates and road markers, and institutions' requirements of clothing, bedding, soap, shoes, brooms and utensils. Institutional farms furnished vegetables, and much milk and butter for the institutions' use.

These State institutions, with their populations of Dec. 1, 1932, were: State Hospitals for the Insane, at Cherokee (1560), Clarinda (1601), Independence (1544), and Mount Pleasant (1538); Men's Reformatory, Anamosa (1460); State Penitentiary, Fort Madison (1485); Women's Reformatory, Rockwell City (101); Training School for Boys, Eldora (537); Training School for Girls, Mitchellville (188); State Sanatorium for Tuberculosis, Oakdale (346); Soldiers' Home, Marshalltown (523); Soldiers' Orphans' Home, Davenport (643); Juvenile Home, Toledo (331); Institution for Feeble-Minded, Glenwood (1676); Hospital for Epileptics and School for Feeble-Minded, Woodward (1139). The total institutional population was 14,672.

**POLITICAL AND OTHER EVENTS.** During the summer there developed among farmers in Iowa, and in adjacent parts of Minnesota, South Dakota, and Nebraska a movement known as the Farmers' Holiday. It was virtually a strike of producers of agricultural commodities, accompanied with picketing and more or less of violent restraint on producers who insisted on taking farm produce to market, particularly to Sioux City. The movement, reported to have been sponsored by Milo Reno, president of the Iowa Farmers' Union, was later organized in a Farmers' Holiday Association. It met with success to the extent of effecting on August 19 a rise of 55 cents to the 100 pounds of milk delivered in Sioux City. Its further extension was largely checked by the action of sheriffs in some of the affected counties, who cleared the roads of those obstructing farm trucks. An attempt to cut off Council Bluffs from farm supplies was defeated. No grave armed clashes occurred, but 55 pickets, who had been arrested on the roads leading to Council Bluffs, were released on bonds on August 25, after a gathering of hundreds of their sympathizers had threatened to attack the jail. The failure of banks in Iowa tied up a considerable sum in funds of the State government and obliged the State Treasurer to raise money in February by the sale of \$1,000,000 of interest-bearing warrants. State Auditor J. W. Long was suspended from office on April 20 upon report of an investigating commission, that he had unduly charged the State on expense accounts. Senator Smith W. Brookhart was defeated for renomination in the Republican primary on June 6, and Henry Field, a seed merchant of Shenandoah, gained the nomination. Brookhart was later, on September 26, nominated for Senator on a third ticket, by a Progressive organization which declared against "economic slavery for the masses" and against the tariff, the failure of the Federal Reserve system to prevent deflation, and the alleged course of National banks in unloading foreign bonds on the banking institutions in the State.

The State Supreme Court by a decision of October 1 declared it lawful for the State Superintendent of Banking to arrange loans from the Reconstruction Finance Corporation upon the assets of closed State banks wherewith to provide distributions to 80,000 or more persons who had deposits in such banks.

**ELECTIONS.** The popular vote cast on November 8 overturned the partisan traditions of the State by giving a decisive majority for the Democratic National ticket. The vote was: Roosevelt (Dem.), 598,019; Hoover, (Rep.), 414,433. For Governor,

Clyde L. Herring, Democrat, defeated Dan W. Turner, Republican, the incumbent, who ran for reelection. L. Murphy, Democrat, was elected United States Senator, defeating Henry Field, Republican.

**OFFICERS.** The chief officers of the State, serving in 1932, were: Governor, Dan W. Turner; Lieutenant-Governor, Arch W. McFarlane; Secretary of State, G. C. Greenwalt; Treasurer, Ray E. Johnson; Auditor, J. W. Long; Attorney-General, John Fletcher; Superintendent of Public Instruction, Agnes Samuelson; Secretary of Agriculture, Mark G. Thornburg.

**Supreme Court:** Justices, Maurice F. Donegan, John W. Kintzinger, John W. Anderson, Richard F. Mitchell, Hubert Utterback, William D. Evans, Truman S. Stevens, James W. Kindig, E. G. Albert.

**IOWA, THE STATE UNIVERSITY OF.** A coeducational State institution of higher learning in Iowa City, founded in 1847. The enrollment for 1931-32 was 9902. For the autumn of 1932 the enrollment was 6197, including 1182 correspondence students not also registered in residence. The summer session registration totaled 4361. There were approximately 570 members on the faculty in the autumn of 1932. The income for 1931-32 was \$4,097,802. The libraries contained 409,692 volumes. President, Walter Albert Jessup, Ph.D., LL.D.

**IOWA STATE COLLEGE OF AGRICULTURE AND MECHANIC ARTS.** A State institution for the higher education of men and women in Ames, Iowa, founded in 1868. The enrollment for the autumn term of 1932 was 3430. The registration for the first half of the 1932 summer session was 1238 and for the second half, 629. The faculty numbered 486 members. The endowment funds amounted to \$695,000 and the income for the year was \$3,340,000. The library contained approximately 210,000 volumes. President, Raymond Mollyneux Hughes, LL.D.

**IRAQ (IRAK) or MESOPOTAMIA.** A state occupying the basin of the Tigris and Euphrates rivers between Persia and northern Arabia. It comprises the former Turkish vilayets of Bagdad, Basra, and Mosul, which were conquered by British and Indian troops during the World War and later recognized as an independent state under a mandate assigned to Great Britain. Capital, Bagdad; ruler in 1932, King Feisal.

**AREA AND POPULATION.** The area is about 177,148 square miles and the population, at the census of 1920, was 2,849,282; estimated in 1928 at 3,300,000. Besides 87,488 Jews and 78,792 Christians, the inhabitants in 1920 were mainly Mohammedans of the Sunnite and Shiite sects. The chief cities are Bagdad, with about 300,000 inhabitants; Mosul, 60,000; and Basra, the chief seaport, 50,000.

**PRODUCTION.** Primarily dependent upon agriculture, Iraq is capable of great development by irrigation. Dates constitute the chief export crop. Wheat, barley, cotton, oats, linseed, flax, and fruits are other leading farm products; wool and sheep casings are produced. Petroleum production in 1931 totaled 900,000 barrels (of 42 U. S. gallons), as against 913,000 in 1930. There is manufacturing on a small scale.

**COMMERCE.** Imports for consumption were valued at 63,400,000 rupees in 1931 (76,500,000 in 1930) and exports at 43,200,000 rupees (42,200,000 in 1930). The rupee, worth \$0.365 at par, exchanged at \$0.3369 during 1931. Goods enter-

ing the country in transit (mostly to Persia) were valued at 29,800,000 rupees in 1931, 36,800,000 in 1930). The chief exports in 1931 were dates, 11,800,000 rupees (11,300,000 in 1930); grain, 11,000,000 rupees (10,300,000); and wool, 2,700,000 rupees (4,300,000). The leading imports were textiles, 24,100,000 rupees in 1931 (8,200,000 in 1930); sugar, 4,700,000 (6,200,000). The United Kingdom and British India are the principal sources of imports.

**FINANCE.** Closed budget accounts for the fiscal year ended Mar. 31, 1931, showed revenues of 46,456,000 rupees and expenditures of 51,157,000 rupees, leaving an actual deficit of 4,701,000 rupees. In the budget for 1931-32, revenues were estimated at 47,894,200 rupees and expenditures at 47,571,980 rupees. The Indian rupee was accepted as legal tender.

The 1932-33 budget, expressed in the new national currency, estimated receipts at 3,579,000 dinars (about \$13,421,000) and expenditures at 3,571,000 dinars (\$13,391,000). In 1927, the Iraq Government agreed to accept a share of the Ottoman Debt; it purchased bonds to the amount of £1,228,000 (\$5,976,000 converted at par) and agreed to pay the balance of the debt, amounting to £383,000 (\$1,864,000), with interest in seven annual installments.

**COMMUNICATIONS.** The Iraqi railways, with 753 miles of main line on Mar. 31, 1931, reported earnings of 7,878,515 rupees and expenses of 7,870,958 rupees for the year 1930-31 (rupee = \$0.3649 at par). The railways were owned by the British government and administered by the government of Iraq. There are nearly 5000 miles of improved highways, mostly earthen. Bagdad and Basra are links in the London-Karachi air line. A new desert air service between Palestine and Iraq was opened by the Imperial Airways Sept. 5, 1932. Construction of a telephone trunk line from Iraq to Palestine was commenced in November, 1932, in connection with the new petroleum pipe-line's telephone system via Rutbah to Amman. Tonnage handled by the port of Basra during the year 1930-31 totaled 850,180 (416,797 tons of imports and 433,383 tons of exports).

**GOVERNMENT.** The organic law passed by the constituent assembly in June, 1924, provided for a limited monarchy and a responsible government. The legislative body consists of the Senate of 20 nominated "Elder Statesmen" and the Lower House of 88 elected deputies. Premier and Foreign Minister in 1932, Gen. Nuri Pasha as Said (appointed Mar. 23, 1930).

**HISTORY.** On Oct. 3, 1932, Iraq was unanimously elected by the League Assembly to full membership in the League of Nations, thus bringing to an end the mandatory control exercised by Great Britain since the World War. Great Britain had promised to sponsor Iraq's application for League membership in connection with the Anglo-Iraqi treaty of 1930 (see 1930 YEAR BOOK), which was to go into effect upon Iraq's admission to the League and to last for 25 years. In January, 1932, the Permanent Mandates Commission submitted to the League Council a report conditionally approving the termination of the mandatory régime in Iraq. The Council approved the termination of the mandatory régime, subject to Iraq's acceptance of guarantees safeguarding the rights of minorities, the judicial rights of foreigners, and most-favored-nation treatment for countries not form-

ing part of the former Ottoman Empire. These guarantees were formally ratified by the Iraqi government, which on July 12 also pledged itself to accede "as soon as possible" to the Convention of June 17, 1925, concerning the international traffic in arms.

The admission of Iraq was criticized in some quarters because of the treaty of alliance and financial agreement of 1930 with Great Britain. The treaty provided that the British should retain specific air bases in Iraq, that the Iraqi army should be trained by British instructors and equipped with arms identical with those of the British troops, and that Iraq would grant "all possible facilities" for the movement of British troops across its territory. The financial agreement turned over the railways and the British-developed port of Basra to Iraq on generous terms, but both were to be administered under statutes approved by the British and British officials were to staff the railway pending the training of an Iraqi personnel.

On Nov. 3, 1932, the State Department at Washington made public correspondence with the British government in which the American government declared that "in addition to the most-favored-nation treatment which, by virtue of the provisions of the tripartite convention of Jan. 9, 1930, it will enjoy in Iraq upon termination of the special (mandatory) relations, it is also entitled to a voice in the determination of the conditions upon which that most-favored-nation treatment is to be based." This claim was based, the State Department contended, on "the principle established in 1921 that the approval of the United States is essential to the validity" of any determination which might be reached regarding mandated territories. The claim was firmly denied by the British government.

Further fighting with the Kurds occurred during 1932. The rebellious Sheikh Ahmed Barzan was forced to capitulate on June 24, after some four months of campaigning in the rugged mountains of Northern Iraq by Iraqi forces supported by British air units (see KURDISTAN).

The economic condition of the country improved markedly during 1932, largely as a result of the depreciation of the rupee, which was linked with the pound sterling. The date and grain crops brought much higher prices than in the previous year and the government managed

to balance the budget without further taxation. A new currency based directly on the pound sterling was introduced in Iraq, Apr. 1, 1932. The unit was the dinar, equal in value to the pound, and divided into 1000 fils. By the official conversion rate one rupee was exchangeable for 75 fils. In April, the government granted a 75-year concession covering 200 square miles west of the Tigris to the British Oil Development Company, in which the British held 51 per cent of the capital, Italians 25 per cent, French 12 per cent, and Germans 12 per cent. On November 29, the Council of the League of Nations approved the boundary line between Syria and Iraq recommended by its commission of inquiry. On December 15, the Council rejected the appeal of the Assyrians for administrative autonomy within Iraq. See LEAGUE OF NATIONS; SYRIA.

Consult Wilbur L. Williams, "The State of Iraq: A Mandate Attains Independence," *Foreign Policy Report*, Oct. 12, 1932, vol. viii, no. 16.

**IRAQ PETROLEUM COMPANY.** See IRAQ under *History*.

**IRELAND.** The smaller of the two main British Isles, with an area of 32,586 square miles; politically divided into Northern Ireland and the Irish Free State; the former consisting of the parliamentary counties of Antrim, Armagh, Down, Fermanagh, Londonderry, and Tyrone, and the parliamentary boroughs of Londonderry, and Belfast; and the Irish Free State of the remaining 26 counties. The total population of the island (1926 census), was 4,228,553. See IRELAND, NORTHERN; IRISH FREE STATE.

**IRELAND, NORTHERN.** A constituent part of the United Kingdom, comprising the parliamentary counties of Antrim, Armagh, Down, Fermanagh, Londonderry, and Tyrone, and the two parliamentary boroughs of Belfast and Londonderry. Capital, Belfast.

**AREA, POPULATION, ETC.** The area of Northern Ireland, exclusive of water, is 3,351,444 statute acres (also given as 5238 square miles). At the census of 1926, the population was 1,256,561, as compared with 1,250,531 in 1911. The estimated population, as of June 30, 1931, was 1,246,000. In 1930, births numbered 25,879; deaths, 17,148; and marriages, 7547. Roman Catholics constituted one-third of the population. The population of Belfast was 415,007 in 1926. For the academic year 1930-31, there were 1893 public elementary schools, with 201,683 pupils; 73 secondary schools, with 12,094 pupils; and 123 technical schools, with 23,941 students. The Queen's University in Belfast had 1430 students in 1931-32.

**PRODUCTION.** Agriculture is the main occupation, although important linen and shipbuilding industries are located in Belfast. Cereals, potatoes, flax, fruit, and hay are the leading crops. In 1931, about 85,000 persons were employed in linen manufacturing. Shipyards employed about 11,000 persons and the output capacity exceeded 250,000 tons annually. Rope, twine, tobacco products, and soap are other products. Commerce statistics are included in those given for Great Britain.

**FINANCE.** About 30 per cent of the annual expenditure represents the cost of Imperial defense and of Northern Irish services reserved to the Imperial Parliament. Excluding these items, budget estimates for the fiscal year ending Mar. 31, 1933, balanced at £8,936,900, as compared with estimated revenues and expenditures of £8,828,375 in 1931-32. The Finance Minister, introducing

the 1932-33 budget in May, 1932, imposed no new taxation, but foreshadowed special measures of economy calculated to produce £50,000 in order to increase to £120,000 the balance of £70,000 available for surplus and the Imperial contribution.

**COMMUNICATIONS.** Besides 754 miles of main railway lines, Northern Ireland is served by inland waterways, 180 miles of canals, and 12,996 miles of highways. Belfast and Londonderry are the chief seaports.

**GOVERNMENT.** The country forms an integral part of the United Kingdom and is represented in the House of Commons by 13 members. The local parliament has general legislative and executive powers, with certain exceptions. It consists of a senate of 26 members (2 *ex-officio* and 24 elected by the lower house) and the Commons of 52 members elected by general suffrage. The lower house elected in May, 1929, included 37 Unionists, 11 Nationalists, 3 Independent Unionists, and 1 Laborite. The Governor in 1932 was the Duke of Abercorn. The ministry was as follows: Prime Minister, Viscount Craigavon; Finance, H. M. Pollock; Home Affairs, Sir R. Dawson Bates; Labor, J. M. Andrews; Education, Viscount Charlemont; Agriculture, Sir E. M. Archdale; Commerce, J. M. Barbour.

**HISTORY.** The continuance of the economic depression in Northern Ireland resulted in rioting by more than 10,000 unemployed in Belfast Oct. 11 and 12, 1932, in which two were killed and about 18 wounded. The outbreak was attributed to dissatisfaction with the pay received on unemployment relief projects. Efforts to precipitate a general strike in connection with the riots ended when relief payments were increased. Tom Mann, British Left Wing Labor leader, was deported from Belfast on October 14.

Political and religious difficulties between Northern Ireland and the Irish Free State continued. The declaration of President de Valera of the Irish Free State that he intended to secure political unification of Ireland aroused considerable alarm in Ulster and led Viscount Craigavon to visit London. He received assurances that no proposal to unite Northern Ireland and the Irish Free State would be considered against the will of the people of Northern Ireland. The visit of the Prince of Wales to Belfast on November 16 to dedicate the new Northern Ireland Parliament buildings was accompanied by anti-English Nationalist demonstrations. The Prince was welcomed with great enthusiasm in Belfast and departed without harm, despite threats to his safety. See IRISH FREE STATE.

**IRIDIUM.** See PLATINUM.

**IRISH FREE STATE.** A self-governing unit of the British Commonwealth of Nations, constituted under the Irish Free State Government Act of Dec. 5, 1922, which embodies the terms of the Anglo-Irish Treaty of Dec. 6, 1921. Capital, Dublin.

**AREA AND POPULATION.** Comprising about five-sixths of Ireland, the Irish Free State has an area of 26,601 square miles. The population in 1931 was estimated at 2,957,000, as compared with 2,971,922 at the census of 1926. The steady decrease of population since 1871 was due primarily to emigration. In 1931, however, emigration was offset by immigration. Less than 2000 emigrants left Ireland during the year, as against 15,966 in 1930 and 20,802 in 1920. For the period 1926 to 1930, births averaged 58,192 annually and

deaths 42,374, the rates per 1000 of population being 19.7 and 14.3, respectively. The population of the chief cities in 1926 was: Dublin proper, 316,693 (410,900 in 1930); Cork, 78,490; Limerick, 39,448; and Waterford, 26,647. Of the total population in 1926, 2,751,269 were Roman Catholics and 220,653 were Protestants.

**EDUCATION.** Primary education is free and compulsory for children under 14 years. Study of the Irish language was a required part of the curriculum in all national schools. In 1929-30, there were 504,427 pupils in national elementary schools, 27,645 in secondary schools, which are mostly conducted by religious orders, and 3953 students in the University of Dublin and the National University (4339 in 1931-32).

**PRODUCTION.** Primarily an agricultural country, the Free State in 1930 had 3,746,000 acres under crops, or about 22 per cent of the total land area; 7900 acres under orchards, and 8,081,000 acres of grass and grazing land. Cattle exports to Great Britain were the chief source of agricultural income. Livestock in 1931 included 4,029,000 cattle, 3,575,000 sheep, 1,227,000 swine, 450,000 horses, 177,000 asses, and 16,000 mules. Hogs slaughtered in 1931 numbered 700,584 (657,140 in 1930) and cured pork totaled 106,154,000 pounds (100,773,000 in 1930). Cattle exported in 1931 numbered 765,952 (857,878 in 1930), valued at \$57,456,000 (\$71,413,000 in 1930). Production of the chief crops in 1931, in bushels except as indicated, was: Wheat, 781,000; rye, 110,000; barley, 4,921,000; oats, 36,457,000; potatoes, 72,132,000; turnips, 3,303,000 long tons; sugar beets, 34,000 long tons; beet sugar (in 1931-32), 6000 long tons; hay, 5,116,000 long tons; flax, 267,000 pounds; mangels, 1,540,000 long tons.

The sea fish catch in 1931, exclusive of salmon and shellfish, amounted to 23,854,000 pounds valued at £151,230 (\$686,000), as against 22,688,000 pounds valued at £162,247 (\$790,000) in 1930. Butter, cheese, milled grain, margarine, and liquors are the chief manufactured products. The number of registered unemployed increased from 30,865 in December, 1931, to 71,000 on June 30, 1932.

**COMMERCE.** Exports of the Irish Free State in 1931 declined to £36,276,000 from £44,567,000 in 1930, while imports fell to £50,458,000 from £56,709,000 in 1930. The principal imports in 1931 were: Wheat and flour, £3,235,102; maize, £2,153,652; coal, £3,072,924; tea, £2,119,995; iron and steel and their manufactures (excluding cutlery and machinery), £1,900,939. The leading exports were: Live cattle, £12,669,504; porter, beer, and ale, £4,687,370; butter, £2,086,035; fresh eggs, £2,227,452; bacon, £1,216,430; horses, £1,960,595. Imports came chiefly from Great Britain, £35,738,042; Northern Ireland, £5,040,085; and the United States, £2,044,409. Exports went principally to Great Britain, £31,217,981; Northern Ireland, £3,725,978; United States, £393,437.

**FINANCE.** Revised budget estimates for the fiscal year ended Mar. 31, 1932, balanced at £27,916,000. However, closed accounts for the year showed a deficit of £639,000. In the preceding fiscal year total revenues were £32,582,897 and expenditures £31,104,648. On the basis of the 1931-32 budget, a deficit of £1,400,000 was forecast for 1932-33. Accordingly, Minister of Finance McEntee introduced in May, 1932, a 1932-33 budget carrying income-tax increases calculated to yield an additional £1,000,000, surtax

increases estimated to yield £77,000, higher import duties, and higher imposts on many forms of sports, amusements, and luxury articles. At the same time provision was made for a reduction in official salaries. The public debt on Mar. 31, 1932, amounted to £30,695,000.

**COMMUNICATIONS.** Railways in operation in the Free State in 1931 extended 2668 miles, the principal system being the Great Southern. Highways aggregated 40,462 miles (45,722 miles of macadam); inland waterways and canals, 650 miles. The telegraph and telephone systems are government owned. In 1930, 13,963 vessels, of 9,248,415 tons, entered Free State ports in the foreign trade and 13,967, of 9,246,460 tons, cleared.

**GOVERNMENT.** The Constitution of Dec. 6, 1922, declares the Irish Free State a co-equal member of the British Commonwealth of Nations and that "all powers of government . . . are derived from the people of Ireland. It designates the Irish language as the national language, with English equally recognized as an official language; prohibits the state endowment of any religion; guarantees freedom of conscience and religion, speech, and peaceful assembly. The Legislature (Oireachtas) consists of the King, represented by the Governor-General, the Chamber of Deputies (Dáil Eireann) of 153 members elected by popular suffrage under a system of proportional representation, and the Senate (Seanad Eireann) of 60 members elected for nine years by the members of both houses of parliament "voting together on principles of proportional representation." The President of the Council is nominated by the Dáil and in turn nominates the other members of the Council, or ministry, who must be approved by the Dáil. At the beginning of 1932, the Governor-General was James McNeill (assumed office Feb. 1, 1928) and the President of the Council was William T. Cosgrave (Cumann na nGaedheal). The composition of the Dáil elected Feb. 21, 1932, with the previous standing of the parties in parentheses, was: Fianna Fáil (de Valera's party), 72 (57); Cumann na nGaedheal (Cosgrave), 56 (62); Labor, 7 (11); Farmers, 4 (6); Independents, 13 (15); vacancies, 1 (2).

The Executive Council appointed Mar. 9, 1932, was as follows: President and Minister for External Affairs, Eamon de Valera; Vice President and Minister for Local Government and Public Health, Sean T. O'Kelly; Lands and Fisheries, Patrick Rutledge; Industry and Commerce, Sean F. Lemass; Finance, Sean MacEntee; Agriculture, Dr. James Ryan; Defense, Frank Aiken; Education, Thomas Derrig; Justice, James Geoghegan; Posts and Telegraphs, Joseph Connolly; Attorney-General, C. A. Maguire. For other governmental changes in 1932, see *History*.

#### HISTORY

**DE VALERA WINS ELECTION.** The campaign for election of a new Dáil was well under way at the beginning of 1932 (see 1931 YEAR BOOK). Eamon de Valera's party (Fianna Fáil) campaigned on a platform demanding work for every one, abolition of the oath of allegiance to the King, retention of the land annuities, and repeal of the public safety act passed by the Cosgrave government in 1931. The general election of February 9 gave Fianna Fáil a victory over the 10-year-old Cosgrave régime (for the composition of the new Dáil see *Government*). While Fianna Fáil

displaced Cosgrave's Cumann na nGaedheal party as the largest group in the Dáil, the Labor party held the balance of power. In return for its support in enabling de Valera to form a new government, Labor demanded and received extensive concessions in the form of unemployment relief and other social services.

**OATH AND ANNUITIES DISPUTES.** It was difficult to determine which issues decided the outcome of the election. Some writers ascribed de Valera's victory chiefly to the economic depression, the consequent burden of taxation, and a desire for a change after ten years of Cosgrave rule. Mr. de Valera described the election as a mandate for the abolition of the oath of allegiance and the retention of the land annuities. He announced that his third major objective would be the union of Northern Ireland with the Irish Free State (see *IRELAND, NORTHERN*). Mr. de Valera was elected President of the Council on March 9. Immediately upon the reassembling of the Dáil Éireann April 20 he introduced a bill to abolish the oath and to strike from the Constitution the provision that amendments, and even laws, must be in accord with the terms of the Anglo-Irish treaty of 1921.

The Fianna Fáil leader denounced the oath as "the cause of all the strife and dissension in the country since the signing of the Treaty." He did not, however, propose withdrawal of the Free State from the British Commonwealth of Nations. The Constitution, as amended by the oath bill, recognized the position of the King and the Governor-General; it defined the Free State as a "co-equal" member of the Commonwealth. The bill was passed by the Dáil on May 19. On June 8, however, the Senate, which was still controlled by the Cosgrave party, rejected that section of the bill which would have eliminated reference to the 1921 treaty from the Constitution. Instead the Senate adopted an amendment providing that the oath bill should not become effective until the Free State and British governments had reached an agreement concerning the abolition of the oath. A bill rejected by the Senate could not under the Constitution become a law until the Dáil had passed it a second time and a period of 18 months had elapsed since its introduction. Accordingly, although the Dáil repassed the bill on July 12, the oath issue was postponed by the Senate's action until 1933.

It was the annuities issue that brought the British and Free State governments to the verge of an open break and to a bitter and mutually damaging tariff war. This issue involved payments owed by Irish tenant-purchasers on account of loans advanced to them by authority of the British Parliament to enable them to buy their holdings. The interest and, in some cases, the principal of the funds advanced by British and Irish investors was guaranteed by the British government. President de Valera's case for retention of the land annuities rested partly on the fact that the Government of Ireland Act of 1920 authorized both Northern Ireland and the Free State to dispense with these payments and that they were no longer made by Northern Ireland. He informed the British government that he was not aware of "a formal and explicit undertaking to pay the land annuities to the National Debt Commissioners."

The British government replied that the status of the Free State, unlike that of Northern Ireland, was not based upon the Government of

Ireland Act but on a subsequent Act and several agreements, among which was the land annuities convention. It made public the hitherto unrevealed text of an agreement signed by President Cosgrave on Feb. 23, 1923, under which the Free State government was to collect the annuities and pay the full amount due into the "appropriate fund." The Central Fund of the Free State government was pledged as secondary security. According to the British, the Free State Land Act of 1923 implemented the annuities agreement, which was further reinforced by a document signed by both governments in 1926. The latter agreement pledged the Free State government "to pay to the British government . . . the full amount of the annuities . . . without any deduction whatsoever on account of Income Tax or otherwise." The British contentions were supported, in general, by Mr. Cosgrave and his party.

President de Valera rejected these contentions on the ground that the 1923 agreement did not specify payment to the British government and that the 1926 agreement was invalid because it was never ratified by the Dáil. Accordingly, his government made no payment of a £1,500,000 installment of the land annuities due June 15. He declined to submit the annuities issue to arbitration by a Commonwealth tribunal such as was envisaged at the 1930 Imperial Conference and the British in turn rejected his proposal to submit it to international arbitration. On June 16, in a note to the British government, President de Valera reiterated that his aim was the ultimate establishment of a "united Irish republic," associated with Great Britain "in some circumstances and for some reasons," and recognizing the British King as head of the associated states. J. H. Thomas, Secretary of State for Dominions, replied that "no British government would ever agree to such a suggestion." His reasons, expressed or implied, were the hostility of Northern Ireland to union with the Free State and the possibility that Ireland, if completely separated from the British Commonwealth of Nations, might provide some hostile power with a base of operations against the United Kingdom. Finally, it was felt that an independent Ireland might speed the dissolution of the British Commonwealth.

Meanwhile the Dominions of Australia, New Zealand, and South Africa, in notes sent to President de Valera in April, had expressed the hope that no differences of opinion would arise which might weaken the unity of the British Commonwealth or disturb the friendly relations between "two of the oldest sister states."

**THE TARIFF WAR.** When default on the land annuities became effective June 30, the British government announced that it would impose special duties up to 100 per cent ad valorem on imports from the Irish Free State, the duties to remain in force until the amount of the annuities withheld had been collected. A special tariff bill embodying this threat was passed by Parliament on July 12 and on July 15 the government placed a 20 per cent duty on the chief imports from the Free State. The Free State on July 26 retaliated with a tariff measure imposing new or increased duties on selected commodities imported from Great Britain and Northern Ireland. These moves, which deepened the emotional conflict between the two peoples, were followed by successive retaliatory blows at each other's exports and by a series of futile efforts to negotiate a settlement.

In this economic warfare, the Free State suffered relatively more than the United Kingdom, due to its almost complete dependence upon the English market, which took 92 per cent of its exports (see trade statistics for 1931 under *Commerce*). Nevertheless, British trade was affected. In 1931 the Free State ranked second to India as the chief British export market, taking 8 per cent of the value of all exports. In August, 1932, Free State shipments of live animals and farm products to Great Britain decreased by £1,600,000, as compared with August, 1931. The number of unemployed in the Irish Free State increased from 30,398 on Mar. 14, 1932, to 76,715 on August 21 and 88,376 on October 12, an increase attributed largely to the tariff war. In the three months ended October 13, Britain collected revenues of £503,000 (\$1,654,000) on Free State products. This compared with land annuities totaling £564,000 (\$1,855,000) withheld during the same period.

The farmers and cattle raisers of the Free State, who suffered severely under the British tariff, showed increasing restiveness. They sent numerous petitions requesting settlement of the dispute and adopted resolutions to withhold payments of land annuities due the Free State government, which was holding the funds in a suspended account. President de Valera sought to allay their discontent by paying a bounty on Free State exports designed to offset the British duties. The bounty was paid out of higher income and other taxation falling chiefly on the Irish middle classes, who were vocal in their protests.

On October 5 President de Valera reopened negotiations for a settlement, stopping in London on his way home from Geneva, where he had presided with distinction over a session of the Council of the League of Nations (see *LEAGUE OF NATIONS*). His conversations with Mr. Thomas and other British officials were resumed on October 14 and 15, when he returned to London accompanied by three members of his Cabinet. The parleys ended in failure, the British insisting upon observance of the agreements of 1923 and 1926 and the Irish refusing to admit their validity. The tariff war was now intensified. On October 20 the Free State tariff on a number of British products was raised. The British government on November 9 raised the special duty on Free State cattle from 20 to 40 per cent and that on Free State butter, eggs, cream, bacon, pork, and poultry from 20 to 30 per cent. President de Valera sought to appease the farmers by announcing (November 16) that the government would introduce legislation for perpetual remission of a substantial part of the land annuities. While admitting the hardship imposed by the tariff, he declared that his aim was the reorganization of the Free State's economy to free it of its "dangerous dependence upon Britain."

**THE PRIVATE ARMIES.** One of the first acts of the de Valera government was to repeal the public safety act of 1931, designed to check the activities of the private Irish Republican Army. Upon its repeal, the I. R. A. resumed drilling in public. During the summer members of the Opposition repeatedly charged in the Dáil that arms were being landed for use of the republican organization. The government, however, made no effort to restrain the I. R. A., which exerted steady pressure upon it to break openly with Great Britain and establish an independent republic. The government's complacency in the

face of the defiance and terroristic methods of the republicans caused the Army Comrade's Association in August to commence the enrollment of volunteers "with the object of neutralizing the influences of those hidden forces of disorder which are in operation in our country and may grow into a ruthless tyranny if not checked in time." The association, composed of men who formerly served in the Free State Army, was headed by Dr. T. F. O'Higgins, a brother of Kevin O'Higgins, victim of a political murder in 1927.

On August 24, Minister of Defense Aiken announced the formation of the National Guard, a sort of training reserve for the Free State Army, the official army controlled by the government and generally regarded as outside of politics. This made four military organizations, two of them private, within the Free State. A number of clashes between Army Comrades Association members and Republicans occurred during the remainder of the year. Armistice Day celebrations in Dublin were countered by a parade of the I. R. A. through the principal streets, which ended in serious clashes with the police.

**THE GOVERNOR-GENERAL IS OUSTED.** Conflict between Governor-General James McNeill and Mr. de Valera's government broke out soon after the inauguration of the new government and continued until the forced resignation of Mr. McNeill on October 3. The members of the government slighted the Governor-General and his office on every possible occasion. On one occasion, the Governor-General demanded an apology, which was refused. In July, defying Mr. de Valera's warning, the Governor-General made public correspondence that had passed between himself and the President. Mr. McNeill's term of office was due to expire Feb. 1, 1933, but in September the Free State government, in accordance with constitutional procedure adopted at the Imperial Conference of 1930, advised King George that the Governor-General's resignation was desired. The resignation was offered and accepted by the King on October 3, becoming effective October 31. On November 26, the King on nomination of President de Valera appointed Donal Buckley, a relatively unknown shopkeeper of Maynooth, County Kildare, as successor to Mr. McNeill. Mr. Buckley was a fervent republican and a close friend of Mr. de Valera. It was reported that his title was changed from Governor-General to Seneschal.

**OTHER EVENTS.** A 10,000-acre estate, including the lakes of Killarney, known as a famous beauty spot, was presented to the Free State in November by William Bowers Bourn of San Mateo, Calif. The Eucharistic Congress of the Roman Catholic Church was held in Dublin June 22-26.

**IRON AND STEEL.** The production of iron and steel in America, according to *The Iron Age*, New York, in its annual review of the industry, was at a much lower ebb than that reached by other steel-producing countries. The world's total production of steel ingots in 1932 declined 28.5 per cent from that of 1931, while that of

the United States declined 48 per cent in the same period. The production of pig iron throughout the world declined 30 per cent below the production in 1931, while in the United States the production dropped about 53 per cent. The combined steel production of Germany, France, and England dropped in 1932 to about 50 per cent of the combined output of the peak year of 1929, but in the United States the output dropped to less than 25 per cent of the 1929 peak.

International trade in iron and steel, according to the same authority, has naturally slumped along with domestic business, but the decline in imports was relatively less than that of American exports. Outgoing shipments of iron and steel, at 585,600 gross tons, with December estimated, were the lowest on record, comparing with 984,815 tons in 1931 and 3,063,075 tons in 1929. Even with this small trade, more than a third of it consisted of iron and steel scrap, going principally to Japan and Canada. Imports in 1932, in striking contrast to exports, compared favorably with those of the previous year, being estimated at 380,610 tons against 421,089 tons in 1931 and with the peak movement in recent years of 774,212 tons in 1929.

Pig iron and ferromanganese imports, aggregating 116,383 tons and 22,111 tons respectively, were the heavy tonnages of raw materials brought into the United States. Pig iron came in greatest quantities from the Netherlands. Finished steel came chiefly from central European countries, Belgium leading with a total of 87,742 tons in the first 11 months of 1932.

The United States market was particularly affected by the importation of bars and shapes. In New York especially there was a keen competition between foreign and domestic steel; particularly reinforcing bars. Welsh tin plate was brought in on the Pacific Coast at prices much below those quoted by American producers. Even German-made steel pipe, which in previous years had scarcely been a factor in our import trade, found its way into jobbers' warehouses on the Pacific coast. To aggravate the situation, the Canadian market, which for many years has been the best outlet for steel in the export trade of the United States, was virtually closed to American mills by the agreement with Great Britain to establish preferential tariffs intended to build up inter-empire transactions. A conspicuous example of the loss of Canadian trade was the purchase by an American can manufacturer of about 1,000,000 base boxes of Welsh tin plate for its Canadian plants, most of this business having heretofore come to American mills.

With such problems as these, in addition to others that were the natural outgrowth of the depression, the steel companies came closer together in coöperative effort along remedial lines. They found common ground in seeking to curb imports of European steel. Official complaint was lodged at Washington by the American Iron and Steel Institute, alleging that foreign steel was being sold in the United States in violation of the anti-dumping act, and the contention is still the subject of a broad inquiry by the Bureau of Customs.

**IRON ORE.** The iron ore mined in the United States in 1932, exclusive of ore that contained 5 per cent or more of manganese in the natural state, was estimated by the U. S. Bureau of Mines, at 9,588,000 gross tons, a decrease of 69 per cent as compared with that mined in 1931.

The output in 1932 was the lowest since 1885. The ore shipped from the mines in 1932 was estimated at 5,364,000 gross tons, valued at \$13,042,000, a decrease of 81 per cent in quantity and of 82 per cent in total value as compared with the figures for 1931. The average value of the ore per gross ton at the mines in 1932 was estimated at \$2.43; in 1931 it was \$2.60. The stocks of iron ore at the mines, mainly in Michigan and Minnesota, apparently increased 33 per cent from 13,063,708 gross tons in 1931 to 17,316,000 tons in 1932. The stocks at the end of 1932 were the largest ever accumulated at the mines. The Bureau of Mines estimates are based on preliminary figures furnished by producers who mine about 99 per cent of the total iron ore. They show the totals for the principal iron-ore producing States, and, by grouping together certain States, the totals for the Lake Superior district and for groups of Southeastern, Northeastern, and Western States.

Only 67 per cent of the iron ore shipped in 1932 came from the Lake Superior district, in which approximately 7,882,000 gross tons were mined and 3,614,000 tons were shipped, decreases of 70 and 84 per cent, respectively, as compared with the quantities mined and shipped in 1931. The ore shipped in 1932 was valued at the mines at \$10,081,000, a decrease of 84 per cent. These totals include the ore shipped by rail as well as by water from all mines, but exclude manganese ores amounting to approximately 11,000 gross tons in 1932 and 246,136 tons in 1931 that contained 5 per cent or more of manganese in the natural state. The stocks of iron ore in this district apparently increased from 11,821,646 gross tons in 1931 to 16,120,000 tons in 1932, or 36 per cent. The shipments of iron ore by water from the Lake Superior district in 1932 (including manganese iron ores), according to the Lake Superior Iron Ore Association, amounted to 3,567,985 gross tons, a decrease of 85 per cent as compared with these shipments in 1931. The average value of the ore at the mines in the Lake Superior district in 1932 was \$2.79 a ton; in 1931 it was \$2.74.

The Southeastern States, in which the Birmingham district is the largest iron-ore producing area, mined approximately 1,400,000 gross tons of iron ore in 1932, a decrease of 63 per cent as compared with 1931. The shipments of iron ore from mines in these States in 1932 amounted to 1,492,000 gross tons, valued at \$2,470,000, decreases of 60 and 62 per cent, respectively, in quantity and value as compared with 1931. The average value of the ore produced in these States in 1932 per gross ton was \$1.66; in 1931 it was \$1.74. The stocks of iron ore at the mines in this group of States, mainly in the Birmingham district, decreased from 898,635 gross tons in the year 1931 to 806,000 gross tons for 1932.

The imports of iron ore reported for the eleven months ended Nov. 30, 1932, as compiled from the records of the Bureau of Foreign and Domestic Commerce, Department of Commerce, amounted to 574,362 gross tons, valued at \$1,521,295 or \$2.65 a ton. The imports for the year 1931 were 1,465,613 gross tons, valued at \$3,901,775 or \$2.66 a ton. The reported exports of iron ore for the 11 months ended Nov. 30, 1932, amounted to 83,406 gross tons, valued at \$219,604, or \$2.63 a ton, as compared with ex-

ports for the entire year 1931 of 435,665 tons, last year was considerably less than half the valued at \$1,657,832, or \$3.71 a ton. preceding year's total, the percentage increase

**PIG IRON.** Pig iron production in 1932 dropped to the lowest total for any year since 1896, according to *The Iron Age*. Last year's output of coke, pig iron, and ferroalloys was about 8,750,000 tons compared with 18,380,141 tons in 1931 and 42,475,780 tons in 1929, the peak year. The 1932 total surpassed that of 1896 (8,313,000 tons) by only a small margin. It is worthy of comment, however, that in 1895 an output of 9,221,000 tons established a new high record, while last year's production was only about 20 per cent of the all-time peak in 1929.

Output of pig iron rose slightly during the first two months of 1932, but a decline began in March which continued through August, when a low of 17,115 tons daily was reached. This was the lowest daily rate since October, 1896, when 16,079 tons a day was produced. A seasonal increase made itself felt in September, and the number of active furnaces increased from 42, making iron at the rate of 16,225 tons a day on September 1 to 51 furnaces producing at the rate of 20,860 tons on December 1.

Pig iron markets during the year were characterized by a continuance of the price decline which began in the summer of 1929, and which has finally carried quotations on merchant iron in most of the principal producing districts below the cost of production. *The Iron Age* composite price dropped gradually from \$14.81 a ton at the beginning of January to \$13.56 a ton at the year-end, the lowest since August, 1915. Thus the net decline of \$1.45 a ton exceeded the \$1.11 drop in 1931.

Pig iron imports in the 10 months ended with October amounted to 107,610 tons, compared with 74,610 tons in the corresponding 1931 period. Of the 1932 total, the Netherlands shipped more than half, while British India and the United Kingdom followed in the order named. A new competitive factor late in the year was the receipt of a small lot of Japanese pig iron, with more to follow. In view of the fact that consumption in seaboard and nearby foundries

in foreign iron consumed was larger than the figures on imports indicate.

## DAILY RATE OF PIG IRON PRODUCTION IN 1932

**ITALIAN LITERATURE.** The season, viewed in retrospect, witnessed two major events, of which the organization of a National Institute of Drama was indeed welcome, and the passing of Enrico Corradini was a serious loss to Italian letters.

Silvio D'Amico, genial dramatic critic, first conceived a plan for a National Italian Theatre in his essay, *La crisi del Teatro*, which appeared in *Pègaso* some years ago. This essay, now available in booklet form, appearing as it did when the Italian dramatic production was in an apathetic state, stirred theatrical circles to the point of feverishness and instilled a ray of hope. In it, D'Amico analyzed the ills of the Italian stage and forecast its temporary demise unless

help, in the form of subvention, was forthcoming. He called on the Government to act. In fact, he submitted plans for a National Institute of Drama to the Fascist State in 1931. This plan remained a symbol until the past season, when it emerged from the process of crystallization. D'Amico himself issued definite information relative to this "child" since he entrusted it into the hands of the Government Syndicate of Drama. This information revealed that the plan was adopted a year and a half ago by the Syndicate, and under the personal supervision and study of Gino Pierantoni subsidy, in bulk at least, was provided to insure the Institute's reason for being. The next step was to find suitable theatres to evolve or produce drama *ex novo*.

What attitude did the Syndicate show toward the functioning of a practical plan for a National Institute? Various factors continue to impede Italian production. By reason of poverty it has lacked in enterprise, and so languished. It has been powerless to encourage dramatic talent among both young and veteran writers. The promise of a decade and a half ago, indicated by such names as Chiarelli, San Seconodo, Cavacchioli, among others, is now but a memory. When we consider the constituents that composed it, we may call it a theatrical heyday—on the one hand, the "Grotesque Theatre" as exemplified by Chiarelli's *Mask and the Face*, and, on the other, Pirandello with his paradox of self-identity in the philosophical vein. With production next to impossible, the playwright withdraws, interest lags, and if there be experimentation, this is in favor of successful foreign productions which offer better returns. Though the theatrical situation is acute, Italy is not alone in this plight; much may be attributed to the world crisis.

Granting the Institute a certainty, does the future promise to encourage the production of Italian creations by Italians? How will it revive interest in the stage and retrieve, if not increase, its audience? Will it stress the classics or contemporary drama? Conservative or experimental? D'Amico has drawn up a programme according to which Italy will have three theatrical centres nationally subsidized. The main centres will be located in Milan and Rome. A third theatre is to be established as an experimental theatre for Italy's younger and lesser-known writers. The centres will exchange their stock companies periodically, and periodically, too, they will make tours of the country.

On Dec. 11, 1931, Italy lost Enrico Corradini, a vigorous nationalist and polemicist. Corradini's activity in the cause of Italian nationalism found momentum on the eve of Italy's entry into the World War. And, if, in the past decade or so, his activity was less militant, it reached, none the less, a more mellow, a more philosophical turn. His later contributions to periodicals touched varied and vital points: problems in nationalism and the arts. In the past decade, he revised and republished his masterpiece, *Giulio Cesare*, a historico-national drama in which the national Italian character, with all its strength and all its weaknesses, finds identification with a Cæsar, a Brutus, a Cassius, or, if you will, any Roman. In the light of national unity, the Italian has paid dearly for his ultra-individualism. Corradini, cognizant of this divergent trait in the Italian character, persistently urged the necessity of a fusion of the constituents to develop a strong national character to serve modern Italy:

a Roman heritage. To this end Corradini identified himself with the Fascist State which he served in the capacity of Senator and Minister. He was a Florentine, born in Samminiato di Montelupo, 1865. He started his career in literature proper. His early contributions in the form of novels fell somewhat under the D'Annunzian formulae and contained faint echoes of the Nordic philosophers. This early activity (one of imitation and study rather than one of creation) served as an indispensable groundwork for his vast knowledge of history, philosophy, political economy. It is within the foregoing fields that Corradini met with most distinction. For a list of his contributions see *Chi è?* (The Italian "Who's Who?") and the NEW INTERNATIONAL YEAR BOOK, 1931, and Camillo Pellizi's *Le lettere italiane del nostro secolo*. Enrico Corradini collaborated on and directed several political journals, such as *L'idea nazionale*, *Marzocco*, *Il Regno*, the latter of which he founded in 1904. For two studies on the author consult: P. L. Occhini, *Enrico Corradini, Scrittore e nazionalista* (Rome, 1914), and G. Benedetti, *Enrico Corradini* (Piacenza, 1922).

The Goethe celebration throughout Europe caused much stir in Italy where new publications on the German genius appeared and old ones were revived to recall their existence to the Italian public. Goethe's Latinity, and his proclivity for Italian culture, draws him close to the Italian intellectual. *Italia Letteraria* devoted an entire issue to the study of the man and his influence on the Italian peninsula. The April 12th issue of this weekly was replete with material of a biographical nature, and contained, among other contributions, Papini's "Accenni su Goethe," Sibilla Aleramo's "Goethe, e la donna," Enrico Rocca's "Il teatro italiano e Goethe," and G. Titta Roas's "Viaggio in Italia." There are to be noted also the posthumous publication of Prof. Emilio Tezza's version of *Faust*, and a *Life of Goethe* by Lavinia Mazzucchetti, written in the popular vein.

NOVEL. Enrico Cavacchioli who with Luigi Chiarelli, Rosso di San Secondo, and others, concentrated his efforts on the "Grotesque Theatre," a few years ago, issued his second novel, *Serenata celeste* (Ceschina, Milan). With a theme developed out of atmosphere and realism, the novel falls short of being a serious piece of work. It recalls Alberto Moravia's *Gli indifferenti*, though without the forcefulness and poignancy that makes Moravia's novel one of the best contributed in the past decade. The principal objection that the reviewer voices relative to *Serenata celeste* is that the author failed to exploit to advantage the atmosphere and realism couching the first episodes of the novel. Instead he has, knowingly or not, injected an overdose of melodrama. It seems that every situation possible has been thought up and pressed into the story, which, if composed along simpler lines, would have merited a better fate. A mother, a daughter, a libertine lover, a romantic musician are the principals around which the story revolves in a series of extravagant episodes. And, as if in burlesque, an outline of the novel, as well as its autocondemnation, may be found on page 88. In Mario Ferrigni's *Il legionario di sette imperatori* (*The Legionary of Seven Emperors*; Ceschina, Milan) we had a Milanese historical novel with a setting in the 3d and the 4th centuries, after Diocletian had divided the Roman Empire into four

parts and the rule of Italy fell to the Emperor Maximian. The Milan of this epoch is depicted as the cross-roads of the great Empire, the capital of Italy. Here was indeed a city of economic bustle, of intense life, and activity. This was the throbbing Milan, the *Mayland* of the Gauls six centuries B.C., and the *Mediolanum* of the Romans! Specifically the novel deals with Christianity already firmly rooted notwithstanding all the imperialistic persecutions, not excluding Diocletian's. In one part of the story the splendor of all Milan is revealed assembled in the Gabinio Theatre, Maximian, and Diocletian, also spectators. Here the novel attains the heights of emotion and pathos when the comic actor, Genesio, Roman born, repeatedly cries out in defiance, "Tis true I am a Christian!" For this bold manifestation he was decapitated; but not in vain, for the fervor was caught by others of the troupe. And so, like the drama evolved in this little theatre, the Christian drama of the whole Romanic Empire shows that the persecution of one man will account for the conversion of hundreds of other fellow-creatures. As a whole, the novel sustains the historic mood, though the narrative vein is well-timed to offset the tediousness usually present in novels of this type. While it is true that finely worked out detail is essential to the historic novel, it may be pointed out that the author might have condensed his work with advantage without jeopardizing its historic setting. The author has created a praiseworthy nostalgic atmosphere of a distant epoch which he not only presented splendidly but with pathos and dignity.

Bruno Cicognani's *Villa Beatrice* (Treves-Treccani-Tumminelli, Milan) which bears the imprint of a novel written along broad lines and on a solid basis, failed to gain that support which would have won for it the merit and distinction. The story lacked sustained interest and forceful characters. The characters lacked the necessary psychological focus that would render them lifelike and convincing. Cicognani's *Beatrice*, for all her antipathy to conjugal life, to parturition, etc., never fully wins sympathy, yet the novel was fairly well received. Cicognani's short stories of recent date, *Strada facendo* are to be preferred. Where Cicognani fell short in character delineation, Sibilla Aleramo sketched more sympathetically "a life," *Caris di Rosia*, in her latest novel, *Frustino* (*The Whip*; Mondadori, Milan). If in his novel, Cicognani had architectonic structure, Aleramo has none at all. Her work could be called a series of sketches of the love affairs of a woman musician. The author imparted a poetic touch to the idiom which does much to cover the otherwise objectionable melodramatic note that permeates the work. Achille Campanile, who yearly furnished a screamingly funny novel, produced on schedule his *Battista al giro d'Italia* (Treves, Milan). In this Battista (or, our servant, "James") makes a tour of Italy on a bicycle. Jest and cynicism mark the dominant notes of his observations. Better still, may we be permitted to reduce Campanile's symbolic language to the subtle excoiation of the writers who make much ado about thin themes and their arid imaginations? Here attention may be called to the English version of Alberto Moravia's sensational novel, *Gli indifferenti*, (*The Indifferent Ones*; E. P. Dutton & Co., New York) translated by Aida Mastrangelo.

SHORT STORY. Bianca Gerin, little known

among the Italian women writers, made a valuable contribution to short stories in *Aprire la porta* (*Open the Door*; Ceschina, Milan). At most the stories are based on provincial themes, through which, however, gentility and humanity pervade like a delicate perfume. A finely worked-in idiom adds a touch of poetry. A finer contribution than this will hardly be furnished in several seasons. Two other women furnished collections of short stories. In *La propria sorte* (*One's Own Fate*; Marsano, Genoa), Piera Delfina Sessa portrayed a galaxy of characters from an analytical point of view. The "internal struggle" and psychological strokes throw them into high relief. They have pulse and command attention. The author's language is terse and distinctive. A few of her themes have Germanic settings and characters. Lina Pietravalle, better known than either of the afore, discussed authors, gave us sketches of a regional type in *Marcia nuziale* (*Nuptial March*; Bompiani, Milan). Sketched before us are rugged landscapes, strong men, and sturdy women. The work developed in cursory style, makes pleasant reading punctuated with comic episodes. Nino Savaresi based his stories and fantasies, *Storie e fantasie* (Ceschina, Milan), on rustic themes. They are composed with a light touch of philosophy that imparts an undertone of seriousness to the work. *Pane e vino* (*Bread and Wine*) is little short of being a masterpiece. It is perhaps the best story in the collection. Sea stories and legends were collected by E. Bavetta in *Inferni e paradisi del mare* (Agneselli, Milan), and attractively told and pleasingly arranged. The legends are annotated. A group of twelve short stories, *Horse in the Moon* (E. P. Dutton, New York), drawn from Luigi Pirandello's *Novelle per un anno*, and translated masterfully from the Italian by Samuel Putnam, appeared within the year.

THEATRE. The season, which seemed to lack enterprise to hold its own fell below par, notwithstanding the new hope of the project of establishing a National Institute of Drama on the plans submitted by Signor D'Amico. Of the scanty plays, the first worthy of mention was Giovacchino Forzano's *Villafranca* (Barbèra, Florence). Making use of the historic motive, specifically, that of Italy's struggle for independence in the feverish days of 1859, the author has brought into focus a trio that figures portentously in that not remote year—Cavour, Victor Emanuel II, and Napoleon III. In this type of drama the author has had most success. Here it suffices to say that *Villafranca* is good drama and contains red-blooded characters. It is free from pomposity and slow movement. Like plays often have these pitfalls. This play met with public favor in its run at the Teatro Argentina in Rome.

Giorgio Umani composed a dramatic poem in five scenes in *Prometeo* (*Prometheus*; Eroica, Milan). The composition has more value as poetry than as drama. The author must have sensed the futility of stage production of his topic, and yet, could he be excused for minimizing the dramatic moment of his composition? Had the author taken greater care in developing the dialogue interest and the dramatic effect, the work would have reached a far wider public. Considering Giulio Mariani's *La veggente di Betania* (*Mary Magdalen*; Eroica, Milan), the dramatic motives are over-developed, and the poetic values negligible. The stage production of this play

would be far more interesting than the reading, even though the work recalls the D'Annunzian and the Benelli techniques. For these obvious borrowings the author has been flayed by critics. Marco Praga's *Theatrical Chronicles* (Treves, Milan) have been continued after his death, first by Sabatino Lopez and, last season, by Mario Ferrigni, who continued the chronicles in the critical tradition of the founder. Alfonso Sandros produced a compilation of theatrical stories and anecdotes in *Nuovi aneddoti teatrali* (Formiggini, Rome). Pirandello's *Questa sera si recita a soggetto*, a play in which the characters step off stage and assume counterparts in reality (the famous problem of self-identity), has been translated into English, *Tonight We Improvise* (Dutton, New York), by Samuel Putnam. For a review of this play see *The Romanic Review*, vol. xxi, no. 3. At this moment, too, record should be made of Joseph Spencer Kennard's history of the Italian theatre, *The Italian Theatre* (Rudge, New York) in two volumes tastefully printed and bound, and well illustrated. The work, whatever be its shortcomings, is destined to serve the English speaking public in somewhat similar fashion as Luigi Tonelli's *Il Teatro Italiano* serves the Italians.

**POETRY.** The Mondadori Academy Prize for poetry was divided equally by Ugo Betti for his *Cansonette-La morte*, and Fernando Losavio for his *Canti di liberazione*. Both volumes were handsomely produced by Mondadori of Milan. Betti's poems (some assembled from periodical contributions) offer a wide variety of values and feelings. Not infrequently do we find the philosophic vein followed by the conversational, the tragic by the humorous, the ultra-poetic by the narrative. Withal, the poetry is not of the complex variety, which, of course, is always a relief. Losavio, on the other hand, is more lugubrious, almost exclusively in the minor mood. It is the song of liberation (as the title suggests) from the heaviness of life and its suffering. The following four lines will serve conveniently to disclose the thematic material as well as the mood:

Io mi son desto stamane e subito in cuore m'è nato  
un agomento vasto per la giornata intatta,  
che avevo da vivere innanzi.  
ore su ore fino al tramonto, fino alla notte. (*Risveglio*)

Two other volumes decorously edited by Vallecchi of Florence were by Domenico Giuliotti (*Poesie*) and Carlo Delcroix (*I miei canti*). Of the two volumes Giuliotti's deserves greater distinction. The author's poems ranging from 1905 upward (collected from magazine and periodical contributions), are marked by a genuineness of feeling and honesty of introspection. These lines exemplify the poet's singing qualities:

Svanito il volto della giovinezza,  
come dentro uno specchio che s'appanni,  
gelidi, grigi, senza canto, gli anni,  
si rammatassan sulla mia tristezza. (*Fallimento*)

Of Carlo Delcroix, it may be said in passing, that the poems in his latest contribution lack the note of fervid inspiration. They are dry, and too frequently lose the melodic line. In short, one might condemn them of lacking poetry. Still the volume ran through a second edition (up to 1500 copies). This should not be surprising for Mr. Delcroix, a militant Fascist, has a following in Italy.

**CRITICISM AND VARIA.** First in importance we signal out Benedetto Croce's History of Europe in the XIXth century (Laterza, Bari), an interpretation on broad canvas, liberally treated. It is an appeal beyond prejudices and political issues. The survey covered up to 1915. There were two volumes of interest dealing with contemporary authors. The first, Antonio Baldini's *Amici allo spiedo* (*Friends for the Roast*; Vallecchi, Florence), is a study of some of the leading literati of contemporary Italy. With all the apparent good nature of the appraisals, Baldini manages to inject here and there a mordant invective.

The studies are accompanied with critical evaluations of the recent contributions of the authors. In the second volume Carlo Linati discussed with surprising illumination England and American authors, among others, A. Huxley, Virginia Woolf, Lytton Strachey, Hemingway, Wilder. In general Signor Linati has coincided in his opinions with English criticism, though we do not see the importance of including such names as Ezra Pound in the studies. At this moment we should like to call to mind the series, *Tutte le opere* (*Complete Works*) of Antonio Fogazzaro, launched early in the season by Mondadori of Milan. The collection will be assembled in handsome editions with photographs and facsimiles. Piero Nardi's critical and biographical study, *Antonio Fogazzaro*, will serve as introduction to the collection; and Tommaso Gallarati-Scotti's selected letters, *Lettere scelte di Antonio Fogazzaro*, are destined to serve as postlude. The first volume published was the widely read novel, *Piccolo mondo antico*. Two biographies worthy of mention were F. V. Nardelli's *Vita e croci di Luigi Pirandello* (Mondadori, Milan). Aided by Pirandello himself, Nardelli has thrown to light hitherto unknown facts of the distinguished Sicilian. Camillo Antona Traversi continued to swell the list of biographies on D'Annunzio in his study of the poet, *Curriculum vitae di Gabriele D'Annunzio* (Casa del Libro, Rome), compiled from documents and diaries. In English we had Leonard Bacon's study of the poet, *The Furioso* (Harpers, New York), in which the versatile genius is observed in satirical vein (For biographies by Nardelli-Livingston and Sodini see NEW INTERNATIONAL YEAR BOOK, 1931.)

Lastly let us record three studies published by the scholarly house of Laterza (Bari). They are Nicola Festa's translations, *Fragments of the Stoics*, accompanied by copious notes and references; *Problems of Ancient History* by Gaetano de Sanctis; and Nina Ruffini's translation into the Italian of Gilbert Murray's *Euripides and his Times*.

**ITALIAN SOMALILAND**, sō-mā'li-länd. An Italian colony extending along the east coast of Africa from British Somaliland on the northwest to Kenya on the southwest, and bounded on the west by Ethiopia and on the north by the Gulf of Aden. Area, approximately 190,000 square miles; population, 1930 census, 1,030,177 including 1282 white. Mogadiscio, with a population of about 28,000 is the capital. The revenue for 1930-31 was 80,000,000 lire and the expenditure 79,993,000 lire (lira = \$0.526 at par). In 1930 imports were valued at 136,122,000 lire and exports at 47,956,000 lire. The colony is administered by a governor. Governor in 1932, M. Rava, appointed in 1931.

**ITALY.** A constitutional monarchy, comprising besides Italy proper the islands of Sardinia, Sicily, Elba, and some 70 other small islands, together with the territory on the eastern shore of the Adriatic acquired as a result of the Treaty of St. Germain and arrangement with Yugoslavia in 1920. Capital, Rome. Reigning sovereign in 1932, King Victor Emmanuel III, who was born on Nov. 11, 1869, and succeeded to the throne on the death of his father, July 29, 1900.

**AREA AND POPULATION.** At the census of Apr. 21, 1931, Italy had an area of 119,710 square miles and a population of 41,220,434, compared with an area of 110,632 square miles and a population of 36,120,118 in 1915. It was estimated (1931) that about 9,168,367 Italians were living in other countries. The four Italian colonies of Tripolitania, Cyrenaica, Eritrea, and Italian Somaliland (q.v.) had 55,574 white and 2,310,566 native inhabitants in 1931. Births in Italy in 1931 totaled 1,018,174 (1,093,450 in 1930); deaths, 601,685 (573,863); surplus of births, 416,489 (519,587); marriages, 271,045 (301,480). The birth rate fell from 26.7 per thousand in 1930 to 24.9 in 1931 and showed a further decrease in 1932. Emigrants in 1931 numbered 169,864, of whom 40,785 went to North and South America, while Italians returning to Italy during the year numbered 107,744.

The population of the principal cities in 1931 was: Rome, 999,964; Milan, 990,099; Naples, 841,104; Genoa, 607,650; Turin, 596,566; Palermo, 389,933; Florence, 316,193; Venice, 256,144; Trieste, 249,495; Bologna, 245,647; Catania, 226,800. Of the total 1931 population, about 17.37 per cent were concentrated in 22 cities of more than 100,000 population. The 92 cities of every description contained approximately 25.6 per cent of the population. According to the 1931 census, 95 per cent of all Italians were Roman Catholics, 82,659 were Protestants, and 47,485 were Jews.

**EDUCATION.** Illiteracy, which totaled about 27 per cent of the population in 1921, has been sharply reduced under the Fascist régime. Primary education is free and compulsory up to the age of 14. In 1929-30, there were 749,876 pupils in 9546 infant schools; 4,153,784 pupils in 90,633 public elementary schools; 160,494 pupils in 1145 private elementary schools; 153,324 pupils in 1023 public secondary schools; and 52,590 pupils in 703 private secondary schools. The 27 universities (four free) had a total enrollment of 29,680.

**PRODUCTION.** Of the total area of 76,637,676 acres, 70,263,349 acres were in agricultural use in 1931. The area under cereals was 17,095,696 acres; forage and pasture, 12,172,451; woods and forests, 12,102,726; vines, 1,938,517; olive trees, 1,414,345. The 1932 wheat crop of 276,000,000 bushels (provisional figure) was the largest in Italy's history; it was more than twice the size of the average crop for the years 1908-14. The average yield per acre was 22.6 bushels, compared with 15.5 bushels before the war, the increase being due to improved farming methods. Production of the chief crops in 1931 and 1930 (in 1000 quintals of 220.46 pounds each) was: Wheat, 67,478 in 1931 (57,376 in 1930); barley, 2399 (2431); oats, 6047 (5348); rye, 1574 (1555); corn 18,833 (29,978); rice, 6313 (6501); beans, 4235 (3295); potatoes, 15,030 (19,452); sugar beets, 33,706 (30,030). Production of the vineyards was 55,780,000 metric quin-

tals (57,592,000 in 1930); olives, 13,491,000 metric quintals (7,639,000). Livestock in March, 1931, included 6,892,732 cattle, 9,896,038 sheep, 3,157,434 swine, 967,406 horses, 450,001 mules, and 15,773 buffaloes.

Italy lacks most of the natural resources necessary to large scale industry and must import the raw materials. The rapid expansion of hydroelectric power units has reduced coal imports by some 9,000,000 metric tons annually. Production of pig iron in 1931 was 509,174 metric tons (534,293 in 1930); raw steel, 1,452,647 metric tons (1,774,294); rolled steel, 1,253,607 (1,531,365).

The value of minerals produced during 1930 was 588,748,000 lire (\$30,968,000), against 688,116,000 lire (\$36,195,000) in 1929. The chief minerals and metals, with the output in metric tons in 1931 and 1930, were: Iron ore, 560,500 (718,124 in 1930); lead ore, 41,400 (49,928); zinc ore, 100,200 (200,694); iron pyrites, 730,500 (717,270); lignite, 428,760 (576,860); sulphur (crude and ground), 363,800 (370,281); asphalt (rock) and crude bitumen, 417,000 (224,325); marine salt, 546,618 (517,755); metallic mercury, 1189 (1933); aluminum, 11,109 (8763); lead, 24,520 (24,340); pig iron, 507,270 (537,418); steel ingots and castings, 1,452,694 (1,743,351); ferro-alloys, 32,092 (50,829); metallurgical coke, 740,265 (813,325).

The industrial census of 1927 showed 732,109 industrial establishments in the country, with 4,005,812 employees (1,009,883 women). The cotton manufacturing industry, the largest and most important, had 10,406 factories, with 642,654 employees. Production of silk, sugar, and cheese were other leading industries. The estimated textile production in 1931 was: Raw silk, 9,480,000 pounds (11,660,000 in 1930); rayon, 26,247,000 pounds (66,445,000); cotton yarn, 350,000,000 pounds (391,000,000); cotton cloth, 760,000,000 square yards (875,000,000); wool textiles, 65,000,000 square yards (in 1930).

**COMMERCE.** Italy's total foreign trade declined to 21,000,000,000 lire in 1931 from 29,000,000,000 in 1930 and 36,000,000,000 in 1929. As compared with 1930, the 1931 imports decreased 33 per cent in value and 17 per cent in volume, while exports decreased only 17 per cent in value and 1.6 per cent in volume. The adverse 1931 trade balance of only 1,600,000,000 lire compared with adverse balances of 5,227,000,000 lire in 1930 and 6,600,000,000 lire in 1929. Imports in 1931 totaled 11,636,000,000 lire (17,325,000,000 in 1930) and exports were 10,036,000,000 lire (12,115,000,000 in 1930). The Italian lira (\$0.0526 at par) exchanged at \$0.0521 in 1931. Manufactured articles comprised 4,210,000,000 lire of the total exports; foodstuffs and live animals, 2,963,000,000 lire; semi-finished articles, 1,966,000,000 lire; and raw materials for industry, 897,000,000 lire. Imports were divided in commodity groups as follows: Foodstuffs and live animals, 3,005,000,000 lire; raw materials for industry, 3,761,000,000 lire; semi-finished articles, 2,460,000,000 lire; and manufactured articles, 2,410,000,000 lire.

Preliminary figures for 1932 showed imports of 8,247,077,000 lire and exports of 6,796,346,000 lire, the unfavorable trade balance being 1,443,555,000 lire.

Italy's 1931 exports to Great Britain increased 1 per cent over 1931 and to the Soviet Union 170 per cent, while decreases in exports to the other

chief markets ranged from 10 per cent for France to 40 per cent for Egypt. Decreases in imports ranged from 22 per cent for Argentina to 48 per cent for the United States, which was replaced as the leading source of imports by Germany. The principal export markets, in the order named, were Great Britain, France, Germany, and the United States.

**FINANCE.** The budget for the year ended June 30, 1932, placed ordinary and extraordinary revenue and expenditure at 19,888,437,000 lire and 20,464,197,000 lire, respectively. The budget closed, however, with a deficit of 1,300,000,000 lire. Budget estimates for 1932-33 contained revenues of 18,647,000,000 lire and expenditures of 20,060,000,000 lire. Another considerable deficit was forecast. Ordinary receipts and expenditures for the period 1929-30 to 1931-32 are shown in the accompanying table from the 1932 U. S. *Commerce Yearbook*.

ITALIAN RECEIPTS AND EXPENDITURES  
[Millions of lire]

	1929-30 (actual)	1930-31 (actual)	1931-32 (budget)
Receipts .....	19,838	20,084	18,900
Expenditures .....	19,668	20,980	19,324
Equivalent (\$1,000,000)			
Receipts .....	1,043	1,056	994
Expenditures .....	1,034	1,104	1,016

On Jan. 31, 1932, the public debt stood at 91,906,000,000 lire, of which 5,989,000,000 lire represented the floating debt. The foreign debt aggregated 1,696,131,900 lire.

**COMMUNICATIONS.** Railways at the beginning of 1931 extended 13,777 miles, of which 10,463 miles were state owned and operated. Electrified lines handled about 20 per cent of the entire traffic on Italian railways. There were (1930) about 125,026 miles of national roads and 9252 miles of air lines. The Italian mercantile marine on June 30, 1931 consisted of 1101 steam and motor vessels of 100 gross tons or more, with a gross tonnage of 3,273,525 (4.97 per cent of the world's tonnage). The net tonnage of vessels entering Italian ports with cargo and in ballast in 1931 was 20,676,000 (21,840,000 in 1930); that of vessels clearing was 20,352,000 (21,298,000 in 1930). By a law promulgated Dec. 31, 1931, public subsidies were extended to Italian cargo ships, not operating in regular contract services, for a period of one year beginning January 1, 1932.

**ARMY AND NAVY.** See **MILITARY PROGRESS; NAVAL PROGRESS.**

**GOVERNMENT.** The Constitution vests executive power in the King, acting through a responsible ministry, and legislative power rests conjointly in the King and a parliament of two chambers. The Senate, of about 417 members, is composed of princes of the royal house and members nominated by the King for life. The Chamber consists of 400 members elected for five years. The Grand Council of Fascism is the supreme body which "controls all the activities of the régime," under a law promulgated in December, 1928. It "designates" the deputies for the lower chamber and "must give its opinion on all bills dealing with constitutional issues."

The Cabinet at the beginning of 1932 was composed as follows: Prime Minister, Chief of the Government, and Minister of Interior, Benito Mussolini; Foreign Affairs, Dino Grandi; War, Pietro Gazzera; Navy, Giuseppe Sirianni; Air,

Italo Balbo; Public Works, Araldo Di Crollanza; Corporations, Giuseppe Bottai; Education, Balbino Giuliano; Agriculture and Forests, Giacomo Acerbo; Colonies, Emilio de Bono; Finance, Antonio Mosconi; Justice, Alfredo Rocco; Communications, Constanzio Ciano. On Aug. 18, 1931, Premier Mussolini announced that the Council of State, which examines bills preliminary to their submission to Parliament, would thereafter be directed by him.

#### HISTORY

More united and disciplined than ever, Italy in 1932 celebrated the tenth anniversary of the establishment of the Fascist régime with impressive ceremonials and the nation-wide dedication of new public works. The country by no means escaped the paralyzing grasp of the world depression. But Fascism's purposeful vigor, together with the less industrialized state of Italian economy, enabled the nation to escape the worst effects of the economic storm. Premier Mussolini played a leading rôle in the effort to remove the chief obstacles to European economic recovery, particularly excessive armaments, reparations and war debts. His effectiveness was impaired, however, by the contradiction between his advocacy of disarmament and his demands for additional colonial outlets for Italy's rapidly increasing population, an increase which was encouraged in every possible way by the state.

**THE ECONOMIC SITUATION.** The effect of the depression upon Italian finances, industry, and commerce in 1931 was outlined in the report of the Budget Committee of the House of Deputies, published June 1, 1932. The report estimated the national income at between 60 and 70 billion lire, a reduction of approximately 33 per cent since the beginning of the depression. At the same time the pressure of taxation had been steadily rising until it absorbed about 30 per cent of the national income, as compared with 20 per cent in the fiscal year 1925-26. The decline in national income in 1931 was attributed partly to poor crops but chiefly to the price decline. The total value of the four leading crops—wheat, wine, olive oil, and hemp—fell from 14,650,000,000 lire in 1929-30 to 9,860,000,000 lire in 1930-31, or approximately one-third. All agricultural products showed approximately the same decline, and the average industrial decline was about the same, although fluctuating between a minimum of 10 and a maximum of 60 per cent in certain industries. The income from investments fell off by approximately one-third; from real estate, between 10 and 15 per cent; from commercial enterprises, as high as 40 per cent. Wages and salaries were cut, in general, by 10 to 15 per cent. In view of these conditions, the budget committee considered increased taxation inadvisable and that recourse to economy was imperative.

Prices continued their decline during 1932. The wholesale price index stood at 79 on November 4, as against 86 in January and an average of 92 in 1931 and 134 in 1928. The value of both imports and exports decreased steadily, also. However, imports declined more than exports, reducing still further the adverse balance of trade. Unemployment remained serious throughout the year, fluctuating between a maximum of 1,147,000 in February and a minimum of 905,000 at the end of June. Only a small fraction of the unemployed received direct government re-

lief, the burden of supporting the remainder falling upon private charity and the local communities. Most of these were kept busy on public works. As the year advanced, confidence that Italy had seen the worst of the depression increased. The reduction of the adverse trade balance and the relatively small foreign indebtedness relieved Italy of the pressure on its gold reserves, which presented serious difficulties in Great Britain and other countries. The national bank increased its reserves both of gold and of foreign currencies, and with the restriction of currency in circulation the gold reserve on Nov. 4 reached 42 per cent of the circulating medium. These developments strengthened the lira, which exchanged at \$0.0512 in November, as compared with \$0.0504 in January, 1932. A 1,000,000,000-lire government refunding loan issued early in the year was oversubscribed fourfold. To stimulate domestic production and relieve agricultural unemployment, duties were raised during August on a long list of farm products imported from abroad.

**POLITICAL DEVELOPMENTS.** In general the year was one of relative internal peace. The violent struggle with the Vatican which marked the year 1931 was followed by a period of increasing cordiality. This better feeling was evidenced by the Pope's bestowal of the Vatican's highest decoration—the Supreme Order of Christ—upon King Victor Emmanuel and Crown Prince Humbert and of the Order of the Golden Spur upon Mussolini. On February 11, Mussolini made his first visit to the Pope.

Internal opposition to Fascism seemed to have reached a low ebb. Angelo Sbardelotto was arrested in May on a charge of planning to assassinate Mussolini. Convicted early in June, he was executed along with Domenico Bovone, a terrorist arrested in 1931 in connection with a series of sensational bombings. Six of Bovone's accomplices received varying terms in prison. In connection with the celebration of the tenth anniversary of the Fascist régime, Premier Mussolini issued on November 6 his long-promised amnesty decree. In an introduction to the decree, Signor Mussolini wrote that it was proof of the strength of Fascism, "which no longer has reason to fear opposition." The decree revoked prison sentences up to five years for all civil crimes, including political offenses. According to statistics published November 7, 595 out of the 1086 political prisoners banished to the Lipari Islands were freed. Besides the Lipari prisoners, there were 1056 persons serving sentences for "anti-Fascist crimes," of whom 639 were released. The number of persons liberated for minor civil offenses was estimated at between 15,000 and 20,000. On November 16 pardons were extended to 17 prominent anti-Fascists, including Gaetano Salvemini, Vincenzo Vacirca, Massimo Rocca, Cesare Rossi, Benedetto Facislo, Francesco Cicotti Scozzese, Alceste de Ambris, and Giuseppe Donati. With the exception of Rossi, who was serving a 30-year prison term, all 17 were political expatriates. The decrees depriving them of their Italian citizenship and confiscating all their goods were revoked. Pardons were not extended to former Premier Francesco Nitti, Count Carlo Sforza, and other prominent exiles.

An unexpected and only partly explained development was the sudden dismissal by Mussolini on July 20 of five of his leading Cabinet Ministers and 11 Under-Secretaries. Heading the

list of those dismissed were Foreign Minister Dino Grandi; Finance Minister Mosconi; Minister of Education Giuliano; Minister of Justice Rocco, and Minister of Corporations Bottai. Mussolini himself assumed the portfolios of Foreign Affairs and Corporations. His appointees to the other vacancies included six university professors, a seeming effort to court the intellectuals. Grandi's dismissal followed close on the Lausanne Reparation Conference and was believed partly due to Mussolini's resentment at Italy's seeming isolation in the face of the Anglo-French accord (see **REPARATIONS AND WAR DEBTS; GREAT BRITAIN AND FRANCE under History**). On August 11 the Premier announced a sweeping shift in the personnel of the consular and diplomatic service. Over 30 changes were announced, including the appointment of Augusto Rosso as ambassador to Washington, replacing Nobile Giacomo de Martino.

The celebration of the tenth anniversary of the Fascist régime commenced on October 16 and reached a climax on October 28, the anniversary of the march on Rome. The celebrations emphasized the material progress of the nation in the preceding decade, notably the extensive reclamation of waste land, modernization of agricultural methods and financing; construction of highways, railways, and hydro-electric projects; modernization of cities, ports and harbors; and excavation and restoration of ancient Rome's historic remains. Mussolini made a four-day tour through Northern Italy, where he was received with acclaim in the former strongholds of anti-Fascism. He dedicated the huge new Monteferrat Aqueduct on October 23; at Milan he opened the new motor highway for trucks linking Turin and Milan with the seaport of Genoa.

Early in December, the government launched a new programme of public works, to cost \$130,000,000, which was to provide employment for about 300,000 persons during the winter. On December 30, it was announced that Mussolini, through a special commission of the Ministry of Corporations, was drafting laws for the regulation of industrial enterprise to achieve a more balanced production. A statute was adopted forbidding the construction or expansion of any manufacturing plant without the governor's consent. The Premier declared that "those irregular industrial expansions that were dictated rather by bankers' than manufacturers' standards cannot be permitted."

The official list of the Fascist party, made public June 24, showed 1,329,693 members on the rolls, an increase of 181,933 over 1931. An auxiliary branch of the party for women was organized during the year. The government continued its vigorous effort to crush the Sicilian Mafia. Another wholesale trial of offenders was ended May 2 with the sentencing of 244 men and women to long terms of imprisonment. With more than 1000 already convicted, the end of the Mafia's reign of terror was believed in sight.

**FOREIGN RELATIONS.** Franco-Italian rivalry again provided the pivotal point for Italian foreign policies during 1932. Events of the year appeared to confirm reports that Italy's main objective in demanding naval parity with France and in opposing French policies was to induce France to part with some of the colonies taken from Germany during the World War. In speeches before the Italian Chamber of Deputies (May 17) and the Senate (June 3), Foreign

Minister Grandi vigorously advanced Italy's claim to colonial outlets in Africa for Italy's rapidly expanding population. The Foreign Minister made obvious efforts to place the demand for colonies in the foreground of the international stage on a par with the French demand for security, the German drive for revision of the Versailles treaty, and the war debts problem. His failure to make a greater impression abroad, together with the developments at Lausanne, were considered the chief reasons for his dismissal.

Reading between the lines of Grandi's speeches, foreign correspondents concluded that France was being asked to cede to Italy the League mandate over Cameroon or Togoland. At the same time Italy was pressing France to rectify the southern frontier of Tripolitania to include Lake Tchad. Since French Cameroon extended northward to Lake Tchad, the Italian demands envisaged an Italian strip of territory extending from the Mediterranean to the Gulf of Guinea. References were continually made in the Italian press to the possibility of the purchase of Portuguese territories in South Africa, the discussion in Spain as to the advisability of withdrawing from Morocco, and to the future status of Ethiopia, in which Italy appeared particularly interested.

The trump card which Italy had to offer France in exchange for territory in Africa was a military alliance safeguarding France from a possible German attack. Whether such a proffer was made was not revealed. But Mussolini's diplomacy since 1929 had been admirably calculated to weaken France's position in Europe and force her to come to terms with Italy. The strong position which France occupied during the financial crisis of 1931 enabled her to frustrate Mussolini's diplomacy. But in 1932, the increasingly menacing tone of Germany toward France and the refusal of Great Britain and the United States to guarantee French security apparently turned the tide in Italy's favor. Conciliatory gestures were made by Premier Mussolini (October 23) and Premier Herriot soon afterward, which inaugurated more amicable relations between the two powers. The Franco-Italian naval negotiations, suspended in 1931, were resumed but no apparent progress was made during the remainder of the year.

A number of diplomatic moves and counter-moves preceded these steps toward rapprochement. Italy joined Germany in defeating Premier Tardieu's plan for a Danubian Federation (see UNITED STATES OF EUROPE). In the second week of April, the Fascist Grand Council issued a general outline of Italian foreign policies, in which it definitely favored a readjustment of war debts and reparation, reduction of tariff walls, an economic agreement among the Balkan and Danubian states, and the revision through the League of Nations of territorial and armament clauses of the Versailles Treaty objectionable to Germany. The French scored heavily with the Anglo-French accord at Lausanne. A few days later (July 21) Mussolini threw a bombshell into the Geneva Disarmament Conference. He sent General Italo Balbo to Geneva to read a statement denouncing the resolution embodying the agreement reached during the first phase of the conference. The message called the resolution a "vain effort," "entirely inadequate when compared to the wishes and hopes of the world" (see DISARMAMENT). Earlier Italy had been the

only one of the more important European powers to approve President Hoover's proposal for a reduction in armaments. Similarly Mussolini was the only chief of an important government to endorse the German note of August 31 asking for arms equality.

Mussolini's motives for these pacific moves were questioned when there appeared in *Il Popolo d'Italia* an article on Fascism which the Premier had written for the *Encyclopædia Italiana* (published in English in the New York Times of Sept. 18, 1932). Therein, the Premier said that Fascism "laying aside all considerations of present-day politics, does not believe either in the possibility or the utility of perpetual peace. It therefore repudiates pacifism, which betrays a tendency to give up the struggle and implies cowardice in the face of the necessity of sacrifice. . . . Only war raises all human energies to the maximum and sets a seal of nobility on the peoples which have the virtues to undertake it."

On April 23, the Minister of Marine had announced in the Chamber of Deputies that Italy would not present or undertake her new naval building programme until after the Disarmament Conference, as to do so would imply lack of faith in the success of the Conference. On July 24, Hector C. Bywater, British naval expert, charged in *The Daily Telegraph* that Italy was carrying on a naval construction programme secretly presented and authorized by the Chamber in 1931 and started before the Minister of Marine made his statement in the Chamber. Similar charges were published in the French press, arousing much resentment in Italy, where the allegations were declared deliberate falsification of the facts. The French and British press likewise criticized as unnecessarily extensive and flamboyant the Italian naval maneuvers in the Mediterranean in August. To this the Fascist press retorted that the two nations primarily responsible for the failure of the Geneva Disarmament Conference had no reason to complain. Soon after the maneuvers, the government announced (August 17) that about one-third of the Italian Navy (or 130,000 tons) would be retired August 25 as an economy move (see NAVAL PROGRESS). On December 3, Italy aroused much foreign criticism by laying down two new light cruisers and two torpedo boats. Mussolini declared that these vessels constituted replacements and accordingly did not fall within the terms of the arms truce declared by the League of Nations, which was to expire on Mar. 1, 1933.

Friction with France was accompanied by threats to withdraw from the League of Nations, in which, the Fascists believed, France exerted undue influence. In a speech on foreign affairs at Turin October 23, however, Mussolini declared that Italy did not wish to "leave the bedside now that the League is extremely sick" (see LEAGUE OF NATIONS). At the same time he advocated closer collaboration among Italy, France, Great Britain and Germany in the economic and political rehabilitation of Europe. He appealed to the United States not to revive the reparation issue, conditionally disposed of at Lausanne, by insisting upon the full payment of war debts. Germany's demand for equal armaments was justified, he reiterated, but Germany should be permitted to rearm only if the Disarmament Conference ended in failure.

The temporary and opportunist character of

Italo-German coöperation against France was revealed when the German Government shifted from tariffs to quotas on imports of agricultural products. Mussolini countered this blow at Italian exports by forbidding Italian banks to allot foreign exchange to importers of German products.

Meanwhile Italy was consolidating her position in the Eastern Mediterranean. In June, Premier Ismet Pasha of Turkey visited Rome and renewed the Italo-Turkish neutrality agreement signed in 1928. He also concluded a commercial agreement, under which Premier Mussolini undertook to lend about \$15,000,000 to Turkey for a three-year industrial programme. Italy continued her efforts to capture the developing markets in the Balkans and the Near East as well as in Persia and Iraq. With the fall of the Karolyi government in Hungary and the elevation of Julius Gömbös, admiral and disciple of Mussolini, Hungary returned to the Italian orbit (see HUNGARY under *History*). Yugoslavia remained the only Balkan state with which Italy's relations were not friendly.

In December, Italian relations with Yugoslavia again became tense, following anti-Italian demonstration at Trau, Yugoslavia, where the ancient lion of St. Mark symbolizing Venetian rule on the Dalmatian coast was dynamited on December 1. Speaking in the Senate on December 14, Mussolini threatened Yugoslavia with commercial reprisals for the Trau outrage and charged France with major responsibility for the incident. This development, the fall of the Herriot cabinet in France, and the subsequent heavy shipment of rifles and machine guns from Italy to Hungary via Austria on December 30 and 31, served to estrange Italy and France. Yugoslav alarm was increased by reports that Italy was attempting to force a customs union agreement upon Albania (see YUGOSLAVIA).

In accordance with a decision reached by the Fascist Grand Council on December 6, Italy paid the \$1,245,437 war-debt installment due to the United States government on Dec. 15, 1932.

Consult Count Carlo Sforza, "The Fascist Decade," *Foreign Affairs*, October, 1932; William Martin, "Mussolini's Ten Years of Power," *Current History*, October, 1932; "Italy's Financial Stake in Albania," *Foreign Policy Reports*, June 8, 1932.

**IVORY COAST.** See FRENCH WEST AFRICA.

**JACCIA,** AGDE. An American musical director, died in Siena, Italy, Nov. 29, 1932. He was born in Lugo, Italy, Jan. 5, 1875, and studied at conservatories in Parma, Milan, and Pesaro, making his debut as a conductor at the Teatro Grande, Brescia, in 1898. He held similar posts at theatres in Ferrara, Milan, Leghorn, and Siena. His first visit to the United States was in 1902 as assistant conductor of the Mascagni Opera Co. He returned in 1907 with the Milano Opera Co. In 1910 he was appointed general musical director of the Montreal Opera Co. and in 1914 of the Century Opera Co., in New York City. He was also for a short time director of the Boston Opera Co. He conducted the Boston Symphony summer ("pop") concerts during 1917-26, the Cecilia Society of Boston during 1920-24, and the Fitchburg (Mass.) Choral Society during 1923-25. In 1920 he became director of the Boston Conservatory of Music which position he held at the time of his death. He composed several cantatas and songs.

**JACOBS, HENRY EYSTER.** An American theologian, died in Mt. Airy, Pa., July 7, 1932. He was born in Gettysburg, Pa., Nov. 10, 1844, and was graduated from Pennsylvania College in 1862 and from the Lutheran Theological Seminary three years later. Between 1870 and 1883 he taught Latin, Greek, and history at Pennsylvania College. He was then appointed professor of systematic theology at the Lutheran Theological Seminary, where he also assumed the office of dean in 1894 and in 1920 was elected president. He held the latter office until 1927. Among the many societies of which he was president were the board of foreign missions of the General Council of the Lutheran Church (1902-07), the General Conference of Lutherans (1899, 1902, 1904), the American Society of Church History (1907-08) the Pennsylvania German Society (1910-11), and the Pennsylvania Bible Society (1926-32). In 1919 he was appointed chairman of the commission on adjudication of the United Lutheran Church in America, and after 1927 was a member of the Senior Lutheran Ministerium of Pennsylvania. Besides translating various German theological works and editing the *Lutheran Church Review* (1882-96), a *Lutheran Commentary* (1895-98), and the *Lutheran Encyclopædia* (1899), he wrote *The Lutheran Movement in England* (1891); *History of the Lutheran Church in America* (1893); *Elements of Religion* (1894); commentaries on Romans (1896) and I Corinthians (1897); *Life of Martin Luther* (1898); *The German Emigration to America, 1709-40* (1899); *Summary of the Christian Doctrine* (1905); and *Lincoln's Gettysburg World Message* (1920).

**JACOBY, HAROLD.** An American astronomer, died in Westport, Conn., July 20, 1932. He was born in New York City, Mar. 4, 1865, and in 1885 was graduated from Columbia University where he served as assistant and instructor in geodesy and practical astronomy. After obtaining his Ph.D. degree in 1895 he served as adjunct professor until 1904 when he was made full professor. He also acted as director of the Columbia Observatory from 1906 until his retirement in 1930. In 1889-90 he was assistant astronomer on the United States eclipse expedition to West Africa, and during the War World was civilian instructor in navigation at the Submarine Officers' Material School, Pelham Bay (N. Y.) Naval Training School. He was also a councilor of the New York Academy of Sciences, treasurer of the American Mathematical Society, editor of the *Transactions* of that society, and fellow of the Royal Astronomical Society of London. He published *Practical Talks by an Astronomer* (1891); *Astronomy, a Popular Handbook* (1913); and *Navigation* (1917), and contributed papers on astronomical subjects to the journals of various American and European scientific societies. He also edited the department of astronomy in the first edition of the NEW INTERNATIONAL ENCYCLOPÆDIA.

**JAIL OUTBREAKS.** See CRIME.

**JAMAICA.** A colony of Great Britain, consisting of the island of Jamaica, which is the largest in the British West Indies, and the following dependencies: Turks and Caicos Islands; Cayman Islands; Morant Cays; and Pedro Cays. Area of Jamaica, 4450 square miles; of the dependencies, 224 square miles. Population of Jamaica, according to the census of 1921, 858,118, including 660,420 blacks, 157,223 of mixed

race, 14,476 whites, 18,610 East Indians, and 3696 Chinese; estimated population on Jan. 1, 1931, was 1,022,152, including 17,424 East Indians. The capital is Kingston, population 88,000 in 1927.

Jamaica is primarily agricultural, the leading crops being sugar, coffee, bananas, coconuts, cacao, and vegetables. In 1930-31, the area under cultivation was 832,300 acres. Approximately half the banana trees on the island were destroyed by a storm on Nov. 8, 1932, the damage being estimated at \$3,000,000. Imports for 1930-31 totaled £6,101,513 and exports £4,091,573, the excess of imports being characteristic of trade since 1910. The United States is the chief customer and principal source of supply. Revenue for the fiscal year ended Mar. 31, 1931, amounted to £2,197,572 and expenditure to £2,322,613; public debt was £5,117,444 and sinking fund £1,708,700.

The Governor is assisted by a privy council and a legislative council of 5 *ex-officio*, 10 nominated, and 14 elected members. Governor-in-Chief and Captain-General, Sir A. R. Slater, who assumed office on Nov. 21, 1932.

**JAPAN.** A Far Eastern empire, consisting of the five main islands of Honshu (mainland), Hokkaido, Kyushu, Shikoku, and Taiwan (Formosa), together with some 600 smaller islands and island groups, the peninsula of Korea, or Chosen, and Karafuto (the southern half of the island of Sakhalin). Capital, Tokyo; reigning sovereign in 1932, Emperor Hirohito.

**AREA AND POPULATION.** The area of the Japanese Empire and the census populations in 1925 and 1930 are shown in the accompanying table.

#### JAPANESE EMPIRE: AREA AND POPULATION

Island	Area, square miles	Population, 1925 census	Population, 1930 census
Japan proper . . .	147,462	59,736,822	64,447,724
Chosen (Korea) . .	85,228	19,522,945	21,057,969
Taiwan (Formosa) .	13,840	3,993,408	4,594,161
Karafuto . . . . .	13,934	203,754	295,187
Total . . . . .	260,514 <sup>a</sup>	83,456,929	90,395,041

<sup>a</sup> Including Pescadores.

The legal population of Japan proper was placed at 65,866,500 in 1931. The Japanese government also held a 99-year lease of Kwantung (including Port Arthur and Dairen in South Manchuria) with a population of 1,327,971 (about 250,000 Japanese) in 1930, and mandated territory in the South Seas, with a population of 69,627 (about 19,000 Japanese) in 1930. The density of population per square mile for the Empire in 1930 was 347.2, while that for Japan proper was 437.4. The number of Japanese residing abroad was 518,865 in 1930; there were about 39,200 foreigners resident in Japan. For the period 1928 to 1930, births averaged 2,092,624 annually in Japan proper and deaths 1,208,722, the excess of births being 883,852 annually. The average birth rate for the five-year period was 33.6 per 1000 inhabitants and the death rate 19.4. In 1931 births numbered 2,102,600; deaths, 1,240,800; natural increase, 861,400; marriages, 496,574.

The population of the chief cities at the 1930 census, with 1925 census figures in parentheses, was: Osaka, 2,453,569 (2,114,804); Tokyo, 2,070,529 (1,995,587); Nagoya, 907,402 (768,558); Kyoto, 765,142 (679,963); Kobe, 787,596 (644,212); Yokohama, 620,296 (405,888). On

Oct. 1, 1932, the city of Greater Tokyo was created through the amalgamation of five neighboring counties embracing 82 towns and villages, with an aggregate population of 5,040,201 and an area of 213.15 square miles.

**EDUCATION.** Elementary education is compulsory for children between the ages of 6 and 14 years and less than 1 per cent of the adult population were illiterate in 1927. In 1930-31, there were 9,832,000 pupils attending elementary schools, 687,149 in secondary schools, and 57,328 in the five Imperial universities and the 32 other institutions of university rank.

**PRODUCTION.** About 50 per cent of the population was directly dependent upon agriculture in 1931. Out of a total area of 94,376,000 acres, or less than that of California, there were in Japan proper in 1931, 7,952,000 acres of rice fields, 6,932,000 acres of upland farms, 4,623,000 acres of moors and pastures, and 21,437,000 acres of taxable forests. About 54 per cent of the cultivated land was owned by wealthy landowners and leased, in plots averaging about 2½ acres, to tenants who wrung a bare subsistence from the soil. Rice is the chief crop and the main diet of the people. The 1931-32 rice crop was 17,346,000 pounds (20,516,000 pounds in 1930-31). Livestock in Japan proper in 1930 numbered 1,498,000 cattle, 742,000 swine, 24,000 sheep, 217,000 goats, and 1,490,000 horses. The area and production of the chief crops in 1931 and 1930 are shown in the accompanying table from the 1932 *Commerce Yearbook*.

#### CROP AREAS AND PRODUCTION: JAPAN PROPER

Crop	Area <sup>a</sup>		Production <sup>b</sup>	
	1930	1931	1930	1931
Wheat . . . . .	1,198	1,231	29,538	30,892
Barley . . . . .	2,110	2,105	72,472	76,522
Oats . . . . .	296	290	12,558	11,081
Rice (rough) . . .	7,938	7,952	592,091	487,514
Tea . . . . .	93	..	85,201 <sup>c</sup>	..
Tobacco . . . . .	89	91	145,175 <sup>c</sup>	155,757 <sup>c</sup>
Cocoons . . . . .	..	..	880,181 <sup>c</sup>	767,981 <sup>c</sup>

<sup>a</sup> Thousands of acres. <sup>b</sup> Thousands of units—bushels except as indicated. <sup>c</sup> Unit, pound.

The 1932 rice crop totaled 309,197,000 bushels, an increase of 26,496,000 bushels over 1931. The value of the fisheries output in 1930 was 162,928,000 yen (raw products). Production from forest lands is valued at about \$120,000,000 annually. Next to rice, fish is the most important article of diet.

Mineral products are varied but limited in quantity, copper being the only metal available in quantities more than sufficient for local needs. The value of the chief mineral products in 1930 was: Coal, \$95,321,000; copper, \$24,809,000; gold, \$7,962,000; petroleum, \$7,049,000; silver, \$2,228,000. Mineral and metallurgical production in 1931 and 1930 are shown in the accompanying table.

#### MINERAL AND METAL PRODUCTION: JAPAN PROPER

Product	1930	1931
Coal . . . . .	1,000 met. tons	29,374
Iron pyrites . . . . .	met. tons	618,743 <sup>a</sup>
Crude petroleum . . . . .	1,000 bbls.	1,905
Sulphur . . . . .	met. tons	56,000
Gold . . . . .	met. tons	364,292
Silver . . . . .	1,000 troy oz.	5,127
Copper . . . . .	met. tons	77,911
Pig iron . . . . .	1,000 met. tons	1,656
Steel ingots . . . . .	1,000 met. tons	1,794

<sup>a</sup> 1929.

**MANUFACTURING.** The value of manufactured products in Japan proper in 1930 declined to 5,954,000,000 yen (\$2,968,069,000 at par) from 7,759,000,000 yen (\$3,877,861,000) in 1929. The number of operatives was 1,683,600 in 1930 (1,825,000 in 1929) and prime movers (steam) had a capacity of 3,897,900 horsepower and electric motors 3,413,000 horsepower. The production of cotton yarn in 1931 was 1,026,800,000 pounds (1,008,000,000 pounds in 1930); of spun silk, 12,804,000 pounds (13,464,000); of rayon, 46,764,000 pounds (35,000,000). The value of cotton fabrics produced in 1931 was \$225,811,000 and of silk fabrics, \$157,904,000. Iron and steel, ships, paper, flour, camphor, tobacco products, sake (rice wine), and porcelain earthenware are other leading products. Unemployment reached serious proportions during 1931 and 1932; the number of labor disputes increased to 2146 in 1931 from 1823 in 1930.

**COMMERCE.** Imports into Japan proper in 1931 amounted to \$609,929,000, as against \$763,595,000 in 1930, or a decline of 20.1 per cent. General exports were \$566,150,000, as compared with \$725,960,000 in 1930, a 22 per cent decrease. The unfavorable trade balance for Japan proper was \$43,779,000 in 1931, a sum \$6,144,000 larger than in the previous year. The chief 1931 import items, with 1930 figures in parentheses, were: Raw cotton, \$146,163,000 (\$178,651,000); sheep's wool, \$42,522,000 (\$36,356,000); mineral oils, \$42,345,000 (\$44,237,000); machinery and parts, \$25,129,000 (\$42,334,000); fertilizers, \$23,797,000 (\$37,457,000); bean-oil cake, \$18,925,000 (\$28,513,000); cedar wood, \$18,865,000 (\$23,127,000).

Due largely to the depreciation of the yen, the value of Japan's imports and exports in 1932 rose by 15 and 23 per cent, respectively. The unfavorable balance of trade was about 67,000,000 yen, or about half that of the previous year. United States statistics for 1932 showed exports to Japan of \$134,537,384 and imports from Japan of \$134,011,311.

The leading export items in 1931, with 1930 figures in parentheses, were: coin and bullion, \$208,003,000 (\$153,007,000); raw silk, \$175,422,000 (\$205,782,000); cotton tissues, \$98,094,000 (\$134,398,000); clothing and accessories, \$36,444,000 (\$41,532,000); silk tissues, \$21,251,000 (\$32,486,000). The United States took 37 per cent of Japan's total exports in 1931, as against 34.4 per cent in 1930, and supplied 27.7 per cent of Japan's total imports (28.6 per cent in 1930). Raw silk shipments to the United States in 1931 increased 19.5 per cent in volume, but declined 14.1 per cent in value, from the 1930 figures. Exports to the United States in 1931 were valued at \$209,943,000 (\$249,969,000 in 1930) and imports from the United States were \$168,954,000 (\$218,739,000). China in 1931 took 13.6 per cent of Japan's exports (17.7 in 1930) and furnished 11.8 per cent of the total imports (10.5 in 1930). British India took 9.6 per cent of the exports and furnished 10.8 per cent of the imports; Great Britain, 4.5 per cent and 5.1 per cent, respectively.

**FINANCE.** The budget estimates for the fiscal year ended Mar. 31, 1932, fixed ordinary and extraordinary revenues at 1,489,275,000 yen and expenditures at 1,488,903,000 yen. However, actual returns showed revenues of 1,008,000,000 yen and expenditures of 1,205,000,000 yen. The deficit of 197,000,000 yen was attributed to the

world depression, heavy military expenditures at Shanghai and in Manchuria, the Chinese boycott of Japanese goods, and keener commercial competition from European countries with depreciated currencies. The budget for 1932-33 provided for revenues of 1,380,000,000 yen; expenditures of 1,490,000,000 yen, and a deficit of 110,000,000 yen. In December, 1932, the actual deficit for 1932-33 was placed at 322,000,000 yen. The budget for 1933-34, as officially approved by the cabinet Nov. 25, 1932, called for expenditures of 2,239,000,000 yen against an estimated income of 1,342,000,000 yen, leaving an anticipated deficit of 897,000,000 yen. To meet this deficit and additional normal requirements for pensions, etc., the bond issues called for under the 1933-34 budget aggregated about 1,100,000,000 yen.

At the end of October, 1932, the national debt amounted to 6,311,000,000 yen, exclusive of 250,000,000 yen in treasury bills and 100,000 in rice certificates. Of this amount 4,912,000,000 yen represented domestic bond issues and 1,398,000,000 yen were held abroad. On Mar. 31, 1931, the debt totaled 6,154,000,000 yen (1,478,000,000 external). The burden of the foreign debt was more than doubled by the depreciation of the yen (par, \$0.4985) from an average of \$0.4885 in 1931 to an average of \$0.2073 for December, 1932. For other financial developments in 1932, see *History*.

**COMMUNICATIONS.** Railways in Japan proper in 1930 extended 12,814 miles, of which 8769 miles were government owned. In the year ended Mar. 31, 1930, the railways carried 1,278,402,000 passengers and 102,046,000 tons of freight, the gross operating receipts totaling \$302,095,000. Several new lines in the vicinity of Tokyo were completed in 1932. The highway mileage in 1931 was about 559,215 miles, of which 35,466 miles were used for motor traffic. Four commercial air lines, with an aggregate mileage of 1888, were in operation during 1931. The Japanese merchant marine on July 1, 1932, was composed of 1614 steamships of 3,684,637 gross tons, and 350 motor ships of 570,377 gross tons. Vessels entering the port in the foreign trade during 1931 numbered 17,887, of 56,807,994 net registered tons, of which 13,172 vessels, of 37,019,321 net tons were Japanese. Idle Japanese steam shipping aggregated 315,000 gross tons on Jan. 1, 1932, and 212,000 gross tons on June 15.

**ARMY AND NAVY.** Military or naval service is universal and compulsory. Liability commences at the age of 17 and extends to 40, but actual service begins at 20. The peace establishment of the active army in 1931 was 12,343 officers and 185,540 of other ranks. The strength of the active army and the first and second reserves was 17,343 officers and 259,304 of other ranks. See **MILITARY PROGRESS**.

The accompanying table from the *Statesman's Year Book* for 1932 shows the classification of the Japanese Fleet for the three years ending with 1931. Also see **NAVAL PROGRESS**.

JAPANESE FLEET

	Completed at end of		
	1929	1930	1931
Battleships and battle cruisers ..	10	10	10
Armored cruisers .....	7	7	7
Aircraft carriers .....	3	3	3
Cruisers .....	29	32	30
First-class gunboats .....	2	2	2

Submarines .....	65	66	67*

\* Including 62 first-class and 48 second-class.

\* Including 23 first-class and 44 second-class.

**GOVERNMENT.** Executive power is vested in the Emperor who acts with the advice and aid of a ministry appointed by, and responsible to, himself; legislative power is in the Emperor and the Imperial Diet of two chambers, namely, the Upper House or House of Peers, composed of membership based on rank, wealth, and other qualifications, and numbering 401 members; and the Lower House or House of Representatives, elected for four years, unless sooner dissolved, and numbering 466 members. Emperor Hirohito, born Apr. 29, 1901, succeeded his father, Yoshihito, Dec. 25, 1926. The cabinet as constituted Dec. 13, 1931, was composed as follows: Prime Minister and Minister for Foreign Affairs, K1 (Takemshi) Inukai; Home Affairs, Kizaburu Suzuki; Finance, Korekiyo Takahashi; War, Lt.-Gen. Sadao Araki; Marine, Admiral Mineo Osumi; Justice, Toyosuke Hata; Education, Ichiro Hatoyama; Agriculture and Forestry, Teijiro Yamamoto; Commerce and Industry, Yonezo Maeda; Communications, Chuzo Mizuchi; Railways, Takejiro Totonami; and Overseas Affairs, Takeji Kawamura. For changes in 1932, see *History*.

### HISTORY

Undeterred by growing opposition from China, the League of Nations, and the Great Powers, Japan in 1932 tightened her grip on Manchuria, established there the puppet state of Manchoukuo, and announced plans for the forcible annexation to Manchoukuo of the Chinese Province of Jehol in Inner Mongolia. In her headstrong course, the island empire occupied Shanghai, after weeks of heavy fighting which devastated large sections of China's leading city, and then evacuated it under pressure of the Powers. She crushed a great insurrection in Manchuria in a brilliant campaign carried on under the cruel hardships imposed by a North Manchurian winter.

Without awaiting the publication of the report of the Lytton Commission, appointed by the League of Nations at Japan's suggestion, to inquire into the Manchurian situation, she recognized the Manchoukuo government on September 15 and guaranteed its military protection in a formal alliance. When on October 2 the Lytton Report, denying the basic claims advanced in justification of Japanese action in Manchuria, was published, Japan defied the League and the Powers. Dominated by her military leaders, she made it plain that she would fight rather than withdraw from Manchuria. It was only toward the end of the year that internal opposition to the policy of the government appeared. Then some of Japan's business leaders voiced public protests at the growing burden of military expenditures and a few legislators and politicians rebelled at the military domination of the government. Meanwhile the world diplomatic struggle between the United States and Japan was marked by the alienation of Japan's chief potential allies, leaving her virtually isolated in an increasingly hostile world. The end of the year found the League of Nations at last prepared to abandon its efforts at conciliation of the Sino-Japanese dispute and possibly to invoke the sanctions of the League Covenant.

**THE BATTLE OF SHANGHAI.** Friction between Chinese and Japanese at Shanghai, which had grown acute since the middle of December, 1931, flared into open warfare on February 9, when Japanese troops and gunboats attacked the Woo-

sung forts. The struggle then inaugurated continued for five weeks before the Chinese forces were finally expelled from Shanghai. It was May 5 before a truce was signed and the end of May before the 100,000 Japanese troops were evacuated. This sanguinary and destructive struggle apparently had little relation to Japan's major policies with respect to China, although it was feared at the time that Japan planned to establish another protectorate in the Yangtze valley. The original Japanese naval demonstration was designed to force the dissolution of the boycott associations in Shanghai and to punish the city for its anti-Japanese activities. When the naval landing party met unexpected resistance, the question of Japanese military and naval prestige became involved, necessitating the dispatch of a large and costly expeditionary army. For full details of the struggle, see CHINA under *History*.

**JAPAN AND MANCHOUKUO.** As described in the 1931 YEAR BOOK, a sweeping Japanese drive against bandits and irregulars in Southern Manchuria was in progress as the year ended. Despite strong pressure from the Powers and the appointment of a commission of inquiry by the League, the Japanese on Jan. 2, 1932, captured Chinchow, which had served as headquarters for the Manchurian war lord, Marshal Chang Hsiao-liang (Chang Hsueh-liang), after his expulsion from Mukden the previous September. The territory between Chinchow and Shanhaikwan was now rapidly cleared of Chinese forces, thus extending Japanese control to the Great Wall, boundary of China proper. Meanwhile, hostilities had broken out in north-central Manchuria between Gen. Hsi Chia, newly proclaimed "independent" governor of Kirin Province, and Gen. Ting Chao, the Chinese commander at Harbin, who remained loyal to Marshal Chang Hsiao-liang. Following the defeat of Hsi Chia and the reputed looting of Japanese property in Harbin, a Japanese column advanced from Changchung and captured Harbin on February 5, after heavy fighting. Virtually all of Manchuria was now under Japan's domination.

This extension of Japanese control was followed by the establishment of "independent" Chinese governments, supervised by Japanese military advisers, in the three Manchurian Provinces of Liaoning (Fengtien), Kirin, and Heilungkiang. The Heilungkiang provincial government was formally organized Jan. 7, 1932, with Chang Ching-hui as governor. Shortly afterwards the Japanese apparently won over Gen. Ma Chan-shan, the Chinese military leader who had been defeated near Tsitsihar the previous November. In February, following the occupation of Harbin, Chang Ching-hui was transferred to the post of governor of the Harbin special district and General Ma was installed as "independent" governor of Heilungkiang at Tsitsihar. At the same time a number of the Mongolian princes were induced to join the independence movement.

The stage was now set for the establishment of a Manchurian-Mongolian state under Japanese auspices. Following a conference of Chinese and Mongolian leaders in Mukden February 15-18, the independence of Manchuria and Inner Mongolia was proclaimed on February 18. The proclamation was signed by the following Chinese officials: Tsang Hsih-yi, governor of Liaoning; Hsi Chia, governor of Kirin; Ma Chan-shan, governor of Heilungkiang; Tang Yu-lin, gover-

nor of Jehol Province; Chang Ching-hui, governor of the Harbin special district; also by two Mongolian princes, Ling Sheng and Chi-wang. The establishment of the new state of Manchoukuo in "the territories of Manchuria and Mongolia" was officially proclaimed on March 1. On March 9, the former Manchu boy-emperor Hsuan Tung of China, commonly known by his personal name of Henry Pu Yi, was installed as Provisional Dictator (*Chin Cheng*) and two days later the constitution of the new state was promulgated. The government established was notable for the large powers exercised by Japanese serving as members or advisers (see MANCHOUKUO under *Government*). The chief officials, however, were Chinese, including: Cheng Hsiao-Hsu, Prime Minister; Ma Chan-shan, Minister of War; Hsieh Chieh-shih, Foreign Minister; Hsi Chia, Finance; and Chang Ching-hui, head of the Privy Council. Changchun, provincial capital of Kirin, was made the capital of Manchoukuo and renamed Hsinching.

The new government immediately assumed complete control in the three Manchurian Provinces, taking over the customs, salt gabelle, and post offices. However, Governor Tang Yu-lin of Jehol refused to allow Manchoukuo troops within his province and continued to remit the profits of the opium monopoly to Marshal Chang Hsiao-ling, who had now established himself in Peiping. Manchoukuo early sought foreign recognition as an autonomous state, independent of China, by dispatching (March 12) telegrams to the Foreign Ministers of 17 countries requesting the establishment of "formal diplomatic relations." Following the lead of the United States and Great Britain, the nations refused to acknowledge receipt of the communication, excepting Japan, whose reply made no mention of recognition.

Coincident with these military and political developments, the Japanese carried through a drastic reorganization of the financial and economic institutions of Manchuria. Rival Chinese and Japanese enterprises, such as banks, railways, mines, public utilities and other large enterprises, were for the most part consolidated under government control and many Chinese enterprises were placed under Japanese supervision.

The absorption of Manchuria did not proceed smoothly. Despite the claim that the new state of Manchoukuo was created in accordance "with the will of thirty million people," large areas of Manchuria continued throughout 1932 to repudiate Manchoukuo's authority. Before the new state was proclaimed revolts broke out against Ma Chan-shan in Western Heilungkiang, against Hsi Chia in Eastern Kirin, in Chientao near the Korean border, at Tunhua, at Heiho in the Amur basin. In scores of other widely scattered cities, towns, and villages, Manchoukuo troops and officials were driven out by irregular Chinese forces or else deserted to the enemy. By March 22, the situation caused Minister of War Araki to announce in the Japanese Diet the need of additional Japanese forces in Manchuria, besides some 30,000 already there. On April 14, Governor Ma Chan-shan of Heilungkiang repudiated Manchoukuo and took the field against it. Japanese forces were sent against the principal concentrations of anti-Manchoukuo irregulars and defeated them after severe fighting in March, April, and May. However, the mobility of the irregulars, the aid they received from the general population, and the great extent of the country ren-

dered their complete suppression extremely difficult. No sooner did the Japanese recapture one town than insurgents captured another.

In July, the Chinese irregulars, having been temporarily driven to cover, the Manchoukuo government sent a Japanese civilian attaché, Gonshiro Ishimoto, into Jehol to negotiate with Governor Tang Yu-lin. Japanese authorities had reiterated their determination to incorporate Jehol in Manchoukuo. They were also represented as desirous of diverting to Changchun the opium revenues of Jehol, estimated at \$600,000 monthly, with which Marshal Chang Hsiao-ling was maintaining the remnants of his Manchurian armies in North China. When Ishimoto was captured by bandits, the Japanese inaugurated a drive into Jehol. They captured the railhead at Pehpiao on July 19 and concentrated troops at Shanhaikwan and Chingwantao, arousing fear in China of an offensive against Peiping itself.

At this time (the first week in August), another general uprising occurred in Manchuria, particularly in the South, where irregulars sought to recapture Chinchow. Daily raids were made upon railway lines and stations and on the night of August 28 Mukden was raided by insurgents, who destroyed much Japanese property. During the next few months, insurgent activities gained increasing momentum, and Japanese forces were fully occupied in coping with them. Jehol and North China received a respite.

Early in October, it was estimated that there were 300,000 volunteer Chinese troops in Manchuria. Barga (the region west of the Khingan Mountains) had seceded from Manchoukuo, and insurgents controlled the greater part of the three Manchurian provinces. Bandit activities endangered foreign residents. A number of British subjects were carried off for ransom and another, Mrs. C. T. Woodruff, was killed in a Harbin street, while resisting bandits intent upon kidnaping her three children. The Japanese on October 10 launched another "mopping-up" campaign, starting from the Korean border and sweeping westward and northwestward across Manchuria. On November 3, they defeated a large volunteer army near Tsitsihar and on November 28 inaugurated a final campaign against the Chinese general, Su Ping-wen, who controlled the western section of the Chinese Eastern Railway and the great area west of Tsitsihar. This drive, carried out successfully in bitter winter weather, ended on December 6, when the Japanese entered Manchuli and Gen. Su Ping-wen and the remainder of his shattered forces crossed into Soviet territory and were interned.

Once more in control of the railway lines, but with isolated areas still under insurgent control, the Japanese almost immediately shifted their attention to the Jehol border. There the Chinese, in expectation of the long-promised drive, had erected entrenchments and strategic roads. Clashes along this front were reported on December 9 and at the end of the year the increasing concentration of Japanese and Manchoukuo troops were believed to prestage the invasion of Jehol.

JAPAN RECOGNIZES MANCHOUKUO. The action of the Japanese Government on Manchoukuo's request for recognition was forecast on August 8, when Gen. Nobuyoshi Muto, appointed to replace General Honjo in command of Japanese troops in Manchuria, was also named "ambassador on special mission" to Manchoukuo. The Japanese Foreign Minister, Count Uchida, in a speech before

the Diet on August 25 promised "the early extension of formal recognition to Manchoukuo." He asserted it was "the only means of stabilizing conditions in Manchuria and of establishing conditions of permanent peace in the Far East." Anticipating the recommendations of the Lytton Report, he warned that Japan "can never consent" to the restoration of Chinese authority, in whatever form, over Manchuria. The formal protocol of recognition, signed by General Muto and Cheng Hsiao-Hsu, Premier of Manchoukuo, on September 15, contained two salient points. (1) Manchoukuo confirmed "all rights and interests possessed by Japan or her subjects within the territory of Manchoukuo by virtue of the Sino-Japanese treaties, agreements or other arrangements, or through Sino-Japanese contracts, private as well as public." (2) Japan agreed to cooperate in maintaining Manchoukuo's "national security, it being understood that such Japanese forces as may be necessary for this purpose shall be stationed in Manchoukuo." The two governments also signed a military agreement, the terms of which were kept secret.

THE LEAGUE AND MANCHOUKUO. In his speech before the Diet on August 25, Count Uchida definitely ruled out recourse to the League Covenant or other peace machinery on the ground that they were not applicable to the situation in Manchuria. He contended that neither the Covenant nor the Kellogg-Briand Pact placed any restraint upon the exercise of the right of self-defense, which he said obviously "may extend beyond the territory of the power which exercises that right." Japan's recognition of Manchoukuo on September 15, without awaiting publication of the Lytton Report, was widely interpreted as a studied affront to the League. Resentment in League circles was evidenced at the opening of the League Council on September 24, when President Eamon de Valera of the Irish Free State, the presiding officer, and Señor Salvador de Madariaga of Spain took Japan to task for having "taken steps which cannot but be regarded as calculated to prejudice settlement of the dispute."

Japan's effort to secure world acceptance of her Manchurian policy met its gravest setback in the findings of the Lytton Report, published on October 2. In denying that Japan acted in self-defense in Manchuria or that Manchoukuo had the popular support of the Chinese population in Manchuria, the Lytton Report swept away the principal legal bulwarks of the Japanese case. The report, however, sustained a number of the Japanese contentions regarding the provocative attitude of the Chinese and the dangers presented by Chinese misrule and disorder. (For a detailed analysis of the report, see LEAGUE OF NATIONS.) The findings and recommendations of the League commission evoked only the defiance of Japanese military leaders. This defiance was echoed by the government in its formal reply to the Lytton Report published on November 21 when the League Council renewed its deliberations on the Manchurian dispute. It was reiterated by Yusoke Matsuoka, Japan's representative on the League Council, in his opening address before the Council on the same day. Both Japan's reply and Mr. Matsuoka denied the findings of the Lytton Report *in toto* or brushed them aside. Mr. Matsuoka declared his country could not consider any substitute for Manchoukuo.

On December 9, when the Lytton Report was being considered by the League Assembly, to which it had been referred without comment by the Council, Japan suffered another setback. M. Paul-Boncour of France indicated that if conciliation failed France would probably support the invocation of sanctions against Japan. This represented a reversal of the French attitude, which had been considered favorable to Japan. Mr. Matsuoka replied that rather than change her Manchurian policy, Japan was prepared to undergo the severest sanctions. On December 13, the British Ambassador at Tokyo warned the Japanese Government that Great Britain would be forced to support the application of sanctions under Article XVI of the League Covenant if Japan persisted in obstructing League efforts at conciliation. As Sir John Simon, the British Foreign Minister, had theretofore consistently opposed strong measures against Japan by the League, the British action represented another diplomatic defeat. The most serious blow of all was the announcement on December 12 of the resumption of diplomatic relations between China and the Soviet Union. This action definitely aligned the Soviet Union with China and the other Powers in opposing Japan's Manchurian policy.

The Japanese government persisted in its course. On December 17, it rejected the proposal that the Soviet Union and the United States be invited to participate in the work of the subcommittee, to which the conciliation of the dispute had been delegated by the League Assembly. It also objected to the adoption of the Nine-Power treaty and the Lytton recommendations as guiding principles for the work of the subcommittee. At the end of the year, Japan at Geneva faced the opposition of virtually all the League members, as well as that of the United States and the Soviet Union. There was a growing agitation in Japan for withdrawal from the League, while within League circles there was increasing pressure upon the subcommittee on Manchuria for the abandonment of seemingly fruitless efforts at conciliation and the imposition of economic and financial sanctions upon Japan.

RELATIONS WITH THE UNITED STATES. Students of the Far Eastern situation during 1932 agreed that the United States government was the driving power chiefly responsible for Japan's diplomatic isolation and for the growing opposition of the League and of the Powers to Japan's Manchurian policy. The United States was the first government to protest. Its note of Jan. 7, 1932, to China and Japan enunciated the so-called Stimson Doctrine of non-recognition, which the League Assembly subsequently approved. This note declared, in substance, that the United States would not recognize the establishment of Japanese control over Manchuria, inasmuch as it impaired American treaty rights and was brought about "by means contrary to the covenants and obligations of the Pact of Paris (Kellogg-Briand Pact)."

The American government in January, 1932, concentrated its entire fleet in the Pacific and maintained it there for the entire year. On January 26, it published its entire correspondence with the government of Japan, revealing for the first time that it had consistently taken a stronger stand on the Manchurian issue than the League of Nations. In his letter to Senator Borah of February 23, Secretary Stimson intimated that

the United States would increase the size of its navy if Japan persisted in its alleged violation of the Nine-Power Treaty of 1922. Finally, Secretary Stimson, in his address of August 8, vigorously defended the American interpretation of the Kellogg-Briand Pact and implied that Japan was guilty of violation of the pact.

These developments resulted in seriously strained relations between the United States and Japan by the end of 1932. The state of affairs was indicated by the number of Japanese writers who referred to the "inevitability of war" with the United States. On June 21, 1932, Viscount Kikujiro Ishii, a Privy Councillor and former Ambassador to Washington, in an address of welcome to the new American Ambassador, Joseph C. Grew, warned that Japan might have to go to war with the United States if the latter "ever attempted to prevent Japan's natural expansion." Several "American spy" scares during the year testified to the agitated state of Japanese opinion. In December, the action of the American Congress in voting to withdraw from the Philippines served to lessen somewhat the tension in Japan. See UNITED STATES under Administration.

JAPAN AND THE SOVIET UNION. When Japanese and Manchoukuo troops in January, 1932, advanced northward upon Harbin, took control of the Chinese Eastern Railway, which had been operated jointly by China and the Soviet Union, and conducted military campaigns to within a short distance of the Soviet border, the Soviet government concentrated more than 150,000 troops in Siberia. With the extension of disorder in North Manchuria, the arrest of Soviet citizens, and sabotage along the Chinese Eastern Railway, tension between the two powers became acute. Neither country appeared anxious for war, however, and the atmosphere cleared perceptibly when on May 4 the Soviet-Japanese fisheries agreement of 1931 was prolonged for one year. Not long afterward, the Soviet government began to withdraw its troops from the Far East and by June 2 the situation had so far improved that Premier Saito declared the Soviet attitude regarding affairs in Manchuria had been "perfectly correct."

On August 14, a new Soviet-Japanese fisheries treaty was signed which eliminated an almost perpetual cause of friction. Late in October, it was reported by Walter Duranty from Moscow that Japan was attempting to create a united front with the Soviet Union and France in defense of their joint interests in the Far East. The effort failed and the end of the year brought a renewal of Soviet-Japanese tension. The Japanese drive against Gen. Su Ping-wen brought Japanese troops to within striking distance of the Soviet border near Manchuli and the refusal of the Russians to extradite General Su and his forces irritated the Japanese. Preparations for a Japanese drive into Jehol aroused Soviet fears as to the safety of the Soviet régime in Outer Mongolia. On December 12, the announcement of the resumption of diplomatic relations between China and the Soviet Union caused an angry outburst by the spokesman for the Japanese Foreign Office. He charged the Russians with double-crossing under the cloak of friendship and threatened a more "definite" policy toward the Soviet Union. Repeated Soviet suggestions for a Soviet-Japanese non-aggression pact were rejected by the Japanese government. See CHINA and UNION

OF SOVIET SOCIALIST REPUBLICS under History.

For relations with France and Great Britain, see FRANCE and GREAT BRITAIN under History; also LEAGUE OF NATIONS.

INTERNAL DEVELOPMENTS. The political situation in Japan was completely changed during 1932 by the phenomenal growth of a Fascist movement hostile to parliamentarianism and compounded of a vague mixture of socialism and extreme nationalism. The Seiyukai party, which succeeded the Minseito as the governing party on Dec. 13, 1931, came into power under suspicious circumstances and became increasingly unpalatable to the patriotic and military groups. A minority party, its difficulties were aggravated by an attempt made on the Emperor's life on Jan. 8, 1932. As a result Premier Inukai dissolved the Diet on January 21, calling a general election for February 20. The election was a landslide for the Seiyukai, which captured 304 seats in the House of Representatives to the Minseito's 147. The public was apathetic, however, and it was charged that the victory was due primarily to Seiyukai manipulation of the prefectural governors and local police chiefs.

Under the Seiyukai, Japan's financial and economic position steadily deteriorated. Speculators made large profits from the abandonment of the gold standard, at the expense of the public. The value of the yen slumped nearly one-third by May 10, increasing the burden of external obligations. The usual excess of imports increased, while the agricultural crisis deepened and the national debt rose. The deep antagonism of patriotic organizations at the alliance of politicians and big business found vent in a series of assassinations. Junnosuke Inouye, Finance Minister in the Minseito Cabinet, was shot to death February 9. On March 5, assassins killed Baron Takuma Dan, chairman of the Board of Directors of the great Mitsui banking house. Late in March, the police uncovered a terrorist plot of unprecedented proportions, in which a score of Japan's leading figures were marked for assassination by some 20 members of the Blood Brotherhood League, headed by the reactionary Buddhist priest, Nishio Inouye.

During the national crisis arising from the conflict at Shanghai, the Seiyukai leaders further angered the military and patriotic elements by their reluctance to send reinforcements to Shanghai, by political bickering over patronage matters, and by their efforts to secure control of the presidency of the South Manchuria Railway, a post which the army now regarded as within its own preserve. This active discontent culminated on May 15 in the assassination of Premier Inukai by a band of military cadets and young naval officers. At the same time the assassins shot down the Premier in his home, bombs were thrown and shots fired at the residence of Count Nobuaki Makino, Lord Keeper of the Privy Seal, at the offices of the Seiyukai party, the metropolitan police headquarters, the Bank of Japan, and the Mitsubishi Bank. The majority of the terrorists subsequently surrendered voluntarily to the police. The Seiyukai ministry resigned.

After a week of delicate negotiation, the military secured the establishment of a super-party coalition cabinet in which the Seiyukai party held three posts, the Minseito two, the military two, and non-party men six. The military secured control over foreign affairs, leaving internal affairs under party control. The ministry was

headed by Viscount Minoru Saito, who also served as Foreign Minister until the installation in the Foreign Office July 6 of Yasuya Uchida, president of the South Manchuria Railway. Other members were: War, Gen. Sadao Araki; Navy, Adm. Keisuke Okada; Home Affairs, Baron Tatsuo Yamamoto; Finance, Korekiyo Takahashi; Colonial Affairs, Ryutaro Nagai; Commerce and Industry, Baron Kumachi Nakajima; Railways, Chuzo Mitsuchi; Justice, Matsukichi Koyama; Education, Ichiro Hatoyama; Agriculture and Forestry, Fumio Goto.

At a special session of the Diet, held June 1-15, the new ministry secured the passage of bills expanding the currency, controlling exchange, increasing tariffs, and appropriating 193,000,000 yen for supplementary expenditures of the army in Manchuria. Before adjourning, the Diet passed joint Seiyukai-Minseito resolutions urging immediate recognition of Manchoukuo and the calling of a special session to consider farm relief legislation. The second special session of the Diet, held late in August, provided an insignificant 170,000,000 yen for unemployment relief and passed a law for the stabilization of rice prices. The military, however, carried through their complete programme. The appointment of General Muto as Japan's representative in Manchoukuo formally subordinated the Foreign Office to the army. The recognition of Manchoukuo and the Japanese-Manchoukuo military alliance met other military demands.

On November 25, the Saito Cabinet approved the largest budget in Japan's history. It called for an outlay of 2,239,000,000 yen (about \$475,787,500 at the current exchange rate of \$0.2125), of which military and naval appropriations totaled 821,000,000 yen, or twice the amount appropriated for these services in 1930-31. A deficit of nearly one billion yen was anticipated. The budget situation provoked warnings from the business leaders and from some sections of the vernacular press that a continuance of the government's policy of currency inflation and bond issues would result in a collapse similar to that of postwar Germany (also see under *Finance*).

A regular session of the Diet opened on December 24, but two days later adjourned until Jan. 24, 1933, without taking up legislative matters. The two important questions awaiting the Diet's consideration were the budget and the question of exchange control. The budget measure, however, involved the Army's programme for mechanization and reinforcement of the units in Manchuria and the problem of farm relief. There was no apparent disposition to change the ministry's Manchurian policy or to check the minor boom which Japanese industries were enjoying as a result of the depreciation of the yen. The yen exchanged at an average of \$0.2073 for the month of December (par \$0.4985). There was considerable misgiving as to the eventual results of inflation.

On November 5 and again on December 27, the Tokyo police announced the arrest of members of patriotic societies in connection with plots to assassinate Premier Saito. On December 22 a new political party of Fascist leanings, called the National League, was inaugurated under the leadership of Kenzo Adachi, former Minseito Home Minister, who was responsible for the overthrow of the Minseito Cabinet and the abandonment of the gold standard in December, 1931. Despite these developments, the Tokyo correspondent of the New York *Herald Tribune* on

December 31, reported a noticeable decline in the Fascist movement in the preceding few months. The authorities, it was stated, had undertaken to suppress the movement by arresting many of the leaders.

The Fascist movement corresponded with a dramatic growth of the Communist movement among the Japanese intelligentsia, students, and professional classes. The lifting of a ban on press publicity concerning Communist activities was followed by the revelation that 6900 persons were arrested by the police during 1932, of whom 2220 were under detention at the end of the year. Conspicuous among those arrested for sympathy with or membership in the Communist party (outlawed in Japan) were sons and daughters of wealthy or well-known families, university professors, and minor government officials. It was the third time in five years that a nation-wide anti-Communist dragnet had been spread.

**JEWELL,** REAR ADMIRAL THEODORE FREELING-HUYSEN, U. S. N., RET. An American naval officer, died in Washington, D. C., July 26, 1932. He was born in Georgetown, D. C., Aug. 5, 1844, and was graduated from the U. S. Naval Academy in 1864. During the summer of 1863 he served in the defense of Washington, commanding a naval battery of field howitzers. Commissioned ensign in 1866, he served at various foreign stations, was made president of the Naval War College at Newport, R. I., in 1889, and commanded the Naval Torpedo Station there during 1890-93. He was then appointed superintendent of the naval gun factory at the Washington navy yard. During the Spanish-American War (1898) he commanded the cruiser *Minneapolis* on scouting service in the West Indies, and also the cruiser *Brooklyn* in the Philippines. In March, 1904, he was promoted to the grade of rear admiral and

shortly afterward was placed in command of the European squadron. He retired in November, 1904. He was a member of the Naval Examining Board, a fellow of the American Association for the Advancement of Science, and the author of numerous articles on professional subjects, especially ordnance and torpedoes.

**JEWS. POPULATION.** Dr. Harry S. Linfield, whose "Statistics of Jews" has been a feature of the *American Jewish Year Book* for many years, estimates that in 1932 there were 15,200,000 Jews in the world, of whom 7,600,000 resided in a group of adjacent countries located in the centre of the European continent, the so-called Jewish Central Europe. This region included Poland, Danzig, Lithuania, Latvia, Austria, Czechoslovakia, Hungary, Rumania and the Crimea, the Ukraine, and White Russia in Russia. In this area the Jews constituted nearly 6 per cent of the total population. In North America and the West Indies, Dr. Linfield estimated that there were 4,380,000 Jews, constituting nearly 3 per cent of the total population. Other areas in which Jews made up a sizable proportion of the population were: Palestine, Arabia, Iraq, and Syria where 325,000 Jews were to be found, or 2 per cent of the total population; Tangiers, Morocco, Algeria, Tunis, Libya, where 400,000 Jews were to be found, or 1.5 per cent of the total population; the Netherlands, where 150,000 Jews were to be found, or 2 per cent of the total population; Greece and European Turkey, where 1.74 per cent of the population was Jewish, the Union of South Africa, where Jews constituted nearly 1 per cent of the total population and over 4 per cent of the white population; the Argentine, where Jews made up 2 per cent of the total population. In all other regions of the world the Jews constituted less than 1 per cent of the total population. Dr. Linfield estimated that there were 4,228,029 Jews in the United States. According to an interesting computation made by Jakob Lestschinsky of Berlin, published in the *Menorah Journal* for October, the world's Jewish population has grown from 3,000,000 to 16,000,000 during the last 100 years, whereas Europe, America, South Africa, and Australia increased their population only three and one-half times. Mr. Lestschinsky is authority for the statement that Jews have never been so numerous nor have they been found before gathered together to so great an extent in metropolitan areas. Almost one-half of the Jewish people now live in the 14 largest cities of the civilized world. The unprecedented growth of the Jewish population, says Mr. Lestschinsky, "seems all the more remarkable when we recall that during the last half century the Eastern European Jews were engulfed by three large pogrom waves (1881-82, 1903-05, and 1918-21), with 2000 massacres in which approximately 100,000 Jews were murdered and from 200,000 and 300,000 prematurely died of epidemics." At the beginning of the nineteenth century Jews were crowded together in the most backward countries of Eastern Europe, North Africa, and in Asia Minor. Says Mr. Lestschinsky: "In the course of the century huge Jewish migrations took place from east to west; from the agrarian to the industrial countries, from political despotisms to democratic nations, from the spheres of Slavish-Arabian culture to those of English-German culture."

**IMMIGRATION.** During the year ended June 30,

1931, a total of 5692 Jewish immigrants were admitted to the *United States*, 5834 less than during the previous fiscal year; 1455 Jews were admitted during the six months ended Dec. 31, 1931. The number of Jews departing was but 319 during the fiscal year ended June 30, 1931, and 240 during the following six months. A total of 150 Jews were deported during the fiscal year 1930-31, and 80 during the six months following. During the same period, 405 Jews were debarred from entering the United States in the fiscal year 1930-31, and 168 during the six months of July-December, 1931. Of the 5692 Jews admitted during the fiscal year 1930-31, a total of 3201 came from Jewish Central Europe and 2491 came from other countries, chiefly Canada, Cuba, Great Britain, and Palestine. It is interesting to note that in the case of the countries of Jewish Central Europe, the Jewish immigrants constituted but 5.86 per cent of the total number of immigrants admitted from those countries in 1930-31 as against 36.5 per cent during the preceding year.

During the year ending Mar. 31, 1931, a total of 3420 Jews entered *Canada*, of whom 513 were from the United States. Nearly 86 per cent of the immigrants entering Canada came from Jewish Central Europe and only 14 per cent from Great Britain and the United States. Over 90 per cent of the Jewish immigrants were bound for the three provinces of Ontario, Quebec, and Manitoba. During 1930 a total of 1374 Jews entered *Cuba*, 120 Jews departed, and 29 were debarred from landing. In the same year a total of 3558 immigrants were admitted to *Brazil*. One notes with interest that from 1925 to 1929, 21,362 Jews in all entered this country, constituting 4.3 per cent of the total number of persons admitted. In the same year, 1800 Jews entered *Uruguay*; and 7805 Jews entered *Argentina*. During the period 1913-30, 91,490 Jews in all were admitted into Argentina, constituting 4.6 per cent of total admissions. During 1930 a total of 1200 Jewish immigrants entered the *Union of South Africa*. During 1931 a total of 4075 Jewish immigrants entered *Palestine* as compared with 666 Jewish departures. During the same year 1458 non-Jewish immigrants entered and 680 non-Jewish emigrants departed. In 1931 over one-half of the Jews admitted into the country were persons coming to seek employment or join their dependents; one-fifth were dependents of residents already in Palestine; one-seventh were persons with capital or assured income or maintenance; and a little more than 2 per cent were persons of religious occupations, students, or orphans. From the date of the British occupation of Palestine, Dec. 9, 1917, to the end of 1931, a total of 113,047 Jews entered the country; the number of departures from 1922 to 1931 was 27,809. The net immigration of Jews during 1922-31 was 66,353.

**UNITED STATES.** Because of the continuance of the depression American Jews were forced to concern themselves largely with the solution of their own domestic problems with the result that, certainly as far as material aid was concerned, less thought could be given to the affairs and difficulties of their co-religionists overseas. Nevertheless, American Jews were able to maintain to a very measurable extent their feeling of kinship with their foreign brethren, watching with interest and concern events transpiring in Palestine, Poland, Rumania, and

Germany. Thus, support was given to the activities of the Joint Distribution Committee, despite the threatening condition of domestic institutions and local philanthropies. Campaigns for the support of the Joint Distribution Committee were inaugurated in many cities and on Mar. 27, 1932, a meeting of the National Council of the Committee was held in New York with 300 delegates from all over the country in attendance. One of the sessions of the convention was made the occasion for memorial exercises in honor of the noted Jewish philanthropist, Julius Rosenwald, who had died in Chicago on Jan. 6, 1932. The National Council pledged itself to continue the work of rehabilitation begun shortly after the outbreak of the World War.

Mention has been made of the fact that domestic Jewish institutions were suffering severely. No group felt more keenly the severity of the depression than those agencies devoting themselves to Jewish education, which were being forced to reduce their budgets drastically as teachers' salaries were remaining unpaid, schools were being shut down, and teachers' strikes were breaking out. As an example of how well established institutions were suffering, one notes that the Hebrew Union School for Teachers in New York City, which had been in operation for nine years and which over that length of time had graduated 176 students and had had an aggregate enrollment of over 2000 in its classes, was compelled to discontinue because of lack of funds. Nevertheless, despite such inroads, it was indicated that Jews of the United States were spending over \$6,000,000 annually for Jewish education.

One of the most interesting developments of the year was the continuance of the work for fostering good will between Jews and Christians, a project which had been inaugurated some years ago by the Federal Council of the Churches of Christ in America. This work was going ahead during the year by means of seminars, round table discussions, joint religious services, and similar methods. National attention was directed to the movement by a Jewish-Christian Conference held in Washington early in March under the auspices of the National Conference of Jews and Christians, the co-chairmen being the Hon. Newton D. Baker, Prof. Carlton J. H. Hayes and Roger W. Straus. Professor Hayes struck the keynote for the conference when he declared that the majority religion "has always the chief responsibility in assuring as well as proclaiming religious liberty. As minorities, Jews and Catholics have been particularly eager for equality of treatment in politics and society, more eager to obtain these things than the Protestant majority to grant them. Thereby friction has been increased." The *American Hebrew* and *Jewish Tribune* agreed with Professor Hayes, pointing out that what was needed was a "courageous Protestant leadership that will assume a still greater proportion of the burden to foster future seminars on Christian-Jewish relations." One of the frequent topics for discussions in these good will seminars was discrimination against Jews seeking employment, without regard to their fitness or ability. Jews, too, were preoccupied with the problem and at the annual meeting of the National Conference of Jewish Social Service, held in May, 1932, at Philadelphia, Dr. I. M. Rubinow subjected the question to a searching analysis. In April, 1932, a Com-

mittee on Unjust Discrimination Against Jews Seeking Employment was established in Chicago for the purpose of making a survey of cases of discrimination, cooperating with existing employment agencies to discourage such discrimination, educating offending employers as to the unfairness of the practice, discouraging individual volunteers who may wish to attempt corrective measures, and the preventing and discouraging of false rumors of unjust discrimination against any employer.

**LATIN AMERICA.** In *Cuba* the threatened expulsion of about 800 Jews, charged with promoting communistic agitation, in November, 1931, enlisted the interest of the American Jewish Committee, which pointed out that the suspected persons were really members of a Jewish cultural organization. Representations were made to the Cuban Minister of the Interior who, upon investigation, found that the society in question was not communistic and, therefore, ordered the release of the suspected persons. In *Guatemala*, in February, 1932, the government placed a ban on peddling and decreed the deportation of all persons so engaged. Some 60 Jewish families were ordered deported; however, the intercession of American Jewish organizations with the Guatemalan Minister at Washington gained reconsideration and the deportation orders were rescinded. In *Mexico* the anti-Jewish agitation, which had begun on a small scale several years ago, attained sizable proportions during the year. Apparently, as the *American Jewish Year Book* points out, the basis of the agitation was economic and was not aimed at Jews as such but at aliens in general. It was charged that Jews were replacing native Mexicans in certain fields, were working for lower wages, and as peddlers and merchants were responsible for the spread of installment buying.

**GERMANY.** The continued success of the Nazis in Germany kept the Jewish communities in this country in a state of uncertainty and alarm. At the same time the Social Democratic-Centrist coalition government of Bruening failed to show any wholehearted opposition to the anti-Jewish agitation of the Hitlerites or to take any steps to check their Jew-baiting tactics. The upshot was that the year saw the appearance of a number of minor clashes between Jews and Nazis, some of which were followed by arrests and trials. There were also desecrations of cemeteries and attacks upon synagogues, while the accusation of ritual murder was occasionally heard. The downfall of the Bruening government and the accession of von Papen was received with misgivings; however, von Papen made haste to give assurance to the Jewish communities that his government would guard the equality of all citizens irrespective of race or creed. The success of the Hitlerites in provincial elections had immediate repercussions in the retirement of Jewish officials and the dismissals of Jewish actors and singers from government-supported theatres and opera houses. In several cities the Nazis ordered the prohibition of the Jewish ritual method of slaughtering animals. As a result of an alliance of the Nazis and the Communists, the Prussian Diet, in June, 1932, enacted a measure instructing the government to submit the draft of a law providing for the confiscation of the property of East European Jews who had entered the country after Aug. 1, 1914. However, the law remained a dead letter. During the year

but without very much success. In April, 1932, a report from Kiev stated that the restoration to the Jewish community of the one remaining synagogue had been ordered. The government also permitted the importation by individuals of *Matzo's* and other Passover specialties. The *American Jewish Year Book* is authority for the statement that a number of anti-Jewish attacks in schools, factories, government service, and in the Red Army were reported in the press during the year; these apparently did not differ in type from those of previous years. However, the government continued to punish severely persons guilty of overt acts, while the Communist party and the press condemned all anti-Jewish manifestations whenever they appeared.

**PALESTINE.** The Jews of Palestine were reported as suffering less from the effects of the depression than their co-religionists in other lands. In December, 1931, an official statement showed that there were 30,000 Jews employed in the country, 7000 of whom were engaged in agricultural pursuits, 4500 in building and public works, 4000 in factories and large workshops, 3000 in small workshops, 1000 in transport, and 9500 in miscellaneous occupations. The General Federation of Jewish Labor in Palestine has a membership of 29,000, which included the members of the coöperative agricultural settlement and their wives. It was estimated that approximately three-fourths of the Jewish workers in Palestine were trade unionists. Interestingly enough, unemployment among Jewish wage earners was lower in 1930 than in any of the previous four years. In 1926, 6000 Jewish wage earners were reported out of work; in 1927, the number was 7400, while in 1930, it was 1030. An event which attracted international interest was the Levant Fair held at Tel-Aviv in April, 1932, with 1200 exhibitors representing 24 countries. The mechanization of the country continued, in June, 1932, the first Jordan power house of the Rutenberg electrification project being opened.

The annual report of the Jewish Agency for Palestine, to the Permanent Mandates Commission for the League of Nations, was published on the fifteenth anniversary of the Balfour Declaration. The report presented an optimistic review of developments in Palestine during 1931. It was indicated that the sum of £797,000 was expended during the year by the Jewish Agency and its affiliated institutions in the promotion of reconstruction enterprises and the settlement of Jews on the land. The report pointed with satisfaction to the remarkable increase, both in number and percentage of the whole, in the Jewish rural population and to the fact that the increase in the Arab population was most marked in those districts where the greatest progress had been made in Jewish settlement. It was also declared that agriculture in Palestine as a whole suffered less than in other countries because the local market succeeded in absorbing a large proportion of the produce. Despite the depression the Agency was furthering the "thousand family plan" originally suggested by Supreme Court Justice Louis D. Brandeis in 1927, and a special plantation corporation was being formed; also, building construction in the principal towns was being maintained at its normal level during the year. The Agency report stated that at the end of 1931 Jewish unemployment in towns totaled 1200, which constituted less than 1 per cent of

the Jewish urban population. In rural districts unemployment reached 2.5 per cent.

The Zionist Organization of America, at the opening of its annual convention on July 3 at Philadelphia, appealed for continued support of the up-building of a Jewish national home, particularly in view of the fact that despite the depression Palestine apparently was suffering less than most other lands. Nearly 500 delegates representing all sections of the country attended the sessions of the convention.

**SPINOZA TERCENTENARY.** On November 24, not only Jews but the world of the intellect generally observed the three hundredth anniversary of the birth of Baruch Spinoza. Spinoza was a descendant of those "Marrano" Jews who, fleeing the Spanish and Portuguese inquisitions in the fifteenth century, found a haven in free Amsterdam where they proceeded to relearn the tenets of their old faith. In such an atmosphere Spinoza was born. In his youth looked upon as a brilliant rabbinical student, he suffered ex-communication at the hands of the local rabbinate, largely because of his exposition of a Pantheistic world. He continued to steep himself in Jewish doctrine, none the less, and his famous *Ethics* clearly shows its Jewish origins. Looked upon as a heretic by Jews and Christians alike until the nineteenth century, it is plain to-day that Spinoza was neither an atheist nor a convert to Christianity. This "God intoxicated man," in the words of Benjamin Ginzburg writing in the *Nation* of Nov. 30, 1932, "represents a unique religious phenomenon, an attempt to see the meaning of religion in its universal essence, free from the distortions of nationalistic creeds and free from the symbols of imagination and myth."

**JOHNS HOPKINS UNIVERSITY, THE.** A nonsectarian institution of higher education for men and women in Baltimore, Md., founded in 1876. The enrollment for the autumn of 1932 was 5332. The faculty numbered 694. The productive funds amounted to \$30,807,421, and the income from all sources for 1931-32 was \$3,006,378. The main library contained 423,501 volumes. President. Joseph Sweetman Ames, Ph.D.

**JOHORE.** See UNFEDERATED MALAY STATES.  
**JONES, FRANCIS COATES.** An American painter, died in New York City, May 27, 1932. He was born in Baltimore, Md., July 25, 1857, and studied at the École des Beaux-Arts in Paris under Yvon, Lehmann, Boulanger, and Lefèvre. On his return to the United States in 1882 he settled in New York City where three years later, on receiving the Clarke prize awarded by the National Academy of Design, he was elected an associate member of that society. In 1894 he became an academician, and in 1908 was elected a member of the National Institute of Arts and Letters. His specialty was figure painting, especially of children and young girls in charming surroundings, which showed delicacy of coloring and cleverness in the handling of detail. Among his paintings are: "Mother and Child on the Veranda"; "Grandmother's Tale"; "Lost"; "Afternoon in March"; "The Lilies"; "Spring"; "The Little Visitors"; "Chloe"; "A Perplexing Move"; "A Cup of Tea"; "Nymphs Bathing"; "The Letter"; "Wooded Hillside"; "The Sisters"; and "The Trout Pool." He received the Shaw purchase award of the Society of American Artists (1904), the Isidor medal of the National Academy of Design (1913), and silver medals at

but without very much success. In April, 1932, a report from Kiev stated that the restoration to the Jewish community of the one remaining synagogue had been ordered. The government also permitted the importation by individuals of *Matzo's* and other Passover specialties. The *American Jewish Year Book* is authority for the statement that a number of anti-Jewish attacks in schools, factories, government service, and in the Red Army were reported in the press during the year; these apparently did not differ in type from those of previous years. Among his paintings are: "Mother and Child on the Veranda"; "Grandmother's Tale"; "Lost"; "Afternoon in March"; "The Lilies"; "Spring"; "The Little Visitors"; "Chloe"; "A Perplexing Move"; "A Cup of Tea"; "Nymphs Bathing"; "The Letter"; "Wooded Hillside"; "The Sisters"; and "The Trout Pool." He received the Shaw purchase award of the Society of American Artists (1904), the Isidor medal of the National Academy of Design (1913), and silver medals at

the Pan-American Exposition (1901), the Louisiana Purchase Exposition (1904), and the Panama-Pacific Exposition (1915). He served also as treasurer of the National Academy of Design during 1914-29 and was a trustee of the Metropolitan Museum of Art.

**JONES, WESLEY LIVSEY.** An American lawyer and senator, died in Seattle, Wash., Nov. 19, 1932. He was born near Bethany, Ill., Oct. 9, 1863, and on his graduation from the Southern Illinois College in 1886 was admitted to the bar in the same year. Moving to the Territory of Washington three years later, he began the practice of law in North Yakima, and after 1917 practiced in Seattle. His political career began in 1884 when he participated as speaker in the Blaine campaign. In 1898 he was elected Republican member-at-large for the State of Washington to the Fifty-sixth Congress. He held this seat until 1908 when he was elected to the Senate, he was reelected for the three subsequent terms (1915-33). One of the most important measures which he sponsored was the Merchant Marine Act of 1920, providing for the continuance of the United States Shipping Board and for subsidies to shipowners to build new ships at an amount not to exceed \$25,000,000 a year for five years, derived from funds from the sale of government-owned ships and receipts from their operation. In 1929 he acted as agent for the Department of Justice in sponsoring the Jones-Stalker Law, an amendment of the Prohibition Act which increased maximum penalties for violation of the Prohibition law to \$10,000 fine and five years' imprisonment. He aided also in securing power and reclamation legislation. He was chairman of the Senate appropriations committee and of the commerce committee.

**JUGOSLAVIA.** See YUGOSLAVIA.

**JURY SYSTEM, ABOLITION OF.** See LAW IN 1932.

**JUSSERAND, zhu's'-tan, JEAN ADRIEN ANTOINE JULES.** A French diplomat and scholar, died in Paris, July 18, 1932. He was born in Lyons, Feb. 18, 1855, and attended the Universities of Lyons and Paris. Entering the diplomatic service in 1876, he held a variety of posts, being councillor of the Embassy at London (1887-90) and at Constantinople (1890), assistant director for Oriental politics at the Foreign Office (1891-98), and Minister to Denmark (1898-1902). He then became Ambassador to the United States, and at the time of his retirement in 1925 was dean of the Washington diplomatic corps. He gained the respect of both French and American statesmen for the tact and ability with which he served his country's interests during the trying war and post-war periods, and after his return to France continued to work for Franco-American amity. He was a member of the French Institute, a grand officer of the Legion of Honor, an honorary fellow of the Royal Society of Literature, a corresponding fellow of the British Academy, and a past president of the American Historical Association. His works, some of which deal with English literary subjects, include: *Le théâtre en Angleterre depuis la conquête jusqu'aux prédécesseurs immédiats de Shakespeare* (1878); *Les Anglais au moyen âge: La Vie nomade et les routes d'Angleterre au XIV<sup>e</sup> siècle* (1884), which was crowned by the Academy and translated into English by Lucy T. Smith as *English Wayfaring Life in the Middle Ages* (1889); *Le roman anglais* (1886); *Le roman au*

*temps de Shakespeare* (1888); in English, *A French Ambassador at the Court of Charles II*, from the unpublished papers of Count Cominges (1892); *L'épopée mystique de William Langland* (1893); *Histoire littéraire du Peuple anglais* (3 vols., 1895-1909); *Les sports et jeux d'exercice dans l'ancienne France* (1901); *Ronsard*, in the series *Grands écrivains français* (1913); *En Amérique jadis et maintenant* (1916; Eng. trans., *With Americans of Past and Present Days*, 1917, which received the Pulitzer Prize of that year); in English, *The School for Ambassadors and Other Essays* (1924); and *Le Sentiment Américain pendant la guerre* (1931).

**JUVENILE DELINQUENCY.** See CHILD WELFARE; CRIME.

**KALANIANA'OLE, ELIZABETH KAKANU KALEIWOHI-KAAUWAI.** A Hawaiian princess, died in Honolulu Feb. 19, 1932. She was born in Makawao, Maui, in 1879, and during her childhood was a protégée of her cousin, Queen Kapiolani. Her marriage to Prince Kuhio in 1896 was followed by a two-year tour of the world, during which she and her husband were entertained as royalty in all the leading countries. Their residence, Pualeilani (Wreath of Heaven) at Waikiki Beach, was regarded by the older generation as the palace of the country, and all the homage due royalty was paid to them. For 20 years Prince Kuhio was Hawaiian delegate to Congress, and on his death in 1922 his widow succeeded him as a member of the Hawaiian Homes Commission, which had been established through his efforts to rehabilitate the Hawaiian race on the land, principally on farms on the island of Molokai. She was also president of the Kapiolani Maternity Hospital Association. Her second husband was J. Frank Woods.

**KAMERUN.** See CAMEROON.

**KANSAS. POPULATION.** According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 1,880,999, as against 1,769,257 in 1920. Kansas City had (1930) 121,857 inhabitants; Wichita, 111,110; Topeka, the capital, 64,120.

**AGRICULTURE.** The following table shows the acreage, production, and value of the principal crops for 1932 and 1931:

Crop	Year	Acreage	Prod Bu	Value
Wheat	1932	9,270,000	106,551,000	\$33,031,000
	1931	12,632,000	239,868,000	79,156,000
Corn	1932	7,362,000	136,197,000	21,792,000
	1931	6,573,000	115,028,000	32,208,000
Hay	1932	1,969,000	2,692,000 <sup>a</sup>	11,314,000
	1931	1,986,000	2,351,000 <sup>a</sup>	13,613,000
Oats	1932	1,608,000	34,572,000	4,840,000
	1931	1,561,000	43,708,000	8,305,000
Grain sorghum	1932	1,328,000	17,264,000	3,108,000
	1931	1,107,000	17,158,000	4,118,000
Barley	1932	704,000	9,856,000	1,380,000
	1931	563,000	9,008,000	1,982,000
Potatoes	1932	44,000	5,148,000	2,008,000
	1931	46,000	3,634,000	2,253,000

<sup>a</sup> Tons.

**MINERAL PRODUCTION.** The State's much diversified mineral production, consisting normally, to one half or more, by value, of petroleum, was much reduced for 1931 by depression in the petroleum industry. The quantity of petroleum drawn from the State's wells fell to 37,018,000 barrels (1931), from 41,638,000 (1930); the total by value, to \$25,500,000 (1931), from \$54,880,000 (1930). The quantity of natural gas produced was 37,630,000 M cubic feet for 1930

(latest tabulated total), and 38,469,000 M for 1929; the value, \$12,459,000 for 1930 and \$13,429,000 for 1929. There was a considerable production of gasoline from natural gas, to the quantity of 32,590,000 gallons for 1931 and of 35,106,000 for 1930; by value, the total, not obtainable for 1931, was \$1,570,000 for 1930. The cement industry, as in most other States, was severely depressed, the producers' shipments of Portland cement decreasing to 4,478,823 barrels for 1931, from 5,633,098 for 1930; and by value to \$4,112,809 (1931), from \$8,254,416 (1930). The mining of zinc, which had yielded 74,304 short tons (by value \$7,133,184) for 1930, was heavily curtailed as to quantity in 1931 and yet more reduced as to total value of the product. Lead production, after falling to 12,910 short tons for 1930, from 26,596 for 1929, and to the value of \$1,291,000 (1930), from \$3,351,096 (1929), suffered further reduction in 1931 as to both quantity and value. The production of salt, to the contrary of the movement in the generality of the State's industries, was fairly well maintained, totaling 691,160 short tons for 1931, as against 759,800 for 1930; by value, \$3,003,756 for 1931 and \$3,148,728 for 1930. The quantity of coal mined declined to 1,995,000 short tons (estimated) for 1931, from 2,429,929 for 1930; in value it declined more steeply, from the total of \$5,231,000 for 1930. The clay products attained the value of \$2,315,005 for 1930, the latest year of available figures, and of \$3,279,953 for 1929. The total value of the State's mineral product, duplications eliminated, was \$100,253,311 for 1930; for 1929, \$124,472,480.

**FINANCE** State expenditures in the year ended June 30, 1931, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments, \$17,084,837 (of which \$595,694 was for local education); for conducting public-service enterprises, \$425,608; for interest on debt, \$903,942; for permanent improvements, \$16,339,612; total, \$35,353,999 (of which \$19,344,024 was for highways, \$3,892,474 being for maintenance and \$15,451,550 for construction). Revenues were \$36,923,478. Of these, property and special taxes furnished 26.6 per cent; departmental earnings and compensation to the State for officers' services, 9.6; sale of licenses, 44.3 (in which was included a gasoline sale tax that produced \$8,610,549). Funded debt outstanding on June 30, 1931, totaled \$23,500,000. Net of sinking-fund assets, the debt was \$21,891,811. On an assessed valuation of \$3,681,574,879 the State levied in the year ad-valorem taxes of \$7,564,176.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1932, was 9283.52. During the year previous, some 55 miles of line had been abandoned.

**EDUCATION.** For the year ended with June, 1931 (the latest for which the statistics were obtainable) the number of persons of school age in the State was reported as 555,209. There were enrolled in the public schools 434,654 pupils. Of these, 315,720 were in common schools or elementary grades; in high schools, 118,934. The year's expenditures for public-school education totaled \$41,109,215. The defeat of a proposed tax-limiting amendment to the State constitution, in 1932, tended to subordinate the direct advantage of taxpayers, among whom difficulty was widespread, to the claims of the public schools to retain their full customary sources of sustenance.

**CHARITIES AND CORRECTIONS.** A Board of Administration, under the law as existing in 1932, maintained control of the State institutions for the care and custody of persons. This board subsisted, substantially, as created in 1895. It was composed of three ordinary members, and the Governor ranked, *ex officio*, as a fourth member. It had as its executive aid a business manager. Institutions under its care fell into three groups: the correctional, the charitable, and the educational of special types. Charitable institutions, with their respective populations of October, 1932, were: for the mentally afflicted, State hospitals at Topeka (1800), Osawatomie (1582), and Larned (876); State Hospital for Epileptics, Parsons (739); State Training School, Winfield (1017 feeble-minded); State Sanatorium for Tuberculosis, Norton (253); State Orphans' Home, Atchison (211); correctional, the State Penitentiary (1739) at Lansing, State Industrial Reformatory (686, of ages from 16 to 21) at Hutchinson, Women's Industrial Farm (120) at Lansing, Boys' Industrial School (273) at Topeka, and Girls' Industrial School (158) at Beloit; educational, a School for the Blind (114) at Kansas City, School for the Deaf (223) at Olathe, Western University (Negroes, 130) at Kansas City, and Kansas Vocational School (Negroes, 162) at Topeka.

**POLITICAL AND OTHER EVENTS.** Governor Woodring, who had endeavored in March to bring about a saving of \$2,000,000 in State expenditure through voluntary cuts in the pay of State employees and in other outgo, was renominated for Governor on the Democratic ticket in the primaries of August 2; A. M. Landon received the Republican nomination. Conventions of both parties at Topeka declared on August 30 against the repeal of Federal prohibition. The Federal Supreme Court, in a decision of February 29, sustained the refusal of the Kansas Public Service Commission to grant the Western Distributing Company, a subsidiary of the Cities Service Company, an increase in the rate that it might charge for natural gas supplied at El Dorado, Kansas. The case was of importance in a conflict between the State authorities and the Cities Service interests over the latter's rates, which had arisen in 1931.

**ELECTIONS.** At the elections of November 8 the State went strongly Democratic on the National ticket, by 424,203 votes for the Democratic Presidential candidate, Roosevelt, to 349,498 for Hoover (Rep.). George McGill, Democrat, was reelected United States Senator. The Republicans, on the other hand, elected Alfred M. Landon, petroleum producer, Governor of the State, the Democratic candidate, Governor Harry H. Woodring, failing of reelection. A mainly Republican delegation was elected to the House of Representatives for the Seventy-third Congress. Republicans held majorities in both houses of the State Legislature. A constitutional amendment to authorize the State to levy graduated taxes on incomes from all sources was adopted by popular vote. A proposed amendment to limit combined State and local taxes on property to 2 per cent (urban) and 1½ per cent (rural) was defeated.

**OFFICERS.** The chief officers of the State, serving in 1932, were: Governor, Harry H. Woodring; Lieutenant-Governor, J. W. Graybill; Secretary of State, E. A. Cornell; Treasurer, Tom B. Boyd; Auditor, Will J. French; Attorney-

General, Roland Boynton; Superintendent of Public Instruction, George A. Allen, Jr.

**Supreme Court:** Chief Justice, William A. Johnston; Associate Justices, Rousseau A. Burch, John S. Dawson, W. W. Harvey, William E. Hutchinson, William A. Smith, E. R. Sloan.

**KANSAS, UNIVERSITY OF.** A State institution of higher education in Lawrence, Kan., founded in 1864. The 1932 autumn enrollment was 3701, of whom 2443 were men and 1258 women. The 1932 summer session had an enrollment of 1433, of whom 734 were women and 699 men. The full-time teaching staff, exclusive of deans, numbered 233. The endowment fund amounted to \$240,000, and the income for the year, including the balance carried over from 1931, was \$1,600,000. There were 246,000 volumes in the library. Chancellor, Ernest Hiram Lindley, LL.D.

**KARAFUTO**, ká'rà-fu'tó. The Japanese portion of the island of Sakhalin, lying south of the parallel of 50° N. latitude. With an area of about 13,935 square miles, Karafuto had a population (census of Oct. 1, 1930) of 295,187. Fishing, mining, lumbering, and agriculture are the chief industries. Coal mined in 1931, 637,962 tons. Fish products in 1931 were valued at 12,750,419 yen. The budget for 1931-32 was estimated to balance at 26,123,936 yen (yen averaged \$0.4885 for 1931). Governor in 1932, S. Agato, appointed 1931.

**KARA-KALPAKIA.** See SOVIET CENTRAL ASIA.

**KARELIA.** An autonomous socialist soviet republic within the Russian Socialist Federal Soviet Republic. Karelia lies between Finland and the White Sea. The area of 56,476 square miles is about that of the State of Illinois; the population (1931) totaled 285,300 (57.1 per cent Russian, 37.4 per cent Finns, and 5.5 per cent others). The capital is Petrozavodsk, population (1926), 27,105.

**KARIKAL.** See FRENCH INDIA.

**KAZAK REPUBLIC.** See SOVIET CENTRAL ASIA; UNION OF SOVIET SOCIALIST REPUBLICS.

**KEDAH.** See UNFEDERATED MALAY STATES.

**KEELING ISLANDS.** See STRAITS SETTLEMENTS.

**KEEN, WILLIAM WILLIAMS.** An American surgeon, died June 7, 1932, in Philadelphia, Pa., where he was born Jan. 19, 1837. Upon graduation from Brown University in 1859 he attended Jefferson Medical College, Philadelphia, and served as an acting assistant surgeon in the Federal army during part of the Civil War. For two years he studied in Europe, returning in 1866 to Philadelphia to practice and to lecture on anatomical subjects at Jefferson Medical College. He was in charge of the Philadelphia School of Anatomy during 1866-75, was professor of artistic anatomy at the Pennsylvania Academy of Fine Arts during 1876-89, professor of surgery at the Woman's Medical College during 1884-89, and thereafter, until his retirement in 1907, professor of surgery at Jefferson Medical College.

A specialist in the surgery of the brain and nervous system, Dr. Keen was among the first in the United States to perform successfully new and difficult operations in this field. He served as president of the American Surgical Association (1899), the American Medical Association (1900), the Congress of American Physicians and Surgeons (1903), the American Philosophical Society (1907-17), and the International Congress of Surgery in Paris (1920). During the

World War he was a major in the Medical Reserve Corps and was also a member of the National Research Council. He was an honorary fellow of the American College of Surgeons, the Italian Surgical Society, and the Royal Colleges of Surgeons of England, of Edinburgh, and of Ireland. He was also an associate fellow of the American Academy of Arts and Sciences. In 1920 he was made an officer of the Order of the Crown of Belgium and in 1923 of the French Legion of Honor. He delivered numerous lectures defending vivisection.

Dr. Keen's works include: *Reflex Paralysis and Gunshot Wounds and Other Injuries of Nerves* (both with Weir Mitchell and Morehouse, 1864); *Keen's Clinical Charts* (1870); *Early History of Practical Anatomy* (1875); *Surgical Complications and Sequels of Typhoid Fever* (1898); *Addresses and Other Papers* (1905); *Animal Experimentation and Medical Progress* (1914); *Treatment of War Wounds* (1917); *Surgical Operations on President Cleveland* (1917); *Colver Lectures at Brown University on Medical Research and Human Welfare* (1917); *Selected Papers and Essays* (1922); and *Keen's System of Surgery* (8 vols., 1906-21). He also edited such noted medical works as Heath's *Practical Anatomy* (1870); Holden's *Medical and Surgical Landmarks* (1881); and Gray's *Anatomy* (1887).

**KEEWATIN.** See NORTHWEST TERRITORIES.

**KEIFER, KÍ'fēr, J(oseph) WARREN.** An American lawyer, soldier, and congressman, died in Springfield, O., Apr. 22, 1932. He was born in Clark Co., O., Jan. 30, 1836, and attended Antioch College. In 1856 he settled in Springfield, O., where he began the study of law and two years later was admitted to the bar. At the outbreak of the Civil War he gave up his practice to join the Third Ohio Infantry, and during the four years' conflict participated in 27 battles. He commanded the Third Division of the Sixth Army Corps in the Battle of Cedar Creek, which witnessed Sheridan's victory over Early on Oct. 19, 1864. For his exploits here and in the battles of Opequon and Fisher's Hill he was brevetted brigadier-general of volunteers. During Lee's last campaign his troops compelled the surrender of Ewell, Kershaw, Custis Lee, and other Confederate generals at Sailor's Creek on Apr. 6, 1865, in the last general field battle of the war. On this occasion also he received personally the surrender of Commodore Tucker and his marine brigade, numbering about 2000 men, and was brevetted major general of volunteers. At the close of the war he resumed his law practice in Springfield. He also established in 1873 the Lagonda (Ohio) National Bank, of which he was president for more than 50 years.

General Keifer served in the Ohio State Senate during 1868-69, and was active in the formation of the Grand Army of the Republic, being department commander during 1868-70 and vice commander-in-chief during 1871-72. In 1876 he was elected to Congress as representative from the 7th Ohio District. He continued as a member of that body until 1885, serving in the 47th Congress (1881-83) as Speaker of the House. At the outbreak of the Spanish-American War he was commissioned major general of volunteers, being placed in command of the First Division of the Seventh Army Corps. On the organization of the Spanish War Veterans in 1900 he served as first commander-in-chief. He was reelected to Con-

gress in 1904 and served three additional terms. In 1911 he was chosen national member of the commission appointed to observe the Perry Victory Centennial. In his later years he was an active peace advocate, addressing the International Union of Peace at its meeting in Brussels in 1910. In 1912 he was elected a life member by the Interparliamentary Peace Conference of the World that met in Paris. He was also one of the committee of 40 persons that issued the formal call for the third peace conference scheduled to be held at The Hague in 1915. He wrote *Slavery and Four Years of War* (2 vols., 1900).

**KELANTIN.** See UNFEDERATED MALAY STATES.

**KELLEY, FLORENCE.** An American social worker, died Feb. 17, 1932, in Philadelphia, Pa., where she was born Sept. 12, 1859. She was graduated from Cornell University in 1882, studied law at the University of Zurich and Northwestern University, and was graduated from the latter in 1894. On being admitted to the Illinois bar she practiced in Chicago for several years. While in Switzerland she married Count Wischwetzky, a Polish nobleman, from whom she was later divorced, resuming her maiden name. She served as chief inspector of factories in Illinois from 1893 to 1897, was American editor of the *Archiv fur Sozialgesetzgebung* during 1897-98, and after 1899 was general secretary of the National Consumers' League, an organization whose members desire, "so far as possible, to do their buying in such a way as to further the welfare of those who make or distribute the things bought." Through this organization she worked for the betterment of industrial conditions affecting women and children in particular, and exercised a considerable influence upon the course of labor legislation in many States. During the World War she was secretary of the U. S. Board of Control of Labor Standards for Army Clothing. She wrote *Some Ethical Gains through Legislation* (1905) and *Modern Industry in Relation to the Family* (1913), and edited Edmond Kelly's *Twentieth Century Socialism* (1910).

**KELLOGG-BRIAND PACT.** See LEAGUE OF NATIONS; PEACE; JAPAN under *History*.

**KENNETT, ROBERT HATCH.** A British Hebrew scholar, died in Ely, Feb. 15, 1932. He was born in St. Laurence, Ramsgate, Eng., Sept. 9, 1864, and was educated at Queen's College, Cambridge. Following his ordination in the Church of England in 1887, he was made curate at St. Botolph's, Cambridge. He was also chaplain at Queen's College during 1887-93 and again during 1903-20, and lecturer in Hebrew and Syriac during 1887-1903. In 1891 he became lecturer in Hebrew and Syriac at Caius College, and in 1893 university lecturer in Aramaic. After 1903 he was Regius professor of Hebrew at Cambridge and canon of Ely. He was also examining chaplain to the Bishop of Ely (1905-25) and to the Bishop of Manchester (1913-20). In 1909 he was Schweich lecturer. He contributed to the *Cambridge Biblical Essays* (1909), to *Early Ideals of Righteousness* (1910), and to theological journals and biblical dictionaries, and wrote *A Short Account of the Hebrew Tenses* (1901); *In Our Tongues* (1907); *The Servant of the Lord* (1911); *The Composition of the Book of Isaiah in the Light of History and Archaeology* (1920); *Deuteronomy and the Decalogue* (1920); *The Last Supper* (1921); and *Old Testament Essays* (1928).

**KENTUCKY. POPULATION.** According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 2,614,589, as against 2,416,630 in 1920. Louisville had (1930) 307,745 inhabitants; Frankfort, the capital, 11,626.

**AGRICULTURE.** The accompanying table shows the acreage, production, and value of the principal crops for 1932 and 1931:

Crop	Year	Acreage	Prod. Bu.	Value
Tobacco . . .	1932	483,000	345,101,000*	\$35,545,000
	1931	565,000	488,725,000*	34,699,000
Corn . . . . .	1932	2,811,000	67,464,000	18,890,000
	1931	2,928,000	83,448,000	28,372,000
Hay . . . . .	1932	1,141,000	1,151,000*	8,844,000
	1931	1,185,000	1,241,000*	12,375,000
Potatoes . .	1932	60,000	4,620,000	3,095,000
	1931	55,000	3,960,000	3,010,000
Wheat . . . .	1932	270,000	2,835,000	1,304,000
	1931	252,000	5,544,000	2,717,000
Oats . . . . .	1932	162,000	2,349,000	564,000
	1931	232,000	5,104,000	1,684,000
Sweet potatoes .	1932	25,000	2,200,000	1,342,000
	1931	21,000	2,058,000	1,646,000

\* Pounds.    † Tons.

**MINERAL PRODUCTION.** The output of coal, as in other important producing States, fell off, declining to 40,238,803 net tons for 1931, from 51,208,995 for 1930. A lower average price by the ton, obtained by the mines, \$1.27 (1931) as against \$1.49 (1930), resulted in a drop in the value of the year's coal production more severe than was the drop in quantity; coal produced in 1931 attained the total value of \$51,163,000, as against \$76,186,000 for 1930. The number of persons employed at coal mines fell to 48,204 (1931), from 56,674 (1930); the average number of days' work to the employee, to 159 (1931), from 187 (1930).

Petroleum production followed the tendency prevalent among other States in the face of the overproduction in Texas; it declined in quantity to 6,456,000 barrels (1931), from 7,389,000 (1930); in value, to \$5,295,000 (1931), from \$11,080,000 (1930). The output of natural gas was 28,023,000 M cubic feet for 1930, the latest year for which data were available; the value of this product for 1930 was \$9,691,000. Clay products attained for 1930 the value of \$5,563,392; for 1929, of \$7,062,220. The State furnished nearly half of the Union's production of native asphalt, its total for 1930 being 305,024 short tons, in value \$2,374,834. The total value of the mineral product of the State, duplications eliminated, was \$111,091,254 for 1930; for 1929, \$132,649,508.

**FINANCE.** State expenditures in the year ended June 30, 1931, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments, \$23,979,731 (of which \$6,842,755 was for local education); for interest on debt, \$653,597; for permanent improvements, \$17,270,134; total, \$41,920,642 (of which \$19,235,160 was for highways, \$4,730,277 being for maintenance and \$14,504,889 for construction). Revenues were \$37,356,798. Of these, property and special taxes furnished 35.1 per cent; departmental earnings and compensation to the State for officers' services, 7.4; sale of licenses, 42.9 (in which was included a gasoline sale tax that produced \$8,555,588). The State's debt was chiefly unfunded. Funded debt outstanding on June 30, 1931, totaled \$2,492,021. Net of sinking-fund assets, it was \$2,492,777. On an assessed valuation of

\$3,059,586,369 the State levied in the year ad-valorem taxes of \$10,964,088.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1932, was 3990.89. During the year previous, 63.66 miles of line had been abandoned.

**EDUCATION.** Preparations were made for the creation of a new State code of laws affecting the public schools, the General Assembly providing an educational commission to study the public-school system and report thereon to the session of 1934, with a view to guiding codification.

**CHARITIES AND CORRECTIONS.** Under an act of 1932 the management of seven State institutions for the care and custody of persons was committed to a Department of Public Welfare, which became the successor of the previous Board of Charities and Corrections. The direction of this department was placed in the hands of a body of five salaried officers, functioning as a board, the chairman of this board acting as executive head of the department. The institutions under its control, with their average respective populations of the year ended June 30, 1932, were: Eastern State Hospital, Lexington, 1684; Central State Hospital, Lakeland, 2308; Western State Hospital, Hopkinsville, 1746; Feeble-Minded Institute, Frankfort, 651; Houses of Reform, Greendale, 528; State Reformatory, Frankfort, 2437; Penitentiary, Eddyville, 1154.

**LEGISLATION.** The General Assembly met in regular biennial session, adjourning on the night of March 17-18. It made an effort to reform the State's peculiar financial practice of issuing warrants without close restriction, whereby an unfunded debt of some \$13,000,000 had accumulated in the course of years. A budget bill was passed, requiring that warrants be not issued in excess of 90 per cent of the anticipated revenues of a given year. Governor Laffoon, however, vetoed this bill, declaring that the Legislature had failed to provide the necessary current revenue to enable the State administration to do without warrants in excess of the proposed proportion. An allied measure, a funding bond act, was made a law. It provided for an issue of \$14,000,000 of funding bonds wherewith to take up the outstanding warrants of the State. This measure was later declared unconstitutional by the State Court of Appeals. By a reapportionment act the State was divided into nine districts for the election of Federal Representatives; six of the districts thus created were of Democratic complexion. Motor-buses and other commercial users of the highways were placed under a mileage tax and State regulation. The Federal constitutional amendment to alter the dates of inaugurations and of the initial sessions of Congress was ratified. The right of appeal from decisions of the juvenile courts was granted. The State tax on realty was reduced, but the Legislature failed to pass either the sales tax proposed by the Governor or any other tax to make up the resulting loss of some \$3,000,000 a year of revenue. An appropriation act carrying some \$18,000,000 for State purposes outside of the highway funds was passed, but later the appropriations were cut by the Governor.

**POLITICAL AND OTHER EVENTS.** The State Court of Appeals, ruling on June 24 that the issuance of \$14,000,000 of funding bonds to retire the State's interest-bearing warrants was invalidated by the State constitution, caused difficulty in the finances, as the warrants had tended to depreci-

ate in price. Governor Laffoon made an effort to restore their market by having a trustee for all warrants appointed, and by effecting executive economies in State expenditure, thus reducing the prospect that new warrants would issue. Trials of defendants charged with a part in the mining violence of 1931 in the coal fields were held in the early months of the year. The State Court of Appeals refused to overrule trial Judge Prewitt, who had excluded from the court room certain representatives of the press. A movement outside the State, in sympathy with the Kentucky miners, led to a visit to Bell County, on the part of a party of well-known writers. The party was reconducted over the State border by Bell County officials on February 10. A group of students from Columbia University and other Eastern institutions, in sympathy with the Bell County miners, was expelled from the county upon arrival, on March 25, after a hearing before a county Judge, it being alleged that the visitors' presence was a "menace to life and property." Later the group protested before Governor Laffoon, who referred them to the courts for the redress of any infringement of their constitutional rights as citizens. A third expedition, including Arthur Garfield Hays and Dudley Field Malone and backed by the American Civil Liberties Union, was barred on May 14 from Pineville in Bell County, where it had intended to hold a public meeting.

Senator Alben W. Barkley gained the Democratic renomination at the State primary elections on August 6, having declared for a resubmission of Federal prohibition to the people, and defeating former Senator Martin, who had attacked him for previously favoring prohibition. The redistricting act whereby the Legislature had created 9 districts for the election of Representatives, in place of the old 11, was declared invalid by a Federal special three-judge Court late in July, on the ground that, by creating a new 9th District of excessive population, it infringed the Federal reapportioning act of 1911, requiring equal representation. This rendered it necessary to nominate all Representatives at large, by the primary State-wide vote; all persons who had previously qualified as candidates before either party for Representative seats were admitted on the primary ballots. The resulting primary vote was peculiar, in that while the incumbent Democratic Representatives were in general renominated, Louisville was left without a Democratic candidate for the House.

**ELECTIONS.** The popular vote of the State was cast for the Democratic National ticket in the proportion of nearly 3 to 2, the totals being, for President, Roosevelt (Dem.), 580,574; Hoover (Rep.), 394,716. Alben W. Barkley, Democrat, was reelected United States Senator. The nine Representatives of the State in the Seventy-third Congress were elected at large, because of an adverse court decision on the State's redistricting act. Democrats were elected to all the seats. No elections to State offices were held.

**OFFICERS.** The chief officers of the State, serving in 1932, were: Governor, Ruby Laffoon; Lieutenant-Governor, A. B. Chandler; Secretary of State, Sara W. Mahan; State Treasurer, Elam Huddleston; Auditor, J. Dan Talbott; Superintendent of Public Instruction, James H. Richmond; Attorney-General, Bailey P. Wootton; Commissioner of Agriculture, Labor, and Statistics, Eugene Flowers.

**KENTUCKY, UNIVERSITY OF.** A coeducational State institution of higher learning in Lexington, Ky., founded in 1866. The enrollment in the autumn of 1932 was 2642. There were 1463 students registered in the 1932 summer session. The faculty numbered 269. The productive funds amounted to \$184,075, and the income for the year was \$1,386,088. The library contained 132,638 volumes. President, Frank LeRond McVey, Ph.D., LL.D.

**KENYA**, kē'en-yā (formerly the East Africa Protectorate). A British crown colony and protectorate in East Africa, bordering on the Indian Ocean between Italian Somaliland and Tanganyika and extending inland to Uganda and Ethiopia. Area, 224,960 square miles; population, estimated in 1929 at 3,003,158, including 16,663 Europeans, 39,504 Asiatics, and 12,504 Arabs. The population in 1931 was estimated at 3,025,000 (17,285 Europeans). Capital, Nairobi, with 47,806 inhabitants (5228 Europeans). Mombasa had a population of 57,057 in 1931.

The colony is mainly agricultural, there being about 2882 European farmers in the territory in 1930. Coffee, maize, sisal, and wheat are extensively raised in the highlands and maize, coconuts, sisal, and cotton in the lower regions. Sugar cane, groundnuts, simsim, barley, and potatoes are other crops. There are more than 3300 square miles of merchantable timber; some gold, marble, lime, and mica are produced, but the mineral resources are not fully explored. Kenya and Uganda Protectorate constitute a customs union, the joint imports in 1930 being £6,923,665 and the joint exports £5,483,024. In the year 1930 Kenya's revenue totaled £3,241,600 and expenditure £3,438,874. The public debt on February, 1931, was £16,900,000.

The colony is governed under the Constitution of December, 1925, which provides for executive and advisory legislative councils. Governor and Commander-in-Chief in 1932, Sir Joseph Byrne.

**HISTORY.** The discovery of a promising gold field in the vicinity of Lake Victoria and the Uganda boundary line during 1932 revived friction between the natives and the European settlers. The gold was discovered within the 30,000,000 acres which had been set aside perpetually as a native reserve. When the natives refused to lease the lands voluntarily, despite the high rents offered, the Kenya Legislature on December 21 voted to allow the Crown (in which title to mineral resources rests) to grant mining claims in the reserves in return for cash compensation paid to a general natives' fund. The measure provoked widespread protest in England, where many public leaders urged that new lands equivalent to those leased should be allotted to the natives.

**KENYON COLLEGE.** A college of arts and sciences for men in Gambier, O., established in 1824 by the Protestant Episcopal Church and associated with it. The enrollment for the autumn term of 1932 was 173. The faculty numbered 22 members. The endowment funds amounted to \$2,221,000, and the income for the year was \$195,000. The value of buildings and equipment was \$1,592,500. The library contained 78,000 volumes. President, William F. Pierce, L.H.D., D.D., LL.D.

**KINDERGARTEN ASSOCIATION.** NATIONAL. See NATIONAL KINDERGARTEN ASSOCIATION.

**KING, GRACE ELIZABETH.** An American author, died Jan. 12, 1932, in New Orleans, La., where she was born in 1852. Her sketches first attracted attention in the *New Princeton Review* and were the basis of her novel, *Monsieur Motte* (1888). Her special knowledge of the early history of New Orleans and its creole culture was depicted in *Earthlings* (1888); *Tales of Time and Place* (1892); *Jean Baptiste Lemoine, Founder of New Orleans* (1892); *Balcony Stories and A History of Louisiana* (1893); *New Orleans, The Place and the People* (1895); *De Soto and His Men in the Land of Florida* (1898); *Stories from Louisiana History* (1905); *Pleasant Ways of St. Médard* (1910); *Creole Families of New Orleans* (1921); *Madame Givard, an Old French Teacher of New Orleans* (1922); and *La Dame de Sainte Hermine* (1924).

**KING, LIDA SHAW.** An American classical scholar, died in Providence, R. I., Jan. 10, 1932. Born in Boston in 1868, she was graduated from Vassar College in 1890 and from Brown University (A.M.) in 1894 and continued her graduate studies at Vassar (1894-95), Radcliffe (1897-98), Bryn Mawr (1899-1900), and at the American School of Archaeology, Athens, Greece (1900-01). The Litt.D. degree was conferred on her by Mt. Holyoke in 1912 and the LL.D. degree by Western Reserve University in 1913. She taught the classics at Vassar (1895-97) and at the Packer Collegiate Institute (1898-99, 1901-02). In 1905 she was called to Brown University as assistant professor of classical philology and as dean of the Women's College (now Pembroke). After 1909 she was professor of classical literature and archaeology. She retired in 1922. She was a member of the managing committee of the American School of Classical Studies in Athens and a contributor to the *American Journal of Archaeology* and various educational magazines.

**KING'S CUP AIR RACE.** See AERONAUTICS.

**KINGSLEY, DARWIN PEARL.** An American insurance leader, died in New York City, Oct. 6, 1932. He was born in Alburg, Vt., May 5, 1857, and was graduated from the University of Vermont in 1881. After teaching school in Colorado for two years he became editor of the *Grand Junction News*, and in 1884 was delegate to the Republican national convention. He served as auditor and insurance commissioner of Colorado during 1887-89, and then entered the service of the New York Life Insurance Co. as inspector of its New England agencies. Three years later he was made general superintendent of agencies, and in 1898 was elected vice-president and trustee. He became president of the company in 1907, and on his retirement in 1931 was made chairman of the board. During his administration the number of policies in force was tripled, being increased from 993,630 in 1906 to 2,527,327 in 1928. The annual income was also increased from \$100,902,178 in 1906 to \$356,405,867 in 1928. He was president of the Chamber of Commerce of New York during 1920-21 and served also as director of numerous banks, including the Chemical Bank & Trust Co. and the New York Trust Co. He was the author of *The First Business of the World* (1903); *Militant Life Insurance* (1911); *Let Us Have Peace* (1919); and *Life Insurance Light* (1927).

**KIRGHIZIA.** See SOVIET CENTRAL ASIA.

**KITSON, THEO ALICE RUGGLES.** An American sculptor, died in Boston, Mass., Oct. 29, 1932. She was born in Brookline, Mass., in 1871, and studied sculpturing under Henry Hudson Kitson (to whom she was married in 1893) and under Dagnan-Bouveret in Paris. Her work was exhibited at the National Academy of Design in New York, the Pennsylvania Academy of Fine Arts in Philadelphia, the Boston Art Club, the Museum of Fine Arts in Boston, and the Art Institute of Chicago. For the Chicago Exposition of 1893 she was selected by the women of Michigan to make two bronze figures representing the woods of that State. She received a bronze medal at the St. Louis Exposition of 1904. Among the public monuments which she designed are: "The Minute Man of '76" in Framingham, Mass.; "The Volunteer of '61" in Newburyport, Mass.; and soldier monuments in Goshen and Walden, N. Y., Vicksburg, Miss., Minneapolis, Minn., Pasadena, Calif., Providence and Little Falls, R. I., and Ashburnham, North Andover, North Attleboro, Sharon, and Topsfield, Mass. She designed also the Spanish-American war monuments in Schenectady, N. Y., and Lynn, Mass.; the World War memorials in Frankestown, N. H., and Dorchester, Brookline, and Hingham, Mass.; the portrait statue of General Kosciuszko in the Boston public gardens; and the "Mother Bickerdyke" group in Galesburg, Ill. She was a member of the National Sculpture Society and of the Copley Society (Boston) and was vice-president of the Boston Society of Sculptors.

**KIWANIS INTERNATIONAL.** An organization of clubs made up of not more than two of the leaders in each business and profession, united for the rendering of civil and social service to the community. Each club enjoys autonomy but at the same time functions in direct connection with district and international administrations. There are 29 geographical districts, each with a governor, in the United States and Canada. The first club was organized in Detroit, Mich., in January, 1915; by 1917 the organization had spread into Canada.

At the close of 1932 the international organization consisted of 1873 clubs, with an approximate membership of 83,000. Some 35,000 civic and welfare projects were carried out by these organizations during the year. The 1932 convention was held in Detroit, Mich., June 27-30, and the 1933 convention was to be held in Los Angeles, Calif., June 25-29. The international objectives for 1932-33 were: personal service to under-privileged children; intelligent, aggressive, and serviceable citizenship; friendly understanding among all citizens, rural and urban; vocational guidance; and boys' and girls' work. The officers elected were: president, Carl E. Endicott of Huntington, Ind.; secretary, Fred C. W. Parker of Chicago; and treasurer, Walter R. Weiser of Daytona Beach, Fla. Headquarters are at 520 North Michigan Avenue, Chicago, Ill.

**KLAIPEDA.** Same as MEMEL (q.v.).

**KNIGHTS OF COLUMBUS.** A society of Roman Catholic men, organized under a special charter granted by the General Assembly of the State of Connecticut Mar. 29, 1882. Under the charter it is permitted to do business as a fraternal benefit society and to promote and conduct educational, charitable, religious, social welfare, war relief and welfare, and public relief work. The four principles of the order are charity,

unity, fraternity, and patriotism. It observed its golden jubilee in March, 1932.

The order is composed of a supreme council, a supreme board of directors, 61 State councils, and 2540 subordinate councils. The supreme council is the governing body and highest authority in the order, and is composed of the supreme officers, supreme directors, past supreme knights, and officers and representatives of the State councils. This council meets annually in August for legislative purposes and for the election of five members of the supreme board of directors. The latter board, consisting of 15 regularly elected members and seven supreme officers, is the executive body of the order and meets quarterly for the transaction of business. The supreme officers are elected biennially at the supreme convention.

The 1932 supreme convention was held in Washington, D. C., August 14-17. There was unveiled on the opening day the bronze statue of Cardinal Gibbons by Leo Lentelli, for which Congress had granted a site in a small park in front of the Church of the Sacred Heart. The speech of acceptance, on behalf of the people of the United States, was made by President Hoover. The supreme council indorsed the recommendation for a \$1,000,000 endowment fund available to members for relief purposes in times of economic stringency.

In its 50 years of existence the society has paid out more than \$34,000,000 to the beneficiaries of its members. Death claims paid during the fiscal year ending June 30, 1932, amounted to \$2,311,432, and the total insurance in force at that date was \$294,795,378. The total membership as of June 30, 1932, was 547,288, which represented an associate membership of 289,884 and an insurance membership of 257,404.

The officers in 1932 were: Martin H. Carmody of Grand Rapids, Mich., supreme knight; William J. McGinley of New Haven, Conn., supreme secretary; and D. J. Callahan of Washington, D. C., supreme treasurer. The order publishes *Columbia*, a monthly magazine. Headquarters of the Supreme Council are in New Haven, Conn.

**KNOWLES, MORRIS.** An American consulting engineer, died in Pittsburgh, Pa., Nov. 8, 1932. He was born in Lawrence, Mass., Oct. 13, 1869. On his graduation from the Massachusetts Institute of Technology in 1891, he was for a time engaged by the East Jersey Water Co. In 1893 he became associated with the Massachusetts State Board of Health, studying the metropolitan water supply, and in 1895 with the metropolitan water commission of Boston. Removing to Pittsburgh in 1897, he was engaged there as engineer of the filtration commission of the department of public works until 1910. After 1903 he was a member of the consulting engineering firm, Chapin & Knowles, and after 1915 president of Morris Knowles, Inc. He was consultant in various water supply investigations for New York City, Philadelphia, and Lawrence, Mass., and during 1909-11 designed the water works system of the Tennessee Coal & Iron Railroad Co. He served also as a member of the Pittsburgh flood commission during 1909-15, as a member of the board of advisory engineers of the Miami (Ohio) conservancy district in 1914, as consulting engineer of the Essex border utilities commission of Ontario, Canada, during 1916-21, and as a member of the engineering board of review of the Chicago Sanitary District in 1924. During the

World War he was supervising engineer in the construction of Camps Meade and McClellan and chief engineer of the housing division of the U. S. Shipping Board. In addition to being a member of the zoning commission of the U. S. Department of Commerce, he was chairman of the committee on utilities of the President's Conference on Home Building and Home Ownership, vice-chairman of the Pennsylvania commission to study municipal consolidation in counties of the second class, and chairman of the Pittsburgh planning commission (1922-29) and of the board of zoning appeals (1923-27). He was the author of *Industrial Housing* (1920).

**KOLSTAD, PEDER LUNDVIK.** A Norwegian statesman, died in Oslo, Mar. 6, 1932. Born in Oestfold in 1878, he attended the Agricultural High School, from which he was graduated in 1902. He taught agricultural subjects for several years, and in 1913 became rector of the Kalnes Agricultural School. In 1922 he was elected to the Storting, where he was one of the most influential leaders of the Agrarian party. In 1927 he became vice-president and in 1931 president of the Odelsting, the lower section of the Storting. On the downfall of the government of Premier J. L. Mowinkel in May, 1931, he accepted the premiership and the portfolio of finance. His government endeavored to carry out certain principles of the Agrarian party, such as equal tariff protection for agriculture and industry. On account of the party's opposition to all revolutionary tendencies the general strike of the summer of 1931 was amicably settled through government mediation.

**KONGO, BELGIAN.** See CONGO, BELGIAN.

**KOREA (CHOSEN).** A peninsula of eastern Asia annexed by the Japanese Empire on Aug. 22, 1910, and incorporated as an integral part of Japan by an Imperial Rescript of 1919. Capital, Keijo-fu (Seoul).

**AREA AND POPULATION.** With an area of 85,228 square miles, Korea had a population at the 1930 census of 21,057,969, as compared with 19,522,945 at the census of 1925. The 1930 population included about 470,000 Japanese and 53,500 foreigners. The population of the chief cities at the end of 1929 was: Keijo-fu (Seoul), 340,200 (93,272 Japanese); Fusan-fu (Pusan), 119,655 (42,642 Japanese); Heijo-fu (Pyong-Yang), 156,442 (27,438 Japanese); Taikyu-fu (Tai-Ku), 94,801 (28,090 Japanese); and Chemulpo, 59,558 (11,534 Japanese).

**EDUCATION.** Less than 20 per cent of the population is literate. In 1929, there were, mainly for Japanese, 463 elementary schools, with 63,171 pupils; 11 middle schools, with 5649 pupils; 14 normal schools, with 2429 students; and 24 girls' high schools, with 9432 pupils. Schools for Koreans included 1620 primary schools, with 422,800 pupils; 78 private common schools, with 19,966 pupils; 24 higher common schools, with 10,716 pupils; and 15 higher common schools for girls, with 3840 pupils. The University of Seoul had 553 students in March, 1929, of whom 387 were Koreans and 166 Japanese. Japanese is the official language but the language of the people is a mixture of Japanese and Mongolo-Tartar.

**PRODUCTION.** About 20 per cent of the land area, or 10,116,000 acres, was under cultivation in 1931 and about 36 per cent of cultivated land was devoted to paddy fields. Japanese owned about one-half of the tilled area. Rice, barley, wheat, beans, tobacco, cotton, hemp, ginseng, and

various cereals are the leading crops. Livestock raising, fruit growing, and silk culture are important farm industries. A variety of minerals are produced, chiefly gold, iron, graphite, and anthracite. The chief manufactured products are textile fabrics, paper, pottery, metal ware, tobacco products, brewed drinks, and leather. The value of the 1930 output of the chief products was: Rice, 351,645,585 yen; barley, 61,583,331 yen; millet, 36,531,349 yen; soy beans, 31,438,979 yen; minerals 24,654,463 yen; marine products, 30,389,231 yen.

**COMMERCE.** The trade of Korea is almost entirely with Japan and China. Imports and exports in 1931 were valued at \$133,502,000 and \$129,224,000, respectively, as compared with imports of \$181,285,000 and exports of \$131,048,000 in 1930. Japan furnished 80.5 per cent of the total imports (75.8 per cent in 1930) and took 95.2 per cent of the total exports (90.3 per cent in 1930). China supplied 14.6 per cent of the 1931 imports (16.6 in 1930) and took 4.6 per cent of the exports (9.2 in 1930). The leading export items in 1931 were: rice, \$68,357,000; soy beans, \$6,816,000; raw silk, \$5,931,000; fish, \$4,860,000; and fertilizers, \$4,177,000. Piece goods, heavy iron, machinery, fertilizers, and coal were the principal imports. Imports from the United States in 1931 were \$2,247,000 (\$4,257,000 in 1930).

**FINANCE.** The fiscal year ends March 31. Budget estimates for 1930-31 and 1931-32 balanced at the equivalent of \$119,122,000 and \$119,104,000, respectively. The total debt on Mar. 31, 1931 was 387,945,000 yen (\$193,390,000), as against 377,136,000 yen (\$188,002,000) a year earlier. The debt consisted chiefly of exchequer bonds and public undertaking loans.

Actual revenue in 1930-31 amounted to 218,210,352 yen and expenditure to 208,724,448 yen (about \$109,105,000 and \$104,362,000, respectively, at par).

**COMMUNICATIONS.** Government railway lines extended 1710 miles in 1931 and private lines about 440 miles. The highway network covered 10,767 miles, mostly graded earth or gravel roads. An air line linked the chief cities with Japan and with Manchuria. On Mar. 31, 1931, there were 747 postal stations, 24,407 miles of telegraph wire, and 85,719 miles of telephone wire.

**GOVERNMENT.** Korea is governed as an integral part of Japan through a governor-general entrusted with large administrative powers. Governor-General in 1932, Gen. Kazunari Ugaki, who assumed office in June, 1931. The Korean autonomist movement was marked during 1932 by the bombing of a group of high Japanese officials at a military parade in Shanghai, China, on April 29 (see CHINA under *History*).

**KOWEIT.** See ARABIA.

**KREUGER, IVAR.** A Swedish industrialist and financier, died by suicide in Paris, Mar. 12, 1932. He was born in Kalmar, Sweden, Mar. 2, 1880, and attended the Royal Technical University in Stockholm. On coming to the United States about 1893 he was engaged as a real estate broker in Chicago. He later became superintendent of building construction in New York, Syracuse, and other cities. Other construction commissions carried him to England, Germany, France, Mexico, Canada, and South Africa. He was one of the early specialists in the use of structural steel in the erection of the skyscraper. On his return

to Sweden he established, with Paul Toll, in 1908 the firm of **Kreuger & Toll**, which during the next five years when he was managing director constructed some of the most imposing structures in Stockholm and other Swedish cities. In 1913 he sought an expansion of his power in the match industry, the oldest of the highly technical industries of Sweden and in which she led all other countries of the world. He acquired the powerful Jönköping & Vulcan Match Co., as well as 11 independent companies, which he combined into the United Swedish Match Factories. In 1917 he organized as a holding company the Swedish Match Co., which within a few years was developed into an international match trust controlling 250 factories in 43 different countries through the International Match Corp., organized in New York City in 1923. In turn, it was controlled by Kreuger & Toll, which had been reorganized strictly as an investment and financing company, with Kreuger as chairman. Its last important acquisition, in 1931, was the Federal Match Corp., ranking third in size among companies in the United States.

Kreuger & Toll owned shares in 225 subsidiary corporations, including banks, forests, pulp and saw mills, iron and gold mines, power plants, railroads, chlorate of potash and other factories, office buildings and apartment houses. The most important of these were the Swedish Pulp Co., the Grangesberg Co. (controlling Swedish iron ore deposits), the Boliden Mining Corp. (controlling a group of gold mines in northern Sweden), and the Hufvudstaden Real Estate Co. Through its banks, chief of which was the Scandinaviska Kreditaktiebolaget, the firm conducted such operations as participation in financial syndicates, making short-term investments, and amalgamation of industrial enterprises. It also granted state and similar credits in connection with industrial concessions, especially national match monopolies. Loans in exchange for the latter, varying in duration from 20 to 60 years, were granted to the governments of Danzig, Ecuador, Estonia, Greece, Hungary, Latvia, Lithuania, Poland, Rumania, Peru, Turkey, and Yugoslavia. Special agreements pertaining to the match industry in those countries had also been made with the French and German governments in return for loans. In gratitude, the French government made Kreuger a grand officer of the Legion of Honor.

However, it was loans that Kreuger & Toll made to the German government, including one of \$29,480,000 in 1929, the Swedish share of the German international loan under the Young Plan, and another of \$125,000,000 for 50 years' duration, made previous to the declaration of the moratorium in June, 1931, that were largely responsible for Kreuger's embarrassment at the time of his death. He had been unable during his recent visit to the United States to raise 120,000,000 kroner (\$20,000,000) with which to maintain the liquidity of his chief bank, the Scandinaviska Kreditaktiebolaget. Subsequent revelations of the exploitation of resources to which he had resorted over a period of eight or more years exploded the myth which had been built around him as one of the greatest financial geniuses of the twentieth century. See SWEDEN under *History*.

**KRUS**. See LIBERIA under *History*.

**KU KLUX KLAN**, KNIGHTS OF THE. An American benevolent, eleemosynary, and fraternal

institution, incorporated under the laws of the State of Georgia in 1915. "The membership is made up of white, male, Gentile persons, native-born American citizens, 18 years of age. They must be of sound mind, good character, commendable reputation, and respectable vocation; must believe in the tenets of Christian religion; and must owe no allegiance to any foreign government, nation, institution, sect, ruler, prince, potentate, people, or person, and whose allegiance, loyalty, and devotion to the Government of the United States of America in all things is unquestionable." The Klan continued its activity in matters of civil government affecting its ideals or principles. The programme adopted for 1933 was "Communism must be destroyed in America." The officers were: President, Hiram W. Evans; secretary, H. C. Spratt; treasurer, Sam H. Venable. Headquarters are in Atlanta, Ga.

**KULAKS**. See UNION OF SOVIET SOCIALIST REPUBLICS.

**KUNZ**, GEORGE FREDERICK. An American mineralogist and gem expert, died June 29, 1932, in New York City where he was born Sept. 29, 1856. After attending Cooper Union he became associated with Tiffany & Co., New York jewelers, and in 1879 was made a vice-president of the firm. He was a special agent for the U. S. Geological Survey from 1883 to 1909, and in 1902 discovered near Pala, San Diego Co., Calif., a transparent pinkish variety of spodumene which was named kunzite in his honor and which is used as a gem stone. He also was responsible for the name tiffanyite, given to a rare milky-blue-white diamond. From 1892 to 1898 he was a special pearl investigator for the U. S. Fish Commission, and in the Twelfth Census of 1900 had charge of the collection of statistics on precious stones. He was research curator of precious stones in the American Museum of Natural History, and in important capacities related to his profession, was connected with the expositions held in Paris (1889), Kimberley, South Africa (1892), Chicago (1893), Atlanta (1895), Omaha (1898), Paris (1900), and St. Louis (1904). In addition he was interested in various civic undertakings, being president of the American Scenic and Historic Preservation Society, founder and honorary president of the Museum of the Peaceful Arts (now the Museum of Science and Industry) in New York City, vice-president of the American Museum of Safety, and president of the American Metric Association. He was a founder and past president of the New York Mineral Club and past president of the New York Academy of Sciences. Among the honors bestowed on him were a knighthood in the Order of St. Olaf of Norway and an officership in the French Legion of Honor and the Japanese Order of the Rising Sun. He received the Ph.D. degree from the University of Marburg in 1903 and the Sc.D. degree from Knox College in 1907. His publications include: *Gems and Precious Stones of North America* (1890); *The Book of the Pearl* (with Charles H. Stevenson, 1908); *The Curious Lore of Precious Stones* (1913); *Magic of Jewels* (1915); *Ivory and the Elephant* (1915); *Shakespeare and Precious Stones* (1916); and *The Ring* (1917). He contributed to periodicals more than 400 articles on gems, minerals, meteorites, and folklore.

**KUOMINTANG**. See CHINA under *History*.

**KURDISTAN**, koor'de-stan'. A term applied to an indefinite region in eastern Asia Minor comprising portions of Turkey, Persia, Soviet Trans-

caucasia, and Iraq and inhabited by approximately 1,500,000 semi-nomadic Kurds, a people related to the Persians in race and language. Due to their nationalistic aspirations the Kurds have remained in a state of chronic revolt against their respective governments. See IRAQ under *History*.

**KURIA MURIA ISLANDS.** See ADEN.

**KUWAIT.** See ARABIA.

**KWANGCHOW (KWANGHOWAN),** kwüŋ'chō'wün. A small territory on the coast of the Chinese Province of Kwangtung, leased to France in 1898, and two small islands commanding Kwangchow Bay leased to her the following year. It is under the authority of the governor-general of French Indo-China who is represented by a French resident-superior. Resident-Superior in 1932, M. Silvestre (appointed, 1929). See FRENCH INDO-CHINA.

**KWANTUNG,** kwan'tüŋ', or KWANTAO. A territory at the southern end of the Liaotung Peninsula in Manchuria leased to Japan by China, as a successor to Russia after the Russo-Japanese War. Area, including 40 small islands adjacent to the peninsula, 1336 square miles, population, on Jan. 1, 1932 was 938,288 (excluding the army and navy), including 121,517 Japanese. Capital, Dairen (formerly Dalny), with about 262,000 inhabitants. The area of land under cultivation in 1930 was 488,830 acres. The agricultural products include, rice, tobacco, hemp, and various grains and vegetables. The fishing industry is of importance. Bean cake and bean oil, salt, paper, iron and steel, soap, glass, and cement were the chief products and the total value of all products was 70,000,000 yen. Imports for 1931 totaled 97,934,730 yen and exports 192,872,735 yen; (yen had an average exchange rate of \$0.4885 in 1931). The special account budget for 1931-32 was estimated to balance at 22,171,316 yen; and the local expenses budget, at 5,803,081 yen. The territory is administered by a Japanese governor-general. Governor-General in 1932, S. Tsukamoto. See MANCHURIA, JAPAN.

**LABOR.** FEDERAL ANTI-INJUNCTION LAW. On Mar. 23, 1932, President Hoover approved a Federal anti-injunction law, the so-called Norris-La Guardia Act, which was generally hailed as the most important victory in the history of the organized labor movement. The measure was also a victory for Senator George W. Norris, who had almost single handed kept up the fight for such a measure over a period of eight years. The Senate passed the bill by a vote of 75 to 5; the House's vote was 363 to 13. The act, whose purpose is "to define and limit the jurisdiction of courts sitting in equity," has as its outstanding provisions the following: (1) The outlawing of "yellow dog contracts" in Federal courts; (2) the restriction of Federal anti-labor injunctions; (3) the right of trial by jury for contempt offenses outside the immediate presence of the court. The Federal anti-injunction law has no application to State courts, the term "court of the United States" meaning "any court of the United States whose jurisdiction has been or may be conferred or confined or limited by act of Congress, including the courts of the District of Columbia." At the present time the following twelve States have already adopted somewhat similar anti-injunction laws in labor disputes: Arizona, Illinois, Kansas, Minnesota, Montana, New Jersey, North Dakota, Oregon, Pennsylvania, Utah, Washington, and Wisconsin. The *Monthly Labor Review* presents

the following summary of the provisions of the new law:

Section 1 forbids any Federal court to issue an injunction except in accordance with the act. Section 2 declares the public policy of the United States in labor disputes, and assures the employee's right to collective bargaining. Anti-union contracts are outlawed by section 3, and such contracts are made unenforceable in any Federal court. Sections 4 and 5 relate to the restrictions on the issuance of injunctions from doing certain acts either singly or in concert. Officers of associations are no longer held responsible for the unlawful acts of individuals, by section 6, while section 7 prescribes the procedure, namely, that no injunction shall be issued, except after a hearing of the testimony of witnesses in open court, with an opportunity for cross examination, and only after the findings of fact by the court. By the provisions of section 8, an effort to settle disputes must be made before injunctive relief will be granted. Section 9 provides that when an injunction has been issued it shall include only a prohibition of such specific acts as have been expressly complained of and are expressly included in the findings of fact made by the court. Sections 10 and 11 provide for the right of appeal, and trial by jury. A demand for the retirement of a judge may be made by section 12, whenever an attack has been made upon his character or conduct, or if made elsewhere than in the presence of the court. Various definitions are set forth in section 13, while sections 14 and 15 contain the usual provision relating to the constitutionality of the act and the repeal of all conflicting acts.

In the twelve States mentioned above, as has been said, anti-injunction laws already are to be found on the statute books. In four of the States (Kansas, Minnesota, Pennsylvania, and Wisconsin), the law specifically provides that no injunction shall be issued without previous notice and an opportunity to be heard in open court. The Wisconsin law (acts of 1931) defines the public policy of the State relative to collective bargaining, and creates a new section relating to litigation growing out of the labor disputes and limiting the jurisdiction of courts sitting in equity. Another important section concerns the conditions of issuance of injunctions and restraining orders. This section provides that no court shall have jurisdiction to issue an injunction in any case involving a labor dispute except after the testimony of witnesses in open court and with an opportunity for cross examination. Six States (Arizona, North Dakota, Oregon, Utah, Washington, and Wisconsin) have laws containing provisions similar to those contained in section 20 of the Clayton Act, and three other States (Illinois, Montana, and New Jersey) have laws which, although similar in many respects to the Clayton Act, differ in the exact wording of the law.

**FIVE-DAY WEEK.** These columns before have indicated the growing significance of the five-day week movement in the United States. In the report delivered to President Hoover, in July, by the Council of Personnel Administration, of which T. E. Campbell, President of the Civil Service Commission, was chairman, the Federal government was urged to take the initiative in the establishment of the five-day week in public offices. President Hoover approved the shorter term in principle and ordered the Commerce and Labor Departments to resurvey its possibilities. The Department of Labor, the United States Civil Service Commission and the Employees' Compensation Commission adopted the five-day week; also Washington announced that the shorter working week was to be the standard for all road building, flood control and harbor work financed by the Federal relief bill. The executive council of the American Federation of Labor, in the same month, decided to ask President Hoover to call a conference of the

representatives of labor in industry to work out a plan for the early adoption of the five-day week and the six-hour day. According to the A. F. of L.'s leaders, charity and unemployment relief payments were no solution to the nation's serious industrial problems while voluntary action on the part of some corporations could scarcely be deemed sufficient to cope with the great national emergency. The executive council therefore demanded "that industrial management be compelled to act through the pressure of public opinion expressed, as we hope it will be, through the Chief Executive of the nation." The universal five-day week and six-hour day were set forth as labor's immediate remedy for unemployment and industrial management was challenged to offer a better plan.

The reader is referred to the following articles for discussions of the various aspects of the history of labor during the year: CHILD LABOR; COÖPERATION; LABOR ARBITRATION AND CONCILIATION; LABOR LEGISLATION; MINIMUM WAGE; OLD AGE PENSIONS; STRIKES AND LOCK-OUTS; UNEMPLOYMENT; WOMEN IN INDUSTRY; WORKMEN'S COMPENSATION; and to the articles dealing with the respective countries. See also TRADE UNIONS; COMMUNISM; and SOCIALISM for special aspects of the labor subject.

**LABOR, AMERICAN FEDERATION OF.** At its annual convention, held at Cincinnati from November 21 to December 2, the American Federation of Labor adopted its most militant policy in recent years. Not only did it finally give its approval to a drive on the part of organized labor in the interests of State unemployment insurance funds but it also went on record as demanding from employers the creation of a shorter work-day and work-week. The executive council, in its annual report to the convention, stressed, in view of the mounting record of unemployment in the country, the need for compulsory unemployment insurance under State auspices with the entire cost borne by industry. Thus, the chief spokesman for labor in the United States abandoned its long opposition to compulsory insurance. Due to constitutional limitations and the importance of obtaining Federal unemployment insurance legislation, the executive council recommended that bills be introduced in State legislatures with supplementary federal enactments covering workers in interstate commerce or in federal territories. Other proposals made by the council to lessen unemployment and to counterbalance mechanization in industry were the following: the five day-week and shorter working-day; division of work; a larger public works programme; furtherance of self liquidating projects; adequate relief funds; and the calling of a national conference to take the first steps toward national economic plans. On the general economic situation the report declared: "The crisis in our economic order calls for reconsideration of those essential principles which are its cornerstones. In the revisions which shall constitute the policies of the future, labor will be responsible for getting incorporated understanding of the equities which a producing worker has in his job and proportionate consideration of social values involved." As steps toward attaining this security for workers the report advanced the following proposals: The organization of the job market through a system of State employment services under federal coördination. Organization of wage

workers into trade unions under their own control. Distribution of man-hours so that all may have an opportunity to earn a living. Higher wages. Vocational counsel and retraining to assist boys and girls to find the kind of work for which they are best fitted. National economic planning for the purpose of balancing production and distribution. "Balance is our hope for mitigating the severity of business depressions and attendant unemployment," the report stated. "Plans for maintaining economic balance must grow out of a unified basic philosophy and co-ordinated procedure to advance human well-being."

As "integral parts of such a central plan," the report recommended the following: Steeply graduated income and inheritance taxes. Constructive control of credit to finance production. Recognition of the equities of workers in the industries in which they work, and at least protection equal to that given financial investments. Federal agency to collect and collate data on man-hours and wage-earner income, necessary to appraise producing workers' participation in industrial progress. Such an agency would provide the standards for determining economic balance. Federal licenses for corporations operating on an interstate scope, with specific requirements as to accounting. All accounts available to those interested, and protective service for investors. Organization of wage earners to advance their interests intelligently within industry and other relationships. "We believe that national economic planning should aim at raising standards of living for lagging groups and not at a programme of limitation of production with price fixing," the report stated. "We need to find out how best to use our capacity to produce." As an ameliorative measure in periods of unemployment, the report urged advanced planning of public works and use of national credit for self-liquidating projects, for building homes for workers, and other small income groups, for slum reclamation, and similar undertakings. Said the report: "Planning the expansion and contraction of national credit should be a part of the whole undertaking of economic planning, based upon a reliable standard of economic and social soundness." And further on: "The type of undertakings to be financed and details of construction work should be worked out in advance so as to further in balanced proportions the promotion of national welfare. The only cure for unemployment is employment. Every relief plan gains in soundness as it approximates normal conditions of incomes from the creation of wealth needed by society. When industry breaks down, emergency construction undertakings will stimulate recovery."

The report placed the number of unemployed as more than 11,000,000, which was nearly 8,000,000 more persons out of work than in 1930. Due to unemployment and wage reductions workers' income was about one-half that of 1929, the council's report placing the loss for the year 1932 alone as being probably about \$25,000,000,000. Total membership in unions affiliated with the American Federation of Labor was 2,532,261 in 1932, as compared with 2,889,550 in 1931, a loss of 357,289.

Much of the convention's deliberations centered in these two demands of a shorter working period for labor and compulsory unemployment insurance. In fact these demands were voiced at

once in the keynote address delivered by President William Green on November 21, and a week later on November 28 Mr. Green reverted to the question when he declared that labor would strive with all its strength to compel universal adoption in industry of the five-day week and six-hour day. Mr. Green declared that labor's patience with industrial management was at an end and its chief policy from thence on would be to resort to "forcible methods" if necessary to establish a shorter work week. By such measures he said he meant the use of every weapon available to labor, including economical, political, and industrial devices. Mr. Green declared, in a peroration that aroused the enthusiasm of his audience that: "We say that we are going to strike for this great economic reform. Just as the carpenters led the fight for the eight-hour day, so the time has come for some militant union to lead the fight for the shorter work-day and work-week. I and my associates on the executive council are going to find a way out even though we may be compelled to resort to forcible methods to compel industry to yield. We will not be denied the realization of this great reform. It will be given to us in response to reason or we will secure it through force of some kind." The speech was followed by the unanimous adoption of a report calling for the "universal adoption without delay" of the six-hour day and the five-day week, the maintenance of present wage rates at least, and wage increases if possible. The A. F. of L. called upon the Federal government to show the way to industry by adopting the shorter work-day and work-week in federal offices.

On November 30, by an overwhelming vote, the American Federation of Labor went on record as favoring compulsory unemployment insurance under State auspices. The report adopted followed the lines laid down in the executive

request for the modification of the Volstead Act to legalize the manufacture of 2.75 per cent beer. Other proposals adopted by the convention were the following: the elimination of private profit from the production of materials for national defense; opposition to the building of additional ships up to the London naval treaty strength; the inauguration of a "militant campaign" to further the establishment of an exclusive State fund for workmen's compensation modeled after the law in existence in Ohio State; a federal licensing law for corporations; the endorsement of old age pensions; Philippine independence. Washington was selected for the 1933 convention and on that date the Samuel Gompers memorial was to be unveiled.

The officers, all reelected, were: William Green, president; Frank Duffy, first vice-president; T. A. Rickert, second vice-president; Matthew Woll, third vice-president; James Wilson, fourth vice-president; John Coefield, fifth vice-president; Arthur O. Wharton, sixth vice-president; Joseph N. Weber, seventh vice-president; G. M. Bugniazet, eighth vice-president; Martin Francis Ryan, treasurer; and Frank Morrison, secretary.

**LABOR ARBITRATION.** During the fiscal year 1931-32, the Conciliation Service of the Federal Department of Labor handled 759 cases of industrial disputes. Of this number, 659 were satisfactorily adjusted and 15 pending cases were carried forward into the next fiscal year. The 759 cases came from 45 States and the District of Columbia, and involved 449,169 workers. Since the creation of the Conciliation Service in 1913, mediation has been had in 10,946 labor disputes, which involved 13,868,072 workers, either directly or indirectly. The following table indicates the record of the service over the period 1914-32, indicating the number of cases handled, and the proportions that were adjusted and could not be adjusted:

SUMMARY OF CASES, 1914-1932

Cases	1914	1915	1916	1917	1918	1919	1920	1921	1922	1923

NOTE.—Cases pending at end of last fiscal year and now adjusted, 19. Total number of adjustments for 1932, 659. 208 cases in 1918 and 219 cases in 1919 were adjusted pending decisions of National War Labor Board.

council's report, cited above, which called for the inauguration of compulsory insurance schemes under State auspices with all employers paying into such funds not less than 3 per cent of their payrolls. Administration of the funds was to be the responsibility of the States with reserve funds invested by them. No insurance company was to be allowed to write unemployment insurance, and labor and management were to have a voice in the administration of the insurance machinery.

Another important precedent set by the American Federation of Labor was the adoption of a resolution calling upon Congress to repeal the Eighteenth Amendment. At previous conventions the organization has never gone further than a

The following more important cases show the nature of disputes which the Conciliation Service is called upon to mediate:

**Silk Workers, Allentown, Pennsylvania.** On Apr. 24, 1931, a strike of approximately 8000 employees of 42 silk mills in Allentown, Pennsylvania, and its vicinity, took place as a result of a wage reduction of 16½ per cent. At the period of the strike, which lasted for more than four months, there was no union organization among the workers in the industry, but they were soon unionized by the United Textile Workers of America. The union demanded for the strikers the restoration of the cut in wages and the assurance that there would be no further steps toward wage reductions without negotiations; no recognition for the union was demanded. The manufacturers on their side refused to meet with either union officials or the committee of strikers on the ground that the Allentown community had always operated on the open shop basis. The manufacturers, however, did indi-

cate a willingness for each one individually to meet with his own employees. In May, in view of the fact that the community of Allentown was suffering a severe loss due to the shutdown, a citizens' committee was appointed by the Mayor to interpose its good offices. In June, the assistance of Governor Pinchot was asked for by the strikers' committee. In July, communists appeared on the scene and proceeded to disrupt meetings by heckling or to take possession forcibly of platforms. By August, however, the strikers were prepared to give way before the manufacturers' terms because in the middle of that month several shop committees began meeting with their respective mill managements. By the end of August the mills apparently were again in operation, the workers having again returned on the basis of acceptance of wage cuts with, however, the right to organize.

**Veterans' Hospital, Coatesville, Pennsylvania.** The Conciliation Service was called upon to investigate complaints that the contractor erecting a veterans' hospital at Coatesville, Pennsylvania, was not paying prevailing rates of wages. Due to the intercession of the Service, carpenters' rates were raised from \$.50 per hour to \$.65 with time and a half for overtime and double time for Sundays and holidays; also the wages paid to plumbers and steam fitters were raised from \$.75 to \$.95 per hour. These negotiations which began in April, 1932 continued without stoppage of work.

**Building Trades Crafts, Des Moines, Iowa.** Despite the existence of trade agreements, the building trades of Des Moines were notified that on Oct. 1, 1931, wage cuts ranging from \$1 to \$3 a day would be put into effect by their employers, the Master Builders Association. Due to the intercession of commissioners from the Conciliation Service, who worked on the case from October 1 to November 9, settlement was effected by including the following: The employers recognized the existence of trade agreements, as far as building laborers were concerned, and agreed to abide by the specified scales until May 1, 1932, in the case of the bricklayers and carpenters, a cut of \$2 per day was taken unconditionally and return to work took place on October 7, in the case of the members of the building trades council—the hoisting engineers, structural iron workers, plasterers and cement finishers, latheists, and the painters and decorators—State arbitrators were appointed and as a result of a decision handed down on November 1, it was found that verbal agreements were in existence and, therefore, the men were to be restored to their old wage levels until May 1, 1932. Though the master builders refused to abide by the decision of the arbitration board, public opinion was strongly in favor of the unions with the result that the arbitration board's recommendations were accepted and a compromise settlement was reached which provided for about one-half the reduction asked and extended closed shop agreements until May 1, 1933.

**Lady Garment Workers, Boston, Massachusetts.** In February, 1932, with the imminent expiration of a two-year agreement between the International Ladies Garment Workers' Union and the dress, cloak and suit manufacturers of Boston, a strike threatened at the declared intention of the manufacturers not to renew the old agreement. Commissioners of the Conciliation Service appeared on the scene and found that the manufacturers' association had disintegrated to such an extent that only 9 of the 100 manufacturers in the city were members of the association. Efforts to create a stronger organization among the manufacturers were without success, the upshot was that on February 15 a strike of 3000 garment workers was called. However, the commissioners succeeded in obtaining the intercession of Mayor James M. Curley, who called a mayor's conference from which there emerged a sub-committee of manufacturers, union representatives and commissioners of conciliation. Following two weeks of negotiation, an agreement was finally effected, acceptable to the cloak manufacturers, the dress manufacturers and the union. The new agreement recognized most of the policy which had prevailed in the industry up to then but it did accept a downward readjustment in the wage scale and it accorded to the manufacturers the right to reorganize their shops to the extent of 10 per cent of their employees.

**Textile Strike, Langley, Bath and Clearwater, Horse Creek Valley, South Carolina.** A strike of 1600 textile workers, members of local unions affiliated with the United Textile Workers of America, employed in three mills located in what is generally known as Horse Creek Valley, South Carolina, broke out on Mar. 28, 1932, as a result of wage reductions for weavers following a change from the manufacture of print cloths to broadcloth. The strike, which involved only the weavers in the beginning, spread rapidly and by April 1 resulted in a closing down of the three mills. Several weeks following, a Commissioner of Conciliation was called in who proceeded to conduct negotiations with the representatives of the strikers, the mill management and the Governor of South Carolina. The strike was in effect for seven weeks and ended in the correction of the situation in the weaving room of the Langley mill where the strike

had originated, the reinstatement of all employees without discrimination, and the understanding that any differences arising in the future between workers and subordinate officials could be taken up with the general manager, in the event of inability to reach a satisfactory adjustment.

**NEW ZEALAND.** On Apr. 8, 1932, after having experimented with the device for almost half a century, New Zealand passed an act amending its industrial conciliation and arbitration law in such a manner as practically to abolish compulsory arbitration. Under the old law as finally amended up to 1925, an industrial dispute had to be submitted to councils of conciliation composed of persons chosen by each side, and if these failed to reach an agreement the question under dispute went to the arbitration court. The councils of conciliation are still retained by the 1932 enactment and if in a given dispute an agreement is reached, its terms are filed. However, during the course of the month following, any employer, trade union, industrial union or industrial association bound by the agreement may apply to the arbitration court for partial or total exemption and the court in its discretion can grant or refuse the plea. The New Zealand government, in rescinding the compulsory features of the law, took its stand on the ground that the method had become an obstacle to national recovery because it rigidly fixed wages, hours, and other industrial conditions. The only important respect in which compulsion was retained applied to organizations of female workers who were permitted to approach the arbitration court for an award fixing the basic minimum wage in their industries. The arbitration court was retained but submission of a dispute to it was to be voluntary and after the failure of conciliation. Thus passed from the scene a device which in the first two decades of its life was hailed by reformers as one of the means created by democratic societies to lessen, if not abolish, industrial strife.

**LABOR BANKS.** See COOPERATION.

**LABOR CONFERENCE, INTERNATIONAL.**

The Sixteenth Session of the official International Labor Conference, meeting in Geneva on April 12-30, adopted a new Convention for the protection of young persons in industry which extended the prohibition of the employment of children under 14 years of age to practically all classes of work. Preliminary discussions were held on the abolition of fee-charging employment agencies and on international regulations affecting invalidity, old age and widows' and orphans' insurance. The Conference adopted a resolution requesting the secretary-general of the League of Nations to bring to the attention of the Council of the League and of all member nations the following suggestions: (1) that national and international public works projects be undertaken on a large scale without delay; (2) that the League of Nations and the International Labor Office be invited to participate in the economic conference at London; (3) that the nations by joint action lay the foundations for "an international monetary system possessing the necessary qualities of stability"; and (4) that the problem of production and international trade be examined for the purpose of concluding "such international conventions as will insure the resumption of economic activity." The Conference also requested the International Labor Office to study, with a view to the early adoption of international regulations, the possibility of intro-

ducing the 40-hour week in all industrial countries.

**LABOR DISPUTES.** See **LABOR; STRIKES** AND **LOCKOUTS; TRADE UNIONS.**

**LABOR LEGISLATION.** Nine States, two insular possessions, and the Congress of the United States met in regular legislative session in 1932. Special sessions were held in several additional States. Outstanding were the pioneer American compulsory unemployment reserves law in Wisconsin; the recommendations by five official investigating commissions which reported in favor of State-wide compulsory unemployment reserves legislation; improving amendments to workmen's compensation and old-age pension laws; and three Congressional enactments: the extension of the Federal Vocational rehabilitation act to 1937 with an annual appropriation of \$1,000,000, the emergency relief and reconstruction act of 1932 including \$322,224,000 for public works, and the drastic restrictions on the issuance of injunctions in labor disputes by Federal courts.

*Alabama* (Special session.) No labor legislation reported.

*Arizona* (First special session.) Hours of motor-passenger-vehicle operators are limited; unemployment relief act enacted.

*Arkansas* (Special session.) No labor laws enacted.

*Hawaii* (First special session.) No labor laws enacted. (Second special session.) Minimum wage on public works reduced; minor changes in public employees' vacations; employment agency license fee reduced from \$25 to \$10; retirement act amended; public employees' salaries reduced 10 per cent.

*Illinois* (First special session.) Committee to investigate unemployment created. (Second special session.) No labor laws enacted. (Third special session.) Emergency relief commission created; emergency relief funds provided.

*Indiana* (Special session.) Contracts for State highway construction must stipulate wage rate.

*Kentucky*. Wages paid in scrip are safeguarded; wage assignment law amended; State public employment service established in the labor department, safety regulations prescribed for oil wells and coal mines, county civil service board created.

*Louisiana*. Procedure provided for wage garnishment; provisions governing arbitration of disputes between persons extended to apply to certain industrial disputes, child labor act amended, committee to investigate unemployment insurance created.

*Maine* (Special session.) No labor laws enacted.

*Massachusetts*. Wage payment law amended; investigation authorized into the advisability of establishing wage standards on public works; women's and children's hour law amended; act providing vacations for municipal laborers amended; investigation authorized relative to extension of one day's rest in seven law, funds to finance public works programme re-allocated; appropriations authorized for additional emergency employment; 1931 act giving preference in certain employments to persons with dependents is continued; child labor law is amended, workmen's compensation law is amended; old age security act is amended; investigation authorized into advisability of lowering minimum eligible age for pensions, minor amendments made to Worcester Retirement Act, maintenance provisions of State retirement system extended and cash value increased; boiler inspection act is amended.

*Michigan* (Special session.) Commission of inquiry created to investigate State departments.

*Mississippi*. Preference for employment on public works is given to workers of two years' residence in the State immediately preceding employment, legislative investigating committee on reorganization of State and county government is created and continued.

*Missouri*. Constitutional amendment permitting passage of old age pension act ratified November 8.

*New Jersey*. Wage payment law is amended; mechanics' lien law is amended; law protecting wages on public contracts is amended; "yellow-dog" contracts are declared void; hour and prevailing wage law for employees of contractors doing public work is amended; employment of minors prohibited in any occupation considered harmful by Commissioner of Labor; act giving State citizens preference in public works employment is amended; deduction from salaries of State employees to supplement emergency relief funds is authorized; emergency relief act of 1931 is amended; funds for emergency relief are

provided; State block-aid committee for emergency relief is created; workmen's compensation law is amended; old age pension law is amended; retirement system for municipal employees amended; receipt of pension by public employee during term of office prohibited, county employees' retirement act amended, under certain conditions insurance carrier's inspections of refrigerating plants are acceptable in lieu of State inspection; civil service act is amended; governor is empowered to reduce temporarily State personnel during present emergency.

*New York*. Payment of wages to employees on public work is further regulated; mechanics' lien law amended; joint legislative investigating committee on liens is continued; incorporation of wage earners' groups must be approved by Industrial Board; consecutive service of interurban motor truck and bus operators is limited to 10 hours with eight-hour rest intervals, authority of certain corporations to make contributions for betterment of local conditions is continued; probable life of certain public welfare work is determined to be 20 years, funds for emergency relief provided, emergency relief law of 1931 is amended; legislative investigating committee on unemployment is continued; approved electric contacts permitted on elevator fire doors, certain safety requirements are extended to excavations connected with building construction; workmen's compensation law is amended, right of volunteer firemen to accident benefits under General Municipal Law is extended; third party actions under compensation law given preference on court calendars, State employees' retirement act amended, New York City employees' retirement act amended, automatic salary and wage increases in State service temporarily suspended.

*Ohio* (First special session.) State emergency relief commission created, emergency relief funds provided. (Second special session.) Emergency relief funds provided; salaries of State employees reduced.

*Pennsylvania* (Special session.) State Emergency Relief Board created, emergency relief funds provided.

*Philippines* (Laws of 1930.) Contractors' bonds required; law regulating hours of labor for government employees amended; public works appropriation, workmen's compensation act amended.

*Puerto Rico*. Procedure for wage claims amended, conciliation and mediation act amended, division of economic and social research and investigation created in the department of labor. (Second special session, 1931.) No labor laws enacted. (Third special session, 1932.) No labor laws enacted.

*Rhode Island*. Provision made for retirement of notes issued by towns and cities for emergency relief; health certificate required of employees in certain food establishments.

*South Carolina*. Wage payment law amended.

*Texas*. (Special session.) Employment of local labor on public works recommended.

*Virginia*. Mechanics' lien laws amended; misappropriation of money for wages penalized, highway commissioner is directed to employ unemployed citizens on road work, intrastate railway employers' liability act amended, workmen's compensation law is amended; industrial safety investigating committee created.

*West Virginia* (Special session.) Emergency relief funds provided, reduction of salaries of certain public employees directed.

*Wisconsin* (Special session, 1931.) Additional provision for emergency relief, pioneer unemployment reserve law will take compulsory effect July 1, 1933, unless employers of 175,000 employees establish by June 1, 1933, approved voluntary plans, emergency board is authorized to reduce State appropriations.

*United States*. Application of immigration contract labor laws clarified, trade union label authorized in the District of Columbia, injunctions in labor disputes are limited, Interstate Commerce Commission is directed to investigate the application of a six-hour day for railroad employees; District of Columbia private employment agency law amended; emergency relief for District of Columbia provided; emergency relief and construction act of 1932 including \$322,224,000 for public works; vocational rehabilitation act extended to 1937 with \$1,000,000 annual appropriation; furlough, salary reduction, and compulsory retirement required for federal employees. See **CHILD LABOR**.

**LABOR LEGISLATION, AMERICAN ASSOCIATION FOR.** Founded in 1906, this membership organization of socially-minded economists, lawyers, journalists, labor leaders, and employers has worked along scientific lines, fearlessly attacking needless industrial evils from the general welfare viewpoint. It continues its work as the American arm of the International Association for Social Progress formed by the fusion of the three international organizations for labor

legislation, unemployment, and social insurance. See SOCIAL PROGRESS, INTERNATIONAL ASSOCIATION FOR. Progress of the Association was recorded in its substantial quarterly, the *American Labor Legislation Review*, the December, 1932, issue of which contained a convenient annual summary and index of all new labor laws enacted in the United States. A cumulative index to the preceding 20 volumes of this *Review* was published in 1931.

The continuance of business depression during the year brought renewed interest in the Association's unemployment programme. As in 1915 and 1921 a country-wide unemployment survey was made in 1930 and standard recommendations concerning emergency relief measures, public employment agencies, long-range planning of public works, stabilization, and unemployment insurance were stressed. After consultation with representative authorities throughout the country an unemployment insurance bill was drafted which the Association called "An American Plan for Unemployment Reserve Funds" and which was carefully framed to meet the special conditions of American industrial life. It was revised in 1932.

The twenty-sixth annual meeting was at Cincinnati, December 28-30, several sessions being held jointly with the American Economic Association and the American Statistical Association.

The president in 1932 was Ernest G. Draper, the secretary, John B. Andrews, with headquarters at 131 East 23d Street, New York City. See LABOR LEGISLATION.

**LABOR UNIONS.** See TRADE UNIONS.

**LABRADOR**, läb'ra-dör. A dependency of Newfoundland bounded on the east by the Atlantic Ocean, and on the west and south by the Province of Quebec; the coast boundaries are Blanc Sablon in the south and Cape Chidley in the north. Area, 112,400 square miles; population (1929) was 4203 including about 1300 Eskimos. Fishing and lumbering are the chief industries. See NEWFOUNDLAND.

**LABUAN.** See STRAITS SETTLEMENTS.

**LACKAYE**, läk-i', WILTON. An American actor, died in New York City, Aug. 22, 1932. He was born in Loudoun Co., Va., Sept. 30, 1862, and attended Georgetown University. In 1883 he entered on his theatrical career in New York City, appearing as Lucentio in *Francesca da Rimini*, with Lawrence Barrett. He next supported Fanny Davenport in Shakespearean productions, and in 1889 as Prince Saviani in *Jocelyn* portrayed the first of a long succession of vivid character rôles. After appearing as Don Stephano in *Featherbrain* he went to London in 1891, where he won success as Simeon Strong in *The Idler*. His outstanding hit, on his return to the New York stage, was as Jefferson Stockton in *Aristocracy*. In 1895 he created his unique and most highly praised rôle, that of Svengali in the dramatization of Du Maurier's novel *Trilby*; the play ran for two years and was revived in 1905, 1907, 1915, and 1921. The year 1899 was marked by his appearance as "Reb" Shemuel in *The Children of the Ghetto*, which he played in both New York and London. He next appeared as Petronius in *Quo Vadis?* (1900), Curtis Jadin in *The Pit* (1903-04), Consul Bernick in *The Pillars of Society* (1904), and Jean Valjean in *Law and the Man*, an adaptation by himself of Victor Hugo's *Les Misérables* (1906). Other important rôles were John Haggleton in *The Battle* (1908), James

Ralston in *Jim the Penman* (1910), John Marshall in *The Stranger* (1911), and François Desclos in *The Right to Happiness* (1912). Of the many villainous parts which he played that of Fagin in an adaptation of Dickens's *Oliver Twist* (1912) was one of the most celebrated. He later was seen as Lord Goring in *An Ideal Husband* (1918), Dr. John Calvert in *A Good Bad Woman* (1919), Dr. Gustav Ziska in *The Monster* (1922), Richard Lennon in *High Stakes* (1924), and James Telfer in a revival of *Trelawney of the Wells* (1927). His last appearance on the New York stage was in *Love, Honor, and Betray* (1930).

**LACROSSE.** The 1932 lacrosse season was distinguished by the determination of all the teams in the United States to earn the right to meet Canada in the demonstration game at the Olympic games at Los Angeles. By winning all 11 of its games the Johns Hopkins twelve led the teams of the country and then went on to greater things by downing Canada in the exhibition, two games to one. Because of the promise of the Olympic climax the season was the greatest yet held, and the decision of the authorities to represent the United States by a complete team rather than by one composed of picked stars aided the spread of the game materially. Eight teams played through the elimination series for the right to go to Los Angeles and in the final Johns Hopkins defeated the strong University of Maryland team, 7 to 5. In the Olympic competition Johns Hopkins triumphed over Canada in the first game, 5-3, but was checked in the second, the lone game lost by the twelve all season, 5-4. A brilliant offense turned back the Canadians in the rubber game, 7 to 4.

A professional box lacrosse league was formed early in the year and teams were planted in Boston, New York, Philadelphia, and Montreal, but the game, rough enough to be sure, did not strike the public fancy and the league died out after a few weeks of desultory play.

In the middle of December the United States Intercollegiate Lacrosse Association met in New York and made drastic changes in the game. The rules makers performed a major operation on the ancient sport of the Indians and brought forth a game which they are certain will be greatly improved in 1933. They reduced the number of men on a team from 12 to 10 (a far cry from the days when the Indians played the game, a tribe to a side); cut down the size of the field from 110 yards to 80 yards; decided to play quarters instead of halves; and voted to allow the use of face masks.

**LAFAYETTE COLLEGE.** An institution for the higher education of men in Easton, Pa., founded in 1826. The registration in the autumn of 1932 was 952, the enrollment being restricted to 1000. The faculty numbered 100. The productive funds amounted to \$3,793,532 on July 1, 1932, and the income for the previous year was \$663,163. The number of volumes in the library was 85,000. President, William Mather Lewis, A.M., LL.D., Litt.D.

than 50,000 acres in excess of the annual average for the ten-year period expiring on the same date, although 666,853 acres less than were filed upon in the previous year. The area passed to patent was 1,897,976 acres. Filings under the homestead laws accounted for about 90 per cent of the acreage in original entries and more than 75 per cent of that patented.

The total cash receipts from sales, leases, and other disposition of the public lands were \$4,065,210 and from Indian lands \$63,874. This includes bonuses, rentals, and royalties, paid under the general leasing act, the government receiving \$3,236,987. The largest amount was obtained from mineral lands in Wyoming, \$1,435,109. The next largest was from California, a total of \$1,402,264. Under the law the amounts secured from the disposition of the public lands, including leases, were deposited in the Treasury of the United States for distribution as follows: \$2,100,555 to the reclamation fund, to public land States and certain counties within such States, \$1,402,420; to the general fund, \$562,233; and to the various Indian tribes, \$63,874; a total of \$4,129,084. The total expenditures for the conduct of business of the General Land Office, including expenses of district land offices and the various field forces, disbursements of deposits by individuals for surveying public lands, and from appropriations from funds for surveying Indian reservations, amounted to \$2,204,227. Profits from the operation of the General Land Office, therefore, were \$1,924,860.

Homestead entries, under the various laws, numbered 11,010 and embraced 4,049,854 acres. Restorations to entry from withdrawals with a preference right to ex-service men covered an area of 3,578,768 acres and there also became subject to entry with a like preference right, through the approval of surveys, 809,664 acres.

No sensational finds of mineral were reported, but the work of mineral development progressed in a normal manner. Coöperative and unit plans of operation were under way in the development of oil and gas lands. The departmental order of Mar. 13, 1929, which in effect withdrew the public lands from oil and gas exploitation, was modified on Apr. 4, 1932, and under appropriate regulations the public domain was again opened to the filing of applications for prospecting permits under section 13 of the leasing act and subsequent legislation providing for unit developments.

Approximately 1,000,000 acres were added to the national forests. Federal water power withdrawals affected 19,050 acres of land. Such withdrawals aggregated a total of 2,119,570 acres. Public lands to the extent of 6,049,905 acres were placed in a state of reservation, either by Executive or departmental order during the fiscal year and 3,619,457 acres theretofore reserved were restored to entry or other disposition.

**LATANE, JOHN HOLLADAY.** An American historian, died in New Orleans, La., Jan. 1, 1932. He was born in Staunton, Va., Apr. 1, 1869, and was graduated from Johns Hopkins University in 1892, receiving the Ph.D. degree three years later. After serving as acting professor of history and economics at the Baltimore City College, he became in 1896 master of history and English at the San Rafael (Calif.) Military College, and in 1898 professor of history and economics at Randolph-Macon Woman's College. From 1902 to 1913 he was professor of history at Washington and Lee University. He then became professor of American history and head of the history department at Johns Hopkins University. He acted also as dean of the college faculty from 1919 to 1924. On the founding of the Walter Hines Page School of International Relations at Johns Hopkins in 1930 he was made a member of the research staff. During the World War he was chairman of the educational committee of the Maryland Council of Defense. He was the author of *Diplomatic Relations of the United States and Spanish America* (1900); *America as a World Power* (1907); *History of the United States* (1918); *From Isolation to Leadership* (1918); *The United States and Latin America* (1920); and *History of American Foreign Policy* (1927).

**LATHROP, JULIA CLIFFORD.** An American social worker, died Apr. 15, 1932, in Rockford, Ill., where she was born in 1858. She attended Rockford and Vassar Colleges, being graduated from the latter in 1880. She made special studies in the care of the insane, in the better education of children, and in juvenile laws, and also made special investigations of these subjects in countries of Europe. After 1899 she spent a great deal of time in residence at Hull House, Chicago. She was also a member of the Illinois State Board of Charities from 1893 to 1901 and again from 1905 to 1909. For a time she was president of the Illinois Society for Mental Hygiene and vice-president of the Chicago School of Civics and Philanthropy and of the Juvenile Protective Association. In 1913 she became the first chief of the Children's Bureau of the U. S. Department of Labor. This bureau was authorized to investigate and report to the department all matters pertaining to child welfare and child life, especially the birth rate, infant mortality, juvenile courts, accidents and diseases of children, child labor, and labor laws of the various States affecting children. Miss Lathrop held the appointment until 1920. In 1925 she was made an assessor on the child welfare committee of the League of Nations. She had been named in 1923 by the National League of Women Voters as one of the 12 greatest living American women.

**LATIN AMERICA.** See articles on the various countries of the Caribbean, Central America, and South America; also PAN AMERICAN UNION; UNITED STATES; and SPAIN under History, etc.

**LATTER-DAY SAINTS, CHURCH OF JESUS CHRIST OF.** A religious body commonly known as the Mormon Church, existing chiefly in the United States. It was organized Apr. 6, 1830, at Fayette, N. Y., by Joseph Smith to whom is credited by his followers the discovery, through divine revelation, of a set of metal plates, buried in a hill, from which by a special power received from God he translated the text of the Book of Mormon, the special sacred book of the church. The Mormon articles of faith include belief in God,

Jesus Christ, and the Holy Ghost as individual beings, the punishment of men for their own sins, the atonement, divine authority, baptism, laying on of hands, prophecy, salvation for the dead, the Bible "as far as it is translated correctly," the Doctrine and Covenants, the Pearl of Great Price which contain revelations and instructions claimed to have been received divinely by Joseph Smith, the common virtues, and obedience to constituted authorities. The membership of the church is largely in the Mountain States, owing to the early migrations of Mormons and their final settlement in Utah.

The administrative divisions of the church are known as the general, stake, ward, branch, and mission. A stake is a geographical division and comprises wards and branches, and is directed by a presidency of three. A ward is frequently a part of a city, and is directed by a bishop and two counselors. The branch, similar to the ward, is directed by an elder. In 1932 the church included 104 stakes, 934 wards, and 70 independent branches, with a membership of 544,453. There were 13 missions in America with a membership of 99,254; the missions in Europe had a membership of 29,332, and those in the Pacific Islands of 15,396. Of the 1692 missionaries, 798 were at work outside the United States.

The general authorities who have jurisdiction over the entire church are the First Presidency, the Quorum of the Twelve Apostles, the First Council of Seventy, and the Presiding Bishopric. In 1932 these authorities were: First Presidency: Heber J. Grant, president; Anthony W. Ivins, first counselor. Quorum of the Twelve Apostles: Rudger Clawson, president, and Reed Smoot, George Albert Smith, George F. Richards, David O. McKay, Joseph Fielding Smith, James E. Talmage, Stephen L. Richards, Richard R. Lyman, Melvin J. Ballard, John A. Widtsoe, and Joseph F. Merrill, apostles. First Council of Seventy: Brigham H. Roberts, J. Golden Kimball, Rulon S. Wells, Charles H. Hart, Levi Edgar Young, and Antoine R. Ivins. Presiding Bishopric: Sylvester Q. Cannon, presiding bishop; David A. Smith, first counselor; and John Wells, second counselor.

The church maintains seven temples which are devoted to sacred ordinances for the living and the dead, such as baptisms, endowments, and marriages. It maintains also Brigham Young University (q.v.), four junior colleges, three collegiate institutes, one high school, and 80 seminaries, small schools adjoining high schools and providing special religious instruction. The Sunday schools in 1932 had an enrollment of 280,034 pupils and 29,682 officers and teachers. Junior seminaries had an enrollment of 15,452.

The auxiliary bodies include a women's relief society, numbering in 1932 about 66,884 members, who care for the sick and poor. The Melchizedek Priesthood, a senior order, had 81,218 members, and the Aaronic Priesthood, a junior order, 82,823 members. The two mutual improvement associations, composed of young people, had an enrollment of 122,888. The primary association for those under 12 had 110,323 members. The church holds two general conferences each year, one during the first week in April and the other the first week in October, at which the work of the general authorities is reviewed.

**LATTER-DAY SAINTS, REORGANIZED CHURCH OF JESUS CHRIST OF.** After the death of Joseph Smith in 1844, several factions developed

among the Latter-day Saints. In 1852, in Wisconsin, one of these scattered congregations effected a partial reorganization, which was completed in 1860 under the name of "Reorganized Church of Jesus Christ of Latter-Day Saints." The church chose as its leader Joseph Smith, the son of the founder, who on his death in 1914 was succeeded as presiding officer by his son, Frederick M. Smith. The reorganized church claims to be the true continuation of that established by Joseph Smith in 1830, adhering to the faith and religious practices which were established in the original church but rejecting as false, and inconsistent with the doctrine, beliefs, and practices of the church prior to 1844, the doctrine of polygamy.

In 1932 the church reported a membership of 112,000, which included members throughout the United States and in Canada, Great Britain, Australia, Germany, Isle of Pines, Holland, Switzerland, Norway, Sweden, Palestine, South Sea Islands, Hawaii, and New Zealand. There were 745 churches, 7000 ministers, and 730 Sunday schools with 50,000 pupils. The church maintained Graceland College in Lamoni, Iowa, and homes for the aged and the Independence Sanitarium in Independence, Mo. The official periodical, the *Saints' Herald*, is issued weekly. Headquarters are in Independence, Mo.

**LATVIA.** A Baltic republic formed from territories of the former Russian Empire on Nov. 18, 1918; bounded by Estonia on the north, the Soviet Union on the east, and Lithuania and Poland on the south. Capital, Riga.

**AREA AND POPULATION.** With an area of 25,402 square miles, Latvia had an estimated population of 1,918,000 in 1931. The population at the census of 1930 was 1,900,045 (including 56,168 foreigners), as compared with 1,844,805 at the census of 1925. Letts comprised 73.4 per cent of the Latvian citizens, Russians 12.52 per cent, Jews 4.97 per cent, Germans 3.12 per cent, Poles 1.36 per cent, and Lithuanians, Estonians, and others the remainder. In 1930, 34.9 per cent of the total population lived in towns of 2000 or more. Births averaged 36,949 annually for the period 1927 to 1931 and deaths 27,194, the average rates per 1000 of population being 19.5 and 14.3, respectively. The chief cities, with the census population in 1930, were: Riga, 377,917; Liepāja (Libau), 57,238.

**EDUCATION.** Each national minority has the right to its own schools, with its own language of instruction. In 1930, 13.6 per cent of the population 10 years of age and over were illiterate. Enrollment in elementary schools on Jan. 1, 1931, was 187,995; in secondary schools, 22,462; in the Latvian University at Riga, 8577.

**PRODUCTION.** Agriculture remains the primary industry, as indicated by the 1930 census showing a population 65 per cent rural. However, manufacturing has made rapid gains. Cultivated land in 1930 comprised 4,813,000 acres, or 30 per cent of the total area; meadows and pasture, 4,246,000 acres; woods and forests, 4,100,000 acres. The value of the chief field crops in 1931 was 219,051,000 lats (\$42,277,000), as against 283,860,000 lats (\$54,785,000) in 1930. Wheat, rye, barley, oats, potatoes, flax, and clover were the principal crops harvested. Livestock in 1931 numbered 1,117,000 cattle, 712,000 swine, 923,000 sheep, and 366,000 horses. Butter shipments in 1931 totaled 41,310,000 pounds, worth \$9,061,000 as against 40,633,000 pounds, worth \$11,141,000, in 1930.

The badly depressed condition of agriculture necessitated government relief in the form of export premiums, bonuses for butter and bacon production, and appropriations for the stabilization of flax, grain, and sugar-beet prices. In December, 1931, the *Saeima* or Latvian parliament imposed a moratorium on the debts of farmers and fishermen for one year. Industrial production in 1930 was valued at \$85,586,000; there was a further decrease in 1931. The chief manufacturing industries, in order of the number of workers employed in 1930, were woodworking, metal working; food, drink, and tobacco; textiles, paper and printing, and chemicals. On Dec. 31, 1931, there were 21,935 registered unemployed.

**COMMERCE.** While the value of both imports and exports declined sharply in 1931, the unfavorable trade balance was the smallest since 1922. Imports totaled 176,734,000 lats (\$34,110,000), against 296,328,000 lats (\$57,192,000) in 1930, and exports totaled 163,722,000 lats (\$31,598,000), against 247,877,000 lats (\$47,841,000) in 1930. Machinery, cotton fabrics, coal and coke, sugar, other textiles, and heavy iron were the leading imports and bacon, butter, wood products, and vehicles the chief exports. Germany, the United Kingdom, and the Soviet Union, in the order named, were Latvia's principal customers, while Germany, the Soviet Union, Poland, and the United Kingdom were the chief sources of supply. In 1932, all exports totaled 96,000,000 lats and imports 83,000,000 lats (preliminary). Exports to the United States were \$152,512; imports from the United States, \$543,917.

**FINANCE.** The economic depression produced ever-increasing deficits in Latvia. The deficit for the fiscal year ended Mar. 31, 1931, was 2,500,000 lats (lat equals \$0.19295 at par). For 1931-32, preliminary figures showed a deficit of 25,000,000 lats, with revenues totaling about 134,000,000 lats and expenditures about 159,000,000 lats, as compared with budget estimates balancing at 178,494,000 lats. The budget for 1932-33, as passed by the *Saeima* or parliament June 21, 1932, balanced at 133,532,800 lats (about \$25,772,000), a reduction of about 17 per cent from the previous approved budget. Nevertheless, another large deficit was forecast. The national debt on Jan. 1, 1932, was about \$22,007,000, of which \$6,890,000 was due to the U. S. Government, £1,925,000 to Great Britain, \$6,000,000 to the Swedish Match Trust, 4,500,000 francs to France, and 896,000 lats (\$173,000) to Latvian citizens.

**COMMUNICATIONS.** Latvia in 1931 had 1712 miles of railway lines, of which 1603 miles were state owned. The telegraph and telephone systems were owned also by the state. There were about 22,796 miles of highway (674 miles of macadam). In 1931, 2937 vessels of 1,477,000 net registered tons entered the ports and 2926 vessels of 1,458,000 tons cleared. The merchant marine on June 30, 1931, consisted of 127 vessels of 100 tons or more, aggregating 206,086 gross tons.

**GOVERNMENT.** Under the constitution adopted by the constituent assembly, Feb. 15, 1922, executive power is vested in a president, elected by Parliament for three years; and legislative power in the *Saeima*, or parliament, comprising 100 members elected for three years, by universal direct suffrage (men and women), on the basis of proportional representation. President in 1932, Albert Kviesis (Agrarian), elected Apr. 9, 1930. Premier in 1932, Margers Skujenieks, appointed

Dec. 5, 1931, heading a coalition of agrarian and bourgeois groups.

**HISTORY.** An outstanding development in Latvian history during 1932 was the ratification of a pact of nonaggression, neutrality, and conciliation with the Soviet Union. In 1927, Latvian delegates had signed a nonaggression pact with the Soviet Union, but considerations of Latvian internal politics prevented its ratification. Negotiations were continued, however, and on Feb. 5, 1932, another nonaggression pact was signed at Riga. This was supplemented by a convention on conciliation procedure signed on June 18. Both the pact and the convention went into effect July 18, with the exchange of ratifications.

The economic situation became worse during 1932, despite government efforts to alleviate it. Effective in February, 1932, the government limited to three-fourths of the corresponding imports during 1931, the importation of all commodities on which separate import quotas had not already been established. The importation of sugar was monopolized by the government and a government grain monopoly was established. Latvia was represented at the Stresa Conference, held at Stresa, Italy, in September, 1932, but received no direct benefit from that source (see UNITED STATES OF EUROPE). In September, the government notified the United States Treasury that it would take advantage of the option granted in the debt-funding agreement by postponing for two years the payment of principal (amounting to \$37,000) due Dec. 15, 1932, on its debt to the United States. However, Latvia paid non-postponable interest (amounting to \$102,652) on December 15, as well as \$9200 of principal (see REPARATIONS AND WAR DEBTS). The American Foundation Company on Oct. 21, 1932, secured the contract to build a \$5,000,000 hydro-electric power station and dam across the Duna River.

**LAUSANNE CONFERENCE.** See REPARATIONS AND WAR DEBTS.

**LAVONGAI.** See BISMARCK ARCHIPELAGO.

**LAW, INTERNATIONAL.** See INTERNATIONAL LAW.

**LAW IN 1932. ADMINISTRATION.** *In general.* The crime situation continues to present the gravest legal problem. While given most publicity in the United States, where the horrible murder of the Lindbergh child was the most conspicuous event of the year, it is evident that other countries are hardly less affected. In April, Sir Herbert Samuel, then Home Secretary, presented to Parliament statistics disclosing the "serious increase in crime in Great Britain since the war." Hoping to secure immunity habitual criminals resorted to a policy of terrorism. In Germany penalties for political murders were commuted to life imprisonment after bold threats of still greater violence had been made. At Chicago on September 20 Judge McGoorty's house was bombed and while he escaped, a letter followed, threatening him with shotguns where bombs had failed. Just a week later in Massachusetts, the home of Judge Webster Thayer, who had presided at the trial of Saccho and Vanzetti, executed five years earlier, was similarly destroyed, the judge and his family barely escaping with their lives, members of the jury having been previously threatened.

*Jury System.* There seems to be a growing conviction that the jury system, as it generally works, is in no small degree responsible for this unfortunate situation. In London, England, one

hundred justices are reported to have asked the Home Secretary to initiate legislation to abolish juries at quarter sessions. To the American people the unsatisfactory working of the jury system was brought home by a series of tragedies culminating, during the year, on their nearest outpost in the Pacific. Assaults upon women in Hawaii had been increasing for several years when the trend reached its climax in the abduction and violation of the wife of Lieutenant Thomas Massie, U.S.N., stationed at Honolulu. Five Orientals (two Kanakas, two Japanese, and one Chinese) riding in a car which collided with another, were apprehended a few hours after the crime was committed, and at least three of them had criminal records. Two of them were identified by Mrs. Massie as among her assailants. They were all placed on trial before a jury consisting entirely of Orientals and half castes, who, after "deliberating" 97 hours, failed to reach a verdict and were discharged. The case has never been retried, and in October Governor Judd, of Hawaii, and Public Prosecutor Kelley, of Honolulu, came to New York to discuss the advisability of dismissing the case.

One of the five accused, Joseph Kahahawai, despite his criminal record (having pleaded guilty to another charge of assault and served a term of imprisonment) and the victim's identification, was released on bail, being required only to report daily to the authorities. One day, after so reporting, he was seized near the court building, carried away in an automobile and slain. Lieutenant Massie, his mother-in-law, Mrs. Granville R. Fortescue, and two enlisted men of the navy were charged with cooperating in that result and, after a long trial, in which they were ably defended by Clarence Darrow, were, on May 4, convicted (by a jury which contained no Americans), and sentenced to ten years of imprisonment. This was later commuted to one hour by Governor Judd; for there was a general feeling among the unprejudiced that the second tragedy was a direct result of the first, and that it was the natural consequence of defects in the jury system. The number of mistrials where the accused were natives had appeared to encourage criminals of that class and to lead them to rely on a "hung jury" as affording immunity. The early American missionaries in the islands appear to have sensed the situation and to have foreseen that the jury, as they had known it in New England, would not be workable in Hawaii. They never imported the grand jury at all but provided for indictments by judges and conviction by verdicts of nine out of twelve instead of requiring unanimity. Had these improvements on the common law system been left undisturbed, it is highly improbable that such tragic miscarriages of justice as that which seems to have resulted in the trial of Kahahawai and his associates would have occurred. But when, in 1900, Congress passed the organic act for the territory of Hawaii, the provision for verdicts by three-fourths was eliminated and the old common law jury substituted with its requirement of unanimity. The widespread feeling aroused by the Massie outrage compelled the Department of Justice to take cognizance of the matter and strong assurances were given out by the Attorney General that steps would be taken to prevent a recurrence. An Assistant Attorney General was sent to Hawaii, and when he returned he proposed certain changes, including repeal of the provision

requiring prosecuting officers to be appointed from the Territory (which proposal the Hawaiians considered an attack on home rule), but made no recommendation for improvement of the jury system which would reach the crux of the matter. The only Federal legislation during the year as to the jury was Public Law 209, authorizing alternate jurors in certain criminal cases in order to avoid mistrials in case of a juror's death or severe illness. The trial of United States Sen. James J. Davis, for misuse of the mails, which was halted, after many days, by one juror's misconduct, necessitating a complete retrial, shows not only the need of such a law but of its extension to other causes of mistrials.

In *People v. Scornavache*, 347 Ill. 403 (reviewed *Am. Bar Assn. Journ.*, xviii, 226), a bare majority of the Illinois Supreme Court held that the State might insist upon a jury trial in a criminal case, even where the accused had waived it. The opinion appeals to history but no precedents outside of the United States (and few there) are cited and no constitutional provisions are invoked; which, in the view of the minority of the court was "fatal to the conclusion." The ruling was hailed (by one of them), as "a Christmas present to the State's attorneys" by preventing an offender "to appear before a friendly judge and elect to accept the judgment of the court rather than of the jury." But those who believe that the jury system itself is obsolete and should be displaced, or at least restricted, see in this decision one more obstacle. How the domain of the civil jury is being narrowed, however, is illustrated in *Crowell v. Benson*, 285 U. S. 22. *Harper's Magazine* for 1928 contained an article by Robert H. Elder, former District Attorney for Kings County, N. Y., tracing the effect of Workmen's Compensation Acts in displacing juries by commissions whose awards are compulsory. The Federal Supreme Court, in the case last cited, upheld the authority of Congress to provide for the ascertainment by a deputy commissioner (instead of a jury) of the amount of damages to employees from injuries incurred on navigable waters. The tribunal divided, however, on the question whether a court, in reviewing the deputy commissioner's findings, could take new evidence. The majority held in the affirmative. On November 8 Oregon voters adopted a Constitutional Amendment, authorizing trials without juries where both prosecution and defense consent. Such an amendment had already been adopted in California, applicable to capital cases, and in November a married pair were tried for murder thereunder at Los Angeles by a single judge (Pacht) whose findings and sentence of conviction are reported to have been received with widespread approval, and the case demonstrated the possibility of great saving of time and expense, and greater certainty of correct conclusion, than the old-fashioned jury trial.

*Other Features of Criminal Law Administration.* Among acts of Congress during the year was one providing for a public defender in the Panama Canal Zone—something new in the Federal system. Public Law 210 fixes the commencement of a prison sentence by a Federal court, provides deduction for good conduct and extends the provisions of parole laws. In *Blackmer v. U. S.*, 284 U. S. 421, the Supreme Court upheld the act of Congress authorizing a fine for the failure of an American witness, living abroad, to obey a subpoena, served by a United States Con-

sul, from a United States Court. The petitioner, who had resided in Paris since 1924, was there served by the Consul with two subpoenas to appear and testify for the Government in the case of the *United States v. Fall and Sinolair*, then pending in the District of Columbia Supreme Court. He failed to appear, was declared in contempt and fined \$30,000 with costs in each case. The Federal Supreme Court pointed out that the United States did not lose jurisdiction over Blackmer by his removal to France; but that he was still subject to their laws, and to the duty of returning at their command; and that, in enforcing such duty, they might utilize their consuls without an express treaty concession to that effect from the country of the citizen's residence. Hence, the court concluded, the statute was consistent with due process of law. Had a similar statute been available to the New York courts, the witness, Sherwood, much wanted during the investigation of Mayor Walker, might have been brought back from Mexico.

**Extradition.** Holding extraditable one charged with fraud, the United States Court of Appeals for the 7th circuit, on November 15, ordered John ("Jake the barber") Factor returned to England for trial on such a charge. The ruling reversed a contrary one by Judge Carpenter and has not yet been reviewed by the Supreme Court. The case has a direct bearing on that of Samuel Insull, accused of similar offenses, who fled to Greece upon learning of his indictment by a grand jury of Cook County, Ill. An extradition treaty between that country and the United States had been signed but not ratified, and when Insull was apprehended at the request of the American authorities he employed native counsel and contested the legality of the proceeding. But the Greek Court of Appeals, on November 5, construed the treaty as contemplating such an emergency, and directed that Insull be detained until the arrival from Washington of the Presidential warrant for his formal arrest. On December 27, the same court proceeded to rule on the case as if it were trying Insull for the crime charged; whereas, under international law, the only proper question before it was whether he had been regularly accused of committing a crime in the territory of another State. The Court denied the requisition on the ground that "it does not become evident that Mr. Insull committed the offense charged," and released him. Luke Lee and his codefendants, convicted in North Carolina of violating the banking laws, resisted extradition from Tennessee, the Federal Supreme Court having denied relief.

On December 21, Governor Moore of New Jersey refused the requisition of Governor Russell of Georgia to extradite Robert E. Burns, escaped prisoner from the latter State, where he was serving a sentence for robbery with arms. As between States of the Union, such proceedings are supposedly controlled by U. S. Const. IV, 2, which would seem to leave no option on a State's part. But the Supreme Court held in *Kentucky v. Dennison*, 24 How. 66, 16 L. ed., 767 (Mar. 14, 1861), that "there is no power delegated to the general government . . . to use any coercive means" to enforce the duty. This leaves a gap which only a constitutional amendment will close.

The Proceedings of the American Law Institute at its May session, disclosed a growing sentiment that rules of criminal procedure and evidence favoring the accused, because of their

origin at a time when penalties were far more severe, should be modified. Thus the tentative draft for the administration of the criminal law No. 2, relating to "Double Jeopardy," which was the first to be considered at the session, contained a clause providing that the State shall be entitled to a new trial where material error has been committed, to its prejudice, and the accused has been acquitted. This is permitted at present, it was explained, in but one State, Connecticut; though it accords with the practice in Spain and other continental countries (See *Kepper v. U. S.*, 195 U. S. 121). Judge Seabury, in his address at the Institute dinner, stressed the abuse, to the extent of deterring the course of justice, of two time honored rules: (1) the exemption from testifying against oneself; and (2) the inviolability of professional communications to the lawyer. On the other hand the United States Supreme Court in *Powell v. Alabama*, 287 U. S. 45, which is generally referred to as the "Scottsboro Case," elevated to a new plane another privilege of the accused, and set aside the conviction of seven negroes on the ground that the trial court had not provided them with "effective counsel." In fact, it had appointed the entire local bar to act for them, and later a Tennessee lawyer had taken charge of the case in their behalf; but the doctrine of the decision seems to be that unless counsels are especially selected who are familiar with the practice of the forum, there is a want of due process of law under the 14th Amendment. Justices Butler and McReynolds, dissenting, call this "an extension of Federal authority into a field hitherto occupied exclusively by the several States. . . . The Court, without being called upon, and without a hearing, adjudicated an important constitutional question of State court criminal procedure." The Northern press comment and that of the "liberals" were highly favorable.

President Wickersham, in his annual address before the Institute, noted "that there never has been a revision of the Federal Penal Code" and pointed out that

The penal laws of different States vary greatly, both in the definition of crime and in the scheme of penalties. Perhaps more important even than accurate definitions is it to formulate a sound policy of sanctions. Penal codes generally present illogical blendings of penalties, based, sometimes on retributive or vindictive principles, sometimes with a view to reformation. Few of them proceed upon any definite principle, such e.g. as that announced in the recently adopted Penal Code of Italy, that the protection of society is the object of the criminal law. With the adoption of a clearly defined theory of punishment, the formulation of prohibitions and penalties would be greatly facilitated.

The Spanish *Gaceta Oficial* of November 5 contained the texts of new laws abolishing the death penalty, mitigating other penalties and amending accordingly the Penal Code of 1870. About the same time it was announced that chains, instruments of torture and other vestiges of "the barbaric past" would be excluded from Spanish prisons. An exception was made of the chain of Marshal Pardo de Cel who led a 15th century rebellion, calling himself King of Galicia. The proposed amendment of the Michigan Constitution, withdrawing executive authority to grant clemency to first degree murderers, was not adopted.

**TRIBUNALS.** *World Court.* On June 7, the Permanent Court of International Justice, by a vote of 6 to 5, decided in Switzerland's favor its controversy with France, holding that the latter had no right to suppress the free, frontier zone, dat-

ing from 1815, and establish custom houses there; and directing that such zone be reestablished before 1934. On August 3, during the session of the International Congress of Comparative Law at The Hague Peace Palace, the World Court, sitting in the same building, rendered an interlocutory decree in the East Greenland case (*Norway v. Sweden*), holding that no rights would be lost by either party in merely preserving the *status quo ante*. An early decision on the merits is not expected.

*Supreme Court of the United States.* On January 12, Justice Holmes resigned, after nearly thirty years of service, assigning his failing health as the reason. The vacancy caused by his resignation was filled by the appointment on February 10 of Benjamin Nathan Cardozo, Chief Judge of the New York Court of Appeals since 1927 (see *THE NEW INTERNATIONAL ENCYCLOPEDIA*, Supplement, vol. 1).

Before the American Law Institute, on May 5, the Chief Justice summarized as follows, the Court's work for the term then closing:

We have disposed of 775 cases, as compared with 698 at a corresponding date last term. Of these, disposition has been made of 237 cases on the merits and 538 on petitions for certiorari.

As the latter are usually disposed of without writing an opinion, the number of opinions written would average a trifle less than 27 for each of the nine members of the court. The Chief Justice continued:

Provision has been made for a hearing by three judges in a Federal District Court, when it is sought to restrain the enforcement of a state statute. Appeals in such cases lie directly to the Supreme Court from orders granting or denying an interlocutory injunction, as well as from final decrees granting or denying a permanent injunction. In a large proportion of these the question is not to be determined on the mere face of the statute assailed, but in the light of its application to the facts. Accordingly, the District Court, in the exercise of judicial discretion, may grant or withhold an injunction pending final hearing. Upon appeals from such interlocutory orders, it is an established rule to consider only the question whether the three judges in the District Court have abused that discretion.

On October 13, under the auspices of the American Bar Association, with its President presiding, and before an audience which included its assembled members, President Hoover laid the cornerstone (containing various appropriate documents and souvenirs), of the new Supreme Court Building. President Guy A. Thompson of the Bar Association opened the exercises with a brief tribute to that "monument to justice." John W. Davis, former President of the Association and former Solicitor General of the United States, who spoke in behalf of the Bar, and Chief Justice Hughes, who responded for the Court, whose members, except Justice Brandeis, were on the platform, both recounted the vicissitudes of the Court with respect to its place of abode, from its first meeting in Philadelphia; the assignment of quarters in a small room of the Senate Chamber in the new Capitol at Washington, where it met first on Feb. 2, 1801; its removal to the basement "in what was irreverently called 'that old potato hole'" in 1810; its temporary housing in the north wing after the Capitol was burned in 1814; its occupation for 40 years from 1819 of the present Law Library; and of the former Senate Chamber since 1859. The programme was interspersed with musical selections by the U. S. Marine Band and, in spite of the drizzling rain which set in toward its close, it

was said that "never again in the experience of living men will there be an event of like importance in the history of American jurisprudence." The Court's new home is rising pursuant to the Act of Congress of May 25, 1926, for the acquisition of the site, which lies just east of the Capitol grounds and north of the Library of Congress. The Act of Dec. 21, 1928, created a Supreme Court Commission, that of Mar. 4, 1929, appropriated funds for plans and specifications; that of December 20 of the same year authorized an appropriation of \$9,740,000 for construction; that of June 6, 1930, appropriated \$1,000,000; and that of July 3, 1930, \$8,240,000. The new building is not expected to be ready for occupancy before 1934, by which time the Court will have occupied its present quarters—the former Senate Chamber—just three quarters of a century.

*Rota.* This ancient Papal tribunal, dating from before the 15th century, completed in mid-August its judicial year, during which it disposed of 58 cases, arising from 17 countries, as compared with 64 matrimonial cases in the preceding year and 45 in 1926. On October 1 the members of the court were received by the Pope and reported an unusually heavy calendar in sight for the coming judicial year. The first American advocate to practice before the Court was recently admitted in the person of the Rev. Wm. J. Doheny.

*Judiciary Elsewhere.* Judge Cuthbert W. Pound, of the New York Court of Appeals since 1915, was advanced by Governor Roosevelt to the post vacated by Justice Cardozo. Descended from Quaker stock, the new Chief Judge was born at Lockport, N. Y., June 30, 1864, educated in the public schools and at Cornell University, from which he graduated in 1887, was admitted to the Bar and began practice in his native town and was its attorney for three years. He was a member of the State Senate in 1894-5, professor of law at Cornell, 1895-1904, member, and later President, of the State Civil Service Commission, 1900-1906, and a justice of the Supreme Court from 1906 to 1915. In New Jersey, Governor Moore advanced to the vacancy caused by the death of Chancellor Walker in October, Justice Luther A. Campbell of the Supreme Court. Despite the criticism of a State Senator that the appointment was hastily made, it was unanimously confirmed by the Senate on October 18 and the new Chancellor immediately assembled the Vice Chancellors for a conference. He cautioned them to be circumspect in appointing receivers, and especially to avoid naming as such anyone even remotely connected with themselves. It is reported that one man had been appointed a receiver no less than 94 times. New York lawyers have recently criticized the frequent appointment as a receiver of the Irving Trust Co., whose officers retort that it has functioned more efficiently and economically than others. Chancellor Campbell further announced that there would be similar conferences every three months. Henry Fielding Dickens, sixth son of the famous novelist, retired during the year from the position of Common Sergeant (Magistrate) of the City of London after serving therein for 15 years, and was succeeded by Judge Gregory, K. C., of the "Old Bailey" (the Central Criminal Court), who in turn, was succeeded by Judge Whitely.

*Contempt.* Certain English newspapers published in the Far East were wont to criticize the United States Court for China in exercising its power to punish for contempt. How much farther

the English courts go was illustrated on November 7 when the editor of the London *Midweek* was fined £50 and the publishers £25 by the English Court of King's Bench for publishing matter prejudicial to the Sun Life Assurance Company, during the pendency of an indictment in Canada of the publisher of the Montreal *Journal of Commerce* for criminal libel of the Company's President.

**Judicial Selections.** There appears to be a growing sentiment against the choice of judges by popular election; but recent events in Greater New York demonstrate that there is a worse method than partisanship, viz., bipartisanship. Perverting a commendable practice by which, for many years, New York State conventions of both parties have nominated some outstanding candidate (e.g. Ch. J. Pound this year), party leaders in Brooklyn last year, and in Manhattan this year, selected the nominees on both sides by mutual agreement, including, in each instance, the young son of a party leader, and in the latter instance a State Senator who had been sponsor and chairman of the committee investigating New York City's government. That the latter willingly accepted a nomination from those whom he had so vigorously pursued, was cited by Judge Seabury, and other Bar leaders, as the demonstration of a "deal"; and an independent judicial ticket, sponsored by the City Bar Association, led by its President, John W. Davis, was offered the voters as an alternative and received a large vote, but not sufficient to stem the partisan tide in a Presidential campaign.

Even when we turn to the appointive system, as it operates in the Federal government, where the actual selection is usually made by a cabinet officer and from lists prepared by an assistant, the results are not reassuring. This has been especially true of late regarding appointments to the judiciary of the insular possessions where a different system of law and language prevails, and knowledge of each is essential to efficient judicial service. After the Senate Committee rejected certain nominations to the Philippine Supreme Court (1931 YEAR BOOK 457), Secretary Hurley caused the removal of E. Finley Johnson, for 30 years a Justice of that court. He had, indeed, been sued by a litigant for the alleged alteration of a court record (*Alzua v. Johnson*, 231 U. S. 106), but a long period had elapsed since then. Secretary Hurley also caused the appointment to the same court of a retired army officer, son of a former Iowa party leader, but without previous judicial experience or practice in the Civil Law which prevails in the Philippines. In addition to his retired army pay of \$6000, this new judge receives \$10,000 from the Philippine government, making his combined salary greater than that of the Insular Supreme Court's Chief Justice. In Puerto Rico the vacancy caused by advancing to the governorship Attorney General Beverly was filled by the appointment of a former representative and unsuccessful candidate for U. S. Senator from Wyoming, who knew neither the law nor the language of Puerto Rico, as was pointed out by Senator Norris when the nomination was reported.

A still different angle to the puzzling problem of judicial selection was disclosed when, in June, Governor Ely chose Prof. Felix Frankfurter of Harvard Law School, for a vacancy on the Supreme Judicial Court of Massachusetts. The appointment was criticized by former Governor Ful-

ler and others, chiefly because of Professor Frankfurter's espousal of the cause of Saccho and Vanzetti, but was warmly supported by the liberals. In the midst of the controversy, and before the Executive Council could pass on the appointment, the Professor wrote the Governor declining it, stating that he preferred to continue his career as a teacher of law. Judges James Wilkerson of Chicago (who sentenced Capone), and Kenneth Mackintosh of Seattle, formerly of the Washington State Supreme Court and later of the Wickersham Commission, were nominated by the President for the Court of Appeals of their respective circuits; but although a resolution in their behalf was adopted by the American Bar Association at its October meeting, each failed of confirmation.

**Legal Profession.** It is hardly probable that any marked, general improvement in the judiciary will be effected without a corresponding advance in the character and standards of the Bar. For from it the judiciary is recruited and to it, as the group most familiar with the situation, the public must look for leaders of reform. And, as Dean Wigmore tells us, "the rise and perpetuation of a legal system is dependent on the development and survival of a highly trained professional class." The quality and equipment of the lawyer, then, concern not merely the class to which he belongs but society as a whole. The number of lawyers in the United States which, in 1920, was less than the number of physicians, appeared by the 1930 census to be about 7000 more than the latter and 160,605 in all. This marked an increase of over 18,000 lawyers during the decade. In some centres the ratio of increase was much greater; as in New York City where the number grew from 11,499 in 1920 to 18,281 in 1930. The law school enrollment, which appears to have reached its maximum of just under 49,000 in 1929, is still over 40,000 and annual admissions to the Bar aggregate about 10,000. As the latter figure is more than twice the number of annual losses by death or otherwise, the fears of those who consider the legal profession overcrowded seem justified; although a large, and perhaps growing, percentage of those admitted to the Bar, never practice. Central official examinations are now required in most States and one of the remedies proposed for abnormal increase is raising the standards of such examinations so as to exclude the unfit. Some recent examinations disclose a high percentage of failures; thus California 80 per cent, Massachusetts 81 per cent, Mississippi 71 per cent, Missouri 80 per cent, Rhode Island 75 per cent, Utah 74 per cent. This indicates a gratifying vigilance on the part of the Bar Examiners but is of doubtful efficacy in the long run if only intellectual qualifications are to be considered. Those who hope for a smaller and more select Bar support the movement, actively inaugurated more than a decade ago, that requires every applicant to show at least two years of college work or its equivalent before admission. An educational requirement, in addition to the technical one, has now been prescribed in 19 States. Heretofore efforts in that direction have been confined mainly to legislatures and progress has been slow, bills of that character having failed last year in eight legislatures. Two notable decisions of 1932 reinforce, if they do not finally establish, the doctrine that admission to the bar is a judicial function, and that the legislature

may, at most, add to the qualifications which courts impose; the latter cannot be limited by statute. Thus, the Wisconsin Act (1931 YEAR BOOK), purporting to reinstate a suspended lawyer, was declared unconstitutional by the Supreme Court of that State in an exhaustive opinion (*State v. Cannon*, 240 N. W. Rep., 441), which reviews both English and American precedents, and pronounces the statute in question "an assertion of legislative power without parallel in the history of the English-speaking people." The Court, however, exercised its own prerogative by offering to reinstate the offending lawyer upon his payment of the costs in the suspension proceedings. In an advisory opinion (180 N. E. 725, Apr. 21, 1932), to the Massachusetts Senate, the Supreme Judicial Court of that State significantly declared:

No statute can control the judicial department in the performance of its duty to decide who shall enjoy the privilege of practicing law. . . . When and so far as statutes specify qualifications and accomplishments, they will be regarded as fixing the minimum and not as setting bounds beyond which the judicial department cannot go. Such specifications will be regarded as limitations, not upon the judicial department but upon individuals seeking admission to the Bar.

These utterances are in line with previous decisions from Arizona, Illinois, New Jersey, and Pennsylvania. Different conclusions, once announced in New York and California, seem now to have been qualified by later expressions. In North Carolina alone there is undisputed contrary authority. And while these tribunals were defining the judicial prerogative as regards admission to the Bar, others were actually exercising it. Thus on July 1 the Arizona Supreme Court made effective a rule requiring of all applicants for admission a high school education or its equivalent before beginning the study of law, which must be pursued for three years and, if in a law school, it must be one approved by the Bar Examiners. The Kansas court has gone farther in requiring, after June 1, 1936, three years of collegiate study, following a four year high school course. It is evident, then, that the advocates of higher educational qualifications for lawyers need no longer, in most States, go before legislatures, hat in hand, to ask that their proposals be enacted into statutes and to meet the combined opposition of ignorance, prejudice, and self interest, coupled with politicians' timidity and suspicion. Instead, their efforts may now be confined to courts of last resort whose members ought to need no persuasion to aid in "building a better bar."

Sam. P. Cochran, a 77-year-old citizen of Dallas, took the recent Bar Examination in Texas, with 200 others and passed. At a special session of the Supreme Court to receive the applicants, Mr. Cochran was compared by the Chief Justice with Cato, the Elder, who "learned Greek at 80."

*Professional Ethics.* Certain Nevada lawyers who circulated printed abstracts of the State's divorce laws, offering to share fees with non-resident lawyers who might send them divorce cases, and, in some instances, describing the attractions of Reno as a place of sojourn while awaiting a decree, were disciplined and suspended from practice by officials of the self-governing Nevada Bar. In another western State, that has only the old-fashioned voluntary bar association, officers of the latter admitted inability to deal effectively with similar conduct on the part of its members. South of the Rio Grande,

it seems, also, even more objectionable advertising of the opportunities afforded by Mexico's easy divorce laws goes entirely unchecked except for such measures as may be taken in this country by the postal authorities.

*LAW CONGRESSES AND CONVENTIONS.* *American Law Institute.* The 10th annual meeting of this body opened in Washington, May 5. The Director announced the completion of the restatement of the law of contracts, work on which had been commenced nine years before. Publication was promised in September; but before the American Bar Association in October, the Director stated that the work would not be distributed before November. President Wickersham, in his opening address at the Institute, explained "unexpected delays in the completion of the restatement of the conflict of laws" as "partly due to the effect of a somewhat epoch-making series of decisions by the Supreme Court of the United States which necessitated a restudy of the effect of the principles established by them regarding the situs of personal property, tangible and intangible, both with respect to administration and to devolution of ownership." The Director's report stated that the Council expected to submit for the 1933 session the proposed final draft of agency, the first two divisions of torts (intended and unintended harms), and a tentative draft of the first division (formation) of business associations. Work was begun in June, 1927, on the restatement of trusts and the first division (estates) of property was completed in 1931. More of the Institute's proceedings will be found under special topics in this article.

*The International Congress of Comparative Law* assembled in the *Salle des Chevaliers* at The Hague on August 2 with a registered list of 305 delegates and probably twenty-five more unlisted, "owing," says Dean Wigmore, "to the imperfect system of registration." Thirty-one countries were represented and twenty-four more had appointed delegates who failed to appear. Numerically, the largest delegation (72), was from the United States—more than 20 per cent of the whole, of which Dean Wigmore was the acknowledged leader; but there was an exceptionally strong delegation from Great Britain, including Sir William Holdsworth, Professors F. P. Walton and R. W. Lee of Oxford, Lord Hanworth, and Lord Macmillan. Among those from France was Edouard Lambert, Director of the *Institut de droit comparé* of Lyons. From Italy came Professor Vivante and from Austria Dr. Josef Redlich. The papers were many and varied though some of them, and more of the discussions, wandered from the field of Comparative Law. The social entertainment, also, was lavish. "But," as Dean Wigmore well noted, "the mechanical arrangements for facilitating the delegates' attendance at the meetings were strangely inadequate and gave rise to much disappointment." Nevertheless,

The occasion was so distinguished, so unprecedented in our profession's history, so international in flavor, so significant as a forum of world law, and the environment of the Peace Palace and the World Court so impressive, as to overwhelm all minor considerations.

A national convention of Italian lawyers assembled at Rome on October 5. Premier Mussolini, in an address of welcome, ascribed to their profession a place higher than that of the poets and philosophers who initiated the Renaissance; for the former, he said, revived the Roman law.

*The American Bar Association* (see 1931 YEAR BOOK), held its 55th annual meeting in Washington from October 10 to 15. The President of the Association, Guy A. Thompson of St. Louis, delivered his address on October 12 and in the evening of the same day President Hoover spoke before the body. Paul Reynaud, of the Paris Bar, was a speaker on the following evening, and that of October 14 was entirely given over to the Marquis of Reading, who had come from England for the special purpose of delivering his address. One of the most profitable of the different conferences held, from the standpoint of professional progress, was that of the Bar Examiners where papers of a high grade were presented relative to the problems above reviewed regarding admission to the Bar. The Association's medal, for the most notable contribution to American law, was awarded to John H. Wigmore, Dean Emeritus of Northwestern University Law School, and author of a monumental work on "The Law of Evidence." Amendments to the Constitution were adopted, reducing the number of Vice Presidents to ten—one for each Federal Judicial Circuit instead of one for each State—and increasing the term of General Council members to three years. Clarence E. Martin of West Virginia was elected President for the ensuing year and the other officers mentioned in the 1931 YEAR BOOK, were reelected.

*Department of Justice.* What has been called "the world's largest law office" has, together with its head, been the subject of an unusual amount of criticism during the year. A bitter personal controversy between the Attorney General and a Senator from his own State, over the appointment of a Federal district judge there (1931 YEAR BOOK), was finally settled by elevating to the Court of Appeals another judge of the same district court, thus creating an additional vacancy for which the Attorney General accepted the Senator's choice while the latter withdrew from active opposition to the Attorney General's original selection for the other vacancy. In the course of the controversy it came to light that Mr. Mitchell, while Solicitor General, had left the Government unrepresented in an argument, before the Court of Appeals, of a case (*Flannery v. Wilouts*, 25 Fed. (2d), 951), in which he had been the personal attorney for the individuals affected (whose interests were adverse to the Government), had failed to arrange for a review in the Supreme Court, and had endeavored to prevent the collection of an inheritance tax of \$1,130,616 which the Government had assessed on the estate of the late James J. Hill's widow. The Federal district court decreed that the tax was valid and should be paid and it was that decree which the Court of Appeals heard, without the presence of government counsel, and, relying largely upon Mr. Mitchell's own testimony below, reversed. It being the Solicitor General's duty to have cases decided adversely to the Government reviewed in the Supreme Court, and no step therefor, being taken in this case, the Government lost its revenue. At that time the Department upheld the constitutionality of sec. 302 (c) of the Revenue Act of 1926, providing that transfers made within two years of a testator's death are presumed to have been made in contemplation thereof and hence were taxable; the Department having so contended in *Heiner v. Donnan*, 285 U. S. 312 (1932), and Justices Stone and Brandeis, having agreed with it, although a

majority of the Court took the other view. More criticism of the Department arose in connection with the use of troops against the so-called "Bonus marchers," which said Department, in a report to the President, characterized as "the greatest aggregation of criminals ever assembled in Washington." Gen. Pelham Glassford, District of Columbia Police Commissioner, replied that there had been less crime since the arrival of the veterans than previously, adding:

This report, signed by Atty-Gen William D. Mitchell, was a false attack upon the veterans. It was so much in conflict with the police reports and facts known to the police department, that I made an immediate reply. As a consequence, it became obvious that my tenure of office . . . would be of short duration.

General Glassford resigned on October 20. A letter in the Congressional Record (74-6898) indicated that an unusual number of appointments as special counsel went to members of the Attorney General's law firm and its connections, and it was said that Departmental influence was used to place his young son in J. P. Morgan's firm. Senator Harrison released figures showing that 231 employees of the Department were blanketed into its service during the year without the examination for which the law provides.

*Law Library.* July 14 marked the centenary of the act (4 Stats. at Large, 479), creating the Law Library of Congress as a separate entity; and in honor thereof an exhibition of portraits and other collections, relating to the Supreme Court, was opened in the Library building and viewed by many, especially following the cornerstone laying exercises at the new Supreme Court building. The Law Librarian, John T. Vance, in an article treating of the history and functions of the institution over which he presides, terms it "a true *amicus curiae*."

On August 31 a group of American lawyers, headed by Dean Wigmore, returning from the Comparative Law Congress at The Hague, unveiled, in the Cathedral of Tréguire, France, a bronze tablet to St. Yves, patron saint of the legal profession.

*NECROLOGY.* Among the eminent lawyers and jurists who died during the year were Maj. Gen. Enoch H. Crowder, of Missouri (Apr. 11, 1859-May 7, 1932), who served as Judge Advocate General and Provost Marshal General of the United States Army during the World War, was the author of the Selective Draft Law, and later the first Ambassador to Cuba, where he handled with skill many delicate problems of International Law; Lindley M. Garrison (Nov. 28, 1864-Oct. 18, 1932), Vice Chancellor of New Jersey, 1905-1913, Secretary of War, 1913-1916 (leaving that post voluntarily because of difference with President Wilson over methods of enlarging the army and also the question of Philippine independence which Secretary Garrison deemed premature), and receiver of the Brooklyn Transit Company, later reorganized into the "B.R.T.," 1918-1923, in which he was highly successful; Edwin R. Walker (Sept. 13, 1862-Oct. 14, 1932), Chancellor of New Jersey from 1912, when he was appointed by Governor Wilson upon the advancement of Chancellor Pitney to the Supreme Court; Dr. Ernst Freund (Jan. 30, 1864-Oct. 20, 1932), Professor of Law at the University of Chicago since 1894, author of *Police Power* (1904), *Standards of American Legislation* (1917), *Administrative Powers Over Persons and Property* (1928); Sir Herbert Stephen (June

25, 1857-Oct. 23, 1932), Clerk of the Assize of the Northern Circuit of England, son of Sir James F. Stephen, eminent English judge and editor of the latter's books, author of *Law of Malicious Prosecution, Digest of Criminal Procedure, Prisoners on Oath*: a recognized authority on English criminal law and adviser to *nisi prius* judges; Horace K. Tenney (Sept. 11, 1859-Oct. 20, 1932), head of a prominent law firm in Chicago, former President of the Chicago and Illinois Bar Associations, professor of law in the University of Chicago and member of the editorial board of the American Bar Association *Journal*; Leonidas D. Smith (Nov. 25, 1866-Nov. 7, 1932), Tennessee Attorney General since 1926, and former special judge of the circuit and Supreme Courts; Charles A. Hitchcock (Feb. 8, 1859-Nov. 4, 1932), and Jerome L. Cheney (June 18, 1863-Nov. 30, 1932), former New York Supreme Court Justices.

**CONSTITUTIONAL AND PUBLIC LAW.** *British Commonwealth.* The Imperial Conference, which opened at Ottawa July 21, resulted in various preferential trade agreements between units of the Commonwealth, which have been mostly enacted into law by their respective legislatures. The South African Union, in order to put the agreements into effect, arranged amendments to its commercial treaty with Germany, effective October 24. On November 4 both British and Canadian Houses of Commons passed measures ratifying their agreements, and on November 15 the Bahama legislature. The Irish Free State, though represented at the Conference, refrained from entering into any of the agreements, and the Imperial preference previously enjoyed by it automatically ceased on November 15. Meanwhile the Dáil's enactment of the law (not effective until 18 months after passage), abolishing the oath to the King and its refusal to pay the land annuities, brought reprisals from Great Britain in the form of an act authorizing the Cabinet to raise duties up to 100 per cent on imports from the Free State. The power thus conferred has been twice exercised while the Dáil has several times raised the duties upon imports from Great Britain. On November 17 the third round table conference on Indian Affairs assembled in London "to draw up a Constitution that will really work," according to the Aga Khan, Moslem leader. The Conference ended on December 24, with the outlines of the new All-India Constitution complete. The elections in Burma appeared to have resulted adversely to the plan of separation from India. A report of the joint parliamentary committee on November 10 proposed a reduction in membership of the House of Lords and election in part by County Councils.

*Germany.* On October 16, the *Reichsgericht* or Supreme Court of the German republic, sitting at Leipzig, rendered an important decision relative to the respective powers of *Reich* and State governments. Construing Art. 48 of the Weimar Constitution, the court held that law and order were sufficiently endangered in Prussia on July 20, to justify the *Reich* President's intervention and appointment of a Federal Commissioner, with deputies, to administer the state, and with authority supreme in that sphere. But, the court continued, suspension of the regular order was temporary only, affecting the administrative functions alone of the Prussian officials, and not depriving them of their membership in legis-

lative bodies, nor of their right to represent Prussia in its dealings with the *Reich* or any state thereof. Save on the administrative side they are still the Prussian government, and their criticism of the *Reich* is not a breach of their duty toward it. But the Court declined to construe Art. 48 beyond holding that it did not justify barring a state's representative in the Federal Diet. The proposed new constitution would effect changes in the executive by making him President of Prussia as well as of the *Reich*—a step toward merging the former in the latter; a new legislative chamber would be created whose acts could be defeated only by a two-thirds vote of the Reichstag; and the voting age would be raised to twenty-five.

*Mexico.* On October 4, the Congress ratified the treaty for reconstituting the United States-Mexican Claims Commission which had functioned from 1926 to 1931 and broke up in the latter year by the refusal of both neutral and Mexican Commissioners to sit longer with the American Commissioner (Nielson). The latter's dissenting opinion in *International Fisheries Company case* (Ops. 1930-1931, pp. 207-286), in which he bitterly arraigned his colleagues, is said to have precipitated the result. The new treaty has yet to be ratified by the United States Senate and an appropriation must also be made for expenses. On November 9 the Mexican Senate Foreign Relations Committee took the first step toward amending the Federal Constitution so as to permit alienation of territory, the occasion being the Committee's tardy acquiescence in an award by the King of Italy terminating a dispute between France and Mexico as to the sovereignty of the Pacific isle of Clipperton, 4½ by 3 miles in area, situated over 500 miles west of Acapulco, on the direct route between the Panama Canal and Hawaii. Discovered by Spaniards in 1587, and naturally falling to Mexico upon its attainment of independence, the islet was visited by a French merchantman in 1858 and the French flag was hoisted. In 1890 De Lesseps also claimed it for France, although it was then inhabited by other foreigners. The following year saw the Mexican flag raised, France protested, and in 1909 President Diaz asked for arbitration; but it was not until Jan. 28, 1931, that the King awarded the isle to France. Although Foreign Minister Tellez urged that the national honor required approval of the Committee's recommendation, the Senate postponed action indefinitely. But on December 14 it approved the committee's recommendation to accept the award and on December 17 voted to purchase the islet from France.

*Spain.* Statutes of major importance were enacted by the Cortes in September, under the Republican leadership of Premier Azana: (1) the Agrarian Law providing for the expropriation of large feudal, landed estates, especially of those participating in the recent monarchical uprising, and their distribution among the peasants; (2) the Catalan Autonomy Law, by which that region is given its own legislature while peninsular and foreign affairs are still handled by the central government; and (3) in October, the Religious Congregations Law, which vests in the state the title to all Roman Catholic Church property, leaving the latter the privilege of administration only, effects state control of all religious orders, which are forbidden to engage in industry, or to teach any subjects but religion,

and that only in their own schools, which are subject to state inspection, and prohibits the conduct of worship outside the churches. Appointment of ecclesiastical dignitaries, including heads of orders, all of whom must be Spaniards, is subject to the state's approval. Secular education is placed exclusively under the Ministry of Education. At last advices the Papal Nuncio seemed disposed to accept the situation rather than to aggravate it by lodging a formal protest. On November 1, Republican leaders issued a statement reciting that "the visit of Premier Herriot undoubtedly strengthens the ties between the oldest and newest European republics." The Premier conferred upon President Zamora the Grand Cross of the Legion of Honor, and it was reported that the Order of the Republic would be conferred upon President Le Brun.

*United States. Executive Power.* As predicted (1931 YEAR BOOK), the case of *U. S. v. Smith* did reach the Federal Supreme Court which unanimously affirmed the ruling of two inferior courts that the respondent was not subject to ouster after the President had been notified of confirmation, even though the notice had been sent before the period for Senatorial reconsideration had expired (285 U. S.). The decision in *Edwards v. U. S.*, 286 U. S., 482, that the President has ten full days to approve measures passed by Congress, though it has meanwhile adjourned, is the complement of the earlier decision in the *Pocket Veto Case*, 279 U. S., 655, that his failure to approve within the ten days amounts to a veto. Both decisions interpret Const. i, 7 and settle points which had occasioned doubt from the foundation of the government.

*Immigration.* On December 5, the Federal Supreme Court rendered some notable decisions, all unanimous, affecting alien entry and deportation. *Elting v. North German Lloyd*, 287 U. S.—and *Lloyd Sabado Societa Anonima, v. Elting*, 287 U. S.—reviewed fines imposed by the Secretary of Labor upon carriers of non-quota passengers. The court applied its previously established doctrine that the Secretary's findings would not be disturbed unless an abuse of discretion (which is a very broad one) is proved and announced the new principle that possession of a non-quota, consular *visa* did not relieve the carrier if, with reasonable diligence, it might have ascertained that the passenger was in fact a quota immigrant. In *Costanzo v. Tillinghast*, 287 U. S.—the petitioner was ordered deported for operating a brothel, a ground enumerated among many others in the Immigration Act of 1917. A limitation to five years for some of these grounds was held inapplicable to that in question, which, the Court decided, could be invoked at any time. On December 19, three Federal judges at Detroit, Mich., enjoined the enforcement of the Michigan Alien Registration Act of 1931.

*Impairment of Obligation.* The repeal of a State constitutional clause, making corporate directors liable for corporate funds misappropriated by corporate officers, impairs the obligation of an existing corporate contract; notwithstanding the same constitution reserves the power to repeal laws concerning corporations. *Coombes v. Getz*, 285 U. S. 434 (Cardozo, Brandeis, and Stone, dissenting). But a corporation which enjoys constitutional tax exemption may, by a later change in the constitution conferring it, be taxed on its corporate franchise, measured by the tax exempt income. *Pacific Co. v. Johnson*, 285

U. S. 48 (Sutherland, Butler, and Vandevanter, dissenting).

*Interstate Commerce.* In *La. Pub. Serv. Com. v. Tex. & N. O. R. Co.*, 284 U. S., 125, the Supreme Court upheld the power of the Interstate Commerce Commission to prescribe new intrastate railway rates where those already fixed by a State operated unfavorably to interstate commerce. This was held not to infringe Const. i, 8. But in *Chicago etc. R. Co. v. U. S.*, 284 U. S., 80, the court set aside, as arbitrary and unreasonable, an order of the same Commission favoring short lines by allowing them two days' free time for interchanged loaded cars and relieving them from charges on coal cars received for return loading with coal from mines normally dependent upon connecting carriers for car supply. Justice Stone dissented in an elaborate opinion in which Justices Holmes and Brandeis concurred.

*New York Charter.* The resignation on September 1 of Mayor Walker left as Acting Mayor the President of the Board of Aldermen, and as the former's term would have lasted until 1934, the question at once arose whether the special election of a successor was necessary. The Greater New York Charter contains no specific provision on the subject and Judge McGeehan of the Supreme Court issued an order preventing the Board of Elections from proceeding to that end. A majority of the Appellate Division, to which the case was then taken, held a special election necessary, relying on *O'Connell v. Corcoran*, 243 N. Y., 86, which Justice Martin, dissenting, said had "no application to the case." Justice O'Malley considered the question "certainly not free from doubt" but concurred (see *New York Times*, Sept. 30, 1932). The Court of Appeals affirmed the majority ruling, but without writing an opinion. On December 1, ex-Governor Smith formally presented his comprehensive plan to reorganize the city government, discarding the borough system.

*Police Power.* An Oklahoma statute, requiring a license to engage in the ice business and proof of the necessity of conducting such a business at the designated place, was declared inimical to the 14th Amendment in *New State Ice Co. v. Liebmann*, 285 U. S., 262. Justice Cardozo did not participate but Justice Brandeis, with whom Justice Stone concurred, wrote an exhaustive opinion, with abundant citation of economic authority, arguing that the requirement in question was not new but had long been applied to other lines; that the legislature had declared the business a "public" one and that its determination was, at least presumably, valid; that climatic and other conditions in the State rendered ice a necessity like water, gas, and electricity; and that the field was a proper one for experimental legislation which the court should not interfere with "lest we erect our prejudices into legal principles."

In *Bandini Petroleum Co. v. Superior Court*, 284 U. S. 8, and *Champlin Refining Co. v. Oklahoma Corp. Commission*, 286 U. S. 210, the same court upheld State statutes for the conservation of oil and gas, even though the effect was to limit the surface owners to much less than potential production. But in *Sterling v. Constantin*, 287 U. S., the court denied the power of a State Governor "to regulate by executive order the lawful use of complainants' properties in the production of oil"; for "in the place of the judicial procedure available in the courts, which

were open and functioning, he set up his executive commands, which brooked neither delay nor appeal." In *U. S. v. Swift & Co.*, 286 U. S. 108, the court, by a bare majority, declined to modify a decree dissolving, under the Sherman Act, a combination of meat packers; holding that conditions had not sufficiently changed to justify it.

On November 8 the voters of eleven States expressed their disapproval of prohibition, mainly by voting to repeal enforcement laws; those of Massachusetts defeated an initiated petition to legalize chiropractors, and those of Nebraska rejected a proposal to establish a highway police patrol under a commissioner for the whole State. The Supreme Court of the last named, on November 10, declared the Nebraska Bank Guaranty Law of 1909 inimical to both Federal and State Constitutions (*Hubbell Bank v. Bryan*, U. S. Daily, Nov. 16, 1932).

*Proposed Twentieth Amendment.* On March 2, what is popularly known as the "Lame Duck Amendment" (though that phrase indicates but one of its features), was finally submitted to the State legislatures, thus culminating a long and bitter struggle both in and out of Congress, the principal change having been urged in 1916 before the American Bar Association, which has since maintained a committee to promote it. In 1923 the proposed amendment was placed before Congress where its leading advocate was Senator Norris of Nebraska. As now submitted the proposal comprises six sections, the first of which fixes January 3 as the end of congressional terms and January 20 for those of the President and Vice President. As each new congress will assemble on January 3, no member will serve, regularly, after the election at which his successor is chosen. The Amendment also provides for contingencies not heretofore met, in case of the death or failure to qualify of a President or Vice President elect. Only once before has a proposed constitutional amendment met such a prompt and cordial response from the legislatures. On March 5, before the State Department had officially notified it thereof, the Virginia legislature ratified the proposal; that of New York followed less than a week later; and at the end of 1932 ratifications by one-half of the necessary two-thirds had taken place. In Massachusetts the General Court (legislature) deferred action, pursuant to a previously declared policy, "until the opinion of the voters of the commonwealth has been taken," which was done on November 8, the vote being in favor of the amendment.

*Racial Discrimination.* In *Nixon v. Condon*, 286 U. S., 73, the Supreme Court, by a bare majority of its members, construed a Texas statute authorizing the State Executive Committee of a political party "to prescribe the qualifications of its own members," as constituting the Committee an organ of the State, and held that its exclusion of negroes from the party primary was an act of the State infringing the 14th Amendment which "lays a duty upon the court to level by its judgment these barriers of color." There was a dissenting opinion by Justice McReynolds in which Justices Butler, Vandevanter, and Sutherland concurred. The annulled statute had been enacted as a substitute for that declared unconstitutional in *Nixon v. Herndon*, 273 U. S., 530, and which expressly denied the eligibility of any negro to vote in a Democratic primary. The later decision seems to leave open the question whether

a party convention, acting on its own initiative, could exclude negroes. Meanwhile it was reported that negro votes were actively solicited at the recent Texas primary election. The "Scottsboro Case" is discussed above.

*Radio Law.* On May 5 a broadcasting agreement was entered into between the acting Secretary of State and the Canadian Minister, purporting to grant Canada the use of twenty additional frequencies besides continuing the use of those already enjoyed. The validity of the proposed grant has been questioned on the ground that it is really a treaty requiring Senatorial approval, and it has been criticized as unfair to American broadcasters and ill advised for not including other North American countries. Three weeks after it was entered into the Canadian Senate approved the Radio Broadcasting Act, previously passed by the Lower House, providing a system on the European model under a commission of three with a maximum of nine assistants. No provision was made for compensating owners of existing stations and it is expected that the adjustment of their rights and the lack of funds will delay putting the act into effect. In July, under an Executive Order authorized by the congressional appropriation act, the Department of Commerce Radio Division was merged with the Federal Radio Commission. An outstanding decision of the year in this field was *Sorensen v. Wood* (Neb.), 243 N. W., 82, holding that utterances broadcast from writing "constitute libel rather than slander," that the broadcaster as well as the author is liable therefor, and that the former is not relieved by the provision of sec. 18 of the Radio Act of 1927 (44 Stats. at Large, 1170), that the "licensee shall have no power of censorship over the material broadcast." This, the court thought, "merely prevents the licensee from censoring the words as to their political and partisan trend." It "does not give any privilege to join and assist in the publication of libel." The Report of the American Bar Association's Committee on Communications criticizes the doctrine of the broadcaster's liability as requiring the "announcer or other employee" to be "an expert in the law of defamation and able to pass in the twinkling of an eye on such questions." On the other hand the Full Court of Victoria, Australia, dismissed an appeal by Max Meldrum, artist, who had sued the Australian Broadcasting Company for \$10,000. The court held that there could be no libel by radio. A consent decree dissolving the connection between the Radio Corporation of America and its nine associates was signed in November.

*Reapportionment.* The confusion arising from the Act of Congress, changing the distribution of representatives (1931 YEAR BOOK), was resolved by decisions on April 11 in cases from Minnesota (*Smiley v. Holm*, 285 U. S., 355), Missouri (*Carroll v. Becker*, *id.* 380), and New York (*Koenig v. Flynn*, *id.* 375). The gist of each is that apportionment constitutes legislation for which executive approval is as necessary as for any other; and that in States like Minnesota and Missouri, where representation had been reduced, and redistricting acts had been vetoed, all representatives would need to be elected at large. In other States, like Mississippi and Virginia, "gerrymandering" acts were held by the State courts to infringe the apportionment act of 1911 (sec. 3), requiring congressional districts to be "comprised of contiguous and compact ter-

ritory." These decisions were reversed by the Federal Supreme Court on the ground, not, as reported in the press, that the provision had been repealed, but that it was of a temporary character, limited to the 1911 apportionment and hence no longer in force (*Wood v. Broom*, 287 U. S.). A bill has now been introduced to restore the provision.

**Referenda.** The initiative and referendum are now in vogue in 20 States and in all of the others constitutional changes are effected by popular vote. The year has been noteworthy for the exercise of this privilege. In May the California voters rejected an act passed by the preceding legislature for oil conservation, and on November 8 they rejected eight proposed Constitutional amendments and two initiated measures and adopted nine of the former and one of the latter. Among the amendments adopted was one requiring initiative petitions to be submitted to the Attorney General for preparation of title and summary. Among the rejected ones was a proportional representation proposal. Illinois voters rejected a proposal to permit amendment, at the same time, of as many as three articles of the Constitution. Minnesota voters rejected three of four submitted proposals while those of Oregon rejected eight and adopted four. The Arizona voters adopted a constitutional amendment reducing the pay of legislators and membership of the State House of Representatives from 64 to 39; and those of Georgia, one changing the date of the governor's inauguration from June to January; those of Massachusetts voted for a pre-primary convention plan; and those of Ohio defeated a proposal for a constitutional convention. Other changes by popular vote are noticed under special topics. On December 16, District Judge Roberts at Shreveport, La., declared invalid the act under which the referendum on Prohibition repeal had been taken on November 8, since the State Constitution nowhere authorized a referendum.

**Relief.** Much of the year's legislation of both kinds was inspired by the depression with its resulting financial stringency and unemployment. Hence much of it is of a local and, let us hope, temporary character. Congress enacted several notable measures of this class, among them Public Act 55 (46 Stats. at Large, 1030), appropriating \$80,000,000 for grants to States to pay the quota required for Federal road funds. The Reconstruction Finance Corporation Act (47 Stats. at Large, c. 5) created a corporation with \$500,000,000 which is appropriated from the Federal treasury for loans to State institutions, private corporations, etc. Illinois voters on November 8 approved a bond issue of \$2,000,000 for relief. In Chile the importation and distribution of petroleum and its products have been made a state monopoly and 90 per cent of the labor employed, as well as 75 per cent of the capital, is required to be Chilean. The new labor law of Mexico requires the same percentage of the employees of any organization to be Mexican. Another new Chilean law requires rotation of all ships' crews.

**Taxation.** Judging from both legislation and litigation, this topic holds more of interest than any other save possibly that of relief, to which it is closely related, and prohibition. Governor Murray's initiated measure to increase tax levies upon large incomes in Oklahoma, was defeated on November 8 by about 100,000, and income tax proposals were rejected by the voters of Cali-

fornia, Minnesota, and Oregon, although the voters of the latter approved a motor vehicle tax but rejected various educational proposals calling for increased taxes. The Illinois Supreme Court pronounced unconstitutional the income tax act passed by the legislature at a special session in February. In *Burnet v. Chicago Portrait Co.*, 285 U. S., 1, the United States Supreme Court held New South Wales a "foreign country" within the meaning of the 1921 Revenue Act, allowing a credit to an American taxpayer for income tax paid to such a country. In Ceylon a 5 per cent tax upon incomes was levied for the first time and was estimated to yield the equivalent of \$1,750,000. An inheritance tax on shares in a corporation of another State and taxed there was declared invalid in *First National Bank v. Maine*, 284 U. S. 312.

**Waters.** In *Wyoming v. Colorado*, 286 U. S., 494, the Supreme Court refused to dismiss a bill by the complainant to enforce a previous decree (219 U. S., 419), limiting the use for irrigation of the Laramie River, an interstate stream. The opinion proceeds on the theory that acts of diversion by private persons permitted by a State, are proper grounds of complaint in such a proceeding, and that such persons need not be made formal parties thereto. On July 18 a proposed treaty was signed by representatives of the United States and Canada, for the joint improvement of the St. Lawrence and its western connections, providing a continuous waterway from Duluth to the Atlantic. The United States undertakes "to construct, operate, and maintain a side canal with locks opposite Barnhard Island; to construct the works required for rehabilitation on the United States side of the international boundary." Canadian ratification has been made contingent upon that of the United States and on November 14 the latter's Senate Foreign Relations subcommittee opened hearings thereon. Opposition has developed in both countries—from the New York City and Buffalo Chambers of Commerce, the New York State Waterways Association, railway executives, and security holders, the Great Lakes Carriers' Association, and Montreal interests. The Canadian Deep Waterways Association, the Toledo Chamber of Commerce, and western interests generally, favor it; but early consideration by the whole Senate is not expected.

**Miscellaneous.** On March 9 the Virginia House of Delegates passed, with minor amendments, the Senate bill authorizing any county to adopt the County Manager form of government. It was in Virginia that a similar system for cities was first adopted which now prevails in over 450 American cities, including 40 of over 50,000, 18 of over 100,000, and 1 (Cincinnati), of nearly 500,000. On March 1 Dumont, N. J., voted on adopting the plan for that municipality and on November 8 Paducah, Ky., adopted it by a 2 to 1 majority. It is not included, however, in ex-Governor Smith's plan mentioned above, which centres power in an elective mayor. On December 28, Justice Dowling declared invalid the 1931 referendum which resulted in a majority of 1600 for the city manager plan at Utica, N. Y.

Among the members elected to the Hawaiian Legislature on November 8 were four of Japanese, and three of Chinese descent. Two Communists were elected to the Danish Folketing.

**PRIVATE LAW.** The new Civil Code of the Fed-

eral District and territories of Mexico, which has been pending promulgation since 1928, came into force finally on October 1. It comprises 3045 articles as against 3823 in the former code, distributed among four books.

**Equity Jurisdiction.** On March 23 the President signed the act "to define and limit the jurisdiction of courts sitting in equity," etc. (known popularly as "the Anti-injunction Bill"), which Congress had finally approved five days earlier after years of effort on the part of labor leaders and others. Injunctions are largely limited to acts of fraud or violence, and then only where complainant shows greater injury than defendant will suffer by prevention; complainant must first endeavor to settle and show that public officials fail to provide adequate protection; no restraining order continues in force more than five days; and jury trials may be claimed in contempt cases, civil or criminal. In its final stage the bill was opposed by Paul Howland, of Cleveland, chairman of the American Bar Association's Committee on Jurisprudence and Law Reform, and by Representative Beck of Pennsylvania, former Solicitor General of the United States, who declared that it "offends the spirit, if not the letter, of the Constitution, making possible the deprivation of property without due process of law." The Attorney General, to whom the measure was referred by the President for comment, acknowledged the objections but advised approval, shifting the responsibility to the courts.

**Marital Status.** The District of Columbia Supreme Court (*Hoage v. Construction Co.*, 60 App. D. C., 218), having upheld the so-called "common law" marriage (resulting from mere agreement without formal ceremony), although this is opposed to the general American doctrine (Koegel, *Common Law Marriage*, 1922, 10), and especially that of Maryland (*Denison v. Denison*, 35 Md., 361), from which the District was formed, the Washington Police Court ruled in May (*U. S. v. Smith*), that the "wife" of such a marriage could not testify against her "husband"; and as she was the chief available witness, the charge against him had to be dismissed.

**Divorce.** On April 13, the Bolivian Senate, by a vote of 9 to 7, approved the bill previously passed by the Chamber of Deputies (1931 YEAR BOOK), providing for absolute divorce with freedom to remarry, and two days later it was signed by President Salamanca. Under the Trinidad Act (*id.*), divorce courts begin to function Jan. 1, 1934, and rules have been framed by the judges fixing the fees for hearings at \$10 for the first hour and \$2.50 for each additional one. This was criticized in the legislature but the rule was finally approved. A bill putting into force the divorce provisions of the new Spanish Constitution (1931 YEAR BOOK), was enacted by the Cortes on February 24. It provides as grounds infidelity, physical cruelty, desertion, non-support, and imprisonment of either spouse for more than 10 years; as well as mutual consent. The maximum cost bill is fixed at a sum then equivalent to \$38.50. Under the new Religious Congregations Law, orders which teach against divorce, as sanctioned by the state, are subject to suspension. The new Mexican Civil Code provides no less than 17 divorce grounds, of which the last, as in the former code, is mutual consent. Among the new grounds are judicial declaration of ab-

sence, or presumption of death, unjustified refusal of support, and incurable insanity. Under the Yucatan law divorce by mutual consent may be obtained without the personal attendance of the parties, and in Cuba foreigners are not required to establish a residence before seeking a divorce. In both, from the standpoint of private international law, the courts would seem to lack jurisdiction of the alien. The French law of Jan. 4, 1930, removes the prohibition of remarriage after a second divorce and permits the parties to acquire a new matrimonial domicile. From Denmark, where marriage is likewise dissoluble by mutual consent, comes the report of one divorce for every twelve marriages, in contrast to the United States which confesses to one for less than six. The depression, however, seems to be affecting the number. Thus the courts at Reno, Nev., granted 3105 divorces during the year ending in August, as against 4248 in 1931. However, in one day recently Justice Lawrence of London granted 95 divorces.

**Birth Control.** On November 1 a new birth control law, enacted in spite of a contrary opinion by a Mexican Congress of *Médicos*, came into force in the state of Vera Cruz. Proof of physical fitness is made a prerequisite to marriage and the procreation of children by those unable to support them or unfit for marriage is discouraged. In Puerto Rico, which has long suffered from overpopulation, Governor Beverley's pronouncement in favor of birth control was vigorously assailed by Roman Catholics of the United States, and in the Irish Free State the government censor has excluded a work by Sir Arbuthnot Lane, the eminent surgeon, because it advocates birth control.

**Intellectual Property.** An excellent example of law aiding applied science is found in the Act of Congress of May 23, 1930 (46 Stats. at Large, 376), amending the Patent Law so as to permit new plants to be patented. Although in force for less than three years about 40 or such patents have already been obtained, a majority being for plants with new types of flowers, but about one-third for new fruits. The Estate of Luther Burbank has received six of such patents, and some 50 applications for others are now pending. Evidently the act has encouraged plant experimentation.

**Copyright.** a much older subject, has received less help from Congress. The failure of the Vestal Copyright Bill (1931 YEAR BOOK) led the veteran copyright expert, Thorvald Solberg, 54 years with the Library of Congress, to declare our laws on that subject "barbaric and stupid . . . filled with special privilege, buried under inscrutable technicalities and smoke screens." This condition he ascribes to the printers and he advocates entry into the International Copyright Union and the rewriting of our laws in one-third their present space.

**Moratoria.** The measure initiated in North Dakota for a three-year, partial moratorium on private debts was adopted on November 8. A similar end was temporarily effected in Nevada, as regards bank deposits, by the gubernatorial proclamation of a bank holiday on November 1, for three weeks; extended later for a like period, and again to December 18. On November 25 President Herrera, of Colombia, signed the private debts moratorium law, giving foreign banks the option of accepting it or taking 70 per cent of all debts in full payment, or 40 per cent in money

and 60 per cent in Colombian government bonds at par.

**LAWRENCE COLLEGE.** A coeducational institution, comprising a college of liberal arts and a conservatory of music in Appleton, Wis., founded in 1846. For the 1932 autumn term 758 students were enrolled in the college and 290 in the conservatory. There were 37 students enrolled in the Institute of Paper Chemistry, a graduate school affiliated with Lawrence College. There were 58 members on the faculty of the college and 20 on the faculty of the conservatory. The endowment, exclusive of buildings and equipment, amounted to \$1,815,214; the income from endowment for 1932 was \$80,150. There were 59,425 volumes in the library, exclusive of government documents. President, Henry Merritt Wriston, Ph.D., LL.D.

**LEAD.** Production of lead in 1932 throughout the world was about 1,292,000 short tons, compared with 1,512,155 short tons in 1930, or a decline of 14.5 per cent, according to the American Bureau of Metal Statistics.

In the United States the output of refined primary lead from domestic ores in 1932 was 35 per cent lower than in 1931, according to the preliminary figures of the U. S. Bureau of Mines, and was the smallest recorded since 1899. Foreign primary output was 37 per cent lower than in 1931, and was the smallest recorded since 1916. The output of primary domestic desilverized lead in 1932 was about 150,000 tons; of soft lead about 69,000 tons, and of desilverized soft lead about 35,000 tons, making a total output from domestic ores of about 254,000 tons of refined lead. Corresponding figures in 1931 were 211,415 tons of desilverized lead, 138,389 tons of soft lead, and 40,456 tons of desilverized soft lead, making a total of 390,260 tons. The output of lead smelted and refined from foreign ore and bullion was about 33,000 tons, as compared with 52,504 tons in 1931. The total primary lead smelted or refined in the United States in 1932 was thus about 287,000 tons, a decrease of about 35 per cent as compared with the total of 442,764 tons in 1931. The total output of antimonial lead at primary refineries in 1932 was about 22,000 tons, as compared with 21,842 tons in 1931.

The highest average monthly price for lead at New York (outside market) during the year was 3.75 cents a pound in January. It dropped steadily to 2.73 cents, the low for the year, in July, rose to 3.46 cents in September, and dropped steadily again to 3.00 cents in December. In 1931, the average quotation for January was the highest for the year and the lowest monthly quotation prevailed in December.

**LEAGUE OF NATIONS. LYTTON REPORT.** The most significant event in Far Eastern relations within the year was the publication on October 2 of the report of the commission appointed Dec. 10, 1931, by the League of Nations to "study on the spot and to report to the Council on any circumstances which, affecting international relations, threatens to disturb peace between China and Japan, or the good understanding between them upon which peace depends." This commission consisted of: H. E. Count Aldrovandi (Italian), Gen. Henri Claudel (French), the Earl of Lytton (British), Maj.-Gen. Frank Ross McCoy (American), H. E. Dr. Heinrich Schnee (German), Lord Lytton

was elected chairman. Japan and China appointed as their assessors to assist the commission Isaburo Yoshida, Ambassador of Japan in Turkey, and Dr. Wellington Koo, a former Prime Minister of China. The commission spent about six weeks in Manchuria and visited both China and Japan. Their report presents a historical background and "some suggestions on the lines on which it seemed . . . possible to effect a durable solution of the conflict and the reestablishment of a good understanding between China and Japan."

The League of Nations Association published a summary of the report, from which the following findings and recommendations of the Lytton Commission were abstracted:

The military operations of the Japanese troops on the night of Sept. 18-19, 1932 (see 1931 YEAR BOOK UNDER JAPAN, *History*) cannot be regarded as measures of legitimate self defense. In saying this the Commission does not exclude the hypothesis that the officers on the spot may have thought they were acting in self defense.

While there were a number of factors which contributed to the creation of Manchoukuo the two which in combination were most effective and without which in our judgment the new state could not have been formed were the presence of Japanese troops and the activities of Japanese officials, both civil and military. For this reason the present régime cannot be considered to have been called into existence by a genuine and spontaneous independence movement.

The Commission finds further that there is no indication that the "Government" of "Manchoukuo" will be able to carry out many of the reforms which it has announced.

The Commission also states that "After careful study of the evidence presented to us in public and private interviews, in letters and written statements, we have come to the conclusion that there is no general Chinese support for the 'Manchoukuo Government' which is regarded by the local Chinese as an instrument of the Japanese."

In regard to the Chinese boycott of Japanese goods, the Commission points out that the boycott was coordinated and stimulated by the Kuomintang, and that the whole subject of the organized application of the boycott is a problem of international law which in the interest of all States should be considered at an early date and registered by international agreement.

The Commission states that the immediate problem was the establishment of an administration acceptable to the population and capable of supplying the maintenances of law and order. Parallel to this the Commission finds it essential that the principle of the Open Door should be maintained "not only from the legal point of view, but also, in the actual practice of trade, industry and banking."

The Commission dismisses as unsatisfactory suggestions of settlement (1) restoration of the *status quo ante*, and (2) the maintenance and recognition of the present régime of "Manchoukuo."

It lays down ten principles to which any satisfactory solution should conform. These are: 1. Compatibility with the interests of both China and Japan; 2. Consideration for the interests of the U.S.S.R.; 3. Conformity with existing multilateral treaties; 4. Recognition of Japan's interests in Manchuria; 5. The establishment of new treaty relations between China and Japan; 6. Effective provision for the settlement of future disputes; 7. Manchurian autonomy, consistent with the sovereignty and administrative integrity of China; 8. Internal order and security against external aggression, through "an effective local gendarmerie force, the withdrawal of all armed forces other than gendarmerie, and the conclusion of a treaty of nonaggression between the countries interested"; 9. Encouragement of an economic rapprochement between China and Japan; 10. International cooperation in Chinese reconstruction.

The Commission's broad recommendations are:

1. "That the Council of the League should invite the Governments of China and Japan to discuss a solution of their dispute on the lines indicated in the last chapter."

2. "If the invitation is accepted, the next step would be the summoning as soon as possible of an Advisory Conference, to discuss and to recommend detailed proposals for the constitution of a special régime for the administration of the Three Eastern Provinces (Manchuria)."

3. "Simultaneously with the sitting of the Advisory Conference, the matters at issue between Japan and China relating to respective rights and interests should be discussed separately, in this case also, if so agreed, with the help of neutral observers."

4. "Finally, we suggest that the results of these dis-

cussions and negotiations should be embodied in four separate instruments":

A. A declaration by the Government of China constituting a special administration for the Three Eastern Provinces, in terms recommended by the Advisory Conference.

B. A Sino-Japanese treaty dealing with Japanese interests.

C. A Sino-Japanese treaty of conciliation and arbitration, non-aggression and mutual assistance.

D. A Sino-Japanese commercial treaty.

Japan's reply to the Lytton Report, made public on November 21, constituted an uncompromising defense of Japanese activities in Manchuria. The findings of the Lytton Report were either denied *in toto* or completely brushed aside. To the conclusion reached by the Lytton commissioners that Japan's military activities "cannot be regarded as measures of legitimate self-defense," the Japanese statement replied that it "is entirely impossible to accept this gratuitous opinion." Japan's military operations, the statement declared, "had no relation to anything but self-defense, and the Japanese Government cannot allow either their necessity or their appropriateness to be the subject of discussion."

Contradicting the Lytton Commission's finding that the new Manchurian state was not called into existence by "a genuine and spontaneous independence movement," Japan repeated "confidently that the movement was a genuine, spontaneous, popular and natural one." This Japanese statement further argued that the instructions of the Tokyo Government forbade participation by Japanese subjects in the attempts to establish a new political authority in Manchuria, and declared that "in conformity with these instructions the Japanese, civil as well as military, uniformly abstained from interference."

Suggestions looking toward a solution of the controversy offered in the Lytton Report were brushed aside by the Japanese statement as merely "an illustration of one way in which the general principles advanced might be applied," and as materially diminished in importance by Japan's recognition of Manchoukuo. In any case, these suggestions were held to be "too refined and intricate, and not adapted to the realities of the Far East," since they would result in a "disguised international control of Manchuria" which Japan could not accept; since the maintenance of peace and order in Manchuria by an international gendarmerie was not "practical"; and since the prime requisite for the success of the recommendations, a strong and stable central government in China, was lacking. The opening address of M. Matsuoka, Japanese delegate, before the League Council on November 21 was even more intransigent than the Japanese written defense. See MILITARY PROGRESS.

**LEAGUE ACTION ON MANCHURIA AND SHANGHAI.** The Far Eastern situation remained the most important and difficult problem before the League of Nations throughout 1932. With the commencement of the Japanese attack upon Shanghai (see CHINA under *History*), the League Council on January 29 ordered the Secretary-General to investigate the appeal of China for League action under Articles X and XV of the Covenant. A special commission was appointed to investigate the situation at Shanghai, which reported on February 14. On February 16, the Council reminded Japan of its obligations under Article X of the League Covenant, and with the

continuation of the armed struggle at Shanghai the Council (February 20) called a special meeting of the Assembly for March 3. On March 4, the Assembly unanimously voted that Japan must withdraw from Shanghai and that both nations must end hostilities.

The extraordinary session of the League Assembly adjourned on March 11, after adopting a resolution in three parts. The first part of the resolution affirmed the binding nature of the principles and provisions of the League Covenant and the Anti-War Pact, and declared it "incumbent upon members of the League of Nations not to recognize any situation, treaty, or agreement" brought about by means contrary to the Covenant. The second part recalled the Assembly's resolution of March 4 and requested the co-operation of the powers in maintaining order in the evacuated zone upon cessation of hostilities and withdrawal of the Japanese forces. The third part declared that the whole of the Sino-Japanese dispute (i.e. including Manchuria) had been referred to the Assembly, and set up a committee of 19 members to act in the Assembly's behalf. The committee was composed of the President of the Assembly, 12 Council members, and six other elected members. The first report of the committee was to be submitted to the Assembly not later than May 1.

The six members elected to the committee on March 11 included Switzerland, Czechoslovakia, Colombia, Sweden, Portugal, and Hungary, the first four of which had been among the most outspoken opponents of Japan in the Assembly. Dr. Sato and Dr. W. W. Yen refrained from voting on the resolution, the former because of Japan's refusal to admit the Assembly's jurisdiction in the Manchurian question, and the latter because of failure to receive instructions from China. Both, however, participated in the voting for the six elected members of the committee.

Supported by the United States, the League on March 17 reaffirmed that Japan must withdraw from Shanghai without concessions from China. The Lytton Commission was to act as arbitrator. Meanwhile the Japanese had accepted League proposals for a peace conference at Shanghai. Having gained their announced military objectives they finally agreed to a truce (May 5), later withdrawing their troops.

The attention of the League was now shifted to the situation in Manchuria and to the forthcoming report of the Lytton Commission, which was awaited with intense interest and anxiety in most of the world's capitals. Despite warnings in a session of the Council that recognition of Manchoukuo previous to the issuance of the Lytton Report would prejudice her case before the League, Japan on September 15 signed a protocol of recognition with the Premier of Manchoukuo.

Action upon the Lytton Report was not forthcoming until December 7, when Czechoslovakia, the Irish Free State, Spain, and Sweden submitted a resolution to the Assembly calling upon it to seek the co-operation of the Soviet Union and the United States in settling the dispute on a basis involving the non-recognition of Manchoukuo, as a puppet régime set up by force of Japanese arms in violation of existing international obligations. The representatives of the major powers, however, submitted guarded statements avoiding any of the concrete issues stressed in

this resolution. In a two-hour address Yosuke Matsuoka, the Japanese representative, declared that Japan was ready to undergo the severest sanctions of the Covenant. Under this bombardment, the Assembly merely referred the various documents, speeches, and resolutions to the Committee of Nineteen, directing that body to return proposals for a negotiation procedure at the earliest possible moment.

Virtually the same process was repeated in the Committee of Nineteen, where a sub-committee of five wrestled with the problem of devising a conciliation formula stiff enough to bring the United States to the conference table and yet weak enough to induce Japan to enter the negotiations. Strenuous objections by Japan to a draft resolution completed on December 15, calling for Soviet-American participation in negotiations to be guided by the "principles and recommendations" of the Lytton Report, eventually led to a deadlock. On December 20 it was reported that the Committee of Nineteen would adjourn until mid-January, leaving interim negotiations to be carried on through diplomatic channels.

**SIXTY-SIXTH COUNCIL SESSION.** The sixty-sixth session of the Council was the principal meeting in January, 1932. Other meetings were those of the Economic and Financial Committees, the Gold Delegation, the Committee of Coal Experts, the Permanent Central Opium Board, and the Supervisory Commission.

The Council session opened on January 25 at Geneva. Its agenda included between 30 and 40 questions dealing with all branches of the League's activity, the most important being that of the appeal of the Chinese Government under Article XI of the Covenant, with regard to the occupation of Manchuria by the Japanese. In the legal and constitutional field the Council constituted a Committee to study the present system of Council elections, made arrangements with regard to the date of convocation of a Committee on the harmonization of the Covenant and the Paris Pact, and considered the position as regards the ratification of League Conventions.

Important decisions were taken in connection with certain Mandates. The Council approved the opinion of the Permanent Mandates Commission with regard to the termination of the Mandate in Iraq, and set up a Committee to draft the declarations which Iraq would be required to make before the Council. It also approved an agreement between the British and French Governments concerning the Syrian-Trans-Jordan frontier.

The minority questions before the Council concerned petitions from the Ukrainian minority in Poland, the German minority in Upper Silesia, and the descendants of the former Szekler Frontier Guard Regiment, in Rumania. As regards Danzig, the Council noted the opinion of the Permanent Court of International Justice concerning access to the port of Danzig and the anchorage of Polish war vessels, and referred a question concerning the use of the port to the Special Committee which had already made a study of certain matters in connection with Danzig (q.v.).

In addition to the Chinese appeal under Article XI, the political questions before the Council included the claim of the Finnish Government against the British Government regarding Finnish vessels used by the latter during the war,

the Liberian Government's request for assistance, Lithuania's application concerning traffic on the Landwaro-Kaisiadorys railway line, and the termination of the work of the Greco-Bulgarian Inter-Migration Commission. The Council also reviewed the work of the Economic and Financial Committees, the Health Committee, the Fourth General Transit Conference, and the International Educational Cinematographic Institute.

The presidency of the sixty-sixth session of the Council fell to France. As the French Prime Minister and Minister for Foreign Affairs was detained in Paris by public affairs, and as M. Briand was prevented for reasons of health from attending, M. Paul-Boncour took the Chair.

**ECONOMIC COMMITTEE.** The thirty-seventh session of the Economic Committee was held from January 14 to 19. The principal feature of this session was an exchange of views regarding the influence of the financial situation on the régime of international exchanges. The Committee also considered the question of economic rapprochements in Europe, the international situation in certain branches of production (in which connection it reviewed the work of the coal experts), agriculture, bribery and unfair commercial practices, and procedure for the friendly settlement of economic disputes between States. It held a joint meeting with the Financial Committee to consider certain questions touching the activity of both Committees.

The Council met in a special public session on April 2, under the presidency of Premier Tardieu of France, in order to consider the League financial committee's report on the need of helping Austria, Greece, Bulgaria, and Hungary.

**LIBERIA.** Speaking in the British House of Lords on March 16, Viscount Snowden of Ickornshaw disclosed that the League of Nations, and the British, French, and United States Governments had failed to put an end to slavery in Liberia. The recommendations of the League's financial commission to the Republic of Liberia in 1930, had brought a very unsatisfactory reply from the Liberian Government.

The Republic of Liberia was declared a "health menace" in a newly published report of experts of the League of Nations. Conditions there were "so chaotic" as to threaten disintegration. There were "12,000 citizens with 1,000,000 subjects." Yellow fever was rampant with mosquitoes, swarming rats, and practically no doctors. "Liberia's financial situation is tragic. She has no budget, no accounts, and no money." The Liberian Government still balked at plans of rehabilitation by the League. See **LIBERIA** under *History*.

**ASSEMBLY SESSIONS.** The Thirteenth Ordinary Session of the Assembly opened on September 26. Fifty-three of the 56 members of the League of Nations were represented. The session was opened by the President in office, Mr. de Valera of the Irish Free State.

"There is," he said, "on all sides complaint, criticism, and suspicion. People are complaining that the League is devoting its activity to matters of secondary or very minor importance, while the vital international problems of the day, problems which touch the very existence of our peoples, are being shelved or postponed or ignored."

M. Politis (Greece) was elected President of the Session by 44 votes out of 50 registered. The Assembly held in all 12 plenary meetings and

ended its work on October 17. The admission of Iraq to the League, the first country under mandate to be promoted to full independence, was its outstanding decision (see IRAQ under *History*).

The other principal events were the publication of the Lytton Commission Report and the appointment by the Council, approved by the Assembly in November, of M. Joseph Avenol of France to succeed Sir Eric Drummond, who on October 6 resigned as Secretary-General of the League. Dr. Ernst Trendelenburg was appointed the new Assistant Secretary-General of the League to take charge of the Economic and Financial Section. Dr. Trendelenburg, as Permanent Under-Secretary of State of the Ministry of Economics of the Reich for 10 years, exercised a marked influence on Germany's economic policy.

The general discussion on the work of the League, which included the dispute between Bolivia and Paraguay, was shorter than in preceding years. The explanation is that the grave problems at issue were being dealt with by other bodies; disarmament by the Conference for the Reduction and Limitation of Armaments, the Far Eastern dispute by the Council and the Special Assembly, the economic and financial crisis by the World Monetary and Economic Conference.

The Assembly attended to different legal and constitutional, economic and financial, social and humanitarian questions as well as to problems bearing on intellectual coöperation, communications and transit, mandates, the protection of minorities, etc. It elected three non-permanent members of the Council, decided in principle to set up an advisory committee of experts on slavery, and adopted certain measures to provide for the reorganization of the Secretariat.

In his closing speech, M. Politis, the President of the Assembly, pointed out that despite all difficulties the work of the League was proceeding regularly; in every sphere with which it was concerned its efforts were being pursued with unshaken continuity; while by the admission of three new Members during the past year (Iraq, Turkey, Mexico), and by the extension of its activities to every continent, it was steadily making good its claim to universality.

**TURKEY JOINS LEAGUE.** On July 18 the Special Session of the Assembly of the League of Nations unanimously admitted to membership the Turkish Republic, which thus automatically became a member of the International Labor Organization. This left the United States and Soviet Russia alone as non-members attending the sessions.

**THE LEAGUE BUDGET.** The question of the League budget was hard fought, both in the Fourth Committee and on the floor of the Assembly. It was found impossible to effect a proposed general 10 per cent reduction in salaries of members of the Secretariat because of existing contracts. However, some of the major officials accepted voluntary reductions. A 10 per cent reduction in all future contracts was decided upon, as were other budgetary reductions. As finally adopted, the budget total for 1933 was not materially different from that of 1932; this in spite of heavy expense for extraordinary sessions of Council and Assembly and for the World Economic Conference.

Much of the League's financial problem, it de-

veloped, lies in the fact that one-third of the amount apportioned for the 1932 budget has not been paid. Germany proposed to deposit her proportion of League expenses in the Reichsbank to be spent in Germany for material for the new League building.

**ADMINISTRATIVE REORGANIZATION.** After much discussion in the Fourth Committee, a reorganization plan for higher officers of the Secretariat was finally agreed upon. This problem has been before the Assembly for several years. One group of states has favored abolition of the three posts of under secretary-general, contending that three officers were always representatives of larger states and brought a nationalistic spirit to the Secretariat. Another group has insisted that these posts be retained, and even that their number be increased.

According to the plan agreed to, adopted by the November Assembly, there will be two deputy secretaries-general and three under secretaries-general. One of the deputy secretaries-general must be a citizen of one of the smaller powers. No nation will be allowed to have more than one directorship in the Secretariat.

Each year three non-permanent members of the Council are retired and three countries are elected to fill the vacancies. In 1932 Poland, Mexico, and Czechoslovakia were elected to non-permanent seats.

**NATIONALITY OF WOMEN.** Outside the realm of League organization the question which perhaps created the greatest interest was that of nationality of women. At the League's Conference on Codification of International Law, held at The Hague in 1930, a convention on this subject was drawn up. Various international women's organizations, representing it is said over 45,000,000 women, felt that this convention did not go far enough; that it did not call for real equality of sexes in the matter of nationality. They, therefore, petitioned the Assembly to seek to have The Hague convention amended before being sent to states for ratification. The real fight of the women's organizations was for a recognition by all nations that the nationality of a wife shall not be affected without her consent either by marriage or by any change in the nationality of her husband.

Because some of the nations indicated unwillingness to accept this principle, the Assembly decided to support The Hague convention in its original form, with the understanding that the decision was not to prejudice an effort to amend the convention to meet the women's demand when the time seemed ripe.

**THE LEAGUE AND THE PRESS.** Various complaints had been made to the League relative to the relationship of the press to the League and national governments. Some of these had to do with what was designated as false news, for which guilt was laid at the door of the press, and others with the press censorship. These questions were discussed in the Sixth Committee. The consensus seemed to be that a national censorship rather than a laxity of the press was chiefly responsible for false news. Sentiment in the Committee was decidedly against strict censorship, but it was realized that this was a domestic matter in which the League could not interfere. In a resolution adopted by the Assembly the fullest possible publicity for League meetings was asked. The Council was invited to consider the possibilities of affording to journalists

cheap facilities for communicating to their newspapers information through the League wireless station.

**WORLD COURT STATUTE.** Due to failure of a large number of states to ratify it, it had been impossible to put into effect the revised Statute of the World Court, which was drawn up in 1930. The United States had particular interest in this Statute, because it "stabilized" the procedure in regard to advisory opinions, in line with the Root Formula. At one time Cuba opposed the revised Statute, and so made its adoption impossible. However, the Cuban objection was withdrawn. The Assembly urged the nations to expedite ratification of the Statute so that it could be put into force.

**INTERNATIONAL LABOR OFFICE.** The International Labor Office appointed Harold Beresford Butler as its director in place of the late Mr. Albert Thomas. Mr. Butler was one of the three men who organized the Ministry of Labor in Great Britain. In 1920 M. Thomas invited him to become his Deputy at the International Labor Office, in the organization of which Mr. Butler played a prominent part.

**UNITED STATES AND THE LEAGUE.** The United States is represented, officially or unofficially, in the following special agencies of the League of Nations:—the Greek Refugee Settlement Commission, the General Conference on Communications and Transit, the Preparatory Commission for Disarmament Conference, the Economic Consultative Committee, the Hungarian Finance Reconstruction, the Counterfeit Currency and Double Taxation Committees of the Financial Committee, the Health Committee, the Committee on Intellectual Cooperation, the Educational Cinematographic Institute in Rome, the Committee for Progressive Codification of International Law, the Advisory Commission for Protection of Children and Young People, the Committees having to do with the traffic in women and children, and the Preparatory Committee for the International Relief Union. See **LAW** in 1932.

**LEATHER.** The production of leather of all kinds in the United States showed further declines from the year 1931, according to the statistics of the Trade Survey Bureau of the Tanners' Council of America. The greatest decline was in the production of goat and kid leathers which dropped from 48,639,000 skins in 1931 to 37,010,000 skins in 1932, a decline of 24 per cent. While the drop in the production of cattle hide leathers for the year was not so marked—a decline from 16,238,000 hides in 1931 to 14,564,000 hides in 1932—the decrease from the 3-year average of 1925–27 is more significant and shows a lowered output of almost exactly 33½ per cent. Sheep and lamb leathers dropped to a total production of 27,323,000 skins from 32,458,000 skins in 1931. The production of calf and kip leathers, although reduced, was the least affected during the year and has shown less relative change from previous years; a drop to 11,579,000 skins in 1932, from 12,439,000 in 1931, and from 14,173,000 in 1930.

In 1932 the imports of raw hides and skins, except furs, into the United States showed a further decline, dropping to a total of 190,229,272 pounds valued at \$22,492,038 as against 271,082,934 pounds in 1931 valued at \$50,302,286. Declines were registered in all kinds of hides and skins except dry cattle hides and horse, colt, and ass skins. The imports of leather into the United

States in 1932 were valued at \$6,846,578 as against \$10,595,469 in 1931. Imports of leather boots and shoes amounted to 1,441,959 pairs valued at \$2,099,534 as against 3,391,742 pairs in 1931 valued at \$6,228,257; imports of leather slippers and moccasins dropped to 38,586 pairs valued at \$12,934 as against 299,636 pairs in 1931 valued at \$296,744; of leather footwear, fabric uppers, 1,862,652 pairs valued at \$643,815 as against 2,233,662 pairs in 1931 valued at \$492,952.

Exports of hides and skins from the United States increased for the year, though not in value, and amounted to 42,405,505 pounds valued at \$2,240,161 as against 35,593,201 pounds in 1931 valued at \$3,068,678; the increases were practically evenly distributed among the various hides and skins. Exports of leather in all grades, except horse and colt, declined markedly, the total value for the year being \$3,181,307 as against \$7,011,795 in 1931. Exports of men's and boys' shoes dropped to 288,169 pairs valued at \$638,166 as against 568,465 pairs at \$1,493,172 in 1931; women's shoes 426,826 pairs at \$798,372 against 977,502 pairs in 1931 at \$2,199,124; children's shoes 131,633 pairs at \$115,522 against 234,347 pairs in 1931 at \$241,801; slippers, athletic shoes, sandals, etc., dropped to 253,175 pairs valued at \$158,948 as against 540,704 pairs in 1931 valued at \$417,922. The total value of leather exports, according to *Commerce Reports*, although valued at less than in any other year since 1900, amounted to \$13,160,109, or almost twice that of the imports, \$7,137,537. See **BOOTS** and **SHOES**.

**LEBANON REPUBLIC.** See **SYRIA**.

**LEDYARD, LEWIS CARR.** An American lawyer and capitalist, died in New York City, Jan. 27, 1932. He was born in Detroit, Mich., Apr. 4, 1851, and attended Columbia and Harvard Universities, being graduated from the latter with the A.B. degree in 1872 and the LL.B. degree in 1875. Establishing himself as a corporation lawyer in New York City, he was associated after 1880 with James C. Carter in the firms of Scudder & Carter, Carter & Ledyard, and Carter, Ledyard & Milburn. He represented the United States Steel Corp. and other so-called trusts in important litigation, gaining special fame for the skill with which he handled the dissolution of the American Tobacco Co., which had been ordered by the U. S. Supreme Court in 1911. The plan which he evolved enabled the dissolution to proceed by gradual stages, while meeting statutory requirements and the approval of the court. He was also counsel for 30 years for the New York Stock Exchange, president of the Northern Finance Corp. and the Franklin Building Co., and director of many important banks, corporations, and railroads, among the latter being the Northern Pacific, New York Central, Lake Shore & Michigan Southern, Michigan Central, Pittsburgh, Fort Wayne & Chicago, Boston & Maine, Maine Central, and New York, New Haven & Hartford. After 1917 he was president of the New York Public Library, which he had previously taken an active part in forming, as a trustee of the Tilden Trust created under the provisions of the will of Samuel J. Tilden, through the merger of the Astor, Lenox, and Tilden libraries. He was also a past president of the Bar Association of the City of New York.

**LEEWARD ISLANDS, BRITISH.** The most northerly of the British Lesser Antilles, lying to the north of the Windward group and south-

east of Puerto Rico, comprising Antigua (with Barbuda and Redonda), Dominica, Montserrat, St. Christopher or St. Kitts (with Nevis and Anguilla), and the British Virgin Islands. Total area, 715 square miles; population at the census of 1921, 122,242, as compared with 127,193 in 1911. The estimated population in 1929 was 124,901. The chief towns are Roseau (Dominica), 7042 inhabitants; St. John (Antigua), 6997 inhabitants; and Basseterre (St. Christopher), 7736. The chief products are sugar, molasses, cotton, limes, tomatoes, onions, coconuts, tobacco, and salt. Revenue for 1930-31 was \$258,663; expenditure was \$296,024. In 1930 imports were valued at £917,056, and exports at £612,199.

The islands are divided into five presidencies under a central government, at the head of which is a governor, who is also commander-in-chief, assisted by a Federal executive council, and a Federal legislative council. Governor in 1932, Lieut.-Col. T. R. St. Johnston, appointed in 1929.

**LE GOFFIC, le gôfêk', CHARLES HENRI.** A French poet, novelist, and critic, died Feb. 12, 1932, in Lannion where he was born July 14, 1863. He attended the college there and *lycées* in Rennes, Nantes, and Paris. During 1884-92 he taught in Gap, Nevers, Evreux, and Le Havre. His literary career opened with a volume of verse, *Amour breton* (1889). With the crowning of *Le Crucifié de Kéraliès* (1892) by the French Academy he abandoned pedagogy for literature. In his works the traditions and customs of Brittany were depicted in a striking manner, on much the same lines as his contemporary Le Braz. His poetry includes *Le Bois dormant* (1900) and *Le Pardon de la reine Anne* (1902). Among his novels are: *Passé l'Amour* (1895); *La Payse* (1897); *Morgane* (1898); *L'Erreur de Florence* (1904); *Les Bonnets rouges* (1906); *Le Cigarière* (1907); *Passion celtic* (1908); *La double Confession* (1909); *Ventôse* (1910); *Le Pirate de l'île Ieru* (1913); *L'Abbesse de Guérande* (1921); *Chez les Jean Gouin* (1921); *L'Odyssée de Jean Chevanton* (1921); *L'illustre Bobinet* (1922). In collaboration with Gabriel Vicaire he wrote the drama *Le Sortilège* (1899). His other plays are: *Le Pays* (1913), a comic opera, with music by Guy Ropartz; and *Sans Nouvelles*, in collaboration with André Dumas which was performed at the Comédie Française in 1916. His impressions of the War are recorded in *Diamude, Steenstraete, Saint-Georges et Nieuport* (1915-18, a three-volume history of the marines on the Yser); *Bourguignottes et Pompons rouges* (1916); *Les Marais de Saint-Gond* (1917); *La Guerre qui passe* (1918); *Les trois Maréchaux* (1919); and *La Marne en feu* (1921). His critical writing is found in *Les Romanciers d'aujourd'hui* (1889); *Nouveau Traité de versification française* (1890); *Sur la Côte* (1897, crowned by the Academy); *L'Ame bretonne* (1st series, 1902; 2d series, 1908; 3d and 4th series, 1912-22); *Les Métiers pittoresques* (1903); *Fêtes et coutumes populaires* (1911); *Racine* (2 vols., 1912); and *La Littérature française aux XIX<sup>e</sup> et XX<sup>e</sup> siècles* (2 vols., 1913). In addition to being a member of the French Academy and an officer of the Legion of Honor he was president of the Society of Au-

thors, vice-president of the Society of French Poets and of the Syndicate of Literary Critics, and former president of the Breton Federation. He occasionally wrote under the pseudonym Tiburce.

**LEGRANDITE.** See MINERALOGY.

**LEGUIA, lá-gō'yá, AUGUSTO B. A** Peruvian statesman, died in Lima Feb. 6, 1932. He was born in Lambayeque Feb. 19, 1863, and received his education in Valparaíso, Chile. Later he served with distinction in the Chilean-Peruvian War of 1879-83. In 1886 he became a salesman for the New York Life Insurance Co., being made general manager for Peru, Ecuador, and Bolivia. He likewise organized and directed the Peruvian department of *La Sud América*, which although a Brazilian company was in reality an offspring of the New York Life Insurance Co. In 1903 he entered politics, accepting the office of Minister of Finance in the cabinets of Presidents Manuel Candamo (1903-04), and José Pardo (1904-08). The many fiscal improvements which he introduced, especially that of the collection of taxes through a private corporation, greatly increased the public revenues from 12,000,000 soles per annum to 30,000,000 soles.

Leguia was elected president of Peru in 1908 by an alliance of the Civil and Constitutional parties. During his term he maintained a firm control of the situation, although much criticized by the opposition, the Democrats, who attempted a revolution in May, 1909. His administration was marked by the encouragement of education, the settlement of boundary disputes with Brazil and Bolivia, improvement of the national defense, establishment of wireless communication between Lima and Iquitos, canalization of the River Rimac, and construction of a railroad from Lima to Huacho. On the election of Guillermo Billinghurst as president in 1912 Leguia went to London where he resided for seven years, serving as president of the Latin American Chamber of Commerce.

In May, 1919, Leguia returned to Lima, and with the aid of the army, seized power, expelled President Pardo, and was proclaimed interim president. His *coup d'état* was legalized by a Constituent Assembly which promulgated a new Constitution in January, 1920. In 1923, previous to the new elections, Congress ratified a constitutional amendment enabling the President to succeed himself for a second term but for only one immediate election. In 1927 another amendment permitted his reelection without restriction.

During Leguia's second and third administrations, as during his first, his conception of statesmanship remained that of the financier and industrialist. He encouraged the exploitation of Peru's resources, expending great sums in the development of railroads, motor roads, harbors, sanitation, and irrigation projects, schools, and other public works. When revenues proved insufficient to meet his ambitious demands, he floated large loans in the United States, Great Britain, Italy, and Germany.

The smoldering resentment of Leguia's iron-hand methods was fanned into flame by his refusal to withdraw at the end of his term in 1929. His régime had at first assumed the aspect of a benevolent dictatorship, but it had gradually become more severe so as to assure his continuance in office. There was instituted a rigid censorship of the press and a firm check on student and peasant agitations. Hundreds of his

political opponents were deported. The crowning act was the adoption in September, 1928, of a law which designated as a capital offense any act committed by Peruvians, either at home or abroad, which the government judged contrary to the social order and public welfare of Peru. His downfall dated from his "reinauguration" in October, 1929. Following the Wall Street crash, the Peruvian pound steadily declined until on Aug. 21, 1930, it reached the lowest point in history. Unable to float new loans, Leguia had also been forced to curtail his public-works programme and thousands had been thrown out of work. As in several other South American countries, the President was blamed for the increasing depression which had imposed hardships upon all classes. He narrowly escaped assassination in the Lima Cathedral on Good Friday, 1930.

Leguia's enemies were encouraged by the Bolivian revolt of June, 1930, against President Siles. The climax came in August, when Col. Luis M. Sánchez Cerro headed a military junta which forced him to resign. He left for Panama but was brought back and imprisoned first on the island of San Lorenzo in Callao harbor and then in the Lima penitentiary. The gravest charge brought against him was speculation and misuse of government funds during his terms of office. In August, 1931, the Supreme Court decided that the only body competent to prefer charges against him was Congress. However, as his unhappy condition had excited pity even among his political opponents, it is doubtful that the charges would have been pushed to this extreme.

**LEHIGH UNIVERSITY.** A nonsectarian institution for the higher education of men in Bethlehem, Pa., founded in 1866. The enrollment for the autumn of 1932 was 1473, distributed as follows: arts and science, 214; business administration, 333; engineering, 800; graduate students, 126. The enrollment for the summer session of 1932 was 436. The faculty numbered 179, including 23 persons on the administration staff. The endowment amounted to \$5,326,779, while the total income for the year was \$1,249,921. There were 196,000 volumes in the library. The department of philosophy and education was divided during 1932, separate departments being set up as part of a programme of expansion in the field of preparation for the profession of teaching. President, Charles Russ Richards, Eng.D., LL.D.

**LEHMAN, COL. HERBERT H.** See NEW YORK under *Political and Other Events*.

**LEHMANN, LOTTE.** See MUSIC.

**LEITER, JOSEPH.** An American capitalist, died Apr. 11, 1932, in Chicago where he was born Dec. 4, 1868. He was graduated from Harvard University in 1891 and then was an agent for his father, Levi Zeigler Leiter, Chicago merchant, until 1898. In the autumn of 1897 he bought an immense quantity of wheat on the Chicago Board of Trade, causing the price of that commodity to double and affecting grain traders throughout the world. At the beginning of 1898 he was the largest individual holder of wheat in the history of the grain trade, but unable to maintain his corner he ultimately lost more than \$10,000,000. He was president of the Zeigler Coal Co. and of the Chicago, Zeigler & Gulf Railway Co. and director of the American Security & Trust Co., of Washington, D. C., and other banks and corporations.

**LELAND, HENRY MARTYN.** An American manufacturer, died in Detroit, Mich., Mar. 26, 1932. He was born in Danville, Vt., Feb. 16, 1843, and attended the public schools of Millbury, Mass. Having learned the machinist's trade, he served as a toolmaker in the United States arsenal in Springfield during the Civil War. After the war he became associated with Brown & Sharp Manufacturing Co. of Providence, R. I., as superintendent of their sewing machine department and also invented the hair clipper and grinding machine which they manufactured. In 1890 he removed to Detroit where he organized the Leland-Faulconer Manufacturing Co., toolmakers. On the advent of the motor launch and automobile this company began the manufacture of internal combustion engines and transmission gears. In 1904 he founded the Cadillac Motor Car Co., of which he was general manager until 1909 and president and advisory manager until 1917. This company developed an electrical starting device and a V-type engine invented by his son, Wilfred C. Leland. In 1917, with his son, he founded the Lincoln Motor Co., which obtained the first contract for the manufacture of Liberty aviation motors used in U. S. Army airplanes during the World War. He acted as president of this company until 1922. He was also founder and president during 1911-25 of the Detroit Citizens' League.

**LELAND STANFORD JUNIOR UNIVERSITY.** See STANFORD UNIVERSITY.

**LEMONS.** See HORTICULTURE.

**LENZ, MAX.** A German historian, died in Berlin, Apr. 7, 1932. He was born in Griefswald, June 13, 1850, and attended Bonn, Greifswald, and Berlin Universities. In 1881 he was made professor medieval and modern history at the University of Marburg, and seven years later was called to the University of Breslau. In 1890 he joined the history faculty of the University of Berlin, and during 1911-12 was also rector of that institution. He then became lecturer in modern history at the University of Hamburg, where he remained until 1922. Among his works may be mentioned: *Drei Traktate aus dem Schrötenzyklus des Konstanzer Konzils untersucht* (1870); *Die Schlacht bei Muhlberg* (1879); *Briefwechsel Landgraf Philipps des Grossmütigen von Hessen mit Bucer* (3 vols., 1880-91); *Martin Luther* (1883); *Zur Kritik der Gedanken und Erinnerungen des Fürsten Bismarck* (1899); *Die grossen Mächte, Rückblick auf unser Jahrhundert* (1900); *Geschichte Bismarcks* (1902); *Napoleon* (1905); *Geschichte der Universität Berlin* (4 vols., 1910-18); and *Kleine Historische Schriften* (3 vols., 1910-24).

**LEWIS CARROLL CENTENARY.** See CELEBRATIONS.

**LEXICOGRAPHY.** See PHILOLOGY, MODERN.

**LIBERIA.** A Negro republic on the west coast of Africa, extending from the British colony of Sierra Leone on the west to the French Ivory Coast on the east, with about 350 miles of coast line. Area, about 43,000 square miles; population, estimated at 1,000,000, most of whom live in the interior. They belong to about 40 tribes and speak as many languages. The civilized inhabitants, reported at about 60,000, live along the coast and speak English. Whites in the country number about 150. Capital, Monrovia, with 10,000 inhabitants (including Krutown). In 1930, there were 7588 pupils in 169 schools (51 Government and 118 mission schools).

**PRODUCTION AND TRADE.** Agriculture, mining, and industry are comparatively undeveloped. Cocoa and cotton are produced in small quantities, but the staple product is native coffee. Other products are piassava fibre, palm oil, palm kernels, chillies, and beniseed. In 1930 over 30,000 acres of the 1,000,000-acre Firestone rubber concession, granted in 1926, had been planted to rubber trees. About 10,000 laborers were employed on the concession (1931). Imports in 1930 were valued at \$1,228,102; exports at \$838,738.

**FINANCE.** Government revenues declined from \$1,276,438 in 1928 to \$551,306 in 1931, while the deficit increased from \$61,648 in 1927-28 to \$220,000 in 1930-31. A \$5,000,000 loan was floated in the United States in 1927, of which \$2,027,700 was expended by 1931. Under the loan agreement, there was an annual burden of \$269,284 on the treasury, representing interest charges and salaries of American loan officials. These charges absorbed 20 per cent of the revenues in 1928 and 54.9 per cent in 1931.

**COMMUNICATIONS.** Means of transport and communication are severely limited, there being no railway, telephone, or telegraph service. Along the coast are 150 miles of roads passable for light motor traffic but native porters carry all goods in the interior.

**GOVERNMENT.** The Constitution, modeled on that of the United States, vests executive power in a president, assisted by a cabinet of eight, and legislative power in a legislature of two houses. Suffrage is restricted to Negroes owning land. English is the official language. President in 1932, Edwin Barclay.

**HISTORY.** The League of Nations during 1932, in collaboration with the United States and Liberia, carried forward negotiations looking toward the complete reorganization of chaotic conditions in the Negro republic. The Brunot commission appointed by the League, which visited Liberia in 1931 at the request of the Liberian government, completed its report on Sept. 25, 1931. The report, recommending an extensive reconstruction programme to be carried out by 20 foreign advisers and officers, was submitted to the Liberian government in November and made public in May, 1932.

When the League's committee on Liberia met in Geneva on Jan. 26, 1932, with an American representative in attendance, the Liberian government asked for a delay in consideration of the Brunot commission's report. Agreeing that no decision should be taken until the following April, the League committee nevertheless proceeded with a preliminary examination of the report. The report revealed conditions of slavery, accompanied by much brutality. The Liberian government's formal reply to the Brunot report was made on Apr. 27, 1932. Virtually all the recommendations of the commission were rejected, Liberia offering only to appoint for five years three provincial commissioners recommended by the League.

On the basis of the Brunot report and Liberia's counter-proposals, the League committee now framed a far-reaching plan of reconstruction, which was approved by the Council of the League on May 20. It was based on the belief that forced labor in Liberia, revealed in the report of the Christy commission of January, 1931, could be eradicated only by a fundamental reorganization of the country. Rejecting proposals

for a League reconstruction loan, the League committee recommended a moratorium on the service of the 1925 loan until the annual revenues of the government reached \$650,000. It recommended that the size of the Firestone rubber concession be reduced and the rental increased from 6 to about 50 cents an acre. The administrative reorganization suggested called for the division of Liberia into three Provinces, each administered by a Provincial and Deputy Commissioner nominated by the League but responsible to the Liberian President. The engagement of a foreign chief adviser to the Liberian President and of two medical officers and continuance of the five financial officials under the 1926 loan contract was also urged.

In a memorandum to League officials, released at Geneva, May 18, 1932, the United States government waived its special position in Liberia in favor of "sustained international coöperation." It warned, however, that "conditions in Liberia have now grown so chaotic, and adequate authority has become so demoralized that it is doubtful whether an effective government exists in the country." In the event that no solution of the Liberian problem was reached by the autumn, the United States reserved full liberty of action, a phrase interpreted as a threat to intervene. The United States and Great Britain persisted in refusing to recognize the presidency of Mr. Edward Barclay, a member of the administration responsible for the forced labor régime, who had been elected President in May, 1931. Faced by the threat of intervention and of a new outbreak among the tribes of the interior, the Liberian government in August announced that it accepted in principle the reforms recommended by the League committee.

Early in the year (January 30), representatives of the American, British, and French governments informed the Liberia committee at Geneva that the Liberian government had taken repressive measures against the Krus. The same governments protested on March 7 against an alleged massacre of unarmed Krus on Dec. 11, 1931. On March 14, the three governments sent the British Vice Consul at Monrovia to investigate the situation and a week later the Liberian government sent a commission of three—two Liberians and Mr. Travell, an American loan official—to the Kru coast. The three reports submitted by the British Vice Consul, Mr. Travell, and the two Liberians, respectively, indicated that the government employed force to suppress a revolution which was caused in part by the hope of relief from the government's oppression aroused by the visit of the Christy commission. The investigators found that the Liberian Frontier Force had burned about 40 native villages and that between 12,000 and 15,000 natives had fled to the bush and continued to defy the government. The League Council accordingly dispatched a representative to the Kru coast in May, 1932, to persuade the rebellious tribesmen to return to their homes.

See **LEAGUE OF NATIONS.**

Consult Raymond Leslie Buell, "The Reconstruction of Liberia," *Foreign Policy Reports*, Aug. 3, 1932, vol. viii, no. 11.

**LIBIA, lib'ī-a.** An Italian African possession bounded on the north by the Mediterranean, east by Egypt, west by Tunis and Algeria, south by the Anglo-Egyptian Sudan and French West Africa. It was transferred from Turkey to Italy

by the treaty of Oct. 18, 1912 and is divided into the administrative districts of Tripolitania and Cyrenaica. See CYRENAICA; TRIPOLITANIA.

**LIBRARY ASSOCIATION, AMERICAN.** The official organization of librarians in the United States and Canada, founded for the purpose of promoting library service and librarianship. In 1876 its membership was 103; in 1933 it was more than 13,000. The activities of the association are carried on by its officers; by more than 60 voluntary committees and boards, engaged in studying such problems as book buying, book selection, cataloguing, and library work with the blind and with the foreign born; by hundreds of voluntary workers; and by the members of the headquarters staff, which numbered more than 50 in 1932.

The association issues various books and pamphlets for libraries and in the interest of library progress. Important publications of the year included: Leal A. Headley, *Making the Most of Books*; A. L. A. *Catalog, 1926-1931*; William M. Randall, *The College Library* (published jointly with the University of Chicago Press); Ermine Stone, *The Junior College Library*; *The Prison Library Handbook*; *Children's Library Yearbook, No. 4*; and *School Library Yearbook, No. 5. Reading with a Purpose* courses, published by the association during 1932, were: Aaron Director, *Unemployment*; Philip N. Youtz, *American Life in Architecture*; and Dudley Crafts Watson, *Interior Decoration*. Forthcoming courses include: Robert C. Brooks, *Russia, the Soviet Way*; and Alain L. Locke, *The Negro*.

The association issues three periodicals: *Bulletin of the American Library Association*, a monthly which includes the annual reports, the conference proceedings, and the yearly handbook, and which in 1932 included also a number devoted to library salary statistics; *The Booklist*, published monthly as a guide to the selection and purchase of current books; and *Subscription Books Bulletin*, a quarterly which presents critical estimates of subscription books and sets sold currently by canvassing agents.

The fifty-fourth annual conference was held April 25-30, in New Orleans, La., with 1300 librarians present. On this occasion, the John Newberry Medal, given annually by the section for library work with children, for the most distinguished children's book of the year, was awarded to Mrs. Laura Adams Armer for her book, *Waterless Mountain*.

The council approved the establishment, at association headquarters, both of an information and advisory service for college libraries and of an advisory service on library work with children in public libraries and schools. Council authorization was given to create an advisory board for the study of special projects.

A resolution adopted by the council urged that, while librarians and library authorities should "meet sympathetically the demands of appropriate bodies for the utmost efficiency and economy," they should also "stand unflinchingly for the maintenance of those library services which help to sustain morale and to increase understanding of the many difficult problems now confronting the American people." A second resolution which received council approval urged library trustees, librarians, and directors of library schools to do all in their power to maintain salary scales commensurate with those in other professions. The council voted to adopt princi-

ples for school and public library development and indorsed in principle the consolidation of counties.

The fifty-fifth annual conference is scheduled to be held in Chicago Oct. 16-21, 1933.

At the annual midwinter meeting of the association, held in Chicago Dec. 28-31, 1932, the executive board, acting on the authorization of the council and the recommendation of the committee on annuities and pensions, adopted a retirement plan for members of the association, under which 30,000 librarians are, or may become, eligible for annuities.

On the recommendation of the trustees' section of the association, the council passed a resolution adopting statements on "Reduction of Public Expenditures" and "Increased Demand for Library Service," which declared that the elimination of waste in public expenditures should precede any curtailment of socially useful service, and that, in the interest of an intelligent, understanding citizenship, the essential services of the public library must be maintained. The council voted to request the officers of the association to solicit the cooperation of other national and regional educational, cultural, and social agencies and organizations for good government in developing, adopting, and promulgating a citizens' platform in consonance with the adopted statement on governmental expenditures.

A grant of \$500,000, to be added to the permanent fund of the American Library Association, has been made by the Carnegie Corporation of New York, and the first half of that sum was paid in October, 1932, in accordance with the announcement made some months ago that the corporation would give \$500,000 in 1932-33 and a similar amount in 1933-34. A final annual grant of \$13,500 was made by the corporation to the association, for library extension service in the south.

The General Education Board in 1932 granted \$45,000, payable over a period of four years, to the American Library Association for a cooperative cataloguing enterprise to be carried on under the direction of the association's committee on cooperative cataloguing. Headquarters for the enterprise have been established at the Library of Congress.

The officers elected for 1932-33 are: President, Harry Miller Lydenberg, assistant director, New York Public Library, New York City; first vice-president, Julia Ideson, librarian, Public Library, Houston, Texas; second vice-president, Joseph L. Wheeler, librarian, Enoch Pratt Free Library, Baltimore, Md.; treasurer, Matthew S. Dudgeon, librarian, Public Library, Milwaukee, Wis. The headquarters of the association are at 520 North Michigan Avenue, Chicago.

**LIBRARY ASSOCIATION, THE.** An organization of libraries and librarians throughout the British commonwealth of nations, founded in 1877 and incorporated by Royal charter in 1898. Its primary objects are: to unite all persons engaged or interested in library work by holding conferences and meetings for the discussion of bibliographical questions and matters affecting libraries; to promote the better administration of libraries; to promote whatever may tend to the improvement of the position and qualifications of librarians; to watch legislation affecting public libraries, and to assist in the promotion of such further legislation as may be considered necessary for the regulation and management or

extension of public libraries; to promote and encourage bibliographical study and research; and to hold examinations in librarianship, and to issue certificates of efficiency. Membership in the association is also open to institutions and individuals interested or engaged in library work, whether national, governmental, public, university, special, or private in character. It maintains a professional register of more than 800 qualified persons, classified as Fellows (F.L.A.) and Associates (A.L.A.); candidates for senior positions in libraries are selected from amongst those who have been elected to fellowship or associateship. The school of librarianship at the University of London is conducted under the joint auspices of the university and of the association. Among the association's publications are: *The Library Association Record*; *The Library Assistant*; *The Library Association Year Book*; *The Year's Work in Librarianship*; and *The Subject Index to Periodicals*. The president in 1932 was Sir Henry Miers, M.A., D.Sc., LL.D., F.R.S.; the secretary, P. S. J. Welsford, F.I.S.A. Headquarters are at 26-27 Bedford Square, W. C. 1, London.

**LIBRARY PROGRESS.** In 1932 libraries in all parts of the United States reported record-breaking use, as economic and social insecurity led men and women in increasing numbers to attempt to understand through reading the fundamental and current problems which confront them as citizens. Books on the business of earning a living were in great demand. So also were the books of many kinds which contribute to the maintenance of a spirit of hope.

Growing realization of the need for maintaining the library's essential services in the communities which now have libraries and for extending those services to communities still without libraries has been manifest in 1932 in the organization of the Association for Progress through Libraries and in the formation of State citizens' library committees in Louisiana and New York. Several other States either had already formed citizens' committees or are now taking steps in that direction. Officers of the New York citizens' committee include Elihu Root, honorary chairman; John H. Finley, chairman; George J. Ryan, Claude G. Bowers, and Owen D. Young, vice chairman.

Various national organizations are continuing their programmes for library extension. The General Federation of Women's Clubs and the National Congress of Parents and Teachers again indorsed the county library at their annual conventions. The federation issued a library extension leaflet, *Library Service for Everybody*. Rotary International discussed libraries at its meeting in Seattle, Wash., while the Lions Club and other service clubs throughout the United States reported many activities in support of library service. State conferences held to follow up the White House Conference on Child Health and Protection have called attention to rural library needs.

Rural library service has been furthered in a number of States during the year. In Maine a book automobile, presented to the State library by the State Federation of Business and Professional Women's Clubs, visited all parts of the State, offering direct book service to individuals without access to local libraries and establishing traveling library stations at many points. During the latter part of the year, the automobile was

used for an experiment in intensive book service to a single district. In the South the Rosenwald demonstration libraries have made heroic efforts, successful in most cases, to maintain the local financial support which qualifies them for Rosenwald grants. The records of book circulation in these counties show beyond doubt that rural people will read if they have the opportunity. Library development in the South was stimulated by a meeting of Southern library extension workers, held in New Orleans in April, 1932, to discuss common aims and to coördinate programmes for State, school, and county library development. Intensive regional field work in the South was continued under the library extension board of the American Library Association.

**CIRCULATION.** More people used libraries, more books were borrowed from libraries, and more books were used in library reading rooms in 1932 than ever before. Sample reports from 33 cities, representing only one-tenth of the total population of the United States, show that the number of books borrowed from their libraries in 1932 was 81,591,423, an increase of more than 37 per cent since 1929. The highest percentage of increase shown by any of the 33 cities was 173 per cent in Hammond, Ind. Akron, Ohio, and Dallas Texas, stood next, each showing an increase of 116 per cent.

In the face of such increases, widespread economy programmes threatened the curtailment of library service. Some cities, however, exempted their libraries from cuts imposed on other departments. In Oakland, Calif., for instance, the library budget was increased \$8000 for 1932-33, although the assessed valuation of the city dropped \$15,000,000 and the tax rate was reduced four cents. In Duluth, Minn., the branch libraries, which it had first been decided to close for the sake of economy, were kept open on account of their services to the unemployed.

**ADULT EDUCATION.** The adult education service given by public libraries was greatly extended, principally because of the increased demands of the general public for information on social and economic questions. In 1932 eight libraries inaugurated advisory service to readers, bringing the total number of libraries offering such assistance to 50.

"Adult Education and Rural Life" was the theme of the American Country Life Conference, held at Oglebay Park, Wheeling, W. Va., Oct. 14-16, 1932. Book needs of country residents and means of developing adequate rural library service were discussed at a forum on "The Extension of Library Service." A statement, prepared by the library extension board of the American Library Association, on coöperation between State library extension agencies and State agricultural extension services in stimulating reading interests among rural people and in providing the necessary books, showed a great variety of ways in which the two types of organization could work together to bring books to the rural population.

The American Library Association and individual libraries coöperated with the National advisory Council on Radio in Education and the University of Chicago Press in the preparation and distribution of reading lists for those interested in educational radio programmes, broadcast over a nation-wide network, on economics, labor, vocational guidance, government, psychology, and child training. Announcement of the

programmes and distribution of the book lists in advance enabled librarians to prepare to meet demands for the recommended books.

As a result of the passage of the Pratt-Smoot Bill, appropriating \$100,000 yearly for books for the adult blind, more than 150 books have been embossed for the first time, and more than 6400 copies have been distributed to libraries serving the blind. The *Reading with a Purpose* courses, published by the American Library Association, together with one book recommended in each course, are being embossed. Dr. Herman H. B. Meyer, as the director of the project, Books for the Blind, is in charge of the work, with headquarters at the Library of Congress.

**CHILDREN'S READING.** *Children's Reading*, the report of a study of voluntary reading by boys and girls in the United States, made by a subcommittee on reading of the White House Conference on Child Health and Protection, was published in 1932. Carl H. Milam, secretary of the American Library Association, was chairman of the subcommittee.

**LIBRARY SCHOOLS.** The fall of 1932 saw the discontinuance of the library school of the Los Angeles Public Library and the suspension of the library school of the St. Louis (Mo.) Public Library. In each case economic conditions and a general oversupply of professionally trained librarians contributed to the decision of the responsible authorities to close a well established and successful school. The same considerations led several other library schools voluntarily to reduce their enrollments.

In 1931-32 the library schools had larger enrollments than ever before, 35 schools having reported 1636 students in November, 1931. Enrollment figures for 1932-33 showed a decrease of approximately 300, of which slightly more than 200 occurred in the 26 library schools accredited (23 fully and 3 provisionally) by the board of education for librarianship of the American Library Association.

**SALARY AND EMPLOYMENT CONDITIONS** Salary and employment conditions among librarians received attention at various meetings of the board of education for librarianship and the salaries committee of the American Library Association and the committee on supply and demand of the Association of American Library Schools. Early in 1932 the board recommended that library schools reduce the size of their classes through a more rigid scrutiny of applicants; that, in general, the establishment of new training agencies be given the most careful consideration; that employers of librarians raise the professional requirements for library positions and discriminate more accurately among various types of credentials offered; and that library school faculties and librarians generally take the opportunity afforded by the present situation to discover those few young people who show marked personal qualifications and promise and to encourage them to prepare adequately for librarianship.

In December, 1932, a resolution submitted by the board and the committee on salaries and adopted by the council of the American Library Association provided for annual collection of data on unemployment among librarians, requested the cooperation of junior members in the effort to find a solution for the unemployment problem, recommended to the association's executive board the appointment of a committee on unemployment and methods of relief for unem-

ployed librarians or the delegation of the duties of such a committee to an existing committee, and put the council on record as favoring radical reduction of enrollment in library training agencies by the placing of greater emphasis on personal qualifications and experience before admittance.

**INTERNATIONAL COÖPERATION.** At a meeting of the international committee of the International Federation of Library Associations, held in Berne, Switzerland, in June, 1932, a resolution was passed urgently requesting that, to meet the needs of intellectual workers, governments maintain undiminished the financial provisions for national education and especially those appropriations voted for libraries. Representatives of 29 countries attended the meeting, and copies of the resolution have been sent to all national governments. The committee is planning to meet in Chicago in 1933.

**BIBLIOGRAPHICAL PROJECTS.** In the field of bibliography, "Project B," financed by a Rockefeller five-year annual grant of \$50,000, was completed Aug. 31, 1932. This project includes a group of operations undertaken to increase the bibliographical apparatus of the Library of Congress in aid of research.

"Project C," undertaken under the supervision of the Library of Congress and financed by a grant obtained by the American Council of Learned Societies, is the first attempt to list the medieval and Renaissance manuscripts and documents existing in public and private ownership in the United States and Canada. With the assistance of Dr. W. J. Wilson and the cooperation of many librarians and collectors, M. Seymour de Ricci, of Paris, has succeeded, in the last four years in describing some 5000 manuscripts in several hundred collections.

The *List of Serial Publications of Foreign Governments* has been published by the H. W. Wilson Co.

**FUNDS AND ENDOWMENTS.** A total of \$873,000 was granted during 1931-32 by the Carnegie Corporation of New York in support of library interests in the United States and abroad. An active campaign for the enrichment of undergraduate college libraries has resulted in the survey of 108 institutions and the voting by the corporation of appropriations totaling more than \$1,500,000, to be divided among 85 colleges. A study of academic libraries in Canada was completed, and the recommendations of the advisory group are ready for consideration. Steps have been taken toward the improvement of college libraries in New Zealand. In addition, support has been given to certain experimental programmes in the United States designed to throw light upon new possibilities of service by the librarian to both the teacher and the research worker.

Other gifts made during the year for library purposes include: a legacy to the New York Public Library of \$2,000,000, and to the J. Pierpont Morgan Library of New York City of \$250,000, from the estate of Lewis Cass Ledyard; a trust fund of \$1,000,000, established by Willis Edward Hall, the income from which will go to the Public Library of Burlington, N. J.; the Andrew Preston Peabody Fund of \$100,000, given to Harvard University by Caroline E. Peabody; \$35,000, given to the Las Cruces, N. M., Library by Mrs. Alice M. Branigan; \$25,000, given to the Wolcott and Litchfield Circulating Library, Wolcott, Conn., by William Colgate; and \$25,000,

given to the Cincinnati Public Library by George W. Armstrong, Jr.

Trust funds for libraries in the United States are now known to total at least \$105,000,000.

**NEW BUILDINGS.** The Folger Shakespeare Library, Washington, D. C., having an endowment of \$10,000,000 and erected at a cost of \$2,000,000, is outstanding among the new library buildings of the year. Others completed or in the course of construction include the Edward L. Doheny, Jr. Memorial Library at the University of Southern California, costing \$1,100,000; the Indiana State Library, costing approximately \$1,000,000; the

Putnam, stated that in the fiscal year ending June 30, 1932, there were 21,294 marine aids to navigation maintained by the service, a net increase over the previous year of 1021. During the year various improvements were made in the aids—70 lights were changed from fixed to flashing or occulting, and the illuminant of lights was changed as follows: 68 to electric, 72 to acetylene, and 29 to incandescent oil vapor. Eleven radio-beacons were established, and signals were synchronized for distance finding at 15 stations. The number of aids discontinued was 754. See the accompanying table.

SUMMARY OF AIDS TO NAVIGATION AND CHANGES DURING THE FISCAL YEAR

Class	1932				Total, June 30—	
	Estab- lished	Discon- tinued	Increase	Decrease	1931*	1932
<b>Lighted aids:</b>						
Lights (other than minor) .....	121	61	60	...	2,436	2,496
Lighthouse stations .....	...	...	...	...	44	44
Lighted buoys .....	81	22	59	...	669	728
Lighted buoys, with whistles or bells .....	29	8	21	...	432	453

<b>Total fog signals</b> .....	<b>67</b>	<b>29</b>	<b>38</b>	<b>...</b>	<b>1,463</b>	<b>1,501</b>
<b>Unlighted aids:</b>						
Buoys .....	463	182	281	...	8,253	8,534
Daymarks .....	707	123	584	...	3,613	4,197
<b>Total</b> .....	<b>1,170</b>	<b>305</b>	<b>865</b>	<b>...</b>	<b>11,866</b>	<b>12,731</b>
<b>Grand total</b> <sup>b</sup> .....	<b>1,771</b>	<b>754</b>	<b>1,017</b>	<b>...</b>	<b>20,277</b>	<b>21,294</b>

\* Differences from statistics published in 1931 report are due to minor discrepancies in previous count.

<sup>b</sup> Lighted buoys with whistles and bells are counted only once in the grand total.

NOTE.—In addition to the marine aids there are 2688 aids to air navigation maintained by the airways division, the corresponding figure for last year being 1853. There are also 10,296 boundary lights and 1913 obstruction lights.

Charles Deering Library at Northwestern University, Evanston, Ill., costing \$1,000,000; the library of the University of Texas, costing \$1,000,000; the Myrtle Reed Library at the University of Denver, Colo., costing \$350,000; the Mercantile Library, New York City, costing \$350,000; the library at Atlanta University, Georgia, costing \$300,000; the library at Murray State College, Kentucky, costing \$250,000; Harper Hall, Claremont Colleges, California, costing \$175,000; the library at Sul Ross State Teachers College, Texas, costing \$150,000; and the James Laughlin Memorial Library at the Pennsylvania College for Women, erected at a cost of \$100,000.

**LIBYA.** See LIBIA.

**LIECHTENSTEIN,** lit'ten-shtin. One of the smallest independent European states. Liechtenstein is a principality lying between the Austrian province of Vorarlberg and the Swiss cantons of St. Gallen and Graubünden. Area, 65 square miles; population (1930 census), 10,213, of whom 9492 were Roman Catholics. Capital, Vaduz (population, 1715). In 1931 revenue was estimated at 1,179,350 Swiss francs (Swiss franc averaged \$0.194 in 1931); expenditure at 1,314,349 francs. The public debt on Jan. 1, 1932 was 5,117,626 francs. Reigning Prince, Francis I.

**LIFE INSURANCE.** See INSURANCE.

**LIGHT, VELOCITY OF.** See CHEMISTRY.

**LIGHTHOUSES.** The annual report of the U. S. Commissioner of Lighthouses, George R.

Important construction projects during the year included the completion of primary light and fog signal stations at Detour Reef, Mich.; Cape Decision, Alaska; and Anacapa Island, Calif. Changes were made in the aids to navigation in the St. Mary's River, Mich.; the illuminating apparatus at Cape Flattery Light Station, Wash., was improved; numerous new aids were placed to mark the improved channels of the James River, Va., and in Rochester Harbor, N. Y. One of the twin lights at Cape Ann, Mass., was improved and the other discontinued.

At Cape Hinchinbrook, Alaska, the reconstruction of the light station upon a safer site was under way. In Alaskan waters 15 new aids were established, making a total of 870. In the Hawaiian Islands lights at Nawiliwili Harbor and at Cape Kumakahi were being established. Kauhola Point Light Station was electrified and a light established on Kaula Rock.

Radiotelephones were installed at a number of light stations with excellent results; for example, at the isolated light station at Dry Tortugas, Gulf of Mexico, which is distant 63 miles from the depot at Key West.

The synchronization of radiobeacons by groups in order to eliminate interference with each other was carried further. Tests were in progress with a mobile radiobeacon designed for the purpose of avoiding collision, and 13 vessels on the Great Lakes were equipped with these signals

for this test. A control panel governing the operation of the radiobeacon, the fog signal, and the light flasher was installed at several stations, placing all signals in a definite sequence.

Appropriations for the maintenance of the Lighthouse Service totaled \$10,212,410 for the fiscal year 1932, and for special works, \$1,870,000. There was also allotted \$8,675,140 for the airways division.

The new light at Detour Reef, Mich., was placed in commission Nov. 10, 1931. The structure stands in 24 ft. of water at the outer end of Detour Reef and marks the entrance to the St. Marys River from Lake Huron. It replaces the former Detour Light Station, which was located on the tip of Detour Point. The new station may be directly approached by vessels in safety. It eliminates the need for other markers on the shoal and on the point, as well as for a lightship off the entrance, which was several times proposed. The construction of the station was started in May, 1930, with the building of the timber crib at Detour. Operations were suspended during the winter of 1930-31, so that the actual construction at the site required about 14 months.

At Muskegon, Mich., a general rearrangement of aids was made necessary by the improvements to this harbor by the United States Engineers in 1931, in which two breakwater spurs extending into Lake Michigan about 3000 feet were constructed, and the outer ends of the old piers were shortened about 1000 ft. The light and fog signal at the outer end of the south pier and an acetylene light at the outer end of the north pier were discontinued. Muskegon Breakwater Front Range Light and Fog Signal Station was established. Muskegon Pierhead Rear Range was moved to the end of the shortened south pier, and at the north breakwater a flashing acetylene light was established on a skeleton steel tower. The project was started in 1928 and completed early in 1932 following completion of the north breakwater by the United States Engineers.

A station at Cape Decision, Alaska was located on a rocky point on the southern extremity of Kuiu Island, replacing an acetylene light. It serves to guide vessels entering southeastern Alaska from the Gulf of Alaska and interstrait traffic. The building is of reinforced concrete, the focal plane of the light being about 96 feet above mean high water. The fog signal consists of two tyfons mounted on the roof, and the radiobeacon is operated as an intermediate power station. Work was begun on this project in September, 1929, and the station was placed in commission Mar. 15, 1932.

At Anacapa Island, Calif., a station was established to mark more adequately the easterly end of the Santa Barbara Channel, a passage of major importance to navigational interests operating between San Diego, San Pedro, and San Francisco. The light was first displayed Mar. 25, 1932, and replaced the acetylene beacon established in 1912. The station is located on the easterly end of Anacapa Island, the most easterly of the group forming the southern boundary of the Santa Barbara Channel on the California coast. The island is very precipitous, the cliffs being over 100 ft. high and almost perpendicular, there being only one place available as a landing. The buildings at the station comprise a tower, four keepers' dwellings, a powerhouse, a fog-signal tower, an oil house, a storehouse, and a service building. There is also a concrete

rain shed 120 by 250 ft. and two 50,000 gal. water tanks. The light tower is conical in design, 39 ft. high, and from it is displayed a light of 600,000 candlepower. The focal plane is 277 ft. above mean high water and the light is visible 23 miles. The fog signal consists of two diaphones, one pointing to the inside of the channel for serving south-bound traffic along the coast, while the other points to the southward, serving north-bound coast traffic, and in-and-out-bound open-sea traffic.

**AIRWAYS FACILITIES.** The construction programme of the fiscal year 1932, under the Aeronautics Branch of the Bureau, comprised the extension and improvement of the Federal airways system by the installation of an additional 2000 miles of airways lighting, construction of 10 radio communication stations, and 25 radio range beacons, installation of 18 radio marker beacons of the landing-range type, and extension of the teleprinter communications system by approximately 3500 miles of circuits and 55 additional stations. At the close of the fiscal year 1932 there were in operation and under construction or installation 19,500 miles of lighted airways, 69 radio communication stations, 94 radio range beacons, 118 radio marker beacons, and 233 teleprinter stations on a leased-wire system comprising some 13,000 miles of circuits. The total personnel of the airways division was 2102 of whom 897 were part-time employees serving as attendants or caretakers at intermediate fields and beacon lights.

Surveys were completed and contracts were let for lighting installation on the following airways or sections of airways: Dallas-Louisville (Dallas-Nashville section), Fort Worth-Atlanta (Dallas-Meridian section), Chicago-Twin Cities (Chicago-LaCrosse section), Amarillo-Tulsa, New Orleans-St. Louis (Biehle-St. Louis section), Albany-Boston. In addition, the Salt Lake City district organization installed airways lighting on the Salt Lake-Great Falls airway from Pocatello, Idaho, to Spencer, Idaho.

At the close of the year there were 1541 rotating beacon lights, 368 flashing beacon lights, and 355 intermediate fields in operation. The fields had a combined acreage of 32,928, equivalent to 51 sq. mi., and were furnished with 10,296 boundary lights, 1913 obstruction lights, and 3104 boundary marker fences. In addition, installation was proceeding under contract on 132 rotating beacon lights, 5 flashing beacon lights, and 23 intermediate fields.

**LIGHTNING.** See ELECTRICAL TRANSMISSION AND DISTRIBUTION.

**LIGHTNING GENERATOR.** See ELECTRICAL INDUSTRIES.

**LIGHTSHIPS.** See LIGHTHOUSES.

**LIME.** The sales of lime in 1932 by producers in the United States amounted to 1,956,000 short tons, valued at \$12,108,000, according to preliminary figures of the U. S. Bureau of Mines. This was a decrease of 28 per cent in quantity and 35 per cent in value compared with sales of 2,707,614 tons valued at \$18,674,913 in 1931, and followed a decrease of 20 per cent in quantity and 27 per cent in value in 1931 compared with 1930. The average unit value per ton in 1932 was \$6.19; in 1931 it was \$6.90.

Sales of lime in 1932 for construction were estimated at 666,000 tons compared with 947,085 tons in 1931, a decrease of 30 per cent. This followed a decrease of 21 per cent in 1931 from the

1930 production. Sales of lime for chemical uses were estimated at 1,070,000 tons, a decrease of 27 per cent from 1931 (1,463,217 tons). In 1931 there was a decrease of 20 per cent from the 1930 sales. The sales of lime for agricultural use were estimated at 220,000 tons, a decrease of 26 per cent in 1932 from 1931 (297,312 tons) and followed a decrease of 13 per cent in 1931 from the 1930 figures. All the States producing lime showed decreases from the 1931 production ranging from 2 to 66 per cent in quantity and 7 to 63 per cent in value. In the majority of States the percentage decrease in output was less than the percentage decrease in value.

The accompanying table compares the estimated sales of lime in 1932, by States, with the sales in 1931.

LIME SOLD BY THE PRODUCERS IN THE UNITED STATES IN 1931 AND 1932

State	1931		1932 (estimated)	
	Short tons	Value	Short tons	Value
Ohio . . .	656,441	\$4,007,004	477,000	\$2,479,000
Pa. . . .	497,258	3,878,088	374,000	2,410,000
Mo. . . .	224,416	1,481,240	180,000	1,082,000
Tenn. . .	113,268	566,694	104,000	454,000
W. Va. . .	170,420	985,687	85,000	446,000

Total . .	2,707,614	\$18,674,913	1,956,000	\$12,108,000

**LINDBERGH KIDNAPING.** On the evening of Mar. 1, 1932, Charles Augustus Lindbergh, Jr., 19-months-old son of Col. Charles A. and Anne (Morrow) Lindbergh, was kidnaped from the Lindbergh home near Hopewell, N. J. An intensive search by governmental and private agencies in the United States and Europe ended on May 12 when the infant's badly decomposed body was accidentally discovered in woods near a roadway, within five miles of Colonel Lindbergh's home. Meanwhile the latter had paid \$50,000 ransom, through an intermediary, John F. Condon of New York City, to persons representing themselves as the kidnapers. Two other men who falsely professed to be in contact with the abductors were prosecuted. They were Gaston B. Means, who obtained \$100,000 for the child's ransom from Mrs. Evelyn Walsh McLean, of Washington, D. C., and John H. Curtis, Norfolk, Va., boat builder. Means was sentenced to 15 years imprisonment. Curtis, who was convicted by a Flemington, N. J., jury of obstructing justice, was sentenced to one year in prison and fined \$1000. He had taken Colonel Lindbergh on fruitless cruises in Chesapeake Bay on the pretense of establishing contact with the kidnapers. Both Means and Curtis appealed from their sentences. SEE CRIME; LAW IN 1932.

**LINGUISTICS.** See PHILOLOGY, MODERN.

**LINTHICUM, JOHN CHARLES.** An American lawyer and congressman, died in Baltimore, Md., Oct. 5, 1932. He was born in Linthicum Heights, Anne Arundel Co., Md., Nov. 26, 1867, attended

the State Normal School in Baltimore and the Johns Hopkins University, and was graduated with the LL.B. degree from the University of Maryland in 1890. Admitted to the Maryland bar in the latter year, he was engaged in practice in Baltimore with his brother Seth Hance Lithicum. He was elected to the Maryland House of Delegates in 1903 and to the Senate in 1905, serving in the latter for two terms. During 1908-12 he served also on the staff of Governor Crothers as judge advocate general. In 1910 he was elected to the Sixty-second Congress as member from the fourth Maryland district, and had been reelected to each succeeding Congress. He was chairman of the House foreign affairs committee, being instrumental in the drafting and enactment of the bill in 1924 for the improvement of the American foreign service. He succeeded also in having preserved as a national monument Fort McHenry, the bombardment of which by the British fleet in 1814 inspired Francis Scott Key to write the words of *The Star-Spangled Banner*, and in having that song adopted as the national anthem by act of Congress in 1931. He was one of the most aggressive opponents of prohibition.

**LIONS CLUBS, INTERNATIONAL ASSOCIATION OF.** An organization of business and professional men's clubs united in one association for the purpose of promoting good government and good citizenship, encouraging efficiency, and promoting high ethical standards in business and in the professions.

The Association has grown steadily, and on Dec. 1, 1932 numbered 2660 clubs with a membership of approximately 80,000. The International Convention of 1932 was held at Los Angeles, Calif. Charles H. Hatton, banker, of Wichita, Kan., was elected president; Roderick Beddow of Birmingham, Ala.; Vincent C. Hascall of Omaha, Neb.; and Richard J. Osenbaugh of Denver, Col., vice-presidents. The founder of the Association, Melvin Jones of Chicago, has been secretary-treasurer from the first. The official magazine of the Association is *The Lion*, Charles Lee Bryson, managing editor. Headquarters are at 332 South Michigan Ave., Chicago.

**LIPPE.** See GERMANY.

**LITERATURE.** See FRENCH LITERATURE; GERMAN LITERATURE; ITALIAN LITERATURE; LITERATURE, ENGLISH AND AMERICAN; PHILOLOGY, MODERN; SCANDINAVIAN LITERATURE; SPANISH-AMERICAN LITERATURES, SPANISH LITERATURE.

**LITERATURE, ENGLISH AND AMERICAN.** In January appeared O. H. Cheney's *Economic Survey of the Book Industry*, sponsored by the National Association of Book Publishers of America. This report attacked the separation between publishing and book-selling; the system whereby a few best-sellers, accidentally found, carry the burden of the rest of a publisher's list; the short selling-life of most books, most often about four months; meaningless, because too favorable, reviewing; and the absence of information among publishers about their consumers. It recommended a number of reforms, mainly in finance and research, with the aim, apparently, of making the public more "book-conscious." Though the report was "news," and much discussed, that it had led to anything by the end of the year was hard to see. Prices of books had come down somewhat, especially non-fiction; publishers were fewer, and their lists of new books shorter; authors' manuscripts were harder to sell; but these were

results of the depression, not of fundamental, thoughtful reform of a too haphazard industry. That publication in such fields as poetry, criticism, and history tended to be restricted, while books of a merely topical or temporary interest were published in as great numbers as usual, if not greater, illustrated the publishers' methods of meeting their difficulties, both in Great Britain and America.

In regard to the variety of books published during the year, the following compilation from *Publisher and Bookseller*, discarding reprints, shows 1996 novels, 743 books on theology and religion, 653 on political economy, 589 on biography and history, 357 on poetry and the drama, 350 on medicine and surgery, and 219 on travel and adventure. The total, including all miscellany and reprints was 15,279 books.

**FICTION.** More striking than any individual works during 1932 was the small range of the novelists' themes. The favorite American subject was life in the South, which, in its novelists' opinion, was pretty terrible. For instance, Ellen Glasgow's *The Sheltered Life*, highly praised, studied decaying gentility. William Faulkner, who may have been responsible for the vogue, showed in *Light in August* the horrors of Mississippi. Sherwood Anderson's *Beyond Desire* and Fielding Burke's *Call Home the Heart* were about the troubles of mill people. Erskine Caldwell's *Tobacco Road* brutally exposed poor whites in Georgia. Julia Peterkin's *Bright Skin*, and Roy Flannagan's *Amber Satyr* gave us bedeviled negroes. DuBose Heyward's *Peter Ashley* was an unhappy Charleston aristocrat.

The English, on the other hand, went in strongly for novels about a family. John Galsworthy, perhaps to blame for this, published *Flowering Wilderness*, the second about the Cherrills. Phyllis Bentley's *Inheritance* concerned several generations of Yorkshire textile people. Francis Brett-Young's family, in *The House Under the Water*, was Welsh. Hugh Walpole's *The Fortress* was the third of his Herries saga. G. B. Stern's *The Rueful Mating* began a trilogy. American family stories: Myron Brinig's *This Man is My Brother*; Helen Hull's *Heat Lightning*; Ambrose South's *Broken House*.

Both British and Americans were fond of historical themes. *God's Angry Man*, by Leonard Ehrlich, was about John Brown. Rose Macaulay's *The Shadow Flies* re-created seventeenth-century literary England. John Dos Passos' 1919 continued his cross-sectioning American life. *The Store*, by T. S. Stripling, gave the South just after the Civil War. Helen Grace Carlisle's *We Begin* psychoanalyzed the Pilgrims. Floyd Dell's *Diana Stair* was a New Englander of a century back. Booth Tarkington's *Wanton Mally* was laid in the days of Charles II. Gilbert W. Gabriel's *I, James Lewis*, traded fur in the early West, at about the same time as *The Long Rifle*, by Stewart Edward White. And there were many other historical novels.

Certain novels had distinction apart, though most might reasonably be called psychological, which applied, however, to almost every novel in 1932. *The Fountain*, by Charles Morgan, was philosophical about the strange ways of love. Rosamund Lehmann's *Invitation to the Waltz* dealt with a few hours in a girl's life; A. J. Cronin's *Three Loves* was the tragedy of a possessive woman. Louis Golding's *Magnolia Street* discussed Jews versus Gentiles. Edith Wharton con-

tinued *Hudson River Bracketed* in *The Gods Arrive*. W. Somerset Maugham used the tropics for setting of *The Narrow Corner*. Pearl S. Buck in *Sons*, and Ann Bridge, in *Peking Picnic*, wrote about contemporary China. John Cowper Powys' *A Glastonbury Romance* was an ambitious attempt to do a town thoroughly. Louis Bromfield's *A Modern Hero* started in the circus. J. B. Priestley's *Faraway* involved treasure-hunting. James Hanley's *Boy*, and Cyril Hume's *My Sister My Bride* illustrated the 1932 fondness for horrors.

Among first novels which received acclaim were: Phil Stong's *State Fair*, Iowa farmers on holiday; Paul Green's *The Laughing Pioneer*, and Wellbourn Kelley's *Inchin' Along*, two more Southerners; and Willa Muir's *Imagined Corners*, Scotch life.

Skillful light entertainment: P. G. Wodehouse's *Hot Water*; Mazo de la Roche's *Lark Ascending*; A. S. M. Hutchinson's *Big Business*; E. M. Delafeld's *Provincial Lady Goes Further*; Sylvia Thompson's *Summer's Night*; Booth Tarkington's *Mary's Neck*; Mathilde Eiker's *Brief Seduction of Eva*; Christopher Ward's *The Strange Adventures of Jonathan Drew*. Murderers were revealed in Francis Iles' *Before the Fact*, and Manuel Komroff's *A New York Tempest*, besides many others.

A bitter satire was Aldous Huxley's *Brave New World*, against "progress." Other satires: *Loads of Love*, by Anne Parrish, against benevolence; *A Good Man's Love*, by E. M. Delafeld, against the marriage market; *Swiss Family Manhattan*, mildly against New York, by Christopher Morley, who also published *Human Being*, a bewildered business man; *Mrs. Taylor*, by Marjorie Worthington, a female Babbitt.

Novels of fantasy may not have been important, but they were interesting, such as: Radclyffe Hall's *The Master of the House*, Christ in modern dress; *Three Go Back*, by J. Leslie Mitchell, moderns in pre-history; *Pigeon Irish*, by Francis Stuart, Ireland in the next war; T. E. Powys' *Uncle*; Eleanor Farjeon's *The Fair of St. James*; and John Erskine's *Tristan and Isold*, rewriting Malory.

**SHORT STORIES.** Among the producers of volumes of short stories were many distinguished names: Rudyard Kipling with *Limits and Renewals*; George Bernard Shaw with *The Adventures of the Black Girl in Her Search for God*; Sir James M. Barrie with *Farwell*, *Miss Julie Logan*; Willa Cather with *Obscure Destinies*; Arnold Bennett with *Stroke of Luck and Dream of Destiny*. Others, not so distinguished but maybe as good: *Soft Answers*, by Richard Aldington; *The Haunted Mirror*, by Elizabeth Madox Roberts; *Thirty Clocks Strike the Hour*, by V. Sackville-West; *Women Live Too Long*, by Vina Delmar; and *Guardian Angel and Other Stories*, by Margery Latimer.

**POETRY.** *The Collected Poems of Elinor Wylie*, containing much hitherto unpublished work, brought fresh certainty of her commanding position among American poets. *Conquistador*, by Archibald MacLeish, was brilliant modern narrative of the conquest of Mexico, based on Bernal Diaz. John Masefield told of the old war in *A Tale of Troy*. William Rose Benét gave a dramatic narrative in *Rip Tide*. *Thurso's Landing*, by Robinson Jeffers, and *Nicodemus*, by Edwin Arlington Robinson, replowed the fields these authors have made their own. Jewish history was

the subject of Sara Bard Field's *Barabbas*. Hilaire Belloc's *Ladies and Gentlemen* was delightful humor; Wilfred J. Funk's *Light Lines and Dears*, and Louis Untermeyer's *Food and Drink* were lighter verse. England was stirred by the publication of a collection from the young moderns called *New Signatures*, which was matched by their elders with *Known Signatures*. Edmund Blunden published *Halfway House*; William Plomer *The Five-Fold Screen*; Leonard Bacon *The Furioso*, about D'Annunzio; Frances Frost *These Acres*; Marion Canby *High Moving*; Sterling Brown, a new negro poet, *Southern Road*; W. H. Auden, a highly praised young Englishman, *The Orators*.

*The Collected Poems of D. H. Lawrence* appeared with his *Last Poems*; and *Poems*, by Padraic Colum, and *The Poems of T. Sturge Moore* were collections of many earlier volumes. Among the anthologies there were: the second and third series of *The Pleasures of Poetry*, by Edith Sitwell; *American Poets, 1630-1930*, by Mark van Doren; *New English Poems*, by Lascelles Abercrombie; and *An Anthology of the Younger Poets*, by Oliver Wells.

**DRAMA.** Probably no play promising greatness was published in 1932. English and American playwrights' favorite field during this year was the drawing-room play, the comedy of manners. Such were George S. Kaufman and Edna Ferber's *Dinner at Eight*; Robert E. Sherwood's *Reunion in Vienna*; Philip Barry's *The Animal Kingdom*; S. N. Behrman's *Brief Moment*; A. A. Milne's *Four Plays*, the second volume of his with that title; John van Druten's *Behold We Live* and *Somebody Knows*. George S. Kaufman, with Morrie Ryskind and Ira Gershwin, published the Pulitzer prize play of 1931, *Of Thee I Sing*, a musical comedy. That good old naturalism was far from dead was shown by Rose D. Franken's *Another Language*; Denis Johnston's *The Moon in the Yellow River* and *The Old Lady Says No*; C. K. Munro's *Three Plays*. J. B. Priestley's *Dangerous Corner* was melodrama. John Howard Lawson's *Success Story* was strongly satirical. Maxwell Anderson's *Night Over Taos* was historical. Edna St. Vincent Millay's *The Princess Marries the Page*, and T. C. Murray's *Michaelmas Eve* were romantic. The first nudist play was Tom Cushing's *Barely Proper*.

Other plays that might be mentioned were Elmer Rice's *Black Sheep*; Clemence Dane's *Wild Decembers*, about the Brontës; Ronald Mackenzie's *Musical Chairs*; Benn W. Levy's *Springtime for Henry*. Collections included the fifth volume of E. Bradlee Watson and Benfield Pressey's *Contemporary Drama*; and S. Marion Tucker's *Modern Plays*.

**ESSAYS.** Collections dealing with affairs ranged from the high and serious plane of *Interpretations, 1931-1932*, by Walter Lippmann; *As I See It*, by Norman Thomas; *Thunder and Dawn*, by Glenn Frank; to the gossipy and sometimes scandalous *More Merry-Go-Round*, anonymous, about Washington figures; *Not to Be Repeated*, anonymous, a European *Merry-Go-Round*; and *Sons of the Wild Jackass*, by Ray Tucker and Frederick R. Barkley. Other aspects of American life were considered in *Sidelights*, by G. K. Chesterton; *The Soul of America*, by Arthur Hobson Quinn; *A Passing America*, by Cornelius Weygandt, nostalgia for old times.

Literary essays included: Bonamy Dobrée's *Variety of Ways*; T. S. Eliot's *Selected Essays*;

Branch Cabell's *These Restless Heads*; Irving Babbitt's *On Being Creative and Other Essays*. Concerned with finding an attitude toward the contemporary were: *Fear and Trembling*, by Glenway Wescott, and *Challenge to Defeat*, by William Harlan Hale. Semi-philosophical were: *What We Live By*, by Ernest Dimnet, and *On the Meaning of Life*, edited by Will Durant. George Bernard Shaw's *Pen Portraits and Reviews* collected hitherto scattered stuff. Of historical interest: *Bath*, by Edith Sitwell; *The Great Victorians*, edited by H. J. and Hugh Massingham; *The Eighteen-Sixties*, edited by John Drinkwater. Comedy was intended in *Fun in Bed*, edited by Frank Scully; *Comic Relief*, edited by R. N. Linscott; *No Poems*, by Robert Benchley; *The American Keepsake*, old seriousness become funny.

In addition: E. V. Lucas' *Lemon Verbena and Other Essays*; Padraic Colum's *A Half-Day's Ride*, travel; and volumes 13 and 14 of *The Private Papers of James Boswell*, edited by Frederick A. Pottle.

**CRITICISM AND THE HISTORY OF LITERATURE.** Notable this year was the work in American literary history. Ludwig Lewisohn's *Expression in America* was fresh and persuasive. V. F. Calverton's *The Liberation of American Literature* exhibited a Marxian point of view. Stuart P. Sherman's *The Emotional Discovery of America*, and Thomas H. Dickinson's *The Making of American Literature* were also of importance.

Among general works: in aesthetics: *Experience and Art*, by Joseph Wood Krutch; *Art and Beauty*, by Max Schoen; essays on various figures: *Titans of Literature*, iconoclasm by Burton Rascoe; *The Second Common Reader*, by Virginia Woolf; *Sketches in Criticism*, by Van Wyck Brooks; *Sex in the Arts*, edited by J. F. McDermott and K. B. Taft, a symposium which concluded there was very little, or not enough.

About poets and poetry: Charles Williams' *The English Poetic Mind*; F. R. Cleavis' *New Bearings in English Poetry*; Herbert Read's *Form in Modern Poetry*; Chard Powers Smith's *Pattern and Variation in Poetry*; G. K. Chesterton's *Chaucer*; A. Allen Brockington's *Browning and the Twentieth Century*.

About the drama and dramatists: G. Wilson Knight's *The Shakespearean Tempest*; Mark Harris' *The Case for Tragedy*; A. E. Wilson's *Penny Plain, Twopence Coloured*, about English toy theatres; Eleanore Boswell's *The Restoration Court Stage*; Joseph Spencer Kennard's *The Italian Theatre*.

About novels and novelists: *The Twentieth Century Novel*, by Joseph Warren Beach; *Mark Twain*, by Stephen Leacock; *Mark Twain's America*, by Bernard de Voto; *George Moore*, by Humbert Wolfe.

**BIOGRAPHY.** Astonishing was the number of persons whose lives were done more than once in 1932. Spinoza was born 300 years ago, therefore: *Blessed Spinoza*, by Lewis Browne; *Spinoza*, by Benjamin de Casseres; *Spinoza: a Life of Reason*, by Abraham Wolfson. Scott died 100 years ago, therefore: *The Letters of Sir Walter Scott, 1787-1807*, edited by H. J. C. Grierson; *The Life of Sir Walter Scott*, by S. Fowler Wright; *Sir Walter Scott*, by John Buchan; *The Laird of Abbotsford*, by Dame Una Pope-Hennessy. About D. H. Lawrence were: *The Savage Pilgrimage*, by Catherine Carswell; *Lorenzo in Taos*, by Mabel Dodge Luhan; and *The Letters*

of D. H. Lawrence, edited by Aldous Huxley. About the Brontës: *The Brontës, Their Lives, Friendships, and Correspondence*, edited by T. J. Wise and J. A. Symington; *Charlotte Brontë*, by E. F. Benson. About Thomas Huxley: Clarence Ayres' *Huxley*; Houston Peterson's *Huxley, Prophet of Science*. About Benedict Arnold: *Benedict Arnold, Patriot and Traitor*, by Oscar Sherwin, and *Benedict Arnold, Military Racketeer*, by E. D. Sullivan. Another doublet: *William Penn, Quaker and Pioneer*, by Bonamy Dobrée; and *The Penns of Pennsylvania and England*, by Arthur Pound.

In addition to those mentioned, British literary figures were represented in: *Return to Yesterday*, amusing autobiography by Ford Madox Ford; *The Life of Robert Burns*, by Franklyn Snyder; *Bernard Shaw, Playboy and Prophet*, by Archibald Henderson; *Swinburne*, by Georges Lafourcade; *The Journals of Arnold Bennett, 1896-1921*, edited by Newman Flower; *Samuel Butler*, by Clara G. Stillman; *The Life of William Beckford*, by J. W. Oliver; *Dorothy Wordsworth*, by Catherine M. Maclean; *Jane Austen's Letters*, edited by R. W. Chapman; *Discovery*, second volume of autobiography, by John Drinkwater; *The Wife of Rossetti*, by Violet Hunt; *Francis Bacon*, by Mary Sturt; *Thackeray*, by Malcolm Elwin; *Lady Caroline Lamb*, by Elizabeth Jenkins; *Reading, Writing, and Remembering*, autobiography by E. V. Lucas; *Carlyle*, by Emery Neff; *Mrs. Carlyle to Joseph Neuberg*, letters edited by Townsend Scudder; and *The Essential Shakespeare*, by J. Dover Wilson.

British political personages were revealed in: volume iii of the third series of *The Letters of Queen Victoria*, edited by G. E. Buckle; *Lord Cromer*, by the Marquess of Zetland; *Life of H. H. Asquith, Lord Oxford and Asquith*, by J. A. Spender and Cyril Asquith; *The Life of Lord Carson*, volume i, by Edward Marjoribanks; *The Scottish Queen, Mary*, by Herbert Gorman; *Sarah, Duchess of Marlborough*, by Kathleen Campbell; *Albert the Good, the Prince Consort*, by Hector Bolitho; *Stanhope: a Study in 18th Century War and Diplomacy*, by Basil Williams; *Sir Billy Howe*, by Bellamy Partridge; *The Life of Joseph Chamberlain*, volume i, 1836-1885, by J. L. Garvin; *Amid These Storms*, autobiography by Winston S. Churchill; *The Three Pelicans*, about Cranmer, by Arthur Styron.

Other Britishers: the second volume of *Men and Memories*, by William Rothenstein; Edward Gordon Craig's *Ellen Terry and Her Secret Self*; Flinders Petrie's *Seventy Years in Archaeology*; Francis Yeats-Brown's *Bloody Years*, war autobiography; Paul Cohen-Portheim's *Time Stood Still*, how it feels to be interned; Donald Barr Chidsey's *Sir Humphrey Gilbert*; J. R. Ackersley's *Hindoo Holiday*, a funny section of autobiography; Sir Oliver Lodge's *Past Years*; and Captain S. G. S. McNeil's *In Great Waters*, autobiography.

There was a vogue for lives of American big business men, such as: *The Life of Andrew Carnegie*, by Burton J. Hendrick; *Lusty Scripps*, by Gilson Gardner; *Owen D. Young*, by Ida M. Tarbell; *The Tragedy of Henry Ford*, by Jonathan Norton Leonard; *God's Gold* (John D. Rockefeller, Sr.), by John T. Flynn; and *Silver Dollar: the Story of the Tabor*, by David Karsner. Political renown brought lives of: *Grover Cleveland*, by Allan Nevins; *John Quincy Adams*, by Bennett Champ Clark; *Roger Williams*, by

James Ernst; *Beveridge and the Progressive Era*, by Claude G. Bowers; *John G. Carlisle*, by James A. Barnes; *Sherman: Fighting Prophet*, by Lloyd Lewis; *Mary Lincoln, Wife and Widow*, by Carl Sandburg; *Carl Schurz, Reformer*, by Claude Moore Fuess; *George Washington, Soul of the Revolution*, an English biography by Norwood Young; *Lee of Virginia*, by William E. Brooks; *Little Aleck* (Alexander E. Stephens), by E. Ramsay Richardson; *The Autobiography of Peggy Eaton*; *Portrait of an Independent* (Moorfield Storey), by M. A. DeWolfe Howe; *Stephen J. Field*, by Carl B. Swisher; autobiographies by senators' wives: *I Would Live It Again*, by Julia B. Foraker, and *The Heritage of Years*, by Frances M. Wolecott; *Samuel Seabury*, by Walter Chambers; *Justice Oliver Wendell Holmes*, by Silas Bent; and a number of attacks and defenses of President Hoover.

About American writers: *New Letters of James Russell Lowell*, edited by M. A. DeWolfe Howe; *The Three Jameses*, by C. Hartley Grattan; Mary Austin's *Earth Horizon*, autobiography; Carl Van Vechten's *Sacred and Profane Memories*; Gertrude Atherton's *Adventures of a Novelist*; Van Wyck Brooks' *The Life of Emerson*; Upton Sinclair's *American Outpost*, autobiography; Grace King's *Memories of a Southern Woman of Letters*. Other Americans: Clarence Day's charming *God and My Father*; Ernest Sutherland Bates and John V. Dittmore's *Mary Baker Eddy, the Truth and the Tradition*; Stanley Vestal's *Sitting Bull*; Richard Lockridge's *Darling of Misfortune* (Edwin Booth); Max Miller's *I Cover the Waterfront*; Ed Halyburton and Ralph Goll's *Shoot and Be Damned*, war autobiography; Frank Lloyd Wright's *An Autobiography*; Charles J. Dutton's *The Samaritans of Molokai* (Fr. Damien and Bro. Joseph); Clarence Darrow's *The Story of My Life*; Basil Lubbock's *Bully Hayer, South Sea Pirate*; Florence Bennett Anderson's *Through the Hawse-Hole*, a Nantucket whaling captain; Irina Skariatina's *A World Begins*, autobiography; Louis Adamic's *Laughing in the Jungle*, autobiography, these last two of immigrants; and volumes viii and ix of the *Dictionary of American Biography*, edited by Dumas Malone.

About French men and women: Hilaire Belloc's *Napoleon*; Duff Cooper's *Talleyrand*; Naomi Royde-Smith's *The Double Heart* (Julie de Lespinaisse); Sidney B. Whipple's *Scandalous Princess* (Mme. Tallien). Other non-Anglo-Saxon people: G. P. Baker's *Charlemagne*; Carleton Beals' *Porfirio Diaz*; G. O. Griffith's *Mazzini*; David Loth's *Philip II of Spain*; Arthur Herman's *Metetrach*; Arthur Weigall's *Sappho of Lesbos*; Marcia Davenport's *Mozart*; Essad-Bey's *Stalin*; Christopher Hollis' *Saint Ignatius*; Richard Boleslavski and Helen Woodward's *Way of the Lancer*; Edith O'Shaughnessy's *Marie Adelaide*, the Grand Duchess of Luxembourg; Harold Lamb's *Nur Mahal*; William Oxling's *Kagawa*; Grand Duchess Marie of Russia's *A Princess in Exile*; Grand Duke Alexander of Russia's *Once a Grand Duke*; Rafael de Nogales' *Memoirs of a Soldier of Fortune*. Gamaliel Bradford published two collections of essays: *Saints and Sinners and Biography and the Human Heart*.

THE FINE ARTS. Historical works bulked largest in this field, including Frederic Fairchild Sherman's *Early American Painting*; Clive Bell's *An Account of French Painting*, lively and opinionated; Charles Johnson's *English Painting*

from the Seventh Century to the Present Day; Bernhard Berenson's *Italian Pictures of the Renaissance*, an invaluable list with locations; Arthur Upham Pope's *An Introduction to Persian Art since the Seventh Century*; G. H. Edgell's *A History of Sieneese Painting*; O. Elfrida Saunders' *A History of English Art in the Middle Ages*; and Frank P. Chambers' *The History of Taste*, about painting everywhere. A. P. Laurie, in *The Brushwork of Rembrandt and His School*, illustrated the use of photomicrographs in criticism. A. M. Hinds' *Rembrandt* was published lectures. Raymond Coxon's *Art: an Introduction to Appreciation*, also had to do with painting principally.

About architecture were Claude Bragdon's *The Frozen Fountain*, and H. S. Goodhart-Rendel's *Vitruvian Nights*, both collections of essays. R. H. Wilenski explained *The Meaning of Modern Sculpture*. Lee Simonson described the development of scenic design from its beginnings in *The Stage is Set*. In *Horizons*, Norman-Bel Geddes showed how the principles of design affected many of the mechanisms of modernity; while Paul Nash, in *Room and Book*, pleaded for more art in applied art.

RELIGION. The progress of the German theological movement called Barthianism in the Anglo-Saxon world was signalized by the American Walter Lowrie's *Our Concern with the Theology of Crisis*, and the English *Tell John*, by Geoffrey Allen and Roy McKay. The former was a plea for Barthianism; the latter an attack on Barthian grounds on other present day faiths. Charles A. Bennett's *The Dilemma of Religious Knowledge* accepted unprovability and defended the intuitions. *The Religion of Scientists*, edited by C. L. Drawbridge, was a symposium. Histories included: Henry K. Rowe's *History of the Christian People*; Edwyn Bevan's *Christianity*; and Joseph Haroutunian's *Pieté vs. Moralism: the Passing of the New England Theology*. George Lawton's *The Drama of Life after Death* had to do with spiritualism. Bruce Barton did a life of St. Paul in *He Upset the World*. Corliss Lamont discussed *The Issues of Immortality*; many theologians contributed to *Contemporary American Theology*, edited by Vergilius Ferm; Rees Griffiths' *God in Idea and Experience* was sober reasoning. Harry Emerson Fosdick's *As I See Religion*, Samuel M. Shoemaker's *Confident Faith*, and Clarence T. Craig's *Jesus in Our Teaching* also deserved attention.

SOCIOLOGY. A. G. Keller wrote a fascinating history of social institutions in *Man's Rough Road*. Robert Briffault published a shrill attack on social formulas in *Breakdown: the Collapse of Civilization*. Wyndham Lewis found fault with industrial society in *Doom of Youth*. The effects of the depression were discussed in *The American Jitters*, by Edmund Wilson; *Slump!* by H. Hessel Tiltman, about European conditions; and *The Year of Regeneration*, the last a fictional treatment of the theme, by James Cooper Lawrence. Intended originally for European consumption was *America as Americans See It*, edited by Fred J. Ringel; but similar matter was considered in *This Country of Yours*, by Morris Markay; and *Small Town Stuff*, by Albert Blumenthal. In criminology, Lewis E. Lawes' *Twenty Thousand Years in Sing Sing* attracted attention; and Edwin M. Borchard's *Convicting the Innocent* was an attack on the administration of criminal justice by case studies. Having to do with the

sexes: *A Thousand Marriages*, by R. L. Dickinson and Lura Bean; *Woman*, by A. Corbett-Smith; *The Modern Woman and Herself*, by Margaret Kornitzer; and *The More I See of Men*, edited by Mabel Ulrich. Harry Elmer Barnes attacked prohibition in *Prohibition versus Civilization*, and religion in *Can Man Be Civilized?* Sidney and Beatrice Webb gave guidance in *Methods of Social Study*. Other sociological works deserving mention were: C. DeLisle Burns' *Leisure in the Modern World*; *Our Neurotic Age*, edited by Samuel D. Schmalhausen; *The Taxi Dance Hall*, by Paul G. Cressey; *A Short Introduction to the History of Human Stupidity*, by Walter B. Pitkin; *As We Are*, by E. F. Benson; and *Wah' Kon-Tah*, by John Joseph Matthews, about the Osage Indians.

EDUCATION. The following three books attempted to re-define the relations between the State and education: Lord Bertrand Russell's *Education and the Modern World*; George A. Coe's *Educating for Citizenship*; and William Heard Kilpatrick's *Education and the Social Crisis*. *The Theory of Education in the United States*, by Albert Jay Nock, was an attack on democratic higher education. Alexander Meiklejohn's *The Experimental College* described the rise and fall of his undertaking at the University of Wisconsin. *The University in a Changing World*, edited by Walter M. Kotschnig and Elined Prys, was a symposium of expert opinion. The following also were noteworthy: *The College and Society*, by Ernest H. Wilkins; *The Liberal Arts College*, by Floyd W. Reeves and others; *The Founding of American Colleges and Universities before the Civil War*, by Donald G. Tewksbury; *Realism in American Education*, by William S. Learned; *The Making of Citizens*, by Charles Edward Merriam; *Creative Expression*, edited by Gertrude Hartman and Ann Shoemaker; and *Education through Recreation*, by L. P. Jacks.

POLITICS AND INTERNATIONAL. Concerned with internal politics of the United States were: Paul H. Douglas' *The Coming of a New Party*; *What's the Matter with New York?* by Norman Thomas and Paul Blanshard; both these radical; *Farewell to Reform*, by John Chamberlain, and *Our Wonderland of Bureaucracy*, by James M. Beck; both these conservative. Also, Charles A. Beard's *The Navy: Defense or Portent?* and Frederick Palmer's *So a Leader Came* were concerned with American politics, the latter advocating a dictatorship.

About America's foreign relationships: Walter Lippmann and W. O. Scroggs' *The United States in World Affairs 1931*; Wallace Thompson's *Greater America*, North, Central, and South; Harry B. Hawes' *Philippine Uncertainty*, advocating independence; Lothrop Stoddard's *Europe and Our Money*, and *Lonely America*, for isolation; Foster Rhea Dulles' *America in the Pacific*; Frank H. Simonds' *Can America Stay at Home?*

General works included: *Studies in Law and Politics*, by Harold J. Laski; *After Democracy*, by H. G. Wells, an attack on nationalism; *Moral Men and Immoral Society*, by Reinhold Niebuhr; *The Causes of War*, a symposium edited by Arthur Porritt; *The Spirit of World Politics*, by William Ernest Hocking, an attack on imperialism. Mainly historical: *American Foreign Policy in Mexican Relations*, by James Morton Callahan; *The Truth about Reparations and War Debts*, by David Lloyd George; *The Growth of Political Thought in the West: from the Greeks*

to the End of the Middle Ages, by Charles H. McIlwain.

Interest in Russia did not decline, as evidenced by: Waldo Frank's *Dawn in Russia*; Harry Stekall's *Through the Communist Looking-Glass*; Walter Arnold Rukeyser's *Working for the Soviets*; Isaac Don Levine's *Red Smoke*, attempting to prove that the Five-year Plan would fail; Louis Fischer's *Machines and Men in Russia*; *Socialist Planned Economy in the Soviet Union*, by V. Ossensky and others.

About the troubles in the Far East were: *Manchuria: Cradle of Conflict*, by Owen Lattimore; *Manchuria, the Cockpit of Asia*, by P. T. Ether-ton and H. Hessel Tiltman; *The Tinder Bow of Asia*, by George E. Sokolsky. Concerned with the League of Nations were: Felix Morley's *The Society of Nations*, and *Boycotts and Peace*, edited by Evans Clark, attacking article xvi of the Covenant.

Miscellaneous political writings included: Val-entine de Balla's *The New Balance of Power in Europe*, between revisionists and anti-revisionists; Harold E. Scarborough's *England Muddles Through*; W. L. Middleton's *The French Political System*; A. W. Jose's *Australia: Human and Economic*; Sir Arnold T. Wilson's *Persia*; Robert Machray's *Poland: 1914-1931*; Henry Kittredge Norton's *The Coming of South America*.

ECONOMICS. The world and his brother were economists in 1932. Sir Arthur Salter's *Recovery: the Second Effort* offered a programme attractive to many, which he repeated in *The World's Economic Crisis and the Way of Escape*, contributed to, also, by J. M. Keynes, Sir Josiah Stamp, and others. Keynes' *Essays in Persuasion* proved that he had warned us, and gave more advice. Other works offering cures for our ills were: Stuart Chase's *A New Deal*; Wal-lace Brett Donham's *Business Looks at the Unforeseen*, insisting that mass production implies mass consumption; George Soule's *A Planned Society*; *Facing the Facts: an Economic Diagnosis*, by twelve professors; *The Way Forward*, by Robert S. Brookings; *Economic Stabilization in an Unbalanced World*, by Alvin Harvey Hansen, *The Road to Revival*, by F. C. James; and *America Faces the Future*, edited by Charles A. Beard, a summary of economic plans.

Lawrence Dennis asked *Is Capitalism Doomed?* and was inclined to think it was. Henry Pratt Fairchild, in *Profits or Prosperity?* attacked the profit motive. G. D. H. Cole offered *A Guide through World Chaos*. Harold G. Moulton and Leo Pavlovsky explained *War Debts and World Prosperity*; while Garet Garrett, in *A Bubble that Broke the World*, bitterly attacked the system of encouraging foreign trade by foreign loans. Elisha E. Garrison discussed *The Riddle of Economics*; and over-production was considered in *The Paradox of Plenty*, by Harper Leech; *Jobs, Machines, and Capitalism*, by Arthur Dahl-berg; and *Money for Tomorrow*, by W. E. Wood-ward.

Studies in special features of economic life were: *Men, Money, and Mergers*, by George L. Hoxie; *Stop, Look, and Listen*, about the rail-roads, by David Hinshaw and W. E. Albigh; *Confessions of the Power Trust*, by Carl D. Thomp-son; *The Power Fight*, by Stephen Raushenbush; and *Red Economics*, by Walter Duranty and others. Economic history was represented by: Edward C. Kirkland's *A History of American*

*Economic Life*; John H. Frederick's *The Develop-ment of American Commerce*; Henry Hamilton's *The Industrial Revolution in Scotland*; Lancelot Lawton's *An Economic History of Soviet Russia*; and A. M. Sakolski's *The Great American Land Bubble*, showing the results of the inflation of land values on our history.

HISTORY. Publications in history exhibited a marked vogue for reciting and explaining events since the beginning of this century. This was exemplified in such works as the fourth volume of *Our Times*, by Mark Sullivan, covering the years 1909-1914; *Just the Other Day*, by John Collier and Iain Lang, about England in the 1920's; *Years of Tumult*, by James H. Powers, about Europe from 1919 to 1931; *The Partition of Tur-key, 1913-1923*, by Harry N. Howard; *The Nation at War*, by Peyton C. March, defending the conduct of the General Staff; and *Development of the League of Nations Idea: Documents and Correspondence of Theodore Marburg*, edited by John H. Latané. Even *The United States since 1865*, by Louis M. Hacker and Benjamin B. Ken-drick, and *Fifty Years, 1882-1932*, by various persons, gave the greater part of their space to quite recent events. Also, dealing with the con-temporary period, though naturally with a nar-rower interest, were volume vii, *The Agadir Crisis, of British Documents on the Origins of the War*, edited by G. P. Gooch and Harold Tem-perley; and *Spain's Uncertain Crown, 1808-1931*, by Robert Sencourt.

More general works in American history in-cluded: James Truslow Adams' *The March of Democracy*, the political accompaniment of his social *Epic of America*; J. H. Denison's *Emo-tional Currents in American History*; Virginus Dabney's *Liberalism in the South*; and Michael Williams' *The Shadow of the Pope*, about anti-Romanist movements.

Perhaps the outstanding work of history in the traditional grand manner was the second volume of *England under Queen Anne: Ramillies and the Union with Scotland*, by G. M. Trevelyan. Other publications in English history were: Sir Charles Petrie's *The Jacobite Movement*; F. M. G. Higham's *Charles I*; Sir John A. R. Marriott's *The English in India*; R. G. Collingwood's *Roman Britain*; Esmé Wingfield-Stratford's *The Victorian Sunset*. In European history appeared: *War and Peace in Europe, 1815-1870*, by E. L. Woodward; *The Peacemakers, 1814-1815*, by J. G. Lockhart, about the Congress of Vienna; *A History of Europe, 1378-1494*, by W. T. Waugh; *The Story of the Borgias*, by L. Collison-Morley; and volume vii, *Decline of Empire and Papacy, of The Cambridge Medieval History*, edited by J. R. Tanner, C. W. Previté-Orton, and Z. N. Brooke.

In ancient history there were two works by Max Cary: *A History of the Greek World from 323 to 146, B.C.*, and *The Legacy of Alexander*; and volume ix, *The Roman Republic, 133-44, B.C.*, of *The Cambridge Ancient History*, edited by S. A. Cook, F. E. Adcock, and M. P. Charles-worth. There was also *A History of Israel*, by W. O. E. Oesterley and T. H. Robinson.

SCIENCE. In *Kamongo*, Homer W. Smith gave a fictional background to an argument for a mechanist view of life. Gustav Eckstein's *Lives* was about pet animals. Other biological works were: Thomas Hunt Morgan's *The Scientific Basis of Evolution*; J. B. S. Haldane's *The Causes of Evolution*; and A. C. Seward's *Plants:*

*What They Are and What They Do.* In physics appeared *Advancing Science*, by Sir Oliver Lodge; *Science and Human Experience*, by Herbert Dingle; *The Interpretation of the Atom*, by Frederick Soddy; *A History of Experimental Physics*, by Carl Trueblood Chase; and *Behemoth: the Story of Power*, by Eric Hodgins and F. Alexander Magoun. Howard W. Haggard's *The Lame, the Halt, the Blind*, and Paul de Kruif's *Men against Death*, were about medicine, the latter largely biographical. Eighteen astronomers contributed to *The Splendour of the Heavens*; and W. de Sitter's *Kosmos* was about astrophysics.

Experts under the direction of the National Research Council produced four volumes called *Physics of the Earth*, volcanology, meteorology, etc. *Van Loon's Geography*, by Hendrick Willem Van Loon, attracted attention. General works included John Langdon-Davies' *Man Comes of Age*, describing the effect of science on philosophy; J. Arthur Thomson's *The Riddles of Science*, questions with their possible answers; and J. G. Crowther's *Outline of the Universe*, attempting a summary in many fields.

**TRAVEL AND SPORT.** The headliner here was Ernest Hemingway's *Death in the Afternoon*, about bull-fighting. William Beebe's *Non-such* told about sea-bottoms, as did David Scott's *Seventy Fathoms Deep*, about the salvage of the *Egypt*. Charles B. Nordhoff and James Norman Hall described the *Mutiny on the Bounty* dramatically. H. T. Wilkins gave advice about *Treasure Hunting*. Malcolm D. Whitman was learned about *Tennis Origins and Mysteries*. Gene Tunney insisted *A Man Must Fight*. Joseph Hergesheimer's *Berlin* included visits to other cities. Philip Guedalla's *Argentine Tango* was amusing. A. J. Villiers' *The Sea in Ships* dealt with the few commercial sailing-vessels left. Bertram Thomas wrote about *Arabia Felix*; Edmund Blunden about *The Face of England*; F. Spencer Chapman about the British Arctic Air Expedition of 1930-1931 in *Northern Lights*; Sir George Dunbar about Assam in *Frontiers*; Marian Nicholl Rawson about travel in early New England in *From Here to Yonder*; Henry Baerlein about Transylvania in *Enchanted Woods*; Edward H. Thompson about the Mayas of Yucatan in *People of the Serpent*; Cherry Keaton about African water-pools in *The Animals Came to Drink*. These should be mentioned: *Modern Athletics*, by Lawson Robertson; *What Price Football*, by Barry Wood; *Alpine Days and Nights*, by W. T. Kirkpatrick; *Writ in Sand*, by R. B. Cunningham-Graham.

**LITHUANIA**, lith'ô-â-nî-â. A Baltic republic established Feb. 16, 1918, from territories of the former Russian Empire; bounded by Latvia on the north, Poland on the east and south, and East Prussia on the southwest. Capital, Kovno, although Vilna, which was transferred to Poland by the Council of Ambassadors in 1923, was still claimed by the Lithuanians in 1932 as their capital.

**AREA AND POPULATION.** Poland retains possession of approximately 10,000 square miles of territory claimed by Lithuania. The actual area under Lithuanian sovereignty in 1932 was 21,490 square miles, the population being estimated at 2,393,000, as compared with about 2,170,245 at the census of 1923. The Memel (Klaipėda) district, with an area of 933 square miles and a population of 141,274 in 1925, was included in

these figures (see MEMEL). The chief cities, with their estimated population at the beginning of 1932, were: Kovno (Kaunas), 99,530; Memel (Klaipėda), 37,142; and Shavli (Siauliai), 23,249. For the five-year period, 1927-31, births averaged 64,545 annually and deaths, 37,779. The average annual birth rate per 1000 inhabitants was 27.9 and the death rate 16.3.

**EDUCATION.** According to the 1923 census, 35.9 per cent of all males and 38.8 per cent of all females over five years of age were illiterate. In 1931, there were 227,505 students in primary schools, 28,093 in secondary schools and lyceums, and 4354 in higher schools.

**PRODUCTION.** Agriculture and lumbering support the bulk of the population. About 6,485,000 acres, or 47 per cent of the total area, was under cultivation in 1930; there were 3,508,000 acres of meadow and pasture, 311,000 acres of orchard trees, shrubs and bushes, and 2,175,000 acres of woods and forests. The 1931 cereal crop was 28 per cent lower than in 1930 and there was a heavy decline in the value of farm production. The chief crops in 1930 (in bushels) were: Wheat, 8,340,000; rye, 16,282,000; barley, 10,845,000; oats, 28,065,000; potatoes, 72,089,000. Flax production was 46,028,000 pounds; hay and clover, 1,281,000 metric tons. Livestock in 1931 included 1,120,000 cattle, 1,338,000 swine, 605,000 sheep, and 592,000 horses. Industrial enterprises in 1930 numbered 1100, with 20,217 workmen, compared with 1045, with 19,746 workmen, in 1929. Machinery, metal products, foodstuffs, textiles, chemicals, brewing and tobacco manufacture are the leading industrial products.

**COMMERCE.** The value of imports declined 11 per cent in 1931 and that of exports 18 per cent. Imports for consumption were valued at 277,959,000 lits (\$27,796,000), as against 312,415,000 lits (\$31,242,000) in 1930. Exports totaled 273,119,000 lits (\$27,312,000), compared with 333,739,000 lits (\$33,374,000) in 1930. Leading imports in order of value were cotton cloth, metal wares, wool cloth; coal, coke, and briquets; machinery, and fertilizers. The principal exports were meats, butter, chemical wood pulp, swine, and eggs. Imports came principally from Germany (47 per cent), United Kingdom (7.7 per cent), Czechoslovakia (7.1), and the United States (3.9). Exports went chiefly to Germany (45.9 per cent). In 1932, imports totaled 166,953,500 lits and exports 189,125,800 lits.

**FINANCE.** Closed accounts for both ordinary and extraordinary budgets showed a surplus of 4,796,000 lits (lit equals \$0.10 at par) for 1931, with revenues totaling 340,086,000 lits and expenditures 335,290,000 lits. The 1932 budget estimates balanced at 295,000,000 lits (\$29,500,000). The external debt on Jan. 1, 1931, stood at 103,494,000 lits (\$10,349,000); on Jan. 1, 1932, it was 131,599,000 lits (\$13,160,000), of which \$6,197,000 was due the United States Government. The internal debt was negligible.

**COMMUNICATIONS.** The railway, telegraph, and telephone systems are state owned. In 1931, there were 1016 miles of railway lines and about 27,543 miles of highway (752 miles macadam). Gross revenues of the railways in 1931 were equivalent to \$4,736,000.

**GOVERNMENT.** According to the constitution as amended May 15, 1928, executive power is vested in the President of the Republic, elected for seven years, who acts through a responsible ministry; and legislative power is in a diet elected for five

years by universal, equal, direct, and secret suffrage. No elections had been held from 1926 up to 1932, and government remained in the hands of a small nationalist intelligentsia, with legislation being enacted by presidential decrees. President in 1932, Antanas Smetona; Prime Minister and Minister of Finance, Juozas Tubelis.

**HISTORY.** The Memel question again came to the forefront of Lithuania's tangled foreign relations when the Lithuanian government on Feb. 6, 1932, ousted the German president of Memel Territory and established control of the city of Memel, whose autonomy within the Lithuanian state was guaranteed by the League of Nations' Statute of May 8, 1924. This action was precipitated by the action of the German president of the Memel Directorate in negotiating in Berlin concerning the foreign affairs of Memel. The dispute was amicably terminated by a decision of the Permanent Court of International Justice on August 11, whose ruling was primarily favorable to Lithuania (see MEMEL for details of the dispute and of the Court's decision; also see WORLD COURT). There was no improvement in Polish-Lithuanian relations, which had been strained since the Polish occupation of the Vilna district in October, 1920. Lithuania was among the six nations which made war-debt payments to the United States on Dec. 15, 1932, her contribution totaling \$92,396, all in interest. No payment on principal was due.

The desperate condition of the farming population was aggravated during 1932 by continued

of Versailles, St. Germain, Trianon, and Neuilly. The treaties of alliance were renewed in 1929.

**LIVESTOCK.** Drastic price reductions were experienced for all livestock products during 1932. General unsettled conditions and the fact that livestock producers were compelled to move their animals in the face of a declining domestic and foreign demand were the important contributing factors.

The price of beef, pork, and lamb continued to show an almost steady decline from 1929. An indication of the low prices of meat animals may be obtained from the average price received by producers on Oct. 15, 1931 and 1932, for hogs, beef cattle, veal, sheep, and lambs, as calculated by the U. S. Bureau of Agricultural Economics. On Oct. 15, 1932, producers received \$3.25 per 100 lbs. for hogs, \$3.91 for beef cattle, \$4.75 for veal, \$2.03 for sheep, and \$3.95 per 100 lbs. for lambs. At the corresponding date in 1931, the average price for hogs was \$4.70; beef cattle, \$4.76; veal, \$6.5; sheep, \$2.63; and lambs, \$4.64. The prices given for 1931 were at that time considered very low. A temporary rise in June, 1932, in the price of beef cattle and hogs gave some encouragement but the market soon dropped back.

The accompanying table shows that there were somewhat smaller numbers of cattle and calves, but larger numbers of hogs and sheep slaughtered under Federal inspection in 1932 than in 1931. Except in the case of sheep, the numbers of cattle and hogs were smaller than for the 5-year average:

MEAT SLAUGHTERED AND STORED UNDER FEDERAL INSPECTION IN THE UNITED STATES IN 1932, WITH COMPARISONS

	Cattle	Calves	Hogs	Sheep and lambs
Number slaughtered:				
1932 . . . . .	7,625,373	4,493,439	45,244,957	17,899,037
1931 . . . . .	8,107,842	4,716,560	44,771,981	18,070,875
5-year average * . . . .	8,517,939	4,671,286	46,182,229	15,032,403
Total dressed weight of slaughtered animals:				
1932—lbs. . . . .	3,989,886,000	454,386,000	7,830,545,000	681,515,000
1931—lbs. . . . .	4,278,467,000	473,004,000	7,831,136,000	687,634,000
5-year average *—lbs. . . . .	4,369,689,000	467,812,000	8,057,844,000	581,432,000
In storage on December 31:				
1932—lbs. . . . .	42,870,000 <sup>b</sup>		531,938,000 <sup>c</sup>	2,767,000
1931—lbs. . . . .	53,199,000 <sup>d</sup>		614,530,000 <sup>e</sup>	2,318,000
5-year average *—lbs. . . . .	81,645,000 <sup>f</sup>		644,756,000 <sup>g</sup>	4,483,000

\* Average for 1927, 1928, 1929, 1930, 1931.

<sup>b</sup> 29,279,000 lbs. fresh, and 13,591,000 lbs. cured beef.

<sup>c</sup> 101,798,000 lbs. fresh, 389,057,000 lbs. cured pork, and 41,088,000 lbs. lard.

<sup>d</sup> 37,812,000 lbs. fresh, and 15,387,000 lbs. cured beef.

<sup>e</sup> 141,758,000 lbs. fresh, 421,648,000 lbs. cured pork, and 51,224,000 lbs. lard.

<sup>f</sup> 60,542,000 lbs. fresh and 21,103,000 lbs. cured beef.

<sup>g</sup> 133,469,000 lbs. fresh, 446,381,000 lbs. cured pork, and 64,966,000 lbs. lard.

low prices and by heavy rains, which destroyed nearly one-fifth of all the important crops. The decreased purchasing power on the farms was reflected in declining industrial production and foreign trade. Former Premier Augustinas Volde-maras, who was acquitted in 1931 of a charge of treason, was acquitted for a second time on Sept. 29, 1932, following his trial on a charge of attempted embezzlement.

Consult Malbone W. Graham, "Security in the Baltic States," *Foreign Policy Reports*, Feb. 17, 1932, vol. vii, no. 25.

**LITTLE ENTENTE.** A designation applying to the three countries of Czechoslovakia, Rumania, and Yugoslavia (q.v.), whose governments in 1920 concluded a defensive alliance aimed at the maintenance of the status quo in central Europe as established by the treaties

The compensating factor in the livestock situation was cheap feed and relatively good grazing on the range lands. In the range area 1930 and 1931 were years of low rainfall and the range had suffered from drought. Practically all the reserve feed supplies were exhausted in the winter of 1931, but spring rains produced good pastures. However, they suffered from dry weather in the summer in certain areas.

The corn hog ratio used as an indication of the economic advantage of feeding hogs is based on the ratio between the prices of corn and hogs. This ratio was favorable most of the year and above the average of 11 bushels of corn equivalent to 100 pounds of pork.

The number of cattle on farms has been increasing since 1928, but the number of cattle slaughtered each year has been decreasing, cow

and heifer slaughtering being especially low. However, the slaughtering of steers increased. The expansion in the cattle breeding stock is expected to result in a marked increase in beef slaughterings during the next few years.

Because of the favorable range and feed conditions, grass cattle marketed in the fall were in unusually good flesh and there were heavy movements of cattle back to the country for further finishing. There were large numbers of well-finished cattle marketed in the late fall of 1932 which had been fed or held, expecting a rise in the market as occurred in 1931. This points to larger supplies of well-finished cattle during the spring and summer of 1933. The expansion in the beef cattle industry, which has been going on since 1928, appears to warrant caution on account of doubt regarding the ability of consumers to absorb an increased supply of beef at remunerative prices. Early in the fall there was a decided price advantage for heavy steers, but this did not hold in the late fall.

Sheep production probably suffered worse than other phases of the livestock industry because of the long continued low prices of both meat and wool. There was no pronounced recovery in the lamb meat market as occurred temporarily for beef and hogs in June. Although the sheep population has increased for several years the number of feeder lambs transported seemed to be very low as compared with other years.

Egg and poultry markets were generally weaker than in 1931, eggs being quoted at 15 cents or less for five months of the year. After July, egg prices increased very rapidly, equaling 1930 and 1931 fall prices. The estimated November egg price to producers of 26.1 cents was only 1.5 cents less than the 1910-14 average price for November.

Poultry prices did not equal egg prices, and there was disappointment among producers regarding the holiday trade. Returns for turkeys were very low.

**INTERNATIONAL CONDITIONS.** Conditions and expected future developments in the European countries taking most of the United States' exports of pork products, the only major meat exports of the United States, did not offer much promise of improvement. The continuance of the protectional policies of the leading countries was indicated, and there was no general improvement in the buying power of the European consumers.

The downward trend in the pork exports of the United States, which has been under way for several years on account of increased European hog production, continued through 1932, but because of the higher tariffs and other barriers European importation declined, notwithstanding a tendency toward decreased hog production in many European countries. The United Kingdom was the outstanding exception to the general downward trend in production which was evidenced in Germany, Denmark, Poland, Netherlands, and other countries.

Total pork exports of the United States were reduced 25 per cent as compared with the preceding year, the decrease being much greater in bacon than in hams and shoulders. Lard exports showed little change. Although British imports of bacon were the largest on record, those from the United States declined from 10,792,801 pounds to 3,385,640 pounds during the first six months of 1932. The bacon exports to the other principal European countries also de-

clined except to Italy. The total bacon exports of the United States for 1932 were 28,083,000 pounds, as compared with 59,838,000 pounds in 1931. The total exports of hams and shoulders decreased in 1932 to 95,216,000 pounds, as compared with 132,324,000 pounds in 1931. Exports of lard during 1932 were 836,000,000 pounds, as compared with 901,000,000 pounds in 1931.

The greatest factor in the drop in bacon imports of the United Kingdom from the United States was the increase in bacon production in continental hog producing countries. The Danish pig industry has been built up with the intention of supplying the English market. The Dutch industry formerly supplied England with much fresh pork. Since the prohibition of imports of fresh pork from the Continent, Holland increased the production of bacon for the English market. Sweden also caters to this market. In recent years the bacon industry in Poland, Lithuania, Estonia, and Latvia has undergone great development, export production being largely for the English market. Occasional shipments from Germany and frequent but irregular shipments from Russia appeared on the English market.

The British government took steps to encourage livestock production in the various dominions, which may be expected to have a definite influence on the international meat trade. This may be expected to stimulate beef production in a number of the dominions, and in the Union of South Africa additional encouragement was offered in the form of a subsidy. Increased beef production in South Africa may be expected to offer additional competition to the frozen and chilled beef trade, particularly of the South American countries.

**RESEARCH.** Investigations continued on the various phases of livestock production. Meat investigations were probably of the most general interest in the U. S. Department of Agriculture and State agricultural experiment stations. These were concerned with the part played by management; breeding; feeding; grade; storage; and cooking on the quality, tenderness, and palatability of beef, lamb, and pork. In breeding studies there was a growing interest in the setting up of a record of performance to serve as a measure of the breeding capacity of swine, beef cattle, sheep, and poultry. Livestock breeders and those interested in the research features of livestock improvement aided in fostering such a programme. Several State experiment stations and the U. S. Department of Agriculture were engaged in a coöperative attack on the mode of inheritance of capacity for meat and milk production in cattle, and an attempt was being made to combine both qualities in dual purpose breeds. Problems of local and sectional interest are constantly under investigation at the 48 State experiment stations and their substations over the United States.

Interesting results regarding the addition of feeds rich in vitamins A and D to the rations of calves, milking cows, and pigs were reported by H. Isaachsen of the Royal Agricultural College of Norway. Practically no benefit in the growth of calves or pigs from adding feeds rich in vitamin A to skim milk for calves or grain rations for pigs was observed. Additional amounts of vitamin D (antirachitic) supplied in feeds maintained better calcium and phosphorus balances in milch cows and helped to prevent rickets in pigs. Some, but not all, fish meals were good

sources of vitamin D. The importance of the antirachitic vitamin in rations of growing sheep was brought out in studies conducted by D. W. Auchinachie and A. H. H. Fraser at the Rowett Institute in Scotland. Here it was found that cod-liver oil or outdoor sunlight were necessary to permit normal growth. As the calcium and phosphorus in the blood serum were correlated with the growth of the sheep it seemed conclusive that the important factor was the antirachitic vitamin in the cod-liver oil or sunlight. Of course an adequate supply of lime must be available in the ration to permit the full operation of the antirachitic factor.

The importance of minerals and a factor necessary for the assimilation of calcium were further borne out in studies of the mineral balances of laying pullets conducted in the animal nutrition division of the Ministry of Agriculture for Northern Ireland, by R. H. Common. Large amounts of calcium are required for eggshell formation and there was found to be a reduction in the calcium and phosphorus voided during the 2 to 3 weeks prior to egg laying. These findings confirm and substantiate the results of many investigations at the State agricultural experiment stations and the U. S. Department of Agriculture.

Agricultural experiment stations of the Union of South Africa are working on pasture improvement projects. The present carrying capacity of South African pastures is fully utilized in years of normal rainfall and normal grazing conditions. Under existing export subsidies for cattle and dairy products, together with the improved outlook for a market for chilled beef, however, an increased carrying capacity for pastures seems justified.

The National Advisory and Legislative Committee on Land Use and National Land Use Planning Committee issued a statement in November regarding the administration of the public domain of the United States, in which recommendation was made for immediate Federal regulation of grazing on the unreserved and unappropriated public lands to check overgrazing, erosion, and damage to watersheds and irrigation districts. As a result of unrestricted use, large areas have been greatly reduced in grazing capacity and some have been depleted so that they are unfit for grazing in their present condition.

**NECROLOGY.** W. A. Henry, head of animal husbandry and Dean of the Wisconsin Agricultural College from 1880 until his retirement in 1907, died at the age of 82. Dr. Henry was probably best known as the author of the book *Feeds and Feeding* by W. A. Henry and F. B. Morrison.

Dr. Byron E. Pontius, professor of animal husbandry at Purdue University, died on March 16. In addition to teaching animal husbandry and genetics, he conducted research in the field of animal breeding.

Dr. C. D. Marsh, in charge of poison plant investigations in the U. S. Department of Agriculture until his retirement in 1930, died on Apr. 23, 1932.

Dr. Graham Lusk, a member of the Cornell Medical College faculty for 30 years, and one of the leading world authorities on animal nutrition, died on July 18.

**CHANGES IN PERSONNEL.** C. F. Curtiss, well known in animal husbandry circles and as a livestock judge, retired on June 30 as Dean and

Director of the Iowa State Agricultural College and Experiment Station.

**BIBLIOGRAPHY.** Among the recent publications on livestock are the following: J. H. Gehrs, *Livestock and Farm Mechanics* (Rev. ed., New York, Macmillan, 1932); H. W. Vaughan, *Breeds of Livestock in America* (Columbus, Ohio, R. G. Adams Co., 1931); C. W. Gay, *Productive Horse Husbandry* (Philadelphia, 4th ed., 1932); J. F. Wall, *Practical Light Horse Breeding* (Ed. 2. Washington, American Remount Association, 1932); H. Isaachsen, *The Fat-soluble Vitamin Requirements of Cattle and Pigs During Growth, with Remarks on Some Other Questions as to the Vitamin Problem in Cattle and Pig Feeding* (Jour. Agr. Sci. [England], 22 (1932), No. 3, pp. 460-484; W. C. Davis, *Market Classes and Grades of Yearling Beef* (U. S. Dept. Agr. Circ. 208 (1932), pp. 27; R. Ostertag, *Lehrbuch der Schlachtvieh- und Fleischbeschau*. (Stuttgart, Enke, 1932); D. W. Auchinachie and A. H. H. <sup>a</sup> Bales. <sup>b</sup> Tons.

barrels for 1931, from 23,272,000 for 1930; in value, more sharply, to \$14,220,000 (1931), from \$26,110,000. In the production of natural gas the State ranked fourth among the members of the Union, on the basis of quantity, though not on that of value, for 1930, the latest year for which statistics on natural gas were available. The State's natural-gas wells increased their yield to 278,341,000 M cubic feet (1930), from 261,138,000 M (1929); by value, to \$35,895,000 (1930), from \$26,505,000 (1929). Extensive systems of transmission had much to do with the increase. From natural gas were extracted in 1931 58,034,000 gallons of gasoline, as against 73,693,000, in value \$3,725,000 for 1930. Salt production declined only slightly, to 529,280 short tons for 1931, from 535,250 for 1930; by value, to \$1,962,690 (1931), from \$2,164,365 (1930). Except for sand and gravel to the total value of \$2,225,211 produced in 1930 no other mineral products were listed as furnishing totals of major importance in that year. While the State made no substantial contribution to production of sulphur, it was reported in November, 1932, that the Froepert Texas Company was about to develop a sulphur deposit at Grande Ecaille, near the Mississippi River some 50 miles below New Orleans. The total value of the mineral product of the State was \$71,929,038 for 1930; for 1929, \$62,725,997.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1932, was 4639. During the year previous, some 15 miles of line had been abandoned.

**EDUCATION.** In the face of conditions generally adverse to liberal support for public education the State Legislature appropriated in 1932, for the public schools, \$1,500,000 more than had been granted the year before; it likewise increased by \$750,000 the total for the State university and maintained the existing level of appropriations for the other higher schools under the State Board of Education. For the academic year 1931-1932, the numbers of persons of school age were stated as 399,999 whites and 263,170 Negroes. There were enrolled in the public schools 286,988 whites and 160,529 Negroes. Of these, 230,243 whites and 153,285 Negroes were in common schools or elementary grades; in high schools, 56,745 whites and 7244 Negroes. The expenditure of the year for public-school education totaled \$15,019,468 for whites and \$1,861,096 for Negroes. Salaries of teachers, by the year, averaged \$969.55 for whites and \$296.31 for Negroes.

**CHARITIES AND CORRECTIONS.** Under the system in operation in 1932 the central authority of the State over institutions for the care and custody of persons rested in a Board of Charities

and Correction. This board was composed of four ordinary members, of whom one served as vice-chairman, and further included the Governor, as *ex-officio* member and chairman. The board did not possess administrative or executive powers; its duties were supervisory, with regard to the State and subdivisional institutions. The State institutions were conducted by separate directing bodies. The board had, further, the authority to visit private eleemosynary institutions. The chief State institutions were: penal and correctional, the Penitentiary at Baton Rouge, Training Institute at Monroe, and Industrial School for Girls, at Alexandria; for the insane, the Central Louisiana State Hospital, at Pineville, and East Louisiana State Hospital, at Jackson; Greenwell Springs Tuberculosis Hospital, Greenwell Springs; Charity Hospital (general), at New Orleans; for defectives, schools for the blind at Baton Rouge (colored and white), School for the Deaf (Baton Rouge), State Colony and Training School (feeble-minded, Alexandria).

**LEGISLATION.** The State Legislature held a regular biennial session, which adjourned on July 7. In spite of an adverse report, declaring it unconstitutional to repeal State laws by a popular vote, there was passed a bill submitting to a popular referendum in November the proposal that the State's prohibition law be repealed. A separate referendum was submitted to the November popular vote, on the proposition whether to favor the repeal or modification of the Eighteenth Federal Amendment. New or additional taxes were imposed on tobacco, soft drinks, electricity, insurance premiums, corporate franchises and chain stores. The State Highway Commission was authorized by concurrent resolution to borrow \$2,500,000 for the cost of finishing road-building that was under way. Gross sales of dairy and meat products were subjected to a tax of 1¼ per cent. Measures of budgetary planning, of State economy, and of tax reduction were lost. The proposed Federal constitutional amendment to alter the dates of inaugurations and of the convening of Congress was ratified.

**POLITICAL AND OTHER EVENTS.** The State act of 1931, prohibiting the planting of cotton in 1932, not having been copied by the other cotton States, was declared inoperative by Governor Long in a proclamation in January. Long vacated the office of Governor on January 25 in order to qualify for the office of United States Senator, to which he had been elected in 1930. He was not succeeded by Lieutenant Governor Cyr, who had sought to obtain the office through court action, but by Alvin O. King, President of the State Senate and Long's personal choice for his successor. King was sworn in on January 26, and assumed office. Cyr also went through the form of being sworn in but did not obtain authority. In the Democratic primary election, held on January 19, O. K. Allen, who had Governor Long's support, received the nomination for Governor, this insuring his election, which took place April 20. An ouster suit brought by Cyr for the removal of King as actual governor was denied by Judge Porter of the District Court, at St. Charles, on March 14. Oscar K. Allen was inaugurated Governor on May 16. On the same day was dedicated, at Baton Rouge, the new State Capitol, a \$5,000,000 structure of Alabama limestone, composed of a broad, low base and a central tower of 33 stories, the interior being

embellished by works of Lorado Taft, Jules Guerin, and other artists of note. The State secured a loan of \$1,000,000 for relief of need among the unemployed, from the Reconstruction Finance Corporation, in August. It obtained, from the same source, on September 27, a loan of \$13,000,000 to cover the cost of the projected railroad and highway bridge across the Mississippi River at New Orleans.

**ELECTIONS.** The State voted the Democratic Presidential ticket by a majority of 13 to 1. For President, the popular vote was: Roosevelt (Dem.), 249,418; Hoover (Rep.), 18,853.

J. H. Overton, Democrat, was elected United States Senator, and a full Democratic delegation of 8, all but one being actual incumbents, were elected to the Federal House of Representatives. An affirmative popular vote was cast on two referenda: That the State prohibition law be repealed, and that Congress be petitioned to call a convention to repeal the Eighteenth Amendment.

**OFFICERS.** The chief officers of the State, serving subsequently to the inauguration of May 16, were: Governor, Oscar K. Allen; Lieutenant-Governor, John B. Fournet; Secretary of State, E. A. Conway; Treasurer, J. S. Cave; Auditor, L. B. Bayard, Jr.; Attorney-General, G. L. Porterie; Superintendent of Education, T. H. Harris.

**Supreme Court:** Chief Justice, Charles A. O'Neill; Associate Justices, Ben C. Dawkins, Winston Overton, John St. Paul, W. G. Rogers, John R. Land, H. F. Brunot, Fred M. Odom.

**LOW, SIR SIDNEY.** A British author and journalist, died in Kensington, London, Jan. 13, 1932. He was born in Blackheath, Jan. 22, 1857, and was educated at Balliol College, Oxford. He became a barrister of the Inner Temple and also lectured on constitutional history at King's College, University of London. In 1888 he succeeded Frederick Greenwood as editor of the *St. James's Gazette*, holding this post until 1898 when he became a leader writer on the *Standard*. He was literary editor of the latter in 1904 and special correspondent thereafter. His assignments, which covered important events in all parts of the world, including the World War, were later recounted in such books as *A Vision of India* (1906), the outgrowth of his trip to India at the time of the Prince of Wales's tour; *Egypt in Transition* (1914); *The Spirit of the Allied Nations* (1915); *Italy in the War* (1916); *The Call of the East* (1921); and *Indian States and Princes* (1929). He also wrote a *Dictionary of English History* (1884, revised, 1896); *Governance of England* (1904); *Political History of the Reign of Queen Victoria* (1907); *De Quincey* (1911); and *The British Constitution* (1928). He was knighted in 1918.

**LOW, WILL HICOK.** An American illustrator and figure and genre painter, died in Bronxville, N. Y., Nov. 27, 1932. He was born in Albany, N. Y., May 31, 1853, and obtained his art education in Paris where he studied under Gérôme at the École des Beaux Arts and under Carolus-Duran. His work was also influenced by association with Millet and other painters at Barbizon. Returning to the United States in 1877, he was elected a member of the Society of American Artists in 1878, an associate of the National Academy of Design in 1888, and an academicien in 1890. During 1882-85 he was an instructor in the life classes at Cooper Union and during

1889-92 at the National Academy of Design. In 1910 he delivered the Scammon lectures at the Art Institute of Chicago. He was the recipient of medals at the Paris Exposition of 1889, the Chicago Exposition of 1893, and the Buffalo Exposition of 1901, and at the St. Louis Exposition of 1904 served as a member of the International Jury of Awards. At the time of his death he was a member of the National Institute of Arts and Letters.

Low was one of the first to introduce the light tones of the plein-air school into American art, his work showing grace of line, delicate coloring, and good composition. Among his paintings are: "The Orange Vender" (Art Institute of Chicago); "Christmas Morn" (National Gallery, Washington); "May Blossoms" (Smith College); "The Sylvan Year" (Montclair, N. J., Art Museum); "My Lady" (Lotus Club, New York City); and "Aurora" (Metropolitan Museum of Art, New York City). Among his decorations are stained-glass windows in the Rock Creek Church, Washington, D. C., and St. Paul's Methodist Episcopal Church, Newark, N. J.; decorative panels for the ball room of the old Waldorf-Astoria Hotel, New York City; and mural paintings in the Essex County Court House, Newark, N. J., the Lucerne County Court House, Wilkes-Barre, Pa., the Federal Building, Cleveland, Ohio, and St. Paul's Protestant Episcopal Church, Albany, N. Y. His most significant murals are the series depicting "The Aspiration of Man and the Results of His Achievement" in the rotunda of the New York State Educational Building and the frieze in the legislative library of the Capitol at Albany. His best-known illustrations are those for Keats's *Lamia* and *Odes and Sonnets*. He was the author of *A Chronicle of Friendships* (1908) and *A Painter's Progress* (Scammon Lectures, 1910).

**LUBECK, lü'bék.** A state of the German Republic. See GERMANY under *Area and Population*.

**LUCE, ADMIRAL JOHN.** A British naval officer, died near Devizes Sept. 23, 1932, aged 62. During the World War he participated in the cruiser operations in the South Atlantic, commanding the *Glasgow* which he successfully saved when the rest of Admiral Cradock's squadron was lost in the battle off Coronel, Chile, Nov. 1, 1914. Afterwards he helped Admiral Sturdee to restore the prestige of the British navy at the battle of the Falklands on Dec. 8, 1914, the *Glasgow* destroying the German cruiser *Leipzig*. His ship was also responsible for the sinking of the *Dresden* off the island of Juan Fernandez on Mar. 14, 1915. After the war he became associated with the Royal Naval Air Service and was one of the first commodores of the station at Cranwell. During 1921-24 he was admiral superintendent of the Malta dockyard. He retired in 1925. He was created a Companion of the Bath and received the decoration (third class) of the Order of the Rising Sun of Japan in recognition of the part he had played in the destruction of the German Asiatic fleet.

**LUDLOW, JAMES MEEKER.** An American clergyman and author, died in Norfolk, Conn., Oct. 4, 1932. He was born in Elizabeth, N. J., Mar. 15, 1841, and was graduated from Princeton University in 1861 and from the Princeton Theological Seminary in 1864. Following his ordination to the Presbyterian ministry in 1864, he held, until his retirement in 1909, pastorates of the First Presbyterian Church, Albany; the

Collegiate Reformed Church of St. Nicholas, New York City; the Westminster Church, Brooklyn; and the Munn Avenue Church, East Orange, N. J. He wrote: *A Man for A' That* (1880); *Concentric Chart of History* (1881); *Captain of the Janizaries* (1886); *A King of Tyre* (1890); *That Angelic Woman* (1890); *The Age of the Crusades* (1896); *Deborah* (1901); *Incentives for Life* (1902); *Sir Raoul* (1905); *Jesse Ben David* (1907); *Judge West's Opinion* (1908); *The Discovery of Self* (1910); *Avanti!* (1913); and *Along the Friendly Way* (1919).

**LUMBER.** See FORESTRY.

**LUSK, GRAHAM.** An American physiologist, died in New York City, July 18, 1932. He was born in Bridgeport, Conn., Feb. 15, 1866, and was graduated from Columbia University in 1887 and with the Ph.D. degree from the University of Munich in 1891. From 1891 to 1898 he was successively instructor, assistant professor, and professor of physiology at Yale University. He was then called to the same chair at the University and Bellevue Hospital Medical College in New York City. After 1909 he was a member of the Cornell University medical college faculty. Also, he was made scientific director of the Russell Sage Institute of Pathology, and during the World War was a member of the Inter-Allied Scientific Food Commission. He was the author of *Elements of the Science of Nutrition* (1906) and of the *Fundamental Basis of Nutrition* (1914).

**LUTHERAN CHURCH.** A church that expresses itself in groups of religious bodies and synods that receive and hold the canonical Holy Scriptures of the Old and New Testaments as the inspired Word of God, and as the only infallible rule and standard of faith and practice. The church accepts the three ecumenical creeds—the Apostles, the Nicene, and the Athanasian. The church receives and holds the Unaltered Augsburg Confession as a correct exposition of the faith and doctrine of the Evangelical Lutheran Church, founded upon the Word of God. All the groups accept Luther's Small Catechism and none reject the symbolical books of the Evangelical Lutheran Church, namely, the Apology of the Augsburg Confession, the Smalcald Articles, the Large Catechism of Luther, and the Formula of Concord. The cardinal doctrine of the Lutheran system of theology is justification by faith alone in Jesus Christ.

The membership of the Lutheran Church, while found chiefly in Central and Northern Europe and in the United States and Canada, is distributed throughout the world, being a total of about 83,000,000, served by more than 50,000 pastors in more than 75,000 congregations. In the United States, as the result of mergers and the formation of federations, the Lutheran Church expresses itself in practically a threefold equal division in the United Lutheran Church in America, the American Lutheran Conference (consisting of the American Lutheran Church, the Augustana Synod, the Norwegian Lutheran Church, the Lutheran Free Church, and the United Danish Church), and the Synodical Conference (consisting of the Missouri Synod, the Joint Wisconsin Synod, the Slovak Synod, the Norwegian Synod, and the Negro Missions). In addition there are the following minor religious bodies: Eielson Synod, Church of the Lutheran Brethren, Danish Church, Icelandic Synod, Finnish Suomi Synod, Finnish National Church, Finnish Apos-

tollic Church, and a number of non-synodical or independent congregations.

The statistics for 1931-32 for the United States and Canada were as follows: pastors, 12,018; congregations, 10,532; baptized members, 4,401,501; confirmed or communicant members, 2,941,413; communing members, 2,411,461; church schools, 19,552; officers and teachers, 155,286; scholars, 1,791,291; value of church property, \$380,202,923; congregational expenses, \$39,784,096; congregational benevolences, \$9,933,064; congregational expenditures, \$49,717,160. The per capita gifts were for congregational expenses, \$13.52; for congregational benevolences, \$3.37; and for congregational expenditures, \$16.90.

During 1932 are to be noted the process of balancing budgets, without curtailment of work and expansion despite depression; the intensive emphasis upon evangelism; the survey of the Lutheran Church in Canada, looking forward to the formation of a separate Lutheran Church; the establishment of commissions on investments and endowment; the development of the stewardship movement and the development and conservatism of the work among young people's and laymen's and women's organizations; the passing of a resolution of the 35th triennial convention of the Synod of Missouri, Ohio, and other States, creating the office of the board of Christian education and the office of the secretary of missions under a board of national missions, and the placing of linguistic missions in charge of the local districts; the passing of a resolution by this same convention, looking to the formation of one unit by the merging of the synods now in the federation with the Synodical Conference; and the taking of steps for the formation of one Lutheran Church in America. There must also be noted the initiation of a survey of the American Lutheran Church educational institutions; the steps taken by the board of trustees of Hartwick Theological Seminary, Brooklyn, N. Y., for the establishment of an all-Lutheran theological seminary in the City of New York; and the agreement of the Norwegian Lutheran Church, the American Lutheran Church, and the Augustana Synod to support and operate jointly the Pacific Lutheran College, Parkland, Wash. The first convention of the American Lutheran Conference was held in Milwaukee, Wis., in November, 1932, when it was decided to divide the United States into five home mission areas, with a separate home mission council in each, composed of representatives of the five general Lutheran Church bodies in the American Lutheran Conference. This council was to supervise the work and co-ordinate the efforts of these Lutheran bodies so as to avoid duplication and overlapping. There should also be noted the resolutions of the American Lutheran Conference looking forward to the formation of one Lutheran Church in America.

**FOREIGN.** In the Lutheran Church of the world in general are to be noted first of all the transfer of the 397 Lutheran refugees from Harbin, Manchoukuo, to Brazil and their settlement there by the Lutherans of the world acting through the executive committee of the Lutheran World Convention, Dr. John A. Morehead, chairman, the necessary funds having been contributed by the Lutherans of America, Norway, Sweden, Denmark, Finland, Germany, and other countries. In Norway must be noted the influence of Hallesby's teaching, preaching, and writing and Martha Steinsvik's translation of Liguori's *Moral*

**Theology.** In Denmark must be noted the celebration of the 800th anniversary of the Bishopric of Viborg. In Sweden must be noted the consecration at Upsala on Trinity Sunday, May 22, 1932, of the new Archbishop, Erling Eidem, who is holding the Lutheran Church to its cherished ideals; the movement to return all Lutheran church properties to the parishes and institutions, and all the missionary churches of India and China, in charge of Swedish missionaries, to entire mission field home rule and self-government; also the unveiling of a memorial to the late Archbishop Nathan Söderblom in Upsala Cathedral. The Lutheran World Convention honored Gustavus Adolphus on Nov. 7, 1932, when Bishop Ludwig Ihmels, vice-president of the executive committee, presented a tribute in the form of a wreath on behalf of the Lutherans of the world at the celebration at Luetzen, Germany. There must also be noted in Germany the founding of the Luther Academy in Sondershausen; the Gustavus Adolphus celebration in Leipzig, Sept. 17-20, 1932; the Salzburger 200th anniversary celebration in Prussia; and the rededication on Reformation Day, Oct. 31, 1932, of the castle church in Torgau, first dedicated Oct. 5, 1544. In Switzerland there was the organization of the Martin Luther Society, to aid in the supporting of the Lutheran congregations in that country; in Rumania, the retirement of Bishop Teutsch and the election of Dr. Victor Glondys as the Bishop at the head of the Evangelical Lutheran Church of the Augsburg Confession in Rumania; in Estonia, on June 30, 1932, the celebration of the 30th anniversary of the Lutheran University of Dorpat,—the founder was Gustavus Adolphus; in Hungary, the inauguration of the use of a new liturgy edited by Bishop D. D. Sonder Raffey, based upon the order of service prepared by Martin Luther; in Latvia, the creation of the Archbishopric of Latvia and the election of Dr. Theodors Grinbergs as Archbishop, and also the election of four other bishops to preside over the four Latvian districts of the Lutheran Church in Latvia.

In 1932 the Lutheran Church in the United States and Canada maintained 37 theological seminaries, 31 colleges, 85 junior colleges, academies, and schools with a total enrollment of 31,591 students, 2093 instructors, an endowment amounting to \$17,010,988, and a property value of \$44,729,337. Lutheran Inner Mission institutions, such as deaconesses' homes, hospitals, old people's homes, orphanages, immigrants' and seamen's homes, numbered 410, with an endowment of \$5,223,228 and a property value of \$49,996,530. During the year they sheltered, cared for, and ministered to 8847 children and 1,119,952 women and men at an annual expense of \$11,262,857. In addition to the institutional work, congregational and society inner mission work was done at an expense of approximately \$9,000,000. The expansion of efforts, looking to the preparation of literature for the blind is to be noted.

The work of the American Lutheran churches in fields outside of the United States and Canada was carried on principally in India, Africa, Japan, China, New Guinea, Argentina, and British Guiana in charge of 450 pastors, serving 2462 congregations and missions with 307,099 baptized members, 110,332 confirmed members, 127,957 communing members, 3104 church schools, 1370 officers and teachers, 127,795 scholars. The property value was \$4,430,954; the local congregational

expenses, \$219,833; the benevolences, \$151,348; the total congregational expenses, \$371,181. On the foreign mission field are to be noted the transference by the Rheinisch Mission Society of Barmen, Germany, to the American Lutheran Church of the mission in New Guinea (Madang District) and the 20th anniversary of the Boys' Middle School, Kyushu Gakuin, at Komoto, Japan.

The church maintains 25 publishing houses, with a total property value of \$5,663,798. The official periodicals are: *The Lutheran* (United Lutheran Church), *Lutheran Standard* (American Lutheran Church), *Lutheran Companion* (Augustana Synod), *Lutheran Herald* (Norwegian Lutheran Church), *Lutheran Witness* (Missouri Synod), *Northwestern Lutheran* (Wisconsin Synod), *Ansaar Lutheran* (United Danish Church), *Lutheran Men* (American Federation of Lutheran Brotherhoods), and *National Lutheran* (National Lutheran Council). Headquarters of the National Lutheran Council, in which the United Lutheran Church in America and the American Lutheran Conference cooperate, are at 39 East 35 Street, New York City, the executive director being the Rev. Ralph H. Long, D.D.

**LUXEMBURG (LUXEMBOURG)**, lük'sembürg. A small state of western Europe, bounded by Germany, France, and Belgium and linked economically to Belgium by a customs union effective May 1, 1922. Area, 999 square miles; population (1931) 300,748. Capital, Luxembourg, population (1931), 53,791.

Agriculture engages only 32 per cent of the population, the 394,000 acres under cultivation being devoted principally to oats and potatoes. Mining and metallurgical industries predominate. Production of iron ore (1931) totaled 4,731,068 metric tons; pig iron, 2,053,158 metric tons; steel, 2,034,942 metric tons. In 1930 there were 45 blast furnaces and 7 steelworks in operation. The brick, printing, leather, and glass industries are relatively important. Figures for foreign trade are included in those for Belgium. In the budget for 1931, revenue was estimated at 505,640,578 Luxemburg francs and expenditure at 461,586,709 francs (1 Luxemburg franc equals \$0.139 at par). The public debt Jan. 1, 1931, was 531,010,511 francs.

Executive power is vested in the sovereign, who appoints the Cabinet, and legislative power is vested partly in the sovereign and partly in the Chamber of Deputies of 54 members elected by direct suffrage for six years. The Council of State of 15 members, chosen by the sovereign for life, acts as a Senate. Premier in 1932, Joseph Bech (Catholic-Conservative), who is assisted by three director-generals. Ruler in 1932, Grand Duchess Charlotte. See BELGIUM and NETHERLANDS, THE, under *History*.

**LYMAN ALLYN MUSEUM.** See ART MUSEUMS.

**LYNCHINGS.** The year 1932 saw the perpetration of 11 lynchings in the United States, as compared with 14 in 1931, thus indicating that despite the continuance of the depression this form of mob rule was being kept tightly in hand. Of the 11 victims, 9 were Negroes and 2 were whites. Two lynchings occurred in Florida, and one each in Arkansas, Georgia, Kansas, Kentucky, Louisiana, Ohio, South Carolina, Texas, and Virginia. In all cases the mobs either hanged or shot their victims. The offenses charged to the lynched persons included a quarrel with an em-

ployer, murder, theft of a \$10 note and the wounding of a deputy sheriff, quarrel over pay resulting in shooting, dynamiting a store, and insulting white women.

**LYTTON COMMISSION**, REPORT OF. See JAPAN and CHINA under *History*; LEAGUE OF NATIONS; MILITARY PROGRESS.

**MACAO**, maká'ô. An island at the mouth of the Canton River, in China, which with the two adjacent islands of Taipa and Colôane, constitutes a province of Portugal. Area, 4 square miles; population, according to the census of 1927, 157,175 (including 3846 Portuguese, and 152,738 Chinese). The trade is chiefly in transit and is mainly in the hands of the Chinese. In 1930-31, revenues were estimated at 4,769,535 patacas and expenditures at 4,758,243 patacas (1 pataca equals approximately \$0.48). In 1930, imports were valued at 20,571,497 patacas and exports at 11,014,782 patacas. Governor in 1932, Artur Tamagnini.

**McCLURE, JAMES GORE KING**. An American clergyman and educator, died in Lake Forest, Ill., Jan. 18, 1932. He was born in Albany, N. Y., Nov. 24, 1848, and was graduated from Yale University in 1870, and from the Princeton Theological Seminary in 1873. Ordained to the Presbyterian ministry, he was pastor in New Scotland, N. Y., from 1874 to 1879. Following his call to Lake Forest, Ill., in 1881, he was elected president of the Lake Forest University in 1897 and held that office until 1901. From 1905 to 1928 he was president of the McCormick Theological Seminary (now the Presbyterian Theological Seminary) in Chicago. He was the author of *Possibilities* (1896); *The Man Who Wanted to Help* (1897); *The Great Appeal* (1898); *Environment* (1899); *For Hearts That Hope* (1900); *A Mighty Means of Usefulness* (1902); *Living for the Best* (1903); *The Growing Pastor* (1904); *Loyalty, The Soul of Religion* (1905); *Supreme Things* (1907); *Grandfather's Stories* (1926, 1928); and *History of the Presbyterian Theological Seminary, Chicago* (1929).

**MACDONALD, J. RAMSAY**. See GREAT BRITAIN under *History*.

**MACEDONIA**. A stretch of territory in the Balkan peninsula, included in European Turkey until the outbreak of the Balkan Wars (1912-13) and since the World War divided between Greece and Yugoslavia to the exclusion of Bulgaria. See GREECE.

**MCGILL UNIVERSITY**. A coeducational institution of higher learning in Montreal, Quebec, Canada, founded in 1821. The enrollment for the autumn session of 1932 was distributed as follows: Faculties of arts and science, 1049; medicine, 478; engineering, 345; dentistry, 39; law, 89; music, 149; and graduate studies, 257; and schools or departments of agriculture, 118; architecture, 51; commerce, 218; household science, 91; graduate nursing, 38; physical education, 26; library administration, 12; and teachers' training school, 223. The registration in the French summer school of 1932 was 185 and in the summer library school, 27. The number of members on the teaching staff was 576.

The endowment of the university amounted to \$18,878,274; the income for the year was \$2,027,392. The library contained 450,000 volumes.

An institute of helminthology and a department of animal industry were inaugurated at Macdonald College, an affiliated college of McGill University at Sainte Anne de Bellevue, Quebec.

In the faculty of graduate studies and research two new courses were offered: one leading to the degree of Master of Civil Law and the other to the degree of Master of Arts in Chinese Studies. The university received a grant of \$1,232,652 from the Rockefeller Foundation for the department of neurology and neuro-surgery in the faculty of medicine, and a new building for the carrying on of this work was under construction. Principal, Sir Arthur William Currie, G.C.M.G., K.C.B., LL.D.

**MACK, NORMAN EDWARD**. An American newspaper publisher and politician, died in Buffalo, N. Y., Dec. 26, 1932. Born in Canada July 24, 1858, he received a public school education in Pontiac, Mich. Settling in Buffalo, N. Y., he established there in 1879 the *Sunday Times* and in 1883 the *Daily Times*, both of which he continued to edit and publish until his retirement in 1929. Becoming active in Democratic politics, he came to be regarded by many as the up-State representative of Tammany Hall. He served between 1892 and 1924 as delegate to nine Democratic National Conventions. After 1900 he was New York member of the Democratic National Committee, and in 1908 was selected by William Jennings Bryan as chairman of that committee. In 1915 he was chairman of the New York State Committee for the Panama-Pacific Exposition in San Francisco.

**McKEE, JOSEPH V.** See NEW YORK under *Political and Other Events*.

**MACKENZIE**. See NORTHWEST TERRITORIES.

**McKINNEL, NORMAN**. A British actor, died in Bloomsbury, London, Mar. 29, 1932. He was born in Maxwelltown, Scotland, Feb. 10, 1870, and was educated at Edinburgh and Leipzig Universities. He first appeared on the stage at Clacton-on-Sea in *A Jonathan without a David* in 1894. His début in London was made the following year in *Davy Garrick*. Also, he played with Sir H. Beerbohm Tree for three years, principally in Shakespearean productions. In 1903 he was engaged by Sir Henry Irving to support him in *Dante*. Subsequently he played leading parts in *Candida* (1904), *The Perfect Lover* (1905), *The Harlequin King* (1906), *Pan and the Young Shepherd* (1906), *Don Juan in Hell* (1907), *Irene Wycherley* (1907), *Grit* (1908), *The Truants and Strife* (1909), *The Crisis* (1910), *The Master Builder* (1911), and *The Cat and the Cherub* (1911). In 1912 he gave a notable performance in London and New York as John Rutherford in *Rutherford and Son*. He later distinguished himself in *Monna Vanna* (1914); *The Ware Case* (1915); *Hobson's Choice* (1916); *General Post* (1917); *The Truth about Blayds* (1921); *Old English* (1924); *The Green Hat* (1925); *Intimate Enemies* (1926, of which he was co-author); *Tuppence Colored* (1927); and *Water* (1929). He was the author of *The Bishop's Candlesticks*, founded on an incident in Victor Hugo's *Les Misérables*, which was produced in 1901. He was also for a time chairman of the British Actors' Association.

**McLEAN, GEORGE PAYNE**. An American lawyer, governor, and U. S. Senator, died June 6, 1932 in Simsbury, Conn., where he was born Oct. 7, 1857. While engaged as a reporter on the Hartford *Evening Post* he studied law, and after his admission to the bar in 1881 practiced in Hartford. He served as a member of the House of Representatives of the Connecticut General Assembly in 1883 and was clerk of the Board of

Pardons (established largely as a result of his efforts as chairman of the House committee on State prisons) from 1884 to 1901. In 1885 he was a member of the commission to revise the statute laws of Connecticut, and the following year was elected a member of the State Senate. During 1892-96 he was U. S. attorney for Connecticut and also counsel for the State comptroller and State treasurer. He was governor of Connecticut from 1901 to 1903, the outstanding events of his administration being the calling of a constitutional convention in 1902 and the establishment of a tax commission. Elected to the U. S. Senate in 1910, he was reelected in 1916 and 1922, voluntarily retiring in 1928 before the expiration of his third term.

**McMASTER, JOHN BACH.** An American historian, died in Darien, Conn., May 24, 1932. He was born in Brooklyn, N. Y., June 29, 1852, and was graduated from the College of the City of New York in 1872. After establishing a reputation as a civil engineer, especially through his books *Bridge and Tunnel Centres* (1876) and *High Masonry Dams* (1876), he was appointed in 1877 instructor in civil engineering at Princeton University. He abandoned that field, however, and in 1883 was chosen professor of American history at the University of Pennsylvania where he remained until his retirement as professor emeritus in 1920. In 1905 he served as president of the American Historical Association. He was also a member of the National Institute of Arts and Letters. His works include: *A History of the People of the United States* (8 vols., 1883-1912); *Benjamin Franklin as a Man of Letters* (1887); *Origin, Meaning, and Application of the Monroe Doctrine* (1893); *A School History of the United States* (1897); *A Primary School History of the United States* (1901); *Daniel Webster* (1902); *Brief History of the United States* (1907); *The Struggle for the Social, Political, and Industrial Rights of Man* (1903); *Life and Times of Stephen Girard* (1917); *The United States in the World War* (2 vols., 1918-20); *A History of the People of the United States during the Administration of Abraham Lincoln* (1927). He was joint editor of the *American Historical Review* from 1896 to 1899, and in 1903 contributed several chapters to vol. vii of the *Cambridge Modern History*.

**MADAGASCAR.** An island belonging to France, separated from the southeast coast of Africa by the Mozambique Channel, which is 240 miles wide at its narrowest point. The area is 241,094 square miles and the population at the census of 1926 was 3,621,342 (including the Mayotte and Comoro Islands), of whom 3,591,943 were Malagasy, 18,040 French, and 11,359 foreigners. In 1929, the total estimated population was 3,853,300, of which Tananarive, the capital, had 92,998; Majunga, 19,072; Tamatave, 16,380; Fianarantsoa, 13,162.

Cattle breeding and agriculture are the chief occupations, the principal crops being rice, sugar, coffee, manioc, cotton, cacao, vanilla, tobacco, beans, cloves, rubber, and mulberry trees. The forests contain valuable woods and gums. Phosphate, graphite, and mica are mined. The balance of foreign trade has been unfavorable since 1925. In 1930 exports were valued at 355,053,000 francs, compared with imports of 602,783,000 francs (1 franc equals \$0.0392 at par). In 1930, exports to France totaled 257,172,000 francs (367,423,000 in 1929) and imports from France were 240,704,000 francs (407,346,000 in 1929).

Exports were principally vanilla, hides and skins, raffia fibre, coffee, graphite, and manioc. The budget for 1932 was estimated to balance at 255,600,000 francs. The public debt on Jan. 1, 1930, stood at 127,128,000 francs (131,142,000 francs on Jan. 1, 1929).

In 1930 there were about 443 miles of railway in operation; passengers carried, 1,183,000; freight, 285,000 metric tons. During 1931, the railways were working on large-scale electrification projects. There were about 1800 miles of highway. A total of 5732 vessels of 3,279,427 tons entered the ports in 1929 and 5756 vessels of 3,253,380 tons cleared. The colony is under a governor-general assisted by a consultative council. A delegation of 24 French citizens and 24 natives meet once a year to examine budget proposals. Chiefs represent the natives in their relations with the government and natives are widely employed in subordinate civil and military positions. There is a military force of 5365, including 1589 Europeans. Governor-General in 1932, Leon Cayla.

**MADDEN DAM.** See DAMS.

**MADEIRA, mǎ-dě'rǎ.** A group of islands in the North Atlantic, with an area of 314 square miles and a population (1930 census) of 210,220, politically an integral part of Portugal. Funchal, the capital (population about 25,000), lies 535 miles southwest of Lisbon and 360 miles west of the African coast. Governor in 1932, A. A. Calçado.

**MADOERA (MADURA).** See NETHERLAND INDIA.

**MAGINOT, ANDRÉ.** A French statesman, died Jan. 7, 1932, in Paris where he was born Feb. 17, 1877. Beginning his career as a civil servant in Algeria, he rose to be a director in the Department of the Interior. In 1910 he was elected Deputy for Bar-le-Duc, taking his seat among members of the *Gauche Républicaine Démocratique*. In 1913 he was appointed Under-Secretary of State for War, and on the outbreak of the World War a year later served as a private, being promoted to sergeant. After being severely wounded before Verdun in 1916 he was dismissed from the army with the Cross of the Legion of Honor and the *Médaille Militaire*. In 1917 he was made Minister of the Colonies by Ribot, and later under Millerand in 1920 became Minister of Pensions. On Poincaré's accession to power in 1922 he was made Minister of War, which post he held until the fall of that government in 1924. During this period he was one of the leading opponents of early evacuation of the Rhineland and of the granting of an equality status to Germany on the ground of her responsibility for the War. He reassumed the portfolio of the Colonies in the Poincaré government of 1928 and the Briand government of 1929, and in the succeeding Tardieu and Laval ministries again became Minister of War. With Tardieu and Barthou he was for more than a decade one of the most powerful advocates of French nationalism and of an aggressive military policy.

**MAHE.** See FRENCH INDIA.

**MAINE. POPULATION.** According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 797,423, as against 768,014 in 1920. Portland had (1930) 70,810 inhabitants; Augusta, the capital, 17,198.

**AGRICULTURE.** The accompanying table shows the acreage, production, and value of the principal crops for 1932 and 1931:

Crop	Year	Acreage	Prod. Bu.	Value
Potatoes ....	1932	168,000	89,480,000	\$ 9,870,000
	1931	195,000	50,810,000	12,578,000
Hay .....	1932	971,000	808,000*	7,990,000
	1931	967,000	952,000*	9,410,000
Oats .....	1932	180,000	4,940,000	1,630,000
	1931	118,000	3,776,000	1,548,000
Apples .....	1932	.....	2,412,000	1,471,000
	1931	.....	1,178,000	1,028,000

\* Tons.

**MINERAL PRODUCTION.** Stone quarries yielded in 1930, 318,620 short tons of stone of all grades, largely superior, as against 354,500 short tons produced in 1929; by value, \$2,252,097 for 1930 and \$2,902,603 for 1929. The sales of the product of the slate quarries were much reduced in total value, for 1931, to \$257,619, from \$506,322 for 1930. Producers' sales of lime diminished to 29,000 tons (estimated) for 1931 from 66,775 for 1930; in value to \$240,000 (estimated, for 1931), from \$542,115 (1930). Clay products attained a value of \$459,406 for 1930, the latest year of tabulated figures, as against \$641,364 for 1929. The production of sand and gravel, to the value of \$806,545 for 1930, was relatively important. Maine ranked second, after North Carolina, among the members of the Union in the production of crude feldspar, of which her total for 1930 was, by quantity, 22,738 long tons, and by value, \$161,631. The total value of the State's mineral product, duplications eliminated, was \$6,227,528 for 1930; for 1929, \$6,748,799.

**FINANCE.** State expenditures in the year ended June 30, 1931, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments, \$14,223,239 (of which \$2,397,261 was for local education); for conducting public-service enterprises, \$104,513; for interest on debt, \$985,852; for permanent improvements, \$10,535,299; total, \$25,848,903 (of which \$13,135,891 was for highways, \$3,765,925 being for maintenance and \$9,369,966 for construction). Revenues were \$24,296,769. Of these, property and special taxes furnished 39.1 per cent; departmental earnings and compensation to the State for officers' services, 8.4; sale of licenses, 43.3 (in which was included a gasoline sale tax that produced \$4,398,102). Funded debt outstanding on June 30, 1931, totaled \$24,388,588, of which \$17,556,500 was for highways. Net of sinking-fund assets, the debt was \$24,170,847. On an assessed valuation of \$756,860,383 the State levied in the year ad valorem taxes of \$5,481,517.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1932, was 2192.48.

**EDUCATION.** A preliminary revision of the curriculum for the normal schools was completed, in the course of the year. For the academic year 1931-1932 the number of persons of school age in the State was reported as 252,780. There were enrolled in the public schools 168,574 pupils. Of these, 137,930 were in common schools or elementary grades; in high schools, 30,644. The year's expenditures for public-school education totaled \$11,438,111. Salaries of teachers averaged, by the year, \$894.86 for elementary positions and \$1540.80 in high schools.

**CHARITIES AND CORRECTIONS.** Under the administrative statute of 1931 one of the four departments created under the State government was the Department of Health and Welfare. In

it were vested the previously separate powers and duties of the former Department of Health, Board of Prison Commissioners, trustees of the Reformatory for Women, trustees of the Reformatory for Men, trustees of the juvenile institutions, trustees of the tuberculosis sanatoria, and of authorities concerned with care of the blind and the deaf, pensions, poor relief, Indian welfare, child guardianship, and paroles. Headed by a commissioner, the department was divided into bureaus of health, social welfare, and institutional service. Superintendents of State institutions were to be chosen by appointment of the Commissioner of Health and Welfare, with the approval of Governor and Council. An advisory council of health and welfare was created, with power to make recommendations and, likewise, regulations for carrying out the health and welfare laws. The Governor received the power to appoint boards of visitors to keep check upon the several State institutions. These institutions were: State Hospitals, at Augusta, Bangor, and Pownal, respectively, for the mentally afflicted; the Pownal State School, at Pownal; State sanatoria for tuberculosis at Hebron (post office, Greenwood Mt.), Fairfield, and Presque Isle; Maine State Prison, Thomaston; State Reformatory for Women, Skowhegan; State Reformatory for Men, South Windham; State School for Girls, Hallowell; State School for Boys, South Portland; Maine School for the Deaf, Portland; State Military and Naval Children's Home, Bath.

**LEGISLATION.** A special session of the State Legislature was held in April. Its purpose was to amend the gasoline-tax law, so as to render the 4-cent tax on gasoline applicable to quantities used, as well as quantities sold, in the State, which was done.

**ELECTIONS.** The State election, held on September 12, resulted in a decisive Democratic victory, upsetting the State's political traditions. Louis J. Brann, Democratic candidate, was elected Governor, defeating Burleigh Martin, Republican. Two Democrats and one Republican were elected to the House of Representatives. The Democratic State vote for Governor exceeded the Republican by only a scanty margin; it was the first Democratic State victory in 18 years. The State had been made a battle ground by the National parties, the Republicans especially sending speakers of note in the attempt to hold the vote in line, on account of its possible effect on sentiment in the National campaign. The total vote cast for Governor was about 239,000 and the Democratic majority was apparently about 2400. About 30,000 fewer Republican and 54,000 more Democratic votes were cast than in the gubernatorial election of 1928. The September vote had an influence on the campaign in the Nation, being taken as a sign of Republican weakness.

On November 8 was cast the State's popular vote for the National candidates. The vote was: Hoover (Rep.), 166,631; Roosevelt (Dem.), 128,907. Thus the State reversed its September position by reflecting the normal preference for the Republican National ticket.

**OFFICERS.** The chief officers of the State, serving in 1932, were: Governor, William Tudor Gardiner; Secretary of State, Edgar C. Smith; Treasurer, William S. Owen; Auditor, E. D. Hayford; Attorney-General, Clement F. Robinson; Commissioner of Education, Bertram E. Packard.

**Supreme Judicial Court:** Chief Justice, William R. Pattangall; Associate Justices, Charles J. Dunn, Frank G. Farrington, Guy H. Sturgis, Sidney St. F. Thaxter, Charles P. Barnes.

**Superior Court:** Justices, James H. Hudson, George L. Emery, Herbert T. Powers, William H. Fisher, George H. Worster.

**MAINE, UNIVERSITY OF.** A coeducational State institution of higher learning in Orono, founded in 1865 and opened for students in 1868. The enrollment for the autumn of 1932 was 1615 and for the summer session of 1932, 402. There were 173 members on the faculty. The productive funds of the university amounted to \$905,945.33, and the income for the year was \$1,622,957.59. The library contained 105,000 volumes. Stevens Hall, the building of Arts and Sciences, named for Dean Emeritus James S. Stevens, is being augmented by the addition of two wings which will double the capacity of the present Arts building. President, Harold Sherburne Boardman, C.E., D.Eng., LL.D.

**MAIZE.** See CORN.

**MALAYA, BRITISH.** See BRITISH MALAYA.

**MALAY STATES.** See BRITISH MALAYA; FEDERATED MALAY STATES; UNFEDERATED MALAY STATES; STRAITS SETTLEMENTS; BRITISH NORTH BORNEO; BRUNEI; SARAWAK.

**MALDIVÉ ARCHIPELAGO.** See CEYLON.

**MALTA.** An island in the Mediterranean Sea, which, with the adjacent islands of Gozo and Comino, was annexed by Great Britain in 1814. Situated 58 miles south of Italy and 180 miles from the African coast, it is an important link in British Imperial communications and is the base of the British fleet in the Mediterranean. Area of Malta, 95 square miles; total area with Gozo and Comino, 122 square miles. The civil population increased from 224,680 at the census of 1921 to 232,832 on Jan. 1, 1930. There is a garrison of about 10,000 troops. Valletta, the capital, is the chief town and port (population, excluding the suburbs), 22,779. The people generally speaks a Maltese dialect, but English and Italian are the official languages. In 1930-31 there were 165 public elementary schools, with 29,110 pupils, besides several secondary institutions and a university with 198 students. The Church owns one-third of all the land. Cereals, vegetables, cotton, and fruit are the leading crops. Fishing and the manufacture of lace, cotton, filigree, beer, and cigarettes are other industries. Imports in 1930, including bullion and specie, totaled £3,836,260; exports, including bullion and specie, £482,932. Revenue was £939,993 for 1930-31, and expenditure £997,272. In 1930, 2201 vessels aggregating 3,561,513 tons entered the ports.

**GOVERNMENT.** Under the Constitution of 1921 (suspended temporarily June 26, 1930 and restored Mar. 2, 1932) local affairs were controlled by a legislature, consisting of the senate of 17 members, 10 of whom are appointed, and a legislative assembly of 32 elected members. In the elections of June, 1932 the standing of the parties in the assembly was: Nationalists, 21; Constitutional, 10; Labor, 1. The Senate standing was: Nationalist and Clergy, 11; Constitutional, 4; Trade Union 2. There was a responsible ministry for local affairs. A governor, appointed by the King, controls the naval, military, and air forces, Imperial interests, external relations and trade, coinage, immigration, and may veto local legis-

lation. He is assisted by an appointed executive council and a nominated council, consisting of the Lieutenant-Governor, a legal adviser, and three officers of the military forces. Governor and Commander-in-Chief in 1932, Gen. Sir David Campbell.

**HISTORY.** The report of the Royal Commission appointed by the British government Feb. 23, 1931 to investigate conditions which led to the suspension of the Maltese Constitution on June 24, 1930, was published Feb. 11, 1932. Describing as trivial the origin of the conflict between Lord Strickland, the Governor, and the Roman Catholic clergy, the commission declared that the Governor's subsequent tactics had aggravated the situation and divided the island into "very embittered cliques." (For origin of the dispute, see the 1930 YEAR BOOK.) The commission's recommendations that the Constitution be restored and that the teaching of Italian in the elementary schools be abolished were adopted by the British government. The Constitutionalist Ministers, who had remained in office despite the suspension of the Constitution, resigned on March 2. The religious controversy between Lord Strickland and the Roman Catholic clergy was now ended by Lord Strickland's apology and full withdrawal of his remarks offensive to the church, the apology being accepted by the Pope. On June 3, the Bishops of Malta and Gozo issued a pastoral letter withdrawing the pastoral letter of May 2, 1930, in which they forbade Catholics to vote for Lord Strickland's Constitutional party candidates "under pain of mortal sin."

With the religious issue relegated to the background, the campaign previous to the elections of June 11-13 was fought out primarily on the language issue. In Letters Patent issued Apr. 25 and May 2, 1932, the British government had ended the use of Italian in elementary schools, leaving English and Maltese as the languages of instruction. The use of Italian along with English was authorized in secondary schools and in the university and it was retained as the normal language of the law courts and as optional for speeches in the Legislative Assembly. This action aroused restrained protests from the Royal Academy of Italy and from Foreign Minister Grandi of Italy. The Nationalist party's platform called for the revocation of the Letters Patent and the restoration of the Constitution of 1921, under which Italian was a language of instruction in elementary schools. The voting gave the Nationalists a decisive victory over the Constitutionalists, who had controlled the Legislative Assembly since 1927. The Nationalists won 21 out of 32 seats in the Assembly, as against 10 for Lord Strickland's Constitutionalists and 1 for his Labor allies. In the Senate the Nationalists and clergy won 11 seats, the Constitutionalists 4, and Labor 2. The Left wing of the Nationalist party stood for separation from Great Britain and union with Italy. The Nationalists charged that the clergy were active in supporting the Nationalist candidates during the campaign.

The events of the year in Malta, and particularly anti-English remarks made by Francesco Giunta, Under-Secretary of State to Mussolini, during a brief stopover in Malta March 23, served to irritate Anglo-Italian relations.

**MANCHOUKUO.** A new state comprising the three northeastern Provinces of China, namely, Liaoning (Fengtien), Kirin, and Heilungkiang, the independence of which was proclaimed under Japanese auspices Feb. 18, 1932. Manchoukuo came into official existence Mar. 1, 1932. The three Provinces of Liaoning, Kirin, and Heilungkiang constitute the geographical region known as Manchuria and were administered during 1932 by the government of Manchoukuo. Jehol, in Inner Mongolia, remained in control of a local Chinese governor, Gen. Tang Yu-lin, who signed the declaration of Manchoukuo's independence but continued his nominal allegiance to both Manchoukuo and the Nationalist government of China. The so-called Northeast Special District and several Mongolian banners (districts), adhered to Manchoukuo's declaration of independence. Capital, Changchun. Official head in 1932, the former Manchu Emperor of China, Hsuan Tung, commonly known by his personal name of Henry Pu Yi, whose new title was Provisional Dictator (*Chin Cheng*). The name of the city of Changchun was changed to Hsinking in March, 1932. An independent Chinese régime was maintained in the Barga region—the section of Heilungkiang Province west of the Khingan Mountains—for a few months during 1932 (see JAPAN under *History*).

**AREA AND POPULATION.** Including Jehol (estimated area, 67,166 square miles), the three Manchurian Provinces (estimated area, 428,998 square miles), and the adjoining Mongolian territories adhering to the declaration of independence, Manchoukuo had an area of approximately 500,000 square miles. The western boundary had not been properly delimited. The population was estimated at about 33,000,000 (26,623,000 in Manchuria and 6,594,000 in Jehol), of whom less than 1,500,000 were Japanese subjects. Official Japanese estimates of 1929 placed the number of Japanese in Manchuria at 240,108 and the number of Koreans at 768,280. The average density of population was about 73 persons to the square mile for the whole of Manchuria, but the density in the respective Provinces varied from 210 in Liaoning to 23 in Heilungkiang. Between 1923 and 1930 more than 5,000,000 Chinese migrated to Manchuria, of whom about 1,500,000 became permanent settlers. The chief cities, with their estimated population, are: Mukden (former capital), 250,000; Changchun, 80,000; Dairen, 250,000; Harbin, 225,000; Newchwang, 65,000; and Antung, 72,500.

**PRODUCTION.** Manchuria (excluding Jehol), is one of the world's most fertile and rapidly developing agricultural regions. The arable land is estimated at about 64,500,000 acres, of which about 30,500,000 acres were under cultivation in 1931. The various crops produced (chiefly soy beans, millet, rice, and wheat), were estimated in 1931 to be worth a billion Chinese (Yuan) dollars at normal exchange and the whole cultivable area was reported to be capable of producing an annual return of three billion dollars. In 1932 all crops were from 40 to 75 per cent below normal. Agriculture is carried on almost exclusively by Chinese and Koreans, the Japanese engaging chiefly in commerce, industry, and official or professional work. Sugar beet and silk cultivation and livestock raising are increasing. Forests cover about 28,756,000 acres.

The chief crops in 1931 were: Wheat, 58,394,000 bushels (50,857,000 in 1930); corn, 67,418,000 bushels (62,554,000); rice (in 1931-32), 15,560,000 bushels (15,296,000 in 1930-31); soy beans, 5,226,000 metric tons (5,296,000 in 1930). Livestock in 1930 included 1,605,000 cattle, 2,641,000 sheep, 2,438,000 horses, 7,507,000 swine, and 1,221,000 mules and asses.

There are rich mineral deposits of coal, iron, gold, silver, lead, and cement materials. The Japanese had under exploitation the great Fushun open-strip coal deposits, 22 miles east of Mukden, where in an area of 15 square miles were about 1,200,000,000 tons of bituminous coal covered by approximately 5,000,000,000 tons of oil shale. A plant for reduction of oil shale was placed in operation in 1930, the output in that year totaling 28,578 tons of heavy oil, 10,606 tons of crude paraffin, 13,332 tons of ammonium sulphate, and 2685 tons of coke. Iron ore deposits were estimated at 738,000,000 metric tons, with an iron ore content of 259,000,000 tons. Japanese government and private investments in Manchuria (including Kwantung) totaled 2,200,000,000 yen, or about \$1,100,000,000 at par, in 1932.

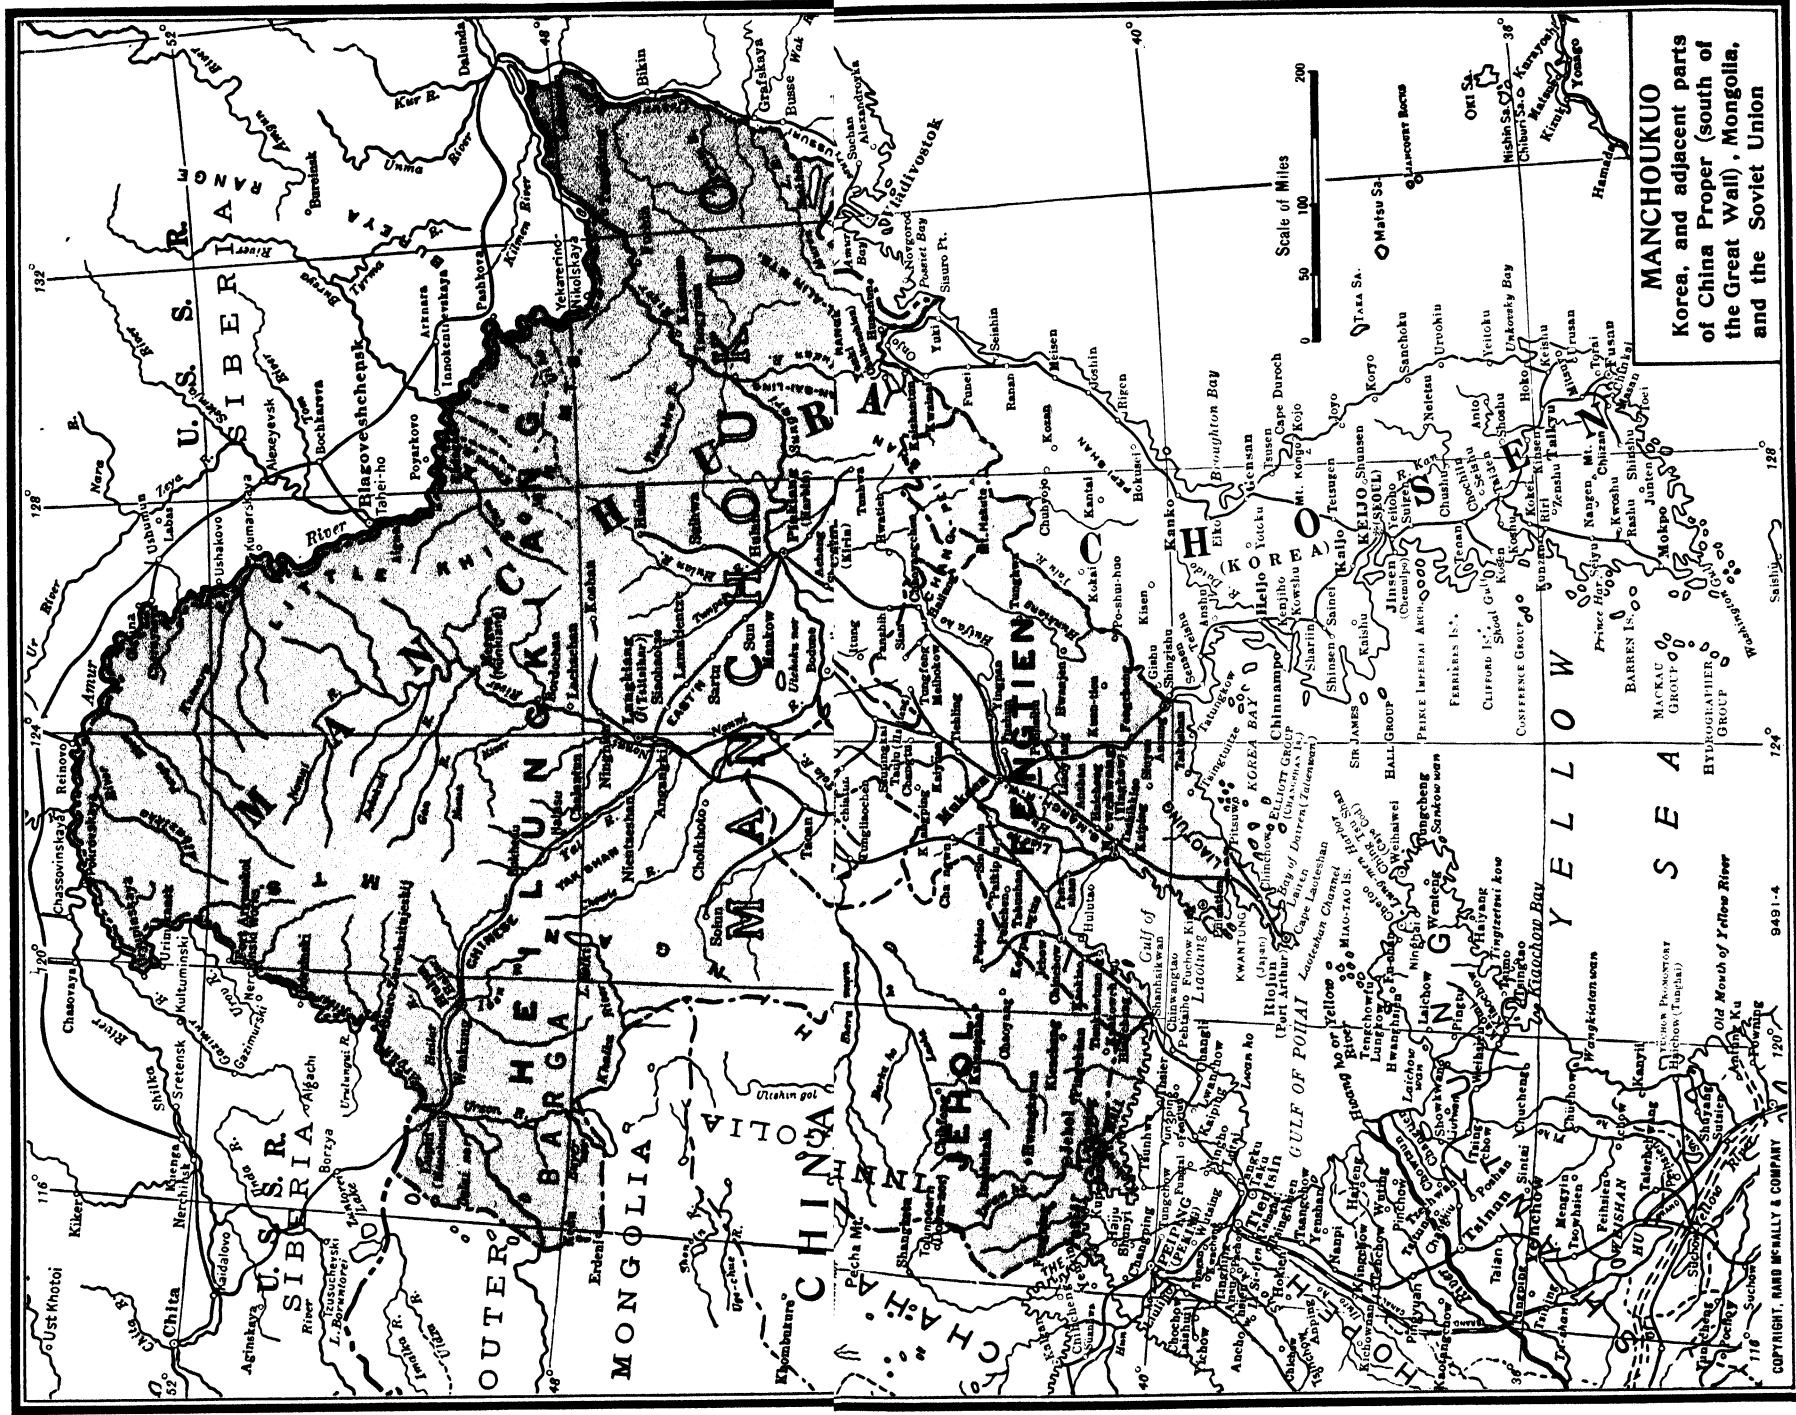

**COMMERCE.** According to the report of the South Manchuria Railway for 1932, total Manchurian exports in 1930 amounted to 396,714,056 Haikwan taels (about \$182,488,000 at the average exchange rate for 1930 of \$0.46) and total imports to 306,999,437 Haikwan taels (about \$141,219,500). This compared with exports and imports of 225,926,429 taels and 205,129,451 taels, respectively, in 1920, and 47,585,123 taels and 53,112,034 taels, respectively, in 1908. Soy beans and their products constituted more than half the total exports, with millet next in importance. Coal exports in 1930 were valued at 37,588,000 taels. Cotton goods, including cotton yarn, comprised 21 per cent of the 1930 import trade.

In 1931, Manchuria's imports from Japan were valued at 77,416,000 yen (about \$38,708,000 at par) and the exports to Japan were valued at 132,013,000 yen (about \$66,006,500). Manchuria in 1931 contributed 56 per cent of all China's exports to Japan and took 30 per cent of all Japan's exports to China. Imports of American finished products in 1931 were estimated at \$3,500,000 (about \$20,000,000 in 1929). About 90 per cent of the foreign trade passed through Dairen, which since 1927 ranked second to Shanghai among China's trading ports. Dairen, imports in 1932, 207,000,000 yen (98,000,000 in 1931).

**FINANCE.** The 1932 budget of Manchoukuo showed estimated revenues of 95,000,000 silver dollars and expenditures of 109,000,000 silver dollars, leaving an expected deficit of 15,000,000 dollars. The par value of the silver dollar, in terms of U. S. currency, varies with the price of silver. The Manchoukuo government during 1932 established a national bank, with a capital of 30,000,000 dollars silver and issued a new currency. The amount of the new currency in circulation on Oct. 29, 1932, was 122,391,000 dollars silver, which was covered by gold and silver reserves to the value of 66,657,000 dollars and by loans and securities valued at 55,000,000 dollars silver.

**COMMUNICATIONS.** Previous to the Japanese occupation of Manchuria in 1931 there were 3700 miles of railway lines in operation. Of these Japan owned nearly 700 miles (the South Manchuria system), Russia (in joint management with China), 1069 miles (the Chinese Eastern

system), and China over 1800 miles. The Japanese took over approximately 600 miles of Chinese roads which had been constructed with Japanese capital. Of the remaining Chinese roads several, particularly those connecting the Chinese railway net with the ports of Newchwang and Hulutao, were put out of commission and the remainder were incorporated as adjuncts of the South Manchuria Railway. In 1932 the Japanese were pushing to completion two extensions—one connecting the Changchun-Tunhua line with Rashin, a new port to be constructed in Northern Korea, and the other connecting Koshan and Hailun in Heilungkiang Province. The Changchun-Rashin route was designed to provide Japan with a new and shorter railway approach into the heart of Manchuria (see KOREA under *Communications*). In North Manchuria, the Manchoukuo government placed its own appointees on the governing board of the Chinese Eastern Railway. The Chinese telephone and telegraph systems in various Manchurian cities were connected with previously competing Japanese systems and placed under Japanese supervision. Of the three powerful radio stations in Mukden, one was destroyed by fire and another, the Sino-American station, was opened under Japanese control Apr. 15, 1932. Manchurian highways were for the most part impassable to motor vehicles in summer. The Japanese have inaugurated air services between some of the principal cities.

**GOVERNMENT.** The Constitution of Manchoukuo, promulgated Mar. 11, 1932, nominally vests virtually unlimited power in the hands of the Provisional Dictator and his Privy Council. Under the Dictator are the four principal departments—Executive (comprising the Cabinet and Board of General Affairs), Legislative, Judicial, and Inspection. The Premier, heading the Cabinet, serves as a link between the Provisional Dictator and the various ministries. The chief officials of the government, announced Mar. 10, 1932, were: Premier, Cheng Hsiao-Hsu; Minister of War, Ma Chan-shan; Foreign Affairs, Hsieh Chieh-shih; Finance, Hsi Chia; head of the Privy Council, Chang Ching-hui. This wholly Chinese governmental façade was supported and controlled by Japanese advisers and officials. The constitution made all residents in Manchuria eligible to hold office. In accordance with this principle, four Japanese were appointed (April 23), to key positions in the Ministries of Finance, Foreign Affairs, and Home Affairs, and the Liaoning provincial police bureau. The president of the Board of General Affairs and the chiefs of the six bureaus comprising the Board, also were Japanese. Having complete control of the budget and wielding the power of dismissal over ministers and officials, the Board of General Affairs was the real sovereign authority in the government.

Japan on Sept. 15, 1932, extended formal recognition to the state of Manchoukuo and signed a treaty of alliance with its government (see JAPAN under *History*). Despite a request for recognition, sent by Foreign Minister Hsieh Chieh-shih Mar. 12, 1932, to the governments of 17 countries having consular representatives in Manchuria, no other foreign government had recognized the Manchoukuo government up to Dec. 31, 1932.

See JAPAN, CHINA, UNITED STATES, GREAT BRITAIN, FRANCE, and the UNION OF SOVIET SO-

CIALIST REPUBLICS under *History*; LEAGUE OF NATIONS; KWANTUNG. Consult Owen Lattimore, *Manchuria: Cradle of Conflict* (New York, 1932); T. A. Bisson, "Railway Rivalries in Manchuria between China and Japan," *Foreign Policy Reports*, Apr. 13, 1932; T. A. Bisson, "Japan and Manchoukuo," *Foreign Policy Reports*, June 22, 1932.

**MANCHURIA.** See MANCHOUKUO.

**MANDATES.** See LEAGUE OF NATIONS; IRAQ; PALESTINE; SYRIA.

**MANGANESE.** Shipments of manganese ore containing 35 per cent or more of metallic manganese from domestic mines (exclusive of Puerto Rico) in 1932 were approximately 17,000 gross tons, valued at \$357,000, compared with 39,242 tons, valued at \$699,121, in 1931, according to the preliminary estimates of the U. S. Bureau of Mines. The shipments in 1932 were the lowest since 1922. The shipments of metallurgical and miscellaneous ores in 1932 amounted to about 10,500 gross tons valued at \$135,000, compared with 31,290 tons valued at \$417,598, in 1931. Battery ore shipments decreased from 7952 gross tons, valued at \$281,523 in 1931, to about 6500 tons valued at \$222,000 in 1932. Shipments of manganese ore from Puerto Rico to the United States during the eleven months ended Nov. 30, 1932, were 2152 gross tons valued at \$61,809, compared with shipments for the entire year 1931 of 2374 tons, valued at \$87,356. Manganese ore was reported shipped from Alabama, Arkansas, Georgia, Montana, and Virginia in 1932; Montana furnished 88 per cent of the total shipments. The imports of manganese ore for the eleven months ended Nov. 30, 1932, amounted to 106,418 gross tons containing 51,318 tons of metallic manganese, compared with 502,518 tons of ore containing 245,910 tons of metallic manganese during the entire year 1931. Of the ore imported in 1932, 55,437 tons were from Soviet Russia, 24,592 tons were from British West Africa (Gold Coast), and 21,500 tons were from Brazil.

The production of steel in 1932 was about 13,500,000 gross tons in comparison with 25,045,501 tons in 1931, which accounts for the decreased demand for ferromanganese and in turn for manganese ore during the past year. The production of ferromanganese in 1932 is reported by *Iron Age* at 57,342 tons; the production reported to the Bureau of Mines in 1931 was 166,937 tons. Shipments of domestic ore containing from 10 to 35 per cent of manganese (ferruginous manganese ore) in 1932 were about 16,000 gross tons, valued at approximately \$62,000, compared with 64,062 tons valued at \$405,749 in 1931. The ferruginous manganese ore shipped in 1932 was from Alabama, Arkansas, Georgia, and Minnesota. The domestic shipments of ore containing 5 to 10 per cent of manganese (manganiferous iron ore) in 1932 were 9582 tons valued at \$29,426, compared with 217,352 tons valued at \$570,800 in 1931. All the manganiferous iron ore shipped in 1932 was from Michigan.

**MANITOBA,** mǎn't-tō'bá. The easternmost of the Prairie Provinces of Canada, bounded on the east by Ontario and the Hudson Bay, west by Saskatchewan, north by the District of Keewatin, and south by the United States. The area is 251,832 square miles and the census population in 1931 was 700,139, compared with 610,118 in 1921. The chief cities, with populations (1931 census), were: Winnipeg, the capital, 218,785; Brandon, 17,082; St. Boniface, 16,305. In 1930,

births totaled 14,411; deaths, 5685; marriages 5061. In the 4166 public schools 151,846 students were enrolled in 1930; the University of Manitoba at Winnipeg had 2844 full-course students registered.

Agriculture, mining, and manufacturing are the leading industries. In 1931, the area under field crops was 5,708,889 acres (6,794,700 in 1930) and the value of production was \$24,664,000 (\$52,975,000 in 1930). The total value of all agricultural production in 1931 was estimated at \$52,379,000 (\$90,606,000 in 1930). The 1931 wheat crop of about 27,000,000 bushels was valued at \$11,070,000. Mineral output in 1931 was valued at \$9,978,556 (preliminary figure) compared with \$5,453,182 in 1930. Gypsum, gold, copper, and zinc are the principal minerals produced. The 1930 fish catch was valued at \$1,811,962. In the same year there were 937 manufacturing establishments, with a capital investment of \$188,413,164; employees numbered 26,488, the gross value of production was \$142,424,990, and the net value was \$67,663,725.

The budget for 1931 was estimated to balance at \$14,705,531. The provincial funded debt on April 30, 1931 was \$94,201,735. Railroad mileage in 1930 aggregated 4420 miles of line. Government is administered by a lieutenant-governor, and a legislative assembly of 55 members elected for five years. The Province is represented in the Dominion Parliament by 6 members in the Senate and 17 in the House of Commons. Lieutenant-Governor in 1932, J. D. McGregor; Premier, President of the Council, and Provincial Treasurer, John Bracken. See CANADA under *History*.

**MANNING, VAN (NOY) H (ARTBOG).** An American engineer, died in Forest Hills, Long Island, N. Y., July 13, 1932. He was born in Horn Lake, Miss., Dec. 15, 1861, and attended the University of Mississippi. In 1886 he became associated with the U. S. Geological Survey as topographic engineer. Upon the establishment of the bureau of mines in the Department of the Interior in 1910 he was appointed chief clerk. The following year he was made assistant director, in 1914 acting director, and in 1915 director. On the entry of the United States into the World War he extended the activities of this bureau, developing the chemical warfare service, improving powerful explosives, and increasing the production of coal and other minerals vitally needed in the war. He was responsible also during this period for the successful experiments in the production of helium from natural gas which aided in the development of the airship for Army and Navy use and led to the establishment of the cryogenic laboratory at the government helium plant near Amarillo, Tex. He resigned from the government service in 1920 to become director of research for the American Petroleum Institute. He served as petroleum engineer for the Pan American Petroleum & Transportation Co. during 1924-25, and in 1926 became consulting petroleum engineer and in 1928 director of engineering and technical research for the Petroleum Research Corp. After 1930 he was consulting engineer for the U. S. Bureau of Mines.

**MANOEL, Dom.** Former King of Portugal, died in Twickenham, Eng., July 2, 1932. He was born in Lisbon, Nov. 15, 1889, and received the title of Duke of Beja. He was trained for a naval career, but succeeded to the throne upon the assassination, on Feb. 1, 1908, of his father King Carlos I and his brother Luis, Duke of Bragança.

He was acclaimed King Manoel II. His father's reign had been marked by extravagance and general demoralization of the finances of the country, and during Manoel's brief reign conditions did not improve. A republic was established following the overthrow of the monarchy in October, 1910, and the king escaped to England where he took refuge at Wood Norton, near Evesham in Worcestershire, with the Duke of Orleans, brother of his mother, Queen Amélie. After the unsuccessful royalist uprisings in Portugal of 1911 and 1912, Manoel restrained his followers from further enterprises against the republic. In September, 1913, he married Princess Augusta Victoria of Hohenzollern. Through friendships in England he acted as an unofficial ambassador of Portugal in her international relations.

**MARGOLIS, MAX LEOPOLD.** An American Hebrew philologist, died in Philadelphia, Pa., Apr. 2, 1932. He was born in Merech, Vilna, Russia, Oct. 15, 1866, and attended the Leibniz Gymnasium, Berlin. On coming to the United States, he completed his education at Columbia University, from which he received the A.M. degree in 1890 and the Ph.D. degree in 1891. He was lecturer on Jewish literature at the Glenmore School for Cultural Sciences at Keene, N. Y., in 1892. Called to the Hebrew Union College, Cincinnati, O., he was assistant professor of Hebrew and Biblical exegesis during 1892-97. He then went to the University of California where he was assistant professor of Semitic languages and literatures during 1897-98 and associate professor during 1898-1905. Returning to the Hebrew Union College, he was professor of Biblical exegesis during 1905-07, and after visiting Europe served for a year as editor-in-chief of Bible translation for the Jewish Publication Society of America. After 1909 he was professor of Biblical philology at Dropsie College for Hebrew and Cognate Learning, Philadelphia. He published *The Columbia College Manuscript of Meghilla* (1892); *An Elementary Text-Book of Hebrew Accidence* (1893); *The Theological Aspect of Reformed Judaism* (1904); *The Holy Scriptures with Commentary on Micah* (1908); *A Manual of the Aramaic Language of the Babylonian Talmud* (1910); *The Story of Bible Translations* (1917); *The Hebrew Scriptures in the Making* (1922). He contributed a number of brilliant articles on his studies to the *Jewish Encyclopedia* (1901-05), and after 1922 was editor of the *Journal of the American Oriental Society*.

**MARIETTA COLLEGE.** A nonsectarian co-educational institution in Marietta, O., founded in 1835. The total registration for the autumn term of 1932 was 360 of whom 214 were men and 146 women. The faculty numbered 36. The endowment amounted to \$1,383,786 and the income for the year to \$145,212. The library contained 101,093 volumes. President. Edward Smith Parsons, L.H.D., LL.D.

**MARINE DISASTERS.** See SAFETY AT SEA.

**MARITAL STATUS.** See MARRIAGE AND DIVORCE; LAW IN 1932.

**MARTIME PROVINCES.** The three most easterly Provinces of Canada—Prince Edward Island, Nova Scotia, and New Brunswick. The

population (1931 census) of the three Provinces was 1,009,103 (1,000,328 in 1921). See CANADA and separate articles on each province.

**MARKETS, MARKETING.** See AGRICULTURE; AGRICULTURE, U. S. DEPT. OF; COÖPERATION.

**MARQUETTE UNIVERSITY.** An institution of higher education for men and women, under Roman Catholic direction, in Milwaukee, Wis., organized as a college in 1881 and chartered as a university in 1907. In the autumn of 1932 there was a grand total of 3258 enrolled in the university, excluding 417 students registered in the high school. The registration for the 1932 summer session was 591. The faculty in the autumn numbered 355 members, excluding 27 high school instructors. Endowment funds amounted to \$2,855,251, excluding Jesuit service endowment estimated at \$1,300,000. The income for the year was \$1,168,471. The library had 64,000 volumes. A new building for the school of medicine, costing \$500,000, was opened in

1932. President, the Rev. William M. Magee, S.J., A.M., LL.D.

**MARRIAGE AND DIVORCE.** The Bureau of the Census report on Marriage and Divorce for the United States for 1931 indicated that there were 1,060,905 marriages performed during the year as compared with 1,128,572 in 1930. This represented a decrease of 68,477 or 6.1 per cent as compared with a decrease of 8.4 per cent over 1929-30. In the year 1931 there were 183,695 divorces granted as compared with 191,591 in 1930. This represented a decrease of 7896 or 4.1 per cent as compared with a decrease of 4.9 per cent for 1929-30. There were 4330 marriages annulled in 1931 as compared with 4370 in 1930. The number of marriages per 1000 of the population in 1931 was 8.5 as compared with 9.2 marriages in 1930. The number of divorces per 1000 of the population in 1931 was 1.49 as compared with 1.56 in 1930. In 1931, as compared with 1930, but 11 States reported increases in the number of marriages performed, viz.: New

\* Revised since publication of last report.

Hampshire, 7.6 per cent; South Dakota, 7.8 per cent; Nebraska, 7.6 per cent; Maryland, 0.5 per cent; Virginia, 6 per cent; West Virginia, 2.4 per cent; South Carolina, 1.5 per cent; Florida, 1.1 per cent; Kentucky, 9.7 per cent; Utah, 1.6 per cent; and Nevada, 25.1 per cent. Of these 11 States 8 adjoin those in which recent changes made in the marriage laws require from 3 to 5 days to elapse between the application for the marriage license and the issuance of it. The Census Bureau points out that South Dakota adjoins Iowa, where the change was made effective July 1, 1931, Minnesota, where the change was made Apr. 29, 1931, and Wyoming, where the change was made June 1, 1931. Nebraska also adjoins Iowa and Wyoming. Virginia and South Carolina border North Carolina and Tennessee, where restrictions became effective July 1, 1929. West Virginia is a neighbor to Ohio where the change became effective July 23, 1931. Kentucky adjoins both Ohio and Tennessee. Utah borders Colorado, change effective Sept. 1, 1931, Idaho, on Mar. 16, 1931, and Wyoming. Finally, Nevada adjoins Idaho and California, where the change was made July 29, 1927. Of the remaining three States, Maryland has long been a *Gretna Green* for adjoining Delaware, where restrictions have been in effect for some years, and Florida borders Georgia, where restrictions are in effect for persons under 21 years of age. New Hampshire, however, not only adjoins States where the five day interval must elapse but carries the same law on its statutes. It is interesting to note the relative number of marriages for each divorce. In 1931, for the country as a whole, 5.8 marriages for each divorce were reported as against 5.9 in 1930. The District of Columbia and New York State, each having one cause for absolute divorce, reported 24.7 and 22.4 respectively while the rates in the other States ranged from 12.1 marriages to each divorce in Georgia to 1.5 marriages to each divorce in Nevada. Some States showed marked increases in their divorce rate when the 1931 figures are compared with those of 1930. So, in Nevada the increase was 101.6 per cent and there were increased rates for divorces in the States of New Hampshire, Connecticut, New York, New Jersey, Wisconsin, North Dakota, South Dakota, Georgia, Kentucky, Wyoming, and Utah. The accompanying table compares the marriages and divorces in the United States for 1931 and 1930 and gives the number of marriages to one divorce.

**MARTINIQUE**, *mār'ti-nēk'*. One of the Lesser Antilles group of the West Indies, forming a colony of France. Area, 385 square miles; population (1931 census), 234,505, of whom 10,000 were whites, and the remainder Negroes, mulattoes, East Indians, and Chinese. Capital and chief port, Fort-de-France, with a population (1931 census) of 48,395. The chief exports are sugar, rum, bananas, preserved pineapple, and cacao beans. Exports in 1930 were valued at 281,615,000 francs (1 franc = \$0.0392 at par) and imports at 131,950,000 francs. The budget in 1931 was balanced at 93,450,000 francs. Government is under a governor assisted by a privy council. The budget is voted by an elected general council; the communes, of which there are 32, are administered by elected municipal councils. Governor in 1932, L. Gerbinis.

**MARYLAND**. POPULATION. According to the Fifteenth Census the population of the State on

Apr. 1, 1930, was 1,631,526, as against 1,449,661 in 1920. Baltimore had (1930) 804,874 inhabitants; Annapolis, the capital, 12,531.

**AGRICULTURE**. The following table shows the acreage, production, and value of the principal crops for 1932 and 1931:

Crop	Year	Acreage	Prod. Bu.	Value
Wheat . . .	1932	380,000	4,940,000	\$2,569,000
	1931	404,000	9,696,000	4,848,000
Corn . . . .	1932	548,000	16,440,000	5,261,000
	1931	545,000	20,710,000	8,077,000
Hay . . . . .	1932	407,000	473,000 <sup>a</sup>	4,485,000
	1931	386,000	473,000 <sup>a</sup>	5,664,000
Tobacco . . .	1932	32,500	22,750,000 <sup>b</sup>	3,640,000
	1931	38,200	29,605,000 <sup>b</sup>	4,441,000
Potatoes . . .	1932	31,000	2,945,000	1,620,000
	1931	32,000	3,360,000	1,714,000
Sweet potatoes	1932	8,000	920,000	414,000
	1931	11,000	2,013,000	1,087,000

<sup>a</sup> Tons. <sup>b</sup> Pounds.

**MINERAL PRODUCTION**. Though of secondary importance in the totals for the entire Union, the State's coal-and-iron group of industries held up relatively well in 1931. The production of coal declined moderately to 1,950,000 short tons (estimated) for 1931, from 2,270,593 for 1930, for which year the value of the product was \$3,690,000. In 1931 there were produced 817,995 short tons of coke, as against 1,169,016 in 1930. Blast furnaces' shipments of pig iron fell to 677,076 long tons for 1931, from 981,466 for 1930. For 1930 the State's clay products attained the value of \$3,513,008; for 1929, \$5,115,816. The stone quarries yielded 1,215,730 short tons of stone, exclusive of marble, in 1930, as against 1,163,630 of all sorts in 1929; by value, \$2,028,021 for 1930 and \$1,915,014 for 1929. The total value of the State's mineral product, duplications eliminated, was \$14,989,695 for 1930; for 1929, \$18,469,568.

**FINANCE** State expenditures in the year ended September 30, 1931, as reported by the U. S. Department of Commerce, were for maintaining and operating governmental departments \$21,651,132 (of which \$3,182,717 was for local education); for interest on debt, \$1,450,358; for permanent improvements, \$10,493,070; total, \$33,684,183 (of which \$13,499,867 was for highways, \$5,023,402 being for maintenance and \$8,476,465 for construction). Revenues were \$33,573,514. Of these, property and special taxes furnished 27.3 per cent; departmental earnings and compensation to the State for officers' services, 13.9; sale of licenses, 4.4 (in which was included a gasoline sale tax that produced \$6,514,516). Funded debt outstanding on September 30, 1931, totaled \$32,096,000, of which \$18,886,000 was for highways. Net of sinking-fund assets, the debt was \$31,197,913. On an assessed valuation of \$2,824,422,084 the State levied in the year ad-valorem taxes of \$6,441,111.

**TRANSPORTATION**. The total number of miles of railroad line under operation on Jan. 1, 1932, was 1439.08. During the year previous, some 4 miles of line were abandoned.

**EDUCATION**. The number of persons of school age (from 5 to 18 years, inclusive) in the State was determined in 1930 as 385,878. There were enrolled in the public schools, in 1932, 288,169 pupils. Of these, 238,653 were in elementary schools; in high schools, 49,516. The year's expenditures for public-school education totaled \$19,260,181. Salaries of teachers, by the year averaged \$1497.

**POLITICAL AND OTHER EVENTS.** In accordance with a permissive State law of 1931 the city of Baltimore submitted to a voters' referendum an ordinance rendering it lawful to hold Sunday sports in the city, and to conduct moving-picture shows and restricted retail sales on Sunday. The vote, taken on May 2, gave a majority of more than 83,000 for the proposed ordinance. The police force of the city, through the voluntary vote of its members, imposed on itself in July a reduction of 10 per cent in pay, in the interest of public economy.

**ELECTIONS.** The popular vote cast on November 8 was in favor of the Democratic National ticket by about 5 to 3. The totals as officially reported were, for President: Roosevelt (Dem.), 314,314; Hoover (Rep.), 184,184. A solid Democratic delegation of six Representatives, all but one being the actual incumbents, was elected to the Seventy-third Congress.

**OFFICERS.** The chief officers of the State, serving in 1932, were: Governor, Albert C. Ritchie; Secretary of State, David C. Winebrenner; 3d.; Treasurer, J. M. Dennis; Auditor, Edmund R. Stewart; Comptroller, William S. Gordy, Jr.; Attorney-General, William Preston Lane, Jr.; Superintendent of Schools, Albert S. Cook.

**Court of Appeals:** Chief Judge, Carroll T. Bond; Associate Judges, John R. Pattison, T. Scott Offutt, William H. Askins, Francis N. Parke, Hammond Urner, W. M. Digges, D. Lindley Sloan.

**MARYLAND, UNIVERSITY OF.** A coeducational State institution of higher learning at College Park and Baltimore, Md., founded in 1807. The enrollment for the autumn term of 1932 was 3362; the summer school enrollment was 1033. The faculty in the autumn numbered 567. The total income from appropriations and other receipts amounted to \$2,676,919. The library contained approximately 84,040 volumes. During 1932 the following buildings were completed: Library building costing \$207,786, horticulture building and equipment, \$220,000, addition to the engineering building, \$100,000; dormitory for women, \$175,676; men's field house, \$181,233; women's field house, \$41,872. President, Raymond A. Pearson, D.Agr., LL.D.

**MASHONALAND.** See RHODESIA.

**MASSONS.** See FREEMASONRY.

**MASSACHUSETTS. POPULATION.** According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 4,249,614, as against 3,852,356 in 1920. Boston, the capital, had (1930) 781,188 inhabitants.

**AGRICULTURE.** The accompanying table shows the acreage, production, and value of the principal crops for 1932 and 1931:

Crop	Year	Acreage	Prod Bu	Value
Hay . . .	1932	338,000	409,000 <sup>a</sup>	\$6,512,000
	1931	310,000	487,000 <sup>a</sup>	8,671,000
Cranberries	1932	14,000	360,000 <sup>b</sup>	2,520,000
	1931	14,000	450,000 <sup>b</sup>	2,700,000
Tobacco . . .	1932	5,600	7,896,000 <sup>c</sup>	1,295,000
	1931	7,600	10,085,000 <sup>c</sup>	1,936,000
Apples . .	1932	.....	3,442,000	2,375,000
	1931	.....	1,575,000	1,890,000
Potatoes . . . .	1932	13,000	1,950,000	1,268,000
	1931	13,000	1,625,000	1,365,000
Corn . . . .	1932	38,000	1,520,000	760,000
	1931	37,000	1,591,000	939,000

<sup>a</sup> Tons. <sup>b</sup> Barrels. <sup>c</sup> Pounds.

**MINERAL PRODUCTION.** The stone quarries furnished the larger part of the State's pro-

duction of native minerals in 1930, as reckoned by value. There were produced 3,008,360 short tons of stone, as against 3,127,500 for 1929; by value, \$6,865,541 for 1930 and \$8,056,302 for 1929. There was also a substantial production of sand and gravel, attaining the value of \$2,790,436 for 1930. Clay products totaled \$1,718,790 in value for 1930; for 1929, \$2,571,951. The production of lime, which had declined considerably from the totals of 1929 to 107,502 short tons, by value \$1,072,008, for 1930, rose somewhat in quantity to 120,000 short tons (estimated) for 1931, but attained the slightly lower total estimated value of \$1,035,000 (1931). There was a considerable coking industry, which produced, from by-product ovens, 1,150,270 short tons of coke in 1931, as against 862,603 in 1930; the total by value rose to \$9,061,415 (1931), from \$6,697,235 (1930). The total value of the State's mineral product, duplications eliminated, was \$12,722,974 for 1930; for 1929, \$16,030,807.

**FINANCE** State expenditures in the year ended Nov. 30, 1931, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments \$43,474,584 (of which \$2,872,136 was for local education); for conducting public-service enterprises, \$228,735; for interest on debt, \$1,181,469; for permanent improvements, \$20,173,843; total, \$74,058,631 (of which \$24,269,827 was for highways, \$1,076,332 being for maintenance and \$22,393,505 for construction). Revenues were \$74,020,060. Of these, property and special taxes furnished 42.1 per cent; departmental earnings and compensation to the State for officers' services, 6.0; sale of licenses, 32.2 (in which was included a gasoline sale tax that produced \$13,685,393). Funded debt outstanding on Nov. 30, 1931, totaled \$29,625,775, of which \$4,486,500 was for highways. Net of sinking-fund assets, the debt was \$17,265,706, exclusive of the State's contingent debt, as guarantor of issues made by certain of its subdivisions, but inclusive of \$7,420,000 on account of the Cambridge subway. On an assessed valuation of \$7,181,358,958 the State levied in the year ad-valorem taxes of \$7,500,000.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1932, was 2013.84. During the year previous, 14.57 miles of line were abandoned and 6.62 put in operation.

**EDUCATION.** Attempts were reported to have been made, without success, to secure from the Legislature the enactment of the transfer of control over public-school finances from school committees to mayors, city councils, and selectmen. The move to this end reflected the rise of opposition to the scale of school taxes. Despite some such opposition the year's total of appropriations for the public schools was reported, in the *Journal of the National Education Association*, to have come within 5 per cent of the level of normal times.

For the academic year ended June 30, 1932, the number of persons of school age was reported as 849,119 (from 5 to 16 years, inclusive). There were enrolled in the public schools of the State 767,583 pupils; of these, 513,586 were in the common schools or elementary grades; 98,480 in junior high schools; 155,517 in the upper high schools. The year's expenditures for public-school education were: current, \$72,191,013; outlay, \$9,645,333. Salaries of

teachers, inclusive of principals and supervisors, averaged \$1910 a year. Particular attention to the separate education of special groups of children continued to be given by the State. Superintendent Smith stated that 40 full-time and 51 part-time teachers were instructing crippled children in the latter's homes, and that 50 classes for the mentally retarded and 4 for the deaf and hard of hearing were maintained; also that special provision had been made for over 3000 gifted pupils.

**CHARITIES AND CORRECTIONS.** The authority of the State over its institutions for the care and custody of persons, as exercised in 1932, was not centered in a single body. A Department of Public Welfare, composed of a commissioner and an advisory board of six members, dealt with divers welfare problems; it gave some sort of State assistance to about 70,000 individuals during the year, at an expenditure of some \$6,500,000. Among these were 3379 mothers and 10,101 children assisted under the Mothers' Aid Law. The department had custody (December 1) of 6854 children declared to be State wards. It had charge of 3254 other minors on parole from the State training schools. Its duties included the granting of old-age assistance, supervision of town planning, control of housing regulations, supervision over private charitable corporations of divers sorts, and investigation of adoptions. It directed the State Infirmary, Tewkesbury, with 3252 inmates; Massachusetts Hospital School, Canton, 309; Lyman School for Boys, Westborough, 446; Industrial School for Girls, Lancaster, 290; Industrial School for Boys, Shirley, 323.

Under the government of a Commissioner of Correction were the State Prison, Boston; Massachusetts Reformatory, Concord; Reformatory for Women, Framingham; Prison Camp and Hospital, Rutland; State Farm, Bridgewater. A Department of Mental Diseases supervised mental hospitals at Worcester, Taunton, Northampton, Danvers, Westborough, Medfield, Monson, Foxborough, and Grafton. The Department of Health had authority over five State sanatoria.

**LEGISLATION.** The regular annual session of the General Court passed a law, similar to that of New Jersey, permitting taxpayers to local governing bodies to present previously acquired notes of these bodies in satisfaction of tax payments. The "lame duck" amendment to the Federal Constitution, to change the dates of inaugurations and of initial sessions of Congress, was ratified. The name of the (Boston) Metropolitan Transit District was changed by law to "the Boston Metropolitan District." The legislators failed to act on repeated demands of Governor Ely for a reduction of 10 per cent in the amount of all State salaries above \$2000. Efforts to procure the passage of some sort of aid for the relief work of the cities, 32 of which were reported to be spending at the aggregate rate of \$2,000,000 a month to succor the needy, failed. A Boston bond issue of \$20,000,000 for the construction of a new subway was authorized. The amount of the State tax was set at \$9,750,000 for the year. The power was given to municipalities in the State to receive, in advance of the legal due date, payments of taxes up to 90 per cent of payment that had, in each individual case, been made in the preceding year, and to allow interest on such

payments, from receipt until the due date, at one-half per cent a month.

**POLITICAL AND OTHER EVENTS.** The financial condition of a number of the municipal governments was strained during the year. Fall River was under the management, in financial matters, of a State commission created by the General Court at the city's own request. Lowell, Lawrence, Chelsea, Chicopee, and Revere experienced difficulties at times in meeting payroll disbursements, and payroll payments were at times delayed. Advance payment of taxes, upon which the Legislature had allowed payers to obtain interest as an incentive, replenished some of the municipal treasuries for the time being. Industrial conditions were improved by a rise of activity in the textile mills in the course of the spring, coupled with a reduction in banking troubles. There was erected in the Back Bay section of Boston a \$3,000,000 publishing plant for the Christian Science periodicals.

The primary vote of September 20 gave the Republican nomination for Governor to Lieut. Gov. William S. Youngman; Gov. Joseph B. Ely was chosen as the Democratic candidate, to succeed himself.

**ELECTIONS.** The popular vote cast on November 8 was in favor of the Democratic National ticket by about 13 to 12. The totals of the votes for President, as officially reported, were: Roosevelt (Dem.), 800,148; Hoover (Rep.), 736,959. The 15 Representatives elected to the Seventy-third Congress were prevailingly Republican. Gov. Joseph B. Ely, Democrat, was reelected, defeating William S. Youngman, the Republican candidate. A measure of the State Legislature ratifying the "lame duck" amendment to the United States Constitution was approved by popular referendum. Another referred measure, to provide pre-primary conventions for the selection of parties' candidates in the primaries, was also approved.

**OFFICERS.** The chief officers of the State, serving in 1932, were: Governor, Joseph B. Ely; Lieutenant-Governor, William S. Youngman; Secretary of the Commonwealth, Frederic W. Cook; Treasurer, Charles F. Hurley; Auditor, Francis X. Hurley; Attorney-General, Joseph E. Warner; Commissioner of Education, Payson Smith; Commissioner of Public Welfare, Richard K. Conant.

*Supreme Judicial Court:* Chief Justice, Arthur Prentice Rugg; Associate Justices, John Crawford Crosby, Edward Peter Pierce, William Cushing Wait, Fred Tarbell Field, Charles Henry Donahue, Henry T. Lummus.

**MASSACHUSETTS INSTITUTE OF TECHNOLOGY.** A non-sectarian institution for scientific and technical education in Cambridge, Mass., founded in 1861. The enrollment for the autumn of 1932 was 2831, including 523 graduate students. For the summer session, the registration was 1351. There were 242 members on the faculty and 283 others on the active staff of the institute. The productive funds amounted to \$32,600,000; and the income for the year was \$3,700,000; received from various sources, as follows: Funds, \$1,520,000; student fees, \$1,580,000; miscellaneous, \$600,000. The book value of land and buildings in Boston and Cambridge was \$15,500,000. The library contained 280,000 volumes. President, Karl Taylor Compton, D.Sc., D. Eng., Ph.D., LL.D.

**MASSACHUSETTS STATE COLLEGE** (formerly MASSACHUSETTS AGRICULTURAL COLLEGE.) A State institution for agricultural and scientific training in Amherst, founded in 1867. The enrollment in 1932 was 1223. There were 203 members on the faculty, including 113 in resident teaching, 61 in research at the experiment station, and 29 in extension service in agriculture and home economics. The income in 1932 amounted to \$1,237,235, of which \$1,014,038 was from State appropriation and \$222,596 from Federal appropriation. The library contained approximately 91,000 volumes. President, Hugh P. Baker, M.F., D.Oec.

**MASSIE CASE.** See HAWAII; LAW IN 1932.

**MATABELELAND.** See RHODESIA.

**MATERNAL HEALTH.** See CHILD WELFARE.

**MATHER COLLEGE.** See WESTERN RESERVE UNIVERSITY.

**MATTER, ORIGIN OF.** See CHEMISTRY.

**MAURITANIA.** A French colony forming part of French West Africa (q.v.). Lieutenant-Governor in 1932, M. Chazal (appointed in 1929).

**MAURITIUS, mā-rīsh'ŭs.** An island in the Indian Ocean, 500 miles east of Madagascar, forming, with the adjacent small islands of Rodrigues and Diego Garcia, a crown colony of Great Britain. Area, about 720 square miles; population (1931 census), 393,418. Port Louis, the capital, had 53,988 inhabitants in 1930.

Sugar is the main crop, one-quarter of the island being devoted to its cultivation. Production in 1931-32 was estimated at 200,000 metric tons. Coconuts, cacao, tobacco, coffee, aloe fibre, tea, and vanilla also are grown. Exports in 1930 were valued at 26,600,904 rupees; imports, 39,806,180. The budget for 1930-31 estimated revenue at 13,322,000 rupees and expenditure at 16,930,000 rupees (15 rupees = £1). Governor in 1932, W. E. F. Jackson, appointed March, 1930.

**MAYOTTE (mā-yōt') AND COMORO ISLANDS.** An archipelago midway between the east coast of Africa and the northern end of Madagascar, belonging to France and forming a colony attached to the government of Madagascar of which it is the twenty-first province. Capital, Dzaoudzi (111 inhabitants). Total area, about 790 square miles; population in 1928, 126,208 (about 800 Europeans).

**MEAT.** See LIVESTOCK.

**MECHANICAL ENGINEERS, THE AMERICAN SOCIETY OF.** An organization founded in 1880 to promote the art and science of mechanical engineering and the allied arts and sciences. It includes 16 professional divisions, organized on the basis of a common interest in a branch of engineering within the scope of the society. These divisions are: aeronautic, applied mechanics, fuels, hydraulic, iron and steel, machine shop practice, management, materials handling, national defense, oil and gas power, petroleum, power, printing industries, railroad, textile, and wood industries.

Local sections of the society have been established in 72 industrial centres of the United States. They foster and promote the welfare of strong local engineering societies, inclusive of members of all branches of the engineering profession, together with architects and chemists. These sections held more than 400 meetings during the year. Nearly 5000 students were enrolled in the 108 student branches of the society. The

first southern student branch conference was held in Chattanooga, Tenn., in April, 1932, bringing together representatives of the 15 colleges where there was inaugurated in 1931 a new policy establishing the grade of student member. This plan, which more closely affiliates the students with the work of the society, is being extended to colleges in other localities.

In addition to the meetings of its student branches, local sections, and professional divisions the society held two major meetings during the year. These were the semi-annual meeting at Lake of Bays, Ont., Canada, June 27-July 1, 1932, and the annual meeting in New York City Dec. 5-9, 1932. The membership of the society at the beginning of the fiscal year, Oct. 1, 1932, was 20,079.

The numerous technical committees of the society carried on their work in research, standardization, and the formulation of safety, power test, and boiler codes and rules. The process industries committee, which was organized in 1931, held the first national process meeting in Buffalo, N. Y., in June, 1932. Another special committee of the professional divisions, the pure air committee, was continuing the work inaugurated by the subcommittee on smoke abatement of the fuels division. The society accepted joint sponsorship with the Society of Automotive Engineers for a study of combustion in Diesel engine cylinders and for the standardization of classification and designation of surface qualities.

The society is also a member of the American Engineering Council which, upon the recommendation of its own committee on the economic status of the engineer, established the Engineers' Council for Professional Development. This is a joint organization of the societies of civil, mechanical, mining, electrical, and chemical engineers and of several other organizations whose general objective is the enhancement of the professional status of the engineer.

The regular publications of the society are. *Mechanical Engineering*, the monthly journal; *Transactions*, containing the year's papers of specialized interest and issued in 24 sections, including the Record and Index which contains annual reports, necrology, and an index to all publications of the society for the year; *The Engineering Index*; *Mechanical Catalog*; and the *A.S.M.E. News*, the semi-monthly news sheet for members.

The officers for 1932-1933 were: president, A. A. Potter; vice-presidents, Robert M. Gates, William B. Gregory, Frederick H. Dorner, Charles M. Allen, Harold V. Coes, James D. Cunningham, C. F. Hirshfeld; managers, William L. Batt, Harold L. Doolittle, Herbert L. Whittemore, Eugene W. O'Brien, Harry R. Westcott, Alexander J. Dickie, Robert L. Sackett, Alexander D. Bailey, John A. Hunter; treasurer, Erik Oberg; secretary, Calvin W. Rice; executive secretary, C. E. Davies; assistant secretaries, Ernest Hartford, C. B. LePage. Headquarters are in the Engineering Societies Building, 29 West Thirty-Ninth Street, New York City. There is a mid-west office at 205 West Wacker Drive, Chicago, Ill., and a mid-continent office, concerned principally with the problems of the petroleum industry, in Tulsa, Okla.

**MECKLENBURG-SCHWERIN, mēk'lēn-bōrk-shvā-rēn.** A State of the German Republic. See GERMANY under *Area and Population*, and *History*.

**MECKLENBURG-STRELITZ**, mēk'lēn-bōrk-shtrā'lits. A State of the German Republic. See GERMANY under *Area and Population*.

**MEDICAL ASSOCIATION, AMERICAN.** A union of the constituent, or State and Territorial, medical associations, founded in 1847 to "promote the science and art of medicine and the betterment of public health." The legislative powers of the association are vested in a house of delegates which is empowered to transact all business not provided for in the by-laws and elects the general officers and the board of nine trustees. Members of the association must be members of constituent associations, and these members, in good standing, constitute the scientific assembly of the American Medical Association. The assembly is divided into 16 sections, each having its own officers who serve for a year. These sections are: Practice of medicine; surgery, general and abdominal; obstetrics, gynecology, and abdominal surgery; ophthalmology; laryngology, otology, and rhinology; diseases of children; pharmacology and therapeutics; pathology and physiology; nervous and mental diseases; dermatology and syphilology; preventive and industrial medicine and public health; urology; orthopedic surgery; gastro-enterology and proctology; radiology; and scientific exhibit, technical exhibits, etc.

The eighty-third annual session was held in New Orleans, La., May 9-13, 1932, the house of delegates convening on May 9 and the scientific assembly the following day. There were 2778 persons in attendance. At the section meetings leading authorities and investigators in the field of medical science announced and discussed the latest discoveries and methods in treating the sick. Of special significance were the joint sessions of the section on the practice of medicine and the section on preventive and industrial medicine and public health in which there were discussed the readjustment in organized medicine which the rapidly changing social order calls for, the association maintaining that the necessary readjustment should be initiated and controlled from within the profession rather than be forced from without. See MEDICINE AND SURGERY, under *The Cost of Medical Care*.

The association's convention in 1933 is scheduled to meet in Milwaukee, Wis., June 12-16.

The officers for 1932-33 were: President, Edward H. Cary, Dallas, Tex.; president-elect, Dean Lewis, Baltimore, Md.; vice-president, Rudolph Motos, New Orleans, La.; secretary and general manager, Olin West, Chicago, Ill.; and treasurer, Austin A. Hayden, Chicago, Ill. The official publication is the *Journal of the American Medical Association*, Morris Fishbein, editor. Headquarters are at 535 North Dearborn Street, Chicago, Ill.

**MEDICAL CARE, Cost of.** See MEDICINE AND SURGERY.

**MEDICINE AND SURGERY. THE COST OF MEDICAL CARE.** In November of this year the Committee on the Costs of Medical Care presented its long awaited report, the first comprehensive study ever made in this country of the relation of current medical practice to the actual need of the sick of the nation. This ambitious undertaking, sponsored by several philanthropic foundations and including in its membership representatives of the public, the social sciences, public health, institutions and special interests, and private medical practice, was launched five

years ago under the chairmanship of Ray Lyman Wilbur, Secretary of the Interior in President Hoover's Cabinet, and President of Stanford University. In the course of its survey approximately one million five hundred thousand dollars have been spent.

A majority of the Committee recommended the socialization of medical practice by the formation of community and State medical centres supported by insurance or taxation, which would deal both with the prophylactic and therapeutic aspects of community health. The costs would be borne by the community on a group basis and fees would be paid by weekly or monthly installments. Facilities for private care would be available to those who wished and were able to pay personal physicians' fees. By these means the Committee states it "will provide for the first time a scientific basis on which communities throughout the country can attack the perplexing problem of providing adequate medical care for all persons, at costs within their means."

Vigorous dissent from this opinion was made in a minority report signed by eight physicians, who included in their number the representatives of the American Medical Association. These members felt that the majority plan was Utopian, that it would tend to eliminate one of the most important aspects of medical care, the personal relationship of the physician and patient, and finally that it threatened to involve the medical profession in a complicated, impractical, bureaucratic organization.

The recommendation of the majority report is summarized by the *New York Times* (Nov. 30, 1932) as follows:

That medical care be furnished largely by organized groups of physicians, dentists, nurses, pharmacists and other associated personnel, centered around a hospital, and rendering home, office and hospital care

That all public health services be extended until they are available to the entire population, according to its needs.

That the costs of medical care be placed on a group-payment basis, through the use of insurance, taxation or both methods, without precluding the continuation of the individual-fee basis for those who prefer it

That a specific organization be formed in every community or State for the "study, evaluation and coordination of medical service"

That the professional education of physicians, dentists, pharmacists and nurses be reoriented to accord more closely with present needs, and that educational facilities be provided to train three new types of workers in the field of health-nursing attendants, nurse-midwives and trained hospital and clinical administrators

The development in each city of one or more hospitals into a "community medical centre" is described as the "key-stone" of the committee's recommendations. These centres would provide complete medical services in return for weekly or monthly fees, with, when necessary, some supplementary support from tax funds. Professional procedures, according to the report, would be under the control of the physicians, dentists and other practitioners, and financial responsibility would rest with a board representing the public.

The personal relations between patient and practitioner should be carefully maintained in such centres, the committee says. Such organization, it is asserted, would be fairer to practitioners than the present system because it would provide them with higher average incomes and would give the largest rewards to those with the greatest experience and ability.

The recommendations in general, the report states, provide for the development of existing machinery rather than the construction of an entirely new organization.

The minority report is summarized as follows that:

(1) Government competition in the practice of medicine be discontinued and its activities restricted entirely to certain types of service; (2) government care of the indigent be expanded with the ultimate object of relieving the medical profession of the burden; (3) coordina-

tion of medical service be considered an important function for local communities; (4) united attempts be made to restore the general practitioner to the central place in medical practice; (5) that the corporate (i.e. organized) practice of medicine be vigorously and persistently opposed as wasteful, inimical to high quality, or productive of unfair exploitation of the medical profession; (6) careful trial be given methods which can rightly be fitted into our present institutions and agencies without interfering with the fundamentals of medical practice, and (7) that State or county medical societies develop plans for medical care.

The American Medical Association, speaking through its official organ, the *Journal* (Dec. 3, 1932), strongly attacked the conclusions offered in the majority report, and threw the weight of its authority behind the chief minority report as summarized above. It felt that the director of the work of the committee, Harry H. Moore, Ph.D., had already disclosed in his previous writings, "his personal bias for insurance schemes and, indeed, for government practice"; that "the rendering of all medical care by groups or guilds of medical societies has been one of the pet schemes of E. A. Filene, who probably was chiefly responsible for establishing the Committee . . . and in developing funds for its promotion"; and that "such practice has . . . on various occasions had the endorsement of representatives of some of the eight foundations that contributed financial support." Besides attacking the committee as biased, the *Journal* believes, "The alignment is clear. on the one side the forces representing the great foundations, public health officialdom, social theory—even socialism and communism—inciting to revolution; on the other side the organized medical profession of this country urging an orderly evolution guided by the controlled experimentation which will observe the principles that have been found through the centuries to be necessary to the sound practice of medicine."

Less alarmed indeed is the reaction of the conservative press as represented by this editorial comment in the *New York Times*:

At whatever costs, both the majority and the minority reports of the Committee on Medical Costs agree, the general practitioner should be restored to his place—the central place—in medical practice, and the personal relations between patient and practitioner should be maintained. This is of first importance. It must be the *religio medici*. But there must be a group organization of some sort in order to bring such professional service within the reach of every man, woman and child. A society that does not recognize the obligation to make its skill in protecting and saving human life available for all has not reached or even approached its ideal.

How that is to be done, there may be and is disagreement. The majority report looks in the direction of co-ordinating locally and regionally health and medical services, and distributing the costs over a period of time and over groups of families or individuals. This is in fact the direction in which medical provision is already moving.

Finally, in some liberal circles there is the feeling that the report, while unquestionably a step in the right direction, does not go far enough, and is in reality but a "stop-gap" measure—that the annual payments necessary under the Committee's plan are beyond the means of a great group of "average" wage earners, and that in the end some form of compulsory health insurance with probably an added government subsidy will be necessary. The *New Republic* (Dec. 7, 1932) says,

In short, this is a stop-gap report. The members of the committee as a whole have never grappled with the problem of keeping the nation in good health. They have closed their eyes to the folly of an economic system which keeps three-quarters of the total population just above the

subsistence level. The plan which is proposed is better than the existing situation, but that is about as much as can be said for it. The real solution of the question will have to wait until this country shakes off the pathetic delusions of eighteenth-century society which are today keeping it at the tail of the procession.

It is inevitable that such a report as that of the Committee, suggesting as it does radical changes in the economic relationship of the physician and the patient which would change the whole character of medical practice in this country should meet with widely varying receptions, depending for a large part upon the differences in social and economic views of different groups. But regardless of whether any immediate change in medical organization occurs as a result of it, and it seems unlikely that any will, it will have unquestionably served a very valuable purpose in bringing before the attention of the nation the fact admitted by all, regardless of their economic creed, that at present a large part of our population, which in general consists of the so-called middle class rather than the poor who are received into free clinics and charity hospitals, cannot afford adequate medical attention.

**POLIOMYELITIS.** The widespread epidemic of poliomyelitis (infantile paralysis) occurring in 1931 served to renew interest in this serious epidemic disease and its distressing paralytic sequelae. Numerous papers on its epidemiology and treatment are to be found in the literature for 1932, as well as experimental studies on its immunological aspects. Opportunity was afforded for a large scale study of the effects of antiviral serum therapy on the disease in man, from which conflicting reports have come.

Dr. Simon Flexner, Director of the Rockefeller Institute for Medical Research, a pioneer student of experimentally produced poliomyelitis, read an important paper before the College of Physicians of Philadelphia (*Science*, vol. 77, no. 1984, p. 7), in which he reviewed our present knowledge of the immunology of the disease and made suggestions for a plan of treatment aimed at its prevention. Dr. Flexner pointed out three salient facts:—that poliomyelitis is an infection of the upper respiratory tract, that there is a wide variation in the severity of its clinical manifestations, and that, in monkeys at least, any degree of actual infection protected inoculated animals from the effects of a second administration of the virus. As early as 1910 Flexner and his co-workers discovered neutralizing anti-viral bodies in the blood of both monkeys and men who had recovered from poliomyelitis, and further found that neutralization of the virus occurs not only in the test tube, but *in vivo*, if the anti-serum (so-called convalescent serum) is injected within 18 to 24 hours after inoculation with the virus has been made. More recent studies have shown that the potency of the monkey convalescent serum can be increased by reinoculating animals who have already been injected with the virus.

Professor Netter of Paris, in 1911 (Dr. Flexner points out) was the first to use convalescent serum in the disease in man. Applying the previous experimental studies to clinical practice, he injected into patients suffering with the disease a convalescent serum obtained from others who had recovered from it. (Still later it was found that a great many normal adults who have never had frank symptoms of infantile paralysis have in their blood neutralizing bodies, so that now it is usually not necessary to use only the sera of those who have actually been known to

have had poliomyelitis. The most commonly accepted theory of the origin of this immune sera in normal adults is that at one time they have had a mild attack of poliomyelitis not detected clinically. This theory is attacked by some investigators, as will be pointed out below.) It soon became evident that the serum was quite ineffectual in those cases where paralysis had already developed; so that now it is used only when the disease is detected before paralytic symptoms appear. It is in this group that the question of its efficacy becomes most important and is as yet quite undetermined. Dr. Flexner says that the problem is largely a statistical one and therefore very difficult of judging. His own reaction is that since certainly we have definite evidence of the value of the serum in experimental poliomyelitis in monkeys, and since there is no definite proof that it may not be active in man, we are justified in the continued use and study of it clinically. It certainly has not been shown to have any harmful effects, and may possibly strengthen the "already acting resisting agencies."

An equally important phase of the problem is that of prophylaxis. Dr. Flexner had previously found that monkeys could be protected against the development of poliomyelitis following their experimental inoculation with the virus by previous intra-spinal or intra-venous injection with convalescent serum; and further that the immunity thus developed would last several days. In 1931, at his suggestion, several thousand children exposed to poliomyelitis during the epidemic in New York City were injected with adult serum (30 c.c. of their parents' serum injected intra-muscularly) and the incidence of poliomyelitis in this group was believed to be less than in a corresponding non-protected group. The results of this study were too incomplete to be convincing, and further work along the same line was undertaken in Philadelphia in 1932. While it is too early to make any final report on this last study, the results so far seem to be promising. Dr. Flexner concludes that "We must await future events before attempting any general prediction on this important subject; but enough would appear to have been achieved already to warrant a further and wider trial of this safe and readily available means of preventing epidemic poliomyelitis which continues to be a serious menace on a world wide scale."

Another contribution made by Flexner (*Jr. Am. Med. Ass'n* 99, 1244, 1932) has to do with the production of an active immunity against poliomyelitis in monkeys. It has been known for some time that the repeated subcutaneous injections of small amounts of the virus or even one large injection would confer immunity. But some animals, a small percentage of those injected, might develop paralysis. Recently, it has been found that the combined injection of both serum and virus would obviate this occasional production of paralysis while still consistently producing immunity (Rhoads, *Jr. Exp. Med.* 52, 115, 1931). Flexner also found that the serial passage of the virus through monkeys changed its infectivity without changing its immunizing properties. It is possible that these findings may later prove of value in actively immunizing human beings against the disease.

Several important studies are reported in the *Journal of the American Medical Association* for Sept. 24, 1932 (99, 13).

J. E. Gordon of the Detroit Department of Health, described and emphasized the diagnosis of poliomyelitis in its preparalytic stage. Two great benefits are to be expected from early diagnosis. In the first place, public health may be protected by the isolation of the affected person, and in the second the patient may be benefited by the early use of certain therapeutic measures: absolute rest in bed, reduction of cerebro-spinal fluid pressure by lumbar puncture, and possibly the use of presumably specific anti-sera.

S. D. Kramer of the Harvard Medical School, studied the incidence of immunity in varying age groups of the population and the probable mechanism of its production. Babies at the breast are immune up to one year, when susceptibility begins. Following this there is increasing immunization with increasing years, so that by adult life approximately nine-tenths of the urban population and a somewhat lesser percentage of the rural population is immune. Kramer made an investigation in a small town in Massachusetts (population, 1500) where five cases of poliomyelitis occurred. At the same time there were 33 other minor illnesses among children in the town which might have been abortive forms of poliomyelitis. Tests for immunizing substances in the sera of these children were made several months later, and no higher percentage found than among those who were not ill during the epidemic, or among children in a neighboring town where there had been no poliomyelitis. He concluded, therefore, that minor, atypical febrile illnesses in the wake of an epidemic are usually not mild forms of poliomyelitis. Several children who had been in immediate contact with those ill of infantile paralysis were all found several months later to possess immune bodies in their sera, although they had not been ill, and although at the time of the epidemic their blood had not shown immunizing properties. Several children who had had more remote contact (and especially were not liable to have had nasopharyngeal secretions transferred to them) did not develop immunity. Kramer believes as a result of this investigation that immunity to poliomyelitis may be developed by contact without necessity for the development of even an "abortive" form of the disease, and he suggests that this is the mechanism by which a large part of the general immunity of the population is developed. He also surmises that there must be a carrier group, just as is the case of measles or diphtheria. He concludes that "the most productive line of further study would seem to be in investigating the factors which seem to lead in one case to immunity after exposure and in the other to the development of clinical symptoms."

Of special interest and importance is the report of Dr. William H. Park of the Department of Health, New York City, under whose direction extensive use of antipoliomyelitis serum ("immune serum") in the treatment of the preparalytic forms of poliomyelitis was carried out. As pointed out above, we know that in monkeys, immune sera, if injected within 18 to 24 hours, will prevent the development of symptoms. The crucial question then, would seem to be whether or not this same phenomenon occurs in man, and if it does, whether it is possible to diagnose the disease in an early enough stage to allow the antiserum to be effective. Parks' review of the experience in New York City would seem to indicate that, unfortunately enough, either the anti-

serum is not effective in man, or else it cannot be administered in an early enough stage to be of any value.

Nine hundred and twenty-seven cases were studied, 408 of which were untreated and 519 treated with convalescent serum. All were in the preparalytic stage. Various methods of administration of the serum were used and amounts given varying between 25 c.c. and 100 c.c. An attempt was made to divide the series equally between treated cases and controls without regard to the severity of the symptoms, although, since most of the cases treated at home were given serum, it was found necessary, in order to keep the series approximately even, to refrain from giving serum to alternate hospital cases, as had been the original plan. A summary of the results is found in the following table:

<i>Controls untreated by serum</i>	<i>Total cases</i>	<i>No paralysis or weakness at end of three weeks</i>	<i>Weakness</i>	<i>Paralysis</i>	<i>Death</i>
Observed by Health Department and City Hospital pediatricians .....	306	229 (74.8%)	46 (15%)	29 (9.9%)	2
Observed by Academy of Medicine pediatricians .....	102	72 (70.5%)	12 (11.7%)	16 (15.6%)	2
Combined totals .....	408	301 (73.7%)	58 (14.2%)	45 (11%)	4 (0.9%)
<i>Patients treated with convalescent serum</i>					
Observed by Health Department and City Hospital pediatricians .....	95	72 (75.7%)	10 (10.5%)	10 (10.5%)	8
Observed by Academy of Medicine pediatricians .....	424	285 (67.2%)	30 (7%)	92 (21.7%)	17
Combined totals .....	519	357 (68.8%)	40 (7.7%)	102 (19.6%)	20 (3.8%)
Total of all cases .....	927				

Dr. Park adds, "The figures . . . are disappointing to those who hoped that the serum would demonstrate its value statistically. Some of us were hardly surprised for we knew that antiserums have been of little or no value in other diseases known to be due to filtrable viruses. These tend to invade the cells themselves and seem to be beyond the curative reach of serum.

"Not one of the pediatricians who treated these patients felt that he had any evidence of a curative influence in the serum."

And he concludes, "The results of these observations on treated and untreated patients in the preparalytic stage of poliomyelitis during the 1931 outbreak do not give any statistical proof that the serum has any value when given in cases after the cells of the central nervous system are involved."

It would not be fair to ignore the fact that not many previous investigators have felt that the serum was of value, although it must be admitted at once that their series was not as well controlled as was Dr. Park's. He suggests that future studies should be adequately controlled and reviewed by impartial investigators.

It would seem that while Dr. Park's paper casts grave doubts upon the efficacy of immune serum treatment, it would be unwise to entirely discard it until even larger and more complete studies have been made. The position of Dr. Flexner, mentioned earlier in this article, seems to be a justifiable one.

Two interesting new viewpoints toward the problem of individual susceptibility to poliomyelitis were expressed during the year. Dr. George

Draper of the College of Physicians and Surgeons, Columbia University, a student of the relationship of constitution to disease, applied the criteria of his previous studies to the problem of poliomyelitis, and came to the conclusion that children of a certain and very definite type of physical make-up were apt to be susceptible to the disease (*Am. Jr. Med. Sci.* clxxxiv, 1, 111). He found that "the constitutional structure of the infantile paralysis people points toward deficiencies of three glands, namely: pituitary, gonad, and adrenal cortex," and concluded that "the highly specialized type of child described above is a causal factor in the occurrence of infantile paralysis, of equal importance with the virus; but so far as the development of the virus is concerned, the constitution of the child is of greater significance than the virus."

Jungeblut and Engle of the College of Physicians and Surgeons, likewise concluded that endogenous rather than exogenous factors accounted in chief part for individual susceptibility to poliomyelitis (*Jr. Am. Med. Ass'n*, 99, 25, 2091). After reviewing previous epidemiological and immunological studies they are of the opinion that the theory, which presupposes a widespread sub-clinical infection with the virus of poliomyelitis as the causative mechanism of adult immunity, is untenable. In their opinion, it is invalidated by the varying age incidence in different latitudes, by the fact that the age line has been recently advancing, and by the fact that natural virucidal substances can develop in human blood serum without contact with the specific antigen. They believe that "the mass protection enjoyed by the adult human population rests primarily on the normal function of the endocrine balance characteristic of mature age." In support of their theory they were able, in some instances, to demonstrate virus neutralizing substances in the serum of immature monkeys after prolonged treatment with anterior pituitary extract (a substance which may cause precocious sexual development). It of course, goes without saying that their views run contrary to the present day immunological teaching.

WHOOPING COUGH. One interesting line of investigation followed recently concerns the etiology of whooping cough, the cause of which has been considered for many years to be the Bordet-Gengou bacillus (*B. Pertussis*). With advances in our knowledge of the nature of filtrable viruses, the conception has gained prominence that

certain of them may be the cause of diseases previously thought to be of bacterial origin; and, in fact, in some instances it has been definitely demonstrated that particular bacteria, formerly regarded as primary etiological factors in the production of a given disease, are in reality merely secondary invaders in a pathological process caused by a filtrable virus. This is notably the case in epidemic influenza, the causative agent of which was at one time thought to be the "influenza bacillus" of Pfeiffer, but which is now considered almost certainly to be a virus disease, although as yet little exact knowledge concerning the virus involved has been obtained. More recent and exact studies have shown that psittacosis, hog cholera, and the distemper of dogs are all virus diseases, although usually associated with specific bacteria which earlier investigators had considered the responsible organisms. Studies reported by McCordock, Rich, and others during the past year would seem to indicate that possibly whooping cough falls into this same group.

In a lucid article in the *Bulletin* of the Johns Hopkins Hospital (vol. li). Rich outlines the case against the Bordet-Gengou bacillus, and presents pathological evidence suggesting that a filtrable virus is the primary causative agent of the disease. Rich points out that the etiological rôle of the Bordet-Gengou organism has never been definitely established. It is true that it has been cultured in the early stages of whooping cough in many cases; but in some cases it has not been cultured, in spite of the use of presumably adequate technique; and furthermore, it is practically never grown late in the disease or at autopsy, when a neighboring and very similar organism, the influenza bacillus, has been frequently found. More important still, whooping cough has not, in Rich's opinion, ever been definitely produced in animals by inoculation with *B. Pertussis*. One strong bit of evidence favoring the bacillary origin of pertussis is that at autopsy microscopic examination of the epithelial tissues lining the respiratory passages shows myriads of small gram-negative organisms, presumably Bordet-Gengou bacilli, enmeshed in the cilia of the epithelial cells. Indeed, it is this feature that probably accounts for the convulsive cough which characterizes the disease clinically. Rich found, however, that exactly this same picture might occur in cases of whooping cough in which the influenza bacillus and not the pertussis bacillus had been cultured both primarily and at autopsy; and since the organisms are morphologically indistinguishable, he concludes that the bacteria seen in the microscopic sections are in certain cases unquestionably influenza bacilli. And he points out that indeed a pertussis like cough is not uncommon in epidemic influenza, nor in the distemper of dogs where a similar organism (*B. Bronchisepticus*) is found, but is known to be a secondary invader.

On the other hand, there is good reason for suspecting clinically that whooping cough is a virus disease. It resembles known virus diseases in certain of its salient features—that is, it is highly infective, one attack leaves a durable immunity and a specific form of encephalitis sometimes occurs as a complication. Pathologically there is evidence pointing in this same direction. The terminal pneumonia associated with whooping cough is characterized histologically by an infiltration around the smaller bronchi and bron-

chioles with mononuclear cells, a definite picture differing sharply from the ordinary terminal lobular pneumonia following infectious diseases and one found only, so far as we know, in two other diseases, measles and influenza, both of which are pretty certainly caused by filtrable viruses. Very interestingly Rich found that this same characteristic type of peribronchial infiltration might be found in cases of whooping cough uncomplicated by pneumonia, where the fatal conclusion was caused by convulsive seizures. And since the monocellular response is not in any other condition elicited by the *B. pertussis* or the *B. influenzae*, which are pyogenic organisms, Rich is inclined to believe that the reaction in the peribronchial tissues is a specific response to virus infection. Furthermore, in a careful study of tissues from the respiratory tract, he was able in certain cases to find so-called inclusion bodies, large round or oval masses in the cell nucleus and sometimes also in the cytoplasm, which are generally considered to be characteristic of virus disease. The exact significance of this finding has not been established, however, because in some cases inclusion bodies were found in the absence of peribronchial mononuclear infiltration.

Finally, in an experimental study carried out with several other investigators at Johns Hopkins, he found that a virus might be recovered, both from the blood and from the filtered tracheal secretions of children suffering from whooping cough, which, when injected into chimpanzees, produced a catarrhal condition of the upper respiratory tract associated with fever, which closely resembled the early stages of the disease in man. It has not yet been proved, however, that this virus is not that of the common cold. Unfiltered sputum from a case of whooping cough was sprayed in the throats of two monkeys, and these in two days developed an upper respiratory catarrh, which again resembled the common cold as previously produced experimentally in apes. However, in one case thirty days later, the ape developed a typical paroxysmal cough which lasted for seven weeks, and the usual laboratory evidences of whooping cough were found—that is, a cough plate was positive for the Bordet-Gengou bacillus, and there was an increase of the lymphocytes of the blood. Another ape drank a heavy suspension of Bordet-Gengou organisms, and in twenty-four days developed typical whooping cough, both clinically and from the laboratory standpoint. Finally, a third animal was inoculated with a third generation culture of Bordet-Gengou organisms, isolated from the ape described just above, and in seven days he developed a typical whooping cough. In all three of these cases the complement fixation test was positive for the Bordet-Gengou bacillus after the whooping cough was established. A filtrate from the tracheal secretions of these last three animals, taken in the catarrhal stage, did not produce whooping cough when injected into other chimpanzees. The significance of this work is not yet clear, and further studies will no doubt be required to establish the relative significance of the Bordet-Gengou bacillus, and of the virus in the production of the disease. Rich feels that it is quite possible that whooping cough is primarily a virus disease of the upper respiratory tract, which paves the way for a secondary invader (Bordet-Gengou bacillus), which in turn by its localization in the ciliated margin of the

epithelial cells of the air passages, is responsible for the striking clinical feature of paroxysmal cough. (Rich, Long, Brown, Bliss, Holt, *Science*, 76: 330, Oct. 7, 1932.)

H. A. McCordock, of the Washington University Medical School, reported in June the results of an extensive search for inclusion bodies in the lungs of patients dying of pertussis. In 35 autopsies he was able to find characteristic inclusion bodies in 12. In 80 control cases, where there had been no suspicion of whooping cough, he found inclusion bodies in only 2 cases, both infants less than six months old. He is inclined to believe that these findings support very strongly the belief that whooping cough is a virus disease. (*Proc. Soc. Exper. Biol. & Med.*, 29: 1288, 1932.)

**THE ETIOLOGY OF PEPTIC ULCER.** Ulcers of the stomach and duodenum, so-called peptic ulcers, have been the subject of extensive study for many years, but in spite of numerous and careful investigations, we have as yet no satisfactory explanation of their cause. One fact, however, is well recognized—that in recent years there has been a distinct increase in the incidence of the disease. This phenomenon has been considered by some to be associated with the increasing strain of modern life, an opinion corroborated by the frequent parallelism in specific cases between increased mental stress and the occurrence or exaggeration of symptoms and signs of ulcer.

In general there are two schools of thought in regard to the etiology of peptic ulcer: The first believes that the cause of the ulcer is to be found in local conditions in the stomach or duodenum, and the etiological agent is variously believed to be vascular, bacterial, traumatic, secretory, and so on. The second is inclined to believe that nervous factors are primarily responsible, and that ulceration is caused by a disturbance in the normal neurogenic mechanism. This disturbance they consider probably to be due to excessive stimulation of the vagus nerve (which carries the stimulating fibres from the para-sympathetic nervous system) and a resultant change in the normal balance between the two vegetative systems. (Inhibitory fibres come from the sympathetic nervous system by way of the splanchnic nerves and the celiac plexus.) Interesting light is thrown on this neurogenic theory of the etiology of peptic ulcer by a recent paper of Dr. Harvey Cushing, retiring professor of surgery at the Harvard Medical School, and one of the world's leading neurosurgeons. (*Surgery, Gynecology, and Obstetrics*, vol. lv, no. 1, p. 1.)

Dr. Cushing's interest was drawn to this subject by the distressing experience of losing a patient shortly after an intracranial operation because of perforations of multiple acute gastric ulcers. The occurrence of similar complications in two patients, both of whom had been subjected to operations upon the cerebellum, suggested that the incident was not merely a chance one, but that trauma to the brain might possibly be a causative factor in the production of gastric ulcerations.

This opinion was strengthened by his later clinical experience and by reports in the literature of the association of intracranial lesions with peptic ulcer, and especially with the acute type which leads to early perforation. In two of his cases, patients coming to autopsy shortly after intracranial operations showed fresh ulcerations of the stomach which had not perforated,

and since these hemorrhagic erosions may be small and not very obvious, he supposed that in the past they might have been overlooked in routine post-mortem examinations. Similar lesions were found in the stomachs of two patients dying of "malignant hypertension," a disease associated with changes in the cerebral vessels. A chronic duodenal ulcer was found at autopsy in a child of nine who died following a second operation for brain tumor. She had been subjected to extensive X-ray treatment. And finally, in one case, there was a striking relationship between ulcer symptoms and the exacerbation of symptoms caused by brain tumor. At Dr. Cushing's suggestion, Dr. Blackfan of the Children's Hospital in Boston reviewed their autopsy records and found in one year four instances of esophageal perforations associated with intracranial disease or injury. There seemed to be definite clinical evidence, then, that peptic ulcer might follow operations on the brain (and particularly on the cerebellum), that it might be associated with intracranial tumors, and that it might follow birth injuries or other cerebral disease in infants and children.

In addition, there is experimental evidence, both physiological and pharmacological, that lesions of the vegetative nervous system, either in its peripheral branches (vague or sympathetic) or in its central connections, may cause local changes in the stomach or duodenum, which lead to ulceration. This phase of the subject is rather too complex and detailed to allow any full presentation in a summary of this sort, but it is enough to say that the gist of the work seems to be that experimental lesions which cause stimulation of the parasympathetic (motor or stimulating fibres or paralysis of its antagonist, the sympathetic nervous system (carrying inhibitory impulses) lead to definite changes in the normal mechanism of the stomach—changes of a type that are found clinically associated with chronic ulcer, and which one might believe predispose to ulcer formations. Briefly, these changes are hypermotility, hypertonicity, and hypersecretion. Indeed, in animals it has been found possible to produce ulcers by procedures of the general type indicated above.

Cushing's previous studies of the neurohypophysis (pituitary gland) had led him to believe that one of its secretions, pituitrin, is a specific stimulant of the parasympathetic nervous system, quite comparable to adrenalin, the specific stimulant of the sympathetic system; and studies both from the physiological and the clinical side had convinced him that there existed in the inter-brain, or diencephalon, a localized parasympathetic centre, at which site presumably the pituitrin acted. These conclusions were reached after detailed studies of the effect of injection of pituitrin into the ventricles of the brains of patients, in the course of which the type of gastric responses mentioned above were noted.

It seemed, then, that these clinical and experimental findings might be correlated; and that one might gather from them that a possible explanation of the production of conditions favorable for gastric or duodenal ulceration lay in excessive stimulation of the diencephalic parasympathetic centre—in the unusual cases included in this study by such factors as new growths, operative trauma, etc.; in the more ordinary type of case by the action of higher cerebral stimuli (associated with nervous and mental strain). If these excessive stimuli from the forebrain do

cause the changes in gastric physiology which one finds after the intraventricular injection of pituitrin, then local changes might well occur in the walls of the stomach—"small areas of ischæmia or hemorrhagic infarction"—which would definitely predispose to ulceration; and for this eventual event, any of the so-called "local factors" mentioned above (vascular, traumatic, bacterial, etc.) might be responsible.

Cushing concluded: "Those favorably disposed toward the neurogenic conception of ulcer have in process of time gradually shifted the burden of responsibility from the peripheral vagus to its centre in the medulla, to the midbrain, and now to the interbrain, newly recognized as a highly important, long-overlooked station for vegetative impulses easily affected by psychic influences. So it may easily be that highly-strung persons, who incline to the form of nervous instability classified as parasympathetic (vagatonic) through emotion or repressed emotion, incidental to continued worry and anxiety and heavy responsibility, combined with other factors, such as irregular meals and excessive use of tobacco, are particularly prone to have chronic digestive disturbances with hyperacidity often leading to ulcer—effects wholly comparable to those acutely produced by irritative lesions experimentally made anywhere in the course of the parasympathetic system from the tubular centre to its vagal terminals."

**TREATMENT OF CYANIDE POISONING.** The cyanides (hydrocyanic acid, sodium and potassium cyanide) are notoriously powerful poisons, and ones for which there has been in the past no potent antidote. Cases of cyanide poisoning are not so very rare, as the chemical has certain industrial uses (photography, metal refining, etc.) and is besides the chief constituent of some commercial poisons used against insect and animal pests. It is used for suicidal purposes, especially by those with technical knowledge who desire a rapid and painless exitus, and in the past, at least, enjoyed a vogue as an agent for murder. Recent studies seem to indicate that in methylene blue, a complex organic dye, we have a valuable therapeutic agent in cyanide poisoning.

It has been known for some time that the cyanides act by inhibiting aerobic respiration, or oxidation. (Warburg, 1910.) Carbon monoxide, another common cause of poisoning, especially since the advent of the automobile, acts similarly. Methylene blue, it seems, along with other related substances, causes an activation of oxygen. Brooks reported in June experiments on rats, indicating that recovery from mild poisoning by hydrocyanic acid and by carbon monoxide is greatly hastened by the administration of methylene blue, and suggested its clinical use. (*Proc. Soc. Exper. Biol. and Med.*, 29: 1228, June, 1932.) C. J. Geiger, Director of Public Health in San Francisco, reported in December, the successful treatment of a case of cyanide poisoning in man. In this instance, a former medical student, who was admitted to the hospital in a comatose condition after taking fifteen grains of potassium cyanide, ordinarily a lethal dose, was revived dramatically within five minutes by the intra-venous administration of 50 c.c. of a 1 per cent solution of methylene blue. (*Jr. Am. Med. Ass'n*, 99, 23, 1944.) Brooks in a recent communication to the *Journal* indicates that several more cases have been successfully treated, but as yet the details are not available.

So far there is no report of its clinical use in carbon monoxide poisoning, although no doubt this next year will bring many such.

**THE NOBEL PRIZE IN MEDICINE.** See NOBEL PRIZES.

**THE HEREDITARY FACTOR IN CANCER IN MAN.** The question of the existence of an hereditary predisposition to cancer is one which has long been debated and never conclusively settled. Until quite recently the prevailing opinion has been that very probably cancer is not an hereditary disease. Certainly none of the available statistical studies offered any convincing evidence to the contrary. In the last few years, however, this viewpoint has been difficult to reconcile with the accumulating experimental evidence indicating that in certain animals, at least, both the incidence and location of malignant new growths is definitely subject to hereditary influences. The extensive and carefully controlled studies made by Maud Slye of Chicago have been especially important in establishing this fact.

It has been recognized, of course, that large statistical studies of human disease, and especially of such a condition as cancer, which may be of long duration, appear in protean forms, and in many sites, be difficult of diagnosis, may be fraught with error. Again, whereas in the case of experimental animals several generations may be studied in a year, in man a study of as many generations might take a lifetime. And finally, of course, in man one has no way of controlling the countless other factors which might have an etiological rôle in the production of the disease.

Nevertheless, with these difficulties and sources of error in mind, we must conclude from the report of a recent wide-scaled study that the hereditary factor may be an important one in human cancer. This report is that of the Committee for the Investigation of Cancer of the Norwegian Medical Society, a brief discussion of which occurs in the *Journal* of the American Medical Association for May 7, 1932. (P. 1656.)

According to the *Journal*, more than six thousand cases were studied in the interval between 1908 and 1931, and a careful attempt made to discover cases of cancer in near relatives and in forebears. Because of the settled and compact nature of Norway and the relative absence of migration, more complete data were obtained than have ever been available before; no previous study parallels this in either size or thoroughness. The Committee's conclusion, after due consideration of the possible factors predisposing to error, is that the figures obtained indicate a definite hereditary factor in the etiology of cancer in man. It was found, for instance, that cancer was much more common in brothers and sisters of patients with the disease than it was in their husbands or wives, or in the population at large. Again, cancer was more common among the children of those with cancer and conversely, the incidence of cancer was greater in the parents of cancerous patients. The Committee found, however, cases of cancer in persons with no family history of the disease, and concluded that the absence of cancer in parents was no protection against it. This finding led to the conclusion that there are probably two factors predisposing to cancer, one of which is hereditary.

Of special interest, as the *Journal* points out, is the fact that in this study there seemed to be a definite hereditary effect on the localization of cancer (as one might expect from animal stud-

ies). For instance, of the relatives of patients with carcinoma of the breast suffering from cancer, 44 per cent also had cancer of the breast; whereas the incidence of breast cancers among all malignant new growths was only 16.5 per cent. In the case of relatives of patients with cancer of the uterus, localization of the new growth to this same organ occurred in 34.5 per cent of the cases; whereas cancer of the uterus makes up only 8 per cent of cancer in general.

It is not to be expected that a clinical study should afford data for as accurate a determination of the mechanism of heredity involved as is the case in the laboratory. There were indications, however, that probably two independent hereditary factors are involved, and that they are probably recessive.

**SURGICAL TREATMENT OF PULMONARY TUBERCULOSIS.** Dr. Hugh H. Trout, in a presidential address before the Southern Surgical Association, presented an interesting appraisal of the value of surgery in the treatment of pulmonary tuberculosis. (*Surgery, Gynecology, and Obstetrics*, vol. lv., p. 607, 1932.) As a preparation for his paper, Dr. Trout visited the leading thoracic surgery clinics in this country, sent questionnaires to 97 of the largest sanatoria, and reviewed carefully the literature on the subject from 1925 to 1931. He was well equipped, therefore, to give an accurate picture of the present status of the operative therapy of tuberculosis in this country.

This field, Dr. Trout says, is a large and growing one. Of almost 29,000 patients in sanatoria, more than 3500 are in need of surgical treatment (and by this he means procedures more drastic than pneumothorax, which by and large is considered a "medical treatment"). The aim of surgical treatment is to "put the lung at rest," and this may be accomplished by a variety of procedures which produce either temporary or permanent collapse of the affected lobes. The exact physiological changes which produce the favorable clinical results following collapse are not known in detail, but certain broad principles are understood. Cavities are emptied and obliterated, and there is a distinct tendency for the tuberculosis process to heal.

Temporary compression may be achieved by several procedures, the simplest and most commonly used being the production of an artificial pneumothorax—that is, inflation of the pleural cavity with air or some other gas. This causes a collapse of the homolateral lung which is pushed against the mediastinum. Dr. Trout points out that pneumothorax may not only have a beneficial effect on the pulmonary process, but may be of value in laryngeal and intestinal tuberculosis, by removing a focus which is "feeding" secondary lesions; and also may, in some cases, allow pregnancy in a tuberculosis patient to be successfully terminated without the usual exacerbation of the disease. Sometimes the success of collapse therapy by pneumothorax is prevented by the presence of adhesions which bind the lung to the pleura and prevent its shrinkage. These cases, Trout believes, are in general best treated by operation with division of the adhesions.

Another popular measure used to promote collapse is that of phrenicectomy, which consists of interfering with the nerve fibres which run in the phrenic nerve and supply the diaphragm. Temporary paralysis of the diaphragm (and its consequent rise and compression of the lung on the

same side) may be effected by crushing the nerve or injecting it with alcohol. Permanent paralysis is most safely produced by an acutal dissection and excision of a part of the nerve, rather than by the more common exeresis (twisting off the divided half), Dr. Trout believes. Other and more recent measures for producing partial collapse are (1) division of the three scaleni muscles which allows collapse of the apex of the lung, and (2) resection of the intercostal nerves which paralyzes the thoracic muscles.

Permanent collapse of the lungs is best brought about by resection of a portion of each rib. This procedure—thoracoplasty—allows the chest wall to fall in against the lung and thus compress it. This is a major surgical procedure, and a formidable one, but Dr. Trout believes that with a rigorous selection of cases and an adequate technique, the operative mortality should be small. He quotes the figures of a leading American thoracic surgeon who had only 2 per cent of deaths. (The average figures are probably between 5 per cent and 8 per cent, and in unskilled hands run even higher.) That this procedure is well worth while, in spite of its risk, is clearly demonstrated by its late results. Five years after the operation, 33 per cent of the patients are well and self-supporting. Another third are very much improved, though not self-sustaining. When one considers that the operation is done only on patients who have failed to respond to medical treatment, usually the subjects of extensive tuberculosis infection, these figures seem even more significant.

There are certain technical features which are important in the procedure. It had best be preceded by phrenicectomy, and should usually be done in stages, the upper ribs being resected before the lower. Sometimes, the improvement following the first stage is so striking that resection of the lower ribs becomes unnecessary. Local anæsthesia is to be preferred, supplemented, if necessary, by nitrous oxide or ethylene.

Dr. Trout concludes that surgery will, in all probability, play an increasingly important part in the therapy of tuberculosis of the lungs; that the benefits of collapse therapy should be extended to patients who fail to respond to the medical treatment; and that it is important that the general surgeon equip himself to deal with this new and important problem—one which is to be adequately met only by those with a broad surgical experience.

**MEDIUMS.** See PSYCHOLOGICAL RESEARCH.

**MELCHERS,** mēlk'ers, (J.) GARI. An American genre, figure, and portrait painter, died in Falmouth, Va., Nov. 30, 1932. He was born in Detroit, Mich., Aug. 11, 1860, and studied at the Academy of Fine Arts in Düsseldorf, Germany, at the École des Beaux Arts in Paris and also under Lefèvre and Boulanger in Paris. He continued to live in Europe until the outbreak of the World War, maintaining studios at the Bois-le-Roi on the outskirts of the Forest of Fontainebleau near Paris, at Egmond, the Netherlands, and at Weimar, Germany. On his return to the United States he divided his time between his studio in New York City and Falmouth, Va. He received many decorations and prizes, including medals of honor at the Paris exposition (1889) and at exhibitions in Berlin (1891) and Antwerp (1894). Gold medals or first-class prizes were awarded him by exhibitions in Amsterdam (1887), Munich (1888), Chicago (1891), Philadelphia (1892, 1896), Vienna (1898), Dresden

(1901) and at the Pan-American Exposition, Buffalo (1901), the Louisiana Purchase Exposition, St. Louis (1904), and the Sesqui-Centennial Exposition, Philadelphia (1926). He was also a member of the international jury of award at the World's Columbian Exposition in Chicago in 1893.

Melchers early made a specialty of Dutch peasant life, which he depicted with great insight and sympathy, painting in a style of simple, sincere, but often almost brutal realism. Among his chief works in foreign galleries are: "Maternity" and "Peasant Nurse and Two Children" (Luxembourg Museum, Paris); "The Family" (Berlin); "The Ship Builder" (Dresden); "Child in Church" (Munich); "Man with the Cloak" (Rome); and "Drummer, Royal Scots" (Toronto). He is represented in American galleries by "Madonna" (Metropolitan Museum of Art, New York City); "Dutch Skaters" (Pennsylvania Academy of Fine Arts, Philadelphia); "Mother and Child" and "Sailor and His Sweetheart" (Carnegie Institute, Pittsburgh); "Penelope" and "Maternity" (Corcoran Gallery, Washington); "The Wedding," "Vespers," "Portrait of Mrs. Melchers," "Ik Marvel," and "The Fencing Master" (Detroit Institute of Arts); "Marriage" (Minneapolis Institute of Arts); "Vespers" (City Art Museum, St. Louis); "Small House, Egmond" (Los Angeles Museum); "Still Life" (School of Design, Providence); and "Brabanconne" (Providence Memorial Museum). His most famous paintings in private collections are: "Audrey," "The Green Mantle," "Supper at Emmaus," "The Nativity," and "Mother and Child." He painted also the murals entitled "War" and "Peace" in the Congressional Library, Washington; decorations in the municipal library, Detroit; and portraits of Mark Twain, Eugene Field, Susan Blow, and Sidney Rollins for the governor's room in the Missouri State Capitol. Other portrait commissions which he received were those of Theodore Roosevelt (National Gallery, Washington), Charles L. Hutchinson (Art Institute of Chicago), Potter Palmer, Donald K. Mitchell, David B. Jones, John Barton Payne, Dr. Lewis Stimson, and Gov. Benjamin Strong.

Melchers was elected an associate member of the National Academy of Design in 1904 and an academician two years later. He was also a member of the International Society of Painters and Sculptors in London, of the Institut de France and of the Société Nationale des Beaux Arts in Paris, of the Royal Academy in Berlin, of the Royal Society of Austrian Painters in Vienna, of the American Federation of Arts, and of the National Institute of Arts and Letters. From the latter he was elected a member of the American Academy of Arts and Letters (q.v.), which at the time of his death was holding an exhibition of his works. Among the decorations which he received were those of chevalier and officer of the French Legion of Honor, knight of the Royal Bavarian Order of St. Michael, and officer of the Royal Prussian Order of the Red Eagle and of the grand ducal order of the White Falcon of Saxony.

**MELONS.** See HORTICULTURE.

**MEMEL,** mā'mēl, or KLAIPĖDA. A territory on the Baltic including the city of Memel (population, 36,988) and the lower reaches of the Memel or Niemen River, which was detached from Germany by the Treaty of Versailles and subsequently incorporated in Lithuania under a con-

vention agreed to by the conference of ambassadors (May, 1924). The German population of Memel received a clearly defined measure of administrative and financial autonomy. The governor is appointed by the President of Lithuania. The total area is 943 square miles and the population (1930) about 147,000, of whom 37,000 were Lithuanians. Governor Antonas Merkys was succeeded in May, 1932, by M. Gylys.

**HISTORY.** On Feb. 6, 1932, the Lithuanian government forcibly ousted Otto Boettcher, German President of Memel Territory, and established control over the city. The Lithuanians charged that Herr Boettcher had carried on secret negotiations with the German government regarding Memel's foreign relations, a revelation which added to the disturbed political situation in Eastern Europe. The Lithuanian Governor appointed Edouard Simaitis, a Lithuanian, as President of the Memel Directorate. The latter then dissolved the Diet, which was German in sympathy, without waiting for that body to accord the new Directorate a vote of confidence. This action was in defiance of the governments of Great Britain, France, Japan, and Italy, the guarantors of the Memel Statute of the League of Nations adopted in 1920. Accordingly these Powers on April 11 brought suit to restrain Lithuania before the Permanent Court of International Justice.

Meanwhile on May 4, 1932, the election of a new Diet in Memel resulted in an overwhelming victory for the autonomist-German majority. On June 6, Governor Gylys appointed an all-German Directorate, with Ottmar Schreiber, a native of East Prussia, as the new president, thus terminating the dispute in favor of the German element. The decision of the Permanent Court, handed down August 11, was primarily favorable to Lithuania. By a vote of 10 to 5, the Court ruled (1) that the Lithuanian Governor had authority to dismiss the President of the Directorate; (2) that the President, Herr Boettcher, violated the Memel Statute in negotiating with Berlin; and (3) that the Governor was not justified in dissolving the Memel Diet under the circumstances. **METALLURGY.** Operations in metallurgical plants in 1932 were reduced still further so that activity averaged about one-fourth of that in 1929, with prices so low that scarcely a company showed a net profit for the year. Technologic changes therefore were largely those that would result in lower costs of operation without much capital expense involved. Funds for research were limited but as many highly trained experts had plenty of time available, progress in ore reduction technique was not entirely absent. Outstanding among the world's industries during the last year or two has been that of gold production, for the price of this metal has held constant or even increased in terms of the currency used in countries that have temporarily given up the gold standard, whereas costs have continued to decline because of lower wage scales and reduced prices of supplies and equipment. Therefore, the technique of gold production is

now of particular importance, and the recent application of the flotation process of concentration to gold ores is perhaps the outstanding development of the year in the metallurgical industry.

**ORE DRESSING.** Of dominant interest in the field of crushing and grinding has been the introduction of the Hadsel mill at a California gold property. This mill comprises a drum, in the original installation 24 feet in diameter, mounted on a horizontal axis driven by a motor at a speed of  $2\frac{1}{2}$  to 3 revolutions per minute. Buckets are arranged about the inside periphery of the drum, which scoop up the ore to be ground from a shallow pool of ore and water standing in the bottom of the drum and continuously fed from a nearby bin. The ore is thus elevated to the top of the machine where it falls out and drops on to anvil plates placed in the interior of the mill above the pulp level. The chunks are broken by impact, the smaller pieces of ore on the breaker plates being still further crushed to a fine powder by the falling pieces of ore rather than by steel balls as in the more common ball mill, or by steel rods as in rod mills. At one side of the drum of the Hadsel mill an overflow is provided. As quickly as ore particles are ground to a suitable fineness, which may be made as fine as 95 per cent through 200 mesh, these particles will remain in suspension in the agitated pulp in the mill and pass out in the overflow. The mill, therefore, allows an unusual size range between feed and product, chunks in the feed permissibly being as large as 2 feet thick, and thus lowers the capital investment required for crushing and grinding equipment. At the Georgetown, Calif., installation, the only one so far made, the 24-foot mill is driven by a 100-horse power motor and has a capacity of about 300 tons of ore per day. For this installation, the following data have been published: Power, 6.7 kilowatt-hours per ton; water, 1500 gallons per ton; steel consumption, not over 0.5 pound per ton; labor, about 3 cents per ton; and repairs, \$1000 per year. One of the largest manufacturers of mining equipment has acquired the rights to this mill and several more installations are planned for the coming year which will give a more accurate basis for estimating its importance as a piece of crushing and grinding equipment.

In the more conventional forms of crushing equipment, one of the types of gyratory crusher has been improved by adding a releasing device to prevent injury due to the presence of tramp iron in the feed. In one of the native copper mills in Michigan, standard crushing equipment is being placed in competition with the steam stamps that have been used for years locally in reducing that particular type of ore. Progress made in producing harder and tougher steels by the use of alloying materials and improved methods of heat-treating has received commercial application in better liners and grinding media in ball and rod mills. Also, such mills are more and more being used for a single stage of grinding, two or more units being installed for successively finer work where one was used before, with dependence on a high circulating load through a classifier to get the desired results.

Mechanical classifiers of the rake type have been installed with larger capacities and simplified head motions. An automatic control device to maintain a constant circulating load, based

on the use of a demand meter in the electric motor supply line, has been developed. Increased efficiency of separation between sand and slime has been achieved by the use of a small air-lift to put back into circulation border-line particles that accumulate in the bottom of a classifier bowl. Another manufacturer has developed a classifier with a double set of rakes, each operating on the sand in the same channel, thus giving more nearly continuous raking.

Research work has continued on the explosive shattering of minerals by saturating the pores with water followed by heating under pressure. When the pressure is suddenly released, the water changes to steam and blows up the mineral particles. A commercial machine operating on this principle is being designed.

In the field of ore concentration, minor improvements continue to be made in reagents and equipment for the flotation process, and its application in the metallurgy of gold is now important, particularly in California and Canada. At one plant, cyanidation precedes flotation, the cyanide tailing being floated to recover sulphides and tellurides which are reground and recyanided. At another plant, the ore is rather coarsely ground, floated, and the flotation concentrate reground and cyanided, thus eliminating the cyanidation of a large tonnage of ore that would otherwise be necessary. In one of the California plants, the gold is partly free-milling, and is first amalgamated. The amalgamation tailing is dewatered, reground, and subjected to flotation, making a lean tailing that can be discarded, and a small tonnage of rich concentrate that is cyanided. Introduction of flotation, rather than gravity concentration, in the California gold mills during the last year or two, has been instrumental in securing a great reduction of tailing losses. Reagents in general use include lime, xanthate, Aerofloat (dithiophosphate), copper sulphate, cresylic acid, and sometimes a little pine oil or starch, the latter being used to depress nonmetallic minerals such as graphite and talc. To date, flotation has by no means been considered of universal application in gold mills but practically all mills are considering its applicability to their local problems. Homestake, for instance, continues to rely on amalgamation and cyanidation; Hollinger on gravity concentration and cyanidation; and Dome flows the pulp from its tube mills over a form of corduroy blanket to remove the coarse gold preliminary to cyanidation.

The application of flotation to the concentration of nonsulphides other than gold also continues to expand. Pyrolusite is now successfully treated in this way in Cuba, and the flotation of phosphate in Florida is now general practice. The most complete treatise on the flotation process yet to appear was published during the year: *Flotation*, by A. M. Gaudin.

An interesting combination of ore-dressing and hydrometallurgical methods was devised and put into operation during the year by the Miami Copper Co., in Arizona, to treat mixed sulphide and oxide ores. No published account of the practice at the new plant has appeared but it is understood to include flotation of the sulphides, leaching of the nonsulphides, precipitation as cement copper, and flotation of this cement copper before sending it to a smelter.

**SMELTING.** Copper metallurgists have been faced with the problem of running their furnaces

to the best advantage on a greatly curtailed production basis, so much progress has been made in intermittent operation. At one plant reverberatories are operated virtually on a two-shift basis, being only lightly fired on the third shift, with little ore charged. Roasting furnaces are also shut down on the third shift, though the rables are occasionally moved a little to prevent them from sticking. Another plant shuts down a furnace for a month at a time but keeps it hot, and generates steam in the waste-heat boiler, by burning from 30 to 45 barrels of oil per day. This was a standard 25 by 120-foot furnace. Still another smelter makes a practice of running its reverberatory at full capacity continuously until the amount of copper scheduled to be produced for the month has been made; then to shut down the furnace and allow it to become cold. The smelting period is made continuous during the last part of one month and the first part of the next.

With the piping of natural gas to most of the smelting centres of the West, that fuel has been generally substituted for the fuel oil or pulverized coal formerly used, both in smelting and refining furnaces. It has several advantages, among them being its ready availability for immediate service, its ease of application, and the fact that the interior of a furnace thus fired is transparent, so that the operator may, with colored goggles, inspect the progress of smelting. On a heat-unit basis, it is believed that gas is not quite so efficient as other fuels. Natural-gas burners are commonly directed downward about 10 degrees so that the flame impinges on the surface of the molten bath. A modern reverberatory furnace installed in Arizona is 26 by 107 feet in interior dimensions, thus being slightly shorter than has been the general practice. It has a high arch to afford maximum combustion space for natural gas. Its capacity is 1000 tons of solid charge per day, with a fuel consumption of about 3,000,000 B.t.u. per ton.

New smelters have been completed in northern Rhodesia by the Roan Antelope and Rhokana companies, not because there was a dearth of copper smelting capacity in the world, but because of the developments of this important copper area that will soon supply a substantial proportion of the world's requirements at a lower cost than heretofore except in Chile. The charge at the new African smelters is exceedingly high-grade, at one of them being concentrate containing about 60 per cent copper. It is fed wet, without calcining, limestone and iron oxide being added for flux. The matte produced contains less than 1 per cent of iron, so the converter operation consists almost entirely in burning off sulphur. There is no converter slag and very little reverberatory slag but what there is contains 2 to 3 per cent copper. The smelting practice is thus quite different from that at any American plant. Even in Rhodesia curtailment in production has been made, the capacity of the 25 by 120-foot reverberatory being reduced by temporarily shortening it to 82 feet, rather than by intermittent operation.

A new type of waste-heat boiler installation has proved successful in Mexico, the boiler being installed close to the furnace, without a spare unit or bypass. It is of 800 horsepower and operates at 400 pounds pressure, higher than heretofore used in such an installation.

Lead smelting practice has witnessed even

more care in the preparation of the blast-furnace charge. Not many years ago, double sintering became the vogue, with the sulphur down to about 2 per cent and scarcely any matte production in the furnaces. This has been extended to a considerable amount of triple sintering, with crushing to about  $\frac{1}{4}$  inch between each operation for best results. This brings the sulphur down very close to 1 per cent. With a 48 by 202-inch furnace, a well prepared charge, without much fines, containing about 90 per cent sinter with high lead content, 350 to 450 tons per furnace-day is being secured.

Kettle-refining methods are being favored over furnace-refining practice. This trend is exemplified by the use of the Harris process and the chlorine dezincing process of J. O. Betterton, a patent for which was granted during 1932. Bismuth removal by the use of calcium is preferred to the use of the Betts electrolytic process. Welded steel kettles and improved designs of kettle settings have played a part in the increasing popularity of kettle refining.

The new Mount Isa lead smelting plant, in Australia, was extended during the year by the construction of additional Dwight & Lloyd sintering machines and a third blast furnace, the present capacity being 6000 tons of bullion a month. This is shipped to an English refinery where lead of exceptional purity, 99.994 per cent, is produced. The Mount Isa bullion averages about 99 $\frac{1}{2}$  per cent lead, 50 to 80 ounces of silver, 0.118 per cent antimony, 0.017 arsenic, 0.003 bismuth, and 0.128 per cent copper. Practically no other extensions to lead smelting capacity were made during the year, with the possible exception of Russia.

In zinc smelting, low prices and curtailed operation have resulted in the survival of the fittest. The continuous vertical-muffle retort plant has demonstrated its worth by the high quality of metal produced and the low operating costs. Average retort life is reported better than two years. Electrothermic smelting to zinc oxide has continued at the one plant in America, mentioned in the review for 1931. Electrolytic zinc production has practically ceased in the United States, orders having been taken care of almost entirely from accumulated stocks. Cessation of production of this grade is only temporary, however, and a new electrolytic zinc plant in Canada has continued in operation throughout the year.

Traveling-grate zinc oxide furnaces have definitely proved their worth; they have been handling higher burdens, and the quality of the oxide is much better than with the old hand-fired furnaces. The practice of fuming zinc from lead blast-furnace slag has stood the test of the depression, as well. A process for the continuous electroplating of zinc on iron wire, to take the place of, or supplement, galvanizing, has been put in commercial operation with success.

In the realm of the more uncommon metals, a metallurgical process has been worked out in Canada for the treatment of the rich radium ores from the newly discovered deposits at Great Bear Lake. Details have not been released but it is understood hydrochloric acid is used in a much simplified process. A plant has been built that went into operation at the end of the year. The Belgian Congo has for several years been the only source of importance for supplies of radium.

Beryllium has received increased attention; its metallurgy has been developed so that the

metal, in the form of an alloy with copper, is now available at \$25 per pound, compared with \$200 six years ago. Output is still small, and the processes used closely guarded, but experimental work on beryllium-copper alloys has been rather active, and the material has definite possibilities where resiliency and resistance to fatigue are desired.

The metallurgy of nickel production has changed but little, but the use of the metal has been extended in some directions, as in a long wearing cast iron containing 4½ per cent nickel, of especial application for rolls, and in a cast iron containing 14 per cent nickel, 6 per cent copper, and 2 per cent chromium. A nickel wrought iron is a new development.

An increased interest in the metallurgy of powdered metals has occurred. Metals can be combined in their powdered state, pressed in dies, and subsequently heat-treated. The process may be used for metal parts that would otherwise be cast or drop-forged, and some alloys are possible that could not be obtained by melting and mixing.

**METALS, POWDERED.** See CHEMISTRY, INDUSTRIAL.

**METEORITES.** See EXPLORATION.

**METEOROLOGY.** From time immemorial, there has persisted a widespread belief that the moon and other celestial bodies exert an influence on the weather; and those who have attempted to justify this belief on scientific grounds have often sought to show that the source of the alleged influence lies in atmospheric tides. The magnitude of the tides raised in the oceans by the gravitational action of the sun and the moon has frequently led to the supposition that, in the lighter and more mobile atmosphere, tides of much greater magnitude would be generated and would exert important influences on meteorological phenomena. Unfortunately for this hypothesis, however, the actual observational measurement of the magnitude of the atmospheric tides, as well as the theoretical calculation of this magnitude, shows the supposition to be in error; the tides in the atmosphere are in reality so small as to be almost unobservable, and are totally incapable of affecting the course of the weather.

Both the theoretical and the observational knowledge of atmospheric tides has been notably extended in recent years, especially by S. Chapman and J. Bartels; the latter has presented a readable summary of present knowledge in the *Scientific Monthly* for August, 1932. Tidal motions in the atmosphere are produced in two different ways—by the direct gravitational actions of the sun and the moon; and also by the periodic heating and cooling of the atmosphere by the sun. These influences result in several tidal motions, which cause small periodic fluctuations in the barometric pressure, and which may be detected by a mathematical analysis of long series of records from self-recording barometric instruments. The tides are so small that the pressure variations which they cause are completely masked by the very much larger and irregular fluctuations of barometric pressure due to other factors; it is only when the latter fluctuations are averaged out over a very long interval of time that the regular fluctuations due to the tides in the atmosphere can be found.

The intricate mathematical theory which has been worked out for oceanic tides is found to be largely successful in accounting for the observed

atmospheric tides. The latter are in some respects much simpler than the oceanic tides, partly because the atmosphere is not so completely divided into separate parts by obstructions as is the ocean, and partly because the atmosphere as a whole has a tendency to oscillate with the same periods which the tidal forces have, and this magnifies the world-wide oscillations and represses local irregularities.

Most of the atmospheric tides would not be large enough to be detected, were it not that they are considerably magnified by resonance. Our understanding of atmospheric tides still rests largely on the resonance theory of Kelvin, as subsequently developed by Rayleigh and Margules: The sun produces a traveling 12-hour tidal wave in the atmosphere, which causes a maximum barometric pressure at 10 a.m. and 10 p.m., local mean time, over the globe; the sun also causes a 12-hour standing wave between polar and equatorial regions, with fixed nodes in latitudes 35 degrees north and south; likewise, a traveling 8-hour wave, which reverses its phase from summer to winter; and, finally, a traveling 24-hour wave. The two 12-hour waves and the 8-hour wave would not be appreciable except for the fact that the earth's atmosphere chances to have free periods of oscillation of nearly these lengths, so that these waves are much magnified by resonance. The 24-hour wave is caused by the 24-hour temperature variation; the temperature variation is quite large, but the tidal wave it produces is very small because in this case it is not magnified much by resonance. The tides due to the direct gravitational action of the moon are not magnified appreciably by resonance, and hence are so small that only recently have they been detected at all, though long sought for; a small 12.4-hour wave, and a still more minute 24.8-hour wave have now been found in barometric records.

One of the most notable advances in meteorology during recent years is the development of the mathematical theory of the irregular turbulent motion of the lower atmosphere, and the application of this theory to explain a number of important meteorological phenomena. It is exceedingly difficult, however, to construct a uniformly satisfactory theory of all the phenomena due to turbulence, and much still remains to be done; O. G. Sutton has recently effected an improvement in the existing mathematical theory of turbulence, by developing a treatment based on the assumption that the irregular motion of a given mass of air is successively controlled by eddies of continually increasing size; the resulting formulae seem to give a good quantitative explanation of most of the observed facts about diffusion in the lower atmosphere.

In August, 1932, active work commenced on the international enterprise known as the Second Polar Year. This is a programme of systematic observation of magnetic, meteorological, and other geophysical phenomena at a network of stations over the globe for a period of thirteen months; about half the stations are in high latitudes, whence the name of the project. It is being carried out on the fiftieth anniversary of a preceding similar project. Half the stations are temporary, having been established for this especial purpose; thirty-three nations are taking part in the work. The data gathered should be of great value in aiding the solution of numerous outstanding problems in the geophysical sciences.

**METEORS.** See ASTRONOMY.

**METHODISM, BRITISH.** Methodism had its birth at the University of Oxford, where John and Charles Wesley and the members of the Holy Club received the nickname Methodist and formed the first Methodist Society of England in 1739. The mother church of the movement was the Wesleyan Methodist Church, which held its first conference in London in 1744. Separatist bodies included the Primitive Methodist Church, commonly known as the "Camp Meeting Methodists," which was formed in 1810; the Independent Methodist Churches, which began in 1796 and united with other societies in 1806; the Wesleyan Reform Union, which separated in 1850 and organized as a separate body in 1859; and the United Methodist Church, which was formed in 1907 by the union of three denominations of Methodists which had hitherto been separate from and independent of each other—the Methodist New Connection, the Bible Christians, and the United Methodist Free Church.

The three major branches of British Methodism, the Wesleyan, Primitive, and United, held a meeting at Albert Hall, London, on Sept. 20, 1932, at which there was signed a deed of union under the name of the Methodist Church. The moving spirit behind this reunion was Sir Robert Perks, noted engineer, who had labored 54 years for its accomplishment. The Rev. John Scott Lidgett, a former president of the Wesleyan Methodist Conference (1908-09) and president of the uniting conference of the three branches, was chosen first president of the united church, the president designated for 1933 was the Rev. Luke Wiseman. The Methodist Church in 1932 had 1,542,936 members, 5782 ministers, 55,116 lay preachers, 20,892 churches, and 10,717 Sunday schools with an enrollment of 1,573,273 teachers and pupils. The remaining separatist bodies, the Wesleyan Reform Union and the Independent Methodist Churches, numbered together less than 25,000 members.

**METHODIST CONNECTION (OR CHURCH) OF AMERICA, WESLEYAN.** A branch of the Methodist Episcopal Church, organized in 1843 in Utica, N. Y., the outgrowth of controversy over what was termed "liberty of testimony and freedom of discussion" and also a protest against the exercise of ecclesiastical authority. The purpose of the new organization was a church that should be anti-slavery and non-episcopal. In doctrine, the church is in accord with the Methodist bodies generally. In 1932 the branch comprised 28 annual conferences. There were 630 churches, 801 ministers, and 24,350 members; the Sunday schools numbered 638, with 6382 teachers and officers, 40,160 pupils, and 6993 persons enrolled in the home department and on the cradle roll.

The different corporations of the church meet annually in February in Syracuse, N. Y. These corporations are: The Wesleyan Methodist Connection (or Church) of America; the Wesleyan Methodist Publishing Association; the Superannuated Ministers' Aid Society of the Wesleyan Methodist Connection of America; the Missionary Society of the Wesleyan Methodist Connection of America; and the boards of trustees of the following colleges maintained by the church,

Houghton College in Houghton, N. Y., Central College in Central, S. C., Marion College in Marion, Ind., and Miltonvale College in Miltonvale, Kans. The general conference (whose last meeting was held in 1931) elects quadrennially 17 representatives from all parts of the church who constitute what is known as the book committee, and these 17 representatives become in turn the board of trustees of each separate corporation. The president of the book committee is the Rev. J. S. Willett and the secretary, the Rev. E. D. Carpenter.

The foreign missionary department of the Missionary Society continued its work in Africa, India, and Japan, and the department of home missions and church extension among the American Indians, Mexicans, and mountaineers of the South. The *Wesleyan Methodist*, weekly, is the official organ of the church. The officers are: President, the Rev. E. D. Carpenter; first vice-president, the Rev. J. S. Willett; second vice-president, Joe Lawrence; and secretary, the Rev. E. F. McCarty. Headquarters are at 330 East Onondaga Street, Syracuse, N. Y.

#### METHODIST EPISCOPAL CHURCH.

Methodism in its widest signification and intention was a "revival of Christian earnestness, simplicity, and power." John Wesley had no intention of establishing a new church; his effort was to revive pure and undefiled religion. He taught the doctrines of the Church of England and "faithfully urged the people to attend its ordinances, to be present at its public assemblies, and to be interested in its prosperity." Had the authorities of the Church of England accepted some of Wesley's plans, in place of driving him away from them, the future of Methodism might have been quite different. Richard Boardman and Joseph Pilmoor, two of Wesley's workers, came to America in 1769 and were followed in 1771 by Francis Asbury who became the great leader of the infant church. The Methodist Episcopal Church was organized at the Christmas conference held in Baltimore in 1784.

The governing body of the church is the quadrennial general conference, composed of an equal number of ministerial and lay delegates who make all the rules and regulations and appoint commissions to carry on the work of the church. Such a conference was held in Atlantic City, N. J., May 2-25, 1932. Two important commissions were created on this occasion. one, composed of 10 laymen, 10 ministers, and 5 bishops, was to carry out an evangelistic programme to improve the spiritual life of the church; the other was to study the church's whole supervisory, administrative, and benevolence systems. There are held also annual conferences, presided over by the bishop of each area, at which all pastoral changes are considered and reports of the local churches are gathered and compiled. A local quarterly conference administers all matters pertaining to the work of the local church.

In 1932 there were in the United States and territories 95 annual conferences and missions, 375 districts, and 14,807 charges in 18 episcopal areas. Effective ordained ministers numbered 12,696 and local, or lay, preachers, 10,370. There were 4,544,797 church members, of whom 101,366 were preparatory and 3,907,119 full members, while 536,312 were on the inactive roll. The enrollment in 23,943 church schools was 3,983,518, including 378,716 officers and teachers. There were 543,004 Epworth League members. Conferences

outside of the United States in 12 episcopal areas included 5 in Africa, 10 in Eastern Asia, 21 in Europe and North Africa, 5 in Latin America, 3 in southeastern Asia, and 12 in southern Asia. The membership totaled 641,943; ordained ministers, 1892; and local preachers, 3064. Church schools numbered 1674, with an enrollment of 349,472, including 17,917 officers and teachers.

The administration of the missionary, educational, and philanthropic work of the Methodist Episcopal Church is committed to six general boards: Foreign missions; home missions and church extension; education; hospital, homes, and deaconess work; pensions and relief; and temperance, prohibition, and public morals. These boards cooperate in the world service movement, their budgets being fixed and their work correlated by the world service commission. On May 31, 1932, this commission reported total net receipts of \$4,831,902.

The board of foreign missions administers the missions of the church in Africa (Central and South), Europe and North Africa, Eastern Asia (China, Japan, Korea), Latin America (Mexico, Central America, South America), Southeastern Asia (Philippine Islands, Malaya, Sumatra), and Southern Asia (India and Burma). Its receipts for the fiscal year ending Oct. 31, 1932, totaled \$1,841,277. The board of home missions

and church extension administers the missions in the United States and its possessions, not including the Philippine Islands, and looks after weak churches in new and growing communities in the United States. During the fiscal year a total of \$1,047,631 was expended on home missions, while disbursements for church extension amounted to \$320,236. There are two women's missionary societies, the foreign and the home, which reported total receipts in 1932 of \$1,692,327 and \$1,969,816, respectively.

The educational system of the church, administered by the board of education, included, in 1932, 47 colleges and universities, 24 secondary and preparatory schools, 8 schools of theology, and 15 institutions for colored students. The board of hospitals, homes, and deaconess work administered, in 1932, 77 hospitals, 44 homes for the aged, 43 children's homes, 45 deaconess homes, and 27 homes for young business men and women. The board of pensions and relief reported in 1932 a connectional permanent fund amounting to \$1,376,825; endowments and reserves in trust, \$332,028; conference stewards' fund in trust, \$303,193; and ministers' provident annuity fund, \$614,751.

The board of temperance, prohibition, and public morals is responsible to the general conference, its purpose being "to make more effective

the efforts of the church to create a Christian public sentiment" and "to crystallize opposition to all public violations of the moral law and to all attempts to undermine and destroy civil and religious liberties."

The official publications of the church are the *Christian Advocate* (New York, Cincinnati, Chicago, Kansas City, San Francisco, and Southwestern editions); the *Epworth Herald* (Chicago); *Zion's Herald* (Boston); and *Der Christliche Apologete* (Cincinnati). The secretary of the general conference in 1932 was the Rev. John M. Arters, 700 Hammond Street, Bangor, Me. The editor of the denomination's *Year Book and General Minutes* was the Rev. Frank Wade Smith, 150 Fifth Ave., New York City.

**METHODIST EPISCOPAL CHURCH, COLORED.** This denomination was organized in Jackson, Tenn., in 1870 and was composed of the colored membership of the Methodist Episcopal Church, South. In 1932, it reported 4301 churches with 492,570 members; 3010 traveling preachers and 2068 local preachers; 3244 Sunday schools with an enrollment of 321,690 pupils; and 1812 Epworth Leagues with a membership of 47,460. The amount raised during the year for educational purposes was \$102,000 and about the same for missionary purposes. More than \$1,000,000 was also contributed for home maintenance. The church has 7 bishops and 12 connectional officers. The *Christian Index* is the official organ, while the *Eastern Index* and *Western Index* serve their respective sections. A quadrennial general conference was held in Louisville, Ky., in May, 1930. During the year 1931 a new publishing house was built at Jackson, Tenn., at a cost of \$145,000. Headquarters are in Jackson, Tenn.

**METHODIST EPISCOPAL CHURCH, SOUTH.** A separate branch of the Methodist Episcopal Church, formed in 1845 over the question of slavery. In 1932 there were 48 conferences and missions, of which 41 were in the United States and seven in foreign countries; 16,348 churches; 8075 traveling preachers and 4316 local preachers; and 2,665,504 church members. Sunday schools numbered 15,350, with an enrollment of 1,990,441 pupils; and Epworth League societies, 9612, with a membership of 291,415. Contributions for all purposes in 1932 amounted to \$23,930,866. The denomination sponsored 152 educational institutions, including 48 universities and colleges, 12 academies, and 92 mission schools. Important periodicals are the *World Outlook* and the *Christian Advocate*. The executive body is the college of bishops which in 1932 had 15 members. Headquarters of the church are in Nashville, Tenn.

**METHUEN, PAUL SANFORD METHUEN, THIRD BARON.** A British field marshal, died in London Oct. 30, 1932. Born in Nynehead, Somersetshire, Sept. 1, 1845, he was educated at Eton and Sandhurst, and entered the army in 1864 as a lieutenant of the Scots Fusilier Guards. He served on a special mission on the Gold Coast in 1873 and in the second campaign of the Ashanti War in 1874. In 1877 he became assistant military secretary to the commander-in-chief of Ireland, after which he served for four years as military attaché in Berlin. He was made assistant adjutant general and assistant quartermaster general for the Home District in 1881. During the Egyptian War of 1882 he was staff officer and quartermaster general and was present at the battles of Mahuta, Kassassin, and Tel-el-Kebir. In 1884 he

commanded Methuen's Horse, a unit of irregulars of the field force, in Bechuanaland, and in 1888 was made deputy adjutant-general in South Africa. He succeeded to the baronage in 1891 and the following year, having been made a major general, was selected to command the Home District. In 1897 he was sent to India where he served as press censor on the headquarters staff of the Tirah expedition.

On the outbreak of the Boer War in October, 1899, Methuen was put at the head of the first of Buller's three divisions of the 1st Army Corps and was sent to relieve Kimberley which had been besieged by a Boer force of 6000 under Prinsloo. His force for this purpose consisted of about 8000 men, the majority of whom were infantry, but after early successes at Belmont on November 23 and Enslin on November 25 he was checked in his attempt to cross the Modder River near the Riet and on December 11 in a frontal attack on Magersfontein lost nearly 1000 men. In May and June, 1900, however, with Hunter he formed the left in Lord Roberts's victorious movement on Pretoria. He was again humiliated when captured by De la Rey in a surprise attack at Klip Drift on Mar. 7, 1902, but was released a few days later and, on account of his wound, was allowed to return to England. His personal bravery in the firing line had caused a lot of the criticism of his outmoded methods of warfare to be discounted.

Methuen was commander-in-chief of the Eastern Command during 1903-08 and general officer commanding-in-chief in South Africa during 1907-09. In 1909 he was appointed governor of Natal, and in 1915 governor and commander-in-chief of Malta, holding the latter command throughout the World War. On his return to England in 1920 he was made constable of the Tower of London and was promoted to the rank of field marshal. He was a Companion of the Bath (1882), a Companion of St. Michael and St. George (1886), a Knight Commander of the Royal Victorian Order (1897), a Knight Commander of the Bath (1900), a Knight of the Grand Cross of the Bath (1902), and a Knight of the Grand Cross of St. Michael and St. George (1919).

**METROPOLITAN MUSEUM OF ART.** See ART EXHIBITIONS; ART MUSEUMS.

**METROPOLITAN OPERA COMPANY.** See MUSIC.

**MEXICAN ART.** See ART EXHIBITIONS; PAINTING.

**MEXICAN FRUIT FLY.** See ENTOMOLOGY, ECONOMIC.

**MEXICO.** A federal republic lying between the United States and Central America. Capital, Mexico City.

**AREA AND POPULATION.** With an area of about 767,198 square miles, the population at the census of May 15, 1930, was 16,404,030, or 2,069,250 (14.4 per cent) more than at the census of 1921. Of the 1930 population, 9,040,590 were of mixed race, 4,620,860 were Indian, 2,444,466 were pure white, 140,094 of unknown racial origin, and 158,000 (including about 14,600 citizens of the United States) were foreigners. About 1,791,000 Indians still spoke their native language. The population is overwhelmingly Roman Catholic, but the Church, under the Constitution of 1917, is separated from the state and strictly regulated.

The population of Mexico City, according to

the 1930 census, was 968,443 (752,194 in 1921). A decree of Aug. 24, 1931, extended the city boundaries to include slightly more than 1,000,000. Other leading cities, with their populations in 1930, are: Guadalajara, 150,000; Puebla, 111,791; Monterrey, 129,748; Mérida, 91,139; Tampico, 76,000; San Luis Potosí, 73,205; Vera Cruz, 70,000; and Torreón, 65,000.

**EDUCATION.** Primary education is free, compulsory, and secular in all official educational establishments. In 1930, there were 1,662,371 pupils enrolled in schools of all grades, including 663,170 in Federal schools, 824,349 in state and municipal schools; and 174,852 in private schools. The seven universities enrolled 9472 students on July 31, 1930. At the census of 1921, 65 per cent of the persons over 10 years of age were illiterate.

**PRODUCTION.** Agriculture supports the bulk of the population. Only about 24,000,000 acres, or 5 per cent of the total area, was under cultivation in 1931 (including 3,500,000 acres under irrigation), while an additional 73,000,000 acres were available for cultivation. There were 146,000,000 acres of pasture, and 43,933,000 acres of forest land. Under Mexican agrarian laws, estates of more than 2000 acres were being subdivided, some 16,000,000 acres of state and confiscated land having been distributed up to June 30, 1931. Production of the chief crops in 1931, and 1930, is shown in the accompanying table from the 1932 U. S. *Commerce Yearbook*.

<sup>a</sup> Thousands of acres. <sup>b</sup> Thousands of units—bushels except as indicated. <sup>c</sup> Seasons ended following year. <sup>d</sup> Unit, metric ton. <sup>e</sup> Unit, pound.

Production of the chief crops was reduced in 1932 by drought and frost in various regions.

Mining ranks second to agriculture in importance. There were about 31,000 mining properties in 1930, of which 97 per cent were foreign-owned. Mexico normally produces about 40 per cent of the world's silver output. Production of petroleum declined to 33,039,000 barrels in 1931 from 39,529,913 in 1930, and 44,687,879 barrels in 1929. In 1930, there were 1186 oil concessions, occupying 30,866,894 acres. Mineral output in 1931, with 1930 figures in parentheses, was: Gold, 628,000 troy ounces (671,000); silver, 87,461,000 troy ounces (105,413,000); copper (metal content), 54,121 metric tons (73,370); lead (metal content), 226,629 metric tons (231,875); zinc (metal content), 120,292 metric tons (124,106); antimony (metal content), 5443 metric tons (2882); white arsenic, 6508 metric tons (10,128); graphite, 3122 metric tons (5853); mercury (metal content), 255 metric tons (166); coal, 808,000 metric tons (997,000); petroleum, 33,039,000 barrels (39,530,000).

The 1929 industrial census showed 44,216

manufacturing establishments, with 307,581 employees and an output valued at 890,394,138 pesos. Cotton textiles, tobacco products, woolen goods, foods, and iron and steel articles are the chief manufactured products.

**COMMERCE.** The value of general imports and exports for the years 1929 through 1931, in pesos and dollars (converted at average exchange rates) is shown in the accompanying table compiled from the 1932 U. S. *Commerce Yearbook*.

MEXICAN IMPORTS AND EXPORTS, 1929-31

Year	1,000 pesos		1,000 dollars	
	Imports	Exports	Imports	Exports
1929 . . . . .	382,843	590,633	184,454	284,567
1930 . . . . .	350,178	458,674	165,039	216,173
1931 <sup>a</sup> . . . . .	216,585	399,711	92,352	170,437
1932 <sup>a</sup> . . . . .	180,308	304,190	57,428	96,885

<sup>a</sup> Preliminary.

Mineral and vegetable products, including silver, lead, gold, zinc, copper, petroleum, coffee, winter vegetables, henequen (sisal), and bananas, comprised over 86 per cent of the total 1931 exports, as against 95 per cent in 1930. Machinery, foodstuffs, railway and tramway cars, iron and steel, bullion and specie, and mineral oils were the chief import items. According to United States statistics, imports from Mexico in 1931 were \$47,612,000 (\$80,300,000 in 1930) and exports to Mexico were \$52,366,000 (\$116,100,000 in 1930), or declines of 41 and 55 per cent, respectively, as compared with the previous year. The United States in 1931 took 61.2 per cent of all Mexico's exports (58.3 per cent in 1930) and supplied 66.8 per cent of all imports (68.2 in 1930). The United Kingdom took 11.9 per cent of the total 1931 exports; Germany, 8.3 per cent; and France, 5.4 per cent; their respective shares of the total imports were 7.2, 9.0, and 5.4 per cent.

**FINANCE.** According to provisional figures published in the January, 1932, *Boletín de Informaciones* of the Ministry of Finance, revenues during 1931 amounted to 224,620,006 pesos, or 39,134,566 pesos less than the budget estimate of 298,500,000 pesos. Expenditure estimates for 1931, as approved by Congress, totaled 299,490,480 pesos, but were further reduced by about 60,000,000 pesos through executive economies, according to a statement of the Minister of Finance. A deficit was thus indicated, although official returns were not available at the end of 1932. For 1932, revenues were estimated at 213,074,225 pesos and expenditure at 212,987,421 pesos; for 1933 the budget as presented to Congress calculated revenues at 215,050,000 pesos and expenditures at 215,014,754 pesos.

By the agreement of July, 1930, the principal of the direct foreign debt was fixed at \$267,493,250 and that of the Mexican National Railways at \$225,000,000. The internal debt was estimated by the Minister of Finance in 1931 at 600,000,000 pesos. In 1932, the moratorium on foreign debt payments was extended to Jan. 1, 1934. The peso, with a theoretical par value of \$0.4985, exchanged at an average of \$0.3549 in 1931 and \$0.4713 for the period July 30 to Dec. 31, 1930.

**COMMUNICATIONS.** The government-owned National Railways of Mexico operated 14,680 miles of line in 1931 and the various states operated 3439 miles. Highways extended 62,137 miles, of which some 380 miles were surfaced. A new highway between Mexico City and Laredo, Texas, was under construction in 1932 as part of an extensive road-building programme designed to

stimulate tourist traffic from the United States. Airlines linked the chief Mexican cities with the United States, and Central and South America. The Pan American Airways opened direct service between Panama and Mexico City on Apr. 14, 1932. On Oct. 22, 1932, the Central Mexican Airways Company inaugurated a tri-weekly passenger, mail, and express service between Mexico City and El Paso, Texas. Vera Cruz and Tampico are the chief ports. In 1930 a total of 20,316 vessels entered all Mexican ports and 20,869 vessels cleared.

**GOVERNMENT.** Under the Constitution of 1917, amended in 1929, executive power is vested in the President, elected by direct popular vote for four years and ineligible for reelection, and legislative power in a Congress of two houses—the House of Deputies, of 185 members, elected for two years by universal suffrage, and the Senate, of 58 members, composed of two members from each state, elected in the same manner. Congress sits from September 1 to December 31, and during the remainder of the year delegates its powers to a permanent committee consisting of 14 Senators and 15 Deputies appointed by the respective houses. President at the beginning of 1932, Pascual Ortiz Rubio, who assumed office Feb. 5, 1930 (for changes in 1932, see *History*). The Republic comprises 28 states, three territories, and the Federal District embracing Mexico City. The states have large powers of autonomy. The National Revolutionary party contained the group which had been in control of Mexico for over 10 years.

#### HISTORY

**THE STATE-CHURCH CONFLICT.** The revival of the conflict between the Mexican Federal government and the Church in 1932 had its origins in the events of 1931 (see 1931 YEAR BOOK). Federal authorities had refused to intervene when several of the states passed laws restricting the number of priests—in one case to one priest for each 100,000 persons. In December, 1931, the festivities at the shrine of the Virgin of Guadalupe, attended by thousands of pilgrims, aroused the National Revolutionary party to a new campaign against the Church. The Federal Congress then passed laws limiting the number of priests in the Federal District and the Territory of Lower California to one for every 50,000 inhabitants. A Presidential decree of Dec. 29, 1931, established non-sectarianism in Mexican public schools. In Mexico City the new legislation limited to 25 the number of priests and the number of churches in which services might be held. (There were about 200 churches in the capital city.) Numerous petitions for injunctions against the enforcement of this legislation were submitted to the district court of the city, but were rejected in January, 1932, on the ground that the legislation did not impair religious liberty.

Archbishop Francisco Orozco y Jimenez of Jalisco was exiled on January 25, following his arrest by government agents in Guadalajara on a charge of seditious activity. On January 31, Archbishop Pascual Diaz, acting upon instructions from Pope Pius XI, announced that the Church of Mexico would accept the new religious laws under protest. Peace negotiations were successfully completed and on February 17 the Papal Delegate, Archbishop Ruiz y Flores, advised Catholics to accept without criticism the

agreement, which had the sanction of the Pope. After being suspended for two months, services were resumed in some of the designated Mexico City churches on February 25.

The compromise proved of short duration. In May, the states of Michoacán, Mexico, and Orizaba adopted further restrictive legislation as a result of which most of the churches in these states were closed. Archbishop Ruiz y Flores was prevented from officiating in his own state of Michoacán. On July 9, the Mexican Supreme Court upheld the constitutionality of the law limiting the number of priests and churches within the Federal District.

The conflict entered a more acute phase on September 29, with the publication of the papal encyclical *Acerba Animi*, which charged the government with "persecution" and with action "contrary to the spirit in which the *modus vivendi* had been established" in 1929. The encyclical cited the imprisonment and expulsion of members of the clergy, the state laws restricting the number of priests, and the refusal of some states to recognize the authority of the Church in the nomination of priests for the government license, as provided by the 1929 accord. Finally, the encyclical urged Roman Catholics to comply formally with the religious laws but suggested continuing protests and efforts toward modification.

The encyclical was bitterly attacked by members of the government. "I am resolved," said President Rodriguez in a statement on October 2, "that if this vulgar and defiant attitude is continued, as outlined in the encyclical, the churches shall be converted into schools and factories for the benefit of the proletarian classes of Mexico." He declared the encyclical an open incitement to social upheaval. The following day, the Apostolic Delegate, Mgr. Ruiz y Flores, protested against the President's statement. He denied that the encyclical was an incitement to revolution or that the Pope could be properly called a "foreign power" "because it is through him that God and Jesus Christ rule over the world." The Delegate concluded with an appeal for conciliatory negotiations leading to "the reconstruction of the fatherland on the basis of peace and conscience."

The Federal Chamber of Deputies on the same day (October 3) voted to expel the Papal Delegate as a "pernicious foreigner." Although he was a native of Mexico, it was charged that his allegiance to the papacy, now a secular power, had annulled his citizenship. He was arrested by agents of the Interior Department on October 4 and sent by airplane to the United States. The presiding Archbishop of Mexico, Mgr. Pascual Diaz, was arrested also, but was later released on payment of a fine and compliance with the registration law. He immediately issued a pastoral letter cautioning Catholics to avoid any action that might be construed as resistance to the government. With this action, there followed a lull in the conflict which continued to the end of the year. The state, which over a period of 122 years had steadily deprived the Church of its prerogatives, appeared victorious in the latest phase of the century-old conflict.

**RESIGNATION OF ORTIZ RUBIO.** In some circles, the government's drastic measures against the Church was believed to have been motivated by a desire to solidify the National Revolutionary party behind the leadership of former President

Plutarco Elias Calles. This thesis received support from dissensions within the party, which reached serious proportions during 1931 (see 1931 YEAR BOOK). The 1931 crisis was solved by the return of General Calles to the Ministry of War, in place of the ambitious Gen. Joaquin Amaro. On Jan. 20, 1932, occurred another Cabinet reorganization, in which Calles retained the War portfolio. Gen. Juan José Rivas, formerly chief of the Presidential headquarters staff, succeeded Manuel M. Tellez as Minister of the Interior; Señor Tellez succeeded Genaro Estrada as Minister of Foreign Affairs; and Alberto Pani, Ambassador to Spain, resumed his former post as Minister of Finance in place of Luis Montes de Oca. The shakeup was attributed in some quarters to Calles' opposition to the Presidential ambitions of Luis Montes de Oca. Others attributed it to a dispute over anti-re-election laws and to dissensions over the government's religious policy. Later (July 30), General Calles turned over the Ministry of War to his friend and business associate, Gen. Abelardo L. Rodríguez, who was Minister of Industry, Commerce and Labor.

The primary elections held April 3 to choose candidates for Congressional and state offices and the final election on July 3 emphasized the factional disputes within the National Revolutionary party, which made a clean sweep of the contested positions. The agrarian and labor organizations were dissatisfied with Calles leadership of the party, and some of the state governments, dominated by anti-Calles elements, showed a growing disinclination to coöperate with President Ortiz Rubio, a Calles adherent.

In August the President became involved in a political feud with Gen. Vicente Estrada Cajigal, Governor of the state of Morelos and Chief of the Federal District. General Calles sided with Estrada Cajigal and Ortiz Rubio, realizing that he could retain the Presidency only through violence, presented his resignation on September 3. The newly assembled Congress on September 4 elected Gen. Abelardo Rodríguez to the Provisional Presidency out of four candidates nominated by the National Revolutionary party. The other nominees were Gen. Joaquin Amaro, Minister of Finance Pani, and Minister of Interior Juan José Rios. General Rodríguez was sworn in immediately to serve out the term expiring Nov. 30, 1934. On the same day Ortiz Rubio left for the United States, making his home at San Diego, Calif.

The new Cabinet appointed by Provisional President Rodríguez on September 5 contained only two new members, former President Emilio Portes Gil as Attorney General, and Dr. Gaston Melo as Minister of Public Health. The new President was reputed to be a strong personality, friendly to the United States, and favorably disposed toward American capital in Mexico. Like his predecessors, he took his orders from General Calles. On September 28, he announced his intention to press to a conclusion the Mexican agrarian programme and to take immediate steps toward the creation of national reserves of minerals, petroleum, and coal. On December 20, Foreign Minister Manuel Tellez resigned and was succeeded by Dr. José M. Puig Casauranc, the Mexican Ambassador to the United States. The Washington post was filed on December 29 by the appointment of Eduardo Suarez. On the same day Primo Villa Michel and Juan de Dios Bojor-

quez were appointed to the newly created cabinet posts of National Economics and Labor.

General Rodríguez had earned the hostility of labor by his policies as Minister of Labor and his policy of encouraging foreign investments was repugnant to the radical wing of his party. These elements found a leader in Gov. Adalberto Tejeda of the state of Vera Cruz, which had taken the lead among Mexican states in restricting clerical activities and appropriating private property. On October 5, Governor Tejeda advocated the ousting of foreign capital from Mexico, the nationalization of wealth, and the "proletarianization" of cultural endeavor. Shortly after (October 26), the Ruralists and Workers Syndicate in Vera Cruz inaugurated a Presidential boom in Colonel Tejeda's behalf. A few days later the Vera Cruz state legislature granted the Governor a leave of absence to undertake an important mission in Europe. Federal engineers engaged in parcelling out the lands in Vera Cruz found themselves increasingly obstructed by armed hands of agrarians believed to owe allegiance to Colonel Tejeda. By December 8 the possibility of trouble led President Rodríguez to announce that he would not tolerate further "anarchy" in the state of Vera Cruz and that trouble makers there would be energetically suppressed. Before the end of the year the Federal government sent more than 17,000 troops into the State and numerous bands of agrarians were disbanded.

NEW LEGISLATION. Numerous new laws, many of them of a decidedly nationalistic or radical character, were placed upon the national or state statute books during 1932. The most controversial of these measures were so-called expropriation laws enacted in the states of Vera Cruz, Hidalgo, and Michoacán. The Hidalgo law made private property liable to purchase "for public utility" upon payment of 3 per cent of its value with payment for the remaining 97 per cent spread over 20 years. It was first applied May 25, when the French-owned cement factory in Tula was expropriated and turned over to the workers. The Vera Cruz law was similar in context. The measures aroused a storm of opposition among business men and politicians throughout Mexico. On June 17, President Ortiz Rubio intervened with a statement that the laws in Hidalgo and Vera Cruz were unconstitutional and needed revision. The Governors, however, gave vague or evasive replies and when injunctions against application of the measures were obtained carried an appeal to the Mexican Supreme Court. On June 27 Finance Minister Pani attributed to these expropriation measures the decline in the exchange value of the peso to about half of normal.

Among other laws promulgated in 1932 were measures regulating the formation of agrarian communities, for which private lands not in cultivation for three years might be expropriated; providing for the formation of agricultural chambers of commerce; and authorizing the Secretariat of Communications and Public Works to regulate transportation and communication services of all descriptions. The Mexican civil code for the Federal District of Mexico City and the Territories, published in 1928, became effective Oct. 1, 1932. Consisting of 3044 articles, the code governed persons and corporations, domicile, the family, matrimony and divorce, property rights, contracts and obligations, etc.

A law effective Mar. 1, 1932, required that at least 90 per cent of the employees of industrial, financial, and commercial concerns in Mexico must be Mexican citizens. Other decrees promulgated in the capital discriminated in favor of Mexican-produced films and automobile parts. A liberal divorce law, effective in the state of Chihuahua in January, 1932, recognized mutual desire as sufficient ground for divorce in any case. A radical birth-control law became effective in the state of Vera Cruz Nov. 1, 1932.

In contrast to the general trend toward nationalistic legislation, the Mexican government was reported in the *New York Times* of Oct. 15, 1932, to be negotiating a \$10,000,000 tax loan from foreign oil companies operating in the country, in return for which the export tax on petroleum products was to be lifted. Of the \$10,000,000 loan, the Standard Oil Company of New Jersey, the Royal Dutch-Shell group, and the Standard Oil Company of California were to guarantee \$3,000,000 each, and the Consolidated Oil Corporation \$1,000,000. The advance was to be made to the Mexican government through the Chase National Bank and was to be amortized at about \$270,000 monthly through issuance of Mexican government certificates, which would be accepted by the government in payment of taxes by the oil companies.

**MONETARY AND BANKING REFORMS.** To check the decline in circulation of silver coins due to hoarding, a law was passed Mar. 9, 1932, making important changes in the law of July 25, 1931, under which the silver peso was established as the monetary unit. The Central Banking Commission, established in 1931, was dissolved and the function of regulating the national currency was restored to the Bank of Mexico. This government-controlled bank became the sole bank of issue, with powers of a central bank similar in many respects to the Federal Reserve Bank in the United States. The law provided for severe regulation of foreign banks in Mexico.

President Ortiz Rubio announced Jan. 11, 1932, that the Ministry of Finance and the International Committee of Bankers on Mexico had mutually agreed to an extension of the moratorium on Mexico's foreign debt to Jan. 1, 1934. The agreement was ratified by a special session of Congress on January 13. On June 29, the President promulgated another decree regulating general credit and banking operations. The act applied to foreign banks operating in Mexico the requirement, previously exacted of other foreign businesses, that they must submit themselves to the exclusive jurisdiction of Mexican courts in all business "effected within the national territory."

**FOREIGN RELATIONS.** Mexican foreign relations during 1932 were marked by the severance of diplomatic relations with Peru, an internal dispute over transfer of Clipperton Island (q.v.) to France, and the closing of the Mexican offices at the League of Nations, which Mexico entered in 1931. Mexico severed diplomatic relations with Peru May 14, after the Peruvian government had requested the recall of the Mexican minister in Lima, Juan B. Cabral, on the ground that he had "intervened in the internal politics (of Peru) and served plans of communistic elements to disturb the public order." Spain offered to mediate the dispute and on June 9 the two nations agreed to a resumption of diplomatic relations.

The cession of Clipperton Island, called for under the King of Italy's arbitral decision of January, 1931, necessitated alteration of the Mexican Constitution, which provided that national territory might not be ceded without such a step. Opponents of the cession seized upon this constitutional difficulty to postpone indefinitely the carrying out of the award. While the foreign relations committee of the Senate recommended approval of the award (Nov. 9, 1932), the Senate on November 14 postponed action on the committee's resolution indefinitely. It was indicated that, while Mexico had vigorously opposed the Monroe Doctrine, many Senators hoped the United States would invoke that doctrine to prevent France from taking possession of the island. However, Foreign Minister Tellez on November 15 urged the Senate to ratify the island's cession as a matter of national honor. The Senate finally ratified the cession on December 14. On December 16 the Senate adopted a resolution offering to buy the island from France.

The closing of Mexico's offices at Geneva, confirmed by Foreign Minister Tellez November 16, was an economy measure. The Foreign Minister indicated that this step did not necessarily imply Mexico's withdrawal from the League and that Mexico's affairs at Geneva might be handled through the Paris Legation. There were fewer irritations to Mexican-American relations than in the previous year. On January 8, President Ortiz Rubio rejected the offer of the Oklahoma Agricultural and Mechanical College to establish a scholarship in memory of the two Mexican students shot to death in Ardmore, Okla., in June, 1931, by two American deputy sheriffs. A bronze tablet to the memory of Ambassador Dwight Morrow was presented to the American Embassy in Mexico City by a group of Mr. Morrow's Mexican friends and dedicated on July 4, 1932. The U. S. State Department announced June 18 that the general and special claims conventions between the United States and Mexico, which expired in August, 1931, had been extended for two years. The extension was ratified by the Mexican Senate in October. On Dec. 19, 1932, the U. S. House of Representatives voted to pay \$30,000 to the Mexican government for the families of Emilio Cortez Rubio and Manuel Gomez, the two students killed in Oklahoma.

With the adjournment of the Italian-Mexican Claims Commission in October, 1932, only the claims of United States and Spanish nationals for damages suffered during the revolutionary period from 1910 to 1920 remained to be settled. The British, French, German, and Belgian claims were settled for a small fraction of the original demands. The Spanish claims against Mexico aggregated \$82,000,000, and those of American citizens more than \$900,000,000. The Chinese Minister to Mexico City on Feb. 20, 1932, protested against the wholesale deportation of Chinese from the state of Sonora.

Consult James Morton Callahan, *American Foreign Policy in Mexican Relations* (New York, 1932).

**MEYDUM.** See ARCHÆOLOGY.

**MIAMI UNIVERSITY.** A coeducational institution in Oxford, O., founded in 1809. The enrollment for the autumn of 1932 was 2222, distributed as follows: College of liberal arts, 771; school of education (four-year course), 671 (two-year course), 172; business administration, 460; fine arts, 102; graduate students, 46. The en-

rollment in two summer sessions was 841. The faculty numbered 166. The income from the State of Ohio, fees, gifts, and income on investments for 1931-32 was approximately \$1,300,000. There were 119,000 bound volumes in the library. President, Alfred H. Upham, Ph.D.

**MICHAELIS**, mi-kä-ä'lis, SOPHUS. A Danish author, died in Copenhagen Jan. 28, 1932. He was born in Odense May 14, 1865, and attended the University of Copenhagen. After traveling extensively he became a journalist. His earliest published works were his poems, mostly lyric verse which showed a French influence. Among these are: *Digte* (1888); *Solblomster* (1893); *Sirener* (1898); *Livets Fest* (1900); *Palmerne* (1904); *Digte* (1919); *Romersk foraar og andre digte* (1921); *Solblomster* (1926); and, with Ferreira d'Almeida, *Portugisiske og brasilianske Sonetter* (1927). His successful historical romance, *Åbelø* (1895), was followed by *Dodedansen* (1900); *Giovanna* (1901); *Den evige Sørn* (1912); *1812*, a romance of the Napoleonic wars (1912); *Hellener og Barbaren*, a novel of the Persian wars (1914); *Dommeren* (1921); and *Himmelskibet* (1921). Outstanding among his plays are: *Lægen* (1906); *Revolutionsbryllup* (1906), which furnished the libretto for the opera, *Der Revolutionshochzeit*, by Eugen d'Albert (q.v.); *St. Helena* (1911), and *Manden fra Elba* (1921), both based on Napoleon's downfall; and *Abailard og Héloise* (1926).

Michaelis edited *Kunst* during 1900-06 and was associate editor of *Danmarks Nationalhistorisk Literatur* during 1925-27. His translations of Flaubert's *Salammbô*, of *Aucassin et Nicolette*, and of *La Tentation de St. Antoine*, as well as of Goethe's *Faust* and the librettos of Wagner's *Parsifal* and Puccini's *Turandot*, were excellent. At the time of his death he was chairman of the Danish Authors' Union and president of the Danish Authors' Association. He was also a member of the consulting board of the Danish Ministry of Education and of the National Commission for International Intellectual Cooperation.

**MICHIGAN. POPULATION.** According to the Fifteenth Census, the population of the State on Apr. 1, 1930, was 4,842,325, as against 3,668,412 in 1920. Detroit, the chief city, had (1930) 1,568,662 inhabitants; Lansing, the capital, 78,397.

**AGRICULTURE.** The accompanying table shows the acreage, production, and value of the principal crops for 1932 and 1931:

Crop	Year	Acreage	Prod. Bu.	Value
Hay .....	1932	2,394,000	3,133,000*	\$17,190,000
	1931	2,433,000	2,580,000*	22,070,000
Corn ....	1932	1,463,000	43,279,000	13,518,000
	1931	1,407,000	40,944,000	15,149,000
Oats .....	1932	1,263,000	34,101,000	6,138,000
	1931	1,435,000	43,768,000	10,067,000
Wheat ....	1932	701,000	16,774,000	6,710,000
	1931	711,000	18,426,000	8,476,000
Potatoes ...	1932	260,000	29,900,000	7,774,000
	1931	250,000	23,750,000	7,362,000
Dry beans .	1932	479,000	4,254,000*	4,516,000
	1931	614,000	3,318,000*	5,670,000
Sugar beets .	1932	121,000	1,184,000*	(c)
	1931	58,000	581,000*	3,675,000
Barley ....	1932	328,000	6,560,000	1,968,000
	1931	278,000	7,228,000	2,819,000
Rye .....	1932	158,000	2,133,000	576,000
	1931	158,000	2,133,000	704,000

**MINERAL PRODUCTION.** The coal-and-iron group of industries, taken as a whole, maintained

its lead in the diversified mineral activity of the State, but suffered much curtailment in 1931. There were mined in the State but 393,000 tons (estimated) of coal in 1931, as against 661,113 in 1930; by value \$2,323,000 (1930). By-product ovens' production of coke diminished to 2,436,630 short tons (1931), from 2,603,819 (1930); in value, to \$11,632,284 (1931), from \$14,222,856 (1930). The quantity of iron ore shipped from mines declined to 5,555,376 long tons (1931), from 11,154,773 (1930); the value of ore shipped, to \$15,986,273 (1931), from \$31,515,996 (1930). The output of pig iron likewise was curtailed, to 519,643 long tons (1931), from 711,224 (1930), by quantity; and to \$8,694,439 (1931), from \$12,859,820 (1930), by value. The production of the cement industry also shrank; 7,168,720 barrels were shipped by the producers in 1931, as against 10,817,994 in 1930, the value of the shipments declined to \$6,984,725 (1931), from \$14,897,439 (1930). There were mined in 1931, 105,222,177 pounds of copper, as against 142,985,522 for 1930, for which year the value of the copper produced was \$22,000,000, approximately; the lower copper prices of 1931 brought the value of that year's product to about half that for 1930. Producers of salt sold or used 2,053,980 short tons in 1931, as against 2,558,290 in 1930; by value \$5,760,001 for 1931 and \$7,884,072 for 1930. Petroleum output fell slightly to 3,789,000 barrels (1931), from 3,911,000 (1930) and more considerably in value to \$2,840,000 (1931) from \$5,160,000 (1930). Clay products attained the value of \$4,891,647 for 1930 and of \$6,217,018 for 1929; stone, of \$6,816,972 for 1930 and \$8,454,702 for 1929. The production of gypsum in 1930 was 519,225 short tons, in value \$3,755,631. The total value of the State's mineral product, duplications eliminated, was \$111,405,530 for 1930; for 1929, \$151,975,563.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1932, was 8020.33. During the year previous, about 54 miles of line were abandoned and about 2 put in operation.

**EDUCATION.** Figures bearing on public-school education throughout the State were not yet obtainable to cover the academic year 1931-1932. For the year 1930-1931, the number of persons of school age in the State was reckoned as 1,373,585. There were enrolled in the public schools 986,980 pupils. Of these, 832,523 were in common schools or elementary grades; in high schools, 187,341. The year's expenditures for public-school education totaled \$98,859,130, which was about \$1,000,000 in excess of the total that had been reported for the year before. The salaries of teachers averaged, by the month, \$174.49.

**CHARITIES AND CORRECTIONS.** The State Welfare Department, as operating in 1932, comprised a group of agencies, each exercising duties of central control and administration, over its corresponding group of State institutions for the care or custody of persons. The Institute Commission had charge of the State schools for special handicapped classes. The Corrections Commission, of juvenile reform schools. The Hospital Commission, of State hospitals and allied institutions. The Prison Commission, of the State prisons and reformatory. There were also a State Advisory Commission, a Welfare Commission (doing work not of institutional admin-

istration) and a Probation Commission. All were composed of appointees of the Governor, serving at his pleasure; save the Hospital Commission, which had seven members, each was composed of five members. The department had a single executive head, W. S. Carpenter, Director. In October a new receiving hospital, with 204 beds, was opened at Ionia; another, with 112 beds, at Wahjamega; a 200-bed hospital was under construction at Newberry.

The State maintained 17 institutions, which had, in November, 24,847 inmates or pupils. These, with their respective totals, were: Kalamazoo (2717), Pontiac (1755), Traverse City (2289), Newberry (1156), Ionia (715), and Ypsilanti (1248) State Hospitals, for mental cases; Farm Colony for Epileptics (931); Michigan Home and Training School (3489); State Prison, at Jackson (5743); Michigan Reformatory, Ionia (1794); Branch Prison, at Marquette (899); Boys' Vocational School (649); Girls' Training School (305); State Public School (449); School for the Deaf (477); School for the Blind (176); Employment Institute for the Blind (55).

The department handled funds obtained from the Reconstruction Finance Corporation, for the relief of the destitute.

**LEGISLATION.** The State Legislature was convened in special session on March 29 and adjourned on May 6. Its main work was to carry out measures of economy recommended by Governor Bruckner; his recommendation that a measure be passed to submit to the voters a proposal for an income tax was not followed. Among the measures of the session were those to permit the distribution of \$10,000,000 of highway funds for the relief of certain debts; to permit reduction of local tax budgets; to diminish the levy of the State tax for the ensuing fiscal year from an estimated \$29,000,000 to the neighborhood of \$23,500,000; amending the banking laws with a view to bringing about the earlier payment of receivership dividends; revising downward the State's budget for the ensuing fiscal year, chiefly by cuts, averaging about 15 per cent, in salaries. A committee was created, to study the proposal to guarantee bank deposits with a backing of State credit. A commission was created, to report to the next Legislature on plans for a civil-service system. As an effort to succor distressed mortgagors, there was passed a measure of disputed constitutionality extending by six months the period that must elapse before final judgment could be taken in foreclosures of land contracts, provided half of the due amounts were paid and taxes and insurance were not allowed by the debtor to go unmet. Banks were freed for one year, by resolution, of the requirement to provide surety bonds against public deposits, except those of the State. The operation of the Covert road law was suspended for five years. The proposed Federal Constitutional amendment to alter the dates of inaugurations and of initial sessions of Congress was ratified.

**POLITICAL AND OTHER EVENTS.** The effect of adverse times in the State was evidenced by the action of the State Board of Equalization, which on August 1 recommended reductions in the assessed valuations of property throughout Michigan by the aggregate of more than \$1,000,000,000. The total valuation at which the board arrived was \$6,819,420,207, as against previous valuation of \$7,853,514,000 for 1931 and \$8,564,

598,000 for 1929. Unemployment was severe in Detroit and other centres of the automobile-manufacturing industry. The city government of Detroit was embarrassed by extensive non-payment of taxes during the year. It was unable to meet on time in March and April the payments on the salaries of its employees. Repeated difficulty, moreover, was experienced in renewing the city's outstanding notes, which it could not meet as they matured. Apart from recent tax delinquencies, the city had itself bid in tax title, prior to the beginning of March, to property on which taxes of the total of some \$14,600,000 were more than 18 months in arrears. But though the theoretical value of such property was in the neighborhood of \$500,000,000 the city was unable to realize the amounts due it thereon by tax sales, there being too few purchasers. Mayor Murphy was instrumental in putting through the city council ordinances whereby municipal salaries were cut by 50 per cent for May and June and later were put on a permanently lower basis, by 14.5 per cent, than before the cuts, through the adoption of a 5-day working week with pay consequently less. The current year's city budget was cut in April to \$67,000,000, from \$76,000,000, largely by the aid of salary reductions.

A mob estimated to number some 3000 men beset the Ford Motor Company's plant in Dearborn on March 7, having marched out from Detroit with the intention of demanding work. They fought with the Dearborn police and the private police of the Ford plant and were repulsed only after four of their number had been killed by shots and a number of persons, including police had been wounded. The minimum wage rate at the Ford works was reduced to \$4 a day, on September 29, from \$5, with corresponding reduction in the higher rates.

**ELECTIONS.** The popular vote of November 8 upset the State's partisan traditions and favored the Democratic National ticket by more than 7 to 6. The vote cast for the Presidential candidates was reported as: Roosevelt (Dem.), 871,700; Hoover (Rep.), 739,894. A prevaingly Republican delegation was nevertheless elected to the House of Representatives of the Seventy-third Congress. William A. Comstock, Democrat, was elected Governor, defeating Gov. Wilber M. Bruckner, Republican, who ran for reelection. Democratic majorities were reported to have been elected to both houses of the State Legislature. A proposed amendment to the State Constitution, repealing the existing amendment that required prohibition, and permitting the Legislature to create a commission for the control of traffic in liquor, was adopted by a popular vote in the proportion of nearly 3 to 1. Another proposed amendment, to limit the rate of taxation on property to not more than \$15 on the \$1000, was approved. Proposals were rejected to allow an exemption of taxation on homesteads, up to \$3000, to prohibit executive clemency for murderers, and to impose a tax on oleomargarine. Detroit's voters rejected a proposed issue of \$2,000,000 of bonds with which the city was to have been put into the business of purveying natural gas.

**OFFICERS.** The chief officers of the State, serving in 1932, were: Governor, Wilber M. Bruckner; Lieutenant-Governor, Luren D. Dickinson; Secretary of State, Frank D. Fitzgerald; State Treasurer, Howard C. Lawrence; Auditor-

General, Oramel B. Fuller; Attorney-General, Paul W. Voorhies; Superintendent of Public Instruction, Webster H. Pearce; Highway Commissioner, Grover C. Dillman.

**Supreme Court:** Chief Justice, Henry M. Butzel; Associate Justices, George M. Clark; John S. McDonald; William W. Potter; Nelson Sharpe; Walter H. North; Louis H. Fead; Howard Wiest.

**MICHIGAN, UNIVERSITY OF.** A State institution for the higher education of men and women in Ann Arbor, founded in 1817. In 1931-32 the enrollment was 14,826. The registration in the 1932 summer session was 3757. The teaching staff was composed of 874 members, including 59 of the summer session staff not at the university during the regular year. For current expenses the State appropriated \$4,920,000, while approximately \$4,125,000 was derived from other sources.

During 1931-32 the construction of Hutchins Hall, the new building for the law school, was carried forward; the building was to be occupied in 1933. A building to house the editorial offices and printing plant of the student publications was erected at a cost of \$180,000 and was opened for use in June, 1932. Gifts valued at approximately \$385,000 were received during the year. The university libraries contained 839,338 bound volumes. President, Alexander Grant Ruthven, Ph.D.

**MICROBIOLOGY.** See SOILS.

**MICRO RAY.** See RADIO.

**MIDDLEBURY COLLEGE.** A coeducational, nonsectarian college in Middlebury, Vt., founded in 1800. For the autumn term of 1932, 638 students were registered as undergraduates and 23 as graduates; of these 346 were men and 202 women. The enrollment in the special summer schools of French, Spanish, German, and English, conducted by the college, amounted to 507. There were 74 members on the faculty, including administrative officers and those on leave of absence. The productive funds of the college in 1931-32 amounted to \$4,080,254, and the income for the year was \$400,447. Gifts to the college amounted to \$27,546. The library contained 60,000 volumes. President, Paul Dwight Moody, D.D.

**MILITARY PROGRESS.** GENERAL. The past year has seen many military developments in widely scattered portions of the globe. The world at large may be at peace, but rumblings of war are heard on many fronts. In regard to Disarmament the situation as the year closes is that Germany will participate in the Conferences, France has submitted a plan whereby all regular and conscripted troops will be replaced by national militia, a plan apparently having the support of Germany, and a disarmament plan is presumably reached by Germany and France. Further, Great Britain and the United States are now ready to agree to limit private manufacture of arms.

Specific military progress has been lessened by depleted appropriations. The statistics of military strength of the various countries have undergone but little change since those reported in

the YEAR BOOK for 1931, which may be relied on for this year.

In matters Asiatic much has been written and said upon the Manchurian situation. The old Chinese Province has become the State of Manchoukuo, dependency of Japan. Despite the Nine Power Treaty and the Kellogg-Briand Pact, Japan has formally recognized Manchoukuo.

On September 15, 1932, with her special envoy General Muto and the flourish of a tiny brush instead of the usual pen, she formally and officially recognized the State of Manchoukuo, the result of her successful military campaign in Manchuria last fall. According to the Associated Press from Chanchun the scene resembled a war conference rather than a peace conference, with Japanese military officials packing the room—generals, colonels, and majors resplendent in red, yellow, and gold uniforms.

Paragraph 2 of the Treaty affirmed is of military interest, as the contracting powers "agree to cooperate in the maintenance of their national security, it being understood that such Japanese forces as may be necessary for this purpose shall be stationed in Manchoukuo."

Soviet Russia acknowledged Manchoukuo's existence by recognizing the right of the new State to succeed to China's rights in the Chinese Eastern Railway, and by granting both the Japanese and Manchoukuo armies facilities of communication on the Russian Lines in Manchuria.

France has opposed any proposal for either diplomatic or economic sanctions against Japan over the question.

Japan's position now with the League of Nations is fraught with difficulties. She asked for a fact-finding commission, not one with power "to interfere with military arrangements" of either China or Japan. How she will act on the Lytton Report and what the League of Nations will do in the matter is of vital interest to the United States, declaring as she has that she will not recognize changes occurring in Manchuria in violation of the treaties referred to above.

The Lytton Report is one of the ablest documents ever issued on a difficult international situation. It does not evade the responsibility of assessing Japan's action in invading Manchuria as overstepping the boundaries of legitimate self-defense in her military action. It outlines a possible solution; a solution to be achieved not by international dictation but by direct negotiations, with international advice and under international umpires. Briefly, there must not be railway competition between China and Japan but rather cooperation and consolidation; an autonomous Manchurian government under China, supported by native gendarmerie, all other troops being withdrawn; the rights of the national government over these provinces as to taxes, customs, and foreign relations to be specified, with Japanese advisers; the maintenance of the open door; China's sovereignty to be honored in the creation of this government; a trade treaty between Japan and China dealing with boycotts; Japan to cooperate with other nations in maintaining a stable central government in China.

What is to be done about it now? Japan vigorously rejects it. Apparently the gestures of the League have come too late. The special League of Nations Assembly met to consider the Lytton Report and subscribed to the essence of the Lytton Report—that China and Japan should be brought together for the purpose of working out

a formula recognizing Japan's present claims and China's ultimate rights. But rather than take definite action it referred the controversy to a Conciliation Committee of nineteen nations. The Lytton Report is neither accepted nor rejected. A very dangerous situation has been avoided, temporarily at least, for had the resolution of the minor powers been adopted, and the League endorsed the findings of the Commission and pronounced Japan guilty of an unnecessary resort to arms, Article XVI of the Covenant would automatically come into force and the major European Powers would have had to show reason why they should not deem Japan "to have committed an act of war" against all of them. In that event boycott or the application of "sanctions" would have had to be the next step, and such application of economic "sanctions" upon Japan would have meant war.

The League of Nations Committee of Nineteen adjourned until early in 1933 without making the minimum of progress expected when it officially began its deliberations. The statement of the President, that emphasized the gravity of the situation to all nations and made it clear that the Committee of Nineteen is still firm for the substance of the resolution, warned that "conciliation may become impracticable" unless Japan proves more conciliatory. The position of China and Japan is really irreconcilable. Japan's programme is apparently to use Manchuria as a base economically and as a first line of defense militarily. Fighting steadily through the year for her objectives of raw materials and foodstuffs so essential in wartime, such as wheat, coal, iron, soya beans, rice, and wool, she may be said to have arrived.

According to George E. Sokolsky, special New York *Times* correspondent in the Far East, the first line of defense against Russia is the line running north and south through a point west of Taitsihar, a movement forward some 350 miles through the old theoretical line through Changchau. The Japanese refer to it economically as their "life line," strategically as their "first line of defense." In doing this Japan has declared a Japanese Monroe Doctrine, making Manchuria her protectorate.

CHINA. The New York *Times* special correspondent at Peiping under date of Sept. 19, 1932, stated that with the opening of the academic year in North China officers had been detailed to various educational institutions to drill students. Orders provided for immediately beginning the military training of students in accordance with a plan outlined by the Ministry in coöperation with military authorities in Nanking.

The Lytton Report in a clarifying discussion of conditions in China saw, among other things, "Communism in China . . . has become an actual rival of the National government. It possesses its own laws, army, and government, and its own territorial sphere of action. . . . Communist zones of influence cover a large part of China south of the Yangtze, part of the Provinces of Hupeh, Anhwei, and Kiangsi north of that river, with Shanghai the centre of communist propaganda. When a district has been occupied by a Red Army, efforts are made to sovietize it if the occupation appears to be more or less permanent. Any opposition from the population is suppressed by terrorism—a communist government is established."

JAPAN. The peace time strength of the Japan-

ese Army is about 230,000. Under date of Dec. 28, 1932, the special correspondent to the New York *Times* stated that the Japanese Army's project for modernizing and reconditioning mechanical equipment and advancing technical training was aimed, according to officers in Tokyo, to bring the standard up to that of the Soviet Army and of other nations, the new plan being to provide a smaller but more modernly equipped army at the lowest possible cost. The previous Ministry drafted the plan with the idea of gradual accomplishment, but events in Manchuria, and Japan's responsibilities there, have compelled the Japanese to expedite it. Increasing the number of her troops in Manchuria to 65,000 in two years will be effected by reducing the home terms of the divisions now serving until the full peace time strength is in Manchuria. According to the War Office spokesman: "Although the Soviet attitude towards Japan at present is friendly, it is impossible to forecast the future and we must bring our forces in Manchuria to a state of efficiency, modernization, and mechanization equal to that of the Red Army."

RUSSIA. Under date of Feb. 15, 1932, the military organ *Red Star* placed the man power of the Red Army of Soviet Russia of 1931 at 562,000. This organ gave no other details of Soviet strength and mentioned nothing about reserves. Its only comparison of neighboring states was that these had increased their strength three and one-half times since 1925 while that of Russia had not been changed.

An interesting item concerns the issuance of orders to the Red Army soldiers, compelling them to listen to radio broadcasts for one hour daily at specified periods; these broadcasts presumably relate to governmental and army affairs. It is apparent that Soviet Russia does not miss many features to make its army effective. (New York *Sun*, Oct. 15, 1932.)

MEXICO. According to American War Department sources the maximum Mexican Army on October 1, 1931, consisted of 62,857 actives and 29,779 reserves. Late in August, 1932, there were unofficial announcements of plans that the Mexican Government would reduce this number by 3000 officers and men—a reduction of 5 per cent in effectives and a saving of 3,000,000 pesos (\$865,000). On September 30, the Associated Press placed Mexico's standing Army at 295 generals, 8732 lesser officers, and 44,286 enlisted men as reported by the War Department. The total strength is 53,018 men, or one general for each 133 men.

SOUTH AMERICA. From the Far East we turn to South America where much fighting, regular and irregular, has been going on most of the year.

In Brazil civil war has finally been ended. During July and August more than 120,000 men were engaged and brought to a deadlock. Since that time not much progress toward stamping it out has been made. Government censorship has kept the world in ignorance of what is undoubtedly the most important military struggle in the history of South America. The struggle for the control of the railroads has been the main effort; with practically all of Brazil involved. The Federal Army invaded São Paulo from the state of Paraná, seized control of the Sorocabana railroad, forcing the rebels into a defensive position from which they were finally dislodged and surrendered early in October. It was civil war in all its meaning—generally, between the state of São

Paulo and the Federal Government—and brought about by a revolutionary government. See BRAZIL.

Paraguay and Bolivia are still at war over Chaco. Each country lays claim to the triangular area of swamps, plains, forests, and streams lying between the Paraguay and the Pilcomayo Rivers. Bolivia demands a part of the west shore of the Paraguay which would give her an outlet to the Atlantic. The two nations face each other along some fifty wooded forts, and intense fighting has been going on since July, 1932.

The conflict between Bolivia and Paraguay may be briefly summarized as follows: the first period resulted in the successful offensive of the Bolivians against the Paraguayans and the capture of several of their forts; the second resulted in the Paraguayan counter-offensive against Fort Boqueron and the loss of a succession of forts extending southward to Fort Saavedra; the third and present phase is that of Bolivia's rally against the effort of the Paraguayans to drive the Bolivians west of the sixty-first meridian.

The Bolivians' new drive in the Boqueron sector, with the object of retaking that fort, is under the impetus of Gen. Hans Kundt and so far has forced Paraguay to withdraw troops from Fort Saavedra and hurry them northward. The southern base of the Bolivians is at Fort Munoz. Troops had to be taken from there to reinforce the movement undertaken toward Boqueron. Bolivia seemed determined to continue her activities, and despite the rainy season pressed her advantages.

Under date of November 24, Asunción reported that Bolivia called up ten classes of reserves for the preparation of a new army of 30,000 men. At Fort Acre the Bolivian artillery apparently dominated the situation at Fort Saavedra but the terrain makes advances impossible as the Paraguayans fire upon the fort under cover of heavy growths of reeds and bullrushes some distance away. Operations were, therefore, confined to long range firing.

Under date of December 13 a General Staff communiqué announced that "in a counter attack at Fort Saavedra light tanks were used by the Bolivians successfully." On December 16 a Bolivian tri-motored plane, escorted by two scout planes, flew over the Paraguayan lines in the Gran Chaco between Saavedra and Platanillos, and returning dropped a few bombs without particular damage.

Under date of December 17, 1932, the Paraguayan Foreign Office rejected the proposal of the neutral commission to demilitarize the Gran Chaco, declaring the proposal unjust and openly favorable to Bolivia. This gave jurisdiction to Bolivia over the zone President Hayes awarded more than fifty years ago.

According to Clarence K. Streit (New York Times, Dec. 17, 1932), history's first official attempt to mobilize governmental opinion around the world by an appeal broadcast by radio against the continuance of war between two nations was made at Geneva that day. The appeal was made at the direction of the League of Nations Council over the League's own short wave station as part of the Council's efforts to induce Bolivia and Paraguay to accept the peace convention proposed to them by the commission of neutrals at Washington. The item is interesting as showing diplomatic possibilities at a cheapened cost. When the Chaco dispute first came before the League in 1928, the Council sought to accom-

plish the same result by a circular telegram sent to each member of the League, which cost \$26,000. The same publicity was accomplished by radio broadcast on Dec. 17, 1932, over a vaster field with much more subject matter at an estimated expense to the League of less than \$3. The broadcast consisted of a stenographic transcript of the Council's meeting, including the whole of the proposed convention.

Under date of Dec. 27, 1932, the Paraguayans began a retreat from Fort Saavedra, Aguatica, and Murgio, leaving Bolivia victorious in the Pilcomayo sector. This was after six weeks of rather intensive fighting during which they endeavored to push the Bolivians back to the sixty-first meridian.

Paraguay concentrated her forces at Forts Boqueron and Acre, toward which Bolivia was driving in a new offensive under Gen. Hans Kundt. These forces were to be reinforced by 20,000 fresh troops as soon as they could be transported to the Chaco by the Bolivian-Platanillos road. See map in article BOLIVIA.

The construction of this road has enabled Bolivia to conduct her offensive during the rainy season, to the apparent distress of the Paraguayans. With the additional reinforcements Bolivia will have about 60,000 troops. The offensive planned is against the railhead of the Chaco's longest railroad, running to Concepción, headquarters of the Paraguayan General Staff. The Bolivians are on higher and drier ground where transport difficulties will be lessened and they can assume an offensive operation after its long defensive one. (New York Times, December 27.)

Peru and Colombia are quarreling over the seizure by Peruvian civilians of the trading town of Leticia in the jungles of the upper Amazon. This frontier fighting getting out of control, as it has, of the two governments concerned, threatens the peace of these two countries. The Leticians refuse to recognize Colombia's sovereignty.

Under the Brazilian-Colombian treaty of 1907 Colombia is entitled to send warships up the Amazon. It is reported that a squadron of four gunboats is preparing to sail up the Amazon River to Leticia, provided that the Brazilian Government does not object. Also that two transports carrying troops are expected at Para soon. (New York Times, Dec. 1, 1932.)

Chile. Two years ago the Chilean unified Air Force had nearly 200 planes and was termed by experts the largest and strongest south of the United States. Lack of funds for repairs and new machines and other economies, the gradual rise of new anti-armament sentiment in many places, and internal troubles have done much to reduce this strength to probably not over 80 active fighting branch planes. The entire force is to be reorganized by a special commission of army, navy, and air officials.

Argentina has found it necessary to send three regiments to her northern boundary to guarantee her neutrality between Bolivia and Paraguay. Bolivia has a detachment of infantry to guard her frontier touching Peru.

All of this warfare is going on without war having been declared anywhere in South America. In these days declarations of war seem quite unnecessary.

EUROPE. We now turn to Western Europe to consider Germany and her demand for equality of armaments. Coming as it does now—with the Disarmament Conference adjourned, having ar-

rived nowhere—it seems impertinent again to discuss the actual strength of European armies.

At Geneva the following data showing the armaments of the various countries for war on land were recently published:

ARMAMENT OF NATIONS

	War strength	Machine guns	Guns	Tanks	Air- craft
France . . . . .	4,500,000	62,000	5,200	3,500	2,800
Russia . . . . .	6,500,000	16,000	8,000	350	1,700
Italy . . . . .	3,500,000	16,000	3,000	150	1,015
Poland . . . . .	3,200,000	38,000	5,436	350	800
Great Britain . . . . .	2,000,000	14,200	1,500	580	2,400
Japan . . . . .	1,800,000	21,000	1,930	40	1,000
United States . . . . .	1,420,000	85,000	4,010	2,100	3,100
Yugoslavia . . . . .	1,150,000	8,750	2,000	50	450
Belgium . . . . .	600,000	4,073	851	50	300
Czechoslovakia . . . . .	1,800,000	21,000	2,100	100	600
Germany . . . . .	100,000	1,926*	288	...	...

\* Light.

An examination of these data is not entirely illuminating because of the misconception of many people of what are the requirements of a modern army.

Two factors, according to Count Eberhard Westrap (New York *Times*, Sept. 11, 1932), influence the organization of modern armies, and a study of the military progress of the countries to be discussed reveals that the first requirement is a ready made army that can be brought into action within a few days, or even in a shorter time, and which carries the war into the enemy's country. The second factor is the result of the mechanization and motorization of the armies of today. The technical service and the application of machines on the battlefield require better and more intensive training for each individual. Longer active service prohibits training of a corresponding greater amount of recruits. The longer the active service the better the training, the shorter the active service, the greater the quantity of recruits. The longer service of professionals is to satisfy the demands of quality, while the shorter training of many recruits is to meet the requirements of quantity.

The organization of the French Army may be considered as the best example of quality against quantity. It consists of the field army, which is organized for use into two waves. In the first wave are 26 infantry divisions, of which 8 are white, 5 colored, and 5 cavalry divisions, which can be concentrated on the border after one or two days. Six of these divisions are quartered along the German frontier and in peace times almost at war strength.

In the second wave are 20 reserve divisions to be established within 6 or 8 days.

Within about three weeks' time further mobilization is expected to produce 20 more divisions, so that within this length of time about 70 infantry and 5 cavalry divisions, or 4,000,000 white and 750,000 colored men, with auxiliary troops and all necessary war equipment, would be available.

To produce this result there is one year's active service of the conscripts. Compulsory service in France lasts 28 years, every year 250,000 men being trained. The skeleton for the new units are taken from the 230,000 professional soldiers; that is, those serving longer than one year in the active army.

Now, in thinking of France one must also visualize her military alliance with Belgium, Yugoslavia, Poland, Rumania, and Czechoslovakia, with an aggregate peace strength of 639,000 and

trained reserves of 1,195,000. The aggregate then of peace time availables of about 1,400,000 trained men can be increased to a war strength of at least 10,000,000 men for France and her Allies.

Contrasting with this, Italy trains 180,000 men annually for 18 months, so that her standing army in summer time is greater than during the winter months. The number of her professional soldiers is limited to 15,000 officers and 14,000 non-commissioned officers. Her reserves consist of 200,000 officers and 3,500,000 men. Putting the limit for the compromise between quality and quantity high, Italy trains all men more or less alike.

The German defensive organization is one of a purely professional system. As is well known, only 100,000 officers and men are permitted under the Versailles Treaty. The training of the youth, reservists and their control, reserve stock of material, heavy artillery, anti-aircraft, tanks and armored cars, military airplanes, fortifications, special training of the general staff, preparation for gas war and mobilization, railroad construction in certain districts—offensive and defensive means—are prohibited thereunder.

Enlisted men have to serve 12 years, officers 25 years, and only 5 per cent may be released every year beyond the regular quota.

Germany trains every year not more than 10,000 men, who really are not reservists because dismissed from active service on account of disability or after 12 years' service, either being unable for military service or at least 32 years old. The peace and war strength of the German Army is 7 Infantry and 3 Cavalry divisions.

France and Poland pay their soldiers 1 cent a day, Germany 42 cents per day at present. According to our informant this is the thing Germany wants changed.

If allowed to have equality and it were possible to train 250,000 men per year, a simple calculation shows that it would take 18 years to reach an equality with France; that is, to overcome the 10,000,000 recruits already trained.

The statement of Baron von Neurath, German Foreign Minister, when making public the text of the German Memorandum to France upon Armament is as follows: "It is clear to-day that Germany cannot participate in further deliberations of the Disarmament Conference until the question of German equality has found fundamental clarification. . . . Our equality and not our armament is the point which is at stake. . . . What we demand by 'equality' is nothing else than certain modifications in our present régime of armaments—modifications which bear in mind the necessity of adapting the rigid system imposed on our country in its special political, social, and economic conditions."

Notwithstanding, Germany's demand is for equality of armament with France, nothing more. They are certain they must be freed from the Versailles inequalities to cover their self-respect. The French are equally convinced that the Germans want an armed force principally to further their militaristic designs. In connection with this it is interesting to recall that this equality plea is not unlike the plan of Marshal Foch and a committee of Allied Generals which would have given Germany an army of 200,000 men and nearly twice the supply of arms and war material finally permitted under the Versailles Treaty. Had that plan been adopted the German Army to-day would have had a reserve force of

2,500,000 trained men who would have served at least one year with the active units of the Reichswehr. Marshal Foch was the chairman of this committee composed of Gen. Tasker H. Bliss, Gen. Sir Henry Wilson, General Désouguettes, and General Cavallero of Italy.

The plan was based upon an estimate of the "forces necessary to insure order and police the interior of her (Germany's) territory." The terms recommended had the unanimous approval of the military experts. It did not abolish conscription in Germany. The civilian members of the Supreme War Council, however, did not approve. The writer believes that the Disarmament crisis confronting the world to-day is the direct result of the decision reached by this Supreme War Council in 1919. Also that Germany has some justification now to assert she has been deprived of the right to prepare for her own defense.

The French view of the German situation is well set forth in *Foreign Affairs* for January, 1932, in an article by General Réquin. According to this authority Germany has restored the essential foundations of her pre-war strength and continues to increase that strength for aggressive warfare. The Reichswehr has a more centralized command than had the Imperial Army. The General Staff has been restored, ready to serve as the framework about which will group "the nation in arms." The Reichswehr has been given new armament in recent years, i.e. the new rifle "Einheitsgewehr," a new light machine gun, a new mine thrower, new cannon, new howitzer, and the like. The trained reserves at the present time total about 8,000,000 young men. With these must be counted 1,000,000 trained ex-combatants, aged less than 32 years. Under cover of commercial aviation, the nuclei of military and naval aviation have been established. Forbidden arms are being studied and sometimes tried out or actually put into service. Military mobilization, in the full technical sense of the term, and industrial mobilization, both have been fully prepared.

As to effectives at the present time the masculine population of Germany which could be mobilized is about 11,000,000 men between the ages of 17 and 45 years of age. Of this total about four and one-half millions have received complete military training, as follows: 1,000,000 trained men under 32; 1,700,000 trained men 33-38 years of age; 1,800,000 trained men 38-45 years of age. The organization called the *Kuratorium*, attached to the Ministry of the Interior, is under the chairmanship of General von Stulpnagel, former commander of the Fourth Division. It has considerable financial resources, and about twenty camps distributed over the entire country will be made available for the Wehrsport training of the German youth. The following associations, according to the German press of September 21, joined the Kuratorium: Reichsbanner 220,000 men; Stahlhelm 100,000 men; Jungdeutscher Orden 100,000; Wehrwolf 440,000. The National-Socialist shock-troops joined on Oct. 1, 1932, bringing an additional 200,000 to 400,000 young men.

Does all this "sport" activity dissipate France's beliefs and suspicions? The writer takes it that it does not.

Germany has paid since the war an indemnity of over one thousand million pounds sterling, but she has borrowed at the same time two thou-

sand million pounds sterling with which to pay this indemnity and equip her factories. Lausanne freed her of all those reparations. Now her demand is that she shall be allowed to rearm. "Do not let us delude ourselves," says Winston Churchill, speaking in the House of Commons recently. "All those bands of splendid Teutonic youths marching to and fro in Germany with the light of desire to suffer for their Fatherland in their eyes are not looking for status. They are looking for weapons, and when they have the weapons, believe me, they will ask for the restoration of their lost territories and lost colonies, and when that demand is made it cannot fail to shake, possibly to their foundations, every one of those countries I have mentioned and some countries that I have not mentioned." (*New York Times*, Dec. 11, 1932.)

The Five-Power Declaration signed at Geneva on December 11 by the disarmament negotiators, pledging simultaneous equality of status to Germany and security to France, is surely a noteworthy success for Germany. The Versailles Treaty is being broached by the diplomacy of Germany, for twice this year she has succeeded in winning over to her side the negotiators; first, last June in the virtual cancellation of reparations in the Lausanne Conference, and now the theoretical recognition of Germany's right to equality of armaments. This revocation of part 5 of the Versailles Treaty, which rigidly limited the extent and nature of her military forces, has for years been the objective of German policy. Germany, Great Britain, France, and the United States signed the declaration.

In France, the creation of a new Technical Service is due to the belief that delicate mechanical devices make specialization necessary. It will be composed of a directorate of armament manufacturers and a corps of military technicians under the Ministry of National Defense. This service will do away with Arms Officers and takes on military technicians who have served at least eight years previously in the forces.

The slogan: "The Army as a public school," now brought about by the suggestion of Colonel Lebrun, in command of a recently recruited regiment at Beauvais, France, that France will possess another argument for maintaining her present military status irrespective of international guarantees for safety, seems to be seriously considered by the Ministry of War.

It was recently discovered in this regiment that of 400 conscripts enlisted 75 were unable to read or write, while 25 did not know the alphabet. There are infinite possibilities in the idea of creating classes and having the literates teach the illiterates. The Colonel believes that his task is to turn out good soldiers; a man who is an illiterate cannot fulfill this description beyond his mere fighting capacity. He must know how to handle words as well as arms.

Will such instruction help to vote military credits as well as to present a strong ethical argument against further disarmament?

GREAT BRITAIN. Aerial disarmament, which is held to be a very different thing from either military or naval disarmament, particularly for Great Britain, is a matter that is now agitating aviation experts. According to the *Morning Post's* aeronautical correspondent, plans for British aerial disarmament, if they are to receive the support of the British people, must be formulated with special reference to the work which

the air arm is now being called upon to perform in distant parts of the British Empire. The British air forces are used in a manner which differs radically from that of other countries, the essential feature being the emphasis placed upon mobility. Quoting: "Stations have been established in different parts of the Empire and squadrons have been allotted to them with the object of providing a strategic distribution of aircraft, enabling men and machines to be moved any place where action may be needed. Generally speaking, the aircraft, upon which the work of policing overseas stations falls, are those known as the bomber class. Their chief use is in carrying men and supplies, in reconnaissance, patrol, ambulance work, communications, and the dropping of messages."

The vast globe-spanning distribution of the Royal Air Force is revealed in the table of squadrons which has not heretofore been compiled for the public:

ROYAL AIR FORCE STRENGTH

<i>Squadrons</i>		<i>Squadrons</i>	
<i>United Kingdom</i>		<i>Palestine and Transjordan</i>	
Army Cooperation .....	5	Bomber .....	1 1
Fighting .....	13		
Bombing .....	16	<i>Egypt and Sudan</i>	
Cadre Squadrons .....	5	Army Cooperation .....	1
Auxiliary Air Forces .....	8	Bomber .....	4 5
Flying Boats ..	4		
Communications	1 52	<i>Singapore</i>	
		Flying Boat ..	1
		Torpedo Bomber	1 2
<i>Iraq</i>			
Bomber .....	3	<i>Malta</i>	
Bomber Transport .....	1 4	Float Seaplane .	1 1
<i>Aden</i>		<i>Basra</i>	
Bomber .....	1 1	Flying Boat ..	1 1
<i>India</i>		<i>Fleet Air Arm</i>	
Army Cooperation .....	4	Fighter .....	
Bomber .....	4 8	Reconnaissance ..	
		Torpedo Bomber	13½ 13½
		Total ...	88½

To make flights between the bases covered by the foregoing squadrons complete units are required, not only for the necessary exercise of the squadrons but also to maintain a fund of information about the routes and landing places, for strategic as well as commercial use. In the present year six flights have been made covering long distances. Shorter links have been established and maintained, and the result is that the aim of setting up a mobile defense system is on the way to realization. The working of this plan has been put to the test on a few occasions when the air force has been called upon to undertake operations in the form of punitive action against tribesmen, evacuation of civilians from beleaguered cities, the provisioning of troops on the march, or the conveyance of troops to areas of operations.

The application of the mobile principle in Iraq has led to a saving of 25,000,000 pounds sterling in ten years.

The types of machines in use for the Empire air defense are mainly of the bomber, general purpose, bomber transport, and troop transport types. They also include flying boats of various sizes, and attempts are being made to increase the range and seaworthiness of flying boats, with

the aim of improving their mobility still further. Strategic bases should be within aircraft range of each other but at the present time this is not possible.

The new Chief of the Imperial General Staff has been announced by the War Office. He is Gen. Sir Archibald A. Montgomery-Massingberd, Colonel-Commandant, Royal Artillery, Aide-de-Camp General, the appointment to go into effect early in 1933. General Montgomery-Massingberd rose to fame as Chief of Staff of the Fourth Army in France, and the outstanding part which this army played in the final stage of the war established the position of the man who had been Lord Rawlinson's right hand.

*India.* The Associated Press from Dehra Dun, India, announced the formal opening on Oct. 1, 1932, of India's "West Point," the first Military Academy exclusively for Indians. The course is to last three years. Aspirants who seek to qualify will be charged \$1200 for the course. The London Conference provided for this step in the long period, some thirty years, that it is expected it will take to build up a strong Indian Army of officers entirely Indian.

The Earl of Halsbury, in the *British Legion Journal*, reveals new details of the terribly potent gases which are already available for employment in the next war. "We cannot judge the nature of future wars from the known effects of chlorine or phosgene used in the World War. . . . Even air containing one part in 200,000,000 of the diphenylchlorine produces nasal irritation. One part in 50,000,000 causes marked symptoms, and with such a mixture, five minutes is said to be the limit of human endurance. The symptoms are intense mental distress and utter dejection. If severely gassed, people would be driven mad by the pain and misery, and would lose all mental control." Another gas is "lewisite," which aircraft could spray through hose pipes in liquid form. Defense squadrons cannot protect towns from aerial bombers. Air manoeuvres in 1927 were intended to reassure the public that the defenses of London against hostile aircraft were adequate, but actually proved that that city cannot be defended. One modern asphyxiant would kill every person within a radius of half a mile, the victims being driven so mad with irritation that they could not stand respirators.

*BELGIUM.* The programme of the Minister of National Defense calls for the very latest modern fortifications for Belgium's eastern frontier, patterned after the strong fortifications that France has constructed in Alsace and Lorraine since the World War. It is the right bank of the River Meuse that is to be defended to the limit of her strength in case of attack, with the front line of defense consisting of a chain of concrete dugouts along the frontier linking up the towns of Maeseyck, Arlon, Saintvith, Houffalize, Bastogne, and Martelange.

These dugouts, commanding all the international highways, will not be guarded in peace time by permanent garrisons, but will be either occupied or looked after by the rural gendarmery. In the event that surprise automobile raids by invaders force the defenders out of these dugouts, it will be possible hastily to destroy them so they will be useless to the enemy. Homberg, which the first German Uhlans passed through on Aug. 4, 1914, will be the centre of the fortifications.

The second line of defense, a system of the lat-

est improved types of concealed sunken batteries, each spreading out over about 30 or 40 acres, will be almost invisible on the surface. Strong forts are to be placed at Eben-Emael, Battice, and Pepinster of the same type adopted by France at Longwy on the Rhine. For the defense of the Meuse, a chain of nine forts around Liège and seven more at Namur will be depended upon. (*La Libre Belgique*, July 29, 1932.)

SPAIN. The Premier and Minister of War Azana recently stated to the correspondent of the *New York Times* that Spain plans a vast reorganization to make the Spanish Army a real fighting force. Notwithstanding her declaration against war as an international instrument, "we must be prepared in case the unexpected occurs to defend ourselves or maintain our neutrality. We have fliers, but we need planes. We particularly want a modern Spanish air force to make us a first-class power. In five years we shall spend \$15,000,000 on our air force." The Spanish Army is about 150,000 in numerical strength.

On December 28, 1932, the Spanish Government issued a decree that troops in North Africa will total 25,405 regulars, 9184 Moors, and 4404 members of the Spanish Foreign Legion. The troops will be on a war footing, fully equipped with war material. The remaining 10,000 troops there will be repatriated.

POLAND. The sorest spot in all Europe is without doubt the Polish Corridor, the narrow strip 23 miles wide at one point and widening to 150 miles at its extreme width. According to Frank Simmonds: "The programme of the German Republic, in the matter of the Polish Corridor, is that of Frederick the Great." To see that this is so, one has but to read any patriotic speech that refers to Poland or this Corridor. The two conceptions abroad, the immutable right of Poland to independence and the unquestionable right of Germany to unity, make the way of conciliation or combining justice to the Pole with satisfaction to the German a seeming impossibility short of war.

Dr. Julius Curtius, former German Foreign Minister, in an address at Town Hall called upon those "who want to save mankind from a new disaster like that of the World War to take early action in a united fight to undo the wrong done Germany by establishing the so-called Polish Corridor." Poland was adjudged the outlet to the sea known as the Corridor because the new state was carved out of lands which for centuries before the partition of Poland were part and parcel of the old Kingdom of Poland, and the so-called Polish Corridor, geographically known as "Pomerania," was included in these lands. See map in article POLAND.

SWEDEN. The question of national defense will be an important one when the Swedish Riksdag assembles in January, according to the Associated Press, Dec. 22, 1932. The new Socialist Cabinet is responsible for the movement to secure the reduction by the curtailment or suspension of compulsory military training as well as naval reductions. There is opposition to the movement by militarists and conservatives. Peace training of conscripts in Sweden is now 140 days for ordinary conscripts, 200 days for special arms, and 260 days for students during the first year. The second year conscripts must take part in general maneuvers. It is estimated that 10,000 young men would be affected the first year and

20,000 the second year if compulsory military training should be suspended.

UNITED STATES. Four field armies, embracing all Regular Troops, National Guard, and Organized Reserves divisions in the United States, recently created provide for the defense of the frontiers of the country.

The First Field Army, comprising all troops of the three components within the First, Second, and Third Corps Areas, is to defend the Northeastern and North Atlantic region;

The Second Field Army, protecting the Great Lakes region, will consist of the troops of the Fifth and Sixth Corps Areas;

The Third Field Army, charged with the defense of the Gulf region and the Southern frontier, is composed of the Fourth and Eighth Corps Areas; and

The Fourth Field Army, defending the Pacific Coast, will consist of the troops of the Seventh and Ninth Corps Areas.

A General Headquarters is announced with the Chief of Staff as Commanding General.

This further step in the organization of the peace time military establishment since the World War is for the purpose of preparation for the utilization of the fighting forces in possible theatres of operations.

This organization is a new departure in national defense, for it is the first time in our history that a military man commands the Armies and at the same time functions as Chief of the General Staff. The scheme is a purely defensive one, based upon the thought that in case of emergency the people of the country will have an effective plan of defense. The first set-up of the plan provides for officer training only and has for its purpose the carrying out of the provisions of the defense act for tactical control, development of mobilization, and procurement plans. The plan practically abolishes the three field armies now existing, and provides the four units instead.

In his annual report General MacArthur, Chief of Staff, terms America's preparatory programme for land defense far from adequate. During the year military activities comprehended little more than normal training and administration.

He advocates increase of the Regular Army to 14,000 officers and 165,000 enlisted men as soon as the Government's revenue permits, and calls attention to the Far Eastern situation and European disarmament difficulties as reasons for avoiding further reductions in our military forces. In regard to the former he states: "Untrustworthiness of treaties as complete safeguards of international peace was emphasized again by the Sino-Japanese conflict in Shanghai last winter (1931) and gave rise to a feeling of apprehension among portions of our population and was reflected in expressions of anxious concern as to the adequacy of our defense structure."

Concerning the latter, he continues: "Unquestionably there has been crystallized among important elements of our citizenry a strong sentiment in opposition to further weakening of American military strength unless accompanied by drastic and sweeping cuts in the Armies of other Nations." He discusses the effect of diminished estimates for War Department requirements, due to the economic depression, and American policy and the character of its military establishment. Specifically he states, the 1920

law provided for a small professional army and for limited training of civilians on a voluntary basis, through the National Guard, the Organized Reserves, the Reserve Officers' Training Corps, the Citizens' Military Training Camps, and the National Rifle Association. This system combines efficiency, economy, and respect for American ideals and traditions.

Among the nations of the world the United States ranks first in wealth and fourth in population, yet each of the 16 others maintains a military establishment exceeding in strength the aggregate of Regular Army, National Guard, and Organized Reserves.

Our expenditures for current military activities of the Army have amounted to between 6 and 7 per cent of the total federal disbursements. According to the best available figures, expenditures by some foreign countries for similar purposes are as follows: France 17.4 per cent; Great Britain 7.9 per cent; Italy 25.4 per cent; Japan 13.1 per cent.

Data concerning distribution of the Regular Army beyond the continental limits are as follows:

#### TERRITORIAL DISTRIBUTION OF U. S. ARMY

Station	Strength	
	Officers	Men
Hawaii .....	757	13,466
Panama .....	418	9,537
Puerto Rico .....	52	938
Philippines .....	633	11,111
China .....	45	719
Alaska .....	10	309
Total ... ..	1,915	36,080

This leaves for the continental United States approximately 10,850 officers and 89,170 enlisted men. On June 30, 1932, the numbers actually present in continental United States were about 9750 officers, 820 warrant officers, and 83,600 enlisted men. The National Guard's aggregate strength is approximately 190,000, and that of the Organized Reserves approximately 84,000 civilians.

As to mechanization and general munitions development in this country as well as in all foreign armies, the possibilities of increasing fighting strength and conserving man power through a maximum utilization of machines continue to be assiduously explored.

The distinction between the terms might again be stated: the inclusion in military units of motor driven vehicles purely as for transportation of troops and supplies is known as "motorization"; their employment on the battlefield as actual weapons is termed "mechanization." During the past year visible progress in the Army toward mechanization consisted in the procurement of seven combat vehicles of the "Christie" combination wheel and track type, at a cost of \$262,000, and 12 armored cars of the most modern design at an approximate cost of \$190,000. The Tank School and Tank Board were transferred and combined with the Infantry School at Fort Benning, Ga. There has been set aside for development as a laboratory one unit of Cavalry, for the purpose of developing applicable tactics and methods and testing of the machines as a mechanized unit of this branch of the fighting forces.

One of the most extraordinary recent advances in new equipment has been the production of a heavy bombing plane of vastly increased efficiency. It is capable of carrying 2000 pounds of

bombs and a crew of four men. It has a maximum speed of about 165 miles per hour, and a cruising radius of some 500 miles. Improvements in anti-aircraft fire-control instruments and guns have continued. American pilot models in this equipment are at least equal to any others now existing.

During the past year attention has been directed toward a redesign of the semi-automatic shoulder arm gun to permit employment of the standard calibre of ammunition used in the Army. The "Garand" is the latest model produced.

Attack aviation is a new departure in military aviation developed during the past ten years. The Third Attack Group, equipped with observation type planes, Douglas and Curtiss Falcons mostly, two place ships bristling with machine guns in the cockpits and along the wing, with attack pilots trained for just such observation, are really the infantry of the air. They strike at guns and supply trains, trenches, and moving bodies of troops on the road. To protect the attack machines, fast and maneuverable pursuits are essential.

"The Third Attack Wing, which is now the Third Attack Group," writes F. Trubee Davison, Assistant Secretary of War for Aviation, "will comprise approximately 300 officers and 1600 men, and 180 planes." At Barksdale, Louisiana, 20,100 acres of land owned by the government has a landing field 3 miles long and half a mile wide, to be completed a mile wide. The field when finished will be the only air field over which maneuvers can be held without any of the bullets going off government land.

The whole plan of war in the air has been changed since the World War. The day of the Knight of the Air is ended. Mass work has succeeded individual exploit. A pursuit group consists of three squadrons of 18 planes each. It regularly practices open and close order drill, as an infantry battalion does and for the same reasons of discipline and smartness. Infantry terms are creeping into the lexicon of the Air Corps. A group flight is divided almost the same way as an infantry force on the march, with its reserve, support, and striking force comparing with infantry advance guard. In this way it goes into action, maintaining formation rather than splitting up into single ship actions as during the war, and just as an infantry commander does if the enemy breaks up his unit, the new air leader withdraws in the best order, reforms, and again attacks.

Five additional pursuit squadrons have yet to be organized to complete the overseas air defenses in Panama and Hawaii. During the fiscal year ending June 30, four additional pursuit squadrons and two bombardment squadrons, together with certain auxiliary units were reconstituted. These permit the organization of two complete wings of the service, each consisting of a bombardment group and a pursuit group. One wing is stationed on the Pacific Coast, at March Field, California, and the other in the East, at Langley Field, Virginia.

An Attack Wing, consisting of an attack group of three squadrons with auxiliary units, will be organized from units already in existence, to be stationed eventually at Barksdale Field, Shreveport, La.

The United States ranks fourth in air power, an estimate based on the full power this country

could employ in a particular operation where Army, Navy, and Air Forces would be used to full capacity.

The 73d Congress, if called into special session after March 4, 1933, may be called upon to pass a bill amalgamating the War Department with the Navy Department into a Department of National Defense, supposedly in the interests of economy and efficiency. Anyone familiar with the operations of the two departments must realize the destructive effect upon service morale of such an amalgamation.

The Army's first motorized field artillery is to undertake a thirty days' test simulating war conditions from Fort Bragg, N. C., to West Point, N. Y. Speedy little trucks with rubber mounted trailers on which are mounted 75 millimeter pieces have replaced the horsedrawn gun mounts in the experimental battery, and judging from results in the way of experiments will replace the horses permanently. (*New York Times*, Dec. 31, 1932.)

**MILITARY TERRITORY OF THE NIGER.** See FRENCH WEST AFRICA.

**MILK.** See DAIRYING.

**MILLS COLLEGE.** A college for women in Oakland, Calif., founded in 1885. The enrollment in the autumn of 1932 was 490, while that for the summer session was 71. The summer session included courses in music, fine art, and physical education. The faculty numbered 79 members, plus 18 assistants below the rank of instructor. Preceptorial aid was furnished by 10 tutors who were in residence with the students. The total productive funds amounted to \$1,593,134, and the total assets to \$4,302,927, while the gross income for the year ending June 30, 1932, was \$660,569. The library contained 60,000 volumes. President, Aurelia Henry Reinhardt, Ph.D. LL.D., Litt.D., L.H.D.

**MILLWARD, JESSIE.** A British actress, died in London July 13, 1932. Born July 14, 1861, she made her first appearance on the London stage in 1881 as Constance in *The Love Chase*. The following year she was engaged by Sir Henry Irving on the strength of the success with which she portrayed the rôle of Alice Verney in *Forget-Me-Not*. She appeared with his company on both the British and American stage in *Much Ado about Nothing*, *The Lyons Mail*, *The Bells*, *The Merchant of Venice*, *The Bell's Stratagem*, *Louis XI*, and *King Richard III*. While in the United States during 1884-85 she appeared also in *Called Back* and *Scaled Instructions*. On her return to England she appeared intermittently with William Terriss in a series of popular melodramas until the tragic death of that actor in 1897. Among these were *The Harbor Lights*, *The Bells of Haslemere*, *The Union Jack*, *The Silver Falls*, *The Shaughraun*, *Roger La Honte*, *The Fatal Card*, *The Girl I Left Behind Me*, *The Swordsman's Daughter*, *One of the Best*, *Boys Together*, *Black-Eyed Susan*, *Secret Service*, and *In the Days of Drake*. She appeared also during 1892-94 with Sir Henry Irving in *Richelieu*, *Becket*, and *Faust*. In 1898 she returned to the United States for an extended stay, her outstanding successes being as Lady Algernon Chetland in *Lord and Lady Algy*, Lady Eastney in *Mrs. Dane's Defence*, and the Countess Zicka in *Diplomacy*. She later appeared in *There's Many a Slip* (1902), *The Taming of Helen* (1903), *A Queen's Messenger* (1904), and *The Hypocrites* (1906). Her versatility was further displayed by

her appearance in the musical comedies *The Girl in the Taxi* (1910) and *As a Man Sows* (1911). Her last appearance was on the London stage in *The Rosary* in 1914. In 1923 she published her reminiscences under the title of *Myself and Others*.

**MIMICRY IN ZOOLOGY, PROTECTIVE.** See ZOOLOGY.

**MINERALOGY.** Of importance in the progress in mineralogy in 1932 is the publication of the Fourth Edition of Dana's *Text Book of Mineralogy* under the revision of Dr. William E. Ford.

As Dr. Ford points out in his preface, the period of ten years which has elapsed since the Third Edition of this standard work has been one of unusual activity in mineralogical investigation, involving additions and changes which well justify the present new edition.

In recognition of the rapid progress made in the field of crystal structure, much valuable matter has been added in the section dealing with the general morphological relations of crystals. This revision balances and modernizes the text rather than exploits this relatively new province of mineralogy.

A discussion of the Origin, Mode of Occurrence and Association of Minerals, mainly taken with minor additions, from the 1929 Edition of Dana's *Manual of Mineralogy*, constitutes a valuable and significant contribution to the new matter of the Edition.

It is in the portion of the work devoted to Descriptive Mineralogy, however, that the bulk of the new matter has been added to this revision, about two hundred and twenty new species have been added to the science in the ten years that have elapsed since the last edition of this text and these have been included in Part V (formerly Part IV). The order of the species within groups has, in many cases, undergone rearrangement. In adjudging the importance and validity of species the editor holds to the practice, employed in former editions, of using heavy faced and small upper case type apparently to mark a difference in rationality of establishment of the species, although the reader is at a loss to find any explanation of the meaning of this use of type in the text. Small printers' errors have crept in, as would be expected in so large and complete a book. Perhaps the most inexcusable of these is the spelling of mallardite without the *r*, and the inclusion of mallardite and mallardite (two separate species) under mallardite in the index. Also, as would be natural, the critic is not always in accord with Dr. Ford regarding the use of the heavy-faced and upper case type above mentioned. But these are small matters which in nowise dim the achievement of a very notable and praiseworthy piece of work. The new species announced during 1932 are, in general, neither as important nor as sharply defined as those that have characterized recent years.

*Bultfonteinite*, a new fluorine bearing hydrous calcium silicate, was first found in the Bultfontein mine at Kimberley, but has later appeared elsewhere in South Africa. The mineral occurs in small radial spherulites of acicular triclinic crystals which are white to colorless and resemble *afwillite* (INTERNATIONAL YEAR BOOK, 1925).

A new zinc arsenate from Lampazos, Neuvo Leon, Mexico has been named *legrandite* in honor of Mr. Legrand, a former mine manager. It was

found in small, bright transparent monoclinic crystals deposited on sphalerite. The name *rosickyite* has been proposed for a monoclinic ( $\gamma$ ) phase of sulphur, new as a natural compound, in honor of Dr. V. Rosický of Prague. Rosickýite occurs in the cretaceous clay at Havirna, near Letovice, Moravia. *Glaucoocerinite*, a new hydrous zinc, copper, and aluminum sulphate, has been found at Laurium, Greece. It occurs in soft sky-blue, warty masses, resembling blue wax. A white or light yellow material of a powdery consistency, from the phosphatic deposits in a cave in Cioclovina, Transylvania, has been proved to be a double salt, a sulphate and phosphate of calcium. It has been named *ardealite* in recognition of the Rumanian name Ardealu, applied to the former principality of Transylvania. A vein of gneiss near Bald Knob in Alleghany County, North Carolina, has yielded two new manganese minerals. *Alleghanyite*, named from the locality,

is a manganese silicate occurring in pink grains, resembling garnet. *Galaxite* is a new manganese spinel, occurring in small black grains. The name of this species is derived from the town Galex in Virginia.

*Sanbornite*, a new barium dimetasilicate occurring in white or colorless triclinic plates in Mariposa County, California, has been named in honor of Mr. Frank Sanborn of the California Division of Mines.

**MINERAL PRODUCTION IN THE UNITED STATES.** The continued effect of the economic depression in 1932 drove the mineral industry to lower production records than it has experienced in many years. Except for gold (\$51,836,400) and a few mineral products of relatively minor importance the downward trend in values was general. Articles on individual minerals, metallic and nonmetallic, present production data for the year 1932 while the follow-

Lime . . . . .	do.	3,387,880	25,616,486	2,710,000	18,506,000	
Magnesite (crude) . . . . .	do.	129,320	1,033,130	73,602	499,289	
Mica:						
Scrap . . . . .	short tons..	6,732	109,100	6,621	99,415	
Sheet . . . . .	pounds..	1,465,485	177,307	962,953	111,830	
Millstones . . . . .	do.		17,702		5,330	
Mineral paints:						
Natural pigments <sup>a</sup> . . . . .	short tons..	( <sup>a</sup> )	( <sup>a</sup> )	( <sup>a</sup> )	( <sup>a</sup> )	
Zinc and lead pigments <sup>c</sup> . . . . .	do.	147,948	18,420,436	123,963	15,225,300	
Mineral waters . . . . .	gallons sold..	( <sup>a</sup> )	( <sup>a</sup> )	( <sup>a</sup> )	( <sup>a</sup> )	
Natural gas . . . . .	M cubic feet..	1,948,421,000	416,090,000	1,637,000,000	350,000,000	
Natural gasoline . . . . .	gallons..	2,210,494,000	128,160,000	1,831,918,000	65,964,000	
Oilstones, etc. . . . .	short tons..	651	137,184	870	81,951	
Peat . . . . .	do.	( <sup>a</sup> )	( <sup>a</sup> )	( <sup>a</sup> )	( <sup>a</sup> )	
Petroleum . . . . .	barrels (42 gallons)	898,011,000	1,070,200,000	851,081,000	550,830,000	
Phosphate rock . . . . .	long tons..	3,926,392	18,996,880	2,534,959	9,288,485	
Potassium salts . . . . .	short tons..	56,610	2,986,157	63,770	3,086,955	
Pumice . . . . .	do.	56,843	336,099	68,819	338,586	
Pyrites . . . . .	long tons..	347,512	1,028,680	330,848	974,820	
Salt . . . . .	short tons..	8,054,440	25,009,480	7,358,070	21,541,012	
Sand:						
Glass . . . . .	do.	1,849,101	\$ 3,210,973	1,600,000	\$ 2,600,000	
Molding, building, etc., and gravel . . . . .	do.	195,202,625	111,965,570	153,400,000	85,400,000	
Sand-lime brick <sup>a</sup> . . . . .	thousands	191,198	1,950,709	146,514	1,269,405	
Silica (quartz) . . . . .	short tons..	13,156	121,289	7,851	69,103	
Slate . . . . .	do.	463,610	7,911,618	368,420	5,498,336	
Stone . . . . .	do.	126,996,340	178,948,611	96,200,000	131,248,000	
Sulphur . . . . .	long tons..	1,989,917	35,800,000	1,376,526	24,800,000	
Sulphuric acid (60° Baumé) from cop- per and zinc smelters . . . . .	short tons..	1,188,316	9,544,288	862,729	6,491,515	
Talc and soapstone <sup>c</sup> . . . . .	do.	179,385	2,108,338	163,752	1,852,472	
Total value of nonmetallic prod- ucts (approximate) . . . . .			\$3,773,400,000		\$2,605,500,000	
SUMMARY						
Total value of metallic products . . . . .			\$ 982,550,000		\$ 567,200,000	
Total value of nonmetallic products (ex- clusive of mineral fuels) . . . . .			1,008,900,000		719,700,000	
Total value of mineral fuels . . . . .			2,764,500,000		1,885,800,000	
Total value of "unspecified" (metallic and nonmetallic) products (partly esti- mated) <sup>a</sup> . . . . .			8,850,000		7,300,000 <sup>a</sup>	
Grand total approximate value of mineral products . . . . .			\$4,764,800,000		\$3,180,000,000	

<sup>a</sup> In this general statement certain of the figures represent shipments rather than quantity mined, and some of the figures for 1931 are estimates. The reader is referred to the articles on the various mineral products for information in greater detail than it seems practicable to give here.

<sup>b</sup> From both domestic and foreign ores. As the result of a change in method of statistical presentation, comparable figures for 1931 are not available; estimate of value of antimony and lead contents of antimonial lead from domestic sources included in total value of metallic products.

<sup>c</sup> Figures represent antimony content of antimonial lead. Value excluded from metallic total as the value of the antimony is included in the antimonial lead value.

<sup>d</sup> Product from domestic ores only.

<sup>e</sup> Value, \$20.671834625323 an ounce.

<sup>f</sup> Value not included in total value.

<sup>g</sup> Figures not available.

<sup>h</sup> Figures showing values not available.

<sup>i</sup> Figures for 1931 not yet available.

<sup>j</sup> Value included in total value of metallic products; Bureau of Mines not at liberty to publish figures.

<sup>k</sup> Figures obtained through cooperation with Bureau of the Census. Figures for 1931 not yet available; estimate of value included in total value of nonmetallic products.

<sup>l</sup> Includes brown coal and lignite, and anthracite mined elsewhere than in Pennsylvania.

<sup>m</sup> Figures represent tripoli only. Value of diatomite is included in total value of nonmetallic products, Bureau of Mines not at liberty to publish figures.

<sup>n</sup> No canvass. Estimate of value included in total value of nonmetallic products.

<sup>o</sup> Value included in total value of nonmetallic products; Bureau of Mines not at liberty to publish figures.

<sup>p</sup> Canvass discontinued after 1915. Value of iron ore sold for paint included under last item ("Unspecified").

<sup>q</sup> Sublimed blue lead, sublimed white lead, leaded zinc oxide, and zinc oxide.

<sup>r</sup> Equivalent as K<sub>2</sub>O.

<sup>s</sup> According to Bureau of the Census.

<sup>t</sup> Figures represent talc only. Value of soapstone is included in total value of nonmetallic products; Bureau of Mines not at liberty to publish figures.

<sup>u</sup> Includes for 1931 the value of bismuth, cadmium compounds (\$331,119), chats (\$368,000), cobalt ore, columbite (\$490), flint lining for tube mills and pebbles for grinding (\$26,211), optical fluorspar (\$1,230), iodine, iron ore sold for magnets, iron ore sold for paint (\$29,759), lithium minerals, new ingot magnesium (\$199,633), natural magnesium salts (\$982,814), calcareous marl (\$65,935), greensand marl, micaceous minerals, molybdenum (\$1,577,000), selenium (\$386,255), silica sand and sandstone (finely ground) (\$749,171), sodium salts (carbonates and sulphates) from natural sources (\$1,421,676), sulphur ore, tellurium, and an estimate of the value of miscellaneous mineral products, statistics for which are not collected annually by the Bureau of Mines.

ing paragraphs, based on the Annual Summary for 1931 of the U. S. Bureau of Mines, present the situation for that year, and emphasize the trend that was continued in the succeeding year.

The U. S. Bureau of Mines stated the aggregate value of all mineral products in 1931, \$3,180,000,000, was the lowest since 1915. As compared with the total for the preceding year, the 1931 value represented a reduction of 33 per cent. This large drop followed a decrease of 19 per cent in the 1930 aggregate value. Compared with 1929, the 1931 total value shows a reduction of 46 per cent, or the largest decline in value for any two consecutive years since the beginning of the statistical record in 1880. Only in two previous instances—1883 and 1884, 1927 and 1928—were declines registered in the total value of mineral products in consecutive years, and these declines were relatively very small. Moreover, although the value of mineral products dropped 40 per cent in the postwar depression year 1921 as compared with 1920, yet the reduced value recorded for 1921 was about a billion dollars more than that reported for 1931.

Comparisons of the various individual products show only a few scattered departures from this common tendency, and no notable increases were recorded. As in 1930, however, the intensity of the decline was far from uniform, and some branches of the mineral industry suffered much more than others, as shown in the accompanying tabulation on pages 514 and 515.

Among the metallic products, striking declines in values ranged from 44 to 54 per cent for the important industrial metals, copper, pig iron, lead, silver, and zinc, while the total value of metallic products decreased about 42 per cent from that in 1930. Gold, the standard price of which was not affected by the business depression, again showed an increase in 1931 with a gain of 4.8 per cent in output and value. Relatively large gains in the production of tungsten ores and chromite were accompanied by much smaller proportionate increases in values. The output of mercury and nickel gained about 16 and 23 per cent, respectively, but the total values were less than in the preceding year. These two products were the only ones except for gold, tungsten ores, uranium and vanadium ores, rutile, and chromite (which enjoyed increased total realizations) in the entire metallic group to show value declines of less than 20 per cent.

The mineral fuels as a group decreased about 32 per cent in value of total products. Less bituminous coal was produced in 1931 than in any year since 1908, and the anthracite output was smaller than in any year free from labor difficulties after 1900. Moreover, average unit realizations were slightly lower than in immediately preceding years. Petroleum output decreased for the second consecutive year after steady increase from 1925 to 1929; the output in 1931 dropped only 5 per cent below that in 1930, but the value declined about 49 per cent. Production of natural gas declined about 16 per cent and was accompanied by a sharp decline in value; the output of natural gasoline fell about 17 per cent below that in 1930 and brought barely one-half the total value reported for 1930.

The total value of nonmetallic products (not including fuels) fell 29 per cent. This was considerably less than the decrease recorded for the value of metals but only slightly below that reported for the value of mineral fuels. Except for

potassium salts and pumice the declines in values were wide sweeping. A gain in the output of bromine was offset by prices low enough to result in a reduced total value. In spite of road and public-building programmes the demand for non-metallic structural materials declined sharply. As compared with 1930, total values of all the important nonmetallic building materials—stone, gravel, gypsum, lime, cement, asphalt, slate, mineral paints, sand-lime brick, and clay products—decreased 17 to 38 per cent in 1931.

**MINERALS.** See GEOLOGY.

**MINES AND MINING.** See METALLURGY.

**MINING AND METALLURGICAL ENGINEERS,** AMERICAN INSTITUTE OF. An organization founded in 1871 and incorporated under the laws of New York State in 1905 "to promote the arts and sciences connected with the economic production of the useful minerals and metals and the welfare of those employed in these industries." It is made up of 27 local sections and has 47 affiliated societies in American colleges. On Nov. 15, 1932, there were 8620 members, distributed as follows: Honorary, 16; members, 6276; junior members, 366; associates, 882; student associates, 576; Rocky Mountain members, 127; and junior associates, 377. The income for 1932 is estimated at \$139,000.

In addition to the monthly meetings of the local sections and regional meetings held in various important mining or metallurgical centres, an annual meeting, or four-day convention beginning on the third Tuesday in February is held in New York City. The medals and prizes awarded by the society during 1932 for notable work in the field of mining and metallurgy were: The James Douglas Medal to Champion Herbert Mathewson; William Lawrence Saunders Gold Medal to F. W. Bradley; Robert W. Hunt Prize to Howard Scott, and the J. E. Jonson, Jr. Award to Ora E. Clark. The Institute publishes *Transactions*, an annual in several volumes containing the best papers of the year on mining and metallurgical subjects; *Mining and Metallurgy*, a monthly magazine; the *Directory*, which constitutes a "Who's Who" in the profession; *Technical Publications*, a series of individual technical pamphlets; and special volumes from time to time. In connection with three other societies it maintains the engineering societies library and an employment bureau. The officers elected at the 1932 convention were: President, Scott Turner; vice presidents, Frederick M. Becket and Paul D. Merica; directors, Erle V. Daveler, Eugene McAuliffe, Harvey S. Mudd, J. B. Umpleby, and Charles C. Whittier; secretary, A. B. Parsons; and treasurer, Karl Eilers. Headquarters are in the Engineering Societies Building, 29 West 39th Street, New York City.

**MINNESOTA.** POPULATION. According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 2,563,953, as against 2,387,125 in 1920. Minneapolis, the most populous city, had (1930) 464,356 inhabitants; St. Paul, the capital, 271,606.

**AGRICULTURE.** The table on page 517 shows the acreage, production, and value of the principal crops for 1932 and 1931.

**MINERAL PRODUCTION.** Looking to its iron mines for nearly nine-tenths of its mineral output in normal years, Minnesota's mineral industry suffered severely by the curtailment of demand for iron ore in 1931. The iron mines shipped only 17,063,591 long tons of ore (1931),

Crop	Year	Acreage	Prod. Bu.	Value
Corn	1932	4,847,000	176,916,000	\$24,768,000
	1931	4,896,000	115,056,000	37,968,000
Oats	1932	4,575,000	164,700,000	18,117,000
	1931	4,575,000	128,525,000	23,470,000
Hay	1932	4,445,000	5,564,000*	30,210,000
	1931	4,812,000	4,088,000	30,601,000
Barley	1932	1,968,000	47,232,000	8,502,000
	1931	1,874,000	37,480,000	11,619,000
Wheat	1932	1,867,000	19,506,000	7,412,000
	1931	1,224,000	18,011,000	9,186,000
Potatoes	1932	372,000	29,016,000	6,384,000
	1931	361,000	28,880,000	9,819,000

	1931	861,000	6,027,000	7,293,000
Rye	1932	310,000	4,960,000	1,042,000
	1931	365,000	5,475,000	1,588,000

\* Tons

as against 34,165,777 (1930); though the price of ore was not affected, the year's total by value fell by almost one-half, to \$46,020,269 (1931), from \$90,835,451 (1930). The blast furnaces' production of pig iron, by the use of non-native coal, fell off to 17,878 long tons (1931), from 266,622 (1930). Of manganiferous ores there were shipped 243,819 long tons in 1931, as against 698,244 in 1930; by value \$733,788 (1931), and \$1,812,171 (1930). The stone quarries, for which data were not available to cover 1931, produced 562,130 short tons of stone in 1930, and 517,720 in 1929; by value, \$3,923,372 for 1930 and \$4,460,383 for 1929. Clay products attained the value of \$1,647,007 for 1930 and \$2,085,697 for 1929. The total value of the State's mineral product, duplications eliminated, was \$103,931,377 for 1930; for 1929, \$136,349,610.

**FINANCE.** State expenditures in the year ended June 30, 1931, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments \$38,755,553 (of which \$10,441,037 was for local education); for interest on debt, \$4,183,329; for permanent improvements, \$20,989,252; total, \$63,928,134 (of which \$23,574,904 was for highways, \$4,414,251 being for maintenance and \$19,160,743 for construction). Revenues were \$65,662,908. Of these, property and special taxes furnished 19.2 per cent; departmental earnings and compensation to the State for officers' services, 9.2; sale of licenses, 49.7 (in which was included a gasoline sale tax that produced \$7,328,457). Funded debt outstanding on June 30, 1931 (exclusive of county-reimbursement road bonds), totaled \$71,151,759, of which \$9,000,000 was for highways. Net of sinking-fund assets, the debt was \$14,221,200. On an assessed valuation of \$2,341,848,744 the State levied in the year ad-valorem taxes of \$11,060,642.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1932, was 8778.04.

**EDUCATION.** The State distributed, in 1932, a new curriculum of secondary public-school education. It was reported at the end of the year that the public schools would continue their complete services, despite the pressure of adverse times. There were enrolled in the public schools, in the academic year 1931-1932, 558,148 pupils. Of these, 434,458 were in the common schools or elementary grades; in separate classes for defectives, 7839; in the regular courses of the high schools, 114,446; in the high schools also, but taking special courses, 1405. For the school year 1930-1931, the latest for which the financial total had been rendered, the expenditures for pub-

lic education totaled \$54,615,401, of which \$45,629,084 was for maintenance and operation. The salaries of teachers averaged, for men, \$173.61 a month in 1932; for women, \$112.34.

**CHARITIES AND CORRECTIONS.** The State Board of Control, a body created by an act of 1901, had in 1932 general control over 18 State institutions for the care or custody of persons. It also supervised county tuberculosis sanatoria, purchased for the institutions that it controlled, paroled and discharged from the reform schools, conducted prison manufactures of binder twine and farm machinery, clothing and woodworking products, operated prison quarries, collected charges for maintaining the insane, inspected jails, poorhouses, and infirmaries, and performed duties as to children, the blind, and veterans.

State institutions under the board's control, with their populations of Nov. 1, 1932, were: Anoka State Asylum, 1096; Hastings State Asylum, 1060; Willmar State Asylum, 1223; Fergus Falls State Hospital, 1809; Rochester State Hospital, 1562; St. Peter State Hospital, 1843; School for the Feeble-Minded, Faribault, 2214; Colony for Epileptics, Cambridge, 645; School for the Blind, Faribault, 110; School for the Deaf, Faribault, 329; State Public School, Owatonna, 508; State Training School for Boys, Red Wing, 366; Home School for Girls, Sauk Center, 310; State Reformatory for Women, Shakopee, 58; State Reformatory, St. Cloud, 1100; State Prison, Stillwater, 1356; Sanatorium for Consumptives, Ah-gwah-ching, 275; Hospital for Crippled Children, St. Paul, 230.

**POLITICAL AND OTHER EVENTS.** The Federal Supreme Court, in a decision of April 11 (opinion by Chief Justice Hughes), ruled that the nine Representatives allowed the State under the reapportionment of 1930 must be elected at large, the State's redistricting measure of 1931, vetoed by Governor Olson, being invalid. It was impossible to elect under the previous redistricting law of the State, as the number of Representatives for the State had been reduced by one. Governor Olson refused to call a special session to pass a new redistricting law. Accordingly candidates for the House of Representatives were chosen at large in the party primaries on June 20. Eighty-eight names were presented; the voters chose 27; nine apiece for the Republican, Democratic, and Farmer-Labor parties. Governor Olson was renominated on the Farmer-Labor ticket; Earle Brown of Minneapolis gained the Republican nomination for Governor; the Democratic nomination went to John E. Regan, of the party wing opposed to the Presidential nomination of Franklin D. Roosevelt. This wing later made an unavailing effort in the Democratic National Convention to supersede the previously named pro-Roosevelt delegation of the State with a delegation of its own.

The State's so-called gag law, for the suppression of objectionable newspapers, had been declared unconstitutional by the United States Supreme Court in 1931 with regard to its provision for suppressing scandalous and defamatory newspapers, was declared still valid, by a decision of Federal Judge Guilford at Minneapolis on August 6, with regard to the suppression of publications for obscenity. The Court refused to interfere with a move on the part of the State authorities to confiscate the Minneapolis *Public Press*. Wilbur B. Foshay and H. H. Henley, heads of a \$50,000,000 combination of companies that

had failed in 1929, were convicted at Minneapolis on March 21 of violation of a Federal law by using the mails to defraud; both received 15-year sentences. Governor Olson appointed a committee on land utilization, chiefly to study the problem of abandoned lands in the northern counties, soon to revert to the State for tax delinquency.

**ELECTIONS.** The popular vote of November 8 was prevailingly Democratic, in the proportion of almost 5 to 3 as to the National tickets, but the Farmer-Labor candidates gained the chief vote for other important offices. Gov. Floyd B. Olson, Farmer-Laborite, was reelected, defeating Earle Brown, Republican, and John E. Regan, Democrat. Five members of the Farmer-Labor party, 3 Republicans, and 1 Democrat were elected to the House of Representatives for the Seventy-third Congress. All nine were elected at large, because of the invalidation of the State's re-districting measure by the Federal Supreme Court. The vote for President as officially reported was: Roosevelt (Dem.), 600,806; Hoover (Rep.), 363,959. A constitutional amendment to permit the Legislature to enact a law creating a State income tax was defeated.

**OFFICERS.** The chief officers of the State, serving in 1932, were: Governor, Floyd B. Olson; Lieutenant-Governor, Henry Arens; Secretary of State, Mike Holm; State Treasurer, Julius A. Schmald; Auditor, Stafford King; Attorney-General, Henry R. Benson; Commissioner of Education, James M. McConnell.

**Supreme Court:** Chief Justice, Samuel B. Wilson; Associate Justices, Homer B. Dibel; Andrew Holt, Clifford L. Hilton, Royal A. Stone, I. M. Olsen, Charles Loring.

**MINNESOTA, UNIVERSITY OF.** A coeducational State institution for higher learning in Minneapolis, founded in 1851. The 1932 autumn registration was 11,708, while the summer session enrollment for the same year was 5058. The university staff on a full-time basis, including professors, associate professors, assistant professors, and instructors, numbered 611. The income for the year ending June 30, 1932 amounted to \$9,462,879. The permanent university fund was increased by \$325,448.

Gifts received during the year include \$25,000 from the Carnegie Corporation of New York and \$75,000 from the Rockefeller Foundation, for an economic and social study of unemployment and a study of the reeducation of the unemployed; \$10,000 from the American Association for Adult Education for the study of University Extension class students under the special supervision of a special subcommittee of the Committee on Educational Research. The new Dentistry building was completed in 1932 at a cost of \$409,507. The library contained 788,011 volumes. Chancellor, Lotus Delta Coffman, Ph.D., LL.D.

**MINORITIES.** See LEAGUE OF NATIONS; POLAND, YUGOSLAVIA, CZECHOSLOVAKIA, BELGIUM, and SPAIN under *History*.

**MISSIONS INQUIRY, LAYMEN'S FOREIGN.** This inquiry, sponsored during 1931-32 by laymen of seven leading Protestant denominations—Baptist (Northern), Congregational, Methodist Episcopal, Presbyterian Church in the U. S. A., Protestant Episcopal, Reformed Church in America, and United Presbyterian—was a result of the growing conviction that the Protestant mission enterprise was at the crossroads and that to continue the work momentous decisions

in regard to aim, scope, personnel, and attitude toward other faiths were necessary. It was restricted to the Far Eastern mission field—India, Burma, China, and Japan—the first stage of the study being entrusted to the Institute of Social and Religious Research which late in 1930 sent a corps of research workers to the designated fields under the supervision of Galen M. Fisher, general director. The group in India and Burma was headed by C. Luther Fry, that in China by H. Paul Douglass, and that in Japan by Harvey H. Guy. The facts collected by these workers were then submitted to the commission of appraisal. Leaving the United States in September, 1931, this commission spent three months studying conditions in India and Burma, two and a half months in China, and six weeks in Japan. Its report, entitled *Rethinking Missions: A Laymen's Inquiry after One Hundred Years*, was published in September, 1932.

The commission of appraisal consisted of 15 prominent churchmen of the various denominations, with William Ernest Hocking, Alford professor of philosophy at Harvard University, acting as chairman and Frederic C. Woodward, vice-president of the University of Chicago, as vice-chairman. The other members were: Clarence A. Barbour, president of Brown University; Edgar H. Betts, business man and banker of Troy, N. Y.; Arlo A. Brown, president of Drew University; Charles Phillips Emerson, professor of medicine and dean of the medical school of the University of Indiana; Mrs. William E. Hocking, founder of Shady Hill School, Cambridge, Mass.; Henry S. Houghton, dean of the medical college of the University of Iowa; Rufus M. Jones, professor of philosophy at Haverford College; William Pierson Merrill, pastor of the Brick Presbyterian Church, New York City; Albert L. Scott, president of Lockwood Greene Engineers, Inc., New York City; Harper Sibley, lawyer and business man of Rochester, N. Y.; Mrs. Harper Sibley, religious leader and speaker of Rochester, N. Y.; Henry C. Taylor, agricultural economist of Washington, D. C.; and Miss Ruth F. Woodsmall, specialist in work for women, Young Women's Christian Association, New York City.

The principal conclusions of the commission, as set forth in *Rethinking Missions*, are as follows:

*The Continuance of Missions.* To any man or church, possessed of religious certainty, the mission in some form is a matter not of choice but of obligation.

*Their Aim.* The message of Christianity presents a way of life and thinking which the Christian conceives, not as his way alone, but as a way for all men, entering without violence the texture of their living and transforming it from within. . . . The aim of Christian missions today, in our conception, would take this form: To seek with people of other lands a true knowledge and love of God, expressing in life and word what we have learned through Jesus Christ, and endeavoring to give effect to his spirit in the life of the world.

*Their Scope.* Nothing can displace, or minimize the importance of, a true and well-qualified evangelism. But the Christian way of life is capable of transmitting itself by quiet personal contact and contagion, and there are circumstances in which this is the perfect mode of speech. . . .

We believe that the time has come to set the educational and other philanthropic aspects of mission work free from organized responsibility to the work of conscious and direct evangelism. We must work with greater faith in invisible successes, be willing to give largely without any preaching, to coöperate whole-heartedly with non-Christian agencies for social improvement, and to foster the initiative of the Orient in defining the ways in which we shall be invited to help.

*Their Attitude toward Other Faiths.* The mission of to-day should make a positive effort, first of all, to know and understand the religions around it, then to recognize and associate itself with whatever kindred elements there are. It is not what is weak or corrupt but what is strong and sound in the non-Christian religions that offers the best hearing for whatever Christianity has to say.

It is clearly not the duty of the Christian missionary to attack the non-Christian systems of religion—it is his primary duty to present in positive form his conception of the way of life and let it speak for itself. . . . The Christian will therefore regard himself as a co-worker with the forces within each such religious system which are making for righteousness.

*The Men and Women in Missions* The task of the missionary is an extremely difficult one. It calls not only for a self-sacrificing spirit and an utter devotion but for moral courage, a high order of intelligence, and a love of adventure. Perhaps more than for any of these it calls for the capacity truly to understand and genuinely to love and sympathize with the people among whom he works.

The commission is convinced that a much more critical selection of candidates should be made, even at the risk of curtailing the number of missionaries sent out. Those appointed should have the benefit of a carefully planned training for their work: great pains should be taken in the designation of appointees to specific tasks and locations. Whenever possible, nationals should have a voice in their selection and retention, and if feasible the early years of their service should be of a probationary nature.

*Concentration of Effort.* The number of weak Christian institutions and of merely nominal Christians throughout Asia is a reproach to the missionary enterprise. Denominational interests, institutional pride, and lack of coöperative planning have contributed to the development of conditions which should no longer be tolerated. We are convinced that one of the most urgent needs in all fields is the rigid enforcement of a policy of concentration of personnel and resources. Experience shows that this cannot be accomplished by the missionaries in the field; the forces which make for a continuance of the present status are too strong for them. Vigorous and determined action on the part of the mission boards, and the denominations behind them, is imperative.

*Transition from Temporary to Permanent Character.* A mission, by definition, is intrinsically temporary; the time comes when established centres of religious life must be left to develop according to the genius of the place.

Missions should now be preparing for the transition from the temporary work of church planting, pioneer work in medicine, education, and the training of leaders—to the permanent function of promoting world understanding and unity on a spiritual level through the ambassadorship of

relatively few highly equipped persons, and through institutions for the study of theology and civilization, and the emerging needs of the adopted land.

*The Transfer of Responsibility—Devolution.* The goal of the mission must be the transfer of its responsibility to the hands of the nationals. Answerable for the integrity of its work, the mission cannot realize the idea of the indigenous church by simply letting go. The desire to make himself unnecessary is a mark of the true missionary; but in achieving that end, the transfer of responsibility must follow thorough training of nationals: devolution should be real—not nominal; and gradual—not abrupt.

*Administrative Unity and Cooperation.* The commission believes that the time has come for a plan of administrative unity on a comprehensive scale, and proposes a single organization for Christian service abroad in place of the complex, costly, and duplicative machinery which now exists.

If a new alignment of forces, rising above denominational and doctrinal barriers, can evoke creative missionary statesmanship at home and abroad, can command the enthusiasm of the finest and most adventurous type of Christian young men and women, and bring the whole enterprise to new levels of accomplishment, we are convinced that the churches of America will have a great part in the making of a better and happier world, but not otherwise.

**MISSISSIPPI.** POPULATION. According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 2,009,821, as against 1,790,618 in 1920. Jackson, the capital, had (1930) 48,282 inhabitants.

**AGRICULTURE.** The accompanying table shows the acreage, production, and value of the principal crops for 1932 and 1931:

Crop	Year	Acreage	Prod. Bu	Value
Cotton . . .	1932	3,830,000	1,150,000 <sup>a</sup>	\$37,375,000
	1931	4,032,000	1,761,000 <sup>a</sup>	54,239,000
Corn . . .	1932	2,414,000	32,589,000	11,732,000
	1931	2,299,000	42,532,000	17,013,000
Hay . . .	1932	356,000	407,000 <sup>b</sup>	2,892,000
	1931	358,000	482,000 <sup>b</sup>	4,497,000
Sweet potatoes	1932	79,000	7,900,000	3,160,000
	1931	63,000	5,544,000	4,047,000

<sup>a</sup> Bales. <sup>b</sup> Tons.

**MINERAL PRODUCTION.** There occurred a sharp reduction in the production of brick and tile in 1930, bringing the total value of the State's clay products for that year down to \$613,350, from \$1,189,142 for 1929. The output of natural gas, though still small, rose to 179,000 M cubic feet for 1930, from 90,000 M for 1929; and to the value of \$86,000 (1930), from \$32,000 (1929). The production of sand and gravel, to the value of \$1,050,579 for 1930, furnished the greater part of the yearly mineral total. The value of the State's entire mineral product was \$1,774,621 for 1930; for 1929, \$2,572,616.

**FINANCE.** State expenditures in the year ended Sept. 30, 1931, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments \$16,297,681 (of which \$5,710,822 was for local education); for interest on debt, \$1,499,365; for permanent improvements, \$4,882,914; total, \$22,679,960 (of which \$6,193,183 was for highways, \$2,926,391 being for maintenance, and \$3,266,792 for construction). Revenues were \$19,084,386. Of these,

property and special taxes furnished 38.4 per cent; departmental earnings and compensation to the State for officers' services, 8.1; sale of licenses, 31.8 (in which was included a gasoline tax that produced \$2,899,836). Funded debt outstanding on Sept. 30, 1931, totaled \$32,905,799. Net of sinking-fund assets, the debt was \$32,721,661. On an assessed valuation of \$692,655,464 the State levied in the year ad valorem taxes of \$5,541,244.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1932, was 4170.15. During the previous year about 39 miles of line had been abandoned.

**EDUCATION.** Supporters of the public-school system made unusual exertions early in the year to prevent its services from being cut down on account of the deficiencies of public revenue. A mass meeting of about 5000 persons, held at Jackson, adopted a resolution in favor of the State's making provision to keep public schools open for at least eight months of the year in every county. The attitude of this group lent impetus to Governor Conner's successful recommendation that the Legislature create a sales tax. For the latest period as to which the figures were obtainable, the academic year 1930-1931, the number of persons of school age in the State was reported as 873,665. There were enrolled in the public schools 584,011 pupils. Of these, 529,284 were in common schools or elementary grades; in high schools, 54,727. For the year 1929-1930, the expenditure for public-school education totaled \$14,952,699. Salaries for colored teachers attained the medium figure of \$226 a year; for white elementary teachers, of \$720; for those in high-school classes, of \$1060.

**LEGISLATION.** The State Legislature, in its regular biennial session, was impelled by Governor Conner to pass measures to bring a degree of order into the public finances. It enacted a general sales tax designed to bring in about \$1,000,000 a year. This tax applied to retail sales of almost all articles. It went into effect on May 1. Under its provisions sellers, most sorts of public utilities included, must pay 2 per cent of gross annual receipts, from sales, above \$1200; likewise persons practicing a licensed trade or profession must pay in the same proportion from trade incomes. On clay products, cement, bottled soft drinks, automobiles sold, and sales of industrial power 1 per cent was laid. The legislature authorized the funding of the floating State deficit, an accumulation of several years, by the sale of \$12,000,000 of 6 per cent State bonds, which might be offered below par; the excess of this issue over the amount needful to cover such deficit might be used to refund maturing State bonds. The rate of the State's tax on sales of gasoline was set at six cents a gallon, by a gasoline-tax act containing strict provisions against elusion of the tax; a tax of a cent a gallon was placed on kerosene. Ratification of the proposed Federal Constitutional Amendment to alter the dates of inaugurations and of initial sessions of Congress was voted. An act was passed to redistrict the State into seven districts for the election of Federal Representatives, in place of eight, in accordance with the Federal reapportionment of 1930; it united the old 7th and 8th districts to form a new 7th district.

**POLITICAL AND OTHER EVENTS.** Martin S. Conner was inaugurated Governor on January 19. In his inaugural address he urged corrective

measures for the State finances, a "complete reorganization" of the administrative machinery, and the legislative voting of revenues in advance of appropriations. Poverty throughout the State had led to something approaching a collapse of revenue from direct taxation. It was reported that on April 4 39,699 farms, comprising 16.2 per cent of the agricultural land, were offered at sheriffs' sales for non-payment of tax, in addition to some 15,000 farms previously forfeited for the same reason. A sale of State bonds to retire outstanding warrants was partly successful on September 10, \$6,000,000 of principal, par value, being sold, to bear interest at 6 per cent, at the price of 96 per cent of the par value, out of an offering of \$11,500,000. Revenues from the general sales tax (see Legislation, above) met expectations soon after the outset and did much to meet the State's requirements of revenue.

A flood of the Tallahatchee River broke levees on January 15 and entered the Tippecanoe Basin, driving some 30,000 people from their homes. The American Red Cross administered relief to the refugees. The redistricting act of the Legislature of 1932, reducing the number of districts for the election of Federal Representatives to 7, from 8, was rendered ineffective by an injunction granted at New Orleans by a special three-judge Federal Court; the Court's order did not prevent the holding of nominating primaries by districts under the new law. But the Federal Supreme Court, in a decision of October 18, sustained the redistricting law, on the ground (opinion by Chief Justice Hughes) that the Federal reapportionment act of 1911, requiring compact and approximately equal districts, which the consolidation of the old 7th and 8th Mississippi districts might have infringed, was superseded by the Federal act of 1929, which made no provision on the subject, the old restriction as to districts therefore having lapsed.

**ELECTIONS.** The State's vote of November 8 was overwhelmingly for the Democratic National ticket: for Roosevelt (Dem.), 140,168; for Hoover (Rep.), 5170. The seven Democratic Representatives were reelected.

**OFFICERS.** The chief officers of the State, serving in 1932, were: Governor, Sennett Conner; Lieutenant-Governor, Dennis Murphree; Secretary of State, Walker Wood; Attorney-General, Greek L. Rice; State Treasurer, Lewis L. May; State Auditor, Joseph S. Price; Superintendent of Education, W. F. Bond; Commissioner of Agriculture, J. C. Holton.

**Supreme Court:** Chief Justice, Sydney Smith; Associate Justices, W. D. Anderson, James G. McGowan, George H. Etheridge, W. H. Cook, V. A. Griffith.

**MISSISSIPPI RIVER.** See FLOODS AND FLOOD PREVENTION.

**MISSOURI. POPULATION.** According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 3,629,367, as against 3,404,055 in 1920. St. Louis had (1930) 821,900 inhabitants; Kansas City, 399,746; Jefferson City, the capital, 21,596.

**AGRICULTURE.** The table on page 521 shows the acreage, production, and value of the principal crops for 1932 and 1931.

**MINERAL PRODUCTION.** There was a great decrease in the production of the lead and zinc mines subsequent to 1929. In the case of lead the production, by quantity, however, rose slightly to 199,032 short tons for 1930, from 198,469

Crop	Year	Acreage	Prod. Bu	Value
Corn . . .	1932	6,122,000	188,721,000	\$35,477,000
	1931	6,184,000	170,060,000	54,419,000
Hay . . .	1932	2,676,000	2,423,000 <sup>a</sup>	13,175,000
	1931	2,922,000	2,919,000 <sup>a</sup>	19,579,000
Wheat . .	1932	1,332,000	14,926,000	5,672,000
	1931	1,497,000	29,833,000	11,073,000

<sup>a</sup> Tons    <sup>b</sup> Bales.    <sup>c</sup> Pounds.

for 1929; but the total by value fell to \$19,963,200 (1930), from \$25,007,094 (1929). The curtailment as to quantity, consequent upon lower prices, was evidenced thereafter. In the case of zinc, the quantity produced fell to 10,811 short tons (1930), from 11,017 (1929); the total by value, to \$1,037,856 (1930), from \$1,454,244 (1929).

Production of coal likewise declined, to 3,269,000 short tons for 1931, from 3,853,150 for 1930; by value also it declined sharply from the \$8,967,000 of 1930. With regard to cement, a drop to producers' shipments of 5,103,287 barrels (1931), from 8,030,528 (1930) was accentuated as to values by a lower level of prices, the totals by value being \$5,052,840 for 1931 and \$11,470,751 for 1930. Production of lime declined moderately to 225,000 short tons (estimated) for 1931, from 265,771 (1930); by value, to \$1,518,000 (estimated, for 1931), from \$1,861,105 (1930).

Clay products attained the value of \$12,517,707 for 1930, as against \$14,994,548 for 1929. Quarries produced 3,910,060 short tons of stone in 1930, as against 4,397,800 for 1929; by value, \$6,007,531 for 1930 and \$7,085,323 for 1929. The total value of the mineral product of the State was \$69,074,500 for 1930; for 1929, \$78,948,484.

FINANCE. State expenditures in the year ended Dec. 31, 1931, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments, \$28,586,826 (of which \$5,621,172 was for local education); for interest on debt, \$4,135,920; for permanent improvements, \$31,887,670; total, \$64,610,416 (of which \$30,417,628 was for highways, \$5,650,705 being for maintenance and \$30,766,923 for construction). Revenues were \$51,484,545. Of these, property and special taxes furnished 27.5 per cent; departmental earnings and compensation to the State for officers' services, 11.7; sale of licenses, 43.9 (in which was included a gasoline sale tax that produced \$9,154,688). Funded debt outstanding on Dec. 31, 1931, totaled \$104,864,896, of which \$88,500,000 was for highways. Net of sinking-fund assets, the debt was \$103,005,394. On an assessed valuation of \$4,566,442,883 the State levied in the year ad valorem taxes of \$5,479,731.

TRANSPORTATION. The total number of miles of railroad line under operation on Jan. 1, 1932, was 7970.02. During the year previous, 82.88 miles of line had been put in operation; 9.52 miles abandoned.

EDUCATION. A county-redistricting board was organized, to perform the work of mapping the larger public school districts, optional as to adoption, within the county school system, thus carrying forward plans adopted in the legislation of 1931. For the academic year 1930-1931, the

latest for which statistics were obtainable, the number of persons of school age in the State was given as 948,220. There were enrolled in the public schools 660,306 pupils. Of these, 191,911 were in rural schools, 337,430 in elementary grades, and 130,965 in high schools. The expenditure of the year for public-school education was \$42,730,104. Salaries of teachers averaged, by the year, \$653 for men and \$614 for women in rural schools; in high-school districts, \$1479 for men and \$895 for women.

POLITICAL AND OTHER EVENTS. The course of the General Assembly of 1931, in making appropriations some \$5,000,000 in excess of anticipated revenue, under the mistaken hope that economic improvement might bring revenue from the income tax far above expectations, left the State in a bad financial plight toward the end of 1931. Governor Caulfield dealt with it by demanding, in December, 1931, that all State departments and institutions reduce their expenditures by 25 per cent for the biennium then nearly half over. This signified, for practical purposes, a cut of nearly 50 per cent in expenditure for which these governmental branches had not yet become engaged. Public opinion supported the Governor, and the heads of departments and institutions agreed to comply, with the exception of State Superintendent of Schools Lee, who declared that expenditure required for education under the laws of the last session prevented any such cut. The Federal Supreme Court by a decision of April 11 (opinion by Chief Justice Hughes) declared the attempt to carry out the vetoed State redistricting act of 1931 invalid; this had the effect of compelling the election of all Representatives of the State to Congress in November at large, i.e. each one by the vote of the entire State; for the State's representation having been reduced to 13, and the Governor failing to call a special session to pass a new act, election by districts was impossible. The nomination of 15 candidates for members of the State's electoral college, however, was not affected, the Governor creating special districts therefor, as the law of the State prescribed, in the absence of an act. At the primary elections on August 2, the Republicans nominated Henry W. Kiel of St. Louis for United States Senator and the Democrats nominated Col. Bennett C. Clark, a son of the late Champ Clark; both men stood outright for the repeal of Federal prohibition. For Governor, Edward H. Winter was nominated by the Republicans and Francis M. Wilson by the Democrats. Wilson died on October 12 and the Democratic State Committee named Judge Guy B. Park of Platte City to take his place on the ticket.

ELECTIONS. The popular vote of November 8 was cast for the Democratic National ticket in the proportion of about 11 to 6. The reported totals were: for Roosevelt (Dem.), 1,025,406; for Hoover (Rep.), 564,713. Col. Bennett C. Clark, son of the late Senator Champ Clark, was elected to the United States Senate on the Democratic ticket, defeating former Mayor Henry W. Kiel of St. Louis, Republican, by a plurality of some 200,000. Judge Guy B. Park, Democrat, was elected Governor, defeating Edward H. Winter. Because the State's redistricting measure had not been supported by the courts, the 13 members of the State in the House of Representatives of the Seventy-third Congress were elected at large: all the 13 elected were Democrats.

OFFICERS. The chief officers of the State, serv-

ing in 1932, were: Governor, Henry S. Caulfield; Lieutenant-Governor, Edward H. Winter; Secretary of State, Charles U. Becker; Auditor, L. D. Thompson; Treasurer, Larry Brunk; Attorney-General, Stratton Shartel; Superintendent of Public Schools, Charles A. Lee.

**Supreme Court:** Chief Justice, Frank E. Atwood; Associate Justices, William T. Ragland, Berryman Henwood, Earnest S. Gantt, William F. Frank, John Turner White, George R. Ellison.

**MISSOURI, UNIVERSITY OF.** A State institution of higher education in Columbia and Rolla, Mo., founded in 1839. The enrollment for all divisions for the first semester of 1932-33 was 3828, of whom 2791 were men and 1037 women. The total enrollment for the 1932 summer session was 2323, of whom 1142 were men and 1181 women. The total annual enrollment of all classes of students, including those in correspondence and extension courses was 8692. There were 390 faculty members. The endowment of the university was approximately \$2,500,000, and the total income from all sources was approximately \$3,511,392. The libraries contained 291,819 volumes. President, Walter Williams, LL.D.

**MIXED CLAIMS COMMISSION.** See MEXICO under *History*.

**MIYATOVICH, CHEDOMILLE, COUNT.** A Serbian diplomat, died in London May 14, 1932. Born in Belgrade in 1842, he attended the Universities of Munich, Leipzig, and Zurich, and in 1865 became professor of political economy at the High College of Belgrade. Four years later he was appointed general secretary in the Ministry of Finance and in 1873 assumed the portfolio of Finance and Commerce. Among the reforms which he instituted were the establishment of the National Bank of Serbia, the introduction of the dinar as the first official Serbian currency, and the passage through parliament of a taxation law by virtue of which there could not be seized from any Serbian peasant for any debt whatever his house, a yoke of oxen, his plow, and 5 acres of land. He was thrice accredited Serbian minister to the Court of St. James's, the first time being in 1884. He was recalled in 1886 to serve as Serbian plenipotentiary for the conclusion of peace with Bulgaria. This peace, which was largely secured through the intervention of Austria-Hungary, was the shortest ever written, consisting of one sentence: "Peace between Serbia and Bulgaria is restored." In spite of the routing of the Serbians by the Bulgarians there were no territorial changes, no war indemnity, and no humiliation for the defeated nation. Miyatovich was again appointed Minister to Great Britain in 1895. In 1899 he was Serbian delegate to the Peace Conference at The Hague. Transferred to Constantinople the following year, he was returned to London in 1902. He retired from the diplomatic service on the assassination of King Alexander and Queen Draga in 1903 but thereafter continued to make his home in London. He was an authority on the history of Serbia in the fifteenth century, his *Life of Georg Brankovitch*, the last king of the Serbs in that period, being crowned by the Royal Serbian Academy of Science. He was also the author of several Serbian novels and of works in that language on political economy, finance, and commerce. His works in English include: *Ancestors of the House of Orange* (1892); *A Royal Tragedy* (1906); *Serbia and the Serbians* (1908);

and *The Memoirs of a Balkan Diplomatist* (1917).

**MONACO, mōn'à-kō.** A principality on the Mediterranean coast, surrounded on the land sides by the French Department of Alpes Maritimes. Total area 149 hectares (about 370 acres); population (1928 census) 24,927. Monaco, the capital, had 2085; Monte Carlo, 11,055; La Condamine, 11,787 inhabitants. Revenue is mainly derived from the gambling concession, which is leased for about \$450,000 annually. Receipts of the gambling resort, the Monte Carlo Casino, for the fiscal year ended Mar. 31, 1931, totaled \$5,250,000 and gross expenditures were nearly \$3,000,000.

Under the constitution promulgated, Jan. 5, 1911, the government consists of the Prince, assisted by a council of state, and a national council elected by universal suffrage. Ruler in 1932, Prince Louis II (June 26, 1922). A decree issued by Prince Louis, Dec. 26, 1930, dissolved the Council of State, and National Council and suspended some of the constitutional guarantees (see 1930 YEAR BOOK).

**HISTORY** The financial condition of Monaco became difficult during 1932, as a result of the world depression, which caused a slump in the receipts of the gambling casino. It was reported on November 8 that Monaco had agreed to give France supervision of its customs and finances in return for 13,000,000 francs (about \$520,000) in cash and a perpetual annuity of 3,750,000 francs (about \$150,000). The proposed treaty, it was understood, would end the freedom from taxation long enjoyed by citizens of Monaco and would authorize France to fortify the Monaco rock. A treaty with France, embodying these provisions, was approved by Maurice Bouilloux-Lafont, Minister of State of Monaco, and was awaiting consideration by the French parliament. On Nov. 12, 1932, Monaco's budget deficit was placed at \$78,400.

**MONEY.** The table on page 523 from the annual report of the director of the United States Mint shows the distribution of the stock of money in the United States on June 30, 1932, June 30, 1931, June 30, 1930, Oct. 31, 1920, Mar. 31, 1917, June 30, 1914, and Jan. 1, 1879.

**MONEY RATES.** See FINANCIAL REVIEW.

**MONGOLIA.** A huge and vaguely defined region lying west of Manchuria and south of the Siberian territories of the Soviet Union. It is divided politically into Inner Mongolia, which is administratively a part of China, and Outer Mongolia, an independent soviet republic in close relations with the Soviet Union. The total area is roughly estimated at from 1,367,000 to 1,875,000 square miles and the population at about 2,000,000, mostly half-nomadic Mongols and Kalmyks,

with a small proportion of Chinese and Russians. The Mongols and Kalmuks live mainly by stock-raising, and furs, skins, hides, horns, and wool are the principal exports. The naturally fertile soil needs irrigation to be productive. Gold, iron, coal, copper, silver, and tin are found, but not extensively worked.

**INNER MONGOLIA.** In 1928, the Nationalist Government at Nanking made Provinces of the former special administrative districts of Jehol, Suiyuan, and Chahar into which a large part of Inner Mongolia and portions of adjacent Provinces in China had been divided (see CHINA and MANCHOUKIO under *Area and Population*). Chengteh, Kueihuacheng, and Kalgan are the respective provincial capitals. A steady influx of Chinese has extended the area under cultivation.

**OUTER MONGOLIA.** Established as an independent republic along Soviet lines in May, 1924, Outer Mongolia has an area of about 714,000 square miles and a population estimated in 1928 at about 676,000, of whom 579,000 were Mongols, 90,000 Russians, and 7,000 Chinese. The capital, Urga (or Ulan Bator Hoto), had about 60,000 inhabitants. Since 1924, Outer Mongolian trade has shifted to a large extent from China to the Soviet Union. Motor transportation was being developed and there was an air-line between Urga and Verkhneudinsk on the Trans-Siberian railway. Under the soviet régime, all lands, forests, minerals, waterways, and marine products were owned by the public, a strict monopoly of foreign trade was established, and the Mongol nobles and lamas (monks), were deprived of their privileges. Lamas comprised over 30 per cent of the total male population.

**HISTORY.** The situation in Outer Mongolia attracted increased attention during 1932, as a result of the consolidation of Japanese power in Manchuria. High Japanese officials explained that Japan's policy in Manchuria was in part designed to forestall a possible soviet attack from the Russian sphere of Outer Mongolia. They encouraged the establishment of a special Mongol-controlled province (Barga) in that part of Heilungkiang Province west of the Khingan Mountains, to serve as a buffer state between the Soviet Union and Japan. In August, 1932, it was reported that large Tibetan armies had advanced northward into Inner Mongolia with the object of overthrowing the Chinese administration there, and the soviet régime in Outer Mongolia, and forming a great Central Asia state. The campaign was said to have been inspired by the religious zeal of the Tibetans to free their fellow Buddhists in Outer Mongolia from soviet control. At the same time, riots and disorders were reported in Outer Mongolia. While Japanese sources on December 22 reported that an anti-soviet revolt had been successful, refugees arriving in Kalgan from Outer Mongolia toward the end of the month declared that soviet officials at Urga had frustrated an uprising in eastern Outer Mongolia and had crushed another rebellion in the West after heavy fighting. In order to pacify the region of the Altai Mountains, the sovietized Mongol leaders were said to have abandoned the Communist collectivization programme.

**MONTANA. POPULATION.** According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 537,606 as against 548,889 in 1920. Helena, the capital, had (1930) 11,803 inhabitants.

**AGRICULTURE.** The accompanying table shows

the acreage, production, and value of the principal crops for 1932 and 1931:

Crop	Year	Acreage	Prod. Bu.	Value
Wheat . . . .	1932	4,070,000	55,610,000	\$16,683,000
	1931	2,182,000	14,478,000	7,239,000
Hay . . . . .	1932	2,458,000	3,101,000 <sup>a</sup>	16,714,000
	1931	2,038,000	1,929,000 <sup>a</sup>	17,080,000
Oats . . . . .	1932	408,000	10,075,000	2,116,000
	1931	183,000	3,202,000	961,000

<sup>a</sup> Tons. <sup>b</sup> 100-lb bags. <sup>c</sup> Not available

**MINERAL PRODUCTION.** The aggregate value of the product of the five metals, copper, silver, zinc, lead, and gold, furnishing much the greater part of the yearly value of the State's mineral output, again declined greatly, for 1931. It fell by some 45 per cent, to about \$18,073,000; further, it fell to an estimated \$6,667,957 for 1932. The copper output diminished to 184,555,000 pounds (1931), and 84,717,000 (estimated 1932) from 196,187,523 (1930); in value, to \$15,312,000 (1931), from \$25,504,378 (1930). Zinc production decreased to 11,550,000 pounds (1931), from 52,841,108 (1930); in value, to \$438,900 (1931), from \$2,536,373 (1930). Lead production was reduced to some 8,610,000 pounds (1931), from 21,316,044 (1930); in value, to about \$310,400 (1931), from \$1,065,302 (1930). The silver output was cut to 4,076,872 ounces for 1931, from 8,596,966 for 1930, by value, to \$1,182,293 (1931), from \$3,309,832 (1930). For 1932 it was estimated at 1,671,000 oz.; in value, \$471,222. That of gold, to 40,901 oz. (1931), from 46,900 (1930); and in value, to \$845,500 (1931), from \$969,500 (1930). Gold production was estimated, for 1932 at \$823,773.

There were mined in 1931, 2,210,000 short tons of coal, as against 3,022,004 for 1930, the value of the product of 1931 declining similarly from the \$6,043,000 of 1930. Production of petroleum wells fell to 2,830,000 barrels (1931), from 3,349,000 (1930); by value, to \$2,730,000 (1931), from \$5,420,000 (1930). The output of natural gas, for which figures were not obtainable beyond 1930, rose to 10,060,000 M cubic feet (1930), from 9,659,000 M (1929); in value, to \$2,990,000 (1930), from \$2,377,000 (1929). A production of 12,680 short tons of arsenious oxide in 1930 was valued at \$732,886. The total value of the State's mineral product was \$50,995,123 for 1930; for 1929, \$93,842,135.

**FINANCE.** State expenditures in the year ended June 30, 1931, as reported by the U. S. Department of Commerce, were, for maintaining and operating governmental departments: \$7,375,734 (of which \$1,553,318 was for local education); for interest on debt, \$421,620; for permanent improvements, \$6,314,758; total, \$14,112,112 (of which \$7,181,215 was for highways, \$1,048,969 being for maintenance and \$6,132,246 for construction). Revenues were \$13,514,114. Of these, property and special taxes furnished 17.1 per cent; departmental earnings and compensation to the State for officers' services, 6.4; sale of licenses, 33.8 (in which was included a gasoline

sale tax that produced \$3,006,605). Funded debt outstanding on June 30, 1931, totaled \$5,588,735. Net of sinking-fund assets, the debt was \$2,985,712. On an assessed valuation of \$453,080,548 the State levied in the year ad-valorem taxes of \$2,056,831.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1932, was 5212.46. During the year previous, about 20 miles of line had been abandoned; about 4 miles put in operation.

**EDUCATION.** Though the districts were heavily hampered during the year by reduced revenues it was reported in December that 98 per cent of the public schools had up to that time maintained their terms on the basis of nine months a year. The number of persons of school age in the State was reckoned as 161,133. There were enrolled in the public schools 119,134 pupils. Of these, 90,040 were in common schools or elementary grades and 29,094 were in high schools. Expenditures of the academic year 1931-1932 for public-school education totaled \$13,331,192. The prevailing rates, by the year, of teachers' salaries were between \$600 and \$900 for rural schools; for those in towns and cities, from \$900 to \$1500.

**ELECTIONS.** The popular vote of November 8 was cast for the Democratic National ticket in the proportion of about 11 to 7. The reported totals were: Roosevelt (Dem.), for President, 127,286; Hoover (Rep.), 78,078. Gov. John E. Erickson, Democrat, was reelected, defeating Frank A. Hazelbaker, Republican candidate. One Democrat and one Republican were elected Representatives to the Seventy-third Congress.

**OFFICERS.** The chief officers of the State, serving in 1932, were: Governor, John E. Erickson; Lieutenant-Governor, Frank A. Hazelbaker; Secretary of State, W. E. Harmon; Treasurer, F. E. Williams; Auditor, George P. Porter; Attorney-General, L. A. Foot; Superintendent of Public Instruction, Elizabeth Ireland.

**Supreme Court:** Chief Justice, Lew L. Callaway; Associate Justices, John A. Matthews, Albert J. Galen, S. C. Ford, Albert H. Angstman.

**MONTANA, STATE UNIVERSITY OF.** A State institution for the higher education of men and women in Missoula, Mont., founded in 1895. The enrollment for the autumn of 1932 was 1457. In the 1932 summer session 710 students were registered, of whom 269 were men and 441 women. The faculty had 102 members. The productive funds and income for the year amounted to \$625,000. There were about 200,000 volumes in the library, including government documents. President, Charles H. Clapp, Ph.D.

**MOORE, ELIAKIM HASTINGS.** An American mathematician, died in Chicago, Ill., Dec. 30, 1932. He was born in Marietta, O., Jan. 26, 1862. After receiving his A.B. degree from Yale University in 1883 and his Ph.D. degree in 1885, he attended the University of Berlin, being ap-

pointed on his return in 1887 tutor in mathematics at Yale. In 1889 he was called to Northwestern University as assistant professor of mathematics, being advanced to associate professor in 1891. The following year he accepted a professorship at the University of Chicago, and from 1896 until his retirement as professor emeritus in 1931 was head of the mathematics department at that institution. He edited the *Transactions* of the American Mathematical Society from 1899 to 1907, and was president of that society during 1901-03. He served also as vice-president of the International Congress of Mathematicians in Cambridge in 1912 and as president of Section A (mathematics) of the American Association for the Advancement of Science in 1921. He was a member of the National Academy of Sciences, an associate fellow of the American Academy of Arts and Sciences, and a fellow of the American Association for the Advancement of Science.

**MORAVIA AND SILESIA.** A Province of Czechoslovakia. See **CZECHOSLOVAKIA** under *Area and Population.*

**MORAVIANS.** A religious denomination comprising, in the United States, three branches: The Moravian Church (Unitas Fratrum); the Evangelical Union of Bohemian and Moravian Brethren in North America; and the Independent Bohemian and Moravian Brethren Churches. It was formed in Bohemia in 1457 under the leadership of John Huss and Jerome of Prague, and opposed the efforts of Austria and the Roman Catholic authorities to suppress it. In 1741 Moravians, settling at Bethlehem, Pa., founded the first Moravian church in the United States. The doctrine is evangelical, without a creed peculiar to itself, and in its polity the denomination follows a modification of the episcopacy, having a ministry of three orders: Bishops, presbyters, and deacons.

**THE UNITAS FRATRUM,** the largest branch, is organized in the United States in two coordinate provinces: the Northern, with a provincial synod meeting every fifth year; and the Southern, of which the provincial synod meets every third year. The church maintains the following four educational institutions: Linden Hall, Lititz, Pa., Moravian College and Theological Seminary, and Moravian Seminary and College for Women, Bethlehem, Pa.; and Salem Academy and College for Women, Winston-Salem, N. C. Missionary workers are maintained in southern California and Alaska, and in Nicaragua, Honduras, the West Indies, Jamaica, Labrador, Surinam, South America, the Himalayas, Unyamwesi, Central Africa, and South Africa. The official periodical, *The Moravian*, is published weekly in Bethlehem, Pa.

On Jan. 1, 1932, there were in the United States 149 churches; 170 ministers; 27,396 communicant members, although the actual membership was estimated at 37,677; and 137 Sunday schools with 24,292 pupils. The five "home provinces" of the American and European branches had a total membership of 57,714. In Europe there were also affiliated societies, known as "Diaspora," with a membership of about 30,000. The foreign missions had a membership of 143,191. A world conference of Moravians was held in Herrnhut, Saxony, in June and July, 1931, for the purpose of reestablishing the International Moravian Church (Unitas Fratrum) on a somewhat different administrative basis than heretofore.

**MORMONS.** See LATTER-DAY SAINTS, CHURCH OF JESUS CHRIST OF.

**MOROCCO.** Occupying the northwestern corner of the continent of Africa, Morocco is divided into three zones: First and most important, the French protectorate, including approximately 85 per cent of both area and population, with Rabat as the political capital and Casablanca as the leading port and commercial centre; second, the Spanish protectorate, a narrow strip of land extending for about 300 miles from the Atlantic Ocean along the Mediterranean, with Ceuta, Melilla, and Tetuan as the principal localities; and third, the international Tangier zone administered in accordance with the terms of the Paris protocol of July 25, 1928, adhered to by France, Great Britain, Spain, and Italy. The total area is about 213,350 square miles divided roughly as follows: French Zone, 200,000; Spanish Zone, 13,125; Tangier Zone, 225.

**FRENCH MOROCCO.** The area effectively occupied by the French in 1931 was about 162,162 square miles, in which the census of 1931 showed 5,057,449 inhabitants, compared with 4,229,146 at the census of 1926. In 1929 births numbered 8141 and deaths 6625. The population of the chief cities in 1931 and 1926, respectively, was: Marrakech, 191,936 (149,263); Casablanca, 160,418 (106,608); Fez, 106,858 (81,172); Rabat, 53,000 (38,044). The population consisted of 4,230,000 Islamized Berbers and Arabs, 120,000 native Jews, and 150,000 foreigners. The total school enrollment in 1930 was 50,453, of whom 27,086 were in European schools, and 11,914 in Israelite schools.

**Production, Etc.** Farming and stock raising are the chief occupations. In 1929-30 there were 8,885,000 acres of arable land (8 per cent of the total area), 281,000 acres of trees, shrubs, and bushes, 11,614,000 acres of grazing land, and 4,942,000 acres of woods and forests. Wool production from 6,613,000 sheep was 21,867,000 pounds in 1931 (19,300,000 pounds in 1930). Other livestock were (1931) 1,965,000 cattle, 3,195,000 goats, 91,000 swine, 209,000 horses, 680,000 mules, and 116,000 camels. Production of the chief crops in 1931 was: Wheat, 29,684,000 bushels; barley, 58,619,000 bushels; oats, 1,660,000 bushels; corn, 5,326,000 bushels; linseed, 932,000 bushels; wine, 7,925,000 gallons; olive oil (in 1931-32), 2,628,000 gallons. Although iron ore, coal, zinc, lead, and manganese deposits exist, phosphate is the principal mineral exploited; production in 1931 was 900,723 metric tons (1,779,000 tons in 1930). The phosphate industry is a state monopoly. Manufacturing is relatively unimportant.

There is normally a large excess of imports over exports. In 1931, imports and exports were valued at \$81,665,000 and \$30,029,000, respectively, as compared with \$86,572,000 and \$28,195,000, respectively, in 1930. Manufactured products, consisting principally of cotton goods, automobiles, gasoline, oils, cement, and rails, are the chief imports, while eggs, palm fibre, wheat, and other agricultural products are the chief exports. France furnished 59.7 per cent of the imports and took 40.9 per cent of the exports in 1930. The ordinary budget for the fiscal year ended Mar. 31, 1932, placed receipts at 921,725,000 francs (franc equals \$0.0392) and expenditures at 921,312,000 francs. The public debt on Jan. 1, 1932, stood at 1,750,210,000 francs (\$68,608,000), as against 1,030,624,000 francs

(\$40,400,000) on Jan. 1, 1931. The debt increase was due to the action of the government in guaranteeing private loans for railway and port developments. Railways, extending 1433 miles (1929), reported gross receipts equivalent to \$5,912,000 in 1930. There were 2764 miles of motor highways. Vessels entering the ports in the foreign trade in 1930 numbered 2208, of 3,482,000 net registered tons.

**Government.** While nominal authority is vested in the Sultan of Morocco, who resides in the French Zone, usually at Rabat, effective authority is exercised by the French Resident General, who possesses the power of veto over all the Sultan's edicts and decrees. Local administration is supervised by native caids and French agents, or controllers. Sultan in 1932, Sidi Mohammed. French Resident General, M. Lucien Saint, appointed Jan. 2, 1929.

**SPANISH MOROCCO.** The Spanish Zone (area, about 13,125 square miles) had an estimated population of 600,000, including some 38,000 Europeans and 11,000 native Jews. The chief towns are Tetuan (the capital), 38,000; Melilla, 61,000; Ceuta, 52,000; Larach, 26,800. Agriculture and tunny fishing are the chief industries, although some iron ore is mined in the Melilla district and exported. European colonization is spreading into the fertile Guis valley. Eggs, livestock, iron ore, and farm products are the chief exports; wines, textiles, tea, sugar, and candles the chief imports. In 1930, imports were valued at 88,033,000 gold pesetas and exports at 30,609,000 gold pesetas (peseta equaled \$0.1929 at par). In order to balance the budget accounts, the Spanish government normally contributed almost half of the total expenditures. The budget for 1929 balanced at 59,184,799 pesetas. Peseta exchange (par \$0.193) averaged \$0.0954 in 1931, \$0.1167 in 1930, and \$0.1468 in 1929. Daily boat services connect Melilla and Ceuta with the Spanish cities of Algeciras and Malaga. There are about 530 miles of hard surfaced highways. The administration is actually controlled by a Spanish high commissioner resident at Tetuan, but nominal authority is vested in a Khalifa, chosen by the Sultan of Morocco from a list of two candidates chosen by the Spanish Government. Khalifa in 1932, Sidi Muley Hassan Ben el Mehedi, Spanish High Commissioner, Luciano Lopez Ferrer, appointed June 20, 1931.

**TANGIER.** See separate article on TANGIER.

**History.** In pursuance of plans to unite Morocco and Algeria and to tap the reputedly rich mining districts of the South Atlas by a railway from the port of Agadir, the French during 1932 continued their combined military and political operations in the southern part of the Atlas Mountains. The submission of some 15,000 tribesmen, after serious fighting, was reported from Rabat on September 16. An unauthenticated report from Madrid to the *New York Times* (October 28) stated that 100,000 troops had been engaged in the summer's operations and had forced the submission of 80,000 families. The escape of some of the rebellious tribesmen into Spanish Morocco led to an agreement between the French and Spanish authorities to cooperate in forcing their surrender.

Early in the year the republican government at Madrid announced its policy with regard to Spanish Morocco. Instead of withdrawing from Morocco, as had been rumored, Spain would proceed vigorously to develop the territory, but un-

der a programme of rigid economy. It was officially stated that the Spanish Foreign Legion in Morocco would be disbanded and that Spain would police the turbulent region by soldier-colonizers, who would be encouraged to take up land and establish themselves permanently there. A revolutionary plot in Spanish Morocco, headed by Abd-el-Krim's lieutenant, Adselam Ben ad, was frustrated on December 19, according to the Colonial Office at Madrid. Notwithstanding this, the Spanish government on December 28 ordered the withdrawal of some 10,000 troops from Morocco, leaving a force of 25,405 regulars, 9184 Moors, and 4404 members of the Spanish Foreign Legion. This indicated that the Foreign Legion had not been wholly disbanded.

**MOTION PICTURES.** In at least one way, the course of the cinema in 1932 was an almost complete reversal of what occurred in the preceding year. Where in 1931, the bankers were busy ousting the veteran amusement magnates and assuming active control of production in the industry, last year found them just as busily engaged in getting out of the business of production and restoring it to its former owners. Audiences at the film theatres continued to fall off rather sharply and there was much talk in Hollywood about the need for retrenchment, the cutting of pre-depression salaries, and the curtailing of unnecessarily lavish expenditures, even though little actually was done in the field of economy. Yet, if the motion picture industry faced a particularly difficult year financially, the cinema as a distinctive dramatic medium did show definite signs of progress.

For one thing it provided evidence of developing a social conscience. Perhaps the most important American photoplay of the year was *I am a Fugitive from a Chain Gang*, adapted from Robert E. Burns's autobiographical account of prison conditions in the South. It possessed a grim, realistic directness that was both dramatically impressive and rather chillingly credible, and it had a very definite quality as an editorial document. Less powerful, but in the same tradition of social criticism, were such pictures as *The Man I Killed*—also called *Broken Lullaby*—which dealt with pacifism and national hatreds, and *The Wet Parade*, an inferior photoplay which attempted to present fairly both sides of the controversy over prohibition, and in its endeavor to be reasonably impartial, failed rather dismally. In addition there were works devoted to political satire (*The Phantom President*); indignant contemplation of political conditions (*Washington Merry-Go-Round* and *Washington Masquerade*); earnest exposés of shyster lawyers (*The Mouthpiece*) and even grave considerations of the possibilities of evil in college athletics (*The All-American* and *Sport Parade*).

There was developed, too, an interest in picturesque biographies of recent figures of minor, but racy, historical interest. In *The Match King* a mild and feeble attempt was made to dramatize the career of that late international adventurer, Ivar Kreuger. More successful was the

picture in *Silver Dollar* of H. A. W. Tabor, one of the founding fathers of the city of Denver. Here was a brisk and hearty portrait of a man, who was made to stand as a symbol of his epoch. *Silver Dollar* was of chief interest as representing one of the most successful efforts of the cinema to dramatize the robust annals of pioneer America, and it seemed to many observers that, without making any effort to be lavish and spectacular, the film recaptured more of a period than such an elaborate photoplay as *Cimarron*, of a year ago, was able to achieve.

Another favorite subject of the screen during 1932 was its own native habitat of Hollywood. As if to display its sportsmanship, the motion picture made a relentless version of *Once in a Lifetime*, that contemptuous comic assault on the dignity of the cinema and its practitioners, which was one of the great recent Broadway stage hits. More sympathetic in its treatment, but possessing its traces of satire, was *What Price Hollywood*, a fresh and lively canvas, which managed quite dexterously to be both a defense of the cinema capital, and a humorous contemplation of its frailties. The other films upon the subject were negligible, since they were never able to maintain their attempted balance between praise and condemnation, and rambled heavily.

The year showed definite signs of marking the close of two important cinema cycles—those of the gangster picture and the horror pictures. Photoplays were still manufactured in these once-popular moods, but there was evidence that they belonged definitely to outmoded schools. It was *Scarface*, the long-delayed and wholesalely homicidal gang melodrama, which handled the subject with such completeness that it seemed to make no further word on the subject necessary for a while. It was this, rather than any disapproval on the part of the censorious, which caused the producers to cut down on the flow of the machine gun melodramas. The horror cycle lingers on, chiefly because of the popularity of Boris Karloff, the successor to the late Lon Chaney as the screen's specialist on grotesque disguises, but since the production of a particularly clumsy work called *White Zombie* these nightmare films have appeared to be less prevalent. One of the best was *Freaks* which took place in a circus sideshow, and which dealt with torture and mutilation.

There were not many musical comedy films produced, but at least two of them seemed to most of the critics among the highest spots reached by this difficult and rather hybrid medium. René Clair, the French director who is the recognized master of satirical musical pictures, was represented by *A Nous la Liberté* and Rouben Mamoulian, who followed in his tradition, directed what is perhaps the most effective American photoplay of this manner in *Love Me To-Night*. The excellence of this work was due in considerable part to the lively and engaging musical score arranged for it by Richard Rodgers and Lorenz Hart. Ernst Lubitsch's *One Hour with You* was another brilliantly managed musical comedy film.

Lubitsch, one of the recognized masters of his craft, stepped out of his customary field to make the poetic drama called originally *The Man I Killed*, which has already been referred to. Adapted from a play by the Frenchman, Maurice Rostand, this drama of a sensitive young French soldier, who felt that war had made him a mur-

on Lake St. Clair at Detroit over the Labor Day week-end, when *Miss England III's* twin motors broke down. Wood had a mere run-around of the course to win. Two weeks later, out on the St. Clair River, at Algonac, Mich., Wood opened the throttle of his huge power plant of 6500 horse power and whirled over the measured mile in better than two miles a minute speed. She set the mark for all time unlimited hydroplanes at 124.86 m.p.h.

The Gold Cup and the President's Cup speed-boat races drew small fields, and were won, as has been the case in recent years, by rejuvenated craft, previously tagged for the scrap pile. *Delphine IV*, owned by Horace Dodge and driven by Bill Horn, set a 30-mile heat record of 59.21 m.p.h. and a total race record of 57.77 m.p.h. in winning the Gold Cup at Montauk Point, L. I. in August. She was a seven-year-old boat, and *El Lagarto*, runner-up, was eleven. *Delphine IV* also won the president's Cup, after *El Lagarto*, George Reis's defending champion, had taken the first heat and had then become disabled in a trial spin.

In outboard competition speed records were also hoisted and several drivers were able to race their boats to 50 m.p.h. or better. Art Sauerberg of St. Louis, in a time trial, drove his boat at 58.915 m.p.h., the fastest speed ever attained by an outboard. Charles Cabot of New Haven, Conn., won the annual Albany to New York race, in which there were 97 entries. Yale won the intercollegiate outboard championships at Lake Skaneateles, N. Y., beating Princeton by thirteen points, 5459 to 5446. Yale's team was composed of Chester Wickwire, Dudley Rockwell, and Paul Sawyer. George H. Townsend, president of the American Power Boat Association, offered a medal for high score among the outboard drivers of the United States and it was won by Jack Maypole, of River Forest, Ill., with 11,738 points.

**MOTOYAMA, HIKOCHI.** A Japanese publisher, died in Osaka, Dec. 30, 1932. Born in Kumanoto in 1853, he attended the Keio-gijuku and began his career as an official of the Hyogo prefectural government. From 1882 to 1886 he was financial director of the Osaka newspaper, *Jiji Shimpō*, and from 1886 to 1892 an executive of the commercial firm, Fujita Gumi, for which he directed reclamation work in Kojima Bay. He then acquired the Osaka *Mainichi* and a few years later the Tokyo *Nichi-nichi*. At the time of his death the combined daily circulation of these papers, and of their English edition, exceeded 3,000,000. The Osaka *Mainichi* published also the Japanese Sunday *Mainichi*, a weekly; the *Economist*, a bi-monthly; and the Braille *Mainichi*, a weekly for the blind. He was influential in the industrial life of Japan, being a director of the Nankai Railway Co., the Meiji Life Insurance Co., and other concerns. Among the philanthropic enterprises which he established were the Mainichi Charity Corps, which gave free medical treatment to the poor; the Better Farming Society, which devoted itself to the improvement of agriculture; and a hospital ship for welfare work among the inhabitants of the coastal villages. The Emperor honored him by making him a mem-

ber of the House of Peers and by conferring on him the Second Order of Merit.

**MOUNT HOLYOKE COLLEGE.** An institution for the higher education of women in South Hadley, Mass., founded in 1837. The registration for the autumn session of 1932 was 1006. The faculty, including professors, associate professors, assistant professors, instructors and chief administrative officers, numbered 137, and there were 54 assistants, graduate assistants, curators, and secretaries. The endowment funds amounted to \$4,520,083 and the income for the year was \$1,234,688. The total amount of gifts and bequests during the year 1931-32 was \$552,166. There were 126,000 volumes in the library. President, Mary Emma Woolley, Litt.D., L.H.D., LL.D.

**MOZAMBIQUE (PORTUGUESE EAST AFRICA),** mō'zām-bēk'. A colony of Portugal, occupying the east coast of Africa between Tanganyika Territory and the Union of South Africa. Area, 287,756 square miles; total (1930) population 3,514,602 including about 17,842 Europeans. The colony is divided into the state-administered Province of Mozambique (area, 235,700 square miles) and the territory of Manica and Sofala administered from Beira by the Mozambique Company under royal charter; area, 52,056 square miles; population, 313,927 (3616 Europeans) in 1928-29. Lourenço Marques (population, 37,307) is capital of the Province.

The chief products are sugar, maize, cotton, and minerals. For 1929, imports into the Province totaled 14,001,545 escudos gold; exports, 11,335,517 escudos gold (1 escudo gold equals \$1.08). Imports and exports of the chartered territory (1928) were 6,336,000 and 2,436,000 escudos, respectively. The budget of the Province in 1931-32 was estimated to balance at 313,618,127 escudos. In the chartered colony receipts for 1928 totaled about 64,758,000 escudos and expenditures about 44,570,000 escudos.

The principal ports are Mozambique, Beira, Lourenço Marques, Porto Amelia, and Quelimane. In 1930, 838 vessels of 3,887,669 tons entered and 833 vessels of 3,863,571 cleared the port of Lourenço Marques; 432 vessels of 1,644,271 tons entered and 433 of 1,645,192 tons cleared the port of Beira. The Province is under a governor-general, assisted by a governor in each of the six districts. There is a military force of about 3900 men (2400) natives. Governor-General in 1932, José Cabral.

**MUNICIPAL GOVERNMENT.** Overshadowing all other events in the municipal field was the financial plight of the cities during the depression. This began to be acute in some cities in the latter part of 1931 but it was not generally realized until 1932. Even then the officials of many cities were slow to institute retrenchments, notwithstanding the urgent demands of taxpayers. As the year went on city, county, and State taxpayers' associations were organized in rapidly increasing numbers until by the close of the year there were thousands of these organizations. Their pleas for the reduction of budgets and taxes were supplemented by chambers of commerce and other bodies, commercial and civic. Surprisingly little heed was given to these demands until the cities were brought up short by

their inability to get money to meet their expenses. While these had been running higher and higher tax collections had fallen off, and bonds for permanent improvements initiated in better times became unsalable, thus stopping construction work and adding to the unemployed. It became harder and harder to raise money for operating expenses. Loans were negotiated with difficulty and in numerous instances denied. Beginning early in the year and continuing to its end bankers insisted on reductions in budgets and on retrenchment after the budgets had been adopted. Notable instances of such bankers' pressure were afforded by New York City, Newark, N. J., Philadelphia, Detroit, and Chicago.

In *New York City* the financial emergency was so great in January that the bankers, after insisting on retrenchments, made a short-term loan of \$100,000,000 at the high rate of 6 per cent and agreed to provide a revolving fund of \$150,000,000 more, at 5½ per cent. The retrenchments consisted of stopping the construction of public improvements totaling scores of millions. As the year drew toward a close the city again found itself at the end of its financial rope. It had adopted a budget somewhat under the large one of the previous year, but reduced chiefly by protracting the time of repayment of subway bonds. It had failed to reduce salaries, after two attempts. Again, the bankers took a hand. They called attention to the fact that the city authorities had failed to carry out an economy resolution adopted to obtain financial aid in January. The bankers agreed to loan money needed for the present and immediate future provided the city would appeal to the Governor to call a special session of the Legislature to authorize reopening the 1933 budget, with the understanding that cuts totaling \$40,000,000 would be made, about equally divided between salaries and other expenses. The needed legislation was obtained and at the close of the year the city authorities had taken steps to cut salaries of \$2000 and over on a sliding scale representing 5 per cent on salaries between \$2000 and \$3000 and on up to 25 per cent in salaries of \$15,000 or more.

At *Chicago* complications arising from tax assessment methods have added to all the difficulties incident to the depression. Necessity for a re-assessment of property threw the tax bills two years or so behind; then a lawsuit over the validity of 1928 and 1929 tax assessments held up tax collection and cast doubts on the validity of the 1930 taxes as well. Meanwhile tax strikes were organized. The Legislature set up new tax assessment machinery. The court sustained the legality of the 1928-1929 assessments, so the situation was much improved at the close of 1932. But through the year salaries were in arrears and where salary warrants or scrip had been issued they were cashed at heavy discounts.

With variations due to local conditions, a number of other large cities and hundreds of smaller ones were financially embarrassed during the year. Reductions in budgets and tax rates were common. These were effected by curtailing services and cutting salaries. Early in the year there was much resistance to salary cuts but the emergencies confronted lessened the resistance as the year wore on. The greatest resistance came from policemen, firemen, and school teachers, who in more prosperous times had obtained local and State action increasing their pay and forbidding its reduction. To overcome this resist-

ance the method commonly employed was to get the consent of the protected to deductions from their pay with the understanding that it would not permanently reduce their salaries or affect their pensions. In the case of New York City, already mentioned, recourse to the Legislature was necessary to set aside mandatory salaries.

Few Legislatures met in 1932 but most of them will be in session in 1933 when salary and other legislation tying the hands of cities in controlling their expenses is likely to be attacked. The necessity of this becomes evident when it is understood that the combined debt service and salary payments of most cities make up half or more of their total expenses. Debt service already incurred must be met. Salary cuts are therefore the main possibilities in efforts to cut expenses to meet decreasing revenues.

The decrease in city revenues arises not only from decreased collection of taxes levied but also from a decline in tax payments due to shrinkage in assessed valuations and to reductions in tax rates. Of 256 cities of 30,000 population or more 112 increased and the same number decreased their tax rates for 1932 as compared with 1931 while 32 reported no change. The average for the 256 cities was \$35.03 in 1932 against \$34.99 in 1931, a rise of 4 cents. These figures are actual tax rates. Readjusted to a 100 per cent valuation there was an increase from \$25.39 to \$26.31 or 92 cents. Of the 256 cities, 149 increased their rates, 95 reduced theirs, and 12 reported no change. The increase in the average rates are attributed to higher ratios of assessed to the legal basis of valuation, and to reduced assessments. As to the latter, only 40 of the 256 cities increased their valuations in 1932 while 149 reduced them and 67 reported no change. At least 115 of the 256 comparable cities reduced their total tax levy in 1932. (For a more detailed comparison, and for the actual figures, see Rightor "Comparative Tax Rates for 277 Cities in 1932," in the *National Municipal Review* for December, 1932.)

Offsetting salary cuts and other reductions in expenses was the enormous increase in unemployment relief and other aid to the impoverished. Expenditures for these purposes in 125 cities of 50,000 or more population were 87 per cent higher in July, 1932, than for the same month in 1931, the total payments being \$21,700,000 in July, 1932, in this group of cities containing one-fourth of the population of the United States. In 20 cities showing large increases in July, 1932, over July, 1931, the percentages ranged from 75 in Boston to 2150 in Wilmington, Del. Because of lack of funds, the Los Angeles area showed a decrease of 71.2 per cent; Detroit area, 23.5; Philadelphia, 54.3 per cent. (See Bane, "Feeding the Hungry," in the *National Municipal Review*, for November, 1932.)

In contrast with the bitter conflicts over salary and wage reductions in scores of cities and the sometimes arbitrary and generally haphazard methods of scaling them down, is the method in vogue at St. Paul, Minn., where readjustments have been made from time to time in the past 10 years on the basis of the cost-of-living index numbers of the U. S. Bureau of Labor Statistics. The adoption of this method was preceded by a standardization of salaries and wages under 27 classifications which include the entire civil service of the city. In the earlier years, the readjustments were upward. In 1931, a slight cut

was indicated and made. When a second and higher cut was indicated for 1932 a moratorium was asked and granted, but for the last half of the year a cut was made. (For the history of the St. Paul plan and its workings in detail see Herbert, "St. Paul's Fair Wage System," in the *National Municipal Review* for October, 1932.)

Statutory limitations on tax rates have existed in many States for years but probably none so drastic as those enacted by Indiana and Michigan in 1932. Indiana fixed a rate of \$1.50 per \$100 on all taxable real estate and personal property—\$0.15 for the State and \$1.35 for counties, cities towns, and school districts. The average rate for State and local taxes in 1931 was \$2.80 on a combined valuation of five billions. Reappraisements cut the valuation to four billions for 1932. The net result of the new tax limit and the reduced valuation is to cut the amount payable from \$28 to \$12 per \$1000. Realizing the impossible situation thus created, the statute permits a higher but unstated rate in case of emergencies, to be fixed on request of the taxing district by the county board of adjustment—on which the cities, towns, and school districts have no representative. In Michigan a constitutional amendment was adopted limiting tax rates for all purposes to 1½ per cent of the assessed valuation, but providing that it may be raised for a limited period to not over 5 per cent if authorized by referendum vote.

In some cities payment of taxes by installments in place of the general method of yearly or semi-yearly payments was authorized during the year. Thus, at Portsmouth, Va., taxes formerly became due November 1 and delinquent December 1, with a 5 per cent penalty, and with 6 per cent interest beginning January 1. This was changed to permit payment in installments, as frequently as weekly if desired, with 6 per cent interest credit on the advance payments until the tax-due date. By this means the amount to be raised by tax-anticipation loans was reduced.

Changes in the framework of city government through new or amended charters, including adoptions of the city manager plan, were fewer than in earlier years. Two California counties voted in November on the adoption of the manager plan. The plan was voted down in Mendocino County. San Mateo County, adjoining San Francisco, adopted a county-executive charter, 16,541 to 8592. Five county supervisors will be elected at large, one from each of five districts. They will appoint a county executive from a list submitted by a "qualification board" of five, of whom two will be supreme court judges selected by the presiding judge, one the superintendent of schools, one chosen by these three, and one selected by the county supervisors but not a supervisor. The county executive appoints the members of the health and welfare board, an engineer and surveyor, a building inspector, a coroner, the tax collector, treasurer, purchasing agent, recorder, and recreation commissioner—all for terms of four years. All these appointments are subject to confirmation by the supervisors who also fix the salaries of the appointees. Of the other executives and administrative officers, some are appointed by the supervisors and some are elected. Altogether the set-up is not true to the manager type. The charter becomes fully effective July 1, 1933.

Two attempts to recall a mayor were defeated, one at Atlanta and the other in Los Angeles. In

both cases one of the charges was ridicule brought on the city by the mayor in refusing to drink a toast while on a tour of mayors in France. The Atlanta recall was also sponsored by labor leaders and others opposed to salary cuts advocated by the mayor. Los Angeles was one of the early cities to adopt the recall. It recalled a mayor in 1909. In New York, James Walker resigned as mayor at the close of a hearing before Governor Roosevelt on various allegations made by Samuel Seabury, counsel for a legislative committee appointed in 1931 to investigate the government of the city. Late in the year, three plans for a new charter for New York were made public: one laid before the investigating committee by Ex-Gov. Alfred E. Smith; one formulated by Mr. Seabury; the third tentatively outlined by a committee created by Mayor-elect O'Brien.

A number of cities and special districts applied to the Reconstruction Finance Corporation (see UNITED STATES) for self-liquidating loans for public improvements.

At the close of 1932 there were 445 municipalities with or about to have city managers; 428 in the United States; 1 in Puerto Rico; 13 in Canada; 3 in Ireland. For distribution by States and cities and other details see *City Manager Year Book*, 1933 (Chicago).

**BIBLIOGRAPHY.** Notable books of the year were: Forbes, *Purchasing for Small Cities* (New York); Industrial Conference Board, *Cost of Government in the United States* (New York); Ridley and Nolting, *City Manager Year Book*. Consult also a series of articles on municipal costs and administration and the demand for tax reduction in the time of depressions, by various specialists, in *Engineering News-Record*, February 25, March 3, 10, and 31, July 7 and 14, and December 22; Honay, "Austrian Cities in the Financial Crisis," Hodges, "The Depression in German Cities," and Betters, "The Crisis in German Municipal Finance," in *National Municipal Review*, May, October, and November.

**MUNICIPAL LEAGUE, NATIONAL.** See NATIONAL MUNICIPAL LEAGUE.

**MUNICIPAL OWNERSHIP.** *New York City* began the operation of its Eighth Avenue rapid transit subway in September, greatly increasing its municipally-owned subways and starting to operate this one with its own equipment and personnel. The other lines are leased and privately operated. Construction was begun in 1925. The line put in use extends from Chambers Street to 207th Street, a distance of 12.3 miles. Extensions nearly completed will carry the line into Queens and also into Brooklyn Borough. See RAPID TRANSIT.

The city-owned Cincinnati & Southern railway from Cincinnati to Chattanooga, 339 miles, came to the front through a lawsuit brought by Cincinnati taxpayers against the lessee, the Southern Railway, to prevent the removal of some of the railway offices to Atlanta. The city has owned this railway for over half a century. It receives a yearly rental of \$1,200,000 for the line. An unusual municipal enterprise is the St. Paul (Minn.) City Bank, established some years ago. Early in 1932 a total of \$9,662,000 of "participating certificates" in the profits of the bank were held by 8000 investors. The bank owned \$9,700,000 of St. Paul city bonds, generally bearing 4 and 5 per cent coupons. Certificate holders are now paid 3 per cent, a reduction from 4 per cent paid earlier.

Cities in *Germany* are suffering from deficits in municipally-owned utilities and other services acquired since the War. These include electric and gas works, airplane fields, hospitals, bath houses, museums, theatres, hotels, information bureaus, and advertising signs, "to mention only a few," says a writer in the *National Municipal Review* for September, 1932. With the depression came deficits from the operation of many of these activities. Some of the services have been reduced and some abandoned.

Of 10,789 water works in the United States, according to statistics gathered by R. E. McDonnell, 7853 were publicly and 2936 privately owned, or 73 and 27 per cent, respectively. Municipal ownership prevailed in the 20 largest cities of the United States and in all but 9 of the cities that had a population of 100,000 or more in 1930.

**MUSIC.** GENERAL NEWS. As during the two preceding years, the unfavorable economic conditions prevailing throughout 1932 had their effect upon musical activities. In the United States, where most of the major musical institutions had hitherto been able to weather the economic storm, the Chicago Civic Opera and the Philadelphia Grand Opera Company decided to give no performances in 1932-33. This left the Metropolitan Opera of New York as the only organization of this type still giving an extensive season in this country. In Europe the principal institutions, for the most part, held their own, although some of the state-directed opera companies had to face reductions of subsidies.

In New York, where there was an especially large number of unemployed musicians, the Musicians Emergency Aid, organized in December, 1931, conducted a campaign to obtain \$300,000 for their relief. It continued its activities after this goal had been reached in the spring, deciding to become a permanent relief organization under the title of the Musicians Emergency Foundation. Funds were raised both through individual contributions and large-scale benefit concerts. There as elsewhere, relief in several cases took the form of providing employment for musicians rather than giving direct financial aid.

The 200th anniversary of the birth of Josef Haydn (March 31), was observed by musical organizations both in America and Europe. Vienna held a Haydn festival in April, and, in connection with it, opened a Haydn exhibition at the Municipal Museum. Haydn festivals or special observances were also held in the smaller cities of Austria and elsewhere in Europe. In America, there was no specially designated Haydn festival, but many organizations and individuals commemorated the anniversary by giving Haydn's music a considerable place in their programmes;

his oratorios *The Creation*, and *The Seasons* were performed in several of the important American spring festivals. A little known comic opera by Haydn, *Life on the Moon* was given in March at Schwerin, Germany, in an arrangement by Mark Lothar.

The centennial of Goethe's death also found observance in many points by performances of music inspired by or based upon Goethe's works. The twenty-fifth anniversary of the foundation of the MacDowell Colony at Peterborough, N. H., was observed throughout America in the autumn, when orchestras and other organizations featured MacDowell's music on their programmes.

In January the Berlin Symphony Orchestra under Ernst Kunwald performed an early incomplete violin concerto by Beethoven with Juan Manen, who had finished and arranged the solo. A recently discovered quartet by Schubert for guitar, flute, viola, and cello had its first performance in Madrid in April. A more modern rediscovery was *Pinotta*, an opera written by Mascagni at the age of seventeen, which was performed at San Remo in the spring under the composer's direction. He had left the score with his landlord as security for a debt, and the work was not brought to light until 1931.

In Paris, the unveiling of a monument to Debussy was accompanied by special ceremonies on June 17, including a concert at the Champs-Élysées Theatre conducted by Philippe Gaubert, Gabriel Pierné, and Arturo Toscanini.

The winning number in an Italian national song contest, Ennio Porini's *Traccas* for tenor and piano, was first performed at Milan in the spring, and described as by long odds the strongest new work that had come to light of late in Italian concert halls. Two hundred singers and violinists took part late in the spring in an international contest in Vienna. Karoly Szenassy, a Hungarian, and Giconda de Vito, an Italian, were the winning violinists. The first prize for singers was divided among five aspirants.

In America the \$1000 Hollywood Bowl composition prize contributed by Kathryn Yarnell was won by H. Waldo Warner with his *Hampton Wick*, after Martin Chuzzlewit. Hans Jelinek, a young Viennese composer, won the \$500 prize offered through the New York Association of Music School Settlements for a work suitable for educational purposes. In Russia a prize contest, closing in March, 1933, was arranged to celebrate the fifteenth anniversary of the Revolution, with awards offered for operas, ballets, and orchestral works.

The National Broadcasting Company held a \$10,000 prize contest for a short orchestral work by an American composer. The first prize, \$5000, was won by Philip James, of New York, with his *Station WZZB*, a humorous depiction of activities in a broadcasting station. Max Wald, Carl Eppert, Florence Galajikian, and Nicolai Bere-zowsky were the other winners. The announcement of the awards was made May 8, when the five prize-winning works were played in New York in a radio concert under Eugene Goossens' direction.

In accordance with the policy of giving performances in two years out of every three, there was no Wagner Festival at Bayreuth in the summer of 1932. According to an arrangement to go into effect with the 1933 festival, Heinz Tietjen had been engaged as artistic director and Wil-

helm Furtwaengler as musical director. But, in June, Mr. Furtwaengler resigned this position, stating that he was unwilling to submit to the dictatorship of Mme. Winifred Wagner, and Arturo Toscanini was engaged as one of the directors for the 1933 series.

Mr. Toscanini's reengagement was unexpected, as, after his disagreement with Mme. Wagner over the festival's artistic policy in 1931, it was thought unlikely that he would be willing to return.

On March 12, the Congregation of the Council at the Vatican issued a decree discouraging the use of modern sacred music in Catholic churches and forbidding its use when the question of royalties to the composer or publisher was concerned.

A Congress on Oriental Music was held in Cairo from March 29 to April 3 as a result of the initiative of King Fuad. Among the problems discussed were the development of a standard scale and methods of teaching.

**ARTISTS.** Egon Petri, a Dutch pianist well known in Europe, made his American debut in a New York recital on January 12, winning warm praise as an "artist wholly absorbed in his task of re-creation," to quote Lawrence Gilman in the New York *Herald-Tribune*. He returned for a second American tour in the fall, when he appeared as soloist with several of the principal symphony orchestras. A seventeen-year-old Austrian pianist, Poldi Mildner, made a striking impression in her first New York recital on November 19, exhibiting an extraordinary technical talent, élan, and bravura, although critical praise was coupled with the reservation that the young pianist still had something to learn in the matter of style and interpretation.

Another Austrian artist heard in New York for the first time in 1932 was Lotte Lehmann, soprano, then a member of the Chicago Opera. In her first recital on January 7, she was praised as a singer of appealing personality and interpretive ability. Georges Enesco, Rumanian composer-violinist, and Guiomar Novaes, Brazilian pianist, returned to the United States for concert tours after absences of several seasons.

Although seventy-one years old, Ignace Jan Paderewski made another American tour in the winter and early spring, and accomplished an innovation in New York concert history by giving the first solo recital to be heard in the vast spaces of Madison Square Garden. There, on February 8, 16,000 persons heard the pianist, who was giving his services for the benefit of the Musicians Emergency Aid. The proceeds for relief work among musicians were \$33,000. Another septuagenarian musician, Ernestine Schumann-Heink, continued to make occasional appearances, singing in several motion picture theatres. Luisa Tetrazzini, coloratura soprano, who had been a well known member of Oscar Hammerstein's Manhattan Opera Company, returned to America after a long absence in January, when she also appeared in cinema theatres.

On February 14 Geraldine Farrar announced that she had permanently retired from the concert stage and would limit herself in the future to occasional radio programmes. Josef Hofmann, pianist, took a vacation from concert appearances during the season of 1931-32, with the single exception of a New York appearance with orchestra on April 3 for the Musicians Emergency Aid.

Yehudi Menuhin, who celebrated his fifteenth

birthday in January, divided his time during the year between America and Europe, making a limited number of appearances on both sides of the Atlantic. In his New York recitals, it was noted that his playing seemed in a transitional state, losing a little of the purity of tone which had been a feature of the young violinist's playing as a boy prodigy, but yet foreshadowing what his playing might be like a few years hence. Two younger boy violinists who had won praise in America for their playing, Ruggiero Ricci and Grisha Goluboff, made their first European tours in the autumn.

Among artists making Australian or Oriental tours during the summer months—the winter in the Antipodean sense—were Amelita Galli-Curci, soprano; Joseph Szigeti, violinist, and Benno Moiseiwitsch, pianist.

**CHAMBER MUSIC.** During 1932 the United States had no prominent chamber music festival such as that held at intervals at the Library of Congress in Washington, except for the Yaddo festival of American music at Saratoga (q.v. under *Festivals*). No new group has yet come forward to attain the nation-wide renown of the former Flonzaley Quartet, but during 1932 American audiences were offered the usual number of chamber music concerts by resident and touring organizations. A new Chicago group, the Philharmonic Quartet, of Chicago Symphony players, gave its first public performance on February 29. The London String Quartet, in a New York concert in March, introduced to America Haydn's recently discovered first quartet, in E flat, and Malipiero's *Cantari alla Madrigalesca*. The Busch and the Lener Quartets were among the principal chamber music ensembles making extensive European tours in 1932. During the summer, Felix Weingartner completed a string quartet dedicated to the Lener group, which has exclusive rights to its performance for a year.

**CHORAL SOCIETIES.** In the winter, the American Choral and Festival Alliance began a campaign for the organization of paid choruses to become subsidiaries of the established American orchestras, to organize new choral societies and coordinate existing activities, as well as organizing folksong and dance festivals in 1933 and 1934. Meanwhile existing American choral organizations held their own; a newcomer to their ranks was the Los Angeles Civic Chorus, which made its debut in March with the Los Angeles Philharmonic Orchestra.

On January 20, the Schola Cantorum of New York, conducted by Hugh Ross, gave the first American performance of a work over eight centuries old, *Sederunt Principes*, an "organum quadruplum" by the twelfth century composer Perotinus, believed to have been first performed at Notre Dame in Paris in 1198. This was presented in an arrangement by Rudolf Ficker of Vienna, a specialist in music of the period. The freshness, deftness of construction, and emotional force of the work astonished its hearers. In the February festival of the Mendelssohn Choir of Toronto, a sixteenth century work, Thomas Tallis's forty-part motet *Spem in alium nunquam habui* was sung for the first time in North America.

John Alden Carpenter's *Song of Faith*, composed for the national observance of the 200th anniversary of George Washington's birth, was first sung in a radio concert in February, and

later was heard in several of the American spring festivals.

The principal choral event of the year in Europe, as far as numbers were concerned, was the summer German Sängerbundesfest at Frankfurt-am-Main, in which 35,000 singers took part. Among new works offered were the prize-winning *Day of Judgment* by O. Jochum, G. Nelli's *On German Need* and Bruno Stürmer's *Mass of the Machine Man*.

The Wiener Saengerknaben, 22 boys representing an institution founded in the fifteenth century which was, in Hapsburg days, a training school attached to the Imperial Chapel in Vienna, began their first American tour in November. An ensemble of unusual type, this group made a very favorable impression in singing combining the savor of youth and unsophistication with notable command of choral technique.

Among new choral works performed in Europe for the first time during the year were Nicholas Nabokoff's *Ode* (Strasbourg), Joseph Hass's *St. Elizabeth* (Vienna), Conrad Beck's *Death of Oedipus* (Prague), Delius's *Song of Farewell*, a setting of Whitman poems (London), Charpentier's *La Vie du Poete* (Paris), and Liszt's *Via Crucis* (Dresden). The Liszt work had been composed in 1878, but not printed before this year. A setting of the 90th Psalm by a seventeen-year-old composer, Gottfried Müller, was warmly praised when first performed at Dresden in March under Fritz Busch's direction.

**AMERICAN FESTIVALS.** In the annual Mozart Festival at Harrisburg, Pa., on April 7 and 8, Mozart's G minor Mass was the principal number offered under the direction of Ward-Stephens. The Virginia State Choral Festival, organized through the initiative of John Powell and others, was held from April 25 to 30 in Richmond, with programmes including Dvorak's *Stabat Mater* and music by Virginians.

The first Yaddo Festival of contemporary American music was held at Saratoga Springs, N. Y., on April 30 and May 1. The programmes consisted of chamber music, piano music, and songs by Israel Citkowitz, Carlos Chavez, Vivien Fine, Paul F. Bowles, Virgil Thomson, Roger Sessions, Louis Gruenberg, Roy Harris, Nicolai Berezowsky, Robert Russell Bennett, Marc Blitzstein, and Oscar Levant.

The Eastman School of Music of the University of Rochester (N. Y.), held its second annual festival of American music from May 3 to 6 under the general direction of Dr. Howard Hanson. Among the works performed were Bernard Rogers's cantata *The Raising of Lazarus*, chamber music by Quincy Porter, Ernest Bloch, Deems Taylor, and Bernard Wagenaar; Herbert Ingh's first symphony, Daniel Gregory Mason's prelude and fugue for piano and orchestra, Irvin McHose's concerto for oboe and orchestra, and two ballets, Herbert Elwell's *The Happy Hypocrite* and John Alden Carpenter's *Skyscrapers*.

The twenty-sixth annual Bach Festival at Bethlehem, Pa., took place May 13 and 14 under the direction of Dr. J. Fred Wille, who conducted the Bach Choir in nine cantatas and the B minor Mass. In December, it was announced that no festival would be held in 1933 owing to Dr. Wille's illness.

The thirty-ninth festival at Ann Arbor, Mich., was held May 18 to 21 with the Chicago Orchestra under Frederick A. Stock taking part. Gustav Holst, as guest conductor, directed the

American première of his *Choral Fantasia*; Rimsky-Korsakoff's *The Invisible City of Kitezh* was also heard for the first time in America, while other major numbers were Haydn's *Oration* and Stravinsky's *Symphony of Psalms*. The Chicago Orchestra under Mr. Stock also furnished the instrumental background for the twenty-fourth North Shore Festival at Evanston, Ill., May 23-28.

Albert Stoessel conducted the eighth annual Westchester County Music Festival at White Plains, N. Y., on May 20 and 21, with Haydn's *The Seasons* and Beethoven's Ninth Symphony among the principal numbers. In the seventy-third festival at Worcester, Mass., held in October under Mr. Stoessel's direction, Elgar's *Dream of Gerontius* was the principal major offering, while a *Benedicite* by Vaughan Williams was heard for the first time in America.

**EUROPEAN FESTIVALS.** The tenth festival of the International Society for Contemporary Music was held in Vienna from June 16 to 22, in connection with the Festival Weeks in the Austrian capital. It apparently revealed no new music of unusually striking merit. Among the composers represented in the programmes were Nicolai Lopatnikoff, Karel Haba, Ernst Krenek, Julius Schloss, Leopold Spinner, Hanns Jelinek, Alban Berg, Karel Reiner, Walter Leigh, Claude Delvincourt, Jean Françaix, Malipiero, Vittorio Rieti, Robert Gerhard, Joseph Mahdic, Boleslaw Wojtowicz, Arthur Bliss, Conrad Beck, and Edward Erdmann. The Vienna State Opera contributed performances of Berg's *Wozzeck*, Julius Bittner's *Der Muskant*, and Egon Wellesz's *Die Bacchantinnen* as part of the festival.

The annual festival of Wagner and Mozart operas in Munich opened on July 18 with *The Meistersinger*. The "Ring" cycle, *Tristan und Isolde*, and *Parsifal* were the other Wagnerian offerings, while the Mozart repertoire consisted of *The Marriage of Figaro*, *Don Giovanni*, *Così fan tutte*, and *Die Zauberflöte*. Hans Knappertsbusch again was general musical director for the festival, which closed August 22; Sir Thomas Beecham conducted *Die Zauberflöte*.

The Salzburg festival, held in August, included operas and symphony concerts performed by the Vienna State Opera and Vienna Philharmonic Orchestra, serenades, and church programmes, besides the usual performances of von Hofmannsthal's *Jedermann*. Among operas offered were Mozart's *Die Entführung aus dem Serail*, and *Così fan tutte*, Beethoven's *Fidelio*, Gluck's *Orpheus*, Strauss's *Der Rosenkavalier*, and Weber's *Oberon*. Fritz Busch, Bruno Walter, Philippe Gaubert, and Richard Strauss were the conductors.

The second Chopin Festival in Majorca, the scene of much of Chopin's creative activity, was held in May. Zürich paid tribute to the Haydn bi-centennial in May with nine orchestral programmes offering music of various nationalities, and each including a Haydn symphony; Pierre Monteux, Vittorio Gui, Volkmar Andreare, Sir Henry Wood, and Hermann Abendroth were the conductors. The Allgemeine Deutsche Tonkünstlerverein held its annual festival in Zürich from June 10 to 14.

In the second international festival in Venice, September 3 to 15, the principal feature of the repertoire was chamber opera. Among works presented in this form, early and modern, were Monteverdi's *Combattimento di Tancredi e Clo-*

rinda, Franco Casavola's *L'Alba di Don Giovanni*, Malipiero's symphonic monodrama *Pantea*, Respighi's *Maria Egiziaca*, and Casella's *La Favola d'Orfeo*, which was considered the outstanding work of the festival. There were two programmes of North American and South American music for chamber orchestra, the former conducted by Fritz Reiner.

The Three Choirs Festival was held in Worcester, England, in September, under the general direction of Sir Ivor Atkins. Vaughn Williams's *Magnificat* had its world première, and Karol Szymanowski's *Stabat Mater* was heard for the first time in England.

**ORCHESTRAS.** The New York Philharmonic-Symphony Orchestra began the year without the services of its chief conductor, Arturo Toscanini, who had returned to Italy to take an intensive cure for the muscular trouble in his right arm. Hans Lange and Ossip Gabrilowitsch, conductor of the Detroit Symphony, were in charge for the first concerts of the year. Bruno Walter directed the orchestra from January 11 to February 28. His novelties were the suite from Serge Prokofiev's ballet *The Prodigal Son* (January 21), a suite from Krenek's music for Goethe's *Der Triumph der Empfindsamkeit* (January 21), and Franz Schmidt's *Variations on an Austrian Hussar's Song* (February 3). Daniel Gregory Mason's second symphony, in A major, was heard for the first time in New York on February 18. Mr. Walter was already known to New York, having conducted the New York Symphony as a guest in three visits from 1923 to 1925, but made a more striking impression this time as a musician of good taste, authority, and interpretative ability, a thorough master of the technique of his art.

Sir Thomas Beecham conducted the Philharmonic-Symphony for the balance of the season, except for a week when Ottorino Respighi conducted programmes of his own music. On March 16, Mr. Respighi conducted the first performance anywhere of his chamber opera, or "triptych for concert," *Maria Egiziaca*. This, with a libretto by Claudio Guastalla based on the story of the fourth century saint, Mary of Egypt, was, on the whole, unfavorably received by the critics, who styled the music uninteresting and platitudinous. Sir Thomas's programmes included several numbers by Delius and two works of Elgar, but otherwise eschewed British music. Mozart and Handel were liberally represented.

After completing his cure in Italy, Mr. Toscanini returned to New York to conduct the Philharmonic-Symphony in a single post-season concert on April 28 for the benefit of unemployed musicians. Entirely restored to health, he conducted the Philharmonic-Symphony for the scheduled period from October 3 to November 27, presenting four Polish Dances by Alexander Tansman for the first time in America, and the second symphony of the Dutch-American composer Bernard Wagenaar for the first time anywhere. Issay Dobrowen, a Russian conductor who had been associated with the San Francisco Symphony for the past two seasons, took charge of the Philharmonic-Symphony for two weeks in December. His novelties were a *Passacaglia* by Ludvig Jensen, a Norwegian composer, and Ettinger's *Old English Suite* based on tunes by sixteenth-century English composers.

The Manhattan Symphony Orchestra, of New York, changed conductors after the close of the

winter season, David Mannes succeeding Henry Hadley. A new organization, the New York Orchestra, gave its first concert in April at Carnegie Hall under the direction of Modeste Altschuler, and, during the summer, played the principal part in a new series of outdoor concerts in uptown Manhattan. In the fall it was announced that Nikolai Sokoloff, then in his last season with the Cleveland Orchestra, had accepted the conductorship of the New York Orchestra, and would begin a regular series of concerts in 1933-34.

Concerts by or for the benefit of unemployed musicians made a substantial addition to orchestral activities in New York. The Musicians Symphony Orchestra, organized to give employment to 200 instrumentalists, gave five spring concerts in the Metropolitan Opera House under Leopold Stokowski, Sandor Harmati, Walter Damrosch, Sir Thomas Beecham, and Eugene Goossens. The series was continued in the autumn. Both the conductors and the prominent soloists taking part gave their services gratis.

In November Walter Damrosch began a series of five festival symphony concerts in Madison Square Garden for the benefit of the Musicians Emergency Aid's relief work. Several concerts by orchestras of unemployed musicians were given in New York and Westchester County through the support of the Toscanini Fund derived from the proceeds of the Philharmonic-Symphony's benefit concert of April 28.

The Boston Symphony Orchestra, in its fifty-first season and its eighth under the conductorship of Serge Koussevitzky, began the year with the first American performance of Stravinsky's violin concerto which, within the next few days, was introduced by the Philadelphia Orchestra under Leopold Stokowski to Philadelphia and New York. Samuel Dushkin was the soloist in all these performances. The work was received somewhat coolly, certain critics noting a lack of musical inventiveness.

Chalmers Clifton, of New York, and Gustave Holst appeared with the Boston Symphony as guest conductors in January. On January 22, Mr. Koussevitzky conducted the first performance of George Gershwin's second rhapsody for piano and orchestra, with the composer as soloist. Other works given their première by the Boston Symphony were Aaron Copland's *Symphonic Ode* (February 19), Vladimir Dukelsky's *Epitaph* (April 15), Edward Burlingame Hill's *Concertino* for piano and orchestra (April 25), John Alden Carpenter's *Patterns* for piano and orchestra (October 21), Florent Schmitt's *Symphonie Concertante* for piano and orchestra (November 25). Among works performed for the first time in America were a concerto by Henri Martelli, Ernst Toch's *Bunte Suite*, Serge Prokofiev's *The Gamblers* and fifth piano concerto, Arnold Bax's *Winter Legends*, and Alexander Tcherepnin's *Magna Mater*.

Ravel's piano concerto was played for the first time in America in simultaneous performances in Boston and Philadelphia on April 22.

That the economic depression had not left the Boston Symphony's receipts untouched was indicated by the announcement in December that the conductor, musicians, and managerial staff would contribute from their salaries about half of the estimated deficit of \$93,000 for 1932-33.

During the latter part of the season of 1931-32, Leopold Stokowski shared the direction of the

Philadelphia Orchestra with Bernardino Molinari and Fritz Reiner. Mr. Stokowski introduced a host of works not played before, or new or unfamiliar to America, including Efrem Zimbalist's *Daphnis et Chloe*, Two Cuban Dances by Alejandro Caturla, Darius Milhaud's concerto for percussion instruments, Nikolai Lopatnikoff's symphony, Prokofieff's third symphony, Wassilenko's *Hyrcus Nocturnus*, Henry Cowell's *Synchrony*, Louis Gruenberg's *Moods*, and Arkady Dubensky's fugue for eighteen violins. On April 8, he conducted the first performance in America of Schönberg's *Gurrelieder*, which he introduced to New York on April 20.

That Philadelphia audiences might have been receiving an over-liberal ration of novelties was suggested by an announcement in September from the Philadelphia Orchestra Association that the coming season's programmes would consist primarily of acknowledged masterpieces, avoiding "debatable" music. But on his return to Philadelphia Mr. Stokowski expressed his dissent with such a policy, and stated that he would continue to offer both old and new music. It was arranged, however, that new works would be placed at the end of the programmes. Novelties offered by Mr. Stokowski in the last three months of the year were Werner Josten's *Jungle* (October 7), Ernest Brooks's *Three Units* (October 28), Arkady Dubensky's *The Raven* (December 9), and Dimitri Szostakowicz's third symphony (December 30). Eugene Ormandy, of the Minneapolis Symphony, and Artur Rodzinski, of the Los Angeles Philharmonic, also conducted the Philadelphia Orchestra during this period.

The Cleveland Orchestra, under Nikolai Sokoloff, gave the first performance of Charles Martin Loeffler's *Beat! Beat! Drums!* for men's voices and orchestra on November 17. Eugene Goossens, Eugene Ormandy and Ossip Gabrilowitsch remained as the respective conductors of the Cincinnati, Minneapolis, and Detroit Symphony Orchestras. Both Mr. Ormandy and Vladimir Golschmann, of the St. Louis Symphony, had a considerable element of novelty in their programmes. The St. Louis list included first American performances of George Antheil's *Capriccio* and Karol Rathaus's suite, Op. 29.

Late in the winter, the continuance of the Chicago Symphony Orchestra seemed doubtful; the trustees of the orchestra association notified the musicians that all contracts would be terminated at the end of the season. Lack of prospective funds for future deficits, shrinkage in returns from investments and increased expenses were cited as reasons for this crisis. The situation was finally settled by the acceptance on the part of the musicians of a reduction in the minimum wage, the reduction of the number of players from ninety-seven to eighty-seven and of the number of concerts from 126 to 100.

The San Francisco Symphony Orchestra completed its 1931-1932 season under Basil Cameron who, in the fall, succeeded Karl Krueger in the direction of the Seattle Symphony. Issay Dobrowen conducted the San Francisco orchestra in the autumn, beginning a season shortened as a result of adverse economic conditions. The orchestra association was merged with the San Francisco Opera Association and the Concerts transferred to the new War Memorial Opera House. The Los Angeles Philharmonic, under Dr. Rodzinski, had a less difficult time, thanks to the guarantee of funds to meet the deficit by William Andrews

Clark. Willem van Hoogstraten continued as conductor of the Portland (Oregon) Symphony Orchestra.

The Rochester (N. Y.) Philharmonic Orchestra continued under a régime of guest conductors, among whom were Bernardino Molinari, Howard Hanson, Fritz Reiner, and Artur Bodanzky. The Omaha Symphony Orchestra decided, in the autumn, to suspend its activities.

In spite of the depression, the year brought an increase in the growing number of symphony orchestras of various sizes in smaller communities, or in large cities not previously possessing established orchestras. Among new organizations launched in 1932 were the Providence Symphony under Wassily Leps, the Buffalo Symphony under John Ingran, the Richmond Symphony under Wheeler Beckett, and the Birmingham Civic Symphony under Dorsey Whittington.

Outdoor orchestral concerts were held during the summer in several American cities. Among these were the New York Stadium Concerts, in their fourteenth season, with Willem van Hoogstraten and Albert Coates as conductors; the third season of Philadelphia summer concerts under Alexander Smallens, Henry Hadley, David Mendoza, Sandor Harmati, and others; and the eleventh season at the Hollywood Bowl, near Los Angeles, under Sir Hamilton Harty, Alfred Hertz, Richard Lert, Bernardino Molinari, Frederick A. Stock, and Alfred Wallenstein.

The principal event of the orchestral year in Great Britain was the formation in the early autumn of a new orchestra, named the London Philharmonic Orchestra, under the leadership of Sir Thomas Beecham, to consist of 90 permanent members and 15 auxiliary players. Most of the musicians were drawn from the old Royal Philharmonic, which engaged the new organization for its augmented subscription series. The London Symphony Orchestra, deciding to continue an independent career, engaged Sir Hamilton Harty, of the Hallé Orchestra of Manchester, as regular conductor, with Felix Weingartner and Albert Coates among the guest leaders. The orchestra of the British Broadcasting Corporation continued its regular series under Adrian Boult and others, and again played in the annual London series of Promenade Concerts in Queen's Hall from August 6 to October 1. Wagner and Beethoven programmes were given on one night apiece each week, while four evenings were devoted to all-British programmes.

Gabriel Pierné, conductor since 1910 of the Colonne Orchestra of Paris, resigned his post in the spring, and was succeeded by Paul Paray. The various Paris orchestras, including the Paris Symphony under Pierre Monteux, the Lamoureux, and others, held their own during the year; a new orchestra was created under the name of the Trianon-Lyrique Symphony Orchestra. As before new music played an important part in the Walther Straram concerts.

Ravel's piano concerto had its world première on January 14 under the composer's direction with Marguerite Long as soloist; it was regarded as "brilliant and effective." In the New York première of the work on November 8, brilliance and effectiveness also were noticed, but some critics also noted derivativeness and sterility in its musical ideas.

In Italy the principal sources of orchestral activity were the orchestras of the Augusteo in Rome and of La Scala in Milan, where a spring

series was held under the direction of Alfredo Casella, Vittorio Gui, Gino Marinuzzi, Willem Mengelberg, and others.

The Berlin Philharmonic Orchestra celebrated the fiftieth anniversary of its existence on April 17, when it was announced that a municipal subsidy of \$40,000 a year would be granted to insure the permanence of the organization. The Philharmonic again toured extensively in Europe, visiting England, France, and Italy. For 1932-33 this orchestra, whose regular conductor is Wilhelm Furtwaengler, announced a programme of over fifty concerts in Berlin alone, with conductors including Bruno Walter, Eugene Jochum, Erich Kleiber, Heinz Unger, and Julius Prüwer. Otto Klemperer took over the direction of the State Opera's symphony concerts, which had been shared by him with Mr. Kleiber during the winter. Under Furtwaengler, on October 30, Serge Prokofiev's fifth piano concerto, in G major, was played for the first time, with the composer as soloist.

The Berlin Symphony Orchestra was disbanded after the end of its season in the spring, when it was announced that the players would either be pensioned or added to the Berlin Philharmonic. In Vienna, Ravel's piano concerto for left hand alone was played for the first time in January with Robert Heger conducting, and Paul Wittgenstein, the one-armed pianist for whom it was written, as the soloist.

On March 6 the Brussels Symphony Orchestra, under the composer's direction, gave the first performance of Alexander Tansman's *Symphonie Concertante* for string quartet and orchestra. In September, Georg Schneevoigt was appointed conductor of the Helsingfors Municipal Orchestra, in succession to Robert Kajanus.

In May the Persimfans, or conductorless orchestra, of Moscow, celebrated the tenth anniversary of its organization. Albert Coates, musical director of Moscow's principal opera house, accepted the post of general music director of the Leningrad and Moscow Philharmonic Orchestras.

**OPERA.** During its home season of 1931-32, which closed April 16, the Metropolitan Opera Company of New York gave 166 performances, in addition to 24 Sunday concerts. The season's repertoire consisted of 48 operas, of which 24 were given in Italian 85 times, 13 in German 51 times; 10 in French 34 times and 1 in English, Deems Taylor's *Peter Ibbetson*, 6 times. Twenty-seven composers were represented in the list of operas, 11 Italians, 4 Germans and Austrians, 9 Frenchmen (including Meyerbeer), 1 American, 1 Russian, and 1 Czech. The most represented composer was Wagner, with 10 works performed 37 times. Six operas by Verdi were heard 31 times, and 4 by Puccini 12 times. During the season, the company paid its usual visits to Brooklyn and Philadelphia, and gave two performances apiece in Hartford, Conn., and White Plains. The spring tour was reduced to a single week shared by Baltimore and Cleveland. In all, during 1931-32, the company gave 210 performances of opera.

During the first four months of 1932 interest in the company's artistic activities was often overshadowed by concern over its economic situation. In November, 1931, the non-union personnel of the Metropolitan had agreed to accept a 10 per cent salary reduction, but, despite this reduction in expenses, rumors persisted during

the winter that the next season might see a much shortened schedule or no opera at all. On March 23 the chairman of the Metropolitan's directorate, Paul D. Cravath, announced that the losses of the seasons of 1930-31 and 1931-32 had virtually wiped out the company's reserves, leaving it without sufficient funds to assure an opera season in 1932-33. Efforts, it was added, would be made, by further reductions in expenses and other methods to assure the continuance of the institution's activities.

April 16, it was announced that the Metropolitan would give a shorter season, 16 weeks instead of 24, in 1932-33. Prices of seats were somewhat reduced, from \$7.50 to \$6.50 per performance for season subscribers in the case of orchestra chairs, while the actual reduction was increased when the Metropolitan's tickets were granted tax exemption. A further salary cut was accepted by the company's artists and staff.

On March 3, it was announced that the directors were reorganizing the company under the new title of the Metropolitan Opera Association, making it a membership instead of a stock corporation. This change, however, was not intended to affect the actual administration or artistic policy of the organization. Although, in April, a committee examining the plans for the proposed opera house in the Rockefeller City development reported these to be suitable for the Metropolitan's purposes, no actual progress was made during 1932 in the four-year-old project to move the Metropolitan to this new centre. In September, Mr. Cravath said that no feasible plan toward this end had yet been proposed, and it is very unlikely that the Metropolitan will take any definite steps in this direction while present uncertain conditions continue.

On February 28, the Metropolitan produced for the first time in the United States Verdi's *Simon Boccanegra*, using the revised version of 1881. This little known work impressed with the effectiveness of its scoring and the exceptional dramatic power of the music at certain points, but a lack of melodic inspiration and the devious and complicated nature of the libretto were considered drawbacks to its performance in the repertoire. But it was chosen to open the new season on November 21. The production was, on the whole, distinguished, and the notably dramatic interpretation of the title rôle by the American barytone Lawrence Tibbett was considered his best operatic characterization thus far in his career.

The other novelty of the first part of the year, Von Suppé's light opera *Donna Juanita* was produced for the first time at the Metropolitan January 2, with Maria Jeritza as its protagonist. It proved moderately diverting, but was dropped from the repertoire for the next season. The revivals were Delibes's *Lakmé* and Bellini's *La Sonnambula*, both given as vehicles for the French colatura soprano Lily Pons, who was probably the company's best box-office attraction during 1931-32.

The first novelty of the new season was Richard Strauss's *Elektra*, given for the first time at the Metropolitan on December 3. This was also the first New York performance of the work in Von Hofmannsthal's original German text; its production in 1910 by Oscar Hammerstein's Manhattan Opera Company had been in a French translation. The musical value and dramatic force of Strauss's score, a much discussed work

when first heard in New York twenty-two years before, were generally recognized. The production received more varied comment, being highly praised by Olin Downes in the New York *Times*, while it was found lacking in various respects by Lawrence Gilman in the New York *Herald-Tribune*. Still, it was generally thought that the Metropolitan had done better with the work than what might have been expected; the orchestra, under Artur Bodanzky, gave a performance much above its usual standard for German opera.

In its second performance, on December 9, *Elektra* was given in a double bill with the last novelty of 1932, Rossini's one act comic opera *Il Signor Bruschino*.

The most important Metropolitan début during the first months of the year was that of the Swedish soprano Göta Ljungberg, whose first New York appearance, on January 20, was as Sieglinde in *Die Walküre*. Aided by attractiveness of appearance and an ingratiating stage personality, Mme. Ljungberg scored a considerable success in her first performances, despite some unevenness in the standard of her singing and occasional attacks of self-consciousness in her impersonations. Doris Doe, American contralto, making her Metropolitan début on February 3 as Brangäne in *Tristan und Isolde*, exhibited a voice of satisfactory calibre, but lacked the necessary ability for the leading Wagnerian rôles first assigned her. Armando Borgioli, barytone, Francesco Merli, tenor, proved experienced operatic artists with voices of no unusual quality.

Tito Schipa, tenor, and Richard Bonelli, American barytone, both well known members of the Chicago Opera, made their Metropolitan débuts in the fall, both proving valuable acquisitions to Giulio Gatti-Casazza's roster. Rose Bampton, contralto, seemed the most promising of the young American women singers who joined the company at the beginning of the 1932-33 season. Other American débutantes were Helen Gleason and Margaret Halstead, sopranos. Gustaaf de Loor, Dutch tenor, made his American début on November 24 as Siegfried in *Götterdämmerung*; his first performances did not indicate vocal or dramatic ability beyond those of the usual run of German-singing tenors. Ludwig Hofmann, German barytone, making his first Metropolitan appearance in the same performance as Hagen, won mainly favorable notices from the critics.

The Chicago Civic Opera Company closed its home season January 30, and finished its activities with its usual fortnight in Boston. During the next few months, an effort was made to raise the \$500,000 guarantee needed to assure a season of opera in 1932-33; \$350,000 had been pledged when, on June 22, the trustees announced their decision to give no opera during the coming season, owing to current economic conditions and the uncertainty of the future. Samuel Insull, whose business reverses had deprived the company of one of its important sources of support, resigned the presidency of the organization, and no one was chosen in his place. Up to the close of the year, no announcement had been made concerning any ultimate resumption of performances by the Chicago Opera. Various minor companies announced plans for providing Chicago with some opera, but the upshot was only a few performances, all such projects having been abandoned before the middle of October.

The Philadelphia Opera Company, which had

given the world première of the ballet *H.P.* by the Mexican composer Carlos Chavez on March 31 under Leopold Stokowski's direction, decided to give no performances in 1932-33, but to wait for a season while plans for presenting opera in a new and modernized form were being worked out by Mr. Stokowski. The Ravinia Opera Company gave no performances during the summer of 1932 in its rustic theatre north of Chicago, but contemplated a season on a larger scale in 1933, during the time of the Chicago "Century of Progress" Exposition.

The St. Louis Municipal Opera held its usual summer season of operettas, including one new work, *Cyran de Bergerac* with music by Samuel Pokress. In Cincinnati, the Zoo Opera Company gave eight weeks of grand opera and two of light opera during the summer. In a week of opera at the Cleveland Stadium *Tom-Tom*, by the Negro composer Shirley Graham, had its first performance on June 30.

On October 15 the new War Memorial Opera House in San Francisco was formally opened when the San Francisco Opera Company, under the direction of Gaetano de Merola, began a two weeks' season with *La Traviata*. The new house has a seating capacity of 3285. Before the opening of the San Francisco series, the same company gave a week of opera in Los Angeles.

In London, the Covent Garden Syndicate had decided to suspend its usual spring international season, but finally decided on a four weeks' series, beginning May 9, devoted to Wagner, with a repertoire including the "Ring" cycle, *Tristan und Isolde* and *Die Meistersinger*. Among the artists heard in this series were Frida Leider, Lotte Lehmann, Florence Easton, Lauritz Melchior, Walter Widdop, Ludwig Hofmann, and Friedrich Schorr. Sir Thomas Beecham and Robert Heger conducted.

In November, an agreement creating a National Opera Council was reached between the Covent Garden Opera Syndicate, the Imperial League of Opera, the "Old Vic," and Sadler's Wells Theatres, and the British Broadcasting Corporation. Sir Thomas Beecham joined the board of the Covent Garden Syndicate as artistic director. This agreement was regarded as foreshadowing a closer coöperation between organizations producing opera in Great Britain.

In Paris, during the first half of the year, a crisis at the Opera was averted when the employees accepted a reduction in pay, and the director, Jacques Rouché, withdrew his threatened resignation. After a Russian season in June, the Paris Opéra-Comique was closed for repairs and some modernization; there were doubts as to whether it would reopen. These were disproved when the Opéra-Comique resumed its activities in November under a new director, P. B. Cheusi, appointed after the resignation of Louis Masson. Among novelties produced at the Opéra were Darius Milhaud's *Maximilian* and Strauss's *Elektra*, both in January, and Maurice Bachelet's *Un Jardin sur l'Oronte* in November. Henri Fevrier's *La Femme Nue*, first produced at the Opéra-Comique on April 22, was described as Italian "verismo" gone French.

During its winter and spring season, the Teatro alla Scala in Milan gave eighty-five performances. The first novelty of the year was Humperdinck's *Figli del Re* (*Königskinder*). Pick-Mangiagalli's opera-masque *Basi e Botti* was produced in February under Ettore Panizza.

Gino Marinuzzi's three-act *Palla dei Mozzi* had its premiere at La Scala on April 5; this was described as in the orthodox tradition of nineteenth-century Italian opera. Antonio Veretti's first opera *Il Favorito del Re* met with a mixed reception; the introduction of a jazz band in the second act proved unwelcome. As in 1931, retrospective comments on the Scala's season expressed some dissatisfaction, the management being attacked for "worthless" modern novelties. Trentinaglia resigned as artistic director late in the spring, and the Scala has since been directed by a triumvirate of the Mayor of Milan, the Governor of the Province, and the head of the Milan Fascist Corporation. The new season opened December 26.

Primo Riccitelli's *Madonna Oretta* was produced early in the year at the Royal Opera in Rome. Alfredo Casella's first opera *La Donna Serpente*, based on the tale by Gozzi which had given Wagner his subject for *Die Feen*, was first produced in Rome on March 17. One comment on this work noticed a further departure from Wagnerian influence and towards a continuation of the Italian tradition of Verdi's last works.

A further reduction of salaries was imposed upon the Vienna State Opera at the beginning of the year. Pfitzner's *Das Herz* had its Austrian premiere in Vienna in February; Verdi's *Don Carlos* was produced later in a new version by Franz Werfel and Lothar Wallerstein.

Paul Graener's *Friedemann Bach*, first produced in 1931 in Schwerin, reached Berlin on February 23. Meyerbeer's *Les Huguenots*, unheard in Berlin for twenty-one years, was revived at the State Opera in February in a revised version prepared by Dr. Julius Kapp and Leo Blech. Weill's *Die Burgschaft*, described as diffuse and prolix, was one of the State Opera's novelties, while Herbert Windt's *Andromache* was one of the new works to be first produced by the Municipal Opera. Franz Schreker's latest opera, *Der Schmied von Ghent*, had a hostile reception when produced at the Municipal Opera in November. Prices were reduced for the 1932-33 season in both Berlin opera houses, ten marks becoming the maximum at the State Opera and eight at the Municipal Opera.

Eugen d'Albert's posthumous opera *Mr. Wu* was first produced in Dresden on September 29, and given in five other German cities the next day. Caponsacchi, by an American composer, Richard Hageman, had its world premiere on February 18 at Freiburg, in Baden, under Hugo Balzer's direction.

*Poker Flat*, the third opera by Jaromir Weinberger, of *Schwanda* fame, was first performed on November 19 in Brunn, Czechoslovakia. The scene was laid in the American West, and the influence of American jazz was occasionally noticed in the music. An important premiere in Budapest was that of Zoltan Kodaly's opera *Szekely-fono* which was described as exhibiting Kodaly's richest and most original music.

The winter season at the Teatro Colon in Buenos Aires began in May, after reconsideration of an intention to suspend it. On the other side of the Southern hemisphere, the Imperial Opera Company gave Australia an opera season in June and July.

**NATIONAL ACADEMY OF DESIGN.** An institution in New York City, established in 1825 and incorporated in 1828 for the purpose of "the cultivation and extension of the arts of design." The academy holds two exhibitions of contemporary art each year, to which an artist of any country may submit his work. The works which are accepted by the jury of selection are exhibited without charge to the artists; members of the academy may exhibit one work without approval by the jury. The total number of associate members in 1931 was 150; the number of academicians was 146, including 107 painters, 29 sculptors, 8 architects, and 2 graphic arts.

The following academicians were elected in 1932: Painters, Hilda Belcher, Anna Fisher, Howard L. Hildebrandt; sculptors, Lee Lawrie, and Albert Laessle; architect, J. H. Freelandier, and graphic arts, Charles Dana Gibson. The associate members elected were: Painters, Robert

Brackman, Francis S. Bradford, Jes Schlaikjer, and Paul Trebilcock; sculptors, Ulric Ellerhusen, Thos. Hudson Jones, Gertrude K. Lathrop, Berthold Nebel, and George Lober; architects, Cass Gilbert, Jr., and Frederic C. Hirus; graphic arts, Louis C. Rosenberg. The officers in 1932 were: President, Cass Gilbert; first vice president, H. W. Watrous; second vice president, Robert Aitken; corresponding secretary, Charles C. Curran; assistant corresponding secretary, Albert P. Lucas; recording secretary, Hobart Nichols; treasurer, Henry Prellwitz; and assistant treasurer, F. Ballard Williams. The council members were: Louis Betts, Sidney Dickinson, Charles S. Chapman, Edward McCartan, Roy Brown, and Ernest D. Roth. Headquarters are at Amsterdam Avenue and 109th Street, New York City. See ART EXHIBITIONS.

#### NATIONAL ACADEMY OF SCIENCES.

A body of American citizens actively engaged in scientific research, incorporated by Act of Congress approved by President Lincoln in 1863, for the purpose of investigating, examining, experimenting, and reporting upon any subject of science or art, whenever called upon by any department of the government. The membership is limited to 300 active members and 50 foreign associates. New members are elected by the academy on nominations from its eleven sections: mathematics, astronomy, physics, engineering, chemistry, geology and paleontology, botany, zoology and anatomy, physiology and biochemistry, pathology and bacteriology, and anthropology and psychology. The following new members of the academy were elected at the annual meeting in 1932: Raymond Thayer Birge, Edwin Garrigues Boring, Samuel Randall Detwiler, Walter Abraham Jacobs, Douglas Wilson Johnson, Louis Otto Kunkel, Karl Landsteiner, Walter Curran Mendenhall, Marston Morse, Floyd Karker Richtmyer, John Clarke Slater, John Reed Swanton, Robert Julius Trumpler, Edward Wight Washburn, John Boswell Whitehead.

The academy holds two meetings each year. The annual meeting, beginning on the fourth Monday in April, is held in Washington; while the autumn meeting is held at a place and on dates determined by the council of the academy. The autumn meeting in 1932 was held in Ann Arbor, Mich., November 14-16, upon invitation by the University of Michigan. Meetings are devoted to the transaction of business and the presentation of scientific papers by academicians or persons introduced by them.

The academy has trust funds which grant money for the furtherance of research investigations and other trust funds which provide for gold medals in recognition of outstanding scientific research work. At the annual meeting in 1932 two medals were presented: the Public Welfare Medal to Wickliffe Rose, and the Mary Clark Thompson medal and accompanying honorarium of \$250 to David White. The award to Doctor Rose was "for his organization and direction of the work of the International Health Board of the Rockefeller Foundation by which he made, to the promotion of public health and welfare, a contribution of world-wide significance and importance." Because of the death of Doctor Rose, Sept. 5, 1931—between the time of the award and the time of presentation—delivery of the medal was made to his son, H. Wickliffe Rose. The Mary Clark Thompson Medal and honorarium were awarded to Doctor White, a member of the acad-

emy, for his outstanding researches in paleontology.

The annual report of the president of the National Academy of Sciences to the Congress of the United States contains an account of the business and scientific sessions, including a list of the scientific papers presented, the medals awarded, and the grants made in aid of research work. The academy issues also the series of *Memoirs*, consisting of monographs by academicians and others and reports of investigations conducted by the academy for the government. *Biographical Memoirs* of deceased members are published from time to time. The *Proceedings*, issued monthly, are devoted to condensed reports of the most recent achievements in scientific research work by members of the academy and the National Research Council, its agent, or by persons introduced by members.

The officers in 1932 were: William Wallace Campbell, president; David White, vice-president; Fred E. Wright, home secretary; Robert A. Millikan, foreign secretary; Arthur Keith, treasurer. The academy building is at 2101 Constitution Avenue, Washington, D. C.

**NATIONAL AIR RACES.** See AERONAUTICS.

**NATIONAL BANKS.** See BANKS AND BANKING.

**NATIONAL CIVIC FEDERATION, THE.** A movement organized in 1900 to seek the solution of some of the great problems related to social and industrial progress. It provides especially for the discussion of questions of national import, aids in the crystallization of enlightened public opinion, and promotes legislation when desirable.

The organization was active in 1932 through the following departments and committees: The commission on industrial inquiry continued its activities in furthering its bill to amend the Federal Trade Commission Act by adding certain powers to enable the commission to determine whether proposed or existing mergers intended to or were engaged in practices in violation of the anti-trust acts. Its recommendations concerning the Writ of Injunctions in Industrial Disputes were enacted into law by the Congress. The committee on Russian affairs, in carrying on its programme in opposition to the recognition of the Soviet government, adopted a resolution urging the President-elect to withhold recognition of the Soviet régime until that régime shall have given adequate security that neither it nor the Third International will interfere, either directly or indirectly, in the domestic affairs of the United States. The department of subversive activities continued its efforts to obtain federal legislation to have restored the power to deal with subversive activities. The executive council indorsed the shorter work week practice, and the industrial welfare department made a preliminary survey to evaluate its economic effect upon employer and employee in production costs and widening employment; this department continued also its inquiry into the operation of compulsory unemployment insurance funds, foreign and domestic. The women's department issued a report upon the survey of the woman power of the nation. The federation issued an appeal to industrialists to join in a movement to develop a *modus vivendi* to aid in restoring employment to workers.

The officers of the federation in 1932 were:

Elihu Root, honorary president; W. N. Doak, honorary vice-president; Matthew Woll, acting president; Ralph M. Easley, chairman executive council; Samuel McRoberts, treasurer; and Ellis Searles, secretary. Headquarters are at 570 Lexington Avenue, New York City.

**NATIONAL DEBTS.** See articles on each country under *Finance*.

**NATIONAL DEFENSE.** See MILITARY PROGRESS; NAVAL PROGRESS.

**NATIONAL EDUCATION ASSOCIATION OF THE UNITED STATES.** An organization of persons actively engaged in educational work and others interested in education, organized in Philadelphia in 1857 under the name of the National Teachers' Association and incorporated in 1907 by Congress under its present name. At the annual meeting in 1920, the association was reorganized, and provision was made for a representative assembly composed of delegates from State and local educational associations. The other governing bodies are a board of directors, an executive committee of five, a board of trustees, departmental organizations, standing and special committees, and a staff at headquarters which is held responsible for carrying out the decisions of the governing bodies.

In 1932 there were 22 departments, each having its own officers, as follows: administrative women in education, adult education, business education, classroom teachers, deans of women, educational research, elementary school principals, kindergarten-primary education, lip reading, rural education, school health and physical education, science instruction, secondary education, secondary school principals, social studies, special education, superintendence, supervisors and directors of instruction, supervisors and teachers of home economics, teachers' colleges, visual instruction, and vocational education. There were also more than 15 standing and special committees actively at work on professional problems.

The association's seventieth annual meeting was held in Atlantic City, N. J., June 25-July 1, 1932. The theme of this convention was "Looking Ahead in Education." Most of the important addresses consisted of discussions of the educational crisis brought about by the economic depression. There were held, in addition to the general session, meetings of the representative assembly, the departments of the association, and a number of allied organizations, at which the progress of the year in education was reviewed. Among the important resolutions adopted on this occasion was one on economy and education which opposed "any retrenchment (in school expenditures) which injures the children of America" but at the same time favored "strict economy in the administration of public schools."

The association's department of superintendence held its winter convention in Washington, D. C., the last week in February. The subject of the *Yearbook*, prepared for presentation at this meeting, was "Character Education" while "Educational Leadership" was selected as the theme of the 1933 yearbook. The *Journal of the National Education Association* is the organization's monthly publication. It publishes also an annual volume of *Proceedings* and numerous reports on its activities. Research bulletins, containing statistical information on educational

subjects, are issued regularly. The enrollment of the association on Dec. 31, 1931, was 220,149. Officers elected for 1931-32 were: president, Joseph Rosier, Fairmont, W. Va.; secretary, J. W. Crabtree, Washington; and treasurer, Henry Lester Smith, Bloomington, Ind. Headquarters are at 1201 Sixteenth Street, N.W., Washington.

**NATIONAL KINDERGARTEN ASSOCIATION.** An organization founded and incorporated in New York City in 1909, with the object of helping to secure the advantages of kindergarten education for all of the nation's children. The association is supported entirely by private subscription which has amounted annually, in recent years, to approximately \$45,000. During 1932, however, it dropped to \$30,000. This fund is used for the purpose of promoting a knowledge of and an interest in the value of the kindergarten as an integral part of the public school system. Field secretaries are employed in 47 States for the purpose of keeping this matter before the public and assisting parents in having classes organized for their children.

The association has been instrumental in securing the establishment to date of 1925 kindergartens. Where no adequate provision has been made in the school laws for the maintenance of kindergartens, the association has worked to stimulate an effort to secure the enactment of improved laws and has been instrumental in obtaining their passage in 16 States. In this it has cooperated with such State organizations as the Congress of Parents and Teachers, Federation of Women's Clubs, Woman's Christian Temperance Union, Federation of Labor, and Chamber of Commerce. From 1928 to 1932, through the generosity of its members, the association was able to set aside a fund from which 52 communities, which could not otherwise have opened kindergartens, received financial assistance. Since 1912 it has cooperated with the National College of Education in Evanston, Ill., in the training of kindergarten students. It has also published and distributed extensively leaflets on the subject of kindergarten extension and training.

The association's officers are: Major Bradley Martin, president; Hon. P. P. Claxton, honorary president; Mrs. Henry Phipps, first vice-president; Mrs. Charles Cary Rumsey, second vice-president; Mrs. Roger C. Aldrich, secretary; Miss Bessie Locke, executive secretary; and Julian M. Gerard, treasurer. Headquarters are at 8 West Fortieth Street, New York City.

**NATIONAL MUNICIPAL LEAGUE.** An organization which acts as a central clearing house for current information on improvements in State and local government throughout the United States. Founded in 1894 and incorporated in 1923, its aim is to promote efficient and democratic government in city, county, State, and nation. Under its direction, committees of experts are constantly at work developing sound principles of governmental methods and administration.

The committees active in 1932 were as fol-

lows: new municipal programme; model administrative code; model State constitution; citizen organization for municipal activity; citizens' participation in city government; county government; municipal standards; municipal reporting; selection of the judiciary; model special assessments law; and constructive economy in government. The committee on new municipal programme completed its revision of the present edition of the *Model City Charter*, a task which required two years of concentrated study. The first report of the committee on county government was issued as a supplement to the August, 1932, issue of the *National Municipal Review* under the title of "Constitutional Barriers to Improvement in County Government."

The thirty-eighth annual meeting of the league was held in Washington, D. C., Sept. 19-21, 1932, under the general title of "The National Conference on Government." The National Association of Civic Secretaries, the Proportional Representation League, and the American Legislators' Association cooperated in this conference. The officers elected for 1932-33 were: president, Murray Seasongood of Cincinnati; first vice president, Louis Brownlow of Chicago; second vice president, Mrs. F. Louis Slade of New York City; treasurer, Carl H. Pforzheimer; secretary, Russell Forbes; honorary secretary, Clinton Rogers Woodruff; editor of the *National Municipal Review*, H. W. Dodds; and public relations secretary, Howard P. Jones. Headquarters are at 309 East Thirty-fourth Street, New York City.

**NATIONAL PARKS.** See PARKS, NATIONAL. **NATIONAL RECREATION ASSOCIATION** (formerly Playground and Recreation Association of America). An association organized in 1900 for the purpose of uniting in a national movement the efforts made in various parts of the United States to provide safe and adequate areas where children may play under experienced leadership. A staff of field workers is maintained to assist cities in organizing year-round recreation programmes for children, adults, and the community as a whole, to strengthen existing programmes, and to help to secure State legislation to facilitate the development of municipal recreation.

The association has established a national recreation school for the training of recreation workers, a community drama service, a national music service, a national physical education service, a service to institutions, and a service on recreation for girls and women. It maintains a bureau that gives assistance to Negro groups in securing recreation opportunities and a service to rural leaders through which, in cooperation with the U. S. Department of Agriculture, they are receiving training as recreation workers. It publishes also a monthly magazine *Recreation*, issues pamphlets and books pertaining to the leisure-time movement, and maintains a bulletin service.

The officers of the association for 1932 were: president, Joseph Lee; treasurer, Gustavus T. Kirby; secretary, Howard S. Braucher. Headquarters are at 315 Fourth Avenue, New York City.

**NATIONAL RESEARCH COUNCIL.** A co-operative organization of American scientists, established in 1916 by the National Academy of Sciences, at the request of President Wilson, for the purpose of coordinating the research facilities of the United States for work on war prob-

lems involving scientific knowledge. Reorganized by the academy as a permanent body in 1918 for the general encouragement of research in the natural sciences, the council has maintained close relations with governmental scientific bureaus and has the formal recognition and cooperation of 76 national scientific and technical societies, its membership being composed in large part of appointed representatives of these societies.

The activities of the council are conducted by 11 divisions, each of which has a chairman and from 18 to 44 members. These divisions are composed of two groups, science and technology and general relationships. The science and technology group consists of divisions representing physics, mathematics, and astronomy; engineering and industrial research; chemistry and chemical technology; geology and geography; the medical sciences; biology and agriculture; and anthropology and psychology. The general relationships group consists of federal, foreign, State, and educational relations divisions. Each of these divisions maintains a number of administrative and technical committees.

Among the major undertakings of the council during 1932 were the administration of about 150 post-doctorate fellowships; the issuing of a series of research monographs in the physical sciences, including several parts of a treatise upon *The Physics of the Earth*; the editing of an *Annual Survey of American Chemistry* and the *Annotated Bibliography of Economic Geology*; and the sponsoring of research on highway construction, welding processes, electrical insulation, the durability of paper and preservation of records, sedimentation, leading to the publication of a revision of a previously issued *Treatise on Sedimentation*, tectonics, earthquakes, the measurement of geologic time, the chemistry and physiology of narcotic drugs, scientific problems of sex, medico-legal problems, infectious abortion, effects of radiation on living organisms, the principles of the conservation of wild life, microbiology of the soil, auditory deficiency, American archaeology, child development, and the psychology of the highway.

The general administrative officers of the council in 1932 were: chairman, William H. Howell, director emeritus and professor emeritus of physiology, school of hygiene and public health, Johns Hopkins University; first vice-chairman, David White, principal geologist, U. S. Geological Survey; second vice-chairman, Simon Flexner, director, Rockefeller Institute for Medical Research; third vice-chairman, John J. Carty, Winter Park, Fla.; treasurer, Arthur Keith, geologist, U. S. Geological Survey; secretary emeritus, Vernon Kellogg, National Research Council. Headquarters are in the building of the National Academy of Sciences, 2101 Constitution Avenue, Washington, D. C.

**NATIONAL SAFETY COUNCIL.** A non-profit, co-operative association, not only national but international in scope, devoted to the conservation of human life through a continuous campaign of accident prevention. In 1932, there were 4500 members including industrial corporations, firms, individuals, public officials, schools, Chambers of Commerce, clubs, and civic organizations; about 70 per cent of the memberships were industrial concerns.

Affiliated with the National Safety Council are 59 local councils in as many communities throughout the United States. They carry on intensive

safety work in approximately 10,000 plants in 150 different lines of industry, reaching approximately 10,000,000 persons.

During 1932 the Council's activities laid especial emphasis on the highway accident problem. A National Inter-City Traffic Contest was held, in which 442 municipalities, large and small, participated. Educational work was intensified among cities and schools throughout the United States, and valuable engineering studies were made in highway safety. Council experts also made special studies of the mental aspects of accidents, and accident research, not only in the highway field but also in industrial and home safety fields, was greatly broadened.

The Council publishes *The National Safety News*, for industries; *Public Safety*, for public officials, police chiefs, etc.; *Safety Education*, for schools; *The Safe Worker*, which is distributed each month to 150,000 workers; and *The Safe Driver* with a monthly circulation of 60,000 copies. It also issues safe practices and health practices pamphlets for industry and carries on extensive work through 27 sections represented in the industrial division for the exchange of new ideas, new plans, and new practices among members.

The twenty-first annual safety congress was held in Washington, D. C., Oct. 3-7, 1932 with an attendance of approximately 4000 delegates and visitors. The officers elected were: President, J. I. Banash, Chicago; Vice-President for Public Safety, Robert I. Catlin, Hartford, Conn.; Vice-President for Engineering, J. E. Culliney, Bethlehem, Pa.; Vice-President for Industrial Safety, George H. Warfel, Omaha; Vice-President for Membership, Howard B. Fonda, New York City; Vice-President for Local Safety Councils, John E. Long, Albany, N. Y.; Vice-President for Business Administration, G. T. Hellmuth, Chicago; Vice-President for Health, Dr. Cassius H. Watson, New York City; Vice-President for Education, Albert W. Whitney, New York City; Treasurer, Will Cooper, Managing Director and Secretary, W. H. Cameron, Chicago.

**NATIONAL TRANSPORTATION COMMITTEE.** See RAILWAYS.

**NATURAL GAS.** See GAS, NATURAL.

**NAURU.** An oval shaped atoll about 12 miles in circumference situated 166° E. longitude and 26 miles south of the Equator. The island was surrendered to the Australian forces by the Germans in 1914. It is administered under a mandate from the League of Nations by the British Empire. Area, 5396 acres; population, 1931 census, 2692. The export trade consists chiefly of phosphate. Administrator in 1932, W. A. Newman.

**NAVAL PROGRESS.** Although the Disarmament Conference at Geneva struggled diligently for months to reach some working agreement, and although serious economic difficulties continued to face all naval powers, great and small, the world has not yet given indication of making any very marked reduction in naval expenditures. The activities at Geneva were watched with the keenest interest by naval officials not only because of possible reduction in fleets, but also because agreements reached there might bring about very radical changes in the types of ships that compose fleets, and might impose restrictions on the activities of the types retained. Any such modifications would, of necessity, demand readjustments of prevailing ideas in

regard to tactics; and would, almost surely, result in changes of design for all new construction.

Although more detailed account of the conference is given elsewhere under the heading DISARMAMENT, it might be well to mention here the initial proposals of the five principal naval powers in regard to sea armaments. The United States urged an extension of the London treaty by adherence of France and Italy, a reduction in maximum tonnage, abolition of submarines, gas, and bacteriological warfare. In addition it desired some form of limitation of budgets for war purposes. Great Britain proposed that submarines and poison gas be abolished, but did not put forward initially her usual programme for a reduction in the size of battleships. Japan, preferring to watch for developments, made few proposals other than for the abolition of airplane carriers and heavy bombers. She was non-committal as to submarines. France, with her favorite theme of "security before disarmament," wished to see capital ships, submarines, heavy bombing planes, and chemical warfare abandoned as national weapons, but demanded that they be turned over to the League of Nations to be manned by an international police force. Italy accepted the proposals of the United States but went further and advocated the abolition of capital ships.

After the work of the conference was organized, the naval committee promptly adopted two articles in the draft treaty; one providing that no power should construct a vessel of war which should exceed the limitations as to displacement and armament to be set later by treaty; the other, forbidding sale or transfer of a vessel of war from one nation to another. The committee also agreed that, in the event of war, a country building a warship for another country should not be permitted to complete and use such ship for itself. After this progress, however, little else was accomplished. In April the conference unanimously adopted a resolution providing for "abolition or internationalization" of weapons found to be aggressive in character.

The committees appointed to determine which weapons were "offensive" ran into immediate difficulties. All nations except England, Japan, and the United States maintained that battleships were offensive; all except England and the United States took the same position regarding aircraft carriers. In the case of submarines, the position was reversed. Submarines were considered to be purely defensive weapons by all except England, the United States, Russia, and Germany (to whom they were forbidden). The German delegate mentioned the fact that England and all the Allies had gone on record in the Versailles Treaty as maintaining that airplanes were "offensive" and that in the same treaty France had gone on record that submarines were weapons of offense. The important part was not the arguments advanced but the honest differences of opinion that existed. It was easy to see that France considered the submarines to be her defense against possible naval pressure by England. At the same time, who in the United States considered the battleship anything but part of her defense, her first line of defense at that? Apparently the conference, in attempting to draw a distinction between "weapons of defense" and "weapons of aggression" set a tremendous task for itself.

In June, after the naval committee had failed to make progress, President Hoover offered certain definite proposals viz.: that the number and tonnage of battleships be reduced by one-third; that the tonnage allotted to aircraft carriers, cruisers, and destroyers, be reduced by one-fourth; that the treaty tonnage of submarines be reduced by one-third and that no nation should have more than 35,000 tons of submarines. He further proposed that Italy and France accept the ratios originally made for them in London in 1930. France and certain small powers had earlier objected to any attempts at the use of the London figures, and Mr. Ramsay MacDonald had said that if any power (France, for example) should disregard the limitations of London, England might be forced to invoke the "escalator" clause and build more ships.

Discussions continued with each nation urging the abolition of weapons it could not afford, or that it considered useless, but insisting upon the retention of any weapon within its means. In spite of the efforts to show that "qualitative disarmament" would increase security, all the delegations knew that in war someone would attack and that any means at hand would be used. The proposals of President Hoover were so definite and so far-reaching that in the summer the conference, unable to reach an agreement and unwilling to confess failure, adjourned to meet in January, 1933. It was hoped that further consideration might permit delegations to reassemble in a better frame of mind.

But prospects for success soon appeared jeopardized when Germany demanded release from the limitations on her Army and Navy establishments imposed by the treaty of Versailles (forbade submarines, limited naval personnel to 15,000 in long-term enlistments, restricted largest ships to 10,000 tons; and fixed numbers at 6 battleships, 6 light cruisers, 12 destroyers, and 12 torpedo boats). France firmly opposed this demand, and Germany held to her previously expressed intention of having nothing more to do with the arms conference or its bureau or steering committees until her demand for equality was satisfied. The United States, during the period of adjournment, in a determined endeavor to clear the way for progress when the conference reconvened, sought to arrange for naval reductions below the levels established in London in 1930.

Agreement between England and the United States on such reductions was brought within the range of possibility, contingent upon success in bringing France and Italy into full acceptance of the London treaty provisions and securing naval adjustments on the part of Japan. Chiefly to stimulate progress in this direction, President Hoover released a statement of Navy Day to the effect that should disarmament moves fail, the American Navy must be brought up to its treaty quota. In October the United States approved the League proposal for a four-month extension of the one-year truce in construction of armaments agreed upon in November of last year. (See 1931 YEAR BOOK.)

The activities at Geneva caused many people to examine anew the Washington treaty of 1922 which endeavored to check naval competition and to limit the defense budgets of the great naval powers, as well as to restrict the dimensions of naval armaments. The treaty had been effective so far as capital ships are concerned,

for none was laid down for ten years; and the treaty of London in 1930 gave every hope that the "battleship holiday" would extend to 1936. France's determination to commence work on the *Dunkergue* during 1932 frustrated this hope. In all other aspects the system of treaty restrictions did not seem to have fulfilled the hopes of the authors. The competitive spirit had not been lessened but navies were building ships of inordinate cost, although some of the new types promised to be of doubtful efficiency. Moreover, statesmen and strategists, disturbed by the havoc wrought with the changed balance of naval power, were left vainly groping for a yardstick with which to measure the relative strength of their own Navy and that of any other power.

The treaty limitations on tonnage and armament spurred designers to get the utmost from each ton. The United States in her new construction had stressed heavy armament; France and Italy had emphasized speed; Japan, to gain both characteristics, had sacrificed a certain amount of seaworthiness; and England, although she had not signaled out any particular feature, had consistently designed and built ships that were fully as good as those of the other powers. But the widest variations were apparent in the degree to which America and other nations built up to treaty limits.

A compilation of current information showed that in 1936, if the programmes of the leading naval powers were continued along lines already laid down, the American Navy would be weaker in tonnage than the British Navy and possibly not as powerful as the Japanese Navy. In the number of fighting units, official tables disclosed that America would be far inferior to both her rivals. The American Navy would consist of 68 ships, the British Navy of 134 ships, and the Japanese Navy of 156 vessels. In tonnage the American Navy would have 607,370 tons as against 627,175 for Britain and 602,178 for Japan. An analysis of the naval construction situation of the five signatory powers showed that since the signing of the Washington treaty the United States had laid down or appropriated for the construction of 34 vessels amounting to 195,170 tons; Great Britain, 111 vessels totaling 389,155 tons; Japan had laid down or appropriated for the construction of 127 vessels amounting to 320,062 tons; France, 156 vessels with a tonnage of 360,512, and Italy, 116 ships with a tonnage of 223,446.

#### LAI'D DOWN OR APPROPRIATED FOR SINCE WASHINGTON TREATY

	Cruisers No. Tonnage	Destroyers No. Tonnage	Submarines No. Tonnage
United States <sup>a</sup>	16 152,900	11 16,500	6 11,970
Great Britain <sup>b</sup>	25 210,260	54 73,831	30 37,664
Japan <sup>c</sup> . . . . .	20 160,875	63 89,016	43 62,571
France <sup>d</sup> . . . . .	19 152,902	58 111,197	78 75,913
Italy . . . . .	17 124,086	45 54,709	54 44,651

<sup>a</sup> Also 1 carrier, 13,800 tons

<sup>b</sup> Also 2 battleships, 67,400 tons.

<sup>c</sup> Also 1 carrier, 7,600 tons.

<sup>d</sup> Also 1 battleship, 26,500 tons.

In regard to the United States: of the 16 heavy cruisers (Category A), 9 were in commission and 6 under course of construction. Bids for the 16th cruiser unit were asked by the Navy Department during October, but, under the treaty, this vessel could not be laid down until after January 1, 1933, and could not be completed before 1936. Two more heavy cruisers had been authorized, making a total of 18 built, building,

or authorized. The 17th cruiser unit could not be laid down until January 1, 1934, nor completed before 1937, and the 18th and last cruiser of this group could not be laid down before January 1, 1935, or completed before 1938. Of the 11 destroyers, 8 were under construction. The laying down of 3 more had been authorized, but no funds had been appropriated for this purpose. Of the 6 submarines laid down or appropriated for since the Washington treaty, all were in commission except the *Cachalot* and *Cuttlefish*, both of which were under construction.

A compilation portraying the naval building situation in the United States, Great Britain, and Japan—ships that may be laid down prior to December 31, 1936, under the terms of the London treaty—showed that no provision had been made for the following ships which the United States required to bring the American Navy up to treaty strength: 3 aircraft carriers, 55,200 tons; 9 cruisers, 87,100 tons; 89 destroyers, 133,500 tons; and 34 submarines, 40,730 tons, or a total of 135 ships, aggregating 316,530 tons. In contrast stood the present building status of the British Navy. Great Britain had had in each recent year a uniform building programme of 3 cruisers, 9 destroyers, 3 submarines, and several miscellaneous craft. She was planning to maintain her Navy at treaty strength, as was indicated by the statement of the first lord of the Admiralty to Parliament on March 7, 1932, when he said, in part, that "we must have the ships which we are allowed to have by 1936 by our treaties, and there is no doubt that we shall have them."

Japan was maintaining her forces afloat at practically treaty strength. Her 1933 programme, already recommended in the budget and to be voted in February, provided for all treaty-authorized replacements except 5200 tons of destroyers that might be laid down in 1935 and 5200 tons of destroyers that might be laid down in 1936.

**ARGENTINA.** The necessity for introducing strict economies by the Navy Department resulted in a determination to call no new conscripts for the coming year, and to discharge some 2500 conscripts of the class of 1910 from the naval training stations and mechanics school. The economic exigencies also forced some restrictions on fleet operations. A squadron that included the two new cruisers *Almirante Brown* and *Ventecunco de Mayo*, and four old cruisers held extensive exercises during the summer. The *Buenos Aires*, a cruiser laid down by Armstrong in 1895, was decommissioned. The destroyers *La Plata* and *Jujuy* built in Germany in 1911 were being modernized to join the *Catamarca* and the *Cordoba* already modernized. Construction continued on the submarines *Salta*, *Santa Fé*, and *Santiago-del-Estero* being built in Toronto as part of the programme authorized in 1926. The *Salta* was launched on January 17. The general design of all three resembled the Italian *Mameli* type.

**AUSTRALIA.** The periodic interchange of ships between the Royal Navy of Great Britain and the Royal Australian Navy, postponed in 1930 for financial reasons, was again deferred for a similar reason. An arrangement was made, however, for adjusting the pay of officers who were interchanged so that no hardship or penalty resulted. But urgent reasons for economy did not prevent the reopening, after being closed for two years,

of the naval school with an initial class of twelve students.

**BRAZIL.** The insistence of the Brazilian press that not one unit of the fleet was seaworthy, and the activities of other South American countries in improving their navies resulted in the new provisional president issuing a decree which authorized a navy replacement fund that was to be spread over a twelve-year period. The Navy was to be reorganized, its arsenals improved, and its bases strengthened. The decree authorized purchase of 2 cruisers, 8 destroyers, 5 submarines, and 6 Coast Guard vessels. Bids were to be submitted to the Minister of Marine and construction was required to start within two years of the date of contracts. Except for the submarine *Humayta* which was badly damaged last year, these would be the first warships constructed for Brazil in many years.

In June, an agreement was signed between the U. S. Secretary of State and the Brazilian Ambassador providing for a naval mission of two commissioned officers and one chief petty officer of the U. S. Navy to assist in the work of instruction at the Brazilian Naval War College. Twelve training biplanes were being built by de Havilland for the Brazilian Navy. Of the 11 Savoia Marchetti flying boats purchased in 1931, only 6 remained. Two were destroyed by landing one on top of the other when alighting in formation, a third hit a sand bank in low water, a fourth crashed during a night flight, and a fifth was blown up through a mechanic searching for a gasoline leak with an open light.

**CANADA.** With the development of the British Commonwealth of Nations had grown the feeling in the mother country that some of the younger members did not contribute sufficiently to the common defense. It was estimated that in the fiscal year 1932 the naval expenditure per head in the United Kingdom was about £1.4s. and in Canada 1s.9d. In 1932 the complement of 792 ratings was filled with Canadians but there were only 86 officers (including 8 from the Royal Navy) for an establishment of 104 officers. Canada had never had her own naval college; officers joined as cadets and proceeded to England for training, but last year no candidates passed the required tests. Twelve years ago virtually all of the personnel was borrowed from the Royal Navy.

**CHILE.** A small number of officers from the British Navy headed by a captain were employed as technical advisers. The effects of the recent mutiny (see 1931 YEAR BOOK) had apparently been overcome and at the end of the year it seemed that the naval establishment had resumed a satisfactory state of discipline.

**CHINA.** The Chinese Navy was used for police duty and the suppression of piracy. It was not engaged in Shanghai nor in any other clashes with the Japanese forces. The Minister of Marine announced a new programme comprising 3 cruisers, 4 destroyers, and 2 submarines, he was also reported to have taken steps to enlarge the naval air establishment, at Shanghai, but lack of money checked the development of these plans. At Canton when Admiral Chanchak was ordered removed from his command for disloyalty he seized the most important vessels of the Cantonese fleet and set up a naval administration on the Island of Hainan. There he successfully repulsed the provincial troops that attempted to cross the choppy fifteen-mile strait that sepa-

rated the island from the mainland. Ultimately a compromise was reached and the ships were again placed under their normal jurisdiction.

**COLOMBIA.** In September the government appropriated \$10,000,000 for national defense against Peru. She bought the SS. *Bridgetown* for use as a transport and changed the name to *Boyaca*. A little later she made tentative offers of \$320,000 for the Spanish gunboat *Eduardo-Dato*, completed in 1924, 1335 tons, four 4-inch, two 3-pounder A. A. guns, and 2 pom-poms for landing. Information as to the negotiations became public and before the arrangements were consummated, Peru protested so effectively that Spain was obliged to refuse the offer.

**DANZIG.** See *Poland*.

**DENMARK.** The efforts of the Socialist government virtually to abolish the Navy never achieved complete success. The Danish fleet did, however, continue to undergo diminution. It was planned that in the future it would consist of 9 torpedo boats, 1 mine layer, and 1 engineer ship. Three new torpedo boats *Gelenten*, *Høgen*, and *Ormen* were laid down. They are small craft of 285 tons, 6000 h.p., 275 knots with two 75-mm., two 20-mm. guns, two 8-mm. machine guns, and eight torpedo tubes. The coast defense ship *Herluf Trolle*, the torpedo boats *Ormen*, *Delfinen*, *Svaerdsfiken*, and the submarines *Havfruen* and *Nymfen* were declared obsolete and removed from the Navy list. The Danish Navy League was highly critical of the whole state of affairs and especially of the fact that no adequate provision was made for the replacement of most of the obsolete vessels nor for the replacement of the coast defense armored ships which alone provided artillery defense.

**FINLAND.** The building of the coast defense ships *Vainamoinen* and *Ilmarinen* (see 1931 YEAR BOOK for principal details) showed that the progress of the Polish fleet will not be the only factor likely to affect the balance of power in the Baltic. The work on these vessels was hastened and they should be commissioned during 1933. For their size they will be the best and most modern coast defense ships in the world, and it is to be noted that they and the submarines of the fleet were built in Finnish yards by Finnish labor.

**FRANCE.** Early in the year, M. Tardieu grouped the Ministries of War, Marine, and Air under one Minister of Defense, but in May when M. Herriot succeeded him the old ministries were promptly reestablished. The naval estimates for 1932 provided approximately \$58,000,000 for operation and upkeep, and \$68,000,000 for new construction. The estimates covered but nine months of the year as, in the future, the fiscal year and the calendar year will coincide. The total naval credits demanded for the nine months were at the rate of \$4,000,000 per twelve months over those of 1931. This year's building programme formed another annual "slice" in the series which has gone on uninterruptedly since 1922 at the average rate of about 35,000 tons a year. Each annual "slice" takes about five years to complete, from the laying down of the ships until their first commission, so that there is a fairly large volume of building, equivalent to about 2.5 annual "slices," always in hand. A 10,000-ton cruiser, for instance, takes about 3.5 years to complete, from laying down to first commission. A large submarine takes longer owing especially to the length and delicacy of its trials.

The cost to the French Exchequer of the annual "slice" of naval construction was in 1932 over 1,000,000,000f. (1 franc = 3.92 cents). This did not include building for the "coastal flotillas" (patrol boats and small submarines) and various other items of new work. Last year the French taxpayer had to find in these extra charges 125,000,000f. for auxiliary vessels, remodeling of existing vessels, and research; 200,000,000f. for the construction and filling of underground oil reservoirs; 75,000,000f. for the equipment of arsenals; 100,000,000f. for coast defense; and 40,000,000f. for naval harbor works, a total of 540,000,000f.

The annual cost of upkeep of the French Navy was about 1,500,000,000f. Its strength was 53,750 men. The cost of maintenance and repairs for the growing navy was 16,000,000f. more this year than last. The French Navy consumed 125,000 tons of coal (all from French mines) a year at a cost of 225f. per ton, and 260,000 tons of fuel oil, which cost 159f. per ton. Of the fuel oil nine-tenths has hitherto been purchased from Soviet Russia and one-tenth from the United States, but a change was expected in favor of Rumania. All the oil was brought to the French Navy by its own fleet of eight oil tankers.

In the spring and summer a fleet concentration took place, for the first time since 1913, of the naval forces in the channel with those in the Mediterranean. In July the submarine *Prométhée* was lost in 250 feet of water off Cape Levi on the North coast of France, during surface trials; 62 officers and men were lost. A committee of inquiry expressed the unanimous opinion that a compressed air valve was suddenly opened in error, thus letting in water and causing the vessel to dive. Work was started at Brest during October on the battle cruiser *Dunkerque*, France's answer to the German *Deutschland*. Her characteristics were: length 200 meters, displacement 26,500 tons, speed 30 knots, armament eight 6-inch guns, and either eight or nine 13-inch guns. These latter were to be in three triple turrets or two quadruple turrets.

Vessels of importance completed during 1932 were destroyer *Vautour*, 2400 tons; 9 submarines of 1400 tons each, *Persée*, *Ajaax*, *Pégase*, *Monge*, *Poncelot*, *Protée*, *Argo*, *Archimède*, *Pasteur*; and 7 submarines of 550 tons each: *Ondine*, *Amphitrite*, *Antiope*, *Orphée*, *Amazonc*, *Meduse*, *Idane*. The larger submarines have a surface speed of 17 knots while the smaller ones can make nearly 14 knots. The destroyer completed, like all of the large French destroyer leaders, would be classed as a cruiser under part three of the London treaty. (Only United States, Great Britain, and Japan agreed to that part.) Other important vessels under construction or appropriated for at the end of 1932 are listed in the accompanying table. (See table next page.)

**GERMANY.** The budget for 1932 appropriated 657,300,000M (approximately \$159,366,000) for the Ministry of Defense—about \$3,000,000 less than the preceding year. This budget included \$4,300,000 as the first instalment toward the construction of the third 10,000-ton "pocket battleship" (*Panzerschiff "C"* or *Ersatz Braunschweig*). It also included the final grant for the first "pocket battleship," *Deutschland*, launched at Kiel in May, 1931. A full description of this vessel appeared in the 1931 YEAR BOOK. It is contemplated that the fourth ship of this type, *Ersatz Elsass*, of which Germany, by the treaty

of Versailles, may have six in commission, shall be laid down in 1933. The total amount allotted to new construction was 50,000,000M as against 49,000,000M for 1931.

The *Ersatz Braunschweig*, like her two predecessors, will be of 10,000 tons standard displacement, 20 knots speed and carry six 11-inch, eight 5.9-inch, four 3.5-inch A. A. guns, and six torpedo tubes.

This squadron of ships when completed will be a weighty factor in the balance of power at sea. Its possession will restore to Germany the command of the Baltic, for it will be more than a match for antiquated Russian dreadnoughts or lightly armed capital ships of other Baltic powers. Such a squadron, if able to elude French submarines in the North Sea, would be able to raid French North African communications almost with impunity. Consequently, the French laid down the *Dunkerque* in answer. The Washington and London treaties endeavored to insure a certain degree of stability in the naval field, but the introduction of the *Deutschland* type and the French return to the almost discarded battle cruiser furnished another indication of the difficulty of checking naval competition. New types have always complicated the calculations of even

the greatest naval powers; and even when a given fleet may offer no direct threat to a stronger one, it still may possess a disturbing "alliance value."

The *Panther*, the gunboat famous in relation to the Agadir crisis of 1911, was sold at auction for less than \$10,000. The 20,000-ton cruiser *Salamis* which never had a gun mounted and has been for 14 years a fixture at Hamburg, where it was built on a pre-war order from the Greek government, was sent to Bremen to be broken up. In July the training ship *Niobe* was struck by a sudden squall in the Baltic and capized with the loss of 69 lives. An inquiry reported that the disaster was not due to negligence or inefficiency but to the "act of God." The surviving cadets were sent to Stralsund for further training and will ultimately go to the naval school at Murwik. Meantime the question of placing another sailing ship in service as a training ship was being taken in hand.

GREAT BRITAIN. The naval estimates for the fiscal year 1932-1933 were £50,476,300 (pound on a gold basis worth \$4.8665). This did not, of course, include expenditures for naval air activities nor the cost of dominion navies. Provision was made for 91,410 men, a decrease of 2240. The new construction programme was practically a repetition of that of 1931. It consisted of: 2 cruisers of the *Leander* class, 1 cruiser of the *Arcthusa* class (5000-6000 tons), 1 leader and 8 destroyers, 4 sloops, 3 submarines, 1 shallow draught gunboat, 1 destroyer depot ship, 1 boom defense vessel, 1 tug, 2 tenders, 3 lighters.

The submarine *M-2* was lost with all hands on January 26, and it was a week before the hull was located. An enormous amount of work and the expenditure of £20,000 over a period of many months did not succeed in raising her. The *M-2* of some 1500 tons displacement formerly carried a 12-inch gun but this had been removed and at the time of the disaster she carried an experimental seaplane stowed in a watertight hangar on a catapult. There were indications, but by no means conclusive ones, that an open hangar door may have caused the accident.

The Navy, since the World War, has been constantly experimenting with submarine detectors and in 1932 perfected one that was reported to be highly effective. No details in regard to it leaked out other than that it was a tank-like apparatus and indicated both direction and distance. It was most effective when used by pairs of destroyers. Special ratings were secretly trained in the use of the instruments, which were kept in special cabins under lock and key. Changes, mainly in the interests of economy, were made in the constitution of the Mediterranean and Atlantic Fleets. The number of battleships allotted to the Mediterranean was reduced from six to five. The reduced number of battleships allotted to the Mediterranean was to remain in commission with full peace complement and always be available on the station except for short periods for recommissioning or refitting at home, the intention was that when one of these ships underwent large repairs she should be relieved by a ship of the same class from home. Only one aircraft carrier was to be attached to the Mediterranean Fleet, subject to the proviso that if she were withdrawn for any length of time another large carrier would relieve her temporarily. The number of destroyer flotillas in the Mediterranean was reduced from

four to three. The title of Atlantic Fleet was altered to that of Home Fleet. Of the ten capital ships at home (seven battleships—including one withdrawn from the Mediterranean—and three battle cruisers), three were treated as being in reserve, with only 70 per cent active service crews, but 100 per cent of her non-substantive ratings. (These three were *Barham*, *Repulse*, and *Ramillies*.) The remaining seven capital ships at home were kept in commission with full active service peace-time crews (about 80 per cent of full war complements).

The vessels of importance completed and placed in commission in 1932 were: destroyers *Kempenfelt*, *Comet*, *Crusader*, *Crescent*, *Oyngnet*, *Diamond*, *Daring*, *Defender*, and possibly one or two others of the "D" class from the 1930 programme. All were of 1375 tons, 35–36 knots with four 4.7-inch guns, and eight torpedo tubes. Submarines: *Thames*, 1805 tons. In addition the submarines *Swordfish* and *Sturgeon* of the 1929 programme were virtually completed and should be commissioned early in 1933. The *Leander*, the only cruiser authorized under the 1929 programme, was expected to be ready for service in February, 1933.

Other important vessels under construction or appropriated for at the end of 1932 are listed in the accompanying table.

GREECE. The destroyers *Spetsai* and *Psara*, two of the four building at Genoa for Greece, were launched during the year. By agreement with the British government the contract for a British naval mission of five officers was canceled for reasons of economy.

ITALY. The budget for 1932–1933 estimated for the Army 2,960,000,000l.; for the air force 750,000,000l.; and for the Navy 1,540,000,000l. Of the naval budget 725,000,000l. or approximately \$38,000,000, the same amount as the preceding year, was to be spent for construction. The building programme comprised two 6500-ton cruisers, *Emanuel Filiberto* and *Eugenio de Savoia*, and two 625-ton destroyers. The cruisers were to be very similar to the *Attendolo* class of 5550 tons, eight 6-inch and six 3.9-inch A. A. guns, designed speed of 37 knots. With the launching of the *Pola*, all seven of the 10,000-ton cruisers were in the water. The *Bolzano*, *Gorizia*, and *Pola* were launched in 1930–1931, and were being completed afloat and should be ready in 1933. The *Pola* was specially protected against under-water attack by well arranged compartments; the engines and boilers were in seven watertight compartments; the former consisted of two groups of Parson's turbines with reduction gearing, and the eight latter were Yarrow type, oil fired. The shaft horsepower of two shafts was 95,000, the boiler pressure of 375 lbs., and the super-heat 70° Centigrade; designed speed, 32 knots. Anti-gas protection was fitted to all the fighting stations. There was a small hangar to accommodate three seaplanes. An elevator brought these up in line with the rails of the Cagnotto type catapult.

The cruiser *Armando Diaz* launched on July 10 was the sixth of the eight vessels of the "Condottieri" type, of 5069 tons 37 knots, armed with eight 6-inch guns, six 3.9-inch A. A. guns, six smaller guns, and four torpedo tubes. Each vessel had one catapult and two seaplanes. In the remaining two ships of this group, *Montecuccoli* and *Muzio Attendolo*, laid down in 1931, the displacement has been increased to 5857 tons,

and the horsepower from 95,000 to 110,000 although the designed speed remained at 37 knots.

After the fall manœuvres the battleships that remained in commission were laid up, the latest cruisers were formed into new squadrons of especially fast ships and a special division of four cruisers was formed for the Adriatic. The extensive practice with mine laying (practically all light ships of the Italian Navy had mine-laying equipment) continued throughout the year.

The vessels of importance completed and placed in commission during 1932 were destroyers *Fulmine*, *Lampo*, *Saetta*, *Fulgore*, *Baleno*; and submarines *Argonauta* and *Fisalia*. The destroyers laid down in 1929 and 1930 were all of 1220 tons, 38 knots with four 4.7-inch guns, three 1.8-inch A. A. guns and six torpedo tubes. The two submarines, laid down in 1929, had 600 tons displacement, surface speed 16.5 knots, submerged speed 9 knots, and carried one 4-inch gun and eight torpedo tubes. Other important vessels under construction or appropriated for at the end of 1932 are listed in the accompanying table. (See table next page.)

JAPAN. The naval estimates for 1933–1934 asked for ¥550,000,000 (over \$270,000,000 at normal rate of exchange when value of yen was \$0.4985), much more than double the amount for 1930–1931 the last normal year. In addition to the expense of ¥200,000,000 for operation and maintenance, the Navy asked ¥270,000,000 for improvement and replacement of armaments and about ¥75,000,000 for the costs of the Manchurian and Shanghai expeditions. The ¥270,000,000 covered improvement and replacement of arms, increases and improvements of naval air force and the necessary maintenance funds for the larger force to result. The Navy attached special

importance to the Y30,000,000 included for additional airplanes.

After a prolonged struggle with the finance minister, the total was reduced to Y373,000,000 and this was approved by the cabinet. The details as to where the cuts were made were not announced but it was known that Y237,000,000 of the country's total budget was designated for "replenishment of arms, all services."

The *Maya*, that was nearing completion at the end of the year, would give Japan twelve 8-inch cruisers (her full allowance under the London treaty) all completed since 1925. She also had fourteen 5000-ton cruisers carrying 5.5-inch guns that were completed since 1920. The two cruisers building and the two others appropriated for would bring her to the limit of the London treaty in that class of vessel. She also had built and ready for service more under-age destroyers than any other Navy and had more under-age submarines than any other nation except France. It was reported that one of the cruisers under construction would be of the "flying-deck" type. Progress was made in the programme of 1931-1932 to triple the strength of the naval air force. One hundred boys from 8000 applicants were chosen for three years' training for pilots. The Navy adopted the Kawanishi three-seat reconnaissance seaplane (Nakajima Jupiter engine) to replace the standard type 14 reconnaissance seaplane (Lorraine engine). No details of performance were allowed to be published. The vessels of importance completed and placed in commission during 1932 were: heavy cruiser *Maya*, 9850 tons, 33 knots, ten 8-inch guns, four 4.7-inch A. A. guns, 8 torpedo

tubes; destroyers *Ikazuki* and *Sazanami*, 1700 tons, 34 knots, six 5-inch guns, 9 torpedo tubes; submarines *I-67* and *I-5* each with 6 torpedo tubes, former 1638 tons, 19 knots surface speed, one 3.9-inch gun, latter 1955 tons, 17 knots surface speed, one 5-inch gun. Other important vessels under construction or appropriated for at the end of 1932 are listed in the accompanying table.

**NETHERLANDS.** As a result of competitive bidding the order for the new cruiser *Celebes* was given to a Rotterdam firm. Of German design, she will be of 5250 tons, carry six 5.9-inch guns, speed 30 knots, cruising radius 5000 miles at 12 knots. Destined for use in the Orient, the Netherlands government will pay half the cost and Netherland India the remainder. The submarine *K. XVII* for similar purposes was launched in July. It was decided that construction of six replacement submarines, one mine-laying submarine and two destroyers which were to have been laid down before 1936 would be entirely postponed until the new cruiser was completed.

**PERSIA.** The dispatch boats *Babr* (tiger) and *Palang* (panther) were completed at Palermo. They carry two 4-inch guns and two 3-inch A. A. guns. These with four motor launches were taken to Persia by 29 officers and 330 men of the Persian Navy who had been in training in Italy. They were accompanied by nine Italian officers and some Italian engineers.

**PERU.** A mutiny, believed to form part of a Communist agitation throughout South America, occurred on board the cruisers *Coronel Bolognesi* and *Almirante Grau* off Callao on May 7. The affair might have been more serious but for the patriotism of a sailor from the *Almirante Grau* who swam ashore and gave alarm. The entire Lima garrison was rushed down to Callao to prevent the mutineers from landing. A loyal submarine opened fire on the *Coronel Bolognesi*, where the mutiny started, and when one of her shells struck the cruiser the mutineers hauled down the red flags and hoisted white ones. A court-martial assembled at Lima on May 9, and as a result of its verdict eight ringleaders were executed on May 11; fourteen sailors were sen-

tenced to fifteen years imprisonment, and twelve to ten years.

**POLAND.** The second of the Polish destroyers, *Burza*, built in France, made 33 knots on her trials. She was formally commissioned August 10. The submarine *Zbik*, also French built, was placed in service with the *Burza* at Gdynia. Strained relations existed between Poland and Danzig with regard to the use of the latter port by Polish men-of-war. The International Court decided against Poland's free use of the place and laid down the general principle that the port should not be used as a naval base by any power. As the Polish government is co-owner of the repairing yards agreement was finally effected as to their use.

**PORTUGAL.** Following the fall of the pound sterling the Italian shipyards which had received contracts for the aircraft tender *Sacadura Cabral* (5100 tons), the cruisers *Alfonso de Albuquerque* and *Bartolomeu Dias* (each 2100 tons) and the submarines *Delfim* and *Espadarte* (each 770 tons) found themselves unable to execute the orders and asked for cancellation. They were obliged to return to Portugal £51,000 already received and pay a 10 per cent indemnity. A new call for bids was made and tenders were received from eighteen British, seven French, seven Italian, five Dutch, four Spanish, and one Belgian shipbuilding firms. The award of contracts, however, was further delayed. Work progressed on the balance of the construction programme given in the 1931 YEAR BOOK—the destroyers *Douro* and *Tejo* were laid down at Lisbon and the sloop *Goncalo Velho* was launched from the Hebburn yard in England.

**RUMANIA.** The new submarine *Delficul* was completed for Rumania at Trieste. At her trials she was said to have shown herself to be the fastest submarine in the Mediterranean.

**SPAIN.** Revolution in Spain, lack of money, and limited sea practice greatly reduced the efficiency of the Navy. The naval air service was abolished and the flying corps was reestablished as an independent arm under the minister of war. The 10,000-ton cruiser *Baleares* was launched at Ferrol. She will be armed with eight 8-inch, six 4.7-inch, and four 4.7-inch A. A. guns, and twelve 21-inch torpedo tubes. Her designed full speed was 33 knots. A sister ship, the *Canarias*, was nearly completed. On July 11, the cruiser *Blas de Lezo* struck a reef near Cape Finisterre, and later sank in 33 fathoms while being towed in the hope of beaching. Her crew of 346 was saved by other ships taking part in exercises at the time of the mishap. The *Blas de Lezo* was of 4650 tons and was launched at Ferrol in 1923. The cruiser *Cardinal Cisneros* was lost at the same place in 1905 under similar circumstances.

**TURKEY.** The budget for operations 1931–1932 was 7,860,451 piasters (\$0.044) as compared with 6,297,940 the preceding year. Negotiations were opened for the purchase of the English cable laying vessel *Silver Spray* for use as a submarine fuel ship and tender. The destroyers *Tinaz Tepe* and *Zafer*, and the submarines *Dumlupynar* (mine layer) and *Sakarya*, built in Italy arrived at Stamboul and were placed in service. The payments made on these ships, in spite of very favorable terms allowed by the Italian shipyards, were behind. Similarly financial difficulties interfered with the training on board the ships. Such training as was given was

under the direction of a German mission that had also supervised the installation of fire control material furnished by German factories.

**UNITED STATES.** Actual expenditures for the fiscal year ending June 30, 1932, were \$353,628,362. The appropriation for the year 1932–1933 was \$326,897,692. The Navy Department showed increasing concern over the government's failure to provide for new construction in line with that being built by other naval powers, or even to maintain the Navy at existing strength. Earnest efforts were made in both branches of Congress to authorize the building of a Navy up to the full strength allotted by the Washington and London treaties without requiring that any specified number of ships be immediately laid down. The influence of pacifists, specious hope over the outcome of the Geneva conference, economic difficulties of the government, and lack of public interest were factors that prevented favorable action and the matter went over to the next session of Congress. In the meantime the commander-in-chief called attention to glaring deficiencies in the fleet, but responsible naval officials remained fearful that only a serious international crisis would bring the public and Congress to a realization of the fact that the American Navy was by no means on a parity with that of Great Britain and was, through lack of a proper building and replacement programme, rapidly moving toward third place among the world's navies. In capital ships, by virtue of the "freezing" agreements of Washington and London, the American Navy retained its position; in aircraft carriers the enormous size of the converted battle cruisers *Lexington* and *Saratoga* permitted it to retain a reasonable relative position in tonnage if not in numbers. In heavy cruisers (Category A of the London treaty—guns of more than 6.1-inch calibre) alone it had built or was building its allotment under the London treaty. In all other classes, however, the American Navy was almost hopelessly deficient. In light cruisers both England and Japan were enormously superior both in tonnage and in numbers; and France and Italy, although somewhat weaker, were not far behind the United States. In destroyers (those dangerous, speedy, invaluable ships for manifold fleet duties) the American Navy at the end of the year was reduced to 13 in commission that were under-age (and ten of these become so in 1933) and had but eight building—only a fraction of the strength of any other important naval power. In submarines the United States also made a relatively weak showing and large numbers of such submarines as were in commission were reaching the age limit each year, while there were but two under construction and no others authorized. (See tables in this section of warships building by other powers.)

Many of the over-age vessels were kept in commission for lack of replacements but they lacked modern construction and equipment, their efficiency was reduced through age and service; and their cost of upkeep to maintain them in operating condition was expensive, and, moreover, funds for maintenance were reduced. While still possessing a certain degree of effectiveness, they were far inferior in reliability of operation and in fighting power to the modern ships of foreign powers. Feeling that ships in reserve with reduced crews for material maintenance only were more ready for service than if out of commission,

the Navy Department, to meet the insistent demands for economy, established a "rotating reserve" for ships. By this scheme ships spent about one-third of their time in reserve and by interchanging places with other ships of the same type in the active fleet managed to maintain a certain degree of efficiency. In spite of handicaps, including an 8½ per cent cut in pay that had remained virtually unchanged since 1908, the morale of personnel remained higher than might have been expected. At the end of the fiscal year the Navy had 9423 officers, 81,120 men; and a reserve force of 7869 officers, 35,060 men; while the Marine Corps had 1184 officers and 15,355 men.

The scouting force that normally operated in the Atlantic remained in the Pacific with the battle force. The chief of Naval Operations announced that this action was taken for reasons of "economy and better training facilities." It was popularly believed, however, that the international situation influenced the decision. At any rate, a good deal of comment and criticism was brought forth in Japan from press and platform.

The 10,000-ton cruiser *Indianapolis* held satisfactory trials in October and was commissioned in November. She followed closely the general lines of the *Augusta* class (see description 1931 YEAR BOOK) but had better protection and improved internal subdivision. Her secondary battery was increased from four to eight 5-inch guns. The *Portland* was launched in May and the *New Orleans* in November. Bids were invited for a similar cruiser to cost approximately \$17,000,000 to be laid down in 1933 and completed in 1936. The submarine *Dolphin*, 1560 tons, 18 knots, one 4-inch gun, six torpedo tubes, was commissioned. Work on three more destroyers was undertaken in navy yards at New York, Boston, and Philadelphia. Completion of modernization of the *New Mexico* (completion date September, 1933), *Mississippi* (September, 1933), and *Idaho* (February, 1934) will end this work for all pre-armistice battleships. Other important vessels under construction or appropriated for at the end of 1932 are listed in the accompanying table. The important achievements in naval aviation were the development of coordinated attack by all types of planes, and materially increased accuracy in bombing. The three hundred odd planes with the mobile fleet that took part in Fleet Problem Thirteen off the California coast gave striking examples of the effectiveness of the improved coordination. The gyro-stabilized bomb sight and the improvements thereon aided in obtaining the highly satisfactory results in bombing practice. The perfection of two-way radio telephone communication between carriers and plane added to safety in the flying forces. During the year some hundreds of hook-ons were made by the planes carried by the airship *Akron*. These planes designated as Curtiss *F9C* were designed especially for this work. They carried Wright Whirlwind 420-h.p. motors, could make 180 m.p.h., and climb 1800 ft. per min.

The gear for hooking on, hoisting, and releasing the planes from the airship consisted of a sort of lattice trapeze extending below the keel of the ship and carrying at its lower end a bar which engaged with an overhead hook on the airplane. The pilot flying his plane at the same speed as the airship maneuvered his craft under the keel of the dirigible, and a "landing" was

## UNITED STATES: WARSHIPS BUILDING, 1932

Class and name	Standard displacement	Probable date of completion
<b>Cruisers:</b>		
<i>New Orleans</i>	10,000	10/ 2/38

made by threading the overhead hook of the top wing of the plane through the trapeze bar.

**YUGOSLAVIA.** The budget of 2,137,000,000 dinar (\$0 017) was 467 millions below that of the preceding year. It contained 139,746,700 dinar (a reduction of 45 million) for future development of the Navy. A naval programme to be completed by 1936 included two 3000-ton cruisers, 10 destroyers, 10 coastal submarines, 12 torpedo boats, and lesser craft. The source of the necessary funds was not indicated but apparently it was hoped that they might be furnished by some other interested power. The flotilla leader *Dubrovnik*, described in the 1931 YEAR BOOK, was completed by Yarrow and Co., and delivered in June.

**NAVAL RESERVE.** See NAVAL PROGRESS.

**NAVIES.** See NAVAL PROGRESS.

**NAVIGATION.** See SAFETY AT SEA; SHIP-BUILDING; SHIPPING; NAVAL PROGRESS.

**NAZIS or HITLERITES.** See GERMANY under *History*.

**NEANDERTHAL MAN.** See ANTHROPOLOGY.

**NEBRASKA.** POPULATION. According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 1,377,963, as against 1,296,372 in 1920. Omaha, the chief city, had (1930) 214,006 inhabitants; Lincoln, the capital, 75,933.

**AGRICULTURE.** The accompanying table shows the acreage, production, and value of the principal crops for 1932 and 1931:

Crop	Year	Acreage	Prod Bu.	Value
Corn	1932	10,644,000	269,293,000	\$35,008,000
	1931	10,042,000	170,714,000	51,214,000
Wheat	1932	2,252,000	26,620,000	7,986,000
	1931	3,465,000	58,376,000	19,848,000
Hay	1932	4,568,000	5,115,000 <sup>a</sup>	21,376,000
	1931	4,389,000	3,593,000 <sup>a</sup>	24,220,000
Oats	1932	2,473,000	74,190,000	8,903,000
	1931	2,311,000	49,686,000	10,931,000
Sugar beets	1932	66,000	882,000 <sup>a</sup>	( <sup>b</sup> )
	1931	65,000	891,000 <sup>a</sup>	4,868,000
Potatoes	1932	135,000	8,775,000	2,808,000
	1931	131,000	7,205,000	4,107,000
Barley	1932	918,000	13,360,000	2,754,000
	1931	820,000	13,360,000	3,882,000
Rye	1932	283,000	2,830,000	566,000
	1931	333,000	2,997,000	809,000

<sup>a</sup> Tons.

**MINERAL PRODUCTION.** The total value of the State's mineral product was \$4,962,012 for 1930; for 1929, \$4,844,542. More than one-third of it was derived from the production of sand and gravel (\$1,731,230 for 1930). Clay products

attained the value of \$496,714 for 1930, as against \$914,304 for 1929. Cement and other less important products for which totals were not tabulated had an aggregate value of \$2,545,394 for the production of 1930.

**FINANCE.** State expenditures in the year ended June 30, 1931, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments, \$14,473,913 (of which \$1,431,294 was for local education); for interest on debt, \$14,231; for permanent improvements, \$9,389,997; total, \$23,878,141 (of which \$10,525,329 was for highways, \$2,914,118 being for maintenance and \$7,611,211 for construction). Revenues were \$23,389,440. Of these, property and special taxes furnished 33.3 per cent; departmental earnings and compensation to the State for officers' services, 9.4; sale of licenses, 39.1 (in which was included a gasoline sale tax that produced \$6,903,173). Funded debt outstanding on June 30, 1931, totaled \$237,500. On an assessed valuation of \$3,348,274,592 the State levied in the year ad-valorem taxes of \$7,551,678.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1932, was 6172.61.

**EDUCATION.** There was considerable sentiment among the school districts in 1932 in favor of reducing the salaries of teachers, on account of difficulty in obtaining revenues requisite to expenditure on the old scale. It was reported at the end of the year, however, that the reductions actually made, except in scattered cases, had been less extensive than those originally proposed. Word was received from the office of State Superintendent Taylor in December to the effect that thus far education in the State had not suffered seriously, that the teachers generally were "carrying on," and that a few school buildings were under construction. The number of persons of school age in the State, as reckoned for the school year 1932-1933, was 422,928. In the academic year 1931-1932 there were enrolled in the public schools 324,241 pupils. Of these, 250,896 were in common schools or elementary grades; in high schools, 73,255. The year's expenditures for public-school education totaled \$25,654,744.

**CHARITIES AND CORRECTIONS.** The 17 custodial and eleemosynary institutions of the State were operated in 1932 under the direction of the State Board of Control. This board was composed of three members, appointed by the Governor for terms of six years, the terms ending in rotation at two-year intervals. The board had full jurisdiction over the institutions in its charge. The number of the inmates of all these institutions on Nov. 1, 1932, was 7543. The separate institutions, with the numbers of their respective inmates on that date, were: Institution for the Feeble-Minded, Beatrice, 1106; Girls' Training School, Geneva, 185; Soldiers' and Sailors' Home, Grand Island, 261; Hastings State Hospital, Ingleside, 1534; State Industrial School, Kearney, 191; Hospital for Tuberculosis, Kearney, 153; Lincoln State Hospital, Lincoln, 92; State Penitentiary, Lincoln, 846; Nebraska Industrial Home, Milford, 88; Soldiers' and Sailors' Home, Milford, 138; School for the Blind, Nebraska City, 57; Norfolk State Hospital, Norfolk, 946; School for the Deaf, Omaha, 204; Reformatory for Women, York, 43; Home for Dependent Children, Lincoln, 110; Reformatory for Men, Lincoln, 391.

**POLITICAL AND OTHER EVENTS.** The Farm Holiday movement, a farmers' strike carried on chiefly in Iowa, made some headway in Nebraska, where many farmers were enlisted. They undertook the picketing of the roads into Omaha in the latter part of August, to prevent the entry of shipments by truck of livestock and of other farm products. A similar move was made in the neighborhood of Lincoln. In both places the strikers were pacified by the granting of materially higher prices for delivery of their milk to the cities. The effects of the economic depression on the farming population were severe and resulted in much deficiency of public revenue in the political subdivisions and in reduction of governmental activities. Owing to its having no substantial debt, however, the State government suffered less than the average.

**ELECTIONS.** The popular vote of November 8 was cast for the Democratic National ticket by a ratio exceeding 7 to 4. The reported totals were: Roosevelt (Dem.), for President, 359,082; Hoover (Rep.), 201,177. The incumbent Representatives, 3 Democrats and 2 Republicans, were elected to serve in the Seventy-third Congress. Gov. Charles W. Bryan, Democrat, was reelected, defeating Dwight Griswold, Republican candidate. With Bryan was elected the entire Democratic State ticket.

**OFFICERS.** The chief officers of the State, serving in 1932, were: Governor, Charles W. Bryan; Lieutenant-Governor, Theodore W. Metcalfe; Secretary of State, Frank Marsh; State Auditor, George Marsh; Commissioner of Public Lands and Buildings, Dan Swanson; Treasurer, T. W. Bass; Attorney-General, C. A. Sorensen; Superintendent of Public Instruction, C. W. Taylor.

**Supreme Court:** Chief Justice, Charles A. Goss; Associate Justices, William B. Rose, James R. Dean, Edward E. Good, George A. Eberly, L. B. Day, Bayard H. Paine.

**NEBRASKA, UNIVERSITY OF.** A State institution of higher education in Lincoln, Nebr., founded in 1869. The enrollment for the autumn of 1932 was 5414. These students were distributed as follows: Agriculture 442, Arts and Sciences 1533, Business Administration 591, Dentistry 92, Engineering 569, Graduate College 566, Law 170, Medicine 337, Nursing 118, Pharmacy 53, and Teachers College 984. There were 2520 students enrolled in the summer session of 1932, of whom 990 were men and 1530 were women. The faculty numbered 300. The library contained 264,755 volumes. Chancellor, Edgar A. Burnett, D.Sc.

**NECROLOGY.** The following list contains the names of notable persons who died in 1932. Articles will be found in this volume, in their alphabetical order, on those whose names are given below without other text.

Aballi, Rafael Sánchez, died Apr. 4, 1932.

Adams, Cuyler. American mining engineer, died in Tryon, N. C., Nov. 29, 1932. He was born in Canton, Ill., Aug. 20, 1852, educated privately and graduated from the Poughkeepsie Military Institute. He removed to Minnesota in 1870 and started his career with the Northern Pacific Railway on dock construction. Later he went to Stutsman County in North Dakota and became a bonanza farmer, then went to Western Ontario where he engaged in exploring and developing mining properties. He discovered, by magnetic observation, the great Cuyuna Iron Range in Minnesota and also built the Cuyuna Iron Range Railway, of which he became general manager and president. He was president of the Biwanago Mining Company.

Adams, Evangeline Smith. American astrologer, died in New York City, Nov. 10, 1932, aged 59. She was born in Jersey City, N. J., and attended a private school in Andover, Mass. She originated "Adams' Philosophy,"

taking the truths of all occult schools of the Orient and applying them to the optimistic intelligence of the Western World. She had created a name for herself in the United States and then went to England to gain greater recognition for her chosen field by endeavoring to have astrology legalized there. She is credited with having forecast the date of the death of King Edward, and also of the Windsor Hotel fire in New York, which predictions won her international fame. As a result of radio broadcasting in her later years she had a large following.

Adams, Harry M. American railway official, died in Berkeley, Calif., July 30, 1932. He was born in Comanche, Ia., Jan. 3, 1867, and attended the public schools of that city. He began his railroad career as a messenger for the St. Louis & San Francisco Railway Co. in 1880, and clerked in various railway offices until 1907 when he became general freight and passenger agent for the Spokane, Portland & Seattle Railway Co. In 1910 he was appointed freight traffic manager for the Western Pacific Railroad Co., and in 1914 became general traffic manager for the same company. During the World War he was successively chief of inland traffic service for the War Department, and assistant regional director of traffic (Southwestern Region) for the U. S. Railroad Administration. In 1919 he became vice-president in charge of traffic for the Union Pacific Railroad Co., and in 1927 president of the Western Pacific Railroad Co., serving in the latter capacity until 1931.

Albert, Eugen d', died Mar. 3, 1932.

Alexander, James Strange, died July 16, 1932.

Alexander, Magnus Washington American engineer, died Sept. 10, 1932, in New York City where he was born Feb. 17, 1870. During 1889-92 he studied metallurgical and electrical engineering at the universities of Vienna, Leoben, and Graz, Austria. On his return to the United States he became associated with the Weston Electrical Instrument Co. of Newark, N. J. From 1894 to 1899 he was designer and engineer with the Westinghouse Electric & Manufacturing Co., and from 1899 to 1900 with the Siemens & Halske Electric Co. of America. In 1900 he began his long association with the General Electric Co. as engineer in charge of designing and was consulting engineer on economic issues from 1918 to 1922. He was president of the National Industrial Conference Board, which he helped to organize in 1916, and in which he was spokesman for many of the leading American industries. Also, he was chairman of the Massachusetts Commission on Old Age Annuities and Pensions and ex-member of the Massachusetts Commission on Compensation for Industrial Accidents.

Alexander, Moses American merchant and former governor of Idaho, died in Boise, Jan. 4, 1932. He was born in Germany, Nov. 13, 1853, and came to the United States in 1868. In 1873 he started in the clothing business in Chillicothe, Mo., where he was elected mayor in 1888. Later he went to Boise, Idaho, where he was also chosen mayor in 1897, serving two terms. In 1908 he was an unsuccessful candidate for governor of Idaho but was elected to that office in 1915, and again in 1917.

Allen, Horace Newton, died Dec. 11, 1932.

Anthony, Benjamin Harris American publisher, died Oct. 16, 1932, in New Bedford, Mass., where he was born Aug. 1, 1863, and graduated from Yale University with an A. B. degree in 1886. He immediately entered the newspaper publishing business founded by his grandfather, conducted by his father, and known as E. Anthony and Sons, publishers of the *New Bedford Evening Standard*. In 1894 he took over the management of the *New Bedford Morning Mercury* and conducted both papers, becoming president of E. Anthony and Sons upon the death of his father in 1906. For many years he served as second vice-president of the Associated Press, and from 1923 to 1932 was one of their most active directors. He resigned in the latter year. Also, in 1921, he became president of the New England Daily Newspaper Alliance.

Appel, Jakob, Danish educator, died in Copenhagen, Denmark, Jan. 1, 1932, aged 76. He served as Minister of Public Instruction during 1910-13 in the Klaus Berntsen cabinet, and in 1922 was Minister of Religion in the Niels Neergaard cabinet. He was the author of *Historisk Pynt* (1896-97).

Archinard, Gen. Louis French soldier, died at Villiers-le-Bel, May 8, 1932. He was born in Havre, Feb. 11, 1850, and attended the École Polytechnique in Paris. As commander of the Colonial Army Corps he conquered the French Sudan about 1878, and served there as military and later as civil governor. He received the grand cross of the Legion of Honor and also was made a member of the Conseil Supérieur de la Guerre.

Arens, Franz Xavier, died Jan. 28, 1932.

Arias, Tomás Panama statesman, died in Panama City, July 20, 1932, aged 77. He was the last surviving member of the founders of the Republic of Panama, and had been a member of the Provisional Board of Government which was inaugurated on Nov. 3, 1903. In the first cabinet he served as minister of foreign affairs and later represented Panama in Europe and the United

States. At the time of his death he was president of a bank in Panama.

Armitage-Smith, Sir Sydney Armitage, died Oct. 31, 1932.

Ashhurst, Astley Paston Cooper, American physician, died Sept. 19, 1932, in Philadelphia, Pa., where he was born Aug. 21, 1876. He graduated from the University of Pennsylvania with an A. B. degree in 1896 and an M. D. degree in 1900. He began his medical career with the Episcopal Hospital in Philadelphia and served as surgeon of the outpatient department from 1903 to 1913, and associate surgeon from 1913 to 1915 when he interrupted his medical pursuits to enter the army. He earned the title of major in the medical reserve corps in 1917, was promoted to colonel in 1918 and was placed in charge of Base Hospital 34 of the American Expeditionary Force in France. He won a citation for his services. Upon his return to the United States he became associate in surgery at the Orthopedic Hospital in Philadelphia. In 1923 he was appointed professor of clinical surgery at the University of Pennsylvania School of Medicine and held that office until the time of his death. In collaboration with the late Dr. John B. Deaver he wrote several books on surgery.

Atkinson, John Atkinson, Baron, British jurist, died in London, Mar. 13, 1932, aged 87. Admitted to the Irish bar in 1865, he was appointed Queen's Counsel in 1880. In 1889 he became solicitor general for Ireland, in 1892 attorney general, and in the latter year he was also made Privy Counselor. He was a member of Parliament (Conservative) for Northern Londonderry from 1895 to 1905. Following his admission to the English bar he served as lord of appeal in ordinary for 23 years. He was created a life Baron in 1905.

Austin, Louis Winslow, died June 27, 1932.

Austin, William Luseter, American mechanical engineer and inventor, died in Rosemont, Pa., Mar. 10, 1932. He was born in Philadelphia, Pa., Sept. 22, 1852, and attended the public schools there. After being employed as draftsman in the patent office, Philadelphia, and with the Kensington Steam Engine Works, he began, in 1870, his association with the Baldwin Locomotive Works. He rose from draftsman to engineer, vice president, president (1910-11), and chairman of the board (1911-12). Also, he invented many safety devices for locomotives.

Babcock, Kendrick Charles, American educator and author, died in Chicago, Ill., Mar. 11, 1932. He was born in South Brookfield, N. Y., Sept. 8, 1864, and was graduated from the University of Minnesota in 1889. In 1896 he received the Ph. D. degree from Harvard. He was instructor of history at the University of Minnesota from 1890 to 1894 and assistant professor of American history and political science at the University of California from 1896 to 1903. In 1903 he was elected president of the University of Arizona. He was specialist in higher education for the U. S. Bureau of Education from 1910 to 1913, dean of the college of liberal arts and sciences of the University of Illinois from 1913 to 1931. He wrote *The Rise of American Nationality* (1906) and *The Scandinavian Element in the United States* (1914).

Bachini, Antonio Uruguayan diplomat, died in Montevideo, Sept. 11, 1932. He was born in Dolores, Uruguay, in 1860, and at the age of 15 circumstances placed him owner, editor, printer, and distributor of a provincial newspaper. He succeeded at this undertaking and was later given a position as reporter on one of the Montevideo dailies. Later he was elected to the Chamber of Deputies and served two terms. He was appointed minister of foreign affairs and served from 1907 to 1910. He returned to newspaper work and in 1923 was appointed minister to Portugal, later to Germany, England, and at the time of his death was serving as minister plenipotentiary to Brazil.

Bacon, Benjamin Wisner, died Feb. 1, 1932.

Badger, Charles Johnson, died Sept. 7, 1932.

Bailey, Willis J. American banker and ex-governor of Kansas, died in Kansas City, Kans., May 19, 1932. He was born in Carroll County, Ill., Oct. 12, 1854. Upon graduating from the University of Illinois in 1879 he immediately engaged in farming and stock raising, and later entered the banking field. He was a member of the Kansas House of Representatives in 1888, a member of the Kansas State Board of Agriculture from 1895 to 1899, and a member of the 56th Congress from 1899 to 1901, being representative-at-large for Kansas. He served as governor of Kansas from 1903 to 1905. In 1922 he became head of the Federal Reserve Bank of the tenth district, retiring in January, 1932.

Baker, Simon Strouse, American educator, died in Washington, Pa., Oct. 11, 1932. He was born in Washington County, Pa., July 11, 1868, and graduated from Washington and Jefferson College with a B. S. degree in 1892. He then studied law privately in conjunction with an extension course from the University of Pittsburgh. He taught in the public schools for four years and later became principal and superintendent of the Pittsburgh Public Schools and served in that capacity for over 25 years. From 1920 to 1921 he was acting president of

Washington and Jefferson College in Washington, Pa., and in March, 1922 was appointed president, which office he held until 1931 when he resigned.

Bamford, Brig. Gen. Frank E. American army officer, died in Charlestown, W. Va., June 27, 1932. He was born in Wisconsin, Nov. 15, 1865, and was graduated from the University of Wisconsin in 1887. He enlisted as a private in the army and was promoted from the ranks. He then attended the Army Staff College, graduated in 1915, and the Army War College from which he graduated in 1921. He was promoted through the grades to colonel in 1920, and in 1921 was retired at his own request after 30 years' service. In 1930 he was officially retired with the rank of brigadier general. He was awarded the distinguished service medal for his services during the World War. General Bamford was one of the officers who took part on May 28, 1918, in the capture of Cantigny by the First Division. On October 25 of that year, he took command of the Twenty-sixth Division, which on October 27 penetrated the wood east of Molleville Farm. On November 10, the division led by General Bamford captured Villedavant-Chaumont. He was in command of the first and then later the 26th (Yankee Division) regiments. He was mentioned in the memoirs of General Pershing. (*My Experiences in the World War*).

Bang, Bernhard Laurits Frederik, died June 22, 1932. Bangs, Outram American zoologist, died in Wareham, Mass., Sept. 22, 1932. He was born in Watertown, Mass., Jan. 12, 1863, and graduated from the Lawrence Scientific School of Harvard in 1884. He immediately became curator of mammals and birds there. In 1924, in order to devote all of his time to birds he asked to be relieved of the supervision of mammals. He was one of the world's leading ornithologists and wrote many authoritative articles on the subject of ornithology. Also, he was an instructor at Harvard on mammals and birds.

Banks, Charles Eugene. American author and editor, died in Honolulu, T. H., Apr. 29, 1932. He was born in Clinton, Ia., Apr. 3, 1852, attended public schools there and was also tutored privately. The owner and editor of the *American Commercial Traveler*, in Chicago, from 1885 to 1887, he subsequently became editor of the *Weekly Outlook* in Davenport, Ia. He was also literary editor of the *Chicago Sunday Examiner* and *American*; and after 1907 was editor of the *Peace Pipe*, a monthly magazine, in Seattle, Wash., and dramatic editor of the *Post Intelligencer* of the same city in 1918. On removing to Hawaii he became editor of the *Tribune Herald* in Hilo, and at the time of his death was in the editorial department of the *Honolulu Advertiser*. He was the author of several books, among them being: *Novels: In Hampton Roads* (1898), *A Child of the Sun* (1900), *An American Woman* (1905). Biography: *Theodore Roosevelt, a Typical American* (1902). Plays: *The Swami* (1909), *Vibration* (1909) Poems: *Quiet Music* (1892), *Heart Beats of Hawaii* (1921), and *The Trail of Love* (1921).

Bartholdt, Richard. American congressman, died in St. Louis, Mo., Mar. 19, 1932. He was born in Germany, Nov. 2, 1855, but came to the United States in early boyhood. After learning the printing trade he became a writer for newspapers and was editor-in-chief of the *St. Louis Tribune* from 1885 to 1892. From 1893 to 1915 he was a member of the House of Representatives from the 10th Missouri district. He was president of the Inter-parliamentary Union for Promotion of International Arbitration, and founder, and president for 11 years, of the American group in Congress of that organization. He was the author of several governmental documents and also a book entitled *From Stearage to Congress* (1930).

Bauer, L(ouis) A(gricola), died Apr. 12, 1932.

Bauer, Marius, died July 18, 1932.

Baum, Frank George. American electrical engineer and inventor, died in Redding, Calif., Mar. 14, 1932. He was born in Ste. Genevieve, Mo., July 18, 1870, and was graduated from Stanford University with the A.B. degree in 1888, and the E.E. degree in 1899. In 1902 he joined the California Gas & Electric Corp. as electrical engineer and in 1907 was appointed consulting construction engineer. In 1912 he became associated with the Pacific Gas & Electric Co. as chief engineer in charge of hydro-electric work, and also went to France and Germany as consultant for power corporations. At the time of his death he was engaged in private practice as consulting hydro-electric engineer. He was the inventor of many electrical devices that revolutionized the transmission of electricity at great distances and author of *Alternating Currents* (1902); *Alternating Current Transformer* (1903); and *Atlas of the U. S. A. Electric Power Industry* (1923).

Bazin, René François Nicolas Marie, died July 20, 1932.

Beach, Brig. Gen. William Dorrance. American soldier, died in Mt. Vernon, N. Y., June 18, 1932. He was born in Brooklyn, N. Y., June 18, 1856, and graduated from West Point in 1879. He was assigned to the cavalry as second lieutenant in the third division. In 1892 he was promoted to captain and during the Spanish-American War in 1898 was transferred to the volunteer army as

inspector general with the rank of major. He was a member of General Wheeler's staff at the battles of Las Guasimas and San Juan, Cuba. From 1910 to 1912 he was chief of staff of the Philippine Department. He received an honorable discharge from the volunteer army in 1901, and returned to the regular army with the rank of major. At the time the United States entered the World War in 1917 he was holding the title of colonel and was promoted to brigadier general of the National Army in the same year. He retired from both armies, the National Army in 1919, and the regular army in 1927 with the rank of brigadier general. In 1916 he served as president of the board on cavalry regulations. He was awarded the Distinguished Service Medal and the Croix de Guerre, and created member of the Legion of Honor.

Beaumarchais, Maurice Delarue de. French diplomat, died in Paris, Dec. 3, 1932. He was born in Lyons, France, Sept. 5, 1872. He received a diploma from the College of Political Sciences with a title of Doctor. He served France as co-administrator of Madagascar Colonies to 1896; as secretary of the Vienna Embassy until 1901; to Berlin in 1903, and to Tangiers until 1906. He was then appointed ambassador to Rome and held that office at the time of his death. He was the great-grandson of P. A. Caron de Beaumarchais the author of *The Barber of Seville* and *The Marriage of Figaro*.

Belcourt, Napoleon Antoine. Canadian lawyer and journalist, died at Blue Sea Lake, Que., Aug. 7, 1932. He was born in Toronto, Sept. 15, 1860, and attended St. Joseph's Seminary, Three Rivers, Que. Admitted to the Quebec bar in 1882 and to the Ontario bar in 1884, he was created Queen's Counsel in 1898, and Privy Councillor in 1905. At the time of his death he was a member of the firm of Belcourt, Leduc and Genest in Ottawa. He represented the French-Canadian Educational Association in its fight against the regulation limiting the time French was to be taught in the bilingual schools of Quebec. He urged the extension of the "Entente Cordiale" to include the United States and Japan in 1906. Elected to the House of Commons in 1896, he was re-elected in 1900 and 1904, and was speaker from 1904 to 1906. In 1907 he became a member of the senate. He was minister for Canada at the inter-allied and international conferences in London in 1924, and also president of the Canadian Institute of International Affairs. For many years he was owner and editor of *Le Temps*, an Ottawa daily newspaper.

Benjamin, Marcus, died Oct. 22, 1932.

Bennett, Belle. American actress, died in Hollywood, Calif., Nov. 4, 1932. She was born in Dublin, Ire. In 1893, the daughter of a showman, William P. Bennett, and her first public appearance was at the age of five in the arms of her mother in a play called *The Fatal Wedding*. The entire family played together and in 1898 they emigrated to the United States and settled in Minnesota. She attended a convent until she was 13 and she then joined a circus as an expert on the trapeze. In 1916 she went to Culver City, Calif., and started a motion picture career with the Triangle Films, Inc., playing in Western pictures. Later she joined the Alcazar Stock Company in San Francisco and broke a record by playing in stock for 85 consecutive weeks with 81 different plays. She was then persuaded to come to Broadway and she played successfully in *Happy-go-lucky* in 1920, and also, at a later date, in *Lawful Larceny*, *The Demi-virgin*, *The Wandering Jew*, and other plays. Her greatest fame was achieved in 1925 when she played the part of the mother in *Stella Dallas*. Since her phenomenal success her health failed and she retired to private life a few years before her death.

Benson, Admiral William Shepherd, U.S.N., died May 20, 1932.

Bethell, Admiral Sir Alexander Edward. British naval officer, died in London, June 14, 1932, aged 76. He entered the navy in 1869, and was advanced through the grades to captain in 1898 and rear-admiral in 1908, being appointed the following year director of Naval Intelligence and in 1912 commander-in-chief of the East Indies. In 1913 he became vice-admiral and commander of the Royal Navy War College. At the outbreak of the World War he was placed in command of battleships of the third fleet, and in 1915 appointed commander of the Channel fleet. He was promoted admiral in 1916, and at the same time was made commander-in-chief of Plymouth and admiral commanding coast guards and reserves. In 1914 he was created a Knight Commander of the Bath and on his retirement in 1918 Knight of the Grand Cross of St. Michael and St. George.

Bien, Morris. American lawyer and civil engineer, died in Takoma Park, Md., July 29, 1932. He was born in New York City, Apr. 17, 1859, was graduated from the University of California in 1879, and received the LL.B. from Columbia (now George Washington University) in 1895. He was connected with the U. S. Geological Survey as topographer from 1879 to 1893. From 1893 to 1902 he was in the General Land Office in Washington, being in charge of securing rights of way for irrigation, railroad, and other purposes on public lands of the

United States. He was associated with the Reclamation Service (now the Bureau of Reclamation) from 1902 to 1924 as assistant commissioner in charge of the lands and contracts department, and at times serving also as acting director and commissioner of the department. Between 1898 and 1924 he examined and reported upon right of way and irrigation legislation considered by the Department of the Interior, and in 1904 drafted the State Irrigation Code which was enacted the next year without material change by the legislatures of North Dakota, South Dakota, and Oklahoma, and later, in part, by several other States.

Bigourdan, Guillaume, died Feb. 29, 1932.

Billard, Rear Admiral Frederick Chamberlayne. Commandant of the U. S. Coast Guard, died May 17, 1932, in Washington, D. C., where he was born Sept. 22, 1873. He was graduated from the Baltimore City College and the U. S. Coast Guard Academy and was promoted through the grades from ensign in 1896 to superintendent of the Coast Guard Academy in 1914. During the World War, when the Coast Guard was operated as part of the Navy, he commanded the *Aphrodite*, being engaged in duty overseas. In 1924 he was appointed commandant of the Coast Guard, with the rank of rear admiral, and was reappointed in 1928.

Billings, Frank, died Sept. 20, 1932.

Blackader, Alexander Dougall. Canadian physician and educator, died Mar. 14, 1932, in Montreal, where he was born in June, 1847. He was graduated from the McGill University, Montreal, in 1870, and studied also in London, Vienna, and Prague. During the Fenian raid in 1870 he was acting assistant surgeon of the Montreal Garrison Artillery. After serving as physician and surgeon at several of the London hospitals he returned to Montreal in 1877. In 1883 he was appointed lecturer on diseases of children at the McGill University and in 1891 professor of pharmacology and therapeutics, later becoming emeritus professor. Also, he was consulting physician for many of the Montreal hospitals and founding homes. He served as editor-in-chief of the *Canadian Medical Association Journal* and had contributed to many medical publications articles on variola, hydrocephalus, artificial feeding of infants, and food poisoning.

Blair, Andrew Alexander, died Jan. 25, 1932.

Bogle, Sarah Comly Norris. American librarian, died in White Plains, N. Y., Jan. 11, 1932. She was born in Milton, Pa., and attended the Drexel Institute Library School in Philadelphia, Pa. As a pioneer in the library field she founded the Juniata College library at Huntingdon, Pa., in 1904, and continued as librarian there until 1908. After spending a year as librarian at the Queen's branch of the New York Public Library, she went to the East Liberty branch of the Pittsburgh Carnegie Library where she remained until 1911. She was principal of the Carnegie Library School until 1920 and also head of the children's department of the Carnegie Library in Pittsburgh until 1917. From 1917 to 1918 she was president of the American Library Schools. After 1920 she was assistant secretary of the American Library Association and after 1924 secretary of the association's board of education for librarianship. During 1923-24 she also served as secretary of the association's temporary training board and in 1923 was director of the summer library course for the Paris American Committee for work in devastated France. After 1924 she was director of the Paris Library School under the auspices of the American Library Association. In 1930 she represented the American Library Association at the International Committee Meeting at Stockholm, Sweden, and as delegate before the British Library Association conventions. She also compiled a pamphlet entitled *Children's Books for Christmas Presents*.

Bordonaro, Antonio Chiaramonte. Italian diplomat, died in London, England, June 8, 1932. He was born in Palermo, Italy, Feb. 26, 1877, was educated there and also in Florence. He started his diplomatic career in 1899 as attaché of the consular service at Trieste, being sent to Budapest in 1902. He was stationed at the Foreign Office in Rome in 1906, was appointed first secretary of the Italian Legation at Berne in 1907, and was made private secretary to the Under Secretary of State in 1909. He became counselor of Embassy at St. Petersburg (now Leningrad) in 1913; Berlin 1914, returning to the Foreign Office in Rome in 1915. After the World War, in 1919, he was again sent to Berlin as civil high commissioner. In 1920 he was envoy extraordinary and minister plenipotentiary to Prague; Vienna in 1924 and adjoint member of the Italian delegation at the Conference of Locarno in 1925. In 1927 he was appointed ambassador to the Court of St. James's, which post he held at the time of his death. During the naval conferences in London, in 1930, he was the Italian delegate.

Bonstelle, Jessie. American actress and theatrical director, died in Detroit, Mich., Oct. 14, 1932. She was born in Greece, N. Y., about 1867, and attended a convent until she was 15 years of age. She returned to her home and took part in amateur theatricals and was immediately offered a part in a road company which

she accepted. She then took parts in plays under the direction of Augustin Daly, the Shuberts, and others. She played in several parts in her own company on the road and after playing in *The White Sister* in Detroit she decided to lease the Garrick Theatre and formed a stock company which she directed for over 14 years. In 1925 she bought a theatre and called it the Bonstelle Playhouse and organized the Detroit Civic Theatre. She appeared in many of the plays she directed, and also produced and played in Shakespearean vehicles. She was credited with having made many stars, among them being Katherine Cornell, Ann Harding, Lester Vail, Frank Morgan, and others.

Boselli, Paolo, died Mar. 10, 1932.

Bosher, Kate Lee Langley, died July 27, 1932.

Boulenger, Marcel. French author, died in Chantilly, May 21, 1932. He was born in Paris, Sept. 9, 1873 and educated at the lycée Condorcet. In 1918 he won the Prix née and in 1919 the Prix Stendhal. Among his many novels are *La Femme Baroque* (1898); *Couplées* (1903); *Au Pays de Sylbie* (1904); *L'Amazone Blessée* (1907); *Nos Élégances* (1908); *Les Doyens de fée* (1909); *Opinions Chosies* (1911); *Introduction à la vie comme il faut* (1912); *La Cour* (1918); *Réponse à Gabriele d'Annunzio* (1919); *Marguerite* (1921); *Le Vicomte* (1923); *Mœurs du Jour* (1926); *Mazarin soutiens de L'Etat* (1929); *Quand j'avais une épée* (1931). Also, he was a Chevalier of the Legion of Honor and the Couronne d'Italie.

Bovard, George Finley. American educator, died in Los Angeles, Calif., Sept. 24, 1932. He was born in Alpha, Ind., Aug. 8, 1856, and attended De Pauw University in Greencastle, Ind., from 1877 to 1879. In 1883 he was ordained a Methodist Episcopal minister and was appointed pastor of a church in Orange, Calif. He attended the University of California at the same time and graduated with an A. B. degree in 1884 and an A. M. in 1887. He then became a presiding elder and in 1890 was appointed superintendent of the Arizona missions. In 1897 he again became a presiding elder. In 1903 he was appointed president of the University of Southern California and served until 1921. At the time of his death he was president emeritus. He acted as delegate to the General Conference in 1900, 1904, and again in 1916. From 1900 to 1904 he was a member of the book committee.

Boyd, Thomas Duckett. American educator, died in Baton Rouge, La., Nov. 2, 1932. He was born in Wytheville, Va., Jan. 20, 1854, and graduated from the Louisiana State University with an A. M. degree in 1872. From 1873 to 1877 he served as assistant professor of mathematics at the Louisiana State University and then was commandant of cadets from 1875 to 1879. He was appointed professor of English History and English Literature at the same university where he remained until 1888. In the following year he was appointed president of the Louisiana State Normal School at Natchitoches where he served until 1896. He was then recalled to the Louisiana State University and was appointed president, which office he held until 1927 when he resigned. At the time of his death he was president emeritus.

Bradford, Gamaliel, died Apr. 11, 1932.

Breckinridge, Clifton Rhodes. American congressman, died in Wendover, Ky., Dec. 3, 1932. He was born in Lexington, Ky., Nov. 22, 1846, and graduated from Washington College in Virginia. The Civil War was in progress when he left college and he immediately entered the Confederate Army and served as a private. Later he served as a midshipman in the Confederate Navy. After the war he engaged in cotton planting in Arkansas until 1883 when he was elected to Congress. He served from the 48th to the 51st session of Congress when he was unseated during the first session. Before the second session convened he had been reelected and served until part of the 53d Congress when he resigned in August, 1894 to fill an appointment as Minister to Russia where he served until 1897. He then returned to Arkansas and engaged in business there, later removing to Kentucky. He was the son of General John Cabell Breckinridge, Vice-President of the United States during the administration of President Buchanan.

Brennan, Louis, died Jan. 17, 1932.

Brentford, William Joynson Hicks (1st Viscount), died June 8, 1932.

Briand, Aristide, died Mar. 7, 1932.

Brigham, Albert Perry, died Mar. 31, 1932.

Bristol, Frank Milton. American bishop of the Methodist Episcopal Church, died in Upper Montclair, N. J., Apr. 24, 1932. He was born in Orleans Co., N. Y., Jan. 4, 1851. On his graduation from Northwestern University in 1877, he became a member of the Rock River conference, from which he was accepted into the ministry, and during the next 20 years held successively the pastorates of Trinity, Grace, and the Washburn Avenue Methodist Churches in Chicago, and the first Methodist Church in Evanston, Ill. In 1898 he received a call to the Metropolitan Church in Washington, of which President McKinley was a member. He remained there until 1908, when he became a member of the Baltimore conference

and was elected bishop. From 1908 to 1912 he was stationed in Buenos Aires, thence he was sent to Omaha, Neb., as resident bishop, and from 1916 until his retirement in 1924 he presided over the Chattanooga (Tenn.) conference. He was appointed delegate to the quadrennial general conferences on six successive occasions and also represented his church at Canadian and European conferences. He was the author of *Providential Epochs* (1894), *The Ministry of Art* (1897), and *Shakespeare and America* (1898).

Brock, William S. American aviator, died in Chicago, Ill., Nov. 13, 1932, aged 36. He was born in Gladstone, Ohio, and removed with his family to Springfield, Ohio, where he attended the Wittenberg Academy. At the age of 16 he became interested in flying and left school. He obtained employment with the Thomas Aircraft Co., in Ithaca, N. Y. Three months later he was assistant instructor and seven months later became a test pilot. After doing exhibition flying for a year he joined the U. S. Flying Corps in 1917 and was appointed an instructor and commissioned a lieutenant. After the war he returned to exhibition flying and in 1925 was pilot for the air-mail service between St. Paul, Minn., and Chicago, Ill. On Aug. 26, 1927, he and a colleague from Detroit named Schlee took off for a trip around the world. After going over 12,295 miles weather conditions forced them to abandon the project and they ended the trip at Tokyo from which they came back to the United States by steamer. Later they attempted an endurance flight.

Brookings, Robert Somers, died Nov. 15, 1932.

Brown, Clyde American lawyer, died in Westport, Conn., Nov. 30, 1932. He was born in McConnellsville, Ohio, Mar. 17, 1873, and graduated from the Ohio University with a Ph. B. degree in 1895. He then removed to New York City where he practiced law and later became associated with the New York Central Railroad Company, and in 1907 was appointed assistant to the vice-president of those lines. He became general solicitor for the entire system in 1908 and held that office at the time of his death. It was mostly due to his efforts that an agreement was reached in 1931 for the unification plan for the railroads.

Brown, Gerard Baldwin British historian, died in Edinburgh, July 12, 1932. He was born in London, Oct. 31, 1849, and was graduated from Oriel College, Oxford. He became professor of fine arts at the University of Edinburgh in 1880, and after his retirement in 1930 was professor emeritus. He was the author of several books on art, among them being *From School to Cathedral*, a study of early Christian architecture and its relation to the life of the church (1886); *The Fine Arts* (1891); *The Arts in Early England* (2 vols. 1903); *The Care of Ancient Monuments* (1905), and *Rembrandt* (1907). His later works included *The Life of Saron England in its Relation to the Arts* (1926); *Art of the Cave Dweller* (1928), and later volumes of *The Arts in Early England* (1930 and 1932).

Brown, Harold Haven. American painter, died in Provincetown, Mass., Apr. 17, 1932. He was born in Malden, Mass., June 6, 1869. After attending the Massachusetts Normal Art School he studied at the École des Beaux Arts, Paris, under Gérôme, and at the Académie Julian under Laurens. He became a director of art in the high schools of New York City and later in the University High School of Chicago. From 1913 to 1921 he was director of the museum and school of art of the John Herron Art Institute, Indianapolis, Ind. After 1926 he was director of the Provincetown Art Association. He exhibited many of his water-colors, designs, and illustrations in several large cities, receiving a bronze medal at the Buffalo Exposition in 1901. He was a lecturer on art topics and also the author of *Applied Drawing* (1916).

Brown, Joseph M., died Mar. 3, 1932.

Bryant, Henry Grier, died Dec. 7, 1932.

Buisson, Ferdinand, died Feb. 16, 1932.

Bull, Charles Livingston American painter, explorer, naturalist, and author, died in Oradell, N. J., Mar. 22, 1932. He was born in New York State in 1874. He studied art in Philadelphia, Pa. Though best known for his murals his contributions to science as a taxidermist and naturalist were also of note. He made trips in the company of others through Mexico and Central and South America, and his ability to illustrate with great accuracy made his sketches valuable, especially his illustrations of eagles that were used far and wide on posters during the World War. Also, he illustrated many books. He wrote and illustrated *Under the Roof of the Jungle* (1911).

Burgess, George Kimball, July 2, 1932.

Burke, James Francis American congressman and lawyer, died in Washington, D. C., Aug. 8, 1932. He was born in Petroleum Centre, Pa., Oct. 21, 1867. He graduated from the University of Michigan with an LL.B. degree in 1892, and in 1893 removed to Pittsburgh, Pa., where he practiced law. He served as secretary of the Republican National Convention and as an officer at the conventions of that party in 1892 and in 1896, and also

in 1928 and 1932. In 1904 he was elected to the 59th Congress and was subsequently elected to each Congress until the 69th when he resigned voluntarily in 1914. He was representing the 31st Pennsylvania District. He then practiced law in Pittsburgh, and became known as one of the leading corporation lawyers. At the time of his death he was counsel to the Republican National Committee.

Burn, Sir George Canadian banker, died in Ottawa, Dec. 5, 1932. He was born in Thurso, Scotland, Apr. 10, 1847, and was educated there. He started his career in the Royal Bank of Scotland, and in 1866 went to Canada and joined the staff of the Royal Canadian Bank. He later became inspector of the Exchange Bank in Montreal. He received an appointment as the general manager of the Bank of Ottawa in 1880 and held that office until 1917 when he resigned. For 17 years he served as vice president of the Canadian Bankers' Association, and in 1915 was elected president, being reelected unanimously in 1916 but declined and was voted honorary president. He was active in philanthropic enterprises and was appointed a member of the Royal Commission to investigate the Martineau frauds of the Canadian Civil Service system. He was created knight in 1917.

Burton, Clarence Monroe American historian and lawyer, died in Detroit, Mich., Oct. 23, 1932. He was born in California, Nov. 18, 1853, and graduated from the University of Michigan with a B.S. degree in 1873, an LL.B. in 1874, and was admitted to the bar. He practiced law in Detroit and devoted his leisure time to the study of the history of Detroit and the Northwest. He made an extensive collection of books relating to the subject which he later donated intact, buildings and all, to the City of Detroit, which is known as the Burton Collection in the Detroit Free Public Library. Until the time of his death he continued to take an active interest in the library, contributing more books from time to time, and acting as consultant. Also he served the City of Detroit as chief historian, and was president of the Detroit Historical Society. He wrote several books on early Detroit and the Northwest.

Cabot, Frederick Pickering American jurist, died in Boston, Mass., Jan. 6, 1932. He was born in Brookline, Mass., June 15, 1868, and was graduated from Harvard with the degree of A. B. in 1890, and received the A. M. and LL. B. in 1893. In the same year he was admitted to the bar and began practicing in Boston. From 1896 to 1897 he was assistant U. S. District Attorney for the Massachusetts district, and until 1916 a member of the law firm of Hurlburt, Jones, and Cabot. As judge of the juvenile court from 1916 until the time of his death he became known nationally as an expert on child delinquency. In 1930 he was chairman of the committee of the socially handicapped and delinquent at the White House conference on child health and protection.

Cagni, Admiral Umberto Italian explorer, died in Genoa, Apr. 22, 1932, aged 69. He was a count in 1900, jointly with the Duke of Abruzzi, he headed a Polar expedition and one of the sledge parties of which he had charge attained a latitude of 86° 33', 239 15 statute miles from the North Pole. Cagni was with Abruzzi's expedition that determined the northern coast of Franz Joseph Land. He accompanied the Duke's party on the memorable ascent of Mt. St. Elias in Alaska, and also in 1906 when they ascended Ruwenzori in East Central Africa. He was one of the leaders who took part in the campaign that wrested Tripoli from the Turks in 1911. In 1928 he headed the Government commission which investigated the tragic Noble flight to the North Pole. At the time of his death he was president of the Asiatic Shipping Company, and also president of the Genoa Port Corporation.

Cannu, Ferdinand French paleontologist, died in Versailles, Feb. 12, 1932. He was born in Paris, Dec. 10, 1863, and educated there. Until his retirement in 1914 he was an instructor of mathematics and sciences in the Paris schools. He wrote a text-book on meteorology, and later compiled an atlas of 50 plates on paleogeography; the first of its kind ever published. He later turned to the study of paleontological subjects and wrote many important papers, one among them being on Mesozoic Bryozoa. From 1912 he was associated with the Smithsonian Institution and wrote a number of monographs of fossils and recent Bryozoa. In collaboration with Dr. R. S. Bassler he wrote *The Early Tertiary Bryozoa of North America* (1920). In 1923 he was awarded the Elliot medal of the National Academy of Sciences for his book *North American Later Tertiary and Quaternary Bryozoa*.

Carlsen, Emil, died Jan. 2, 1932.

Carpe, Allen. American mountain climber, died about May 8, 1932, on Muldrow Glacier, Mt. McKinley, Alaska. He was born in Chicago, Ill., Dec. 21, 1894, and went to Germany at the age of nine where he attended schools in Berlin for several years. While in Europe he became interested in mountain climbing, and was often a member of small parties that ascended the Alps. When he returned to the United States he attended Columbia University and was graduated in 1919 as an electrical engineer. In 1925 he was a member of the party that represented the United

States and Canada which conquered Mount Logan, the highest peak in the Dominion of Canada, and the second highest peak in North America. He later climbed Mount Bona in Alaska. In an attempt to measure cosmic rays to determine their relation to magnetic attraction the University of Chicago and the Carnegie Institution of Washington, D. C., joined in a world-wide survey and sent an expedition to Mt. McKinley, in March, 1932, under the direction of Dr. A. H. Compton, of which Mr. Carpe was a member. The Muldrow Glacier was reached April 27, but on or about May 8 Carpe and his partner, Theodore Koven, fell in a crevasse from which his body was not recovered while that of his partner was found by H. J. Leik and A. D. Lindley. (See EXPLORATION.)

Carrizosa, Guillermo Camacho Colombian statesman, died in Cachipav, Sept. 3, 1932. He was born in Bogota, Colombia, in 1876, and started his public career at an early age as a member of the Municipal Council of Bogota and of the Upper and Lower Houses of the National Congress. He was minister of foreign affairs in 1909 and later became successively minister plenipotentiary to France, Italy, and Spain. Upon his return to his native country he was appointed Governor of Cundinamarca. At the time of his death he was on the advisory board of the ministry of foreign affairs.

Carruthers, Sir Joseph Hector McNeill, died Dec. 10, 1932.

Carty, John Joseph, died Dec. 27, 1932.

Castellane, Boniface de (Bonif) French social celebrity, died in Paris, Oct. 20, 1932, aged 64. He was born and educated in France and inherited the title of count. He gained much notoriety by his marriage to Anna Gould, American heiress, in 1895, which ended in divorce in 1909.

Chambers, Rear Admiral Frank Taylor, died Nov. 10, 1932.

Cheshire, Rt. Rev. Joseph Blount, died Dec. 27, 1932. Chesnutt, Charles Waddell American writer, and lawyer, died on Nov. 15, 1932, in Cleveland, Ohio, where he was born June 20, 1858. In 1866 his family removed to North Carolina and he attended the State Normal School there and then taught public school. At the age of 23 he was appointed principal of the State Normal School in Fayette, N. C. In 1884 he removed to New York City and became a newspaper reporter. He then returned to Ohio where he studied law and was admitted to the bar in 1887. After practicing law for some time he became a court reporter and devoted his leisure time to writing. Among his works are *The Conjure Woman* (1899 and 1929); *The Wife of His Youth and Other Stories* (1899); *The House Behind the Cedars* (1900); *The Marrow of Tradition* (1901); and *The Colonel's Dream* (1905).

Chester, Rear Admiral Colby Mitchell, died May 4, 1932.

Cheyne, Sir (William) Watson British surgeon, died in Fetter, Shetland, Apr. 19, 1932. He was born Dec. 14, 1852, and attended the Edinburgh University. In 1888 he was appointed Hunterian Professor of the Royal College of Surgeons of England and held the chair until 1890 when he served as consulting (civil) surgeon of the forces in South Africa. He received the D. Sc. from Oxford University in 1900. From 1914 to 1917 he was President of the Royal College of Surgeons. At the beginning of the World War he served as consulting surgeon for the Royal Navy, becoming Temporary Surgeon-General, and subsequently was appointed Surgeon Rear-Admiral in 1915. In 1917 he represented the Universities of Edinburgh and St. Andrews in Parliament and from 1918 to 1922, all the Scottish Universities. In 1922 he was professor of Clinical Surgery at King's College, London. He held the office of Lieutenant of Orkney and Shetland from 1919 to 1930. He was the foremost exponent of the methods of using antiseptics suggested by Lister, and was awarded the Lister Memorial Medal in 1924. A lecturer on many medical subjects he wrote also a manual on surgery, *Antiseptic Surgery* (1882) in seven volumes; *Manual of the Antiseptic Treatment of Wounds* (1885); *Public Health Laboratory Work*, Part I (1884), and a biography, *Lister and His Achievements* (1925). He was created Baronet in 1908.

Chilton, Horace American lawyer and former senator, died in Dallas, Tex., June 12, 1932. He was born in Smith County, Tex., Dec. 29, 1853, and was educated at Tyler, Tex. He studied law at home and was admitted to the bar. He served as attorney general in Texas from 1881 to 1883. In 1891 when John H. Reagan resigned his seat in the Senate he was appointed to that place by Governor Hogg. He ran unsuccessfully for the next term but was elected to succeed Richard Coke whose seat was vacated. He served from 1895 to 1901. He then removed to Dallas, Tex. in 1906 and practiced law until the time of his death.

Christy, Cuthbert, died May 29, 1932.

Clark, Brig.-Gen. Robert Percy Canadian soldier, died in Vancouver, B. C., Apr. 8, 1932. He was born in London, England, Apr. 17, 1874, and was educated at the College, Broadstairs, Kent, England. Subsequently he

found employment with the firm of L. Lambrinudi & Co., members of the London Stock Exchange, but migrated to Canada a few years later. In 1897 he joined the Klondike gold rush and from 1900 to 1901 fought with the second Royal Fusiliers during the South African war. On Aug. 22, 1914, he joined the first contingent of the Canadian Expeditionary Forces as staff captain and was appointed major on the field of battle in September, 1915. In 1916 he was wounded in battle and when returned to the front was appointed commander of the 14th Canadian Battalion (Royal Montreal Regiment), and later of the Canadian Training Camp in Bramshott, England, until 1918. In 1919 he was transferred to the corps of reserve officers with the rank of brigadier-general. Mentioned five times in dispatches, he received the Military Cross and Distinguished Service Cross and order in 1916, and the companion of St. Michael and St. George in 1918. In 1919 he was president of the Victoria, B. C., unit of the Army and Navy veterans of Canada and in 1920 president of the Provincial unit of the same organization.

Clarke, Gen. Sir Charles Mansfield, British soldier, died in Hyères, France, Apr. 25, 1932. He was born Dec. 13, 1839. After entering the army in 1856 he served in many foreign lands. From 1861 to 1866 he was stationed in New Zealand. While fighting in the Zulu war in 1879 he was promoted to brevet colonel, a year later to commandant-general of the military forces of Cape of Good Hope Colony, and in 1884 assistant-adjutant-general in the War Office. He became deputy-adjutant-general of Ireland and served from 1886 to 1888. During 1889-92 he was major general commanding the third infantry brigade at Aldershot, and the following year deputy-adjutant-general at headquarters. From 1893 to 1898 he was commander-in-chief and lieutenant-general commanding the forces at Madras, and quartermaster-general of the forces until 1903 when he was appointed governor of Malta where he served four years. In 1901 he was created Knight Grand Cross of the Bath and two years later Knight Grand Cross of the Victorian Order. He succeeded to the Baronetcy upon the death of his father in 1899.

Clarke, John Proctor American jurist, died in New York City, Jan. 12, 1932. He was born in Florence, Italy, Apr. 23, 1856, of American parents, and was graduated from Yale in 1878. He studied law in Northampton, Mass., and was admitted to the Massachusetts bar in 1880. From 1881 to 1886 he was assistant U. S. Attorney for the southern district of New York, and a member of the law firm of Hascall, Clarke and Vander Pool until Mar. 1, 1895, when he became assistant corporation counsel for New York City during Mayor Strong's administration and served until Jan. 1, 1898. Two years later he was appointed justice of the Supreme Court of New York, elected in 1901, and reelected by all parties in 1915, being assigned to the Appellate Division, first department, in 1905, reelected in 1910, and again in 1915. He served as presiding justice from 1915 to 1926. During 1926-30 he was a member of the law firm of Clarke and Kresel. On Jan. 1, 1930 he was appointed referee for life of the New York Supreme Court. His bitter opposition to Thomas Collier Platt helped to make political history. (See NEW INTERNATIONAL ENCYCLOPEDIA, vol. xviii, p. 717.)

Clay, Brutus Junius American diplomat, died in Richmond, Ky., June 1, 1932. He was born in Madison Co., Ky., Feb. 20, 1874, and was graduated from the University of Michigan in 1898. In the same year he started in the wholesale and retail grocery business in Richmond, and later conducted cotton plantations in Mississippi and farms in Kentucky and Illinois; also, he engaged in manufacturing lumber, quarrying, mining, etc. In 1897 President McKinley offered him the post of U. S. Minister to the Argentine Republic but he declined. In 1900 he was appointed the U. S. Commissioner to the Paris Exposition. From 1905 to 1910 he was envoy extraordinary and minister plenipotentiary to Switzerland.

Clerk, Sir Dugald, died Nov. 12, 1932.

Cobb, Nathan Augustus, died June 4, 1932.

Coffman, Admiral De Witt, died June 27, 1932.

Coghlan, Rose, died Apr. 4, 1932.

Coleman, Glenn O. American painter and lithographer, died in Long Beach, L. I., N. Y., May 8, 1932. He was born in Springfield, Ohio, July 18, 1887. He removed to New York City when a very young man and studied art under Robert Henri. He won third prize at the Carnegie Institute in Pittsburgh, Pa., for his exhibit in 1928, and also the Brewster prize for his lithographs. His picture *Minetta Lane*, depicting a street scene in Greenwich Village was bought for the Luxembourg Museum in Paris for the permanent collection. He is represented also at the Newark, Brooklyn, and Whitney museums. His picture *Speakeasy* 1931 was acquired by the Metropolitan Museum of Art in New York City.

Collins, Arthur Pelham, died Jan. 13, 1932.

Collins, Edward Treacher. British ophthalmologist, died Dec. 13, 1932, in London where he was born in 1862. He attended the University College School and the Medical Department of the Middlesex Hospital. From 1884 to 1887 he served as house surgeon of the Royal

London Ophthalmic Hospital and pathologist of the same hospital from 1887 to 1894. He then went to Persia where his services were rewarded by the Order of the Lion and the Sun (3d class). He then returned to England and became Hunterian professor of pathology and surgery at the Royal College of Surgeons, London, and Erasmus Wilson lecturer from 1899 to 1900. He filled the Bowman chair as lecturer in 1921 and then went to Ireland where he became Montgomery lecturer at the Royal College there. He served as president of the Ophthalmological Society of the United Kingdom in 1917, 1918, and 1924; president of the Council of British Ophthalmologists from 1923 to 1924, and for 24 years was visiting ophthalmic surgeon of the Metropolitan Asylums Boards Ophthalmia Schools. He wrote several treatises on the disease and treatment of the eye.

Colvocoresses, Rear Admiral George Partridge, died Sept. 11, 1932.

Comfort, Will Levington, died Nov. 2, 1932.

Cooke, Edmund Vance. American poet, writer, and lecturer, died in Cleveland, Ohio, Dec. 18, 1932. He was born in Port Dover, Canada, June 5, 1866, and attended public schools there. He started as a lecturer in 1893 on lecture-entertainment programmes and continued until the time of his death. In 1894 he had his first book of poems, called *A Patch of Pansies*, published. Among his other works are *Rimes to be Read* (1897 and 1905); *Impertinent Poems* (1903 and 1907); *The Uncommon Commoner* (1913); *How Did You Die? and Other Poems* (1927); and many other volumes.

Cooper, Oscar Henry. American educator, died in Abilene, Tex., Aug. 22, 1932. He was born in Carthage, Tex., Nov. 22, 1852, and graduated from Yale University with an A.B. degree in 1872. He then went to Germany and studied at the University of Berlin. He returned to the United States in 1881 and became an instructor at Yale College where he remained until 1884 when he was appointed superintendent of education for the State of Texas. From 1890 to 1896 he was superintendent of schools for Galveston, Tex. In 1899 he was appointed president of Baylor University and served until 1902 when he became president of Simmons College. In 1915 the college became Simmons University and he was appointed professor of philosophy and education and was chairman of the faculty. In 1923 he served as president of the Association of Texas Colleges. During 1928-29 he was a visiting professor at the University of Texas. He wrote a *History of Our Country*, four volumes of educational reports, and about 100 published educational addresses.

Corea, Luis Felipe. Nicaraguan statesman, and lawyer, died in Managua, Apr. 28, 1932. He was born in Granada, Nicaragua, Aug. 25, 1864, and graduated from the National College there with an LL.D. degree, and also from the Central University of Guatemala. He served as professor of history, philosophy, and mathematics at the latter university after graduation. He later held professorships in various other colleges until he was appointed secretary of the legation for the Republic of Central America in Washington in 1896. A few months later he was appointed *chargé d'affaires* for the same republic. In 1898 he served in the same capacity at Nicaragua, and from 1899 to 1909 as minister plenipotentiary of Nicaragua to the United States; also to Mexico and Cuba during the same period. He was appointed delegate to several international congresses and expositions. While living in New York City he was a member of the law firm of Johnson, Galston, and Corea. In 1924 he was the Liberal Presidential candidate in Nicaragua.

Correa, General Serzedello. Brazilian soldier, died in Rio de Janeiro, June 6, 1932. He was born in Para, Brazil, and removed with his family at an early age to Rio de Janeiro, where he graduated from the Military School. At the downfall of the monarchy in 1889, then a captain in the army, he was elected to represent his native city at the Constitutional Convention in 1891. He then received promotion through the grades to General. In 1892 he was appointed minister of foreign affairs, and later held the portfolios of agriculture, finance and justice. On many occasions he was elected to serve in the Chamber of Deputies.

Craighend, Erwin. American editor, died in Mobile, Ala., Feb. 3, 1932. He was born in Nashville, Tenn., Apr. 4, 1852, and graduated from the University of Nashville in 1872 with a B.Litt. degree. Later he went abroad to take a post-graduate course at the University of Leipzig. He was admitted to the Tennessee bar but never practiced. He entered the field of journalism in 1877 and became a music critic and editorial writer for the New Orleans Times. In 1880 he was appointed managing editor of the New Orleans Daily States. From 1882 to 1884 he served as city editor of the Mobile Register, and later managing editor of that paper. In 1903 he became vice-president and remained with the paper until 1926 when he retired as editor emeritus. He wrote *Through Mobile's Past*.

Cranston, Earl, Bishop, died Aug. 18, 1932.

Cresson, W(illiam) Penn., died May 12, 1932.

Crosbie, Sir John Chalker. British statesman, died in St. John's, Newfoundland, Oct. 4, 1932. He was born in Brigus, Newfoundland, Sept. 11, 1876, and attended the Methodist College at St. John's. When very young he started his career as a fish importer and built up an important business of which he became sole owner in 1903. He entered into the political life of Newfoundland in 1908 and held the portfolio of minister of shipping from 1917 to 1919. In 1918 he served as temporary Prime Minister. He later held other political offices, serving as minister of finance from 1924 to 1928. He was created Knight of the British Empire in 1919.

Crowder, Enoch Herbert, died May 7, 1932.  
Cullen of Ashbourne, Brien Cokayne, First Baron, died Nov. 8, 1932.

Czernin, Ottokar, Count, died Apr. 4, 1932.

Daeger, The Most Rev. Albert T., died Dec. 2, 1932.

Daingerfield, Elliott, died Oct. 22, 1932.

Dan, Takuma, Baron, died Mar. 5, 1932.

Davis, Oscar King. American publicist, died in Bronxville, N. Y., June 8, 1932. He was born in Baldwinville, N. Y., Jan. 13, 1866, and graduated from Colgate University in 1888. He became a special correspondent for the New York Sun and Harper's Weekly during the Spanish-American War, the Philippine Insurrection, and the uprising in China in 1900. Later he was special correspondent of the New York Herald with the first Japanese army. From 1907 to 1912 he was Washington correspondent for the New York Times and the Philadelphia Public Ledger when he was appointed secretary of the Progressive National Committee. Also, he had charge of the publicity department. In 1915 he was special correspondent for the Chicago Tribune in China, and from 1916 to 1917 for the New York Times in Berlin. In 1921 he was made delegate from the United States to the first Pan-American Postal Congress in Buenos Aires and was later appointed vice-president of the congress. In 1917 he was made the secretary of the National Foreign Trade Council, which post he held at the time of his death. He wrote *Our Conquests in the Pacific* (1899); *At the Emperor's Wish* (1905); and other works.

De Bunsen, Sir Maurice (William Ernest), died Feb. 21, 1932.

De Forest, Lockwood. American painter, died in Santa Barbara, Calif., Apr. 3, 1932. He was born in New York City, June 23, 1850, studied art in Rome, under Corradi in 1869, under F. E. Church and James M. Hart in New York City, and also in Egypt, Syria, and Greece until 1878. In 1881 he went to Ahmedabad, India, and founded a workshop for the revival of wood-cutting which resulted in exhibits being made by special request of the Indian Government at the first Indian Exhibition in Lahore in 1882, many articles being purchased for the Indian Museum at South Kensington, London. In 1886 he received a medal for Indian carvings at the Colonial Exposition in London; a medal from the Columbian Exposition in Chicago in 1893, and the bronze medal at the St. Louis Exposition in 1904. Also, he was a noted landscape painter. He was a member of several art institutes and academies, among them being the Metropolitan Museum of Art in New York City and the National Academy of Design. In 1885 he published a book entitled *Indian Domestic Architecture* and in 1912 *Illustrations of Design*.

De Villiers, Jacob. South African jurist, died in London, Sept. 17, 1932. He was born in the Orange Free State, Dec. 14, 1868, and educated at Grey College, Bloemfontein; Victoria College, Stellenbosch; University of Amsterdam, and Middle Temple, London. He was called to the bar in 1893 and became state attorney in the old Orange Free State Republic in 1896. He resigned in 1898 and joined the Free State Forces in the Boer War, being wounded in battle in 1900 and taken prisoner of war. After the war he practiced law in Johannesburg and upon the granting of responsible government became attorney-general and minister of mines. In 1930 he was made privy counselor. At the time of his death he was Chief Justice of the Supreme Court in South Africa.

Dice, Agnew Thompson. American railway official, died in Philadelphia, Pa., Mar. 25, 1932. He was born in Scotland, Franklin Co., Pa., Nov. 2, 1862, and attended the Chambersburg Academy. He started his career with the Pennsylvania Railroad in 1881 beginning as flagman and being promoted through the departments until he became supervisor in 1891. He then went with the New York Central and Hudson River Railroad as superintendent of signals in 1892 and was promoted to superintendent of the Hudson Division of the same road in 1893, serving for one year. He then became superintendent of the Atlantic City Railroad and remained with that company until 1897. In the same year he became superintendent of the Shamokin Division of the Philadelphia & Reading Railway and was promoted to general manager in 1910, and to vice-president and general manager in 1913. In 1916 he was elected president of the entire system of the Philadelphia & Reading Railway, which office he held at the time of his death.

Dickinson, Anna Elizabeth, died Oct. 22, 1932.

Dickinson, G(oldsworthy) Lowes, died Aug. 3, 1932.  
 Dippel, (Johann) Andreas, died May 12, 1932.  
 Dobyns, William Ray, American clergyman, died in Birmingham, Ala., Jan. 26, 1932. He was born in Columbus, Mo., May 17, 1861, attended the Westminster College in Fulton, Mo., and the McCormick Theological Seminary in Chicago, where he was ordained Presbyterian minister in 1889. He then organized the Immanuel Church in Chicago and served as the first pastor until 1890 when he became financial secretary of the Westminster College. In 1891 he held the pastorate of the First Presbyterian Church in Marshall, Mo., and in 1899 the First Presbyterian Church of St. Joseph, Mo., where he served until 1920. He then was called to the South Highland Church in Birmingham, Ala., where he served until his death. In 1929-30 he was moderator of the Presbyterian General Assembly. Also, he served as a member of the Foreign Missions Board. He was an authority on the Bible and the founder of the School of the Ozarks in Hollister, Mo.

Doermann, Henry John, American educator, died in Toledo, Ohio, Nov. 20, 1932. He was born in Hickory, N. C., Oct. 20, 1890, graduated from the University of Minnesota with an A.B. degree in 1913, and from Harvard with an A.M. degree in 1917. In the same year he received an appointment as superintendent of schools in Orion, Ia., which he left later in the year to become psychological examiner for the medical department of the United States Army. From 1919 to 1923 he served as director of the Normal School and Academic Department of the Hampton Institute in Virginia. He then went to Porto Rico and in 1925 was appointed dean of administration of the University of Porto Rico where he served until 1928. He then received an appointment as president of the University of Toledo and held this office at the time of his death. He wrote *The Orientation of College Freshmen* (1926).

Dollar, Robert, died May 16, 1932.

Doumer, Paul, died May 7, 1932.

Druce, George Claridge, British botanist, died in Oxford, England, Feb. 29, 1932. He was born in Potters Pury, Northants, May 23, 1850, educated privately and at Magdalen College, Oxford. In 1897 he served as sheriff of Oxford and in 1900 became mayor for a one year term. He was secretary and editor of the yearly reports of the British Botanical Society and vice-president of the Archaeological Society of Oxfordshire. At the time of his death he was Fielding Curator of the University of Oxford. He was considered the foremost authority on the flora of Great Britain and wrote innumerable articles, books, and monographs on the subject. He was a member of several pharmaceutical, botanical, and historical societies.

Drury, Wells, American journalist, died in Berkeley, Calif., May 4, 1932. He was born in New Boston, Ill., Sept. 16, 1851 and attended the Olympia High School (Washington) and the Christian College in Monmouth, Ore. From 1861 to 1865 he was an interpreter at Puget Sound, Wash., for the superintendent of Indian affairs. He started his career in journalism as an apprentice compositor and pressman in 1866, in Portland, Ore., and in 1869 became a reporter for the *Portland Oregonian*, and later for the *Victoria (B. C.) Colonist*. From 1871 to 1873 he owned and edited the *Monmouth (Ore.) Messenger*, in 1875 he became city editor of the *Gold Hill Daily News*, and in 1879 owner and editor of the *Virginia City (Nev.) Daily Stage*. He served as deputy secretary of the State of Nevada from 1882 to 1886, and as a member and speaker pro tempore of the Nevada House of Representatives from 1887 to 1888. He then reported for the *Denver Republican*, *Kansas City Journal*, and the *Chicago Inter-Ocean*, and several middle western newspapers until he founded and edited the *Daily Evening News* of Sacramento, Calif., in 1891. In 1902 he became news editor of the *Sacramento Union* and in 1906 city editor of the *San Francisco Daily Examiner*. From 1908 to 1921 he was director and secretary of the Berkeley Chamber of Commerce in California, and president from 1921 to 1922 of that organization. He wrote *Berkeley, a City of Progress* (1909), *To Old Hangtown or Bust* (1912), and *California Tourist Guide and Handbook* (with Audrey Drury) (1912).

Duckham, Sir Arthur McDougall, British engineer, died Feb. 14, 1932, in Ashstead, Surrey. He was born in Blackheath, July 8, 1879, and educated at Blackheath School. He started his career as an engineer under Sir George Livesay, later specializing in carbonization of coal, furnace work, and engineering connected with chemical development to which he contributed many inventions. During the World War he was deputy director-general of munitions supplies; member of the air council, and director-general of aircraft production. He was a member of a commission appointed to advise upon trade opportunities in Australia in 1928. In 1917 he was created Knight Commander of the Bath and in 1929 Knight Grand Cross Order of the British Empire. At the time of his death he was president-elect of the Federation of British Industries.

Dudley, William Humble Ward (2nd Earl of), died June 29, 1932.

Duffy, Francis Patrick, died June 26, 1932.

Durafour, Antoine, French minister, died Apr. 25, 1932, in St. Etienne, where he was born Aug. 12, 1872. He was a lawyer and former minister of hygiene; also a former vice-president of the district council of the Loire, and a member of the chamber of deputies from St. Etienne. In 1925 Premier Paul Painlevé appointed him minister of labor.

Eastman, George, died Mar. 14, 1932.

Eeden, Frederik Willem van, died June 16, 1932.

Eickemeyer, Rudolf, American photographer, died Apr. 24, 1932, in Yonkers, N. Y., where he was born Aug. 7, 1862, educated in public schools there and at the Hoboken Academy. He started his photographic career as an amateur in 1893, and two years later joined the Carbon Studio where he remained until 1900. He then became art manager for the Campbell Studio. In 1905 he joined partnership with Charles H. Davis of the Davis & Sanford Studio. Four years later he founded the New York branch of the Campbell Studio on Fifth Avenue and was manager there until 1915. He traveled extensively to further his photographic work, having used every known process, for which he received over 100 medals; among them being one of the Royal Photographic Society of England, the Viceroy medal of the Calcutta International Exhibition; the gold medal of the St. Louis Exposition, and the special gold medal of the Hamburg Senate. Also, he illustrated several books and wrote: *How to Make a Picture* (1898); *Down South* (1901); *The Old Farm* (1902); and *Winter* (1904). He was a life member of several art and photographic associations. All of his medal pictures and a few others have been acquired by the Smithsonian Institution.

Elliott, William, American actor and producer, died in New York City, Feb. 5, 1932. He was born in Boston, Mass., Dec. 4, 1885, and started his career on the stage at the age of nine as a violinist and with stock companies. The principal plays in which he had a part were *That Man and I*, with Robert Hilliard (1904), *A Grand Army Man* and *The Music Master*, with David Warfield (1907-08), *Madame X* (1910), *The Pink Lady* (1911), after which he retired from the stage temporarily to engage in producing. Among the plays of which he was the co-producer are *The Governor's Lady* (1912), *Kitty Mackay*, and *Help Wanted* (1914). He then returned to the stage and played in *Experience* (1914) and *The Greatest Nation* (1916), which he also helped to produce. Of the latter he was author. In 1917 he appeared in *The Wanderer*. He produced *The Marked Man* and *Still Waters* (1925), and *The Home Towners* (1926) in which he also appeared.

Emerson, Benjamin Kendall, died Apr. 7, 1932.

Ende, Amelie Von, American pianist and lecturer, died in New York City, Aug. 25, 1932, aged 78. She was born in Poland, came to the United States at the age of 12, and was educated privately. She contributed articles to the *NEW INTERNATIONAL YEAR BOOK* on German literature. Also, she contributed to many magazines. She was a concert pianist, and also lectured on art and kindred subjects in the leading colleges of the United States.

Erickson, Halford, American engineer, died in Chicago, Ill., Apr. 7, 1932, aged 67. He came to the United States from Sweden in 1884 and was graduated from the University of Minnesota. From 1895 to 1905 he served as commissioner of labor for Wisconsin when Governor La Follette appointed him a member of the first State Railroad Commission. While serving in that capacity he drafted several laws for the regulation of public utilities which have been the basis of similar measures in other States. He resigned in 1918 to become associated with the Byllesby Engineering and Management Corporation where he was vice-president in charge of operation at the time of his death.

Eslick, Edward Everett, American congressman, died June 14, 1932, in Washington, D. C. He was born in Pulaski, Tenn., Apr. 19, 1872, and attended Bethel College in Russellville, Ky. He was admitted to the bar in Tennessee where he practiced law and engaged in farming. In 1896 he was elected and from 1900 to 1904 elected for the State at large. In 1925 he was elected to the 69th Congress to represent the 7th Tennessee district and served successively until 1932, when, while making an impassioned plea on the floor of the House for the payment of the bonus to the Veterans of the World War, he was stricken and died before aid could reach him.

Evermann, Barton Warren, died Sept. 27, 1932.

Fall, Charles G., American lawyer, died in Boston, Mass., Jan. 22, 1932. He was born in Malden, Mass., June 22, 1845, and graduated from Harvard University in 1868 with an A.M. degree. He then studied law and was admitted to the Massachusetts bar. He practiced law in Boston until 1894 when he retired. In 1887 an act which he drafted, covering the relationship between employer and employee in accident cases, was passed as a law in the State of Massachusetts and later was adopted by the other States. This law formed the basis of the

workmen's compensation acts. He was a member of the first board of arbitration formed to settle labor disputes and strikes in Massachusetts. He wrote several books on history, law, and also poetry. Among his works are *Employer's Liability for Personal Injuries* (1883); *Patriciot or Tractor* (1913); *Soul of the East* (1914); *Three Political Tragedies, Napoleon, Cinque Mars, Andreas Hofer* (1914). Also, he wrote several volumes on the World War.

Faris, Robert Lee. American civil engineer, died in Washington, D. C., Oct. 5, 1932. He was born in Caruthersville, Mo., Jan. 13, 1868, and graduated from the University of Missouri with a C.E. degree in 1890. Three years later he took a special course in mathematics at Columbian (now George Washington) University. In 1890 he served as assistant engineer on a survey of the Missouri River, was appointed recorder in 1891, aid in 1893, and in 1895 assistant of Coast and Geodetic Survey. For the next five years he was engaged as assistant in a survey of the Yukon Delta, the north coast of Bering Sea, Alaska, etc. Also, he was commandant of a survey steamer at Puerto Rico and the East Coast of the United States. From 1906 to 1914 he served as chief inspector of magnetic work and chief of the division of terrestrial magnetism. In the following year he was assistant inspector of hydrography and topography and in 1915 was appointed assistant director of the Coast and Geodetic Survey, where he served until the time of his death. He was a member of the Mississippi River Commission. He was president of the Philosophical Society of Washington and the Washington Society of Engineers in 1921. Also, in the same year he was treasurer and vice-president of the Washington Academy of Sciences.

Farley, Roland. American composer, died in New York City, May 11, 1932, aged 40. He was born in Aspen, Colo., and at the age of five lost his sight through being kicked by a burro. In 1912 he went abroad to study music and entered the Conservatory at Leipzig. He later returned to the United States and studied under Ernest Hutcheson. In 1930 he organized a publishing company known as the New Music Press, to publish his own music and also to help promising young American composers to bring their work before the public. He composed over 160 songs and also pieces for the piano. Among his many songs the most notable is a descriptive piece called *The Night Wind*.

Felker, Samuel Demeritt. American governor, died Sept. 14, 1932, in Rochester, N. H., where he was born Apr. 16, 1859. He graduated from Dartmouth College with an A.M. degree in 1882, and an LL.B. in 1887. Following this he completed in one year a three-year law course at the Boston University Law School, graduating with high averages. He was admitted to the bar and practiced law in Rochester, N. H. He became a member of the New Hampshire State Senate in 1891 and was reelected in 1892. In 1896 and 1897 he served as mayor of Rochester; as city solicitor from 1898 to 1915, and from 1909 to 1911 as a member of the New Hampshire House of Representatives. In 1913 he was elected Governor of New Hampshire and held that office until 1915. He then received an appointment as judge of the Rochester Municipal Court and served until his retirement in 1930.

Fenn, William Wallace, died, Mar. 6, 1932.

Feraudy, Dominique Marie Maurice de French actor, died in Paris, May 12, 1932. He was born in Joinville-le-Pont in 1860, and attended the Conservatoire de Paris, studied for the stage under the celebrated François Got, and won first prize there for comedy. He made his atirical debut in a play by Molière. The principal parts he created at the Comédie-Française were in *L'Amour brode*, *Cabotins*, *Les Romanesques*, *Le Torrent*, *L'Autre Danger*, etc. Also in his repertoire were rôles in *Le Mariage de Figaro*, *M. Scapin*, *Le Fils de Giboyer*, etc. Among the plays he wrote were *Tic à Tac* (1899); *L'Ecole des Vieux* (1901), and *Le Béguin de Messaline* (1904). He was a member of the société des Auteurs et Compositeurs de musique, the société des Auteurs et Compositeurs dramatiques, an officer of the Legion of Honor, and a former dean of the Société de la Comédie-Française.

Ferrie, Gustave Auguste, died Feb. 16, 1932.

Fessenden, Reginald Aubrey, died July 22, 1932.

Finegan, Thomas Edward, died Nov. 25, 1932.

Firkins, Oscar W. American educator, died Mar. 7, 1932, in Minneapolis, Minn., where he was born May 3, 1864. He graduated from the University of Minnesota in 1884 and received an M.A. degree in 1898. In 1891 he became a member of the faculty of the University of Minnesota and held the chair of professor of comparative literature until the time of his death. He was an author, critic, and playwright. Among his many works are *Ralph Waldo Emerson* (1915); *Jane Austen* (1920); *William Dean Howells* (1924); *Cyrus Northup* (1925); and *Two Passengers for Chelsea and Other Plays* (1928). He contributed to many magazines, was a reviewer of poetry for *The Nation* 1915 to 1918, and dramatic critic for the *Weekly Review* from 1919 to 1921. He was a member of the National Institute of Arts and Letters.

Fish, Carl Russell, died July 10, 1932.

Fiske, Minnie Maddern, died Feb. 15, 1932.

Fleming, Walter Lynwood, died Aug. 8, 1932.

Flint, Alexander. British naval expert, died in London, Oct. 1, 1932, aged 55. He graduated from Edinburgh University and shortly after entered the British Admiralty being promoted to principal assistant of the Secretary of the British Admiralty in 1901 and serving in that office until the time of his death. He was a delegate to Washington, D. C. in 1921 and to Geneva in 1927, and was considered one of the leading authorities on international law as applied to navies. Also, he was a member of the Admiralty delegation to the London naval parley in 1930. He was made a Companion of the Bath in 1920, and the Companion of St. Michael and St. George in 1928.

Folkmar, Daniel. American statistician and anthropologist, died in Washington, D. C., July 21, 1932. He was born in Roxbury, Wis., Oct. 28, 1861. He graduated from Leander Clark College in Toledo, Ia., took post-graduate courses at the Universities of Chicago and Harvard, and also studied in Paris, Berlin, and Brussels. He received a certificate from the Ecole d'Anthropologie in Paris in 1899. He held various professorships in colleges of the United States and Europe, the most important being at the New University of Brussels from 1898 to 1901. He served as anthropologist and as lieutenant-governor in the Philippine Civil Service from 1903 to 1907, was appointed special agent for the U. S. Immigration Commission in 1908-09, and acted as special agent for the U. S. Census Bureau from 1910 to 1914. He was on the editorial staff of the U. S. Department of Commerce from 1914 to 1917. In 1918 he was statistician for the War Department, and also in 1919 anthropologist in charge of measuring soldiers. He then became connected with the U. S. Census Bureau from which he retired in 1931. In 1915 he was appointed delegate to the Second Pan-American Scientific Congress. He was a member of several anthropological and statistical societies. He wrote *Leçons d'Anthropologie* (1900), *Album of Philippine Types* (1904), *Dictionary of Races* (vol. v Immigration Commission Reports 1911), *Mother Tongue of Foreign Stocks* (U. S. Census 1910), and numerous articles and reports.

Fordney, Joseph Warren. American congressman, died in Saginaw, Mich., Jan. 8, 1932. He was born in Blackford Co., Ind., Nov. 5, 1853, and educated at the public schools there. He went to Saginaw in 1869 and engaged in the lumber business. From 1885 to 1899 he served as alderman in Saginaw and was then elected to represent the 8th Michigan District in Congress, in which capacity he served 24 years, being appointed chairman of the House Ways and Means Committee several years before his retirement in 1923. His desire for a strong protective tariff resulted in the Fordney-McCumber act which became a law Sept. 22, 1922.

Frederick August (Ex-King of Saxony), died Feb. 18, 1932.

Freeman, John Ripley, died Oct. 6, 1932.

Freer, Otto (Tiger). American laryngologist, died Apr. 21, 1932, in Chicago, Ill., where he was born Aug. 8, 1857. He graduated from the Rush Medical College in Chicago in 1879, and continued to study in Munich, Vienna, and Heidelberg. He became a specialist in diseases of the nose, throat, and ear. He invented and perfected the Freer instruments that are now widely used to perform the operation known among surgeons as the submucous resection of the septum. He was professor of laryngology at the Polyclinic Hospital in Chicago and later became professor emeritus. In 1906 he was the president of the American Medical Association. At the time of his death he was an attending physician at the Heriot Hospital in Chicago.

Freund, Ernst. American educator, died in Chicago, Ill., Oct. 20, 1932. He was born in New York City, Jan. 30, 1864 of German parents who were visiting the United States. The family returned to Germany and he was graduated from the University of Berlin and from Heidelberg University with a J.U.D. degree in 1884. He then returned to the United States and attended the Columbia Law School, and also the School of Political Sciences there from which he graduated with a Ph.D. degree in 1897. From 1892 to 1932 he was an acting professor of administrative law at Columbia University, and until 1902 had served as instructor, assistant professor, and associate professor at the same university. He then went to Chicago, Ill., where he was appointed professor of jurisprudence and public law at the University of Chicago, which office he held at the time of his death. In 1915 he served as president of the American Political Science Association. He wrote *Police Power* (1904), *Standards of American Legislation* (1917), and *Administrative Powers Over Persons and Property* (1928).

Fuertes, James Hillhouse, died Jan. 27, 1932.

Gadsby, Johanna, died Feb. 22, 1932.

Gamble, Samuel Walter. American clergyman, died in Los Angeles, Calif., Dec. 29, 1932. He was born in Worthington, Pa., Nov. 15, 1852, and received his edu-

cation chiefly in the public schools of Woodhull, Ill. He entered the Methodist Episcopal ministry in 1881 and was in active pastoral work until 1899. He then became interested in ancient literature and gained recognition by reproducing the long-lost Hebrew Calendar. He used this to prove his contention that Sunday and not Saturday was the true Sabbath day according to ancient rule. He gave several lectures on the subject and was selected by the World's Sunday Rest Congress to lecture at the St. Louis Exposition in 1904. He spoke also at the Panama-Pacific International Exposition in July, 1915, for the International Lord's Day Congress. He was the editor of two magazines, *The Toiler's Friend* and *The True Sabbath*. Among his books are *Sunday the True Sabbath of God* (1900) and *A Brief Statement of Sabbath Truth* (1918). He also wrote on the 13 month calendar.

Gaona, Juan Bautista, died May 18, 1932.

Garnsey, Sir Gilbert (Francis) British accountant, died in London, June 26, 1932. He was born Mar 21, 1883, attended the Wellington School in Somerset, and received first honors at the Institute of Chartered Accountants in 1903 and in 1905. As a member of the firm of Price, Waterhouse & Co., of London, Accountants, he had many financial investigations of importance, among them being the Hatry group, Marconi Wireless, and government operations in Britain during and after the World War. In 1918 he was chairman of the Finance Committee and Finance member of the Munitions Council, and from 1923 to 1926 chairman of the London Members' Committee of the Institute of Chartered Accountants. In 1930 he was chairman of the committee for marketing and distributing consumable commodities, and also of the economic advisory council, and in 1931 chairman of the British Industries Fairs sites and buildings committee. He was created Knight Commander of the Order of the British Empire in 1918. He wrote *Holding Companies and Their Published Accounts* (1923) and several treatises on accounting.

Garrison, Lindley Miller, died Oct 18, 1932

Gaugengigl, Ignaz Marcel American painter, died in Boston, Mass., Aug 2, 1932. He was born in Passau, Bavaria, July 29, 1855. He graduated from the Munich Academy of Fine Arts in 1878, and came to the United States, in 1880. He specialized in small canvases and his attention to detail caused him to be known as the "Meisner of Boston". In 1884 he received the gold medal at the New Orleans Exposition. His works have been purchased and exhibited by the Boston Museum of Fine Arts and the Metropolitan Museum of Art, New York.

Gay, H(arry) Nelson American author, died in Monte Carlo, Monaco, Aug 13, 1932. He was born in Newton, Mass., Aug 4, 1870, received an A.B. degree from Amherst in 1891, and an A.M. degree from Harvard in 1896. In 1900 he was elected to a fellowship at Harvard which took him to Rome, where he made his permanent residence. In 1909 he conducted the American relief expedition into Calabria. Also, he carried on relief work after the earthquake in Sicily. After the World War he was active in relief work for Italian soldiers and refugees, being general representative of the Italian war relief fund of America. From 1917 to 1918 he was a representative in Italy of the American Poets' Ambulances. During 1918-19 he collaborated with Colonel House on *The Inquiry* to obtain data for the Peace Conference. He was decorated several times by the Italian Government, and was often consulted unofficially by American Ambassadors to Italy because of his knowledge of the people and the country. He wrote several bulletins and magazine articles, and also the following books *Abiamo Lincoln* (1918), *Cavour e l'Incognita* (1926), and *Strenuous Italy* (1927).

Gayley, Charles Mills, died July 26, 1932.

Geddes, Sir Patrick, died Apr 16, 1932.

Gibb, Robert British painter, died in Edinburgh, Feb 11, 1932. He was born in Laureston, Scotland, Oct 28, 1845, and was educated in Edinburgh. In 1895 he was appointed keeper of the National Gallery of Scotland and in 1908 painter and limner to the King for Scotland. Among his many paintings are *Elaine* (1875); *Death of St. Columba* (1876); and *Bride of Sighs* (1877). His later works include *Saving the Colours the Guards at Inkerman* (1895) and *Hougoumont—1815* (1903).

Gide, Charles, died Mar 13, 1932.

Gill, Adam Cooper. American educator, died in Ithaca, N. Y., Sept. 8, 1932. He was born in Chester, Me., Aug 22, 1863, and graduated from Amherst with an A.B. degree in 1884. He then went to Germany and graduated from the University at Munich with a Ph.D. degree in 1893. He returned to the United States and received an appointment as assistant professor of mineralogy and petrography in 1894. In 1910 he was appointed professor. He held this office until June, 1932, when he retired and became professor emeritus. During the World War he headed the U. S. Geological survey in Alaska studying deposits of chromite upon which he was an authority. He wrote *Tables for Determination*

of the Common Minerals, and *Chromite of Kenai Peninsula, Alaska*.

Gillette, King Camp. American industrialist and author, died in Calabasas, Calif., Sept. 10, 1932. He was born in Fond du Lac, Wis., Jan. 5, 1855. His family later moved to Chicago, Ill., and he was educated in public schools there. He started his career as a salesman for hardware firms in New York, Kansas City, and later in England, going back and forth from the United States. While engaged in salesmanship he invented the safety razor. In 1901 he organized and became president of the Gillette Safety Razor Company, manufacturers of the razor and blades. At first the idea seemed doomed to failure, but the second year the output was more than doubled, and within a few years the safety razor became a household necessity and the picture of the inventor on the box was familiar to every country on the globe. Before his phenomenal success he had visions of a super-social organization. He went so far as to have his plan, known as the "World Corporation," actually incorporated under the laws of Arizona in 1910. He offered the position of director of the corporation to Theodore Roosevelt, then a private citizen, at the salary of \$1,000,000 per year. The offer was refused. He wrote several books on this subject, which were *Human Drift* (1894); *Gillette's Social Redemption* (1900); *Gillette's Industrial Solution* (1900); *World Corporation* (1906), and *The People's Corporation* (1924).

Gimbel, Charles American merchant, died at Lake Placid, N. Y., Sept. 9, 1932. He was born in Vincennes, Ind., Sept 12, 1861, and attended the public schools in Philadelphia, Pa., to which city his parents moved in his boyhood. He started his career as a retail merchant when his father returned to Vincennes and opened a small department store. Later he and his brothers acquired stores in Milwaukee, Wis., Pittsburgh and Philadelphia, Pa., and in New York City. At the time of his death he was chairman of the board of the Gimbel Department Store in Philadelphia. (See Jacob Gimbel, NEW INTERNATIONAL YEAR BOOK, 1922.)

Ginisty, Paul French author, poet, and playwright, died in Paris, Mar 5, 1932. He was born Apr 4, 1858, and attended the Lycée Saint-Louis. He served as vice-president of the Association of Republican Journalists, president of the Association of Former War Correspondents, president of the Association of Dramatic and Musical Critics, and director of the Odéon Theatre from 1896 to 1906. In the latter year he was appointed inspector of historic monuments. He was an officer of the Legion of Honor, and was awarded the Croix de Guerre. He wrote many plays, poems, memoirs, essays, biographies, and novels, for which he was created Laureate of the French Academy.

Girouard, Sir Edouard Percy Cranwill, died Sept 26, 1932

Godfrey, Brig Gen Edward Settle American soldier, died in Cooktown, N. J., Apr 1, 1932. He was born in Kahda, Ohio, Oct 9, 1843, and attended public schools in Ohio and the Vermilion Institute in that State. He answered President Lincoln's first call for volunteers in 1861, and enlisted for three months. He then won an appointment to the U. S. Military Academy at West Point from which he graduated in 1867, as second lieutenant. He was promoted through the grades to brigadier general in 1907. He fought in all the Indian Wars and was in one of the regiments under General Custer at the battle of Little Big Horn in 1876. In 1890 he was awarded the Congressional Medal of Honor for outstanding service to the country during the Indian War with Chief Joseph and the Nez Percé Indians in 1877. He originated "Cosack" and "Rough Riding" for the army. He also served in Cuba and the Philippines. He reached the retirement age in 1907. He was commander of the Military Order of Indian Wars, Historian for that order, and a member of several military orders and societies.

Goodnight, Cloyd American educator, died in Bethany, W. Va., Oct 15, 1932. He was born in Michigantown, Ind., Dec 2, 1881, and graduated from Butler College in Indianapolis, with a B.A. degree in 1906 and an M.A. degree in 1907. In 1912 he studied at the Chicago University. In 1907 he was ordained a minister of the Christian (Disciples) Church and was appointed pastor of the Danville, Ind., Church and in 1910 was transferred to Selbyville. He was then transferred to Uniontown, Pa., in 1913 and remained until 1919 when he was appointed president of the Bethany College in Bethany, W. Va., which office he held at the time of his death.

Gordon, Edwin Seamer. American architect, died Apr. 5, 1932, in Rochester, N. Y., where he was born Mar 28, 1867. He graduated from the Rochester Athenaeum and Mechanics Institute in 1891. He was a member, consecutively, of several architectural firms in Rochester until 1918 when he became the senior member of Gordon and Kaelber, which partnership continued until the time of his death. His firm designed the buildings on the New River Campus of the University of Rochester, and many other important buildings in Rochester.

Gore, Rt. Rev. Charles, died Jan. 17, 1932.

Gossard, George Daniel, American educator, died in Annnville, Pa., Apr. 17, 1932. He was born in Greencastle, Pa., Nov. 26, 1868. He graduated from the West Virginia Normal and Classical Academy in Buckhannon, W. Va., in 1890, and the Otterbein University of Westerville, Ohio, in 1892. He attended the Union Bible Seminary in Dayton, Ohio, in 1896, and was a student for one year at the Johns Hopkins Hospital in Baltimore, Md. In 1897 he was ordained minister of the United Brethren Church and held pastorates in Marion, Pa., 1897-99; Shippensburg, Pa., 1899-02; and Baltimore, Md., 1902 to 1912. In 1912 he became president of the Lebanon Valley College in Annnville, Pa., which post he held at the time of his death.

Graham, William, died Jan. 8, 1932.

Grahame, Kenneth, died July 6, 1932.

Grant, Ulysses Sherman, died Sept. 21, 1932.

Graves, Clotilde Inez Mary, British writer, died in Hatch End, Middlesex, Dec. 4, 1932. She was born in Buttevant, County Cork, Ire., June 3, 1863, and was educated in a convent. She wrote several plays that were produced in New York City and London, and several books, some of which were under the pseudonym of Richard Dehan. Among her works are *The Lover's Battle* (1902); *The Day Doctor* (1910); *Between Two Thieves* (1912); *The Headquarter Recruit* (1913); *The Cost of Wings* (1914); *Off Sandy Hook* (1915); and *Under the Hermes* (1917). Her later works include *The Pipers of the Market Place* (1924); *The Sower of the Wind* (1927); *Shallow Sea* (1930); and *The Man in the Mask* (1931).

Gravina, Manfredi, Count, died Sept. 19, 1932.

Graziani, Gen. Jean César, French soldier, died in Paris, Feb. 9, 1932. He was born in Bastia, Corsica, Nov. 15, 1859, and attended the Ecole Saint-Cyr. From a colonel in the infantry in 1909 he was promoted through the grades to chief of staff of the French army during the World War, in which he commanded the seventh division, and later the 12th division of the Italian army. In 1919 he was at the head of the French Military Mission to Hungary, and also in 1920 of the Allied Mission to Budapest, when the Hungarians and Yugoslavs were having difficulties in matters pertaining to the Allies. In 1923 and again in 1930 he was in charge of the Italian military operations in Africa to stamp out rebellion among the Arabs of Cirenaica of which he was also vice-governor.

Gregory, Augusta (Lady), died May 23, 1932.

Gregory, Charles Noble, died July 10, 1932.

Gregory, John Walter, died June 6, 1932.

Grosclaude, Etienne, French journalist, died Jan. 7, 1932, in Paris, where he was born June 2, 1858. He attended the Lycée Condorcet. He was a contributor to *Le Figaro*, *Le Temps*, and *L'Echo de Paris*. His works include *Parillon Madame* (1894); *Hélène-nous d'en rive* (1895); *Un Parisien à Madagascar* (1898); and *La Machine ronde a perdu la boule* (1921). He was editor of *La République Française*, and an Officer of the Legion of Honor.

Guglielmotti, Gen. Emilio, Italian soldier, died Nov. 29, 1932, in Rome, where he was born in 1866. He attended the Military Academy and fought in every conflict the Italians had since the war against the Turks in Libya in 1911. During the World War he came to the United States and recruited all non-American Italians that were eligible to fight for Italy. He distinguished himself in the campaigns of 1915 and 1916 and in the early months of 1917 when he commanded the Second Bersagliere Brigade on the Carso. In 1918 he was made a Major General. In 1919 he addressed the 332d American regiment and expressed Italy's gratitude for the American participation in the World War.

Gunnison, Herbert Foster, American publisher, died in Brooklyn, N. Y., Nov. 25, 1932. He was born in Halifax, Nova Scotia, June 28, 1858, and graduated from the St. Lawrence University at Canton, N. Y., with an A.B. degree in 1880 and an A.M. degree in 1882. He then removed to Brooklyn, N. Y., where he became a reporter on the Brooklyn *Eagle* and from 1884 to 1886 was the Albany correspondent for that paper. He remained with the same paper and in 1897 was given the responsibility of publishing and directing. In 1921 he became vice-president and treasurer, and in 1925, president, which office he held until 1929 when he retired and became chairman of the board. He was the founder of the American Newspaper Publishers Association, and served as treasurer three years and as secretary two years. He was vice-president of the Associated Press in 1921 and again in 1922, and served as president of the New York City Publishers Association in 1925. He wrote *Out On Long Island, Flatbush of Today*, and *Two Americans in a Motor Car*.

Gutiérrez, Gen. Leonidas Plaza, Former President of Ecuador, died in Andina Huigra, Ecuador, Sept. 17, 1932, aged 66. He was elected President of Ecuador on the reform platform at first to serve from 1905 to 1906, and again in 1912 for a four year term that ended in 1916.

Haardt, Georges-Marie, French explorer, died about Mar. 15, 1932, in Hongkong, China, aged 47. He was born in Naples, Italy, of Flemish parents, and when he settled in France in his youth he became a naturalized citizen. For 20 years he was connected with the Citroën Company, manufacturers of motor cars and tractors. He was commissioned by them to head an expedition to cross the Sahara Desert with Citroën-Kegresse caterpillar-track cars in 1922. It was the first time this feat had been accomplished. He later headed an expedition that traversed the length of Africa with the same means of transportation. The last adventure, known officially as the Citroën-Haardt Transasiatic Expedition, had just been completed when he succumbed to pneumonia aboard a steamer which was part of his return trip home made necessary by the uncertain political conditions in China. The data and pictures secured on his historical crossing of Asia with specially built tractors have been of great value to scientists and educators. In 1930 M. Haardt spoke before the National Geographic Society in Washington, D. C., and exhibited pictures taken on his remarkable journey through Africa.

Hale, Edward Everett, died Aug. 19, 1932.

Hall, Edward Kimball, American lawyer, died in Hanover, N. H., Nov. 10, 1932. He was born in Granville, Ill., July 9, 1870, and graduated from Dartmouth College in Hanover, N. H., with an A.B. degree in 1892, and the LL.B. degree from Harvard in 1896. He was admitted to the Pennsylvania bar in 1896 and the Massachusetts bar in 1898. He began to practice law in Boston, Mass., in 1898 and in 1917 removed to New York City. Hall became interested in public utilities and in 1919 was appointed vice-president of the American Telephone and Telegraph Company which office he held until 1930 when he retired. He then became resident lecturer of the Amos Tuck School of Business Administration at Dartmouth College and served as director of many public utilities boards until the time of his death.

Hall, Francis Joseph, died Mar. 12, 1932.

Halsey, Rena Isabelle, American writer, died Oct. 23, 1932 in New York City where she was born in 1859. She attended Nassau Institute and took special courses at Pratt Institute in Brooklyn and also at the New York University. For eight years she served as secretary of the Colonial Daughters of the 17th Century of which she was a charter member. Two books written by her were placed in the National War Museum of Paris at the request of the French Government. They were *America's Daughter* (1918) and *The Liberty Girl* (1919). Among her other works are *Blue Robin*, the *Pioneer Girl* (1917) and the words for about 100 songs for children. Miss Halsey was a member of an old Brooklyn family for whom Halsey Street was named, and a daughter of Harlan Page Halsey, who wrote a number of boys' books under the pen-name "Old Sleuth."

Hamilton, James Whitelaw, British painter, died Sept. 18, 1932, in Glasgow, Scotland, where he was born Nov. 26, 1860. He was educated in Helensburgh and Glasgow, and studied art in Paris. In 1897 he was awarded the gold medal at Munich. His paintings have been purchased by many prominent art galleries, among them being: The Royal Pinakothek, Munich; Scottish Modern Art Association, Edinburgh; and the Carnegie Institute, Pittsburgh. Also, he is represented in the collection of Queen Margherita of Italy, and in other private collections in Venice, Rome, Munich, Dresden, etc. He was a member of the Royal Fine Art Commission for Scotland.

Harriman, Mary W. (Mrs. Edward Henry Harriman), died Nov. 7, 1932.

Harris, George Robert Canning Harris, Fourth Baron, British politician and soldier, died in Faversham, Kent, Mar. 24, 1932. He was born at St. Anne's, Trinidad, W. I., Feb. 3, 1851, and was educated at Eton College and Oxford University. From 1885 to 1886 he was under-secretary for India, and served as under-secretary of war from 1886 to 1889. He was appointed Governor of Bombay in 1890 and held that office for five years. He served as lord-in-waiting to Queen Victoria from 1895 to 1900, and was side-de-camp successively to both King Edward VII and King George V. He was an assistant adjutant-general of the Imperial Yeomanry in England, in 1900, and in South Africa in 1901. He succeeded his father as baron in 1872. He was created Knight Grand Commander of the Star of India in 1895; Knight Grand Commander of the Indian Empire in 1890, and Companion of the Bath in 1918. He was an expert cricketer, was an authority on the game, and served as president of the Marylebone Cricket Club. He wrote *A Few Short Runs* (1912) and *A Century of Yeoman Service*.

Harris, William Julius, American senator, died in Washington, D. C., Apr. 18, 1932. He was born in Cedartown, Ga., Feb. 3, 1868, and was graduated from the University of Georgia in 1890. He engaged in the insurance and banking business in Cedartown in the same year. He started his political career as secretary of the late Senator A. S. Clay. From 1913 to 1915 he was the director of the U. S. Census Bureau and acting secretary of the Department of Commerce. In 1915 he was chair-

man of the Federal Trade Commission, which post he resigned in 1918 to seek election for the U. S. Senate. He was then elected for the term ending in March, 1925, reelected for the term ending in March, 1931, and again for the term ending in March, 1937.

Hart, Hastings Hornell, died May 9, 1932.

Hartmann, (Francis) M. American educator, died in New York City, Mar. 28, 1932. He was born in Cocheton, N. Y., Aug. 31, 1870. He attended Cooper Union Night School, received a B.S. degree in 1895, took a graduate course in chemistry in 1898, received the E.E. degree in 1903, and then took a course in mathematics at the New York University. In 1891 he was a surveyor for the City of New York, and in 1894 computer in the department of public improvements. He then became instructor of physics and electrical engineering at the Cooper Union Night School of Engineering, and the Cooper Union Institute of Technology. In 1907 he became an assistant professor, and from 1908 to 1921 professor in charge. In 1921 he retained the professorship and also served as dean of the school of engineering, which post he held at the time of his death. He developed a five year night course in electrical engineering for Cooper Union, and wrote *Elementary Mechanics* (1910); *Heat and Thermodynamics* (1911), *Biography of George W. Plympton* (1920); and *Alternating Currents and Transmission* (1928).

Hastings, Charles Sheldon, died Jan. 30, 1932.

Hatch, Frederick Henry British mining engineer, died Sept. 22, 1932, in London where he was born in 1864. He graduated from the University College in London and then studied at the Bonn University where he received the gold medal and degree of Ph.D. in 1896. He then entered the service of the British Geological Survey. In 1892 he went to South Africa and remained there until 1897 when he went to Canada. While there he became a consultant in both Canada and the United States. Two years later he went to India where he remained for a year to report on the gold resources for the Indian Government. In the following year he served in the same capacity for Abyssinia and in later years for all of the newly found gold fields of prominence. He was president of the Geological Society of South Africa in 1905. He wrote many books on geological subjects. He also served as president of the Institution of Mining and Metallurgy.

Hayden, Rear Admiral Edward Everett, died Nov. 17, 1932.

Hemphill, Charles Robert American educator and theologian, died in Louisville, Ky., Mar. 9, 1932. He was born in Chester, S. C., Apr. 18, 1852. He graduated from the University of South Carolina in 1869 and took a post graduate course at the University of Virginia, then attended the Presbyterian Theological Seminary. He was ordained a Presbyterian minister in 1874 and taught Hebrew at Columbia Theological Seminary in the same year. From 1879 to 1882 he was instructor of Greek and Latin at Southwestern Presbyterian University, and from 1882 to 1885 professor of Biblical literature at Columbia Theological Seminary. He became pastor of the Second Presbyterian Church of Louisville, Ky., in 1885 and served until 1899. In 1893 he was professor at the Louisville Presbyterian Theological Seminary, and served as president from 1910 to 1920, and dean in 1920. Later he became dean emeritus. In 1885 he was moderator of the general assembly of the Presbyterian Church of the United States and a member of the Presbyterian Council at Glasgow in 1896. He wrote *Moses and His Recent Critics* (1899).

Henderson, Admiral Sir Reginald Friend Hannam British naval officer, died July 12, 1932, in Worth, Kent, where he was born Nov. 20, 1846. He was educated privately and entered the navy in 1860. In 1869 he was promoted to lieutenant, and in 1881 was appointed a commander. He served as second in command of H.M.S. *Invincible* at the bombardment of Alexandria, July 11, 1882, and later had charge of an armored train there. Promoted to captain in 1887 he subsequently commanded the *Bacchante*, *Rover*, *Ruby*, *Severn*, *Royal Sovereign*, and *Mars*. From 1899 to 1901 he was in charge of the dockyard at Sheerness, and from 1902 to 1905 at Portsmouth. He commanded the coast guard reserves from 1905 to 1910 when he was retired. After his retirement he visited Australia at the invitation of the Commonwealth Government and presented an advisory report on the establishment of an Australian Navy. Hence he was known as the "Father" of that Navy. He was knighted in 1907.

Hernandez, Daniel. Peruvian painter, died in Lima, Oct. 22, 1932. He was born in Huanacavelica, Aug. 1, 1856. He began to study art in Lima at an early age and when but 18 went to Europe. He studied in Rome and made his expenses by painting and selling small pictures. In 1885 he removed to Paris where he remained many years painting many pictures for which he received awards at the Paris Exposition in 1889 and at the World's Fair in 1900. In his later years he traveled between Europe and America devoting his time to

painting portraits and doing historical figures. His painting of Pizarro was presented by him to the City of Lima, and in 1918 the President of Peru, Dr. José Pardo, invited him to establish a school of fine arts there. He accepted and the National Academy of Fine Arts was opened July 15, 1919. He became director on the day of its opening and remained there until the time of his death.

Hernandez, José Conrado, died June 20, 1932.

Herr, Edwin Musser, died Dec. 24, 1932.

Herreshoff, J(ohn) B(rown) Francis, died Jan. 30, 1932.

Herzog, Hermann. American landscape painter, died in Philadelphia, Pa., Feb. 6, 1932. He was born in Bremen, Germany, Nov. 16, 1852, and attended the Dueseldorf Academy where he studied under Schirmer and Lessings. He won a certificate from the Paris Salon for his painting in 1868. In 1869 he came to the United States and studied in Philadelphia, Pa. Then he traveled extensively and in his later years painted scenes from memory of the lands he visited. Among the many medals he won for his paintings were one from the Liège Exposition and one from the Exposition at Brussels. Pictures from his brush were bought by Queen Victoria; others are exhibited in the New York Public Library and in the Memorial Hall, Philadelphia, Pa.

Hill, David Jayne, died Mar. 2, 1932.

Hipper, Franz Von, died May 25, 1932.

Hodge, William T. American actor and dramatic author, died in Greenwich, Conn., Jan. 30, 1932. He was born in Albion, N. Y., Nov. 1, 1874, and was educated there and in Rochester, N. Y. He made his first appearance on the stage in 1891, and his first New York appearance in 1898 in *The Heart of Chicago*. He then played in *The Reign of Error* (1899); *Sag Harbor* (1900); *The Sky Farm*, *Peggy from Paris*, and in a play that he wrote, *Eighteen Miles From Home*, all in 1902. In 1904 he played in *Mrs. Wiggs of the Cabbage Patch* and in *Dream City* in 1906. In 1907 he was engaged to play the part of the lawyer, Daniel Voorkees Pike, in the *Man From Home*, and played in the same part until 1913. Finding it difficult to get a suitable part after his long tour in one play he decided to write his own vehicles, which were *The Road to Happiness* (1913); *Flying Sister* (1916); *A Cure for Incurables* (1917); *The Guest of Honor* (1919); *Beware of Dogs* (1921); *For All of Us* (1922); *The Judge's Husband* (1926); and *Straight Through the Door* (1928). With them he toured widely before they came to Broadway, which Mr. Hodge took no "more seriously than Schenectady or Ann Arbor." He preferred to be a road actor because, he said, "I don't want to work two weeks and live on some one else's money for fifty weeks. That's the only future I can see for the 'Broadway actor'."

Holbrook, Willard Ames, died July 18, 1932.

Holcomb, Marcus Hensley. American governor, died in Southington, Conn., Mar. 5, 1932. He was born in New Hartford, Conn., Nov. 28, 1844, and educated in public and private schools. In 1871 he was admitted to the Connecticut bar and practiced in Southington until 1893 when he became a member of the firm of Holcomb and Pierce in Hartford, and retained the partnership until 1910. He was a judge of the probate court for more than 30 years. From 1893 to 1908 he was treasurer of Hartford County. In 1893 he was elected to the Connecticut Senate and was speaker of the Connecticut House during 1905. From 1907 to 1910 he was attorney general for Connecticut. From 1910 to 1914 he served as judge of the Superior Court. He was elected Governor of Connecticut for three successive terms which began in 1915 and ended in 1921.

Holland, William J(acob), died Dec. 13, 1932.

Holt, Harold Edward Sherwin. British aeronautical expert, died in London, Jan. 4, 1932. He was born Oct. 11, 1862, educated at Eton and at Magdalen College, Oxford. He served as lieutenant-colonel of the late Hants Carabiniers Yeomanry and was retired. He invented several electrical and mechanical devices for automobiles and aeroplanes, and had also taken a great interest in the development of parachutes and flares for night flying. He was one of the founders of the Automobile Club and also of the Society for Psychical Research. During the World War, in 1915, he went to France as temporary major attached to the Royal Flying Corps to superintend the fitting and use of some of his inventions, and later attached to the French and Belgium Aviation Corps. He was decorated by the Belgium Government. At the request of the United States Government he made a tour of inspection of the American Aviation Field in France. He was made Commander of the Order of the British Empire in 1919. He was a frequent contributor to *Punch*.

Hopkins, E(dward) Washburn, died July 16, 1932.

Hopkins, Sherburne Gillette. American lawyer, died June 22, 1932, in Washington, D. C., where he was born Oct. 5, 1866. He attended Columbia University, and was admitted to the bar in 1889. In 1898, during the Spanish-

American War, he was a lieutenant in the Naval Militia, and lieutenant-commander of the U.S.S. *Fern* in 1899. He practiced law in Washington over 40 years, being adviser to many Latin-American and foreign countries. He played an especially prominent part in the fight for freedom made by Georgia and Azerbaijan from Soviet Russia, also in Mexico with the Madero Government in 1911, the Constitutionalist Government in 1913-14, and the Provisional Government (de la Huerta) in 1920.

Horn, Paul Whitfield. American educator, died in Lubbock, Tex., Apr. 13, 1932. He was born in Booneville, Mo., Apr. 30, 1870. He graduated from Central College in Fayette, Mo., in 1888, and received the LL.D. from that college in 1917, and also from Baylor and Southwestern Universities in the same year. He taught in Pryor Institute in Jasper, Tenn., from 1889 to 1892 when he served as president for two years. In 1895 he was appointed principal of a high school in Sherman, Tex., and in 1897 became superintendent of schools in that district. Also, he served as superintendent of schools in Houston, Tex., from 1904 to 1921. In the following year he was superintendent of the American School in Mexico City, and then for one year served as president of Southwestern University. Later, he was elected president of the Texas Technological College, which office he held at the time of his death. He was the author of several text-books and articles on education.

House, Elwin Lincoln. American clergyman, lecturer, and author, died in Scottsbluff, Neb., Jan. 19, 1932. He was born in Lebanon, N. H., Apr. 4, 1861. He graduated from Harvard with an A.B. degree in 1883, and from the Boston University School of Theology in 1894 with an S.T.B. degree. In 1883 he was ordained a minister of the Methodist Episcopal Church and held pastorates in several New England churches until 1891. In 1893 he joined the Congregational Ministry and held pastorates in New England also, going to Portland, Ore., in 1902, where he remained five years, then to Seattle, Wash., until 1913. After 1913 he devoted his time to lecturing and writing on the psychology of religion. Among his works are *The Psychology of Orthodoxy* (1913), *The Mind of God* (1917), *The Drama of the Face* (1919), *The Glory of Going On* (1920), *How to Heal One's Self and Others* (1924), *The Supreme Christ* (1927), *The World's Greatest Things* (1929), and *Life's Masterpieces* (1930).

Howe, Ernest. American geologist, died in Litchfield, Conn., Dec. 18, 1932. He was born in New York City, Sept. 8, 1875, and graduated from Yale in 1898. In 1900 he joined the staff of the U. S. Geological Survey and remained there for 10 years. He then became a consulting geologist. He was active in politics and served in the general assembly from 1920 to 1922 and in the State Senate of Connecticut from 1924 to 1925. In 1926 he became editor of the *American Journal of Science* and held that office at the time of his death.

Howland, Charles P., died Nov. 12, 1932.

Hull, Henry Charles. South African lawyer and soldier, died in Cape Town, South Africa, Oct. 9, 1932. He was born on Nov. 21, 1860, and graduated from law school. He was practicing law in Kimberly when he heard of the gold find in Witwatersrand in Johannesburg, went there and was the first to pitch a tent. At that time there was much dissension between races in South Africa and in consequence he took part in the Jameson raid (q.v. vol. 12, page 556 N. E.) and was fined £2000 and sentenced to two years in prison. In the Great Boer War he served in the South African Light Horse and took part in the relief of Wepener. He was a member of the Legislative Council of the Transvaal and when responsible government was granted to that territory he became treasurer under General Botha. He went to England as a delegate for the passage of the Union Act. When it was passed he became minister of finance in the first Union Cabinet and served from 1910 to 1912. He then became interested in finance and railways and for some years before his death was in retirement.

Hume, Fergus. British novelist, died in London, July 13, 1932. He was born in England, July 8, 1859. His family removed to Dunedin, New Zealand, and he attended high school and the University of Otago there. He was admitted to the bar and practiced law, also in New Zealand. In 1888 he returned to England and devoted his time to writing and traveling. Among his works are *Mystery of a Hansom Cab* sold by him for £50 and of which 500,000 copies were sold (1887); *Madame Midas* (1888); *Monsieur Judas* (1890); *Island of Fantasy* (1892); *The Nameless City* (1893); *The Dwarf's Chamber* (1896); *The Indian Bangle* (1899); *The Bishop's Secret* (1900); *The Crime of the Crystal* (1901); *The Turnpike House* (1902); *Jonah's Luck* (1906); *The Other Person* (1920); *The Whispering Lane* (1924); *The Caravan Mystery* (1926); and many others.

Humphrey, Seth King. American author, died in Boston, Mass., Mar. 23, 1932. He was born in Fairbault, Minn., Aug. 5, 1864, graduated from the Fairbault High School in 1881, and after engaging in flour milling he took a course at the Massachusetts Institute of Technol-

ogy in 1895. Two years later he engaged in the brokerage business, specializing in western investments. While in milling he invented an elevator for employees that has been in extensive use in flour mills all over the world. After his retirement from business in 1912 he devoted his time to traveling and writing. His works include *The Indian Dispossessed* (1905); *Mankind* (1917); *The Kacal Prospect* (1920); *Loafing Through the Pacific* (1927); *Loafing Through Africa* (1929); and *Following the Prairie Frontier* (1931).

Hunton, Eppa, Jr. American railway executive, died in Richmond, Va., Mar. 5, 1932. He was born in Brentsville, Va., Apr. 14, 1855, was graduated from the University of Virginia in 1877, and was admitted to the bar in the same year. In 1901 he went to Richmond and became a member of the firm of Munford, Hunton, Williams and Anderson. They became general counsel for the Richmond, Fredericksburg & Potomac Railroad Company and he was appointed president of the railroad company in 1920, which office he held at the time of his death. In 1916 he was the president of the Virginia Bar Association. During the World War he served as counsel to the director of railroads in Washington.

Hutchinson, Vere Stuart Menteth. British novelist, died in London, Aug. 9, 1932. She was born in San Clare, Paignton, Devonshire in 1891, and was educated privately. Her first novel published was *Sea Wrack* in 1922, and was followed by *Great Waters* (1924), *The Naked Man* (1925), *The Other Gate* and *Thy Dark Freight* (1928). Also, she wrote stories for *Century*, *Nash*, and other publications. She was a sister of A. S. M. Hutchinson, the noted novelist.

Im Thurn, Sir Everad, died Oct. 10, 1932.

Inchcape, Lord James Lyle Mackay, died May 23, 1932.

Inouye, Junnosuke, died Feb. 9, 1932.

Inukai, Ki, assassinated May 16, 1932.

Jacchia, Agide, died Nov. 29, 1932.

Jackson, Dale. American aviator, died in a plane crash in Miami, Fla., Jan. 6, 1932. He was born in Fairbault, Minn., and attended school there. When very young he started fixing bicycles and motorcycles and in 1926 went to Lambert Field in St. Louis, Mo., and earned his tuition for a course in flying by doing mechanical work, later becoming an instructor and test pilot. He first won fame by his record breaking feat with Forest O'Brine in the summer of 1929 when they stayed aloft for 420 hrs and 21 min. It was the first endurance refueling flight, and was then emulated by others, but they were bettered only by the Hunter brothers who made a record of 553 hrs 41½ min. Jackson and O'Brine tried again in 1930 and regained first place by staying aloft 647 hrs. 28½ min. only to have the record challenged by the National Aeronautical Association.

Jacobs, Henry Kyster, died July 7, 1932.

Jacoby, Harold, died July 20, 1932.

Jacques, William White. American physicist, died in Chester, N. S., Canada, June 24, 1932. He was born in Haverhill, Mass., Aug. 30, 1855. He received an S.B. degree from the Massachusetts Institute of Technology in 1876, and A.M. and Ph.D. degrees from Johns Hopkins in 1879. He then went abroad and continued his studies in Berlin, Vienna, Leipzig, and Göttingen. From 1880 to 1897 he was an expert for the American Bell Telephone Co., and at the same time, from 1887 to 1890, lectured on electrical engineering at the Massachusetts Institute of Technology. He was associated with Dr. Alexander Graham Bell in perfecting the telephone, and contributed especially to the practicability of long distance telephony. From 1897 to 1914 he served as expert in electrical and chemical industries in Great Britain, France, and the United States, and invented many mechanisms and originated processes used by them. During the World War he was an expert for the anti-submarine division of the British Admiralty, and originated a device for locating submarines.

Jay, Harriet. British novelist and dramatist, died Dec. 23, 1932, in London where she was born in 1863. She stated her career as an actress in London in *The Bride of Love*, *Alone in London*, and *Fascination*, on the last two of which she collaborated. Some of her novels include *The Queen of Connaught*, *A Marriage of Convenience*, and others. Among her plays were *When Nights Were Bold*, and *Strange Adventures of Mrs. Brown*. At times she used the pen name of "Charles Marlowe."

Jewell, Theodore Frelinghuysen, died July 26, 1932.

Johns, Clayton. American pianist and composer, died in Boston, Mass., Mar. 5, 1932. He was born in New Castle, Del., Nov. 24, 1857. He attended Rugby Academy in Wilmington, Del., and Harvard University from 1879 to 1881. Then he went to Germany and studied music in Berlin, but returned to the United States in 1884, and opened a studio in Boston. Later he spent much time abroad, especially in London where his works were frequently performed. His compositions include various pieces for piano, piano and violin, about 100 songs, short choral works, several movements for string orchestra, and music for a 14th century mystery play. He was the

author of several books on musical subjects which include *Songs of Sleep* (1892); *English Songs* (1894); and also song-books of other nations, *Essentials of Piano-forte Playing* (1909); *The Reminiscences of a Musician* (1929); etc.

Johns, Fred. Australian biographer and author, died in Adelaide, So. Australia, Dec. 4, 1932. He was born in Houghton, Mich. U. S. A., Mar. 22, 1868, of English parents on a visit to the United States. He was educated in West Cornwall, England, and went to Australia in 1884 and joined the literary staff of the *Register* in Adelaide where he remained until 1914. From then on he served as Chief of the first official Hansard Staff of South Australia until the time of his death. He also conducted the South Australian *Freemason* from 1920 to 1925. He wrote *John's Notable Australians* (first published 1906) *Australasia's Prominent People* (1914); *Who's Who in Australia* (7th ed. 1927); and *A Journalist's Jottings* (1922).

Johnstone, Sir Alan (Vanden-Bempde). British diplomat, died in London, July 31, 1932. He was born Aug. 31, 1858, and was educated at Eton College. He entered the diplomatic service in 1879 and served at Vienna, Washington, Belgrade, The Hague, Rome, and Denmark. In 1895 he was secretary of the legation at Copenhagen; from 1896 to 1899 acting chargé d'affaires, and in 1901 secretary of the embassy. In 1903 he served as the secretary of the embassy in Vienna and held that post until he was appointed British minister to Copenhagen in 1905. In 1910 he was appointed minister at The Hague and served until 1917 when he retired. He was created Knight Grand Cross of the Royal Victorian Order in 1908.

Jones, Francis Coates, died May 27, 1932.

Jones, Thomas Samuel, Jr., American poet, died in New York City, Oct. 16, 1932. He was born in Boonville, N. Y., Nov. 6, 1882, and graduated from Cornell University with an A. B. degree in 1904. He became a member of the staff of the *New York Times*, and three years later joined the *Reuter Cable Service* of New York City. In 1911 he became an associate editor of *The Pathfinder*, where he remained a few years and then devoted his time to writing poetry. Some of his lyrical poems were set to music and many of his sonnet cycles dealt with Greek and Roman philosophers and the teachers of the East. Among his works are *The Path of Dreams* (1904); *From Quiet Valleys* (1907); *Interludes* (1908); *The Voice in the Silence* (1911); *The Rose Jar* (7th ed. 1924); *Sonnets of the Crown* (1922); *Sonnets of the Saints* (1925); *Six Sonnets* (1926); and *The Image* (1932).

Jones, Wesley Lawsey, died Nov. 19, 1932.

Jusserand, Jean Adrien Antoine Jules, died July 18, 1932.

Kahl, Wilhelm. German jurist, died in Berlin, May 14, 1932. He was born in Hallwachs aus Darmstadt, June 17, 1849, educated at Erlangen University, and later held various professorships at Rostock, Erlangen, Bonn, and Berlin universities. He served as a lieutenant in the Franco-Prussian War (1870-71), and was present, with Paul von Hindenburg, at the proclamation ceremonies of the German Empire at Versailles in 1871. After being a supporter of capital punishment for many years he introduced a bill to abolish it. He was a veteran parliamentarian and Nestor of German jurists. At the time of his death he was chairman of the judiciary committee of the Reichstag.

Kalaniana'ole, Princess Elizabeth Kakanu, died Feb. 19, 1932.

Keen, William Williams, died June 7, 1932.

Keifer, J. (oseph) Warren, died Apr. 22, 1932.

Kelley, Florence, died Feb. 17, 1932.

Kennett, Rev. Robert Hatch, died Feb. 15, 1932.

Kephart, Cyrus Jeffries. American educator, and bishop, died in Shelby, Neb., July 21, 1932. He was born in Clearfield Co., Pa., Feb. 24, 1852. He attended Western College at Toledo, Ia., and in 1878 graduated from the Union Biblical Seminary in Dayton, Ohio. He was ordained a minister of the United Brethren in 1879. From 1878 to 1885 he served as president of Avalon College in Missouri, and then became professor of mathematics at Western College, Toledo, Ohio, and held the chair until 1887. Receiving a call to the pastorate of a church in Des Moines, Ia., he remained there until 1889 when he became president of the Lebanon Valley College in Pennsylvania. He was appointed pastor of a church in Lebanon, Pa., in 1890, and served four years. In 1894 he was appointed secretary of the Pennsylvania State Sabbath School Association, but in 1897 he returned to Avalon College to again take up the office of president which he held until 1899 and then returned to a pastorate. In 1905 he was elected president of Western (now Leander Clark) College, at Toledo, Ia., and served until 1908 when he again took a pastorate at the First United Brethren Church in Dayton, Ohio, which he held until 1913 when he was appointed Bishop. At the time of his death he was Bishop Emeritus. He wrote *Public Life of Christ* (1892); *Jesus the Nazarene* (1894); *Life*

*of Jesus for Children* (1894); *What is a Christian?* (1899); *Jesus, Lord and Teacher* (1913); and *Christianity and the Social Weal* (1914).

King, Grace Elizabeth, died Jan. 12, 1932.

King, Lida Shaw, died Jan. 10, 1932.

King, Richard Ashe. Irish novelist and clergyman, died in London, May 29, 1932. He was born in County Clare, Ireland, in 1839, and was educated at Ennis College and Trinity College in Dublin. Ordained priest he became the curate of The Old Church, Bradford, and later the Vicar of St. Mark's at Low Moor. In his later years he was the staff extension lecturer on English literature at Oxford University, and literary editor of *Truth* magazine in London for 38 years. Also, he was president of the Irish Literary Society. Under the pseudonym of "Basil" he wrote *Love the Debt*, *A Drawn Game*, *Pammon's Slave*, *Belle Barry*, *A Shadowed Life*, *Love's Legacy*, *The Wearing of the Green*, and *A Coquette's Conquest*. Under his own name he wrote *Swift in Ireland*, and *A Life of Oliver Goldsmith*.

Kingsley, Darwin Pearl, died Oct. 6, 1932.

Kitson, Theo Alice Ruggles, died Oct. 29, 1932.

Kirkpatrick, William Sebring. American congressman, died Nov. 3, 1932 in Easton, Pa., where he was born Apr. 21, 1844, and graduated from Lafayette College in Easton, with an A. B. degree in 1863. He then studied law in the private office of the Hon. H. D. Maxwell and was admitted to the bar in 1865. While practicing law in Easton for several years he also lectured on municipal law at Lafayette College there. From 1874 to 1875 he was the presiding judge of the Third Judicial district and from 1887 to 1891 served as attorney-general of Pennsylvania. In 1897 he was elected to the 55th Congress and served until 1899. He was appointed acting president of Lafayette College from 1902 to 1903, and was president from 1914 to 1915. At the time of his death he was a trustee and honorary president of that college.

Kleibelsberg, Count Kuno. Hungarian statesman and educator, died in Budapest, Oct. 11, 1932, aged 57. He studied in Budapest, Padua, Berlin, and Paris, and started his political career as Counselor of Ministry. In 1915 he served as president of the Disabled Veterans Association and in 1917 became president of a nationwide association formed for the protection of disabled soldiers. In the same year he held the office of secretary to the Prime Minister and served as assemblyman for the school district of Kolozsavar. Later he represented Sopron in the first National Assembly. In 1922 he was appointed minister of the interior and two years later a member of Parliament representing Kamarom. Also, in 1922 he was appointed Minister of Cultural and Religious Education in the Bethlan Cabinet and served until 1931. Kleibelsberg was an exponent of political and scientific reforms and established Hungarian schools in Vienna, Berlin, and Rome. He reformed the school system of Hungary and organized schools in the rural districts. He served as president of the Hungarian Historical Society and wrote many books in Hungarian and other languages, among them being *The Origin of Hungarian Historical Writings*.

Knowles, F. McGillivray. American-Canadian painter, died in Toronto, Apr. 9, 1932. He was born in Syracuse, N. Y., May 22, 1860, of Canadian parents who returned to Canada two months after his birth. He studied art in Canada, Philadelphia, New York, England, and France. In 1904 he was awarded a medal for his exhibits at the St. Louis Exposition, and also at the Panama-Pacific Exposition in San Francisco in 1915. He maintained a studio in New York City and also in Toronto, and became noted for his landscapes and seascapes. He was a member of the Royal Canadian Academy and the Arts and Letters of Toronto.

Knowles, Morris, died Nov. 8, 1932.

Knox, Sir Adrian. Australian jurist, died Apr. 27, 1932, in Sydney where he was born Nov. 29, 1863. He was educated at Harrow School and at Trinity College, Cambridge University (LL. B.). He was admitted to the bar at Inner Temple, London, in 1886, and practiced for many years, being appointed King's Counsel in 1906 and Privy Counselor in 1920. From 1919 to 1930 he served as Chief Justice of the Commonwealth of Australia, and was known as an authority on constitutional law. He was created Knight Commander of St. Michael and St. George in 1921.

Kohler, G. A. Edward. American engineer and manufacturer, died in Chicago, Ill., Apr. 29, 1932. He was born in Philadelphia, Pa., Feb. 17, 1864, and graduated from the University of Pennsylvania in 1886. He went to Chicago in 1887 and became affiliated with the U. S. Construction Co., and a year later with the Peabody, Daniels Company. He entered the electrical business in 1890, in 1891 organized the firm of Kohler Brothers, and took over the entire company in 1910. He invented and manufactured devices for operating newspaper presses which are known as the "Kohler System." Also, he was active in aviation, being chairman of the board

of directors of the Kohler Aviation Co., operators of a passenger service between Milwaukee and Detroit.

Kolstad, Peder Ludvik, died Mar. 6, 1932.

Kreuger, Ivar, died Mar. 12, 1932.

Kryniski, Adam Antone. Polish linguist and grammarian, died in Warsaw, Dec. 11, 1932. He was born in Lukow in 1843 and graduated from Szkoła Główna (Main School). He then attended the University of Warsaw. After many years' association with the Warsaw University he was appointed president of that institution and remained there until the time of his death. He wrote more than 80 books, among them being *About Nasal Sounds in Slavonic Languages*, *How to Write Polish*, *Grammar of the Polish Language*, *The Mountaineer Dialect*, *The Linguistical Question*, *Polish Orthography*, *Remnants of Old Polish Language*, *How One Should Not Write and Speak Polish*, and *The Development of the Literary Language*.

Kunz, George Frederick, died June 29, 1932.

Lackaye, Wilton, died Aug. 22, 1932.

La Flesche, Francis. American ethnologist, died near Macy, Neb., Sept. 5, 1932. He was born on the Indian Reservation in Omaha, Neb., in 1860, of Indian parentage, his father being a head chief of the Omaha Tribe. He received his education at a Presbyterian Mission School on the Reservation where he was taught English which enabled him to fill a position as interpreter for the Senate Committee on Indian Affairs. He was later appointed a clerk in the Bureau of Indian Affairs at Washington, D. C. He attended the National University Law School in Washington and received the LL.B. degree in 1892 and an LL.M. degree in 1893. In 1910 he was appointed ethnologist of the Bureau of American Ethnology from which he retired in 1930. He was a collaborator on many books on Omaha Indians, their music and life. He wrote *Middle Five* (1900).

Langworthy, Charles Ford. American chemist, died in Washington, D. C., Mar. 3, 1932. He was born in Middlebury, Vt., Aug. 9, 1864, and graduated A.B. from the Middlebury College in 1887, A.M., in 1890, and D.Sc. in 1912. In 1893 he received the Ph.D. degree from the Emperor Wilhelm University in Strassburg, Germany. From 1893 to 1895 he was assistant instructor of chemistry at Wesleyan University in Connecticut. Most of his active life was spent in the service of the United States Government, as associate editor of the *Experiment Station Record* from 1895 to 1924, and as chemist with the U. S. Department of Agriculture until 1915 when he was appointed chief of the Office of Home Economics. In 1923 he became specialist in the Bureau of Home Economics and in the Department of Agriculture. He was a member of several chemical and scientific societies both here and abroad. He wrote *A Digest of Metabolism Experiments* (with the late W. O. Atwater); *Occurrence of Aluminum* (with the late Peter T. Austen). Also, he was a contributor to THE NEW INTERNATIONAL ENCYCLOPEDIA.

Latane, John Holladay, died Jan. 1, 1932.

Lathrop, Julia Clifford, died Apr. 15, 1932.

Leale, Charles Augustus. American surgeon, died June 13, 1892, in New York City, where he was born Mar. 26, 1842. He graduated from the Bellevue Hospital Medical College with an M.D. degree in 1865. He served his full term as a medical cadet in the U. S. Army, and later was appointed assistant surgeon of the army; assistant surgeon of the U. S. Volunteers, and had charge of a ward in the U. S. Army General Hospital in Washington, D. C. On Apr. 14, 1865, when President Lincoln was shot, he was the first physician to reach the President's side and was authorized by Mrs. Lincoln to take charge of the President. He remained with him continuously until he died on the following day. He was honorably discharged from the army in 1866 and went to Europe to study Asiatic cholera. He then returned and in 1867 became a medical practitioner in New York City. He served as president of many medical societies and was a consulting physician for Bellevue and Allied Hospitals, besides taking interest in children's hospitals. He wrote several essays on medical, surgical, and scientific subjects.

Ledoux, John Walter. American hydraulic engineer, died in Media, Pa., Nov. 7, 1932. He was born near St. Croix Falls, Wis., Aug. 28, 1860, and graduated from Lehigh University with a C.E. degree and honors in 1887. He then joined the staff of the American Pipe Construction Co. From 1890 to 1920 he served as chief engineer of that company. In the latter year he became a private consulting engineer. He was a designer of more than 100 water power plants here and in foreign countries. In 1919 he was awarded the Edward Longstreth medal from the Franklin Institute in Philadelphia, Pa., for his improved water meter. Also, he designed special waterworks devices. He served as president of the Engineers Club and was vice-president of the Simplex Valve and Meter Company.

Ledvard, Lewis Cans, died Jan. 27, 1932.

Le Goffic, Charles Henri, died Feb. 12, 1932.

Leguia, Augusto B. (Ex-Pres. of Peru), died Feb. 6, 1932.

Leidy, Joseph. American physician, died July 6, 1932,

in Philadelphia, Pa., where he was born Apr. 11, 1866. He graduated from the University of Pennsylvania in 1887, and in subsequent years became consulting physician to various hospitals and universities in the Philadelphia district until 1903. In 1892 he was made assistant demonstrator of pathology, anatomy, and morbid histology at the University of Pennsylvania. In 1900 he was appointed official delegate from the U. S. Government on the international jury on hygiene at the Paris Exposition, and was decorated for his services by France as an Officer of Public Instruction. During the World War he served as a lieutenant-colonel of the medical corps in the U. S. Army, and also as instructor and medical director of gas defense with the 80th division from 1917 to 1919. After the war he returned to the United States and became one of the leading neurologists.

Leiter, Joseph, died Apr. 11, 1932.

Leland, Henry Martyn, died Mar. 26, 1932.

Lenz, Maz, died Apr. 7, 1932.

Lewis, John Frederick. American lawyer, died Dec. 24, 1882, in Philadelphia, Pa., where he was born Sept. 10, 1860. He graduated with honors from the Central High School in Philadelphia, and then studied law under the Hon. Geo. M. Dallas. Admitted to the bar in 1882 he practiced in Philadelphia, being solicitor for the Philadelphia Bourse and the Philadelphia Maritime Exchange as a member of Lewis, Alder and Laws. Lewis was special instructor in shipping and admiralty law at the University of Pennsylvania. During the World War he served as chief of the second division of the United States Shipping Board in charge of schools of navigation between Connecticut and Norfolk, Va. He served as president and vice-president of many historical and art societies in Philadelphia, and was also the president of the Franklin Institute.

Lichty, John Alden. American physician and radiologist, died in Rochester, N. Y., May 2, 1932. He was born in Meyersdale, Pa., Feb. 26, 1866, and was graduated from Mount Union College with a Ph.B. degree in 1890. In 1893 he graduated from the University of Pennsylvania with the degree of M.D., and until 1894 he was a resident physician of the Philadelphia Hospital. He then attended the University of Berlin from 1895 to 1896. After his return from abroad he settled in Pittsburgh, Pa., and became consulting physician to hospitals there, and associate professor of medicine at the University of Pittsburgh. In 1923 he was appointed superintendent of the Clifton Springs Sanitarium near Rochester, N. Y., and remained there until the time of his death. While studying in Berlin he became interested in the future possibilities of the Rontgen rays (X-rays), and was an expert exponent of their use.

Linthicum, John Charles, died Oct. 5, 1932.

Long, Joseph Ragland. American educator, died in Boulder, Colo., Mar. 15, 1932. He was born in Charlottesville, Va., Dec. 15, 1870. He graduated from Richmond College in 1890 with an A.B. degree; from the University of Pennsylvania with a B.S. degree in 1894, and from the University of Virginia in 1895 with the LL.B. degree. From 1890 to 1892 he taught at the Allegheny Institute in Roanoke, Va., and was a member of the editorial staff of Edward Thompson Company, publishers of the American Encyclopedia of Law, until 1896. He then practiced law in Denver until 1902 when he became professor of law at Washington and Lee University at Lexington, Va., and in 1917 dean of that college's law school. In 1919 Richmond College conferred the LL.D. degree upon him. In 1923 he was appointed professor of law at the University of Colorado, which chair he held at the time of his death. He wrote *Law of Irrigation* (1901), *Law of Domestic Relations* (1905); *Jurisdiction and Procedure of Federal Courts* (1910); *Notes on Law of Wills and Administration* (1910); *Notes on Roman Law* (1912); *Cases on Domestic Relations* (1915); *Government and the People* (1922); and *Cases on Constitutional Law* (1926).

Loring, Albert Carpenter. American industrialist, died in Minneapolis, Minn., Dec. 11, 1932. He was born in Milwaukee, Wis., Aug. 31, 1858, and graduated from the University of Minnesota. He joined his father at an early age in the flour milling business in Minneapolis and remained in that field joining the staff of the Pillsbury Flour Mills Company. In 1923 he was appointed president of that company, which office he held at the time of his death.

Lovett, Robert Scott, died June 19, 1932.

Low, Sir Sidney, died Jan. 13, 1932.

Low, Will Hickok, died Nov. 28, 1932.

Luce, Admiral John, died Sept. 23, 1932.

Ludlow, James Meeker, died Oct. 4, 1932.

Lukacs, Ladislas. Hungarian statesman, died in Budapest, Feb. 23, 1932. He was born in Zalatra (now owned by Rumania), in 1850. He studied law, and in 1874 became professor of jurisprudence in the Royal Academy at Győr. In 1878 he was called to the lower chamber of the Hungarian Parliament, and in 1887 held the position of councillor in the Ministry of Finance for a short time. In 1892 he was appointed secretary of state

in the Ministry of Finance and three years later became Minister of Finance. From 1912 to 1913 he served as Premier of Hungary but, owing to the acceptance by his government of subsidies for his party funds through a Hungarian bank, overwhelming criticism caused him to resign. He returned to private life and practiced law.

Lusk, Graham, died July 18, 1932.

Lyncker, Moritz Freiherr von, Baron. German general, died in Potsdam, Jan. 21, 1932. He was born in Spandau, Jan. 30, 1853. During the Franco-Prussian war he was severely wounded in battle and later received the iron cross for bravery. From 1895 to 1898 he was military trainer and governor to the two oldest imperial princes. He served as chief of the Military Cabinet during the reign of Emperor Wilhelm II, from 1908 to 1918. In the memoirs of the late Admiral von Tirpitz it was asserted that General von Lyncker had exerted a baneful influence on the Kaiser during the war. This the Baron bitterly denied.

Lyngsle, Michael Christian. Danish labor leader, died Jan. 1, 1932, in Copenhagen, where he was born in 1864. He received his education in the public schools of Denmark, and in 1891 became chairman of the Workingman's Association of Copenhagen. In 1896 a national workmen's association was formed and he was then made chairman of the new association. From 1898 to 1914 he was a director of the Social-Democratic Business Committee Association and also from 1900 to 1914 a representative in the Municipality of Copenhagen. From 1898 he served as a member of the Folketinget representing Horsensskredet. In 1925 he was appointed a member of the Landstinget and held that office at the time of his death.

Lyon, Lawrence. Canadian editor and writer, died in Montreal, Nov. 11, 1932. He was born in Toronto in 1875 and attended the Trinity College School in Port Hope. He was called to the Ontario bar in 1898 and to the Quebec bar in 1900. He practiced law until 1905 and in that year removed to Paris. Later he went to London and became proprietor of *The Outlook* which he published until 1919 and then sold it to a syndicate. From 1918 to 1921 he served as a member of Parliament (Coalition Unionist) representing Hastings and resigned in the latter year to devote his time to writing. He was awarded the Order of the Crown of Belgium. His works include *The Pomp of Power* (1922); *The Path to Peace* (1923); *Where Freedom Falters* (1927); *The Fruits of Folly* (1929); and *By the Waters of Babylon* (1930).

McAllister, Charles Albert. American engineer, died in New York City, Jan. 6, 1932. He was born in Dorchester, N. J., May 29, 1867, and was graduated from Cornell University in 1887. In 1892 he was appointed second assistant engineer in the U. S. Revenue Cutter Service; commissioned first assistant in 1895, and chief engineer in 1902. During the Spanish-American War he was summoned by President McKinley to give a list of the ships in the revenue cutter service that were suitable for use in combat. Next he served in the U. S. Navy as assistant engineer on the U. S. Flagship *Philadelphia*, and after the war returned to the coast guard service where he remained over 30 years. After his retirement in 1919 he became vice-president of the American Bureau of Shipping, and president in 1926. This post he held at the time of his death. His contributions for the betterment of the merchant marine were recognized as authoritative in shipping circles, as was also his tireless work for the passage of the Jones-White bill through which the Merchant Marine Act of 1928 was passed. In 1929 he was the American delegate to the International Council on Safety of Life at Sea, held at London. He wrote *The Professor on Shipboard* (1902); and *McAndrew's Floating School* (1913). See NEW INTERNATIONAL YEAR BOOK, 1928 under SHIPPING.

McClure, James Gore King, died Jan. 18, 1932.

McCormick, Edith Rockefeller. American philanthropist and social leader, died in Chicago, Ill., Aug. 25, 1932. She was born in Cleveland, Ohio, Aug. 31, 1872, and was educated privately. In 1902 she was co-founder, with her husband, Harold Fowler McCormick, Sr., of the John McCormick Institution of Infectious Diseases. While residing in Chicago she promoted the Civic Opera, was patroness of opera in English for American audiences, patroness of the arts, and also founder of the Chicago Zoological Gardens. In 1907 she founded a French school for the study of French language and literature; organized a club to encourage the study of Italian language, art, literature and history in 1908; and also supported one of Chicago's first probation offices which was a forerunner of the first juvenile court in that city. She then went abroad where she resided for 15 years, and became active in the social life of the communities where she lived. She donated the next highest amount to that of the Italian Government for the erection of a monument to Verdi, at Parma in Italy, also endowed a prize for the best opera written under certain conditions, and provided the means to modernize and redecorate the Teatro Regio for the Verdi opera season in 1918. In return for these

benefactions the Italian Government made her an honorary citizen. While in Switzerland, in 1914, she provided funds for the translation of the works of Dr. C. G. Jung into many languages, and in 1916 founded and endowed the Psychological Club in Zurich, to promote the development of analytical psychology, and established, also in Zurich, a fund to help sculptors, painters, musicians, and authors made destitute by the World War. She then returned to America and continued her social and philanthropic activities until the time of her death.

McGinnis, Monsignor William F. American churchman, educator, and author, died May 16, 1932, in Brooklyn, N. Y., where he was born Dec. 28, 1867. He was graduated from St. John's College in Brooklyn with an A.B. degree in 1887. In 1892 he received the D.D. degree from the North American College in Rome, Italy, where he completed his training for the priesthood. He was ordained a priest in 1891. In 1904 he was appointed pastor of St. Brigid's Church in Westbury, L. I., N. Y., and in 1919 rector of St. Thomas Aquinas' Church in Brooklyn, which office he held at the time of his death. He was president of the International Catholic Truth Society which he founded in 1899, for the purpose of spreading "Knowledge of the doctrines, sacraments, practices, and history of the Catholic Church and to defend the same when attacked, misrepresented, denied, and calumniated," and was editor-in-chief of *Truth* its official organ. He also lectured on patriotic, civic, and religious subjects. The title of Monsignor was conferred upon him by the Vatican at Rome in 1926.

MacGrath, Harold. American author, died Oct. 30, 1932, in Syracuse, N. Y., where he was born Sept. 4, 1871, and was educated there. He engaged in journalism in 1890 and later devoted his time to writing novels, among which are *Arms and the Woman* (1899); *The Puppet Crown* (1901); *The Man on the Box* (1904); *Enchantment* (1905); and *Half a Rogue* (1906). He continued writing and among some of his later works are *Private Wire to Washington* (1919); *The Drums of Jeopardy* (1920); *The Pagan Madonna* (1921); *The World Outside* (1932); *The Green Stone* (1924); and others.

McKinnel, Norman, died Mar. 29, 1932.

Mack, Norman Edward, died Dec. 26, 1932.

Mackintosh, George Lewis. American educator and clergyman, died in Crawfordsville, Ind., Feb. 29, 1932. He was born in Nova Scotia, Can., Jan. 1, 1860. He came to the United States at the age of 18 and entered Wabash College in Indiana from which he graduated in 1884 with an A.B. degree. He then attended the Lane Theological Seminary in Cincinnati, Ohio; in 1889 was ordained Presbyterian minister, received an appointment as pastor of the Fourth Church of Indianapolis and served from 1891 to 1907. While serving as pastor in 1905 he was appointed lecturer of philosophy at Wabash College and served until 1907, when he was elected president of that college. He held that post until 1926 when he retired, and was created president emeritus.

Maclean, Sir Donald. British statesman, died in London, June 15, 1932, aged 68. He became a member of Parliament as a Liberal in 1906 representing Bath until 1910, Peebles and Selkirk until 1918, and Peebles and South Midlothian until 1922. Also, he served as deputy chairman of the House of Commons from 1911 to 1918, chairman of the London Appeal Tribunal, from 1916 to 1918, and chairman of the Liberal Parliamentary party from 1919 to 1922. At the time of his death he was a member of Parliament representing the northern division of Cornwall, which office he took in 1929. Also, he was the president of the board of education. He served as privy counselor in 1916. In 1917 he was created Knight Commander of the British Empire.

McLean, George Payne, died June 6, 1932.

McLeod, Thomas Gordon. American governor, died in Columbia, S. C., Dec. 11, 1932. He was born in Lynchburg, S. C., Dec. 17, 1868, and graduated from Wofford College, Spartanburg, S. C., with an A.B. degree in 1892. He was admitted to the South Carolina bar in 1896 and became a member of the firm of McLeod and Dennis in Bishopville, S.C. in 1905, and was the senior member of that firm at the time of his death. In 1901 he was elected a member of the South Carolina House of Representatives, and in 1903 was elected to the State Senate and served until 1906. He held the office of lieutenant-governor from 1907 to 1910. In 1922 he was elected Governor of South Carolina and was re-elected in 1924 to serve a second term. During the World War he was chairman of the Lee County Exemption Board. McLeod took an interest in farming and was a pioneer in the promotion of coöperative marketing among southern farmers.

McMaster, John Bach, died May 24, 1932.

McNichols, John Patrick. American clergyman and educator, died in Ann Arbor, Mich., Apr. 26, 1932. He was born in St. Louis, Mo., Feb. 24, 1875, was educated in parochial schools there and at the University of St. Louis from which he graduated in 1896 with an A.B. degree. Also, he studied at St. Stanislaus' Seminary in Missouri.

He joined the Jesuit Society in 1891 and became instructor of English and the classics at St. Xavier's College in Cincinnati, Ohio, in 1898. He was ordained priest in 1906 and remained at St. Xavier's as an instructor until 1912 when he was appointed professor. In 1918 he held the chair of professor of English at Champion College, Prairie du Chien, Wis., and remained until 1915. From 1919 to 1921 he was the dean of the college of Arts and Science at Marquette University, and in 1921 was appointed president of the University of Detroit, which office he held at the time of his death. He wrote *Fundamental English* (1908); *Teachers' Handbook* (1908); and other text-books.

Macy, John Albert. American author, died in Stroudsburg, Pa., Aug. 26, 1932. He was born in Detroit, Mich., Apr. 10, 1877, and graduated from Harvard with an A.B. degree in 1899, and received an A.M. degree in 1900. He then became an instructor in English at Harvard and in the following year the editor of *Youth's Companion*, which office he held until 1909. He then served as secretary to the Mayor of Scheuchetady, N. Y., until 1912, when he was appointed literary editor of the *Boston Herald*. From 1922 to 1923 he served as literary editor of *The Nation*. In 1926 he became literary adviser to the newly formed publishing firm of William Morrow and Company. He then devoted his time to lecturing and writing. He wrote a *Life of Poe* (in Beacon Biographies, 1907); a *Guide to Reading* (1909); *The Spirit of American Literature* (1913); *Socialism in America* (1915); *Walter James Dill, a Biography* (1918); *The Critical Game* (1922); *The Story of the World's Literature* (1925); *About Women* (1930); and *Do You Know English?* (1930).

Maginot, André, died Jan. 7, 1932.

Malatesta, Enrico. Italian anarchist, died in Rome, July 25, 1932. He was born in Santa Maria Capua Vetere, in 1850, and was of the family of Malatesta di Rimini of Dante fame. He was a Count by right of birth though he renounced his title. Early in his youth he stopped his medical studies to become a party to the formation of political plots and revolutions and three times was sentenced to death for participating in these. His first attempt was to incite Rumania against Turkey but he was driven back into Italy by the Turks. In 1876 his plot at insurrection in Italy failed, he fled to Spain where he was blamed for a riot, and a warrant was issued for his arrest, but he escaped. Two years later Malatesta started an insurrection in Italy, was captured, and exiled to an island in the Mediterranean. He escaped from this and went to South America where he became editor of a revolutionary paper, and pamphleteer. He then went to France and founded *Le Revolte*, an anarchistic paper, and traveled through Belgium and Switzerland organizing workers and urging them to arm and revolt. Next he turned to the United States and was editor of *La Question Sociale*. While attending an anarchistic meeting there he was shot but recovered and returned to London. Restlessness sent him to South America again and his presence there was followed by riots. He was seized by the Argentine Government and sentenced to death. Again he escaped and returned to London where he remained several years as a political refugee. In 1919 an amnesty was declared and he was allowed to return to Italy, but was kept under strict surveillance by Mussolini and was forbidden to leave the country.

Manahan, James. American congressman, died in St. Paul, Minn., Jan. 8, 1932. He was born in Chatfield, Minn., Mar. 12, 1866. He graduated from the Winona Normal School in Minnesota in 1886, and from the Law School of the University of Minnesota in 1889. He then practiced law in St. Paul, Minn., Lincoln, Neb., and Minneapolis, Minn., and took part in many prominent cases before the Interstate Commerce Commission, among them being the Pullman rate case and the general express investigation (*Sunberg vs. American Express Company* et al.). In 1913 he was elected a member of the 63d Congress and served until 1915, representing Minnesota at-large. He later returned to the practice of law.

Mann, The Rt. Rev. Cameron. American bishop, died in Winter Park, Fla., Feb. 8, 1932. He was born in New York City, Apr. 3, 1851, and graduated from the Hobart College in Geneva, N. Y., with an A.B. degree in 1870, and an A.M. degree in 1874. Also, he graduated from the General Theological Seminary in New York City, in 1873, and was made a deacon in the same year. He then became curate of St. Peter's in Albany, N. Y., in 1875, and was ordained a priest of the Protestant Episcopal Church in 1876 and immediately succeeded his father as the rector of St. James' in Watkins, N. Y. He was called to Grace Church in Kansas City, and served until 1901 when he was consecrated Bishop of North Dakota and remained there until 1913 when he was transferred to Southern Florida where he was an active bishop at the time of his death. He wrote *October Sermons - Discourses on Future Punishment* (1888); *Comments at the Cross* (1893); *The Longing of Vice and Other Poems* (1922); and *A Concordance to the English Poems of George Herbert*.

Manning, Van (noy) H (artrog), died July 13, 1932.

Manning, Brig. Gen. Sir William (Henry). British soldier, died in Faversham, Kent, Jan. 1, 1932. He was born July 9, 1863, and attended Cambridge University and the Royal Military College. Entering the army, he was promoted through the grades to Honorary Brigadier General in 1913. He joined the Indian army in 1888 and served with distinction in the second Burmese War in which he was wounded and received a medal and clasp. In 1891 he took part in the Hazara expedition on the northwestern frontier of India, and from 1893 to 1894 in the Central African conflicts. From 1894 to 1898 he served in Central Africa and Rhodesia receiving brevets of major and lieutenant colonel. He fought also in Somaliland and from 1897 was British Central African Commissioner and Consul General. For his military activities he received various medals and clasps. From 1901 to 1907 he raised and commanded regiments in Central Africa. In 1907 he was appointed acting governor and commander-in-chief of Nyasaland Protectorate where he served until 1908 when he was appointed commissioner and commander-in-chief of Somaliland Protectorate. In 1910 he became governor of Nyasaland and served until 1913. He then became successively Governor of Jamaica, 1913 to 1918, and Ceylon, from 1918 to 1925 when he retired. He was created Knight Commander of St. Michael and St. George in 1904, Knight Commander of the British Empire in 1918, and Knight Grand Commander of St. Michael and St. George in 1921.

Manoel, Dom (Ex-King of Portugal), died July 2, 1932.

Marden, Charles Carroll. American educator, died in Princeton, N. J., May 11, 1932. He was born in Baltimore, Md., Dec. 21, 1867, and was graduated from Johns Hopkins University in 1889 with an A.B. degree and received a Ph.D. degree in 1894. From 1889 to 1890 he was an instructor of modern languages in Norfolk, Va., and in the following year he taught French at the University of Michigan. He then became associate professor and later professor of Romance languages at the Johns Hopkins University. He held that chair until 1900 when he became associate professor of Spanish and, in 1905, professor of that language in the same university where he remained until 1917. He was appointed professor of Spanish at Princeton University in 1917 and held that office at the time of his death. From 1911 to 1915 he was the managing editor of *Modern Language Notes*. He served as a chief examiner in Spanish for the College Entrance Examination Board from 1922 to 1924. In 1928 he was appointed visiting professor to Spanish universities for the Carnegie Foundation and was decorated by the King of Spain. Also, he was president of the Modern Language Association. He wrote *Phonology of the Spanish Dialect of Mexico City* (1896), *Bibliography of American Spanish* (1911 and 1926), and *A First Spanish Grammar* (with F. C. Tarr, 1926). Also, he edited several Spanish books.

Margolis, Max Leopold, died Apr. 2, 1932.

Marr, Sir James. British baronet and shipbuilder, died in Sunderland, England, Nov. 24, 1932, aged 78. He was educated privately and entered the field of shipping. He was a chairman of Sir James Laing & Sons, Ltd., Jos L. Thompson & Sons, Ltd., T. W. Greenwell & Co., Ltd., and the Sunderland Forge and Engineering Co. Also, he was a member of Lloyd's Register of Shipping. He was created Baronet in 1919.

Martin, Alfred Wilhelm. American author and lecturer, died in New York City, Oct. 15, 1932. He was born in Cologne, Germany, Jan. 21, 1862, and removed to Canada and attended the McGill University in Montreal and graduated with an A.B. degree in 1882. He then attended Harvard and graduated with an S.T.B. degree in 1885 and an A.M. degree in 1886. In 1888 he was ordained a Unitarian Minister and served as pastor of the Chelsea (Mass.) Unitarian Church for the next four years. He went to Tacoma, Wash., in 1892 and founded an independent church there and served as its head until 1907. In the latter year he removed to New York City and became head of the Ethical Culture Society which office he held at the time of his death. Also, he was a lecturer of the University Extension Course at Columbia University, in the Brooklyn Institute of Science, and for the league for political education in New York. He wrote *Great Religious Teachers of the East* (1911); *The Dawn of Christianity* (1914); *Faith in a Future Life* (1916); *A Philosophy of Life and Its Spiritual Values* (1923); *Comparative Religion and the Religion of the Future* (1925); and others.

Massard, Emile Nicolas. French author and journalist, died in Paris, Jan. 25, 1932. He was born in Arlen, Belgium, of French parents, Mar. 15, 1857, and attended the Institut Chevalier. During the World War he was attached to the general staff of the 6th Army in France and won the Croix de Guerre. Also, he was made an officer of the Legion of Honor. He served as president of many societies and commissions and was instrumental in getting many civic improvements for Paris. Among his books are *La France héroïque*, *La Guerre de mon-*

*tagnes, Le Crime de la Joliette, Les Espionnes et les espions à Paris pendant la grande guerre.*

Massieu, Jeanne Isabelle. French explorer, died Dec. 7, 1932, in Paris where she was born in 1843. She traveled through Asia, being placed in charge of many Asiatic missions. She was created a Chevalier of the Legion of Honor, and twice her books were crowned by the French Academy. Also, she was decorated with the Order of the Million Elephants and the White Umbrella, by the ruler of the Kingdom of Laos. She was a laureate of the Parisian Geographical Society and wrote *How I Transversed Indo-China* (1901); and *Nepal and the Himalayan Countries* (1914); and other books.

Maurer, Alfred Henry. American painter, died suddenly Aug. 4, 1932, in New York City where he was born Apr. 21, 1868. He studied art in New York and Paris. He received many awards for his paintings, among them being the Innes prize of the Salmagundi Club in 1900, first prize from the Carnegie Institute in Pittsburgh in 1901; the bronze medal at the Pan-American Exposition in Buffalo, N. Y. in 1901, the silver medal at the St. Louis Exposition in 1904; the third medal at Liege Exposition in 1905, and also the gold medal at the International Exposition at Munich in the same year. His last private exhibition won widespread notice because of his departure from the expected form in painting. He is represented in Memorial Hall Museum in Philadelphia, Pa., and the Barnes Collection in that city, and in the Phillip's Memorial Gallery in Washington, D. C. He was the son of Louis Maurer (q.v.).

Maurer, Louis. American painter, died in New York City, July 20, 1932. He was born in Biebrich, Germany, Feb. 21, 1832, and was educated at Mainz. In about 1851 he came to the United States. He was a member of the staff of Currier and Ives, and among his works were many water colors of American life from 1830 to 1880. Also, he was a lithographer, cabinet maker, shell expert, wood and ivory carver, and anatomist. During the Civil War he taught sharpshooting in Palisades Park, N. J., then used as a training ground. At the age of 50 he started to study oil painting, later being a pupil of William Chase in the National Academy. He was the father of Alfred H. Maurer (q.v.).

Mees, Carl Leo. American educator, died in Terre Haute, Ind., Apr. 19, 1932. He was born in Columbus, Ohio, May 20, 1853, was educated privately and then entered high school from which he graduated in 1869. While a student at the Starling Medical College he became assistant professor of chemistry and later developed a method of microscopic identification that was used throughout the profession. He was the first to photograph blood for comparison and exhibition to juries. His method of blood measurement became standard for the U. S. Army and Navy. He received the M.D. degree from the Starling Medical College in 1875. He then studied physics at the Ohio State University (then known as the Ohio Agricultural and Mechanical College), and at the same time was an assistant professor and gave lectures upon the microscope at Starling and Columbus Medical colleges. He then taught at the University of Louisville (now known as the Louisville Male High School). He resigned in 1880 to go abroad to study and spent some time in Berlin under Hoffmann, Helmholtz, and Kirchoff, in London under Professor Frankland, and Professor Tyndall. In 1882 he returned to the United States and was appointed professor of physics and chemistry at the newly organized Ohio University at Athens, Ohio. He resigned in 1887 to become assistant professor under Dr. Thomas Corwin Mendenhall (q.v. p. 393, vol. xv *NEW INTERNATIONAL ENCYCLOPEDIA*), at the Rose Polytechnic Institute at Terre Haute, Ind., and was appointed professor of physics and chairman of the faculty in 1890, acting president in 1894, and president in 1895. In 1919 he resigned and later became president emeritus. He served as general secretary of the American Association for the Advancement of Science in 1889, president of section B in 1896, and president of section E in 1920.

Melchers, Gari, died Nov. 30, 1932.

Metcalf, Henry Harrison. American editor and publisher, died in Concord, N. H., Feb. 5, 1932. He was born in Newport, N. H., Apr. 7, 1841. He attended Mt. Caesar Seminary, Swanzey, N. H., graduated from the University of Michigan with an LL.B. degree in 1865, and was admitted to the bar in 1866. In 1867 he became editor of the *White Mountain Republic* in Littleton, N. H., and in 1868 took up the duties of editor with *The People* in Concord, N. H., where he remained until 1872. He then purchased the *White Mountain Republic* and conducted it until 1874 when he established the *Democratic Press*, in Dover, N. H. This paper he edited until 1879. He was then editor, respectively, of the *Manchester Daily Union*, and *The Concord People and Patriot* until 1892. Also, in 1877, he founded the *Granite Monthly* at Dover and later moved it to Concord and published it until 1919. In 1913 he became State historian for New Hampshire and held the office at the time of his death. Also, he edited several books.

Methuen, Paul Stanford Methuen, Third Baron, died Oct. 30, 1932.

Michaelis, Sophus, died Jan. 28, 1932.

Miller, Frank Ebenezer. American laryngologist, died in Oopake, N. Y., Apr. 15, 1932. He was born in Hartford, Conn., Apr. 12, 1859, and graduated from Trinity College in Connecticut with an A.B. degree in 1881. He then attended the College of Physicians and Surgeons at Columbia University and graduated with an M.D. degree in 1884. He served on the staff of the St. Francis Hospital for the next two years and was appointed sanitary inspector for the City of New York from 1886 to 1889. He served as assistant to many throat specialists and in 1896 began private practice. Miller was a tenor singer, made a special study of the singer's voice, and was the originator of "voice-art-science"; a method of voice cultivation. He invented a system of "finger surgery" used in the treatment of deafness and an electrical system used to produce musical tones. Miller was author of *Observations in Vocal Art Science* (1909); *The Voice, Its Production, Care, and Preservation* (1910); and *The Banner of Universal Harmony* (1919).

Miller, Ransford Stevens. American diplomat, died in Washington, D. C., Apr. 26, 1932. He was born in Ithaca, N. Y., Oct. 21, 1867, and graduated from Cornell University in 1888. In 1891 he was sent to Japan as the secretary of the International Committee of the Young Men's Christian Association. He then studied the Japanese language and was appointed to the staff of the American Legation in Tokyo and served from 1895 to 1906, when he became Japanese secretary to the American Embassy. In 1909 he returned to Washington, D. C. and became chief of the division of Far Eastern Affairs in the Department of State until 1913. He was then appointed consul-general of Seoul, Korea. The Ishii special mission called him to Washington in 1917 and in 1918 he was detailed to the American Embassy at Tokyo. He was again recalled to Washington and again appointed chief of the division of Far Eastern Affairs, and in 1919 reappointed consul-general of Seoul, Korea. At the time of his death he was a Foreign Officer, Class I, in the State Department.

Mills, Sir William. British engineer and inventor, died in Weston-Super-Mare, England, Jan. 7, 1932. He was born in Sunderland, Apr. 24, 1856. His father was a shipbuilder and at an early age he was apprenticed to a marine engineer. He obtained his first-class certificate and worked at sea repairing cables and as an engineer. He was interested in alloys and did much research in metals, being recognized as a pioneer in that field. He was the founder of William Mills, Ltd., of Sunderland, makers of aluminum for aeroplanes, and also of the Mills Munitions Company, manufacturers of the Mills hand grenade, of which he was the inventor, and of which 75,000,000 were made during the World War. Many of his inventions are being used in the telegraph, naval, and marine services, among the most notable being the disengaging or launching gear for life boats on steamships, for which he won the only prize of the Royal Naval Exhibition. His contributions to the sports world were telescopic seats and specially made golf clubs. He was knighted in 1922.

Millward, Jessie, died July 13, 1932.

Milovanovic, Gen. Milan. Yugoslavian soldier, died in Belgrade, Oct. 9, 1932, aged 57. During the World War he served as chief of the general staff for a short while. He was the secretary of "Unity or Death," a secret organization formed in Yugoslavia, and in 1903 his name was linked with the assassination of King Alexander and Queen Draga.

Miyatovitch, Count Chedomille, died May 14, 1932.

Moler, George Sylvanus. American engineer and inventor, died in Trenton, N. J., May 20, 1932. He was born in Columbus, Ohio, Oct. 4, 1851, and graduated from Cornell University with an M.E. degree in 1875. From 1875 to 1880 he was an instructor in physics at Cornell University, and from 1880 to 1911 he served as an assistant professor in the same subject there. He then was appointed professor and served until 1917 when he resigned. He later became professor emeritus. In 1875, in collaboration with Prof. W. G. Anthony, he perfected a dynamo that was used to light the buildings at Cornell University at a time when large cities were still using gas for lighting purposes. It is said to have been the first dynamo used for commercial purposes in the Western Hemisphere. Also, he was considered to be the first to make X-ray photographs after the news was transmitted from France that it was a possibility. He had many inventions to his credit but never commercialized them.

Montgomery, The Rt. Rev. Henry Hutchinson. British Bishop, died in London, Nov. 27, 1932, aged 85. He attended Harrow School and graduated from Trinity College, Cambridge, with the M.A., D.D., and D.C.L. degrees in 1871. He was then ordained a priest and was appointed vicar of St. Mark's in Kennington in 1879 and served for 12 years. In 1889 he was made the Bishop of Tasmania where he served until 1901. At the time of his death he was a prelate of the Order of St.

Michael and St. George, holding the rank of Knight Commander. He wrote biographies and other works, among them being *Life Journey* (1916); *Visions* (3 vols. 1905-1918); *Musings* (1919); *Life of Bishop Lefroy* (1920); *Bishop Balfour* (1925); *Bishop Corfe* (1926); *Bishop Scott* (1928); and *Joy of the Lord* (1931).

Moore, Charles Cadwell. American engineer, died in Santa Cruz, Calif. Apr. 17, 1932. He was born in Alpine, N. Y., July 12, 1868. He graduated from St. Augustine's College, which was then located at Benicia, Calif., but has since become extinct. From 1885 to 1895 he was connected with the San Francisco Tool Co. Later he founded the firm of C. C. Moore & Co., of engineers which specialized in motive power and hydraulic work. On its incorporation he became president, and held this office at the time of his death. From 1908 to 1909 he was president of the San Francisco Chamber of Commerce and vice-president of the Boy Scouts of America. In 1906 he was commissioned to go to Europe to secure foreign warships for the Portola Celebration in San Francisco. He was granted the use of seven ships. In 1908 he was chairman of the executive committee of the San Francisco Citizens' Health Committee for eradication of bubonic plague through the extermination of rats. From 1910 to 1911 he served as chairman of the financial committee of the Panama-Pacific International Exposition, and in the latter year was elected president of the exposition. His most notable engineering achievement was the installation of the power plant of the Huntington Electric Power Company in Southern California.

Moore, Elakim Hastings, died Dec. 30, 1932.

Morehouse, Frederick Cook. American editor, died June 25, 1932, in Milwaukee, Wis., where he was born Mar. 19, 1868. He was educated privately in 1896 he was the editor of *Church Eclectic* and served until 1899 when he became the editor of *The Living Church*. In 1915, upon the death of his father, he succeeded to the presidency of the Morehouse Publishing Co., which post he held at the time of his death. He was one of the lay-leaders of the Anglo-Catholic group of the Protestant Episcopal Church and a member of the General Convention of that Church from 1910. During the World War he served as president of the Milwaukee Chapter of the American Red Cross, and through the columns of his paper *The Living Church* he raised several hundred thousand dollars for relief in Europe and the Near East. This work was recognized by President Wilson and the King of the Belgians. He wrote *Some American Churches* (1892); and *Evolution of Parties in the Anglican Communion* (1905).

Mori, Kaku. Japanese statesman, died in Tokyo, Dec. 11, 1932, aged 49. He was born and educated in Japan and became an influential leader of the Seiyukai. He was chief secretary of the Inukai Cabinet and was a strong advocate of the "Back-to-Asia" movement.

Motoyama, Hikoichi, died Dec. 30, 1932.

Murat, Prince Joachim Napoleon. French nobleman, died in Paris Nov. 2, 1932. He was born in Boissy-St. Léger, Feb. 26, 1856. He became a soldier and reached the rank of captain, but because of a French law forbidding anyone of noble birth from serving in the army he was forced to resign. During the World War he was allowed to serve his country by taking special assignments, such as conferring with leaders in Canada and the United States. He was a direct descendant of the famous General Murat of the first Napoleon's army. He placed his residence in Paris at the disposal of President Woodrow Wilson who resided there for a short time in 1919.

Napoleon, Prince Louis. French nobleman, died in Pragins, France, Oct. 14, 1932. He was born July 16, 1864 and later attended Cheltenham College, in England. He was appointed a lieutenant-general in the Russian Military service and later became a commandant of the cavalry division of the Caucasus at Tiflis. For a while he served as Governor-General of the Province of Coraven. Because of his noble birth he was denied the opportunity of serving France during the World War and was refused admittance to any of the other armies that were allies of the French. He was the grandnephew of Napoleon I. He edited the *Memoirs of Queen Hortense* (1928).

Naulin, Gen. Stanislas. French soldier, died in Paris, Nov. 3, 1932. He was born in Saint-Loup Apr. 27, 1870 and attended the École de Saint-Cyr. He then served as an officer in Morocco, and in 1915, during the World War, was promoted Colonel and placed in command of the 5th Division when they fought on the Somme in 1916 and the Aisne in 1917. At Verdun he led a brigade. In July, 1918, he had in his command the Rainbow Division of American troops, which he praised highly for the fighting qualities of its men and for their valor on July 15-16 in the offensive of the French Fourth Army that broke the German advance. Later he led the 21st army corps to victory during the Champagne campaign in September, 1918. After the war he was returned to Morocco and also served in Algeria and Syria. He was serving as commandant of a division of the

French Troops in Syria at the time of his death. He was a Commander of the Legion of Honor.

Newell, Frederick Haynes, died July 5, 1932.

Nicholson, Admiral Sir William Coldingham Masters. British naval officer died in London, Jan. 10, 1932. He was born Oct. 28, 1863. He entered the British Navy and during the World War served as a torpedo expert. He commanded the *Canada* in the battle of Jutland in 1916. Later he served as Third Sea Lord until 1920. He then served as vice admiral commanding the First Battle Squadron and in 1922 was promoted to admiral, which office he held until 1925, when he was retired. He served as head of the Torpedo School, and also as assistant secretary of the Imperial Defense Committee.

Niemeyer, John Henry, died Dec. 7, 1932.

Nordenskiöld, Nils Erlend Herbert, Baron, died, July 4, 1932.

Norwood, Robert, died Sept. 28, 1932.

O'Brien, Frederick, died Jan. 9, 1932.

Oemler, Marie Conway. American novelist, died in Charleston, S. C., June 7, 1932. She was born in Savannah, Ga., May 29, 1879, and educated at public school, and a convent, but mostly by private teachers at home. Among her works are *Slippy McGee* (1917); *A Woman Named Smith* (1919); *The Purple Heights* (1920); *Where the Young Child Was and Other Christmas Stories* (1921); *Two Shall Be Born* (1922); *His Wife in Law* (1925); *The Holy Lover* (1927); *Sheaves* (1928); *Johnny Reb* (1929); and *Flower of Thorn* (1931).

Olcott, Chauncy (Chancellor John), died Mar. 18, 1932.

Olds, Robert Edwin, died Nov. 24, 1932.

O'Malley, Frank Ward, died Oct. 19, 1932.

Oppenheim, James, died Aug. 3, 1932.

Orth, John. American musician and composer, died in Boston, Mass., May 3, 1932. He was born in Annweiler, Germany, Dec. 2, 1850, and was brought to the United States when he was one year old. His parents settled in Taunton, Mass., and he was educated there. He began learning to play the piano at the age of eight and played the organ in church when only twelve. He then studied music in Boston, Mass., at the same time teaching piano at the New England Conservatory and playing in church to enable him to continue his studies abroad. In 1870 he went to Germany and studied piano under Lebert, Kullak, Puckner, Deppe, and Liszt, and composition under Weitzman, Faiszt, Scharwenka, and Keil. He returned to the United States and taught music in Boston from 1875 until the time of his death. He was well known for his Liszt lectures and recitals, and had composed many pieces for the piano. Also, he was interested in reform and humanitarian causes.

Orton, Edward, Jr., died Feb. 10, 1932.

O'Shea, Michael Vincent, died Jan. 14, 1932.

Ostrorog, Count Leon. Polish authority on international law, died in London, July 31, 1932. He was born June 20, 1867, and was graduated from the University of Paris with a B.A., B.Sc., and LL.D. degrees. He was then sent to Turkey in an official capacity and while there he attended the Turkish University of Stamboul and studied Mohammedan law, completing his course in 1897. In 1893 he also served as head of the legal department of the Ottoman Public Debt in Constantinople. In 1898 he was appointed legal adviser to the Ottoman Ministry of Mines and Forests and served until 1909 when he was made a legal adviser to the Ottoman Government. In 1913 he was given the rank of minister plenipotentiary, and served as adviser to the Sublime Porte, and in the same year was arbitrator between Greece and Holland on a question of international law. In 1919 he was a member of the Paris Peace Conference representing Poland. He lectured on international law at the University of London in 1926. Ostrorog translated many Turkish and Spanish books and wrote many treatises on law.

Ostwald, Wilhelm, died Apr. 4, 1932.

Outerbridge, Eugene Harvey. American merchant, died in New York City, Nov. 10, 1932. He was born in Philadelphia, Pa., Mar. 8, 1860, and was educated in private schools. He then went to St. John's, Newfoundland, and later removed to New York City where he became agent for Harvey & Co., of Newfoundland, importers and exporters, from 1878 to 1881, when he was taken into partnership and became sole resident partner in New York City. In 1923 he was made president of the firm, by this time known as Harvey & Outerbridge, Inc. He was president and treasurer of the Pantasote Leather Company of New Jersey and also of the same company in New York. He served as vice-president of the Agasote Millboard Company of New Jersey. In 1916 and again in 1917 he was president of the Chamber of Commerce of the State of New York and served as vice-president in 1924 and again in 1927 and 1931. In 1921 he was appointed commissioner and chairman of the Port of New York Authority and served until 1924 when he resigned. At the time of his death he was chairman of a special committee on National defense.

Palmer, Walter Launt, died Apr. 16, 1932.  
 Parker, Sir Gilbert, died Sept. 6, 1932.  
 Parrish, Samuel Longstreth. American lawyer, died in New York City, Apr. 22, 1932. He was born in Philadelphia, Pa., Feb. 28, 1849, and graduated from Harvard College with an A.B. degree in 1870. He then returned to Philadelphia and studied law; was admitted to the bar in 1872, and began to practice there in 1873. In 1877 he removed to New York City and engaged in the practice of law until his retirement in 1897, when he became active in social and political life. He was elected president of the Village of Southampton, L. I., N. Y., where he made his home in the summer time. He founded the Parrish Museum there and also, with his brother, he had erected the Memorial Hall as a tribute to the soldiers from that village who fell in the World War. He was appointed a member of the American Relief Committee, and for his work during the great disaster caused by the Messina earthquake was decorated by the King of Italy, the Italian Government, and the American Red Cross. He was the author of several open letters and pamphlets on political questions of the moment.

Parshall, Horace Field, died about Dec. 20, 1932.  
 Parsons, William Barclay, died May 9, 1932.  
 Pasha, Baron Rudolf Carl Slatin, died Oct. 4, 1932.  
 Paton, Lewis Bayles, died Jan. 24, 1932.  
 Patten, William, died Oct. 27, 1932.  
 Patton, Francis Landey, died Nov. 25, 1932.  
 Pau, Paul Marie César G  rald, died Jan. 2, 1932.  
 Paul, Emil, died June 15, 1932.  
 Pettv, A. (Ionzo) Ray. American Baptist minister, died in Philadelphia, Pa., Oct. 26, 1932. He was born in Santa Ana, Calif., July 17, 1887, and attended the Rochester Theological Seminary from 1909 to 1910. He graduated from the Occidental College, Los Angeles, Calif., with a B.A. degree in 1915. In the same year he entered the Union Theological Seminary and studied for one year. After his ordination in the Baptist Ministry in 1917 he became pastor of the Judson Memorial Church in New York City and remained there until 1926 when he was transferred to the Baptist Temple in Philadelphia, Pa. In 1929 he was called to the First Baptist Church in Kansas City, Mo., and remained the pastor there until the time of his death. While in New York City he was one of the founders and served as vice-president of the Judson Health Centre. He contributed to the "Best Sermons" of 1928 and wrote *Songs of the Tenements and Other Verses* (1925).

Phillips, Marion. British labor leader and writer, died in London, Jan. 23, 1932. She was born in Melbourne, Australia, in 1881 and graduated from Melbourne University. Then she went to London where she graduated from the London University. From 1905 to 1906 she was a research scholar and Hutchinson medalist at the London School of Economics. From 1907 to 1908 she served as investigator on the Royal Commission on the Poor Law. In 1912 Marion Phillips was organizing Secretary of the Women's Trade Union League and in the following year became general secretary of the Women's Labor League. She was a member of many welfare organizations and served as secretary of a standing Joint Committee of Industrial Women's Organizations. Also, she was a justice of the peace and chief woman officer of the Labor party. In 1929 she was elected a member of Parliament for the Labor party representing Sunderland. She wrote *A Colonial Autocracy* (1907); *A Working Woman's House* (1919); *Women and the Miner's Lock Out* (1927); and edited *The Labor Woman*, a magazine.

Piffi, Cardinal Gustave Frederick, died Apr. 20, 1932.  
 Pitt, Percy, died Nov. 23, 1932.

Plowman, George T. (aylor). American etcher, and author, died in Cambridge, Mass., Mar. 26, 1932. He was born in Le Sueur, Minn., Oct. 19, 1869, and graduated from the University of Minnesota in 1892. He studied art here and abroad. In 1915 he was awarded the bronze medal for his exhibits at the Panama-Pacific Exposition in San Francisco, Calif. He was noted for his etchings of landscapes, covered bridges, and college buildings. His work is exhibited by the Boston Museum of Fine Arts; the New York Public Library; the Library of Congress, Washington, D. C.; the British Museum, the Luxembourg Museum in Paris, and many others. He was the author of two books on art, *Etchings and Other Graphic Arts* (1914); and *Manual of Etching*.  
 Plumer, Herbert Charles Onslow (1st Viscount), died July 16, 1932.

Plummer, Edward Clarence. American lawyer and author, died in Washington, D. C., Mar. 20, 1932. He was born in Freeport, Me., Nov. 28, 1863, and graduated from Bowdoin College, Brunswick, Me., with an A.B. degree in 1887 and received an A.M. degree in 1890 from the same college. From 1888 to 1896 he engaged in newspaper work in Bath, Me. During the Spanish-American War he was assistant paymaster for the U. S. Navy. In 1898 he started to practice law in Bath, Me., and became a corporation counsel. He served as president of the Atlantic Carrier's Association. In

1921 he became a member of the U. S. Shipping Board, and in 1923 was appointed vice-chairman of that organization, which office he held at the time of his death. He wrote *Tercentennial of the City of Bath* (1907); *Shipping Sense* (1926); and *Reminiscences* (1926).

Plunkett, Sir Horace (Curzon), died Mar. 26, 1932.  
 P  lit, Most Reverend Manuel Maria Ecuadorian prelate, educator, statesman, and writer, died Oct. 1, 1932. He was born in Quito, in 1862, and studied in France and England. He returned to Ecuador in 1881, practiced law and taught at the Central University in Quito. He served in the Chamber of Deputies, and in 1891 entered the priesthood. At the time of his death he was Archbishop of Quito. He wrote many treatises and monographs. His best known historical work is *The Family of St. Teresa in America*.

Porter, Charles Talbot. American aeronautical engineer, died in Torresdale, Pa., Jan. 22, 1932. He was born in Montclair, N. J., Nov. 18, 1865, and graduated from Yale University with a Ph.D. degree in 1907 and received an M.E. degree in 1913. During the World War he was prominent as an aeronautical expert, and was connected with the Naval Aircraft factory from 1918 to 1920. In 1920 he helped to organize the Huff Daland Aircraft Company of Ogdensburg, N. Y., and held the offices of vice-president, treasurer, and chief engineer. He had a large part in the development of the XLB-1 bombing plane that won the race between New York and Philadelphia for large capacity planes; the LB-5 standard plane, also a bomber; the XHB-1 (*Cyclops*) the largest single engine ship up to that time, and the XB-1 (*Super-Cyclops*). His firm was merged with the Keystone Aircraft Corporation and he continued to serve as vice-president, treasurer, and chief engineer of the latter company at Bristol, Pa., until the time of his death.

Powers, Caleb. American congressman, died in Baltimore, Md., July 25, 1932. He was born in Whitley Co., Ky., Feb. 1, 1869, and attended the Union College, Barbourville, Ky. Later he graduated from the State University of Kentucky at Lexington, and also from Valparaiso University in Valparaiso, Ind., with an LL.B. degree in 1894. He took a post-graduate law course at Center College in Danville, Ky., and was admitted to the Kentucky bar. Appointed superintendent of schools in Knox Co., Ky., he served until 1898. In 1899 he was elected Secretary of State, being unseated after a contest. He was implicated in the assassination of Gov. William Goebel in 1900, and was convicted three times and sentenced to life imprisonment or death, the decision being twice reversed by a higher court. He served eight years in all in different jails in Kentucky but was at last pardoned by Governor Willson. He was elected to the 62d Congress, representing the eleventh Kentucky district (1911-1913), and reelected in 1913, 1915, and 1919. At the time of his death he was assistant counsel to the U. S. Shipping Board. He wrote *My Own Story* (1905).

Priest, Irwin Gillespie. American physicist, died in Washington, D. C., July 19, 1932. He was born in Loudonville, Ohio, Jan. 27, 1886. He graduated from the Ohio State University in 1907 and engaged in work immediately with the National Bureau of Standards in Washington, D. C., where he specialized in optics and never departed from that field. In 1913 he was appointed chief of the colorimetry division which office he held at the time of his death. He was one of the first to recognize the importance of the spectro-photometer in colorimetric analysis and contributed many ideas to the development of various types of spectro-photometric equipment. He perfected an apparatus to determine the validity of the theory of interpreting spectro-photometric data in terms of dominant wave-length and purity. He designed other apparatus which enabled science to measure the sensibility of the human eye to wave-length changes, especially in determining nearly white color. He made many other contributions to science in connection with color. He was secretary of the Optical Society of America from 1921 to 1924 and president of that organization from 1928 to 1929. In 1931 he was appointed special representative of the U. S. Department of Commerce at the International Congress on Illumination held in England.

Pringle, Rear Admiral Joel Roberts Poinsett, U.S.N., died Sept. 25, 1932.

Quick, Sir John. Australian jurist, died in Melbourne, June 17, 1932. He was born in St. Ives, Cornwall, Eng., Apr. 14, 1852, and at the age of two was taken to Bendigo, Australia, by his parents. He left school at the age of 15 and became a reporter on a Bendigo newspaper, and at the same time studied law at the Melbourne University where he graduated with honors. He was admitted to the bar and practiced law until 1880 when he was elected a member of the Victorian Parliament to represent Bendigo. He retired from this office in 1889 to return to the practice of law. In 1893 he originated a plan for the Federal Convention to frame an Australian Constitution and for this service he received a knighthood in 1901. He devoted much time

to writing, most of his works being on the subject of law. He also wrote *My Book* (describing his career) (1926); and *The Book of Australian Authors* (1928).

Reavis, Charles Frank. American congressman, died in Lincoln, Neb., May 26, 1932. He was born in Falls City, Neb., Sept. 5, 1870, graduated from Northwestern University in Evanston, Ill., in 1898, and was admitted to the Nebraska bar in 1902. He practiced law in Falls City, Neb., with his father, until 1914 when the partnership ended with the death of the latter. In 1904 he was elected prosecuting attorney for Richardson County, Neb., and served until 1906. In 1914 he was elected to the 64th Congress of the U. S. House of Representatives and served successively in the 65th, 66th, and 67th Congresses. He resigned from the latter Congress to accept an appointment as special assistant to the attorney-general in the prosecution of alleged war frauds and served until 1924. Later he took up his residence in Lincoln, Neb., where he practiced law until the time of his death.

Redfield, William Cox, died June 13, 1932.

Reeves, William Pember, died May 16, 1932.

Reina, Antonio R. Honduran jurist, died in Honduras, Mar. 12, 1932. During his career he served in high offices in his native country, serving in Congress; as president of the Supreme Court, and also president of the National Congress. He represented the department of Tegucigalpa as deputy in the National Congress at the time of his death.

Reinach, Salomon, died Nov. 4, 1932.

Retting, John. American painter, died May 1, 1932, in Cincinnati, Ohio, where he was born in 1859, and attended the Cincinnati Art School. He then went to Paris and studied art under Courtois and Prinetti. He was noted for his paintings of life in Dutch fishing villages. He spent much time abroad and is represented in many museums in the United States and Europe.

Rey, Santiago. Cuban Conservative leader, died in Havana, Cuba, Oct. 1, 1932. He was born in Spain in 1881 and was brought to Cuba by his parents in 1886. When but 14 years of age he joined the Cuban insurrection, fought against Spain, and was promoted to the rank of lieutenant. He resigned from the army in 1910 and in 1916 became a member of the Cuban House of Representatives in which he served until the time of his death.

Richardson, William Lambert. American educator, died Oct. 20, 1932 in Boston Mass., where he was born Sept. 6, 1842. He graduated from Harvard with an A.B. and A.M. degree in 1864, and with an M.D. degree from the Medical School of the same college in 1867. From 1871 to 1872 and again from 1874 to 1882 he served as an instructor of obstetrics at Harvard. In the latter year he was appointed assistant professor in the same department. In 1886 he became a full professor and served until 1907 when he was retired and made professor emeritus. He was the author of several medical text-books.

Robbins, Edward Denmore. American lawyer, died in New Haven, Conn., Oct. 7, 1932. He was born in Wethersfield, Conn., Oct. 20, 1859, and graduated from Yale University with a B.A. degree in 1874. He then studied in European universities and returned to Yale University from which he graduated with an LL.B. degree in 1880. In the following year he started to practice law and from 1882 to 1893 served in the Connecticut House of Representatives. In 1896 he became a professor of jurisprudence at Yale University and served until 1902. He was vice-president of the New England Railroad Company and for many years was counsel for the New York, New Haven & Hartford Railroad Company. He retired in 1914.

Roberts, Peter. American Congregational minister and writer, died in Mt. Vernon, N. Y., Dec. 2, 1932. He was born in Dowlais, South Wales, July 29, 1859, and graduated from Brecon Memorial College in 1883. He then came to the United States and graduated from Yale with a B.D. degree in 1886. In the same year he was ordained a minister of the Congregational Church and held pastorates in Scranton, Olyphant, and Mahanoy City, all in Pennsylvania. In 1907 he became secretary of the International Committee of the Y.M.C.A. and held that office until the time of his death. He was an authority on the Americanization of the immigrant and wrote several books on this subject, among them being *English for Coming Americans* (1908); *Immigrant Races in North America* (1910); *The New Immigration* (1912); and *The Problem of Americanization* (1921).

Rodríguez, Aníbal. Chilean politician, died in Santiago, Oct. 2, 1932. While a student of law he entered the ministry of the interior in 1886. He received rapid promotion, being appointed undersecretary, at the same time serving as secretary of the Council of State. He was elected to the Chamber of Deputies to represent in turn, Temuco, Concepción, Talcahuano, and Lautaro. In 1908 he was appointed a member of the cabinet as minister of war and the navy, and was reappointed to that office four times. In 1909 he was made president of the Chamber of Deputies and in 1923 was appointed Minister of Fi-

nance. In 1925, after having retired from active political life he was prevailed upon to take the office of real estate custodian and while serving in that capacity introduced many important reforms.

Rogers, Jason. American publisher and author, died in Falmouth, Mass., Apr. 26, 1932. He was born in New York City, Aug. 5, 1868, and attended the public schools there. He entered the newspaper field when very young, starting with the *Sunday Mercury* in New York City. In 1911 and 1912 he traveled extensively in the United States interesting many newspaper men in forming an association of newspaper publishers. The enterprise was known as the American Newspaper Publishers' Association. Also, he organized a Bureau of Advertising for that association and a Publishers' Buying Corporation; a combination of 240 newspapers to purchase collectively to defeat the high prices asked by the paper manufacturers. From 1924 to 1926 he was the editor and publisher of *The Advertiser's Weekly*. He was general manager of the *Kansas City Journal Post* from 1926 until 1928 when he retired. He wrote *Newspaper Building* (1918); *Fundamentals of Newspaper Building* (1919); and *Newspaper Making* (1920).

Roscoe, John, died Dec. 4, 1932.

Rosenwald, Julius, died Jan. 6, 1932.

Ross, Ronald, died Sept. 16, 1932.

Ruta, Gilda. Italian-American composer, died in New York City, Oct. 26, 1932. She was born in Naples, Italy, in 1853, and studied music under her father, Michele Ruta, who was a musician of note, and then received instruction from Franz Liszt. In 1890 she was awarded the Gold Medal by the International Exposition at Florence for her compositions and four years later came to the United States where she played in concerts. She accompanied the Metropolitan Opera House Orchestra under the direction of M. Bevingani, and played in other leading orchestras of the day as solo pianist. She won recognition as a composer for both piano and voice. Among her compositions was a concerto for piano and orchestra which was played by Mme. Ruta at the Costanzi in Rome in the presence of Queen Margherita, with Edoardo Mascheroni directing the orchestra. Later it was repeated at the Carignano di Torino under Arturo Toscanini. Her most noted piece of work was an opera called *The Fire Worshippers*.

Saastamoinen, Armas Herman, died Oct. 20, 1932.

Sanford, Elias Benjamin. American clergyman, author, and editor, died in Middlefield, Conn., July 3, 1932. He was born in Westbrook, Conn., June 6, 1843, and was graduated from Wesleyan University in Middletown, Conn., with an A. B. degree in 1865. In 1869 he was ordained a minister of the Congregational Church and became pastor, successively, in churches in Cornwall, Thomaston, and Westbrook, Conn., until 1894, when he was appointed secretary of the Open and Institutional Church League and served until 1900. He then became general secretary of the National Federation of Churches in 1908, and was appointed corresponding secretary of the Federal Council of Churches of Christ in America and served until 1918 when he was made honorary secretary. He wrote *A History of Connecticut* (1887). This book was revised and enlarged in 1923. Also, he wrote *Origin and History of the Federal Council of Churches of Christ in America* (1916); and *History of the Reformation* (1917). He edited *Concise Encyclopedia of Religious Knowledge* (1890).

Santos-Dumont, Alberto, died July 24, 1932.

Sartorio, Giulio Amstide, died Oct. 4, 1932.

Scaccia, Prospero. Italian Archbishop, died in Siena, Italy, Sept. 28, 1932. He was born in Citta della Pieve, May 30, 1857. He spent all of his life in the service of the church and was appointed Bishop of Tivoli, near Rome, by Pope Leo XIII in 1903. In 1905 he was appointed Archbishop of Siena. Also he served as great chancellor of the Theological College in Siena, and had formerly been assistant to the Pope.

Schleswig-Holstein, Caroline Matilde von. German princess, died in Eckernförde, Feb. 20, 1932, aged 72. She was a sister of the late Kaiserin Augusta Victoria, and immediately after her marriage to Prince Frederick Ferdinand of Prussia in 1885 she retired to private life and was seldom seen outside of the estate.

Schober, Johann, died Aug. 19, 1932.

Scollard, Clinton, died Nov. 19, 1932.

Scott, Charles Prestwich, died Jan. 1, 1932.

Scott, Wilfred Welday. American chemist, died in Los Angeles, Calif., May 2, 1932. He was born in Zanesville, Ohio, Aug. 13, 1876, and graduated from the Ohio Wesleyan University in 1897 with an A.B. degree. He then went to Naini Tal, India, and taught at the Philander Smith College from 1898 to 1901, when he returned to the United States and took post-graduate courses at Cornell and Chicago universities and at the Colorado School of Mines. From 1905 to 1910 he served as professor of chemistry at Morningside College in Sioux City, Ia. He then went to Philadelphia, Pa., and became chief chemist of the Baldwin Locomotive Works for one year and then joined the General Chemical

Company in New York City where he remained until 1921. During the next four years he was a professor of chemistry at the Colorado School of Mines, and was then appointed professor of chemistry at the University of Southern California, which office he held at the time of his death. He wrote several books on scientific matters, among them being *Qualitative Chemical Analysis* (1910, fifth edition 1925); *Standard Methods of Chemical Analysis*, 2 vols. (1917, fifth edition 1938); *Technical Methods of Metallurgical Analysis* (1928); *Chemical Methods of Metallurgical Analysis* (1927); and *Elements of Qualitative Chemical Analysis*, 3d edition (1932).

Seaman, Louis Livingston, died Jan. 31, 1932.

Seipel, Mgr. Ignaz, died Aug. 2, 1932.

Sellers, Matthew Bacon, died Apr. 5, 1932.

Semple, Ellen Churchill, died May 8, 1932.

Sexton, Thomas, died Nov. 1, 1932.

Shaf, Sir Muhammad Khan Bahadur Mian. Indian statesman, died in Lahore, Jan. 7, 1932. He was born Mar. 10, 1869. In 1896 he became a barrister in the Middle Temple. He served in an official capacity in many of India's conferences and leagues, in 1911 was president of the All Indian Urdu Conference, and from 1913 to 1927 president of the All Indian Moslem League. Also, in 1916, he was president of the All Indian Mohammedan Educational Conference, and the president of the Punjab High Court Bar Association from 1917 to 1919. He served as pro-chancellor at Delhi University from 1922 to 1925. He was a member of the Round Table Conference in London in 1930, and wrote several pamphlets on political questions in India. He was created Knight Commander of the Star of India in 1922.

Shahan, Thomas, Joseph, died Mar. 9, 1932.

Shaw, Leslie Mortier, died Mar. 28, 1932.

Shelton, William Henry. American writer and soldier, died in New York City, Oct. 4, 1932. He was born in Ontario Co., N. Y., Sept. 4, 1840, and attended the Canandaigua Academy. When about to enter college he decided to join the army. He served with the Army of the Potomac and was later transferred to the Reynolds Rochester Battery L, First New York State Artillery. During the Wilderness battle he was taken prisoner and held in camps at Macon, Ga., Charleston, and Columbia, S. C. for 10 months. He escaped four times, being captured and returned. He finally reached the Union lines in March, 1865. Among his works are *A Man Without a Memory* (1895); *The Last Three Soldiers* (1897); *The Three Prisoners* (1904); and a history of the Salmagundi Club of New York City of which he was a co-founder. Also, he served as curator of Jumel Mansion for many years.

Shirakawa, Gen. Yoshinori, died May 26, 1932.

Simpson, Charles Torrey. American scientist, died in Miami, Fla., Dec. 17, 1932. He was born in Tiskilwa, Ill. June 3, 1846, and was educated in private schools. From 1889 to 1902 he served on the staff of the National Museum at Washington, D. C., and in 1914 became a collaborator for the Department of Agriculture and remained there until the time of his death. He lectured at times at Georgetown University and in 1923 was awarded the Mayer medal for plant introduction. He wrote several books on mollusks among them being *Geographical Distribution of the Land and Freshwater Mollusks of the West Indies* (1895); *Synopsis of the Naides or Pearly Freshwater Mussels* (1900); *Report on the Mollusks of the Fish Hawk Expedition to Porto Rico* (1901); *Native and Exotic Plants of Dade County, Florida* (1913); *Florida Tree Snails of the Genus *Liguus** (1929); and many others.

Skinner, Frank W., died Dec. 24, 1932.

Slattery, John Rodolph, died Sept. 23, 1932.

Slevogt, Max, died Sept. 20, 1932.

Smith, David. Irish theologian, died in Belfast, Oct. 2, 1932. In 1894 he was ordained a minister of the Free Church. He became a pastor at Tullilliam and was transferred to the United Free Church in Blairgowrie in 1909. He later became professor of theology at the McCrae Magee College in Londonderry and in 1912 was appointed Bruce lecturer at the Glasgow University Free College. In 1921 he made a visit to the United States and lectured in Pittsburgh, Pa., and Chicago, Ill. Upon his return to Ireland in 1922 he was appointed professor of New Testament Literature and Language at the Assembly College in Belfast and served until the time of his death. Also, he conducted a column for *The British Weekly* for over 25 years and wrote many books of a religious character. Three of his books were translated into the Japanese, they were *The Days of His Flesh*, *The Historic Jesus*, and *The Life and Letters of St. Paul*.

Smith, Harold Babbitt. American electrical engineer, died in Worcester, Mass., Feb. 9, 1932. He was born in Barre, Mass., May 23, 1869, and graduated from Cornell University with an M.E. degree in 1891. He then took a post-graduate course at the same university and graduated in 1893. He became head designer and electrical engineer for the Elektron Manufacturing Company in the same year, and for the next three years was a professor of electrical engineering at the School of Engi-

neering at Purdue University in Lafayette, Ind. In 1896 he was appointed to the same offices at the Worcester Polytechnic Institute and remained there until 1930 when he resigned. In 1904 he was chairman of the International Group Jury of Awards for electrical engineering at the St. Louis Exposition. From 1905 until the time of his death he was also serving as a designer and consulting engineer for the Westinghouse Electric and Manufacturing Company of Pittsburgh, Pa. During the World War he was a consulting engineer with a special board of the United States Navy on anti-submarine devices. He traveled extensively and studied engineering methods in all the countries he visited. He had many inventions to his credit, and was the author of many monographs on the subject of engineering.

Smith, John Hammond. American civil engineer, died in Pittsburgh, Pa., Apr. 13, 1932. He was born in Wellsville, Ohio, Oct. 14, 1867, and graduated from the School of Engineering of the University of Pittsburgh in 1898. In 1909 he was appointed professor in charge of the department of civil engineering at the University of Pittsburgh, and held that office at the time of his death. He was noted for his ability to develop new methods and apparatus for testing engineering materials, and was a consulting engineer for many of the prominent Pittsburgh industrial plants. He had charge of the seismograph at the University of Pittsburgh. Also, he invented a photo-sculpturing device.

Smith, J(ohn) M(erlin) Powis, died Sept. 26, 1932.

Smith, Seymour Wemyss. American author, and editor, died in New York City, Jan. 4, 1932. He was born in Cleveland, Ohio, Jan. 18, 1896, and was educated at private schools. From 1917 to 1918 he was a feature writer for the New York *Sun* and *Herald*, and in 1918 became the financial editor of the *Hartford Courant* where he remained until 1923 when he was appointed editor of the *Financial Digest* of New York and Hartford. Also, he was president of the Financial Digest Company. He became noted for his contention that John Hanson and not George Washington was the first President of the United States. At the time of his death his book called *John Hanson, Our First President*, was about to be published.

Smith, William Alden, died Oct. 11, 1932.

Snow, Albert Sydney. American naval officer, died in Brookline, Mass., July 14, 1932. He was born in Rockland, Me., Nov. 18, 1845. He received an appointment to the U. S. Naval Academy in 1861, and graduated in 1865 with the rank of ensign. He was promoted through the grades to rear admiral in 1905. He served on the *Pennacola* until 1869 when he was transferred to the *Alaska* in 1873; then placed on duty at the torpedo station in Newport, and in the following year on the *Congress*. In 1877 he was stationed on the receiving ship *Wabash*. He was then sent to the Boston Navy Yard in 1878 and remained there until 1879 when he served as an executive officer on the *Portsmouth*. In 1881 he was again returned to the Boston Navy Yard. In 1883 he was put on coast guard survey duty and did special duty at Newport as a member of the board of inspection and survey. He then became successively commander of the *Essex*; officer of the Naval Academy; lighthouse inspector of the third district, and officer at the Portsmouth Navy Yard until 1898. Snow was then placed on alternating duty at the Navy Yards of New York and Boston. During the Spanish-American War he commanded the *Badger*, and was commandant of the naval station at San Juan, P. R., until 1899. Though he was officially retired in 1907 he was recalled to service from 1918 to 1919 and was appointed president of the general court-martial at the Boston Navy Yard.

Sokal, Franciszek. Polish diplomat, died in Berne, Switzerland, Mar. 31, 1932, aged 49. He entered politics when a very young man and held many ministerial portfolios. He served as the Chief of the Protocol and in 1926 was appointed Minister to Switzerland, which office he held at the time of his death. Also, he was a permanent delegate from Poland to the League of Nations. In May, 1931 he was elected president of the International Labor Conference held at Geneva. He wrote *Social Insurance in Germany* and other books.

Sophie, Queen of Greece, died Jan. 13, 1932.

Sousa, John Philip, died Mar. 6, 1932.

Specht, Richard. Austrian musicologist, died Mar. 10, 1932, in Vienna where he was born Dec. 7, 1870. He at first had planned to become an architect and had studied for that profession but was later dissuaded by Brahms, and also by Goldmark, to take up musical journalism. He became a music critic for *Die Zeit* and *Die Musik*. In 1919 he founded the bi-weekly *Der Merker* and conducted it until 1919. He then turned to writing biographies of musicians, among them being the lives of Beethoven, Brahms, Mahler, Puccini, and Richard and Johann Straus and others. Among his critical sketches are *Kritisches Skizzenbuch* (1900); and *Das Wiener Operntheater: Erinnerung aus fünfzig Jahren* (1919). He was the originator of the new opera-text library.

Speyer, Edgar. American banker, died in Berlin, Ger-

many, Feb. 16, 1882. He was born in New York City, Sept. 7, 1862 and at an early age removed with his family to Frankfort-on-Main where he was educated. In 1886 he went to England and engaged in the banking business with his brothers, and later became the head of the firm known as Speyer Brothers. While there he became active in many works for public welfare, being chairman of the London Hospital and co-founder of the Art Gallery in Whitechapel, in London's East End, and chairman of Queen's Hall Symphony Orchestra. His most notable enterprise in the business world in London was the consolidation of the separate units of the London Underground Railway into one system. He retired as chairman of that system in 1915. He then returned to the United States and devoted his time to furthering the interests of art and music and spent much time in traveling. In recognition of the service he rendered Richard Straus in bringing his work before the public the composer dedicated his opera *Salome* to Speyer.

Spronck, Charles. Dutch bacteriologist, died in Zeist, Dec. 5, 1932, aged 74. He was the founder of the Serological Institute at Utrecht. During the World War the tetanus serum which he contributed to science was widely used.

Stanley, Albert Augustus. American composer and musical educator, died at Ann Arbor, Mich., May 19, 1932. He was born in Manville, R. I., May 25, 1851. At the age of 14 he was placed in charge of the organ at the Congregational Church at Slaterville, R. I., and three years later was in charge of a larger organ at the Church of the Mediator in Providence, R. I. He was then sent abroad to study music and graduated from the Leipzig Conservatory. Later he returned to the United States and from 1888 to 1921 was professor of music at the University of Michigan and director of the school of music of that university from 1903 to 1921. At the time of his death he was director emeritus. He served twice as the president of the Music Teachers' National Association, and was one of the founders of the College of Musicians. Also, he established and conducted the Ann Arbor May Festival. He composed some notable church music, and also the incidental music for Percy Mackaye's tragedy of *Sappho and Phaon*, and many other musical scores.

Starks, Edwin C. American ichthyologist, died in Palo Alto, Calif., Dec. 30, 1932. He was born in Baraboo, Wis., Jan. 25, 1867, and graduated from Stanford University in 1897. He was appointed assistant for the U. S. Biological Survey and in 1899 was appointed assistant professor of zoology and curator of Washington University in Seattle. He remained until 1900 and then went to Stanford where he was appointed curator. He retired in 1927. For many years he assisted the late David Starr Jordan (see the NEW INTERNATIONAL ENCYCLOPEDIA, vol. xii, p. 776).

Starr, M(oses) Allen, died Sept. 4, 1932.

Starrett, William Aiken, died Mar. 25, 1932.

Stephens, Alice Barber. American illustrator, died in Media, Pa., July 14, 1932. She was born in Salem, N. J., in 1858, and educated in public schools in Philadelphia, Pa., and also studied art there at the School of Design for Women, and the Academy of Fine Arts. Then she went abroad to study at the Julian Academy in Paris. After her return to the United States she taught portrait and still life painting at the Philadelphia School of Design for Women. Also, she was a wood engraver and illustrator for *Harper's*, *the Century*, and *Scribner's* magazines, and had illustrated many well-known novels.

Stetson, Caleb Rochford, died June 15, 1932.

Stewart, George Black, died June 23, 1932.

Stewart, Humphrey John. American musician and composer, died in San Diego, Calif., Dec. 28, 1932. He was born in London, England, May 22, 1854, and graduated from Oxford in 1875. He showed an early adaptability for the organ and at the age of 11 was playing the organ at times in churches in England. In 1886 he came to the United States and played the organ in San Francisco until 1901 when he went to Boston, Mass., and became organist at Trinity Church there. In 1902 he returned to California and became organist of St. Dominic's in San Francisco. He was appointed the official organist at the Panama-California Exposition in San Diego in 1915. In the same year he was appointed municipal organist of the City of San Diego where he played daily until the time of his death. He founded the American Organists' Guild and later was presented with a gold medal by that organization. He composed many oratorios, masses, light operas, and orchestral suites, among them being *His Majesty*, comic opera (1890), *The Conjurators*, comic opera (1900); *The Nativity*, oratorio (1888), *Montezuma*, orchestral suite (1903), *Mass in D Minor* (1907); and others.

Stickney, William Wallace. American governor, died in Sarasota, Fla., Dec. 15, 1932. He was born in Plymouth, Vt., Mar. 21, 1858 and graduated from Phillips Exeter Academy at Exeter, N. H., in 1877. In 1878 he was admitted to the bar and practiced law under the firm name of Stickney, Sargent and Skeels. From 1882

to 1892 he served as a clerk in the Vermont House of Representatives and during part of that time served as State's Attorney. He served as speaker of the Vermont House of Representatives and in 1900 was elected Governor of Vermont and served one term. In 1905 he was president of the Vermont Bar Association and was elected president of the Vermont Historical Society.

Stinson, Edward A. American aviator, died in a plane crash in Chicago, Ill., Jan. 26, 1932. He was born in Fort Payne, Ala., July 11, 1894. At the age of 17 he started flying in a plane of his own manufacture, and he with his brothers and sisters became known as "the flying Stinson family," which did stunt flying at carnivals all over the country. During the World War he was the chief civilian instructor of flying for the U. S. Aviation Corps and made a notable record. After the war he became engaged in the manufacturing of aeroplanes that bore his name. At the time of his death he was testing a new model for the Stinson Aircraft Corporation of which he was president. Twice in his career he held records for endurance flights, and was known as the "dean" of aviators. In 1927 he won the Ford Reliability Tour against many competitors.

Stirling, William. British physiologist, died in Manchester, Oct. 2, 1932. He was born in Grangemouth, Stirlingshire, Scotland, Jan. 25, 1851, and graduated from Edinburgh University with an M.D. degree. He then studied in Leipzig, Germany and Paris, France. He became assistant and later Regius professor of the Institute of Medicine in the University of Aberdeen. He was then appointed professor of physiology and histology at the Victoria University in Manchester. He was serving as Fullerian professor of physiology at the Royal Institution in London at the time of his death. He wrote many textbooks on historical and physiological subjects. He was one of the first educators to sanction the use of talking motion pictures in teaching.

Stoney, Florence Ada. British electrical specialist and physician, died in London, Oct. 7, 1932, aged 62. She was educated at home and graduated from the London School of Medicine for Women with an M.D. degree in 1898. She then served on the staff of several hospitals in and around London, taking special interest in X-ray. During the World War she was on the staff of a hospital in Antwerp and was on duty during the bombardment by the Germans in 1915. She later served as head of the electrical department of the Fulham Military Hospital. For her notable services during the war she was awarded the Star of the Admiralty and the Order of the British Empire. Among her works are *Chronic Congestion Treated by Electricity*, *On the Connection Between Soldier's Heart and Hyperthyroidism*, *Case of Fibroid Ovid by X-Rays*, and others.

Story, Daisy Allen, died July 15, 1932.

Strachey, (Giles) Lytton, died Jan. 21, 1932.

Stuart, Charles Macaulay, died Jan. 26, 1932.

Sutcliffe, Halliwell. British novelist, died at Linton in Craven, England, Jan. 14, 1932, aged 62. He was educated at Bingley, Yorkshire, and later attended King's College, Cambridge. Most of his life was devoted to literary pursuits, and beginning in 1893 he wrote more than 35 novels. Among his later works are *Storm* (1925), *Winds of March* (1927), *The Striding Dales* (1929), *Batting Keep* (1930); and *Persons Unknown* (1931).

Swearingen, Henry Chapman. American clergyman, died on a train near Omaha, Neb., June 2, 1932. He was born at Hookstown, Pa., Apr. 28, 1869, and graduated from Westminster College, New Wilmington, Pa., in 1891, and the Allegheny Theological Seminary in 1894. He was ordained a United Presbyterian minister in 1894 and became pastor of the Espyville, Pa., Presbyterian Church for one year when he was called to the Third Presbyterian Church of Allegheny, Pa., where he remained until 1902. From 1902 to 1907 he served as pastor of the First Presbyterian Church of Lincoln, Neb., and from there was called to St. Paul, Minn., where he took charge of the House of Hope Presbyterian Church and was pastor there at the time of his death. He was a delegate to many of the church conferences and in 1912 and 1913 he served as moderator of the Synod of Minnesota and also of the General Assembly of Churches of Christ in America. From 1915 to 1916 he served as president of the Presbyterian Home Mission Council. During 1923 he was president *pro tempore* of the Macalester College and remained a trustee of that institution. In 1925 he was chairman of the General Assembly's special committee. He wrote many pamphlets on religious and historical subjects and many of his addresses and sermons were published.

Swift, Edgar James. American psychologist, died in Hollis, Me., Aug. 30, 1932. He was born in Ravenna, Ohio, July 24, 1860, and graduated from Amherst College with an A.B. degree in 1886. He then went abroad and studied at Berlin and Leipzig universities in Germany from 1889 to 1892 when he returned to the United States. He taught psychology at the Stevens Point Normal School until 1900 when he was appointed professor of psychology and education at Washington University

in St. Louis, Mo., in 1903, and in 1925 was appointed head of the department of psychology, which office he held at the time of his death. Swift lectured at many schools and colleges during the summer months, and from 1920 to 1924 was a special lecturer on applied psychology at the Post-Graduate School of the U. S. Naval Academy and the Naval War College. He wrote *Mind in the Making* (1908); *Youth and the Race* (1912); *Learning by Doing* (1914); *Psychology and the Day's Work* (1918); *Business Power Through Psychology* (1925); *Psychology of Youth* (1927) *How to Influence Men* (1927); and *The Jungle of the Mind* (1931).

Taranto, Gen. Alfredo Italian soldier, died in Naples, Dec. 6, 1932, aged 68. He commanded a brigade in the fourth army during the World War and later served in Dalmatia where he headed the army and navy forces. Also, he led colonial troops in Tripoli, and shortly before his death had retired as head of the army corps at Naples.

Taylor, Fred Manville. American educator, died in Pasadena, Calif., Aug. 6, 1932. He was born in Northville, Mich., July 11, 1855. He graduated from Northwestern University with an A.B. degree in 1876; received an A.M. in 1879; a Ph.D. from the University of Michigan in 1888, and an LL.D. from Northwestern University in 1926. From 1879 to 1892 he held the chair of professor of history at Albion College, in Albion, Mich., and was then called to the University of Michigan, Ann Arbor, and became assistant professor of political economy and finance there from 1892 to 1894. He then became junior professor until 1904 when he was appointed professor and held that office until 1929 when he retired. He wrote *Chapters on Money* (1906); *Readings in Economics* (1907), and *Principles of Economics* (1911), which latter reached the ninth edition by 1925.

Taylor, Col. James D. American army officer, died in Washington, D. C., Nov. 24, 1932. He was born in Florida, Feb. 3, 1877, and graduated from the Virginia Military Institute in 1898. He then attended the Army War College from which he graduated and later from the Army Service School in Fort Leavenworth, Kan. He was an instructor at times in both colleges. He fought in the Philippine uprising, having given information that caused the capture of Emilio Aguinaldo which ended the trouble, in the occupation of Vera Cruz, Mexico, and in the major battles on the Western Front during the World War. He commanded a regiment in France during the St. Mihiel attack and was cited for his bravery. He was awarded the distinguished service medal and the French Croix de Guerre. After the war he organized the survey office for maritime affairs to investigate claims of loss during the war against the U. S. Government by shippers. This organization saved the government millions of dollars. He commanded the U. S. troops in China in 1932 during the attack by the Japanese on Shanghai. He was about to assume charge of regular army work in connection with the organized reserves of the 80th division at the time of his death.

Taylor, Julian Daniel. American educator, died in Waterville, Me., Oct. 13, 1932. He was born in Winslow, Me., Jan. 29, 1846, and graduated from Colby College, Waterville, Me., with an A.B. degree in 1868, and an A.M. degree in 1871. He then taught at Colby College and in 1873 was appointed a professor of Latin. He served until 1918, in which year he had completed 50 years of service to Colby. The trustees named a professorship in his honor and he then became Taylor professor of Latin and served until the time of his death.

Thayer, William Sidney, died Dec. 10, 1932.

Thomas, Albert, died May 8, 1932.

Thomson, Gaston Armand Marie. French dean of the Chamber of Deputies, died at Bone, Algeria, May 14, 1932. He was born in Oran, France, in 1848. He served as editor of *La République Française* with Gambetta, and at the age of 29 began a political career that lasted over 55 years, during which time he served France in various official capacities. He was a supporter of the colonial policies of Jules Ferry.

Threlfall, Sir Richard. British chemist, died in Edgbaston, Birmingham, England, July 10, 1932. He was born in Hollowforth, Aug. 14, 1861. He graduated from Cambridge with an A.M. degree and also attended Strassburg and Victoria universities. In 1886 he became professor of physics at the University of Sydney, N. S. W. From 1869 to 1899 he served as president of the New South Wales Royal Commission on the loading and carriage of coal to sea to investigate the causes of spontaneous combustion. Also, he was chairman of the board of fuel research. During the World War he developed the smoke screen and the tracer bullet. He wrote many papers on physical and chemical subjects and a book *Laboratory Arts* (1898).

Todd, Mabel Loomis. American author and editor, died in Muscongus, Me., Oct. 14, 1932, aged about 70. She was born in Cambridge, Mass., and educated at private schools. Immediately after her marriage she accompanied her husband, an astronomer, on trips to Japan (1887-

1896), Tripoli (1900-1905), around the world in 1906, and to the Dutch East Indies; Chile (1907), and Russia in 1914, all for the purpose of studying the total eclipse of the sun. She wrote many books on the subject, among them being *Total Eclipses of the Sun* (1894); *Corona, Comet* (1898); *A Cycle of Sunsets* (1909); *Tripoli the Mysterious* (1912); and many others. Also, she was an authority on Emily Dickinson, the American poetess, and edited several volumes of her poems and letters.

Toumey, James William, died May 6, 1932.

Toynbee, Paget, died May 13, 1932.

Troland, Leonard Thompson. American scientist, psychologist, and inventor; killed by a fall from Mt. Wilson, Calif., May 27, 1932. He was born in Norwich, Conn., Apr. 26, 1889. He graduated from the Massachusetts Institute of Technology with a B.S. degree in 1912 and continued his studies at the Harvard Psychological Laboratory under Munsterberg where he received an A.M. degree in 1914 and a Ph.D. degree in 1915. He engaged in optical research work for the General Electric Co., through a fellowship from Harvard. When he returned to Harvard in 1916 he became an instructor of psychology and later became an assistant professor. Also, he was lecturing and directing research in vision for Harvard and was serving in that capacity at the time of his death; being in California on a leave of absence. He was vice-president of the Technicolor Motion Picture Corporation and co-inventor of the color process for motion pictures. From 1922 to 1923 he was president of the Optical Society of America. During the World War he served in the Navy Department in the development of a submarine listening device, and also with the National Research Committee on vision and aviation psychology. Among his many works are *The Present Status of Visual Science* (1922); *The Mystery of Mind* (1925); *The Fundamentals of Human Motivation* (1928); and *The Principles of Psychophysiology*, 4 vols. (1929-32).

Tucker, Gilbert Milligan. American author and editor, died Jan. 13, 1932 in Albany, N. Y., where he was born Aug. 26, 1847. He graduated from Williams College in Williamstown, Mass., with an A.B. degree in 1867, and received an A.M. degree in 1870. He joined his father who was publisher and editor of the *Country Gentleman*, a farm magazine, and became editor-in-chief of that periodical in 1897. He served until 1911 when the publication was bought by the Curtis Publishing Company of Philadelphia, Pa. He was president of the New York State Agricultural Society for several years. Among his works are *Our Common Speech* (1895); *History of American Agricultural Periodicals* (1909); *A Layman's Apology* (1913); and *American English* (1921).

Tucker, Henry St. George, died July 23, 1932.

Turati, Filippo, died Mar. 28, 1932.

Turck, Fenton Benedict. American surgeon, died in New York City, Nov. 16, 1932. He was born in Milwaukee, Wis., Aug. 25, 1857 and graduated from the Chicago Medical College of Northwestern University with an M.D. degree in 1891. He then became house surgeon for the Alexian Hospital in Chicago and in 1892 was appointed professor of internal medicine at the Post-Graduate Medical School. From 1893 to 1896 he was a lecturer at the Jefferson Medical College in Philadelphia, Pa., and in the same capacity at the College of Physicians and Surgeons in Chicago from 1901 to 1902. He taught at the University of Rome, Italy, in 1906 and upon his return to the United States was admitted to practice in New York State without examination by the Board of Regents because of the notable record he had made. He was a director of the research laboratory of the Turck Foundation, and during the World War was a captain in the medical corps of the U. S. Army. His book entitled *The Action of the Living Cell*, published in 1932, was the sum total of over 40 years' research into the reaction of plant and animal life. Also, he was the inventor of the gyromele and other medical instruments.

Turner, Frederick Jackson, died Mar. 14, 1932.

Turner, George, died Jan. 26, 1932.

Turrell, Charles James. British-American miniaturist, died in White Plains, N. Y., Apr. 13, 1932. He was born in London in 1845 and studied art at an early age. He first gained renown through a miniature portrait of Queen Victoria, and after this came many commissions to paint royalty, among them being the late Queen Alexandra and Princess Mary of Great Britain, and such notable Americans as the Vanderbilts, Astors, Whitneys, Morgans, and others.

Udden, Johan August. American geologist, died in Austin, Tex., Jan. 5, 1932. He was born in Lekasa, Sweden, Mar. 19, 1859, and came to the United States with his parents who settled in Carver, Minn., in 1861. In 1881 he graduated from Augustana College in Sioux Falls, So. Dakota, with an A.B. degree and received a Ph.D. degree in 1900; an Sc.D. from Bethany in Lindborg, Kan., in 1921, and also from the Texas Christian University in Fort Worth, Tex., in 1923. From 1881 to 1888 he taught at Bethany College and at the same time studied at the University of Minnesota during

1886. He held the Oscar II chair of geology and natural history at Augustana College from 1888 to 1911. In 1911 he was appointed director of the University of Texas Bureau of Economics, Geology, and Technology, and held that office at the time of his death. Udden was appointed special assistant to the Iowa Geological Survey from 1899 to 1903; to the Mineral Survey 1903-04; and to the Illinois Geological Survey 1906-11; and also special agent to the U. S. Geological Survey from 1908 to 1914. He was knighted by the King of Sweden in 1911 (Riddare af nordstjernerorden). He was the first to discover potash in the Permian Basin of Texas. His scientific works include *The Mechanical Composition of Wind Deposits* (1898); *An Old Indian Village* (1900); *The Mechanical Composition of Clastic Sediments* (1917); and *The Texas Meteor of Oct. 1, 1917*.

Underhill, Frank Pell, died June 28, 1932.

Uriburu, Gen. José Francisco, died Apr. 29, 1932.

Van Dyke, John Charles, died Dec 5, 1932.

Van Rensselaer, Martha. American home economist, died in New York City, May 27, 1932. She was born in Randolph, N. Y., in 1864, and graduated from the Chamberlain Institute of that city in 1884. She taught in public schools until 1894 when she was appointed school commissioner of Catteraugus County, N. Y., and served until 1910. Also, she was an instructor at teachers' institutes from 1896 to 1903. In 1900 she founded the extension course of home economics at the N. Y. State College of Agriculture at Cornell University, and became co-director and professor of that department in 1911 serving in that capacity at the time of her death. During the World War she was the director of the home conservation division of the Food Administration, and from 1920 to 1926 was editor of the home making department of the *Delinatore*. In 1923 a commission appointed by the National League of Women Voters named her one of the 12 great American women. From 1915 to 1916 she served as president of the American Home Economics Association.

Van Rooy, Anton, died Nov. 28, 1932.

Van Rossum, Cardinal William, died Aug. 30, 1932.

Vestal, Albert Henry. American congressman, died in Washington, D. C., Apr. 1, 1932. He was born in Frankton, Ind., Jan. 18, 1875. He attended the Indiana State Normal School, Terre Haute, Ind., was graduated from the Valparaiso University in Valparaiso, Ind., with an A.B. degree, and was admitted to the Indiana bar in the same year. He practiced law in Anderson, Ind., and was elected prosecuting attorney for the 50th judicial district of Indiana and served three terms, from 1901 to 1907. In 1917 he was elected to the 65th Congress of the House of Representatives for the 8th Indiana District, and was elected successively up to the 72d Congress, which seat he held at the time of his death. From 1925 to 1931 he served as chairman of the House Patents Committee. He was noted for his copyright bills, having fostered one which granted automatic copyright to the creator of an artistic or literary work immediately upon creation, and also provided for the distribution of rights to any group; such as stage, screen, or magazines. This bill passed the House but was defeated in the Senate.

Vuillemin, Jean Paul. French pathologist, died in Malzeville, June 30, 1932. He was born in Docelles (Vosges), Feb. 13, 1864, and attended the Collège d'Epinal and the University of Nancy. Later, he became a professor of medicine and pathology in the University. His treatise on general pathology is internationally known, and he was considered one of the leading medical authorities in France. He wrote several books on anatomy and pathology.

Walcott, Henry Pickering, died Nov. 11, 1932.

Wallace, Charles William, died Aug. 7, 1932.

Wallace, Edgar, died Feb. 10, 1932.

Wallas, Graham, died Aug. 10, 1932.

Warburg, Paul Moritz, died Jan. 24, 1932.

Ward, Herbert Dickinson, died June 18, 1932.

Waring, Herbert. British actor, died Jan. 31, 1932, in London where he was born Nov. 17, 1857. He received his education at Dulwich College and Merchant Taylor's School. He taught school for a short time before making his appearance on the stage in 1877 at the Adelphi Theatre in *Formosa*. From 1888 to 1889 he played with the Mary Anderson Company in the United States. On his return to London he played at the Novelty Theatre as *Thorvald Helmer* in Ibsen's play *A Doll's House*. After playing romantic parts in different plays he toured England and the United States with Mrs. Patrick Campbell in *The Second Mrs. Tanqueray* and *The Notorious Mrs. Ebbemith*, and in other pieces. Also, he played in *The School for Scandal*, *The Green Goddess*, and Shakespearean plays. His last appearance was in *Plunder* in England in 1928.

Warne, Francis Wesley. American bishop, died in Brooklyn, N. Y., Feb. 29, 1932. He was born in Erin, Ont., Canada, Dec. 30, 1854. He attended George Town Academy and Albert College in Belleville, Ont., and entered the Methodist Episcopal Ministry in Canada in

1874. In 1881 he came to the United States and resumed his studies at the Garrett Biblical Institute in Evanston, Ill., and graduated in 1884. He then became a missionary and spent many years in the Far East until 1900 when he was elected missionary bishop to India at the General Conference of the Methodist Episcopal Church in Chicago, Ill. During 1915 he visited the Philippine Islands in an official capacity five times, and also visited Mesopotamia, Bagdad, Babylon, Mosul, and Nineveh. He wrote *The Bible Sabbath*, *The Lord's Supper*, *A Covenant Keeping God*, *The Life of Mrs. Parker*, *The Story of Lizzie Johnson*, *Twenty Years a Shu-in*, *The Sinless Incarnation*, and *Ideals That Have Helped Me*.

Washburn, John Hosea. American educator, died in Doylestown, Pa., Aug. 3, 1932. He was born in Bridgewater, Mass., June 5, 1859, and graduated from the Massachusetts Agricultural College in 1878, then took a post-graduate course in chemistry at Brown University and returned to the Massachusetts Agricultural College until 1885. Later he went to Germany to study at the University of Göttingen, graduating with the A.M. and Ph.D. degrees in 1889. He taught in public schools, and in 1883 was appointed professor of chemistry at the Storrs (Conn.) Agricultural School. From 1889 to 1902 he was president and professor of agriculture and chemistry at the Rhode Island State College of Agriculture and Mechanical Arts. Also, he was director of the National Farm School in Bucks County, Pa., until 1917 when he retired.

Waterman, Charles Winsfield. American senator, died in Washington, D. C., Aug. 27, 1932. He was born in Waitsfield, Vt., Nov. 2, 1861. He graduated from the University of Vermont with an A.B. degree in 1885, and from the University of Michigan with an LL.B. degree in 1889. He removed to Denver, Colo., where he practiced law and became a member of the firm of Wolcott, Vaile & Waterman from 1902 to 1908. From 1908 to 1923 he was counsel for the Western Sugar Company, and also represented several railroad companies and other corporations. He retired from the practice of law and sought election to the U. S. Senate in 1926. He was elected to serve from 1927 to 1933, and was holding that office at the time of his death.

Watkins, H. G. British explorer, died Aug. 20, 1932, at Lake Fjord, Greenland, aged 26. While still a student at Trinity College in Cambridge he led an expedition to the Arctic, and in 1929 spent a year exploring Labrador. His success at that time led to an appointment from the British Arctic Air Route Expedition of 1930. He was associated in the enterprise with the Royal Geographical Society and received cooperation from several departments of the British Government. He was head of another expedition under the same auspices at the time of his death. He received the Founder's gold medal from the Royal Geographical Society in June, 1932, and was believed to be the youngest man ever so honored. Also he received the Bruce medal and the Danish gold medal in the same year.

Waugh, William Templeton. Canadian educator, died in Montreal, Oct. 17, 1932. He was born in Fairfield, Manchester, England, Mar. 18, 1884, and graduated from the Manchester University in 1903. In 1907 he became assistant master at Fulleck School and in 1910 was assistant lecturer of history at Manchester University. He then went to Belfast, Ireland, in 1915, and was appointed acting professor of history at Queen's University there. During the World War he served on the staff of the War Trade Intelligence Department. In 1922 he went to Canada and was appointed associate professor of history at McGill University where he served until 1925 when he became chairman of the department and Kingsford Professor of history at the same university and remained until the time of his death. He wrote *The Monarchy and the People* (1912); *Germany* (1916); and a number of other works.

Webster, Henry Kitchell, died Dec. 8, 1932.

Welles, Roger. American naval officer, died in New York City, Apr. 26, 1932. He was born in Newington, Conn., Dec. 7, 1862, and graduated from the U. S. Naval Academy in 1884. He was sent as a special commissioner for the Columbian Exposition to Venezuela and made the ethnological collection from the interior of Venezuela, that is now in the Field Museum in Chicago, and for which he received a bronze medal. He was on duty at the exposition from 1890 to 1893. He served as an ensign and was promoted through the grades to admiral in 1918, and rear admiral in 1919. During the Spanish-American War in 1898 he served on the *McArthur*, *Vermont*, and *Wasp*. From 1908 to 1909 he was an executive officer on the warship *New Hampshire*, and from 1919 to 1920 on the *New Orleans*. During 1911 he was a member of the board of inspection and survey of the Navy Department in Washington, D. C., and was later placed in command of the *Louisiana*, until 1913, when he became commander of the Naval Training Station at Newport, R. I., and served until 1915. The following year he commanded the *Oklahoma*, and was then appointed director of naval intelligence at Wash-

ington, D. C., until 1919 when he was placed in command of Division 1 of the U. S. Fleet. In the same year he was appointed commander of Division four of the Atlantic Fleet on the flagship *Minnesota*. In 1921 he was made first commander of the 11th Naval district, and in 1923, was transferred to the fifth naval district and naval operating base at Hampton Roads, Va., where he remained until 1925. He was then appointed commander of the U. S. Naval Forces in European waters with rank of vice-admiral and was retired from active service in December, 1926. He was awarded the Atlantic Battle medal for services at Niipe Bay during the Spanish-American War; the Cuban and Philippine campaign medals, the Naval Cross of the United States, and many other honors.

Wenlock, Arthur Lawley, 6th Baron, British administrator, died in Freiburg, Germany, June 14, 1932. He was born Nov. 12, 1860, and attended Trinity and Eton colleges. He then joined the 10th Hussars and served with his regiment at Suakin in 1884 and received a medal with clasp for bravery. In 1892 he retired from the army and became private secretary to the first Duke of Westminster and with whom he remained until 1896. From 1897 to 1901 he was the administrator of Matabeleland, from 1901 to 1902 was Governor of Western Australia, and for the next four years was lieutenant governor of the Transvaal. From 1906 to 1911 he was the Governor of Madras. During the World War he served as commissioner of the Red Cross in France and Mesopotamia. He was created Knight Commander of St. Michael and St. George in 1901, Knight Grand Commander of the Indian Empire in 1906; and Knight Grand Commander of the Star of India in 1911. He succeeded to the barony in 1931.

Whilar, Agustín T., Peruvian educator, died in Lima, Oct. 1, 1932, aged 75. He was born in Nicaragua and went to Peru at an early age where he studied at the University of San Marcos and immediately after his graduation devoted all of his time to education. He founded the Colegio Peruano de Lima and Escuela Normal de Preceptores, both in Peru. He was the author of many books on methods of conducting schools.

Whipple, Brig. Gen. Charles Henry, American army officer, died in Los Angeles, Calif., Nov. 7, 1932. He was born in Adams, N. Y., June 12, 1849 and was sent to St. Paul's School in Concord, N. H. He then removed with his parents to Faribault, Minn., in 1871, where he became cashier of the Citizen's National Bank. He joined the U. S. Army in 1881 and was promoted through the grades to lieutenant colonel in 1901 and was appointed deputy pay-master. In 1908, having risen to the rank of brigadier general, he was also promoted to pay-master general and served until 1912 when he was retired. During his service as pay-master in Montana he and his men foiled a holdup by highwaymen and saved the government \$30,000. This episode is on the records in Washington, D. C.

Whitehill, Clarence (Eugene), died Dec. 18, 1932.

Wichmann, Hugo, German editor, died in Gotha, Germany, Aug. 7, 1932. He was born in Hamburg, Apr. 9, 1851. He started his career as a statistician, and also became an authority on the royal houses, nobility, and statesman of Europe. For 45 years he was the editor of the *Almanac de Gotha*, a genealogical survey of the world's royalty, nobility, and statesmen, that has been published for 169 years. Also, he edited many statistical journals and court calendars.

Wiggins, (J) Carleton, died June 11, 1932.

Wiczynski, Ernest Julius, died Sept. 14, 1932.

Wildman, Edwin, died Nov. 3, 1932.

Wigans, Anton, Austrian poet and dramatist, died May 3, 1932 in Vienna, where he was born Apr. 17, 1881. He was educated at the Gymnasium and the University of Vienna where he studied law. He held a clerical position for a while in the Vienna Courts but in 1905 he published his first book of poems and turned to the writing of poetry and plays for a livelihood. He published his first play in 1913 and in 1916 brought out his first real success, a tragedy called *Liebe*. Then he wrote *Dies Iae* in 1916 and another book of poems that were published in 1918. From 1922 to 1930 he was director of the Burg Theatre in Vienna and then devoted his time to writing.

Willcocks, Sir William, died July 28, 1932.

Williams, Dwight, American painter, died in Cazenovia, N. Y., Mar. 12, 1932. He was born in Camillus, N. Y., Apr. 25, 1856. He graduated from Cazenovia Seminary in 1875 and studied art under Perry. From 1876 to 1879 he taught art in the Houghton School and was director of the Art School of Norfolk College from 1889 to 1892. He then served as director of the National Park School near Washington, D. C., from 1894 to 1898. His works have been hung in many expositions and he is represented in the National Academy of Design. He was an expert on rare old pictures and had a collection of many, and devoted much time to the study of restoring them. He traveled extensively and was noted

for his picturizations of Colonial and Revolutionary days.

Williams, George Fred, American congressman and lawyer, died in Brookline, Mass., July 11, 1932. He was born in Dedham, Mass., July 10, 1852. He graduated from Dartmouth College, in Hanover, N. H., in 1872, with an A.B. degree, and then went to Germany and studied in Berlin and Heidelberg. He returned to the United States and was admitted to the bar in 1875 and practiced law in Boston. In 1889 he was elected a member of the Massachusetts House of Representatives. He was elected a member of the 52d Congress representing the ninth Massachusetts district in 1891 and served until 1893. He then returned to the practice of law. In 1913 he was appointed envoy extraordinary and minister plenipotentiary to Greece. He resigned in 1914, because, according to press reports, of his utterances with regard to a plot to kill the Albanian leaders. The reports further stated that he was offered the leadership of the Albanians, and could have become their king, but refused. He returned to the United States and started a drive to raise funds for Albania but the World War intervened and the cause was lost. He then took up the practice of law in Boston where he remained. He edited *Williams' Citations of Massachusetts Cases, Annual Digest of the United States*, vols. 10 to 17.

Williams, John Sharp, died Sept. 28, 1932.

Williamson, Ralph Bertram, American lawyer, and Federal Power Commissioner died in Washington, D. C., Dec. 10, 1932. He was born in Tama, Iowa, July 31, 1879, and graduated from Cornell University with a Ph. B. degree in 1899. He then attended Harvard Law School and received an LL.B. degree in 1905. For the next four years he served as legal adviser for the U. S. Reclamation Service and also as a special assistant to the U. S. Attorney for the Eastern division of the State of Washington. He served as president of the Washington State Bar Association in 1925. In 1930 he was appointed vice-chairman of the Federal Power Commission which office he held at the time of his death.

Wilson, Henry Lane, died Dec. 22, 1932.

Wilson, Mortimer, American composer and conductor, died in New York City, Jan. 27, 1932. He was born in Charitan, Ia., Aug. 6, 1876, and studied music in the United States and abroad under the best masters. From 1901 to 1908 he was an instructor of theory at the University of Nebraska, from 1913 to 1914 director of the Atlantic Conservatory and conductor of the Atlanta Philharmonic Orchestra. In the following year he served as head of the department of theory in Gainesville, Ga. From 1917 to 1918 he instructed at the Malkin Music School in New York City, and also in 1918 was the guest conductor of the New York Philharmonic Orchestra. He composed many pieces for the piano and orchestra and his works were played by the leading orchestras of America. Wilson composed several of the musical scores for motion pictures such as *The Thief of Bagdad*, *Don Q The Covered Wagon*, etc. He won the Rosenfeld prize for the best original American overture with his composition *Mardi Gras*. Among his technical works are *The Rhetoric of Music*, *Harmonic and Melodic Technical Studies for Orchestral Training*, and others.

Winslow, Cameron McKee, died Jan. 2, 1932.

Winton, Alexander, American inventor and manufacturer, died in Cleveland, Ohio, June 22, 1932. He was born in Grangemouth, Scotland, June 20, 1860, and was educated in public schools there. He came to the United States in 1880 and began working for a marine engineering firm in New York City. He then went to Cleveland and in 1890 established the Winton Bicycle Company, manufacturing a bicycle that he invented, and four years later became a manufacturer of motor cars. He was one of the first to start in the automotive industry and in 1897 the company was incorporated and he later became president of that corporation. After the popularity of the large motor car waned he started to manufacture oil burning engines and established the Winton Marine Oil Engine Company in 1912. He invented many motor parts.

Winton, George Tayloe, American educator, died in Chapel Hill, N. C., Aug. 26, 1932. He was born in Winslow, N. C., Oct. 12, 1852, and attended the U. S. Naval Academy from 1869 to 1870 and resigned in the latter year to enter Cornell University where he graduated in 1874 with a B. Litt. degree. He then became an instructor of mathematics at Cornell University from 1874 to 1875 when he was appointed assistant professor of Latin. In 1876 he was made a full professor and served until 1891 when he was appointed president of the University of North Carolina. From 1896 to 1899 he served as president of the University of Texas and then returned to North Carolina to become president of the North Carolina College of Agriculture and Mechanical Arts and served until 1908. He was then retired through the Carnegie Foundation.

Wolf, Max Franz Joseph Cornelius, died Oct. 3, 1932.

Wolverton, Frederick Glyn, 4th Baron, British banker, died in London, Oct. 8, 1932. He was born Sept. 4, 1861.

From 1892 to 1896 he was Lord-in-waiting to Queen Victoria and from 1902 to 1905 vice-chamberlain to King Edward VII's household. He fought in the Boer War with the Imperial Yeomanry in 1900. He succeeded to the baronage, that was created in 1869, on the death of an older unmarried brother in 1888.

Woods, The Rt. Rev. Frank Theodore. British churchman, died in Winchester, Feb. 27, 1932. He was born June 15, 1874, and graduated from Marlborough College, and also from Trinity College, Cambridge. He was ordained Episcopal minister in 1897 and served as curate of Eastbourne and Huddersfield until 1901 when he became vicar of St. Jude's at East Brixton. In 1903 he was appointed rector of St. Paul's at Kersel and served until 1908. From 1908 to 1916 he served as vicar of Auckland and of Bradford. In 1916 he was nominated and became Bishop of Peterborough and served there until 1924 when he was made Bishop of Winchester, the fourth most important see of the Church of England, and remained there until his death. He wrote *Interpreters of God* (1921); *The Great Fellowship* (1923); *Great Tasks and Great Inspirations* (1926); *The Prayer Book Revised* (1927); and *What Is God Like?* (1928).

Wrigley, William, Jr. American manufacturer and philanthropist, died in Phoenix, Ariz., Jan. 28, 1932. He was born in Philadelphia, Pa., Sept. 30, 1861, and was educated in public schools there. In 1882 he started his career by going in business with his father. He removed to Chicago, Ill., where he started in business for himself in 1891 under the name of William Wrigley, Jr., & Co. They manufactured chewing gum. In 1911 his company merged with the Zeno Manufacturing Co., being known as the William Wrigley, Jr. Company, of which he became president. He established chewing gum factories in Australia, Canada, Germany, and Great Britain. He was philanthropic, doing most of his charitable work through the Salvation Army. He owned the Chicago Cubs, National League baseball team, and the Los Angeles Club of the Pacific Coast League, and was widely known as a sportsman.

Wurts, Alexander Jay, died Jan. 21, 1932.

Yarrow, Sir Alfred, died Jan. 24, 1932.

Yi, Yehonala (Dowager Empress of China), died Feb. 5, 1932.

Young, John Wesley, died Feb. 17, 1932.

Zenker, Admiral Hans. German naval officer, died in Berlin, Aug. 19, 1932, aged 62. He entered the German Navy in 1889, and was promoted through the grades to admiral. His untiring efforts were mostly responsible for the strength of the German Navy before the World War. At the battle of Jutland he was in command of the *Van der Tann*, which sank the *Indefatigable*. In 1924 he was appointed chief of the general staff and served until 1928 when he resigned because of dissension caused by his supposedly having supplied 6,000,000 marks of the Reichswehr secret funds to the Phoebus Film Company.

Ziegfeld, Florenz, died July 22, 1932.

**NEGRI SEMBILAN**, nã'grê sêm'bê-lân'. See FEDERATED MALAY STATES.

**NEJD**. See ARABIA under *Kingdom of Saudi Arabia*.

**NEPAL**, nê-pôl'. An independent kingdom in the Himalayas between Tibet and British India, under British influence. The area is about 54,000 square miles, the population about 5,600,000. Capital, Kathmandu (80,000 inhabitants); reigning sovereign in 1932, Maharajadhiraja Tribhubana Bir Bikram. The government is a military oligarchy, under a partially hereditary Prime Minister. Prime Minister in 1932, Maj.-Gen. Sir Bhim Shamsheer Jang Rana. The commerce of Nepal on the northeast frontier of India amounted to about 70,000,000 rupees (\$25,550,000) annually. The revenue of the kingdom amounted to between 15,000,000 and 20,000,000 rupees annually.

**NETHERLAND EAST INDIES**. See NETHERLAND INDIA.

**NETHERLAND INDIA (NEDERLANDSCH INDIE)**. A possession of the Netherlands in the East Indies, comprising the group of islands lying between 6° North and 11° South latitude and between 95° and 141° East longitude. Capital, Batavia on the island of Java. According to an official announcement in 1932 from the throne at The Hague, Netherland India is the

preferred English name for the territories formerly known as Netherland East Indies.

**AREA AND POPULATION**. With an area of 733,494 square miles, Netherland India had a population of 60,731,025 at the preliminary census of 1930, compared with 49,350,834 at the 1920 census. The area, population, and population density of the various island groups in 1930 are shown in the accompanying table from the 1932 *Commerce Yearbook*.

NETHERLAND INDIA: AREA AND POPULATION BY ISLANDS

Group of islands	Area, sq. miles, 1930	Population, 1930	Density per sq. mile
Java and Madoera . . . . .	51,219	41,719,524	817
Sumatra . . . . .	163,138	7,661,399	47
Riouw-Lingga . . . . .	12,507	298,329	24
Bangka . . . . .	4,549	205,433	45
Biliton . . . . .	1,873	73,409	39
Borneo . . . . .			
West District . . . . .	56,838	827,898	15
South and East Districts . . . . .	149,277	1,366,633	9
Island of Celebes . . . . .			
Celebes . . . . .	38,200	3,087,335	81
Manado . . . . .	34,980	1,139,251	38
Molukka Islands and New Guinea . . . . .	192,453	893,030	5
Timor Archipelago . . . . .	24,537	1,656,636	68
Bali and Lombok . . . . .	4,072	1,802,146	443
Total . . . . .	733,494	60,731,025	83

The islands other than Java and Madoera (Madura), which are called the Outer Islands, had a 1930 population of 19,011,501. Of the population of Java and Madoera, 40,890,244 were natives, 635,662 were other Orientals (chiefly Chinese), and 193,618 Europeans. The population of the chief cities in 1930, with 1920 figures in parentheses, was: Batavia, 437,433 (253,818); Soerabaja (Surabaya), 336,814 (192,190); Semarang, 217,775 (158,036); Soerakarta, 163,013 (134,285); Bandoeng, 160,722 (94,800); Djokjakarta (Jogjakarta), 136,554 (103,711); Palembang, 109,069 (73,726). All these cities are in Java, except Palembang, in Sumatra.

**EDUCATION**. The number of children of school age (5 to 15 years) in 1920 was estimated at about 12,058,000. In 1929-30, the number of pupils enrolled in primary schools was 1,610,414 and in higher elementary and secondary schools 15,131. There were a number of teachers' training, professional, and private schools.

**PRODUCTION**. Agriculture, the chief industry, is supplemented by mining and manufacturing. In Java and Madoera in 1930 there were 18,856,000 acres, or 57.5 per cent of the total area, under cultivation by natives; 1,714,000 acres, or 5 per cent, under cultivation by European planters; and 7,408,000 acres of state forests. The area under cultivation in the Outer Islands was 3,348,000 acres, of which 1,300,000 acres were in European plantations. Production of the chief crops in 1931 and 1930, respectively, except as noted, was: sugar (Java only), 2,450,000 metric tons in 1931-32 (2,842,000 in 1930-31); rubber, 261,000 metric tons (244,000); coffee (European estates), 100,982,000 pounds (88,874,000); tea, 171,922,000 pounds (158,711,000); rice (Java and Madoera), 251,323,000 bushels (263,597,000); corn (Java and Madoera), 76,769,000 bushels (78,611,000); tobacco, 223,289,000 pounds in 1930; cassava roots (Java and Madoera), 5,500,000 metric tons (5,249,000); copra (exports), 792,951,000 pounds (827,885,000); cinchona (estate production), 20,525,000 pounds

(26,186,000); citronella oil (estate output), 1,041,000 pounds in 1930; palm oil, (estate output), 76,848,000 pounds (109,683,000); kapok, 45,665,000 pounds in 1930; sisal and agave (exports), 152,488,000 pounds (142,481,000). The islands produce about 95 per cent of the world's quinine output. In October, 1931, members of the largest agricultural association in Sumatra agreed upon a minimum daily wage of 14.0 cents (gold) for men and 12.8 cents for women.

Exports of crude rubber in 1932 amounted to 230,107 tons, as compared with 284,199 tons in 1931.

In accordance with the world tin agreement, tin production in the year ended June 30, 1932, was reduced to 27,814 metric tons (35,141 tons in 1930-31). The petroleum output was 35,500,000 barrels in 1931 and 41,729,000 in 1930. Gold, silver, diamonds, coal, natural gas, manganese ore, iodide of copper, and salt are other mineral products. Industrial establishments in 1930 included 188 sugar mills, 370 rubber factories, 250 tea factories, 694 rice mills, 230 factories for the preparation of vegetable and animal oils, and 256 factories operated on coffee and rubber estates. In 1931, however, many factories were closed, production was restricted, and wages were reduced from 10 to 15 per cent.

COMMERCE. Exports and imports in 1931 were one-third lower in value than in 1930, reaching the lowest level since 1918. Imports were valued at \$228,199,000 (\$343,881,000 in 1930) and exports at \$303,942,000 (\$466,159,000 in 1930), according to preliminary 1931 returns. The four leading imports in 1931 were: cotton piece goods, \$49,238,000 (\$69,199,000 in 1930); clean rice, \$35,481,000 (\$41,972,000); iron and steel, \$27,944,000 (\$38,815,000); and machinery and tools, \$27,890,000 (\$41,113,000). The principal 1931 exports were: sugar, \$50,762,000 (\$98,756,000 in 1930); rubber, \$32,973,000 (\$68,825,000); gasoline, \$32,682,000 (\$42,329,000); tea, \$24,110,000 (\$27,951,000); leaf and cut tobacco, \$23,364,000 (\$23,535,000); copra, \$19,507,000 (\$29,661,000). In 1930, the Netherlands supplied 16.2 per cent of the total imports; and Singapore, the United Kingdom, and the United States each about 10 per cent. Exports went chiefly to Singapore (21.2 per cent), the Netherlands (15.3 per cent), United States (12.2), and the United Kingdom (8.3 per cent). United States statistics show exports to Netherland India in 1932 of \$7,816,438 (\$15,323,083 in 1931) and imports from Netherland India of \$29,825,470 (\$34,239,657).

FINANCE. Government receipts and expenditures for the years 1930 to 1932 are shown in the accompanying table.

BUDGET RECEIPTS AND EXPENDITURES  
[In 1,000 florins, florin equals \$0.4020 at par]

Receipts	1930, <sup>a</sup> actual	1931, budget	1932, budget
Ordinary revenues, gross . . . . .	739,342	823,480	717,929
Extraordinary revenues . . . . .	14,631	10,504	8,588
Equivalent (\$1,000): ordinary revenues . . . . .	297,215	331,039	288,607
Expenditures			
Ordinary expenditures . . . . .	824,035	838,884	804,940
Extraordinary expenditures . . . . .	67,507	63,240	40,295
Equivalent (\$1,000): ordinary expenditures . . . . .	331,262	335,221	325,586

<sup>a</sup> Provisional.

Preliminary returns for 1931 indicated a deficit of 180,000,000 florins (\$72,360,000). A deficit of about 154,000,000 florins was forecast for 1932.

The public debt on Dec. 31, 1931, stood at 1,294,474,000 florins (\$520,379,000), of which 1,155,866,000 florins (\$464,658,000) was funded. The Netherland India florin, which is pegged to the Netherland florin, exchanged at \$0.4023 in both 1931 and 1930.

COMMUNICATIONS. Railway lines at the end of 1930 aggregated 4634 miles, of which 2719 miles were state owned and operated. Gross revenues of the state lines declined to 56,497,062 florins (\$22,728,800) in 1931 from 70,386,996 florins (\$28,316,700) in 1930. There were (1930) 35,900 miles of highways, including 24,850 miles of macadam. In 1931, a weekly air service to the Netherlands replaced the fortnightly schedule, and Medan, a town in northeastern Sumatra, was added to the Batavia-Singapore schedule. Vessels entering the ports in the foreign trade during 1931 numbered 17,547, of 10,622,000 net registered tons, as against 19,965, of 12,273,000 tons, in 1930.

GOVERNMENT. Executive authority is vested in a governor-general, who is assisted by an advisory council of five members. Both the Governor-General and members of the Council are nominated by the Queen of the Netherlands. Legislative authority is shared between the Governor-General and the Volksraad, or legislative assembly. The chairman of the Volksraad is appointed by the Crown. Part of the members are appointed by the Government and part are elected by the local councils; the Volksraad must consist of 30 native, 25 Dutch, and not more than 5 foreign-born subjects, such as Chinese. Administration is conducted through 3 provinces in Java and Madoera and through 4 governments and 18 residencies in the other possessions. There is a standing army of 35,000, composed mostly of natives. Governor-General in 1932, Dr. B. C. de Jonge, appointed May 8, 1931. See NETHERLANDS, THE.

NETHERLANDS, THE, OR HOLLAND. A constitutional monarchy of Europe, bounded by the North Sea on the west and north; on the east by Germany, and on the south by Belgium, Capital, The Hague; reigning sovereign in 1932, Queen Wilhelmina Helena Pauline Maria.

AREA AND POPULATION. With an area of 13,214 square miles, the Netherlands had a population of 7,920,388 at the census of 1930, a density of 599 per square mile. The estimated population in 1931 was 8,030,000. In 1920, the census population was 6,865,314. For the period 1927 to 1931, births averaged 178,192 annually and deaths 76,669, the excess of births being 101,524; the birth rate per 1000 inhabitants averaged 22.9 and the death rate 9.9. The population of the chief cities in 1930 was: Amsterdam, 752,003 (647,427 in 1920); Rotterdam, 581,899 (516,271 in 1920); The Hague (’s Gravenhage), 436,568 (354,987); Utrecht, 153,884; Haarlem, 119,159; Groningen, 105,005. Emigration declined to 365 in 1931 from 2756 in 1930.

EDUCATION. There is virtually no illiteracy. Enrollment in primary schools in 1930 was 1,243,960; secondary schools, 39,888; preparatory schools (1929), 10,645; universities, 12,061. The four public universities are at Leiden, Utrecht, Groningen, and Amsterdam.

PRODUCTION. Dutch national economy is based primarily on intensive agriculture and animal husbandry, but manufacturing and mining are important factors. In 1930, there were 2,254,000 acres of arable land, or about 27 per cent of the total area, 3,234,000 acres of permanent meadow.

and 596,000 acres of woods and forests. Production of the chief crops (in bushels) in 1931, with 1930 figures in parentheses, was: Wheat, 6,751,000 (6,056,000); rye, 14,167,000 (14,892,000); barley, 3,274,000 (4,017,000); oats, 19,784,000 (20,454,000); potatoes, 100,535,000 (111,691,000). The sugar beet crop in 1931 was 1,029,000 metric tons (2,138,000); beet sugar, in 1931-32, 167,000 tons (287,000). Livestock in 1930 included 2,366,000 cattle, 2,018,000 swine, 485,000 sheep, and 299,000 horses. Butter production in 1931 was 186,950,000 pounds (192,241,000 pounds in 1930); cheese, 292,881,000 pounds (301,810,000).

Coal is the chief mineral produced. The output in 1931 was 12,901,000 metric tons (12,211,000 in 1930); lignite, 122,000 metric tons (144,000); salt, 56,000 metric tons (49,807). Shipping launched during 1931 aggregated 120,000 gross tons (153,072 tons in 1930). The leading industries, in order of value of production in 1930, were shipbuilding, cotton textiles, machines, cars, etc.; flour milling, margarine, cocoa and chocolate, wool textiles. Diamond cutting is an important industry.

COMMERCE. While both imports and exports declined in value in 1931, there was an increase in the quantity of exports. Low prices affected food-stuff exports particularly. Imports were valued at 1,892,733,000 florins (\$760,879,000), as against 2,418,255,000 florins (\$972,139,000) in 1930; exports aggregated 1,311,814,000 florins (\$527,349,000), compared with 1,718,880,000 florins (\$690,990,000) in 1930. The 1931 imports, in order of importance, were iron and steel, textile manufactures; coal, coke and briquets; electric and other machinery, corn, chemicals, and medicines. Exports, in order of value, were coal, coke, and briquets; cheese, eggs, cotton piece goods, incandescent lamps, fresh vegetables, and condensed milk. Great Britain took 24.5 per cent of all the 1931 exports; Germany, 19.5 per cent; Belgium, 12.9; France, 8.9; and the United States, 2.7. Of the total imports, Germany supplied 32.7 per cent; Belgium, 10.3 per cent; Great Britain, 8.5; United States, 7.9; and France, 4.1 per cent. The United States in 1932 supplied imports to the value of \$45,406,706 (\$65,589,967 in 1931) and purchased exports valued at \$22,447,835 (\$34,951,987 in 1931).

Imports and exports in 1932 were 17 per cent lower by weight than in 1931, and by value were, respectively, 31 and 36 per cent lower.

FINANCE. The budget for 1933 was framed in anticipation of a considerable deficit. Ordinary expenditures were placed at 573,000,000 florins (florin equals \$0.4020 at par) and receipts at 518,000,000 florins, as against estimates of 593,659,000 and 544,268,000, respectively, in 1932. New taxation was expected to reduce the anticipated deficit to 22,000,000 florins. An additional deficit was expected in the capital account, capital expenditures being listed at 69,000,000 florins and receipts at 22,000,000 florins. There was a budget surplus of 23,000,000 florins in 1930 and an estimated deficit of about 26,000,000 florins in 1931. In 1932 actual ordinary government revenues, amounting to 401,000,000 florins, were 52,000,000 florins less than in 1931.

The public debt (all held internally) on Jan. 1, 1931, stood at 2,713,730,000 florins (about \$1,090,919,000), of which 2,386,010,000 florins (\$959,176,000) was funded. Gold in the Bank of the Netherlands on Oct. 17, 1932, was 1,034,897,-

000 florins and the note issue was 976,866,000 florins, compared to respective figures of 810,726,000 and 1,046,762,000 florins on the same date of 1931.

COMMUNICATIONS. Dutch railways are owned by two private companies, in each of which the government owns a controlling interest. The lines are operated under joint management. In 1930, with 2285 miles of line, the railways carried 59,038,000 passengers and 22,666,000 metric tons of freight. Gross receipts were 175,508,000 florins (\$71,055,000). There are 4660 miles of navigable rivers and canals. Highways extended 15,534 miles, of which 10,563 miles were macadam. In October, 1931, a regular weekly mail and freight service was inaugurated between Amsterdam and Batavia, Netherland India. Most of the telegraph and telephone lines are state owned and operated. The merchant marine on June 30, 1931, comprised 1429 vessels of 100 tons or more, aggregating 3,118,170 gross tons capacity. On Mar. 31, 1932, 123 vessels of 573,000 gross tons were laid up in Dutch ports for lack of business.

GOVERNMENT. Executive power is vested in the sovereign and legislative power conjointly in the sovereign and the Parliament, which is called the States-General and consists of two houses. The upper House is composed of 50 members, elected by the Provinces, and the lower House of 100 deputies, elected by direct suffrage. There is a consultative State Council of 14 members, appointed by the sovereign. The Ministry in 1932 was composed as follows: President of the Council of Ministers, Minister of the Interior and of Agriculture, Dr. Ch. J. M. Ruys de Beerenbrouck (Catholic), appointed Aug. 10, 1929; Foreign Affairs, Dr. F. Beelaerts van Blokland; Finance, Dr. D. J. de Geer; Justice, Dr. J. Donner; Colonies, S. de Graaf; Defense, Dr. L. N. Deckers; Public Works, Dr. P. J. Reymer; Labor Commerce, and Industry, Dr. J. Th. Verschuur; Instruction, Science, and Arts, Dr. J. Terpstra. The Cabinet is independent of Parliament, being appointed directly by the sovereign.

HISTORY. The trend toward closer economic cooperation between the Netherlands and Belgium during 1931 led observers to conclude that the formation of a Customs Union was not outside the realm of possibility. This tendency was again evidenced in 1932, particularly by the signing on June 20 by Holland, Belgium, and Luxemburg of a treaty for mutual tariff reductions. The countries agreed to impose no new duties and to lower existing tariff rates 10 per cent annually until a certain level was reached. While unconditional most-favored-nation treatment was abandoned, the treaty remained open to adhesion by any other state. All the signatories of the Oslo tariff convention—Holland, Belgium, Luxemburg, Denmark, Norway, and Sweden—were represented in negotiations at the Dutch Foreign Office in The Hague early in December, 1932. The attitude to be adopted by these countries at the projected world economic conference was discussed and they agreed to keep each other informed concerning their tariff negotiations with Great Britain.

The year 1932 was marked by the elimination of the Zuider Zee, through the completion on May 28 of the 18-mile dike connecting Wieringen with Friesland and converting the Zuider Zee into an inland lake. A total of 500,000 acres was to be reclaimed from the lake bed, leaving a small fresh-water lake only a quarter of the Zuider Zee's expanse, which was officially named

the IJsselmeer (Ysselmeer). The Zuider Zee was formed by an invasion of the North Sea 600 years earlier.

The government continued its efforts to cushion the effects of the economic depression upon industry and agriculture, although standing firmly for maintenance of the gold standard. In response to government support of wheat farmers, the wheat area in 1932 increased by 52 per cent. The acreage of sugar beets and potatoes was similarly influenced, while several other crops, lacking government aid, were sharply curtailed. Despite government relief projects, industrial unemployment increased sharply, from 56,000 on Dec. 31, 1931, to 152,000 on June 30, 1932. In September the government was induced by the rapidly growing budget deficit (then estimated at about \$40,000,000 for 1932) to consider a reversal of the policy of intervening in behalf of depression-stricken enterprises. Declaring that the nation was becoming less capable of competing in international markets because of its high standard of living, the government announced plans for curtailing public works, reducing unemployment benefits by 15 per cent, and cutting down the civil service.

These measures led to a series of anti-government demonstrations by the Social Democrats and trade unionists. There was a noticeable swing toward Communism among the laboring classes, marked by unprecedented demonstrations against the Crown at the opening of Parliament September 20. The rise of Communism led to the formation of a militant Fascist party, supporting the Queen, and toward the end of the year there were minor clashes between Communist and Fascist groups.

Although the gold reserve of the Bank of the Netherlands increased to 1,034,897,000 florins on Oct. 17, 1932, from 810,726,000 florins a year earlier, and the note issue declined during the same period to 976,866,000 florins from 1,046,762,000 florins, the dollar exchange rate of the florin declined somewhat during 1932. With a par value of \$0.4020, the florin exchanged at an average of \$0.4023 in 1931 and at \$0.4015 in December, 1932.

**NEUTRON.** See CHEMISTRY; PHYSICS.

**NEVADA.** POPULATION. According to the Fifteenth Census the population of the State in Apr. 1, 1930, was 91,058, as against 77,407 in 1920. The capital, Carson City, had (1930) 1596 inhabitants.

**AGRICULTURE.** The accompanying table shows the acreage, production, and value of the principal crops for 1932 and 1931:

Crop	Year	Acreage	Prod. Bu.	Value
Hay .....	1932	346,000	576,000*	\$2,625,000
	1931	213,000	252,000*	2,463,000
Potatoes ....	1932	2,000	300,000	147,000
	1931	3,000	261,000	204,000

\* Tons

**MINERAL PRODUCTION.** Mineral industry in the State suffered in 1931 especially from the curtailment of copper mining, which normally provided the chief part of its yearly mineral total. The mine production of copper fell to 72,634,497 pounds for 1931, from 109,203,512 for 1930, itself a year of greatly reduced production; the mine production of copper for 1932 fell further to 31,333,000 lbs., approximately. A decrease of some 30 per cent in the average price of copper for 1931, from that for 1930, caused the State's copper product to decline, by total value, to ap-

proximately \$6,600,000 for 1931, from \$14,196,457 for 1930. The mine production of copper for 1932, owing partly to a still lower average price, was valued at only \$1,911,310. Silver production declined to 2,562,071 fine ounces (1931) and further to about 1,553,000 (1932), from 4,178,903 (1930); in value to \$743,001 (1931) and \$437,950 (1932), from \$1,608,893 (1930). Gold production remained fairly stable, being 139,194 fine ounces for 1931 and 140,220 for 1930; in value, \$2,877,400 (1931), and \$2,898,600 (1930); for 1932, about \$2,728,680. Zinc, of which the production for 1930 was 14,584 short tons, in value \$1,400,070, likewise fell off for 1931. Zinc production for 1932 almost ceased, falling to some 500 tons. In the case of lead, of which 11,529 short tons, in value \$1,162,919 were produced in 1930, the same was true. Production was but 15,860,634 lbs., for 1931; and it sank to 1,260,000 lbs., approximately, for 1932.

The production of gypsum, for 1930, attained the quantity of 165,279 short tons, as against 225,514 for 1929, and the value of \$976,650 (1930), as against \$1,290,854 (1929). The total value of the State's mineral product, duplications eliminated, was \$24,075,375 for 1930; for 1929, \$36,775,743.

**FINANCE.** State expenditures in the year ended June 30, 1931, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments \$2,465,508 (of which \$473,395 was for local education); for interest on debt, \$51,306; for permanent improvements, \$2,071,475; total, \$4,588,289 (of which \$2,476,740 was for highways, \$431,606 being for maintenance and \$2,045,134 for construction). Revenues were \$4,929,093. Of these, property and special taxes furnished 30.2 per cent; departmental earnings and compensation to the State for officers' services, 3.3; sale of licenses, 23.0 (in which was included a gasoline sale tax that produced \$724,298). Funded debt outstanding on June 30, 1931, totaled \$1,021,000, of which \$400,000 was for highways. Net of sinking-fund assets, the debt was \$798,430. On an assessed valuation of \$207,851,131 the State levied in the year ad-valorem taxes of \$1,376,160.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1932, was 2131.20. During the year previous, over 22 miles of new line had been added.

**EDUCATION.** The organization of a new State board of education was reported in the *Journal* of the National Education Association; also the elimination of examinations for credentials of certification to teach in the elementary schools. For the academic year 1931-32 the number of those enrolled in the public schools was 22,764. Of these, 18,005 were in common schools or elementary grades, and 4759 were in high schools. The year's expenditures for support and maintenance of the public schools were: elementary schools, \$1,465,583; high schools, \$660,621. With regard to elementary education the figures were affected, as in other years, by the sparsity of population in many of the school districts. Salaries of teachers, by the year, averaged \$1394 for the elementary and \$1875 for the high-school positions.

**POLITICAL AND OTHER EVENTS.** Lieutenant Governor Griswold (Governor Balzar being at the moment absent from the State) proclaimed on November 1 a bank holiday to last until November 12. The interruption was thereafter

prolonged. This action, which had the effect of releasing banks in the State from the necessity to pay upon order, was in effect a moratorium upon the payment of all private debts. Its purpose was to prevent insolvencies during the reorganization of a chain of 11 banks headed by George Wingfield, which was announced simultaneously, and which affected some \$15,000,000 of deposits. Inability of livestock raisers to meet obligations was stated to have caused the trouble in the State. Not all the banks in Nevada availed themselves of the holiday.

**ELECTIONS.** The popular vote of November 8 was cast for the Democratic National ticket in the proportion of nearly 2½ to 1. The reported totals were: Roosevelt (Dem.), for President, 28,756; Hoover (Rep.), 12,674. P. A. McCarran (Dem.) was elected United States Senator, defeating Sen. Tasker L. Oddie (Rep.), who ran for reelection.

**OFFICERS.** The chief officers of the State, serving in 1932, were: Governor, Fred B. Balzar; Lieutenant-Governor, Morley Griswold; Secretary of State, W. G. Greathouse; Comptroller, Edward C. Peterson; Treasurer, George B. Russell; Attorney-General, Gray Washburn; Superintendent of Public Instruction, Walter Anderson.

**Supreme Court:** Chief Justice, Edward A. Ducker; Associate Justices, Ben W. Coleman, J. A. Saunders.

**NEVADA, UNIVERSITY OF.** A coeducational State institution of higher education in Reno, Nev., founded in 1874. There was an enrollment of 975 students for the autumn term of 1932, distributed as follows: College of arts and science, 662; normal school, 42; college of agriculture, 28; school of home economics, 44; school of mines, 48; school of civil engineering, 43; school of electrical engineering, 74; school of mechanical engineering, 34. There were 79 members on the faculty. The productive funds of the university amounted to \$335,437, and the income for the year to \$695,899. The library contained 54,210 volumes. President, Walter E. Clark, Ph.D., LL.D.

**NEW BRITAIN.** See BISMARCK ARCHIPELAGO and NEW GUINEA.

**NEW BRUNSWICK** (brūnz'wīk). One of the Maritime Provinces of Canada, bounded on the east by the Gulf of St. Lawrence and Nova Scotia, on the north by Quebec, and on the west by the State of Maine. The area is 27,985 square miles and the population at the census of 1931 was 408,219, compared with 387,876 in 1921. Chief cities, with (1931 census) populations: St. John, 47,514; Moncton, 20,689; and Fredericton, the capital, 8830. In 1930, there were 10,534 births, 4991 deaths, and 2761 marriages. Enrollment in the public schools in the same year totaled 85,635 and the average daily attendance was 67,156.

Agriculture, mining, manufacturing, fishing, and lumbering are leading industries. The acreage under field crops in 1931 was 804,167 acres and the value of production was \$10,651,000. About half of the 21,476 square miles of forest is owned by the Province. The production of lumber and other saw-mill products (1930) was valued at \$8,564,415. The fish catch for the same year, was valued at \$4,853,575. The provisional value of mineral production for 1931 was \$2,082,246. Coal, copper, antimony, and gypsum are mined. In 1930 the 924 manufacturing establishments, 18,422 employees, and a capital invest-

ment of \$63,468,262, produced manufactured produce valued at \$63,468,262 gross and \$29,570,998 net. Ordinary revenues and expenditures of the Province for the fiscal year ended Oct. 31, 1930, totaled \$6,513,285 and \$7,357,020, respectively.

Government is vested in a lieutenant-governor and a legislative assembly of 48 members elected for five years. The province sends 6 members to the Senate and 11 members (New Brunswick was to be entitled to 10 members as a result of redistribution based upon the 1931 census) to the House of Commons at Ottawa. Lieutenant-Governor in 1932, Charles D. Richards (Conservative). See CANADA.

**NEW CALEDONIA**, kâl'ê-dô'nî'â. A French colony, comprising the island of New Caledonia, the southernmost of the Melanesian Islands, lying about 875 miles east of Australia, and the following dependencies: Isle of Pines, Wallis Archipelago, Loyalty Islands, Huon Islands, and Fotuna, and Alofi. The island of New Caledonia has a length greater than 248 miles and an average width of 31 miles. Area, 8548 square miles. Population (1931 census), 57,165 including 17,215 whites. Capital, Nouméa with 10,226 inhabitants in 1926. In 1930 imports were valued at 144,721,403 francs (franc = \$0.0392) and exports at 80,898,413 francs. Ships totaling 112 of 237,111 tons entered and 109 of 233,791 tons cleared the ports during 1930. Governor in 1932, Joseph Guyon.

**NEWCOMB COLLEGE.** See TULANE UNIVERSITY.

**NEWELL, FREDERICK HAYNES.** An American civil engineer, the "father" of Federal reclamation, died in Washington, D. C., July 5, 1932. He was born in Bradford, Pa., Mar. 5, 1862, and was graduated from the Massachusetts Institute of Technology in 1885. After being engaged in mining in Colorado, and as assistant to the Ohio Geological Survey, he was appointed in 1888 assistant hydraulic engineer and in 1890 hydrographer of the U. S. Geological Survey. On the passage of the Reclamation Act of 1902, he became chief engineer in charge of the development of the Reclamation Service. In 1907, when this service was organized as a separate bureau of the Department of the Interior, he was made director. During his administration 26 projects were completed in whole or in part, the most notable of which were the Roosevelt and Shoshone Dams and the Gunnison Tunnel. In this capacity he was also a member of the U. S. Land and Inland Waterways commissions and of the National Advisory Board for Fuels and Structural Materials. On the reorganization of the Reclamation Service in 1914 he was made its consulting engineer. The following year he was called to the University of Illinois as head of its department of civil engineering. In 1919 he resumed the position of consulting engineer, being made president of the Research Service, Inc., in Washington. He became also in the same year president of the American Association of Engineers, which he had helped to found for the purpose of securing wider acquaintance and greater cooperation among engineers. He was a past secretary of the National Geographic Society, and of the American Forestry Association, one of whose aims at the time of its organization had been to arouse public interest in the proper conservation and utilization of natural resources, and was a recipient of the Cullum gold medal award by the American Geographical

Society. Among his works are: *Hydrography of the Arid Regions* (1891); *Agriculture by Irrigation* (1894); *The Public Lands of the United States* (1895); *Irrigation in the United States* (1902); *Hawaii: Its Natural Resources* (1909); *Principles of Irrigation Engineering* (1913); *Irrigation Management* (1916); *Engineering as a Career* (1916); and *Water Resources, Present and Future Uses* (1919).

**NEWFOUNDLAND**, nū'fūnd-lānd'. A large island at the entrance to the Gulf of St. Lawrence forming, with the Atlantic watershed of Labrador (q.v.), a dominion of the British Commonwealth of Nations. Capital, St. John's.

**AREA AND POPULATION.** The area of Newfoundland proper is 42,734 square miles and that of Labrador about 110,000 square miles. The estimated population of Newfoundland and Labrador in 1931 was 281,549, as compared with the 1921 census population of 263,033 (Newfoundland, 259,259; Labrador, 3774). St. John's had an estimated population in 1930 of 58,800. The population of the other towns at the 1921 census was: Bonavista, 4052; Harbour Grace, 3825; Grand Falls, 3769. For the years 1927 to 1931, births averaged 6766 annually and deaths 3871, the excess of births being 2895. For the same period birth and death rates per 1000 inhabitants were 24.8 and 14.2, respectively. Education is in the hands of religious denominations. There were 1156 schools, with 60,580 pupils, in 1929.

**PRODUCTION.** Fishing, the main industry, is supplemented as a source of national income by farming, mining, manufacturing, and lumbering. The codfish catch in 1931 totaled 124,544,000 pounds (115,360,000 pounds in 1930). The 1930 seal catch was 241,236; whales, 319; the production of whale oil, 659,000 gallons. The whaling fleet did not operate in 1931 and seal fishing was poor. There are about 188 acres of farm land, including 89,000 acres of improved land; also 9,600,000 acres of forests. Hay, potatoes, turnips, and cabbage are the chief crops. Blueberries and lingon berries are exported, chiefly to the United States. Iron ore is the chief mineral product; the output of the Wabana (Bell Island) mines in 1931 was 846,300 short tons (1,319,300 in 1930). Lead and zinc concentrates (1931) totaled 123,000 short tons; pulp and paper, 295,000 short tons (287,000 in 1930). Three new hydro-electric installations were completed during 1931.

**COMMERCE.** For the fiscal year ended June 30, 1931, imports declined 21 per cent in value and exports 20 per cent from the previous year. The 1930-31 imports were valued at \$25,262,000 (\$31,871,000 in 1929-30) and exports at \$32,909,000 (\$39,193,000 in 1929-30). Machinery, flour, and coal were the leading imports, in order of value, and paper (\$17,135,000), dried codfish (\$7,725,000), and iron ore were the principal exports during 1930-31. Canada in 1930-31 furnished 42.3 per cent of the total imports; the United States, 36.7 per cent; and the United Kingdom, 16.6 per cent. Exports went chiefly to the United States (32.8 per cent), United Kingdom (28.3 per cent), and Canada (6.9 per cent).

**FINANCE.** Gross governmental revenues for the 1930-31 fiscal year totaled \$9,056,000, as against \$11,579,000 in 1929-30, while expenditures were \$12,899,000 and \$11,434,000, respectively (figures in Canadian dollars). The gross funded debt on June 30, 1931, totaled \$87,592,000, as against \$82,592,000 on June 30, 1930. The floating debt, consisting of temporary bank loans and

credits, amounted to \$6,453,000 (Canadian) on Dec. 31, 1931. A temporary war loan of £400,000 from Great Britain was outstanding also. Service of the debt absorbed \$4,328,000 in 1930-31. For financial developments during 1932, see *History*. The unit of currency is the gold Newfoundland dollar, equivalent to the United States dollar at par.

**COMMUNICATIONS.** Railways in 1931 extended 974 miles, of which 905 miles belonged to the government. In the same year, the railways carried 250,000 passengers and 392,000 tons of freight, gross receipts amounting to \$3,180,000. Highways extended over 1000 miles, of which about 880 miles were passable for motor cars. During 1930-31, 1454 vessels of 1,269,687 net registered tons entered Newfoundland ports in the foreign trade.

**GOVERNMENT.** Executive power is vested in a governor, assisted by an executive council of not more than 10 members, and legislative power, in an appointive council of not more than 24 members and an elected house of representatives of 40 members. Women have the franchise. Sir John Middleton was succeeded as Governor and Commander-in-Chief in 1932 by Admiral Sir David Murray Anderson. At the beginning of 1931 the composition of the House of Assembly was: Liberals, 30; Conservatives, 10. The Prime Minister and Minister of Justice was Sir Richard A. Squires (Liberal). For changes in 1932, see *History*.
